

## Australian tortoise beetle (*Trachymela sloanei*)

Rating: C

- ❑ Native to Australia, now widespread in S CA.
- ❑ Hosts: Red gum eucalyptus (*Eucalyptus camaldulensis*); Blue gum eucalyptus (*E. globulus*); and Rose gum eucalyptus (*E. grandis*).
- ❑ Field ID: Adults about 6-7 mm long, **brown with darker mottled spots**, hemispherical and flattened underneath. Legs with tarsomeres bilobed and covered ventrally with a thick set of bristles. Larvae **brown**, caterpillar-like, with black head and three small pairs of legs on thorax, and **sclerotized tubercles** along the body. Elliptical, orange eggs are laid in crevices or fissures in or under bark. Both adults and larvae feed on foliage during the night.
