The Mental Health Services Act (MHSA), Proposition 63, was approved by California voters in November 2004 and became effective January 1, 2005. The MHSA provides funding for expansion of mental health services in California. As required by the law, the County of San Diego, through the Health and Human Services Agency (HHSA) Mental Health Services Division, has completed the MHSA Community Services and Supports (CSS) Program and Expenditure Plan. The MHSA CSS Plan outlines proposed MHSA funded programs and services to be provided locally for Fiscal Year 2005-06 through 2007-08. San Diego County’s initial annual allocation will be used to expand and enhance programs for unserved and underserved County residents who are eligible and in need of public mental health services. The County’s MHSA CSS Plan will be updated annually based on funding revisions and other program considerations.

The MHSA provides access to services for new or expanded programs, but may not replace or supplant existing programs. Expansion will target Seriously Emotionally Disturbed (SED) children and youth and Severely Mentally Ill. Seriously Emotionally Disturbed refers to children and youth with difficulty functioning in multiple life domains, such as school, home, etc. Serious mental illness (SMI) is a term defined by Federal regulations that generally applies to mental disorders that interfere with some area of social functioning.

In accordance with the MHSA CSS Vision Statement and Guiding Principles, services are designed to adhere to the following principles:

- Cultural and linguistic competency
- Promotion of resiliency in children and their families, and recovery/wellness for adults and their families
- Increased access to services, including timely access and more convenient geographic locations for services
- Services that are more effective, including evidence-based or best practices
- Reduced need for out-of-home and institutional care, maintaining clients in their communities
- Reduced stigma towards mental illness
- Consumer and Family participation and involvement
- Increased array and intensity of services
- Screening and treatment for persons with dual diagnoses
- Improved collaboration between mental health and other systems (education, law enforcement, child welfare, etc.)
- Services tailored to age-specific needs
- Address eligibility gaps by serving the uninsured and unserved

• Service providers and County staff | • Telemedicine  
Definitions for terms used in this document:

- **Full Service Partnership (FSP):** Provide all necessary services and supports to help clients achieve their mental health goals and treatment plan. FSP services comprehensively address client and family needs and “do whatever it takes” to meet those needs, including intensive services and supports and strong connections to community resources with a focus on resilience and recovery.

- **Severe Mental Illness (SMI):** A diagnosable mental disorder found in persons aged 18 years and older that is so long lasting and severe that it seriously interferes with a person’s ability to take part in major life activities.

- **Seriously Emotionally Disturbed (SED),** as defined in the California Welfare & Institutions Code Section 5600.3. A diagnosable mental disorder found in persons from birth to 18 years of age that is so severe and long lasting that it seriously interferes with functioning in family, school, community, or other major life activities.

- **Assertive Community Treatment (ACT):** a team-based approach to the provision of treatment, rehabilitation, and support services. ACT models of treatment are built around a self-contained multidisciplinary team that serves as the fixed point of responsibility for all patient care for a fixed group of patients. The treatment team typically provides all patient services using a highly integrated approach to care.

- **Underinsured:** A client is underinsured when they lack mental health coverage or have exhausted mental health insurance coverage, as evidenced by a denial letter.

- **Assertive outreach:** An approach for individuals who cannot or will not engage with traditional mental health services. A professional team works with clients in their own environment, be it a cafe, a park or in the street - wherever it is most needed and most effective. This flexibility allows people to get services who might otherwise not receive them and where they feel most comfortable.

- **Biopsychosocial Rehabilitation (BPSR):** Psychosocial rehabilitation is an array of services designed to help an individual to capitalize on personal strengths, to develop coping strategies and skills to deal with deficits, and to develop a supportive environment in which to function as independently as possible.

- **Transition Age Youth (TAY):** youth and young adults age 16-24.

- **Co-Occurring Disorders:** In this context, refers to a dual diagnosis of mental illness and alcohol or substance abuse.

- **SSI:** Supplemental Security Income

- **SSA:** Social Security Administration
