Mindy,

I noticed that my edits were blending in with previous edits that were made every time I re-opened the file, even though Track Changes options are set to color by author. I would like to discuss your other points in addition to others that I have when you are available, although I can get rid of the comment concerning having them provide an exhibit for an alternative that was rejected. The alternative Los Robles site is presently used in Alternatives 5 through 8, which are candidates for possible approval. Alternative 7 was proposed as the Environmentally Preferred Alternative.

Thanks,
Rob

I can't tell what comments/changes are yours. Check your track changes options and change to "color by author". I have a couple of concerns on the Alt Chapter. I don't think the EIR should state whether or not the alternatives meet the project objectives. That is something we will do down the line. I don't think we need exhibits right now for any alternatives rejected. I don't think we need to consider and reject a wind alternative or nuclear energy alternative. I have a question about the alternative sites – are those being offered up as real options for the decision maker? I thought the alternative sites was more for land use comparison than CEQA comparison.

The PD chapter is fine.

Mindy

Ashley and Mindy,

Please review attached chapters 1 and 4 with my comments/edits and let me know if you would like to discuss before these chapters are sent to applicant. I have some points I would like to make you aware of before these are sent to the applicant with which we have a meeting set up for Friday to discuss.

Thanks,
Rob
