

Bait treatment with Malathion or Spinosad for Regulatory Pre-Harvest Treatment

For a 100 trees/acre grove @ 20' x 20' spacing approximately 60 trees will be sprayed:

X	X	X	X	X	X	X	X	X	X
X				X				X	X
X		X				X			X
X	X			X				X	X
X		X				X			X
X				X				X	X
X		X				X			X
X	X			X				X	X
X		X				X			X
X	X	X	X	X	X	X	X	X	X

All Perimeter trees sprayed.

Inside the grove, every other tree of every other row needs to be sprayed.

NOTE:

A large spray droplet size of 4000 to 6000 μ (4-6 mm) is recommended to optimize length of bait attractance. Fruit flies can detect the bait from several yards away. On ground applications spot or strip, spray several areas on the inner canopy of fruiting plants. Avoid weather conditions that could result in drift to nontarget areas. Direct spray application to bottoms of leaves inside the foliage canopy to reduce direct exposure to sun and rain.
