San Diego, CA 92123

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Barbara Alexander

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance. The effect of this on ORGANICALLY grown crops is just the trick that BIG AG is looking for to CRUSH ORGANIC GROWERS!

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural

pesticides in drinking water are a serious health concern that has not been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk. MAYHAPS YOU do not CARE if you're EATING,DRINKING PESTICIDES!? I don't care to be POISONED by my ENVIRONMENT. SINCE it is you RESPONSIBILITY to PROTECT us-DO YOUR JOB!(Or are you in "the back pocket" of Big Ag and are pimping out the middle class Americans ? Ergo,POISONING thousands is of NO CONCERN to you???)

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

L J Tanaka

RE: Eye Gnat Ordinance and Program - Negative Declaration

Dear Mr. Miller

It is paramount that we strive for LESS REGULATIONS.
MORE EDUCATION.

LESS REGULATIONS
MORE UNDERSTANDING

LESS REGULATIONS
MORE COMPREHENSION

LESS REGULATIONS
MORE TOLERATION

LESS REGULATIONS
MORE COLLABORATION

LESS REGULATIONS
MORE ACTIONS

LESS REGULATIONS
I can go on and on but I think you all got the meaning of this.

I am writing to request that a full Environmental Impact Report be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance.
That is an easy way out and is not acceptable.

The proposed ordinance gives the County the authority to order the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine and or Cyfluthrin) on the organic crops grown in many Organic Farms though out San Diego Co. That is polluting food and the environment and ignoring a natural non-polluting alternatives. I don't want to see the destruction of productive organic farmland and the end of locally grown organic fresh produce. All my large family and many others that enjoys and consumes Local Organic Produce with confidence that is natural and healthy for all of us will be very sad disappointed.

I am especially concerned that spraying pesticides will impact the plants and animals in many areas where eye gnats are indigenes and part of the ecosystem. For example: with my wife. we walk in many

areas of this wonderful San Diego Co., in most of the wet areas where there is natural decaying vegetation (river beds and so on), there are periods of time that Eye Gnats are present and there is not any Organic Farming for miles, I am horrified that the County may indiscriminately dictate the spraying of pollutant pesticides just because Eye Gnats are present and some one complains about it and the regulation mandate it. I understand that Organic Farming may increase the Eye Gnat population in the area but there are natural ways of controlling this situation. With the proper research and implementation of natural alternatives the problem can be resolved naturally with out regulations and more collaboration, Do not rush, Allow time to prove that natural control works. In the golf course in San Pasqual, the Eye Gnat population is way down from couple of years ago, It seems that what Be Wise is doing is working. Why doesn't the County wait to see the results of what Be Wise is doing before enacting more unnecessary regulations that hurt the environment, Then use Be Wise's procedures to educate other Organic Farmers though out the area and other parts of the state, (Education).

Please consider the significant impact to the environment and the health of every one that will be created by this ordinance, Please do the right thing and work with Be Wise Ranch on a pesticide-free alternative to this ordinance.

Thank you

Dario Micheri
Fallbrook California.

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Ty Droegemuller

Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Steven Tyndall

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Re: Eye Gnat Ordinance and Program – Negative Declaration

Dear Mr. Miller,

I am writing to request that a full Environmental Impact Report be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance. It would be heartbreaking for San Diego to become known as the city that shuts down local organic farms.

The proposed ordinance gives the County the authority to order the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, Cyfluthrin) on the organic crops grown at Be Wise Ranch. This will mean the end of Be Wise Ranch's organic status, and an end to the healthy, fresh produce that the farm provides me, my family and many other people, and a loss of productive organic farmland.

I am especially concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise Ranch and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and it supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The Be Wise Ranch's use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts. I am concerned about the health of my family and the local ecosystem, and I really want to know what these impacts will be.

I also don't understand why the county is rushing this ordinance without proper environmental review. Eye gnats at the golf course this year are way down from a couple of years ago, so it seems like what Be Wise Ranch is doing is working. Why doesn't the County wait to see the results of what Be Wise Ranch is doing before enacting more regulations that hurt our local businesses?

Please consider the significant impacts to the environment and to the health of our families and neighborhoods that will be created by your ordinance. Please do the right thing and work with Be Wise Ranch on a pesticide-free alternative to this ordinance.

Thank you,
Sylvia Jonsson

San Diego, CA 92123

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Chris Clausen

Jack Miller
Department of Environmental Health
5570 Overland Avenue, Suite 102
San Diego, CA 92123

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Justin Saegusa

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

tracy mcpherson

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Rachel Wolf

This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Lynda Daniels

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Nicolee McMahon

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Amy Barnes

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Simone Zavala

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Re: Eye Gnat Ordinance and Program Negative Declaration

Dear Mr. Miller,

I am writing to request that a full Environmental Impact Report be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance. It would be heartbreaking for San Diego to become know as the city that shuts down local organic farms.

The proposed ordinance gives the County the authority to order the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, Cyfluthrin) on the organic crops grown at Be Wise Ranch. This will mean the end of Be Wise Ranch's organic status, and end to the healthy, fresh produce the farm provides me and my family, and a loss of productive organic farmland. I am currently a member of the Be Wise Ranch CSA, which provides fresh vegetables to me at a pick-up site in my neighborhood.

I am especially concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise Ranch and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and it's supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The Be Wise Ranch's use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts. I am concerned about the health of my family and the local ecosystem, and I really want to know what these impacts will be.

I also don't understand why the county is rushing this ordinance without proper environmental review. Eye gnats at the golf course this year are way down from a couple of years ago, so it seems like what Be Wise Ranch is doing is working. Why doesn't the County wait to see the results of what Be Wise Ranch is doing before enacting more regulations that hurt our local businesses?

Please consider the significant impacts to the environment and to the health of my family that will be created by your ordinance. Please do the right thing and work with Be Wise Ranch on a pesticide-free alternative to this ordinance.

Thank you,

Claudia Gomez-Martinez, MSW

Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Melodi Coulson

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Dear Jack Miller:

Please do not enact an ordinance that would automatically make an organic farm no longer organic without making an environmental impact report and without giving them time to find an organic alternative to pesticide sprays. I firmly believe just spraying for pests with a pesticide that kills everything is unhealthful to the people, animals, and plants in the area and should not be done unless there is no other less dangerous alternative.

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

JOHN PASQUA

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Debbie Lindgren

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural

pesticides in drinking water are a serious health concern that has not been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Most Sincerely,

Donna Simondes

San Diego, CA 92123

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Robert Hathaway

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Lisa D

San Diego, CA 92123

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

On Behalf of Planet Earth,

Mari Tobler

San Diego, CA 92123

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Michelle Kwiatkowski

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Believe me, the alternatives are not good. One of the main reasons I live in North San Diego County is because of the availability or organic foods. I love the climate here and the organic food availability. What is being proposed will change the current availability of organic food! Please implement better alternatives!!!

Thanking you in advance,

JoAnne Duncan

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Deb Stone

San Diego, CA 92123

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Gloria Munger

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Tom Schneider

San Diego, CA 92123

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Chris McKay

5570 Overland Avenue, Suite 102
San Diego, CA 92123

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Bonnie Alexander

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Geraldine Gatehouse

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Frederic C. Schultz

The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Thomas Casper

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Chesca Pietila

This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not

been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Yvonne Davis

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Lastly I have yet to find an insect that does not eventually build a resistance to insecticides & therefore making them immune to the chemical & then what? Stronger & even more toxic & dangerous insecticides. - Leave it alone! Please. We have enough toxins in our environment already.

Sincerely,

Nancy Nordstrom

Jack Miller
Department of Environmental Health
5570 Overland Avenue, Suite 102
San Diego, CA 92123

Dear Jack Miller:

Do not disturb our beloved Be Wise Ranch! I am a member of Community Supported Agriculture (CSA) and the mother of a 17-month old baby. I joined CSA at Be Wise Ranch because I want to support local organic farming and feed my baby healthy fruits and vegetables without chemicals. Please do not take this choice away from our family. Be Wise is an exemplary pillar of the organic farming community as they produce sustainable, delicious, safe food. The proposed ordinance will destroy this and take away their ability to continue to produce for the region in this manner. I am not convinced that complete due diligence has been done to warrant this action.

Therefore, I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Dear Jack Miller:

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Broadcast coverage using pesticides is damaging to the environment IN THE EXTREME! Why do you think we have hive collapse in the bee populations. These chemicals don't just kill targeted pests they also kill beneficial insects. If there is no preditor for these problematic biological creatures find a soap or oil or some other method to deal with them. Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these

species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

San Diego, CA 92123

Dear Jack Miller:

I am writing to STRONGLY request that a FULL Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. THERE HAS TO BE ANOTHER PLAN THAT COULD BE PUT TO USE...INSTEAD OF USING POISONS!!! This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

My Family and I are extremely worried about pesticides required by this ordinance...that they could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. A catastrophe!!!! Agricultural pesticides in drinking water are a serious health concern that has not been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk. f passed in its current form, this ordinance would:

It seems that this is targeting Organic Farms Without a Scientific Basis The targeting and mandatory inclusion of farmers in the program depends solely on neighbor complaints and the decisions of a single director responding to these complaints. This director would have authority to override input from scientific or agricultural agencies knowledgeable about organic farming. That is illogical!

Organic farmers are participating in legitimate, scientific research to mitigate the problem and are assembling the necessary traps to implement proven measures to control eye gnat populations that don't include any of the above restrictions. Major organic produce suppliers such as Whole Foods, People's Organic Co-op and Jimbo's are siding with organic farms against this ordinance. We are asking that the Board of Supervisors give organic farms the time they need to implement these voluntary, community-wide measures and reject the ordinance in its current, punitive form.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance. IT'S THE RIGHT THING TO DO!

Sincerely,

Cynthia and Roderick Brown

Subject: Re: Eye Gnat Ordinance and Program - Negative Declaration

Jack Miller
Department of Environmental Health

Dear Mr. Jack Miller

I am writing to strongly request a full environmental impact report be prepared for the county's proposed Eye Gnat Ordinance and Program. The negative declaration prepared is inadequate and provides next to no meaningful analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance gives the county the authority to order the spraying of pesticides (acephate, malathion (REALLY?!?!?), diflubenzuron, cyromazine, and cyfluthrin) on the organic crops grown at Be Wise Ranch. This will mean the end of Be Wise Ranch's organic status, an end to the healthy fresh produce the farm provides for my family and a loss of productive organic farmland. I am currently a member of the Be Wise Ranch CSA, which provides fresh vegetables to me from a local pick up site. I also purchase their produce from my neighborhood grocery, Frazier Farms in Vista.

In addition, I am concerned the spraying of pesticides will almost certainly impact the plants and animals in the San Pasqual Valley. The document looks at county policies but the impacts to Be Wise Ranch and the valley are in the city of San Diego. The San Pasqual Valley is a city open space park and agricultural preserve; and it supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo and California Gnatcatcher. The Be Wise Ranch's use of organic farming methods is in harmony with the protection of these species because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this are and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts. I am concerned for the health of my family and the local ecosystem and I really want to know what these impacts will be. In fact, I think as a citizen of a democratic society, we deserve to know.

What's the rush? Eye gnats on the golf course this year are way down from a couple of years ago. Why doesn't the county wait to see the results?

Please consider the significant impacts to the environment and to the health of my family that will be created by YOUR ordinance. Please do the RIGHT thing and work with Be Wise Ranch on a pesticide-free alternative to this ordinance.

Honestly, I can't even believe it is being considered. It is so hard to find fresh, local, organic produce, I will be very upset if Be Wise Ranch is no longer an option for us for organic produce. And very disappointed.

Thank you for your time,
VERY concerned citizen,

Doug and Robin Williams (and family)

San Diego, CA 92123

Dear Jack Miller:

You guys are playing with peoples lives and livelihoods. It's better to be cautious. PLEASE work with the organic farmers to implement a pesticide free solution.

I am a 50ish regular mom, native San Diegan, and a convert to buying only locally grown organic products.

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and

allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Jeri Bakhsh

Jack Miller
Department of Environmental Health
5570 Overland Avenue, Suite 102
San Diego, CA 92123

Dear Jack Miller:

I request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables contribute to our region 's sustainability. This ordinance takes away sustainability. It will also take away organic produce that I buy from People's Co-op.

Gnats are not life threatening. But your plan will kill organisms, both plants and insects, most of them beneficial. Your plan will let pesticides collect in our water systems.

You have neglected to factor in many current practices and activities that are beneficial to humans and animals in the area. They will be negatively impacted by spraying. I would have hoped that you would have learned from the past that spraying pesticides is harmful to more than the intended target.

There are less invasive solutions.

Above all we must keep our organic food sources organic. The nonfood we find in the supermarkets is one reason there is so much ill health in our nation.

I'm afraid you seriously neglected to do your homework but it is not too late to remedy this lack. Once you spray, it will be too late.

Seems to me that there is danger of throwing out the baby with the bath

water.

A little time, a little patience, a little more thoughtfulness, a little more concern for fellow creatures and environments will allow for the development of a a plan that will do no harm, or the least amount of harm possible. When you balance an irritating pest against destruction of organic farms, healthful ecosystems, recreational systems, and the workings of a democratic system the proper choice seems painfully clear to me.

Thank you for your consideration of working to help all involved.

Sincerely,

Wren Osborn

Jack Miller
Department of Environmental Health
5570 Overland Avenue, Suite 102
San Diego, CA 92123

Dear Jack Miller:

It seems like there is always a very long list of pests, moths, etc. that are impacting our states. Where I live in Santa Cruz, CA, the last one was the light brown apple moth. We had a professor from UCSC travel to New Zealand to research how they were handling their light brown apple moth problem (they did nothing and there wasn't any problem). We also had activists in our community who created a documentary of how the spraying was affecting our health, the death of thousands of birds and fish, (not to mention the impact on human health), our environment, gardens, etc. There was a lot of research presented and THEY RULED TO STOP SPRAYING BECAUSE CITIZENS DEMANDED TO BE ABLE LIVE IN A BREATHABLE ENVIRONMENT THAT DOESN'T POISON THEM.

ANYTHING THAT IS GOING TO FORCE ORGANIC FARMS TO STOP GROWING IN GROWING SEASON - and TO FORCE ORGANIC FARMS TO SPRAY PESTICIDES IS REALLY QUESTIONABLE. I SUGGEST YOU LOOK AT WHO IS BEHIND THIS IDEA OF NEVER ENDING LISTS OF GNATS, MOTHS, ETC. - and follow the money. Who makes money from spraying and who wants to shut down or impact organic farming??? I would also request that you do some investigative reporting on this practice of spraying and find out who benefits from it

In one of our meetings re the light brown apple moth, it was mentioned that this is a "cash cow" for the chemical companies. The constant use and practice of applying more and more chemicals, pesticides, herbicides, etc. is simply not sustainable to a healthy soil, air, human life, or planet. Organic farming brings balance to all of this. You are proposing to FORCE ORGANIC FARMS TO SPRAY PESTICIDES??? and to interrupt organic farming DURING THEIR GROWING SEASON - and penalize these farms for doing all the right farming practices to maintain the integrity of the soil, plants, air and human life.

This is a constant assault on our organic farms, counties, towns and states from some fabricated nonsense. Americans are tired of having to defend ourselves to have the right to "not be sprayed". Everything is in balance when you use sustainable farming practices. Why don't you propose that all Big Ag farms go organic and use far less pesticides, herbicides and environmental pollutants, instead of stronger and stronger ones that bugs and weeds become resistant to????

What happens to your dilemma, if you do spray these dangerous chemicals and this gnat becomes resistant to it - what would your answer be then, to endanger all of us even more - with stronger and stronger chemicals, no organic farms and very sick people and environmental impacts???

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. San Diego, CA 92123

Dear Jack Miller:

If you really care about the future of our children you will support the preparation of a full Environmental Impact Report for San Diego County's proposed Eye Gnat Ordinance and Program.

The Negative Declaration that was prepared is pitifully inadequate -- and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms.

This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

I PROTEST! You're considering spraying organic crops with toxic chemicals that are proven to cause ill health for every living thing on this plant to get rid of ... GNATS? Spray that violates the health of our children and our future to get rid of ... GNATS? You need to think again about this.

Locally produced, organic vegetables are part of how we can make our region more sustainable and healthy for everyone. This ordinance takes us off the road to sustainability and continues down the road of poisoning our planet.

I AM DISGUSTED with the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats.

There are already too few organic vegetable farms in San Diego. We should be advocating for MORE not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego.

The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests.

Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, have your thought about the possibility that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir, ending up in our water supply?

You should.

Agricultural pesticides in drinking water are a serious health concern that has not been addressed by your study. Organic farming lowers the risk of pesticides entering the water system. The ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year.

Start working now with organic farmers for a pesticide free alternative to this ordinance.

Sincerely,

Jack Miller
Department of Environmental Health
5570 Overland Avenue, Suite 102
San Diego, CA 92123

Dear Jack Miller:

I have been a member of BeWise Ranch community share association for over 10 years. I am a regular customer of stores selling locally grown produce. This is my way of supporting my local community whilst ensuring the best health of my children.

I am very concerned that the Environmental impact of spraying petiscides will have a negative impact far greater than the nuisance currently caused by the eye gnats. Unless a full Environmental Impact Report is prepared by real experts, local businesses will be destroyed, organic foods will have to be trucked in, wild life will be harmed, and waterways polluted, all without an honest evaluation of the risks versus benefits.

It is up to all San Diegans to support local business, not crush them on a whim without proper research.

Pesticides used to satisfy the complaints of a few individuals will undoubtably enter the wildlife food chain and enter the San Dieguito River, ending up in the drinking water supply for everyone. Should our natural wildlife and every man, woman and child in the district have to face the risk of serious health concerns because our officials didn't take the time to evaluate the environmental situation carefully?

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents, including me, who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are not dismissing the concerns of residents bothered by the gnats, we are simply asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Sue Bedford

RE: Eye Gnat Ordinance and Program - Negative Declaration

Dear Mr. Miller:

I am writing to request that a full Environmental Impact Report be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance gives the County the authority to order the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at Be Wise Ranch. This will mean the end of Be Wise Ranch's organic status, an end to the healthy, fresh produce the farm provides for me and my family, and a loss of productive organic farmland. I am currently a member of the Be Wise Ranch CSA, which provides fresh vegetables to me at a pick-up site in my neighborhood.

My grandparents also live down the street from the farm. They are very concerned about the use of pesticides in their neighborhood and view this as a serious health threat and more of an issue than the occasional eye gnats they may encounter outside.

I am very concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks like a lot of County policies, but the impacts to Be Wise Ranch and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve; and it supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The Be Wise Ranch's use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts. I am concerned about the health of my family and the local ecosystem, and I really want to know what these impacts will be.

I also don't understand why the County is rushing this ordinance without proper environmental review. Eye gnats at the golf course this year are way down from a couple of years ago, so it seems like what Be Wise is doing is working. Why doesn't the County wait to see the results of what Be Wise is doing before enacting more regulations

that hurt our local businesses?

Please consider the significant impacts to the environment and to the health of my family that will be created by your ordinance. Please do the right thing and work with Be Wise Ranch on a pesticide-free alternative to this ordinance.

Thank you,
Teodora Valdez Curtiss

Dear Jack Miller:

The text below very well explains my view. I want and value organic food. If you're not aware of how destructive this is to our local organic business, and citizens that want local organic food then take note. In any case the people do not want or need more poison. Please try to work towards a solution that benefits all parties and do the right thing. -----
I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Jason Phillips

Dear Jack Miller:

I am the owner of a small local business, Gold Mine Natural Food Company. I have been a customer of Be Wise Organic Farm, on both the wholesale and retail level, for many years, buying their organic produce. I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Locally produced, organic vegetables are part of how we can make our region more sustainable. This ordinance takes us backwards on the road to sustainability. I was shocked by the document's comment that organic farming could continue, but only as an orchard or animal keeping, because those don't harbor eye gnats. There are very few organic vegetable farms in San Diego and we should be advocating for more not fewer sources of local organic produce.

I am also concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area, and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts.

Finally, I am concerned that the pesticides required by this ordinance

could run off into the San Dieguito River and enter the Lake Hodges drinking water reservoir and end up in my water supply. Agricultural pesticides in drinking water are a serious health concern that has not been addressed by your study. Organic farming lowers the risk of pesticides entering the water system, while the ordinance you propose raises that risk.

Please consider the significant impacts to the environment and human health, and the comments of the over 1600 residents who opposed the San Diego Eye Gnat Ordinance and Program earlier this year. We are asking you to work with the organic farmers on a pesticide free alternative to this ordinance.

Sincerely,

Dear Jack Miller:

I live in the San Pasqual Valley next to this farm. I have a newborn 6 month old baby. I would be devastated to find out that my home is being polluted with pesticides from the farm next door. The Eye gnatminor annoyance is not nearly as much of an issue as our health is to me. Please know I will fight this tooth and nail and I know many of my neighbors will too once they find out about the spraying of pesticides in our own backyard.

I am writing to request that a full Environmental Impact Report be prepared for San Diego County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance is likely to result in the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at the Be Wise Ranch and other organic farms. This will mean the loss of organic status for these farms, an end to the local, healthy, fresh produce the farms provide, and a loss of productive organic farmland.

Greetings,

I just signed the following petition addressed to: Department of Environmental Health (DEH).

Do not amend the Eye Gnat Program

In regards to Title 6 of the San Diego County Code of Regulatory Ordinances relating to Vector Control to establish a county-wide Eye Gnat Program and The San Diego County Code of Administrative Ordinances. The new proposed text states "Changes to the Ordinance as it was previously released for public review from January 31, 2012 to February 10, 2012 would still not authorize DEH to require the use of conventional pesticides on organic crops or fields or to restrict the crops that could be grown organically on a farm, EXCEPT AS A LAST RESORT."
The DEH does not specify what classifies as a last resort or who determines when it reaches this point. It is a very vague statement that puts San Diego organic farms in jeopardy of the county coming in and spraying up to five different conventional pesticides.
Either remove the statement "Except as a last resort" or clarify this statement. There needs to be clear guidelines as to when this point is reached and who determines it has reached this point. It also needs to account for the natural methods being implemented to control the eye gnat.

Sincerely,

Amber Hilliard
Keene, Texas

The new proposed text states "Changes to the Ordinance as it was previously released for public review from January 31, 2012 to February 10, 2012 would still not authorize DEH to require the use of conventional pesticides on organic crops or fields or to restrict the crops that could be grown organically on a farm, EXCEPT AS A LAST RESORT."
The DEH does not specify what classifies as a last resort or who determines when it reaches this point. It is a very vague statement that puts San Diego organic farms in jeopardy of the county coming in and spraying up to five different conventional pesticides.
Either remove the statement "Except as a last resort" or clarify this statement. There needs to be clear guidelines as to when this point is reached and who determines it has reached this point. It also needs to account for the natural methods being implemented to control the eye gnat.

Sincerely,

David Jenkins

Subject: Do not amend the Eye Gnat Program

Greetings,

I just signed the following petition addressed to: Department of Environmental Health (DEH).

Do not amend the Eye Gnat Program

In regards to Title 6 of the San Diego County Code of Regulatory Ordinances relating to Vector Control to establish a county-wide Eye Gnat Program and The San Diego County Code of Administrative Ordinances. The new proposed text states "Changes to the Ordinance as it was previously released for public review from January 31, 2012 to February 10, 2012 would still not authorize DEH to require the use of conventional pesticides on organic crops or fields or to restrict the crops that could be grown organically on a farm, EXCEPT AS A LAST RESORT."
The DEH does not specify what classifies as a last resort or who determines when it reaches this point. It is a very vague statement that puts San Diego organic farms in jeopardy of the county coming in and spraying up to five different conventional pesticides.
Either remove the statement "Except as a last resort" or clarify this statement. There needs to be clear guidelines as to when this point is reached and who determines it has reached this point. It also needs to account for the natural methods being implemented to control the eye gnat.

Sincerely,

luke nevling

From: Alison Hawkins [mail@change.org]
Sent: Wednesday, June 06, 2012 12:28 AM
To: LUEG, DEH-Eyegnat
Subject: Do not amend the Eye Gnat Program

Greetings,

I just signed the following petition addressed to: Department of Environmental Health (DEH).

Do not amend the Eye Gnat Program

In regards to Title 6 of the San Diego County Code of Regulatory Ordinances relating to Vector Control to establish a county-wide Eye Gnat Program and The San Diego County Code of Administrative Ordinances. The new proposed text states "Changes to the Ordinance as it was previously released for public review from January 31, 2012 to February 10, 2012 would still not authorize DEH to require the use of conventional pesticides on organic crops or fields or to restrict the crops that could be grown organically on a farm, EXCEPT AS A LAST RESORT."
The DEH does not specify what classifies as a last resort or who determines when it reaches this point. It is a very vague statement that puts San Diego organic farms in jeopardy of the county coming in and spraying up to five different conventional pesticides.
Either remove the statement "Except as a last resort" or clarify this statement. There needs to be clear guidelines as to when this point is reached and who determines it has reached this point. It also needs to account for the natural methods being implemented to control the eye gnat.

Sincerely,

Alison Hawkins
Littleton, Colorado

June 17, 2012

RECEIVED JUN 19 '12

Mr. Jack Miller
Department of Environmental Health
5570 Overland Avenue, Suite 102
San Diego, CA 92123

Email: eyegnat@sdcounty.ca.gov

Re: Eye Gnat Ordinance and Program – Negative Declaration

Dear Mr. Miller,

I am writing to request that a full Environmental Impact Report be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance. It would be heartbreaking for San Diego to become know as the city that shuts down local organic farms.

The proposed ordinance gives the County the authority to order the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, Cyfluthrin) on the organic crops grown at Be Wise Ranch. This will mean the end of Be Wise Ranch's organic status, and end to the healthy, fresh produce the farm provides me and my family, and a loss of productive organic farmland. I am currently a member of the Be Wise Ranch CSA, which provides fresh vegetables to me at a pick-up site in my neighborhood.

I am especially concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise Ranch and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and it's supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The Be Wise Ranch's use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts. I am concerned about the health of my family and the local ecosystem, and I really want to know what these impacts will be.

I also don't understand why the county is rushing this ordinance without proper environmental review. Eye gnats at the golf course this year are way down from a couple of years ago, so it seems like what Be Wise Ranch is doing is working. Why doesn't the County wait to see the results of what Be Wise Ranch is doing before enacting more regulations that hurt our local businesses?

Please consider the significant impacts tot eh environment and to the health of my family that will be created by your ordinance. Please do the right thing and work with Be Wise Ranch on a pesticide-free alternative to this ordinance.

Thank you,

Judith Brown

Re: Eye Gnat Ordinance and Program- Negative Declaration

Mr. Miller,

I am writing to request a full Environmental Impact Report to be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance gives the County the authority to order the spraying of pesticides on the organic crops grown at Be Wise Ranch. This will mean the END of Be Wise Ranch's organic status, an end to the healthy, fresh organic produce the farm provides me and my family. I am currently a member of the Be Wise Ranch CSA, which provides fresh vegetables for my pick up weekly.

I am especially concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise Ranch and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and it supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo and California Gnatcatcher. The Be Wise Ranch's use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts. I am concerned about the health of my family and the local ecosystem, and I really want to know what these impacts will be.

I also don't understand why the County is rushing this ordinance without proper environmental review. Eye gnats at the golf course this year are way down from a couple of years ago, so it seems like what Be Wise is doing is working. Why doesn't the County wait to see the results of what Be Wise is doing before enacting more regulations that hurt our local businesses?

Please consider the significant impacts to the environment and to the health of my family that will be created by your ordinance. Please do the right thing and work with Be Wise Ranch on a pesticide-free alternative to this ordinance.

Sincerely,

Renee Ulaszek 17560 Matinal Drive, San Diego, CA 92127

RE: Eye Gnat Ordinance and Program – Negative Declaration

Dear Mr. Miller:

I am writing to request that a full Environmental Impact Report be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance gives the County the authority to order the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at Be Wise Ranch. This will mean the end of Be Wise Ranch's organic status, an end to the healthy, fresh produce the farm provides for me and my family, and a loss of productive organic farmland. I am currently a member of the Be Wise Ranch CSA, which provides fresh vegetables to me at a pick-up site in my neighborhood.

I am especially concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise Ranch and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and it supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The Be Wise Ranch's use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts. I am concerned about the health of my family and the local ecosystem, and I really want to know what these impacts will be.

Subject: Be Wise Ranch

I am writing regarding the eye gnat ordinance and program – negative declaration. Without a more in depth study you will be destroying a hugely productive farming venture that provides organic fruits and vegetables to thousands of residents in and around San Diego County, including me and my family.

Spraying pesticides will impact the plants and animals of San Pasqual Valley and since it is an open space park and agricultural preserve, it supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. Be Wise Ranch works in harmony with the natural preserve to protect these species. Spraying pesticides containing Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin on these crops will destroy the organic status of Be Wise Ranch and it will mean an end to fresh, healthy produce the farm provides.

Spraying pesticides changes the nature of organic farming and they enter the food chain of the animals in the area. Articles continually bemoan the dangers of pesticides to the surrounding flora and fauna; degradation of genetics of birds and mammals; and enter into the water tables which has devastating effects. The County's disregard for such potential harm is careless and disingenuous to all. Be Wise Ranch is using natural methods to control pests, just as they use natural methods to grow our essential crops.

Rushing through with this ordinance without proper environmental review is also a callous move on the part of the County. Since this debacle first came up, Be Wise Ranch has enacted measures to lower the impact of the eye gnats and their efforts have decreased their numbers significantly. Allow them more time to get the gnats under control and to normal numbers. A question to the County is – why the rush? Why are you so eager to enact more regulations that hurt the local agriculture businesses?

The County has a duty of consider the significant impacts to the environment and the health of all families that will be created by your proposed ordinance. Do the right thing and work with Be Wise Ranch on a pesticide-free alternative.

Thank you,

Jann Allen

Subject: Eye Gnat Ordinance and Program - Negative Declaration

Attn: Jack Miller, Department of Environmental Health

Dear Mr. Miller,

I request that a full Environmental Impact Report be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance give the County the authority to order the spraying of pesticides on the organic crops grown at Be Wise Ranch. This will mean the end of Be Wise Ranch's organic status, and end to the healthy fresh produce the farm provides for me and my family and a loss of organic farmland. I'm a current member of the Be Wise Ranch CSA, which provides fresh vegetables to me at a pick up site in my neighborhood.

I'm especially concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to the Be Wise Ranch and the Valley are in the City of San Diego. The San Pasqual Valley is a city open space park and agricultural preserve. It supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo and the California Gnatcatcher. The Be Wise Ranch's use of organic farming methods is in harmony with the protection of these species because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area and allow pesticides to enter the food chain of the animals in this area. Your document gives no analysis to these impacts. I'm concerned about the health of my family and our local ecosystems, and I really want to know what these impacts will be.

Why doesn't the County allow the results of Be Wise Ranch's voluntary program prove their results - already the eye gnats at the golf course this year are significantly reduces from a couple of years ago so it seems to be working. Why rush this ordinance without the proper environmental review?

Please do the right thing and work with Be Wise Ranch on a pesticide-free alternative to this ordinance.

Thank you,

Re: Eye Gnat Ordinance and Program – Negative Declaration

Dear Mr. Miller,

I am writing to request that a full Environmental Impact Report be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance. It would be heartbreaking for San Diego to become know as the city that shuts down local organic farms.

The proposed ordinance gives the County the authority to order the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, Cyfluthrin) on the organic crops grown at Be Wise Ranch. This will mean the end of Be Wise Ranch's organic status, and end to the healthy, fresh produce the farm provides me and my family, and a loss of productive organic farmland. I am currently a member of the Be Wise Ranch CSA, which provides fresh vegetables to me at a pick-up site in my neighborhood.

I am especially concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise Ranch and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, and it's supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The Be Wise Ranch's use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts. I am concerned about the health of my family and the local ecosystem, and I really want to know what these impacts will be.

I also don't understand why the county is rushing this ordinance without proper environmental review. Eye gnats at the golf course this year are way down from a couple of years ago, so it seems like what Be Wise Ranch is doing is working. Why doesn't the County wait to see the results of what Be Wise Ranch is doing before enacting more regulations that hurt our local businesses?

Please consider the significant impacts tot eh environment and to the health of my family that will be created by your ordinance. Please do the right thing and work with Be Wise Ranch on a pesticide-free alternative to this ordinance.

Thank you,

I am especially concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise Ranch and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve; and it supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The Be Wise Ranch's use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts. I am concerned about the health of my family and the local ecosystem, and I really want to know what these impacts will be.

I also don't understand why the County is rushing this ordinance without proper environmental review. Eye gnats at the golf course this year are way down from a couple of years ago, so it seems like what Be Wise is doing is working. Why doesn't the County wait to see the results of what Be Wise is doing before enacting more regulations that hurt our local businesses?

Please consider the significant impacts to the environment and to the health of my family that will be created by your ordinance. Please do the right thing and work with Be Wise Ranch on a pesticide-free alternative to this ordinance.

Thank you,

Pihuei Tung

RE: Eye Gnat Ordinance and Program—Negative Declaration

Dear Mr. Miller:

I am writing to request that a full Environmental Impact Report be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance gives the County the authority to order the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at Be Wise Ranch. This will mean the end of Be Wise Ranch's organic status, an end to the healthy, fresh produce the farm provides for me and my family, and a loss of productive organic farmland. I am currently a member of the Be Wise Ranch CSA, which provides fresh vegetables to me at a pick-up site in my neighborhood.

I am especially concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise Ranch and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve; and it supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The Be Wise Ranch's use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area and allow pesticides to enter the food chain of the animals in the area. Subject: Eye Gnat Ordinance - Negative Declaration

I am writing to request that a full environmental Impact Report be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance gives the County the authority to order the spraying of pesticides on the organic crops grown at Be Wise Ranch. This will mean the end of Be Wise Ranch's organic status and an end to the healthy, fresh produce the farm provides. This is unacceptable!!

Be Wise Ranch, and organic community supported agriculture in general, is very important to me and my family. We have been enjoying and receiving the healthful benefits of organic produce since 1996. The fact that the farm is located close to home means produce is fresh and the impact on our planet is far less than it is when food is transported from afar. Our local economy is boosted and all San Diegans benefit when we are able to rely on local goods. All of this is important to me, my family and our community.

I am also concerned that the spraying of pesticides will impact plants and animals in the San Pasqual Valley. BE Wise Ranch's use of organic farming methods is in harmony with protection of local species. Spraying pesticides would change the nature of farming in this area and allow pesticides to enter the food chain. Your environmental document gives no analysis to these impacts. I am concerned about the health of my family and the local ecosystem and I really want to know what these impacts will be.

I also don't understand why the County appears to be rushing this ordinance without proper environmental review. Eye gnats at the golf course this year are way down from a couple of years ago; so it seems like what Be Wise Ranch is doing is working. Why doesn't the County wait to see the results of what Be Wise is doing before enacting regulations that hurt our local businesses?

RE: Eye Gnat Ordinance and Program- Negative Declaration

Dear Mr. Miller:

I am writing to request that a full Environmental Impact Report be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance gives the County the authority to order the spraying of pesticides (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at Be Wise Ranch. This will mean the end of Be Wise Ranch's organic status, an end to the healthy, fresh produce the farm provides for me, my family, my friends, and others in the community; and a loss of productive organic farmland. I am currently a member of the Be Wise Ranch CSA, which provides fresh vegetables to me at a pick-up site in my neighborhood.

I am especially concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise Ranch and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve; and it supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and California Gnatcatcher. The Be Wise Ranch's use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts. I am concerned about the health of my family and the local ecosystem, and I really want to know what these impacts will be.

I also don't understand why the County is rushing this ordinance without proper environmental review. Eye gnats at the golf course this year are way down from a couple of years ago, so it seems like what Be Wise is doing is working. Why doesn't the County wait to see the results of what Be Wise is doing before enacting more regulations that hurt our local businesses?

Please consider the significant impacts to the environment and to the health of my family that will be created by your ordinance. Please do the right thing and work with Be Wise Ranch on a pesticide-free alternative to this ordinance.

Subject:	Eye Gnat Ordinance and Program - Negative Declaration
Date:	Wednesday, June 20, 2012 11:27:36 AM

Dear Mr. Miller,
I am writing to request that a full Environmental Impact Report (EIR) be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides practically no meaningful analysis of important environmental impacts that will be cause by the ordinance.

The proposed ordinance gives the County the authority to order the spraying of pesticides on the organic crops grown at Be Wise Ranch. This will mean the end of Be Wise Ranch's organic status, an end to the tasty, healthy, fresh, and local produce the farm provides for my family, and a loss of productive organic farmland. I am currently a member of the Be Wise Ranch CSA, which provides weekly boxes of fruits and vegetables at a pick-up location near my house. This ordinance will likely cause us to switch CSA's, resulting in the loss of income and demand for Be Wise Ranch.

I am especially concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document examines County policies, but the impact to Be Wise and the Valley are in the City of San Diego. The Be Wise Ranch's use of organic farming methods is in harmony with the protection of several local endangered and threatened species. Spraying pesticides would change the nature of farming in this area and allow pesticides to enter the food chain of the animals of the area. Your current environmental document provides no analysis of these impacts. I am concerned about the health of the local ecosystem and think it right that the public know what the specific impacts will be.

I also don't understand why the County is rushing this ordinance without a proper EIR. Eye gnats at the golf course this year are way down from a couple of years ago, so it seems like the current efforts of Be Wise Ranch are effectively working. Why cannot the County wait to see the results before enacting more regulations that hurt our local businesses?

Please consider the significant impacts to the environment and to the health of my family that will be created by your ordinance. Please do the right thing and work with Be Wise Ranch on a pesticide-free alternative to this ordinance.

Thank you,
Beth Kassebaum

Subject: Eye Gnat Ordinance and Program-Negative Declaration
Date: Wednesday, June 20, 2012 1:55:28 PM

Dear Mr. Miller,
I am writing to request that a full Environmental Impact Report be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance.

I have lived in Escondido for almost 9yrs and although the eye gnats are a very minor annoyance, just as flies are, they are not so bad that chemicals need to be sprayed. Also the fact that they are indigenous to this area, spraying chemicals to get rid of them is not the best solution.

California is already dealing with enough expensive clean up of runoff waters from farms using pesticides, this Eye Gnat Ordinance would only contribute to this problem. California is already in terrible financial troubles and this would only contribute to more financial problems! Also the side effects of Pesticides in the water and the environment will have a horrible effect on our Health. Many studies are proving this and have proven the effects on children and adults. This Ordinance would only contribute to this problem.

The purposed ordinance gives the County the authority to order the spraying of pesticides (Acephate, Malathion, Diflubenzuron,Cyromazine, and Cyfluthrin) on the organic crops grown at Be Wise Ranch. This would mean the end of Be Wise Ranch's organic status, and the end to the healthy, fresh produce the farm provides for me and my family, and a loss of productive organic farmland.

I am extremely concerned about the spraying of chemicals in a protected Agricultural preserve. The Eye Gnats need to be controlled with natural, non-toxic, methods, so as to protect the endangered and protected species that live in the San Pasqual Valley.

I have lived here for over 9yrs and the Eye Gnats are worse some years than others. However when I moved here, I knew that bugs and eye gnats would simply be a part of living near so much agriculture. It did not detour me from buying a house here and just dealing with the minor annoyance. However I can tell you, with extreme confidence, that I would not have bought a house close to a commercial farm that sprayed pesticides.

I know that Be Wise Ranch has been working hard to be good neighbors and finding a natural solution to controlling the Eye Gnat population. My husband and I walk behind the Sonata Neighborhood weekly and we frequent Kit Carson Park, and we have noticed that the Eye Gnats population is very low.

I am not sure as to why the County is rushing this ordinance without proper environmental review. It is simply just the right, and ethical, thing to do all the investigation needed to ensure the safety of everyone.

Re: Eye Gnat Ordinance Program – Negative Declaration

Dear Mr. Miller,

I am writing to request that a full Environmental Impact Report be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance gives the County the authority to order the spraying of pesticide (Acephate, Malathion, Diflubenzuron, Cyromazine, and Cyfluthrin) on the organic crops grown at Be Wise Ranch. This will mean the end of Be Wise Ranch's organic status, an end to the healthy, fresh produce the farm provides for me and my family, and a loss of productive organic farmland. I am currently a member of the Be Wise Ranch CSA, which provides fresh vegetables to me at a pick-up site in my neighborhood.

I am especially concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise Ranch and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve; and it supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo, and a California Gnatcatcher. The Be Wise Ranch's use of organic farming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area and allow pesticides to enter the food chain of the animals in the area. Your environmental document gives no analysis to these impacts. I'm concerned about the health of my family and the local ecosystem, and I really want to know that these impacts will be.

I also don't understand why the County is rushing this ordinance without proper environmental review. Eye gnats at the golf course this year are way down from a couple of years ago, so it seems like what Be Wise is doing is working. Why doesn't the County wait to see the results of what Be Wise is doing before enacting more regulations that hurt our local businesses?

Please consider the significant impacts to the environment and to the health of my family that will be created by your ordinance. Please do the right thing and work with Be Wise Ranch on a pesticide-free alternative to this ordinance.

To: Mr. Jack Miller, Department of Environmental Health
Re: Eye Gnat Ordinance and Program--Negative Declaration
From: Helen H. Larson, Current Member of Be Wise Ranch CSA

Dear Mr. Miller:

I am writing to request that a full Environmental Impact Report be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance.

The proposed ordinance gives the County the authority to order the spraying of pesticides (acephate, malathion, diflubenzuran, cyromazine and cyfluthrin) on the organic crops grown at Be Wise Ranch. This will mean the end of Be Wise Ranch's organic status; an end to the healthy, fresh produce the farm provides for my husband and I as well as several of my neighbors who are also current Be Wise Ranch CSA members; and a loss of productive organic farmland. I look forward to my bi-weekly Be Wise Ranch fresh vegetable delivery, which I pick up at a convenient neighborhood site. It is important to me not only for the quality organic produce I receive and rely on for a healthy lifestyle, but also for the opportunity to support local farmers who treat the land responsibly.

I am especially concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document discusses County policies, but the impacts to Be Wise Ranch and the San Pasqual Valley will occur in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve, supporting endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo and California Gnatcatcher. The Be Wise Ranch's use of organic faming methods is in harmony with the protection of these species, because it uses natural methods to grow crops and control pests. Spraying pesticides would change the nature of farming in this area and allow pesticides to enter the food chain of the animals in the area. Your environmental document does not analyze these impacts. I am concerned about the health of my family and the local ecosystems, so I am especially interested in knowing what these impacts will be.

I also don't understand why the County is rushing the ordinance without proper environmental review. Eye gnats at the golf course this year are considerably down from a couple of years ago, so it seems as if what Be Wise is doing is working. Why doesn't the County wait to see the results of what Be Wise is doing before enacting more regulations that hurt our local businesses and deny San Diegans the opportunity to purchase healthy, organic, local produce through a well run CSA?

Please consider the significant impacts to the environment and to the health of my family that will be created by your ordinance. Please do the right thing and work with BE Wise Ranch on a pesticide-free alternative to this ordinance.

Re: Eye Gnat Ordinance and Program
Negative Declaration

Dear Mr. Miller,

I am writing to request that a full Environmental Impact Report be prepared for the County's proposed Eye Gnat Ordinance and Program. The Negative Declaration that was prepared is inadequate and provides almost no meaningful analysis of important environmental impacts that will be caused by the ordinance.

Be Wise Ranch grows fresh organic food that me and my family have enjoyed for many years. We feel blessed to be a part of such a positive and wholesome endeavor and have informed and encouraged other San Diegans to eat naturally.

I am especially concerned that the spraying of pesticides will impact the plants and animals in the San Pasqual Valley. Your document looks a lot at County policies, but the impacts to Be Wise Ranch and the Valley are in the City of San Diego. The San Pasqual Valley is a City open space park and agricultural preserve; and it supports endangered and threatened species like the Arroyo Toad, the Least Bell's Vireo and California Gnatcatcher. The Be Wise Ranch's use of organic farming methods is in harmony with the protection of these species, because it used natural methods to grow crops and control pests. Spraying pesticides would change the natural methods of farming in this area and allow pesticides to enter the food chain of animals in the area. Your environmental document gives no analysis to these impacts. I am very concerned about the health of my family and the local ecosystem, and I really want to know what these impacts will be.

I also don't understand why the County is rushing this ordinance without proper environmental review. Eye gnats at the golf course this year are way down from a couple of years ago, so it seems like what Be Wise is doing is working. The County should wait to see the results of what Be Wise is doing before enacting more regulations that hurt our local businesses.

Please consider the significant impacts to the environment and to the health of my family that will be created by your ordinance. Please do the right thing and work with Be Wise Ranch on a pesticide-free alternative to this ordinance.
