Discussion

Subject property is located in an area designated RL20. A Semi-Rural designation would be a spot designation. To resolve the spot designation would require approximately 650 acres of additional parcels to also be redesignated.

FB25 SUPPLEMENT – IMPLICATIONS OF AMENDING GENERAL PLAN

Property Specific Request	August 3 Adopted Designation	Level of Change Category
Semi-Rural 10	Rural Lands 20	Moderate*

*Note - The classification for this property has been changed to Moderate, as opposed to its Major classification in the March 16, 2011 staff report.

Rationale for Moderate Category Classification

The request for SR10 was not directed by the Board to be evaluated as part of the General Plan Update. The highest density for the site considered as part of the General Plan Update was one dwelling unit per twenty acres. Due to the slope in the area, the change in designation is not expected to increase the subdivision potential within the area changed. However, expansion of the Semi-Rural designation could put greater development pressure on some of the surrounding larger lots and could indirectly result in more development. Therefore, additional environmental documentation is recommended in order to comply with State law.

Guiding Principles/General Plan Changes Necessary to Support the Request

To ensure that the SR10 designation is assigned consistently, an additional 650 acres around the property would require a change in designation from RL20 to SR10 (see Figure 1). Because SR10 is slope dependent (slopes over 25% receive a one dwelling unit per 20 acre density) and the area contains mostly steep slopes, this change is not expected to result in additional subdivision potential.
