The core of Contractor's primary Data Center Storage Architecture shall include the latest innovation of HPE 3PAR enterprise storage, which is designed for both cloud and traditional environments. The storage shall host operating system images, virtual snapshots, and application data. Contractor's architecture shall enable the server

image to be disassociated from the physical hardware, allowing the image to move from one physical server to another as needed for greater flexibility, better resource utilization, and built-in failover.

The table below summarizes the types of storage in place in the County as of the Contract Effective Date, the migration technologies in use for each, and the Transition strategy for each.

Storage Transition Summary

TIER	AS OF CED	FUTURE	TRANSITION APPROACH
1 (Data Center)	3PAR P10000 thick provisioned 15,000 RPM drives (Plano and Tulsa)	3PAR P20000 thick provisioned 10,000 RPM drives (Tulsa)	Replication, Peer Motion
1 (AT&T POP)	3PAR StoreServ 8400 2N Solid State drives	3PAR StoreServ 8400 2N Solid State drives	No change in Transition. Contractor shall review and re-address the architecture when this storage comes due for refresh.
2	3PAR P10000 thinly provisioned 15,000 RPM drives (Plano and Tulsa)	3PAR P20000 thinly provisioned 10,000 RPM drives (Tulsa)	Replication, Peer Motion
Archive	3PAR P10000 thinly provisioned 7,200 RPM drives (Tulsa)	3PAR P20000 thinly provisioned 7,200 RPM drives (Tulsa)	Replication, Peer Motion
DPC	3PAR 7200 with 10,000 RPM drives	3PAR 7200 with 10,000 RPM drives	No change in Transition. Contractor shall review and re-address the architecture when this storage comes due for refresh.
Immutable	EMC Centera SN4	EMC Centera Gen4LP	Replication
Email	Email is stored on the 3PAR in both Plano and Tulsa	Provided by the Microsoft Azure Government Cloud	E2E Complete™
Mainframe	HPE P9500 or equivalent in Plano (leveraged)	HPE P9500 or equivalent in Plano (leveraged)	None. Mainframe storage remains intact until the mainframe is decommissioned. At that time, the new midrange solution for those applications that have been deployed (under a separate project) using the appropriate tiers of SAN storage.
Direct-Attached	Disk drives installed on and dedicated to a physical server (types may vary)	Disk drives installed on and dedicated to a physical server (types may vary)	None specific to the storage environment. Direct attached storage shall be replaced, and its data migrated to new storage at the time its associated server is refreshed.

TIER	AS OF CED	FUTURE	TRANSITION APPROACH
Backups (Data Center)	HPE StoreOnce B6200 Virtual Tape Library (VTL)	HPE StoreOnce B6600 Virtual Tape Library (VTL)	Replication
Backups (DPC)	HPE StoreOnce D4212 at Rancho Bernardo MSL 4048 Tape Library	HPE StoreOnce D4212 at Rancho Bernardo Replicating to DR site in lieu of tape creation, for offsite storage	No Transition of VTL environment; only need to start replication to Colorado Springs Tape Libraries shall remain intact until all tapes are expired.

The 3PAR 20000 is the latest innovation in enterprise storage from HPE. Primary data (all 3PAR-based tiers) for applications with a 48-hour Recovery Time Objective (RTO) is replicated to the DR site. The primary immutable storage shall be located in the new production data center in Tulsa on refreshed EMC Centera storage and shall be replicated to a refreshed Centera at the DR site. Contractor shall refresh the 3PAR storage at the County's San Diego sites with like 3PAR storage to reduce the impact on operational processes and maintain the same level of performance. The backup solution shall meet the requirements by providing a refreshed StoreOnce VTL in Tulsa and a smaller refreshed StoreOnce in Rancho Bernardo, both replicating to the DR site for remote storage of backup data. The backup solution changes from the current solution by replicating all data center backup data to the DR site and by eliminating remote offsite storage of backup data on tapes for the Rancho Bernardo site in favor off replicating that data to the DR site as well.

Rationale

Contractor shall meet the increased capacity and transaction requirement of the consolidated data center environment and improve the storage architecture for primary SAN storage, Contractor shall transition to a refreshed, dedicated SAN with a 3PAR 20000 storage array.

Contractor shall provide improved storage performance and capacity at the point of refresh, without disruption to County business applications. Contractor's Transition shall ensure data redundancy between Plano and Tulsa is re-established in the Colorado Springs DR site prior to removal of the Plano environment.

- Deployment plan for resources and use of facilities

Depending on the type of storage and stage of the Transition, Contractor shall execute this project at the Tulsa and Plano data centers and Contractor's Rancho Bernardo site.

Contractor's storage Transition engineers shall come from Contractor's U.S. Public Sector delivery organization, a virtual team composed of U.S. citizens based in the Continental United States, working in close coordination with the local San Diego teams.

Contractor shall engage EMC Professional Services to install, configure, and migrate the existing immutable storage environment to the refreshed environment.

- Key methodologies and processes in solution

Contractor shall use a combination of host-based and storage-based replication to migrate data to the new storage and backup infrastructure without interruption to business processes and without data loss.

Transition Schedule and Tasks

Contractor shall adjust the schedule based on the final detailed plan.

Plan, Procure, and Engineer (Design). Contractor shall create a detailed plan and design for the new storage architecture and provide engineering documents to migrate data from the original storage solution in Plano and Tulsa to the new storage solution in Tulsa and Colorado Springs (DR). Contractor shall submit the design and plan deliverables and review them with the County. The County shall review and respond based on the agreed schedule. Contractor shall make any final revisions and create the detailed Bill of Materials from which Contractor shall procure the needed hardware, software, and services. All design deliverables shall be posted to the Service Portal as required.

Build New Storage and Backup Architecture, Enable Remote Replication. Once hardware is received, Contractor shall begin the build process. Contractor shall install the new SAN switches, storage, and VTL in Tulsa, configure and test the environment, and begin the process of replicating data from the current Plano array and VTL to the new Tulsa array and VTL. Contractor shall replicate from Plano to Tulsa throughout the Data Center Consolidation project, and replication shall be shut down for each application at the point during the consolidation when all application data has been verified and accepted on its Tulsa system.

Preparation of the DR environment shall also occur in parallel with the buildout at Tulsa. Once the DR environment is available, Contractor shall begin replication of SAN storage for applications that require DR with a 48-hour Recovery Time Objective (RTO), from the new Tulsa array to the DR site. Contractor shall replicate VTL data to the DR site for applications that require DR with a 72-hour RTO. Contractor shall begin replication of VTL data from Rancho Bernardo to the DR site for offsite storage.

Contractor shall engage EMC Professional Services to perform the Transition activities for Immutable Storage; this shall include refreshing both Centera units. The new units shall be located in Tulsa and in the Colorado Springs DR site. The new Tulsa Centera shall be configured to take over as the primary, and shall replicate to the Centera at the DR site. All existing Centera data shall be replicated to the new Tulsa Centera. The Centera refresh/migration shall not require downtime. Contractor shall reboot the Centera shortly after refresh/migration. The reboot process shall cause about one hour of downtime for the immutable storage service environment. Contractor shall coordinate this activity, like all Transition tasks, with the County via the Change Management process.

The rest of the Document Processing Center (DPC) storage and backup architecture shall be refreshed at the appropriate time post-Transition—there are no tasks required during the Transition period.

Migrate Local Data – SAN. Once the new SAN and Backup environment are fully configured and ready to support live servers, the various migrations described in the Consolidated and Single Data Center section shall begin. In addition to supporting these migrations, servers that are not migrating (that sit in Tulsa currently) shall also have their storage migrated to the new environment. There are no dependencies between the Data Center Consolidation and migration of the current Tulsa servers to the new storage—these two activities can occur in tandem.

To migrate the Tulsa environment to the new storage, Contractor shall first verify that all data is fully synchronized from the existing array. The SAN has redundant connectivity, and Contractor shall take advantage of this redundancy to move the environment from the current to the new SAN without requiring an outage to the systems or applications. Contractor shall move one set of connections from the current fabric to the new fabric, switch data access to the new fabric, then move the second set of connections to the new fabric. Contractor shall then enable replication of these volumes to the DR site.

In the new storage architecture, End-User data storage shall be provided directly from the new NAS-capable 3PAR, eliminating the need for NAS appliances. This change shall be transparent to the users.

As previously noted, Contractor and the County shall strive to migrate End-User data to OneDrive for Business in order to avoid having to migrate it to the new array as well. If the End-Users cannot commit to the four-month timeframe required, and the County does not wish to elongate the timeframe for the Data Center Framework

Transition, Contractor shall build out the End-User NAS shares by providing End-User data storage directly from the new NAS-capable 3PAR, eliminating the need for NAS appliances. This change shall be transparent to the users.

Following successful completion of the Storage Architecture Transition, Contractor shall securely destroy all data on the retired storage and backup systems and provide disposal of those items.

- Automated systems and tools involved in solution

Both the backup storage (VTL) and 3PAR shall have native replication capabilities built into and enabled by the storage array software. When host/system-based replication is used, DoubleTake V7 shall be the tool that migrates the data along with the server image. The following table lists storage-based tools and utilities.

Storage-Based Tools and Utilities

TOOL	DESCRIPTION AND USAGE
VTL Utilities	StoreOnce replication using Catalyst Replication of de-duplicated backup data reduces time and bandwidth on the dedicated replication link between Tulsa and the DR site. Backup data is available for DR more quickly, to reduce the chance of missing backup data in case of a DR event.
3PAR System Utilities	• 3PAR array-based replication allows background replication of storage from one array to another and shall aid the migration of service data from Plano to Tulsa. • 3PAR Storage Peer Motion allows Contractor to migrate storage data volumes off the old Tulsa 3PAR onto the new Tulsa 3PAR without any interruption in accessing the data.

Service Portal

- Description of solution to meet the requirements

Solution Summary

Contractor's End User Access (EUA) solution, integrated closely with Contractor's Service Management systems (Service Manager), shall provide a centralized Service Portal for all County users. Contractor's Service Portal shall provide access to self-service assistance options and multiple dashboards easily accessible by County users, Service Desk agents and Contractor support teams. It shall be mobile-enabled and easy to use.

During the Service Desk Transition, which shall occur in accordance with the Transition schedule, Contractor shall set up the core Service Portal functionality, including single sign-on, and link it to current data sources and source systems to integrate with the current repositories.

- Deployment plan for resources and use of facilities

Contractor shall assign a TPM for the Service Portal Transition Project. Contractor shall work with the County Technology Office (CTO) and its designees to assist in the design and testing and governance of the Service Portal. Contractor's Global Engineering and Technical Consulting (GETC) organization shall provide the engineering and customization work, in collaboration with the County's local engineering and support team, which manages the current portals. Contractor shall hold design sessions with the County at Contractor's Rancho Bernardo site or at a designated County location.

- Key methodologies and processes in solution

Contractor shall use infrastructure project management processes in delivery of the project.

Transition Schedule and Tasks

The following figure provides a sample view of the activities associated with the Service Portal Transition.

Design Customizations. The Portal configuration process shall be an Agile-style iterative process providing rapid feedback throughout. At the start of the project, Contractor shall collaborate with the County in several iterative workshops to design the Portal "look and feel" and to review initial functionality. The configuration process that takes place during the Transition period shall include items such as the following:

- County branding and "look-and-feel" elements on the front page (tiles, menus, links)
- Use of banners and splash pages
- Identification of End-User roles to be configured, to determine which groups have access to the various types of information
- Integration with Active Directory for Single Sign-on and configuration of End-User roles
- Integration with Service Manager and other tools
- How existing portals and data sources (ITSC, Doc Vault, and so forth) shall be presented—as links or tiles from the main page to the existing functioning applications.

Service Portal Implementation. During transition, Portal implementation has two parts: (1) the "look and feel" of the Portal and (2) integrating HPE Service Manager (SM) and other applications and data sources. Contractor shall begin with a sample portal and gather feedback from the County to determine the County's preferences. This shall be an iterative process, and once finalized and approved by the County, it shall become the Transition release design version.

With Portal design in hand, the next task shall be to connect the functionality of the document repositories and portal systems in use today to the appropriate tiles or links in the new Portal design. The integration of Service Manager with the Service Portal shall be part of Contractor's product integration. The functionality in the Portal that is embedded in Service Manager shall require minimal configuration. For Transition, there shall be no change in the application functionality of existing source applications that sit behind the Portal (those reached by pass-through links and that are not part of the Service Manager suite).

Testing. With the design complete and built, the Portal and attached functionality shall be tested. Contractor shall use the testing methods used for other infrastructure and applications releases, progressing from Systems Integration Test (SIT) through User Acceptance Test (UAT).

Content Development, Content Migration, and Training. In the same timeframe as the testing phases, Contractor shall create Service Desk related content, such as self-help content (videos, tip sheets, and so forth) and cross-functional content associated with the Service Desk available on the Portal. Contractor shall create Service Desk scripts and conduct training for the Service Desk agents to support the Service Portal, and work with the County to develop training and communications materials to introduce users to the new capabilities.

At the end of the process, Contractor shall present final documentation and the Portal itself for County review and response. Approval and successful completion of the activities above shall mark the end of the Service Desk Framework Transition. During the rest of the framework transitions, reports, updated process documentation, design documents, and other deliverables shall be posted to the Service Portal as these deliverables are completed.

- Automated systems and tools involved in solution

The Service Portal shall be customized using End-User Access (EUA) and other web development tools.

Contractor shall use Project and Portfolio Management Center (PPMC) as Contractor's Primary Project and Portfolio Management (PPM) tool suite. Contractor use PPMC for the development and ongoing management of project schedules.

9. TRANSFORMATION PROJECTS

9.1. Transformation Services

Contractor shall control transformational projects through Enterprise Architecture (EA) governance processes that incorporate CTO architecture principles, bricks, reference patterns, technology assessments, regular meetings and roadmaps to identify and align solutions suitable with County business and IT strategic direction. Contractor's CTA and Contractor's EA team shall continue to lead innovation days and technology seminars, focusing on improvements to keep the County moving forward. Contractor shall establish actionable roadmaps with measurable objectives to forecast and accommodate business changes in an agile orientation through effective governance and processes that:

- Use EA tools such as MEGA to create artifacts to identify, allocate, and measure transformational initiatives from an end-to-end perspective
- Establish a Transformational Maturity Model (TxMM) and analytical algorithms to analyze, predict, and recommend architectural and transformational initiatives
- Establish a Model Driven Enterprise in which service models are used to simulate and test emerging value chains and alternatives and accomplish prototyping and testing without impacting operational baselines
- Incorporate recommendations based on bi-modal organizational thinking.
- Blend bi-modal approaches to build County services from an "Outside-In" perspective.

Contractor shall leverage Contractor's knowledge of the County environment, business processes, and strategic objectives.

- Solution Summary and Rationale

The following section sets forth Contractor's approach to addressing the individual Transformation Projects, as listed in the table below. These projects shall be undertaken at the County's request, follow standard Service Request procedures, and shall include no less than what is described in this Transformation section.

Transformation Projects

TRANSFORMATION PROJECTS
Desktop Services
User Data Services
IT Application Portfolio Management Services
Network Transformation
Voice Services Transformation
Storage Architecture
E911
Identity Federated Services
Enterprise Information Management (EIM)
Comprehensive Applications Threat Analysis (CATA) Service

Desktop Services Transformation Project

- Solution Summary & Rationale – Description of solution to meet the requirements

At County's election, Contractor shall implement Presentation Virtualization (also known as Application Virtualization) driven by Citrix XenApp. Presentation Virtualization helps address the need by decoupling the legacy applications from the device in such a way that it minimizes the infrastructure and overall costs when compared to other virtualization approaches. In doing this, legacy applications no longer dictate the upgrade path for the rest of the County's environment and this minimizes the potential for impact if a particular application such as Kronos, Acclaim, or Accela causes problems with the latest O/S upgrade, or browser version. This, and all of the other virtualized apps, can remain for as long as the County continues to use the apps. Transformation of legacy apps can then proceed on their own timeline, rather than being tied to the remainder of the IT environment.

Each virtualization option, illustrated in the Compute Style section of the figure below, is generally related to a specific type of End-User's digital profile, and is typically based on their overall work related IT requirements (e.g. Device(s), Applications, Data, and Support). As the need for more computing power increases (i.e. CPU, Memory, graphics) at the End-User level, the more complex and costly the virtualization solution becomes.

Project Deliverables:

- Virtualization of up to 200 County applications
  - For up to 15,000 County Users

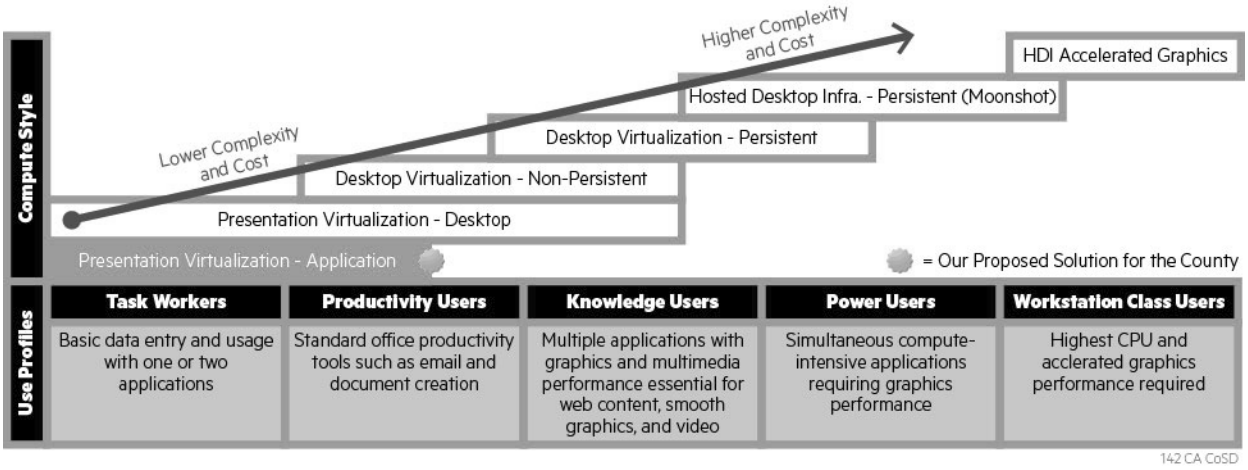
Contractor assumes High Concurrency of End-Users, meaning that for the most part, multiple users would be accessing the application(s) at the same time.

Client virtualization processing load is not only determined by the number of concurrent users, but by the complexity of their applications. The greater the application complexity, the lower the End-User density per server. As a result, application complexity is an important determinant of the number of concurrent users that can be supported on a given Client Virtualization Service (CVS) solution. Contractor classifies application complexity into three groups: light, medium, and complex and has assumed an application profile of medium complexity for the County. Medium Complexity is a standalone application that has minor dependencies on the OS, a prerequisite application, or large/complex data feeds. Most business-related common off-the-shelf applications are considered medium complexity. One notable exception is Microsoft Excel workbooks with embedded macros that can be considered complex in nature.

Specific deliverables include:

- CVS design assessment
- Detailed Presentation Virtualization solution design
- Implementation of the approved solution
- Standardized Contractor CVS Presentation Virtualization monthly reports.

Presentation Virtualization



The approach decouples the legacy applications from the device in a way which minimizes the infrastructure and overall costs compared to other virtualization approaches.

Rationale: Presentation Virtualization, provides all the required functionality and is significantly more cost-effective than other solutions, such as VDI (i.e. Desktop Virtualization, both non-persistent and persistent). Contractor recommends a periodic re-evaluation of Client Virtualization after a number of years, perhaps making the next step to VDI if the requirements change, and if it makes sense financially for the County. This would also be a time to review the current desktop build from the ground up, since VDI would require a much thinner client.

Contractor designed the solution for the County to use the same software stack and versions to deploy and to manage it throughout the life of the Agreement. The solution includes:

- Lakeside Software's SysTrack (for Assessment)
- Citrix: XenApp, XenServer, NetScaler
- Microsoft Server, SQL
- AppSense DesktopNOW Environment Manager.
- Liquidware Labs 'Stratusphere™ UX', Profile Unity and FlexApp
- HPE's Standard Reference Architecture
- Automated Tools – Automated systems and tools involved in solution

Contractor's analysis shows that typically 80 to 90 percent of the use cases can be met by presentation virtualization (typically Citrix XenApp). Presentation virtualization is the most cost effective way to deliver legacy applications when compared to other desktop virtualization technologies, including VMware solutions.

Desktop product upgrades or changes to the Applications Portfolio require significant time and engineering efforts to deploy. Presentation virtualization addresses this issue in that upgrade engineering and testing need only focus on one image: that of the server in the data center running the application that is being presented to the End-User. Virtualizing desktop applications removes a dependency on various desktop client hardware.

This helps prevent deployment delays and post-deployment problems while improving the ability to rapidly maintain desktop currency, at least for the many desktop applications that are virtualized.

Presentation virtualization shall also help maximize the performance of all the applications on the End-User device, whether virtualized or local.

Timing: The Presentation Virtualization project would follow Transition completion.

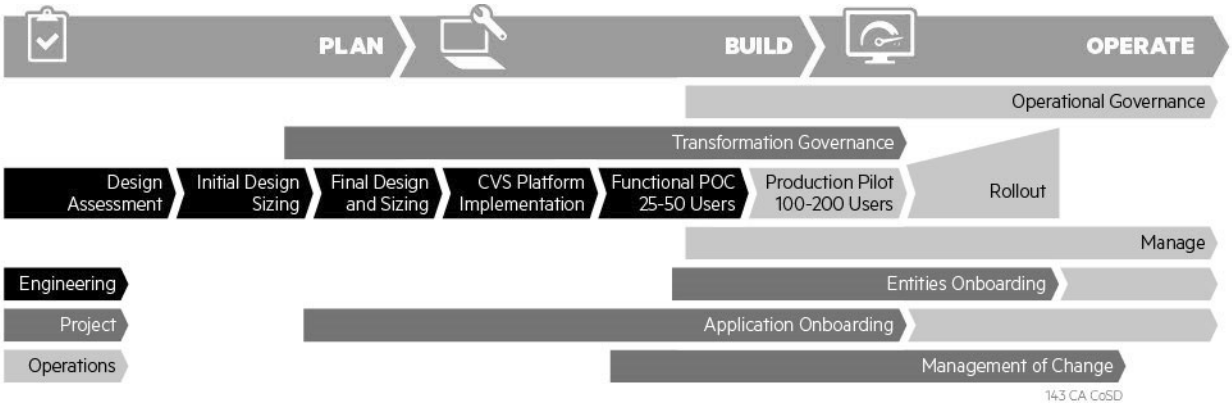
Risk Considerations: The introduction of client virtualization changes the way users perform their work and is therefore considered disruptive. Failed first attempts to introduce users to client virtualization result in roll-out delays, onboarding program rework and reintroduction to users which is costly, time consuming and can significantly erode the expected ROI. For a high degree of success, consider the following:

- **Entity onboarding** - Depending on the structure of the customer and according to the priorities defined during the assessment/analysis/design phase, Contractor recommends ramping up users by personas (groups of users). End-User personas could be a business unit, a department, a typical group of End-User profiles based on common desktop or application requirements. This involves identifying people, managing the persona grouping, desktop and application group entitlements and orchestrating this by means of Active Directory.
- **User onboarding** - Onboarding management and Client Virtualization Service (CVS) Management links the two onboarding subphases (Entity and User onboarding). Contractor proposes to migrate a category of virtualized users either by a specific persona and/or with relatively similar desktop/application requirements, and begin with less complex use cases then progress to the more complex. Subsequently, the scope will be increased until all users have been on-boarded successfully.

All onboarding activities are managed and controlled by an onboarding manager. Once users are successfully onboard in the production environment, they are managed like any other End-User with a CVS Service Manager. The CVS Service Manager monitors the overall performance of the virtualization service, coordinating performance review meetings and reports with both the customer and CVS operations.

Key dependencies and Milestones: Contractor's proposed deployment is comprised of two discrete parts, with the second part dependent upon completion of the first. These are CVS design assessment and implementation.

Representative Key Milestones for a Presentation Virtualization Deployment



Durations and dates of the major tasks are dependent upon the data gathered from the first step, the Design Assessment. After the Design Assessment, Contractor develops the final implementation timeline. Typical Presentation Virtualization projects of similar complexity to the County's take approximately five months.

- Deployment plan for resources and use of facilities

The following Contractor resources shall support this transformation project:

- The Contractor Workplace Transformation Consulting Team shall perform the CV Assessment
- The Contractor implementation team consists of
  - An overall Program Lead that is a subject matter expert (SME) in End-User Compute solutions.
  - Additional SMEs based on the overall solution scope and may include but is not limited to: project management, deployment and implementation planning, infrastructure specialists, End-User onboarding, training, Image Creation / Mgmt., application packaging and testing.

- A senior Transformation Manager who is responsible for the end-to-end project scope and stays in place until acceptance criteria have been met.
- Ongoing support for the Presentation Virtualization service shall be delivered by US-based delivery resources in line with the County's requirements.

- Methodology & Key Processes – Key methodologies and processes in solution

Contractor follows a proven methodology for CVS implementation that begins with the CVS Design Assessment, and continues through implementation and ongoing management as described below.

CVS Design Assessment: Contractor shall assess a sample of existing County users, looking at how they interact with their apps and analyze how the apps interact with users' devices. This helps the appropriate applications for each End-User type to be identified and drive the transition plan from the current mode of operation (CMO) to the desired future mode of operation (FMO). This assessment would take into consideration the following items:

- The desktops included would be a sample of End-User desktops for each type of user and IT usage
- A "Type of End-User" categorization, which refers to the type of applications users work with the intensity with which they use them as measured by CPU, RAM, disk IO, and network traffic
- A "Type of usage" categorization, which includes not only the PC, laptop, tablet, smartphone, or engineering workstation each End-User needs to do his/her job, but also any requirements for peripherals such as USB connected security dongles, portable data storage, cameras, meters, and other specialized devices. The goal is to identify the subset of IT usage that provides the majority of business value, identify a solution that meets the core requirements for providing that business value, and, after the core requirements are met, identify how to support all other candidates for virtualization for the optimum incremental cost.

There are three steps to the Design Assessment:

- Startup
  - Developing a statement of requirements to confirm that the engagement team understands the purpose of this engagement from the County's point-of-view
  - Developing a data collection plan that details how the engagement would collect the data needed for this assessment: The purpose of this plan is to enable County personnel responsible for change management and information security to approve the data collection.
- Execution
  - Meeting notes from a discussion of the County's intended future mode of operation (FMO) to confirm that engagement team understands the desired outcome
  - An assessment report that summarizes and analyzes the collected data: The engagement team would review this assessment with County stakeholders
- Closedown
  - A solution document that identifies the next steps that the County and engagement team have jointly recommended as a result of reviewing the assessment report.

This assessment validates the initial assumptions or identifies necessary modifications of the initial assumptions related to the original scope for this effort. This revised scope, based on the data that was gathered and analyzed, can affect the original solution and can have an impact on the overall solution components including; infrastructure, labor and software that is required for the solution.

CVS Implementation: At the start of the implementation phase of the project, Contractor holds a workshop to begin the planning process. Contractor would work collaboratively with the County to identify and agree upon key milestones and objectives, and Contractor would report status on these throughout the implementation.

Contractor has an established and proven transformation methodology that follows an industrialized "factory" approach. This methodology is organized in phases, as described in the following overview, with clear milestones

that are established by Contractor and the County after the Design Assessment. Contractor then creates a mutually agreed to transition plan with a detailed work breakdown structure, milestones and owners for execution.

The activities executed during the Implementation Phase of the project are:

- Design Sizing (Initial, Final)
  - Review of assessment data (End-User usage, application usage, network, End-User data, security)
  - Architecture Design and Infrastructure Implementation Plan established
- Infrastructure Set-up
  - Site preparation in the Tulsa data center and equipment provisioning. This environment can be implemented as an expansion to the County's MPC environment, or as a standalone virtual infrastructure under the HMCB, in order to integrate it with the County's hybrid cloud.
  - Server installation (HW and operating system)
  - Server integration in the County's Active Directory Domain
  - Server integration in the Tulsa data center and linkage to other infrastructure service (DNS, Storage, proxy, AV system, etc.)
  - Software implementation and configuration
- Functional Testing
  - Functional pilot or Proof of Concept (POC), is performed by a small group of IT users to verify compliance (to functional and technical requirements) and performance of the solution, and tune the configuration if necessary.
- Production Pilot
  - While the functional testing above is focused on IT users with client virtualization familiarity, this testing phase focuses on the general End-User population with the goal of testing both the technical solution and the roll-out plans and materials.
  - The Production pilot is performed with 100 to 200 selected users operating in the production environment. This pilot is for a fixed, short period of time. Test scripts are supplied to pilot users that identify the specific activities a participant is to perform. Contractor then examines the results for faults and provide feedback to the delivery team. Contractor corrects any faults, either by correcting the script, End-User performance of the script or infrastructure/software correction. Once corrections are in place, Contractor would re-run the script until all test scripts are successfully completed with no issues.
- Onboarding
  - During this phase, Contractor manages two kinds of onboarding (Entity and User, as mentioned above), each of which potentially influence the other. Workgroup/departmental similarity in application use, security, and the County's implementation priorities are the main factors in identifying a roll-out plan.
- Management of Change
  - Throughout the entire pilot and rollout period, the Transformation Manager would work with the implementation team and the operational support team to verify that the rollout plans are communicated, support is in place and End-User issues are addressed.

User Data Services Transformation Project

- Key Considerations and Potential Alternative Approaches

One of the steps to achieving a truly mobile workforce is to separate the data from the device. By doing so, County employees would be able to access the data necessary for their job from any number of devices, whether County-owned or through Bring Your Own Device (BYOD), or even via the Web. Knowing this, Contractor has formulated a number of key considerations. The solution must have the following characteristics:

- Be secure
- Allow End-User data to be decoupled from the End-User's device
- Take advantage of existing licensed solutions, tools, and services
- Allow various levels of access.

- Support collaboration both within the organization and external to it.
- Finally, County users span many different types of work, and they are multi-generational as well. Because of this, Contractor's solution balances a new way of interacting with one's data along with the need to maintain some form of familiarity.

- Description of solution

Contractor recommends taking full advantage of the technology the County already has using the County's Office 365 subscription and OneDrive for Business.

OneDrive for Business includes apps for smartphones, and allows mobile access through the mobile device management (MDM) solution.

As subscribers to the G3 level of Office 365, each End-User has 1TB of space on their OneDrive for Business account. Microsoft research shows that the vast majority of business users consume much less than 1TB Contractor's research on the County's historical use of file shares supports this. The entire size of County network shares is 78TB for all 15,000 users. Contractor would continue to work with Microsoft to facilitate optimal configurations.

End-Users can collaborate in several ways. Using OneDrive for Business, an End-User can share a document or series of documents from their own OneDrive for Business data space. The documents themselves are not delivered to the other End-User. Rather, a link to that document allows the designated End-User (and no one else, besides the owner) access to only the documents the owner wants to share.

Departments or divisions that want to have a shared space for their exclusive use can create "groups." Access to these groups is initially fully locked down. The owner of the group would have to explicitly invite members to use the shared space.

To fully realize the benefits of Office 365, users must make the move from using network file shares to storing their data on OneDrive for Business. Contractor proposes a project to migrate data on End-User network file shares to their OneDrive for Business location. The project steps at a high-level are:

- **Group Policies / Powershell Scripting.** The moves would be automated via Powershell scripts and actioned via group policies.
- **Search for invalid files/folders and cleanup.** OneDrive for Business has different requirements for filenames and folder structures than Windows. Contractor would need to locate the files that would not move in their original states.
- **Pilot.** Contractor would migrate a test group of users via automated processes.
- **Scheduling.** The migration would need to occur in waves. The project plan assumes a conservatively low size of 300 users per wave. As the waves progress, the size of subsequent waves might grow, thereby shortening the project.
- **Communication / Training.** OneDrive for Business is a paradigm shift from the traditional way of interacting with data files. Contractor would develop and deliver a communication plan as well as training for users who migrate to OneDrive.
- **Migration (waves).** The migration would occur in waves, with support throughout the entire project. At the end of the project, all County users would have completed a migration from a network share data to their OneDrive for Business account.

- Deployment plan for resources and use of facilities

For OneDrive for Business, all data is stored in Microsoft's Government Community Cloud.

Support for OneDrive for Business would come from the Service Desk. OneDrive for Business issues would take advantage of Contractor's enhanced support for Office 365 service, which uses Contractor support resources working on-site with Microsoft Office 365 support engineers.

- Methodology & Key Processes – Key methodologies and processes in solution

Contractor supports OneDrive for Business, using time-tested infrastructure processes of both HPE and Microsoft, which emphasize delivering measurable, repeatable, and efficient services to the End-User.

- Automated Tools – Automated systems and tools involved in solution

For the rollout and subsequent maintenance of the End-User device connectivity to OneDrive for Business, Contractor would use Group Policy through Microsoft System Center Configuration Manager (SCCM). This would allow a smooth rollout of the solution and would make subsequent revisions for new requirements easier as well.

- Qualifications and Experience – Background and experience in comparable environments

Internally, Contractor has transitioned ~300,000 users (HPE/HPI combined) to OneDrive for Business, using it for individual storage, collaboration, sharing, and device backup. Contractor would follow a similar process to successfully migrate the County to the OneDrive for Business solution.

This solution takes advantage of Contractor's 30-year history of partnership and collaboration where Contractor is the only Microsoft partner to have co-located shared support resources for Office 365 for the exclusive use of Contractor's customers.

IT Application Portfolio Management Services Transformation Project

- Key Considerations and Potential Alternative Approaches
-

IT Application Portfolio Management supports the continuous assessment of IT application portfolios to:

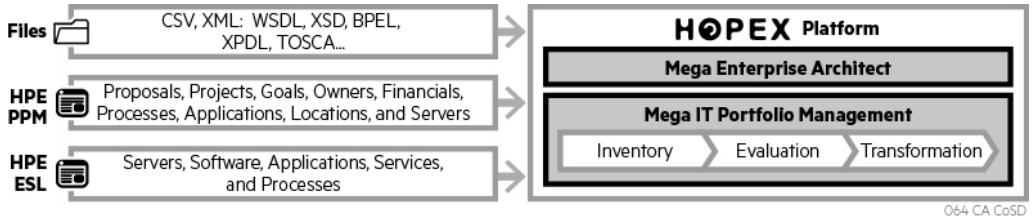
- Standardize portfolio management
- Align the IT application portfolio with business strategies
- Reduce deployment time
- Improve operational efficiencies
- Reduce costs and optimize value
- Increase visibility and understanding of the application portfolio

Key considerations for this transformation project require selecting a tool suitable for meeting the criteria listed below.

- Highly configurable
- Integrated environment
- Integration with source systems
- Speed of implementation
- Develop architecture disciplines to maximize in-place tools
- Business capability mapping
- Incorporation of application portfolio inventory
- Define cost elements
- Project-related information
- Rationalization alternatives/recommendations

- Solution Summary & Rationale – Description of solution to meet the requirements **Solution:** MEGA's HOPEX platform offers a comprehensive, well-rounded, feature-rich platform that provides an out-of-the-box metamodel that is highly configurable and has strong modeling capabilities. It also supports a wide range of industry frameworks. HOPEX combines industry-leading practices in enterprise architecture (EA), IT portfolio management (ITPM), business process analysis (BPA), and governance, risk, and compliance (GRC) into a single platform. This integrated solution gives an interactive view of all business and IT components to help drive business and IT transformation as shown in the figure below.

MEGA IT Portfolio Management



This fully integrated solution gives an interactive view of all business and IT components to help drive business and IT transformation.

Use of this tool facilitates creation of a complete inventory of IT assets, including applications, underlying technologies, and servers. Both out-of-the-box and custom reports provide information that makes it easy to evaluate IT assets using multi-criteria analysis such as costs, risks, technical efficiency, and business value, bringing visibility to the County's IT portfolio. This information also provides insight about dependencies and helps to identify redundancies of IT systems while reducing costs and complexity by eliminating systems with the same functionality. MEGA also provides the ability to create and compare multiple transformation scenarios that take into account various criteria to select the most relevant scenario for their business needs and constraints.

Upon approval from the County to proceed with this transformation project, Contractor and MEGA consultants would schedule a project planning and kickoff meeting. A topic of discussion for this meeting would be identification of County stakeholders that requested to participate in requirements gathering sessions to make certain the MEGA ITPM is configured correctly to meet the requirements.

Once in place, MEGA ITPM provides a three-step approach to managing IT assets:

1. **Inventory**: ITPM automates the collection of IT assets through a web-based interface. It provides metadata that can describe IT assets through various parameters such as functional scope, lifecycle, costs, and risks, providing a comprehensive view of the existing IT portfolio.

The inventory creation would use MEGA's APIs to interface with the ESL, partner systems, and other feeder systems (i.e., AppsManager) to make certain accurate data is in place. Once the inventory data is populated, IT assets can be viewed by business lines, business processes, business capabilities, organizational units, and technology vendors.

2. **Evaluation**: This step assesses IT assets through either out-of-the-box or custom criteria such as costs, risks, business value, and functional support. It provides detailed analysis through cost, dependency, and impact reports (i.e., brick's compliance). To rationalize the portfolio, it provides insight into which IT assets need to be removed, replaced, or maintained. Using business capability maps, IT assets are organized by functional areas, and changes are displayed over time, helping to make better-informed decisions.

Also during this step, costs and other project-related information are associated with the assets. The IT assets are evaluated by business value, functional support, and technical efficiency through the use of IT portfolio evaluation campaigns.

3. **Transformation**: In this step, the County can define a mix of initiatives or assumptions such as extending, replacing, or phasing out applications and technologies and compile them into different scenarios. The County can then assess and compare these scenarios through various criteria such as risk to quality, risk to feasibility, and costs and then identify the best transformation scenario to implement.

Rationale: Contractor has designed this project based on the recommendations of the MEGA ITPM tool product supplier, with the following characteristics and caveats:

- As requirements evolve, additional MEGA modules, such as Enterprise Architecture and Governance, may be required.
- Information from the Contractor's ESL, PPM, and AppsManager would be maintained by the source systems and would be updated by MEGA at scheduled times.
- MEGA out-of-the box functionality would be used for this effort.
- Contractor would install, configure, and manage MEGA modules.
- Licenses are included for MEGA HOPEX WorkBench and ITPM module for 30 contributors, 10 Portfolio Managers (GITMs) and 5 Advanced Users (CTO).

Timing: Contractor proposes to use the MEGA Quick Start program for implementation of MEGA ITPM. In the MEGA Quick Start program, Contractor would collaborate with MEGA consultants to conduct a project kickoff that includes the definition of project scope and schedule. Typical installation and configuration of a MEGA project takes about 45 days, including installing and configuring MEGA ITPM, conducting functional/deployment specifications workshops, designing supporting MEGA metamodels, testing the changes, reviewing and mapping the artifacts, uploading the artifacts, establishing portfolios and hierarchies, and training supervisors and users.

Risk considerations: Potential risks that could affect the project include the following:

- Automating APIs and metamodels shall require configuration and potential connector development to accommodate integration with external systems of record: AppsManager, PPM, and HPE's ESL.

Key Dependencies and Milestones: Following are the key milestones and dependencies for the project:

- Kickoff: Receipt of County approval to begin would initiate kickoff of the engagement. After the kickoff session, Contractor would define the project scope and develop the schedule.
- Installation: The next milestone is installation of MEGA on the established infrastructure. This is dependent on the availability of SQL Server licenses and availability of the infrastructure.
- Specification: The next milestone is conducting and delivering the functional/deployment specifications workshop. Part of this deliverable would be demonstration of MEGA ITPM capabilities. Contractor would prepare an ITPM customer guide. The deliverable would include the functional/deployment specifications and customer guide. This task is dependent on availability of the designated County users who would provide the requirements for use of the MEGA system.
- Configuration: The next milestone is reached when the configuration and customization of MEGA is completed using the functional/deployment specification as defined above. During this step, the supporting MEGA metamodels would be designed, built, tested, and implemented.
- Artifacts: The next milestone is reached when all artifacts are uploaded in MEGA after reviewing and mapping the ITPM specific artifacts. The portfolios and hierarchies would also be established during this cycle. At this time Contractor performs acceptance testing to verify that it is set up correctly.

- Training: This milestone would be followed by a training session for users.

- Deployment plan for resources and use of facilities

Resources: For implementation of the MEGA ITPM toolset, Contractor would use MEGA's Quick Start program. MEGA's experienced consultants would work with Contractor to install, configure, and set up the MEGA environment. MEGA consultants and Contractor staff would work with County staff to demonstrate MEGA HOPEX functionality, determine functional and deployment needs, and document the supporting requirements. To minimize the County's time investment while maximizing impact, Contractor would conduct information gathering workshops through a series of focused discussions with stakeholders to make certain that Contractor has an accurate understanding of the County's needs. At the end of this effort, Contractor would deliver a functional deployment specification and an End-User guide. Contractor would then help design MEGA metamodels and make the configuration changes to interface with PPM, ESL and AppsManager systems. Contractor would then upload the artifacts and establish portfolios and hierarchies in accordance with the County's needs. Contractor's team would also provide training for the End-User groups who would use MEGA ITPM toolset.

The Contractor team supporting the MEGA toolset would work closely with CTO, and supporting staff to provide a collaborative working environment. This would enable direct communication and provide the County with the ability to reach out directly to Contractor personnel for quick resolution of any issues.

Facility: Contractor would locate the MEGA infrastructure in the Tulsa data center.

- Key methodologies and processes in solution

Contractor would perform the installation, configuration, and management of the MEGA ITPM toolset using ITIL v3 processes, consistent with the established processes for managing County assets. Contractor would use Contractor's system development life cycle (SDLC) processes in collaboration with the County staff to configure and make necessary updates to MEGA application programming interfaces (APIs) to align with automated systems and tools involved in Contractor's solution.

The MEGA ITPM tool provides all required functionality to meet the County's requirements, and it would integrate with AppsManager, PPM and the ESL solution.

Network Transformation Project

- Description of solution to meet the requirements

The Contractor's approach to network transformation leverages the existing investment that the County has made in its infrastructure, building on the robust, geo-redundant network core to enable new service adoption while Contractor migrates from legacy technology. This foundation positions the County to make smart, progressive choices in the way services are delivered to its employees and constituents, regardless of their location or access device. As the County network continues to evolve, Contractor's ability to provide ubiquitous connectivity with seamless accessibility, security, and performance would provide the benchmark of Contractor's framework.

Cloud Enablement via NetBond

As cloud-based services mature and become more viable for Government use, Contractor is positioning the County's network perimeter to enable seamless, secure, and performance-assured integration for cloud providers. Contractor shall cause AT&T to build a geo-redundant core network foundation to enable this shift in services, leveraging AT&T's virtual private network (AVPN) MPLS-based transport. This foundation is to be deployed as a Transformation activity in preparation for future services.

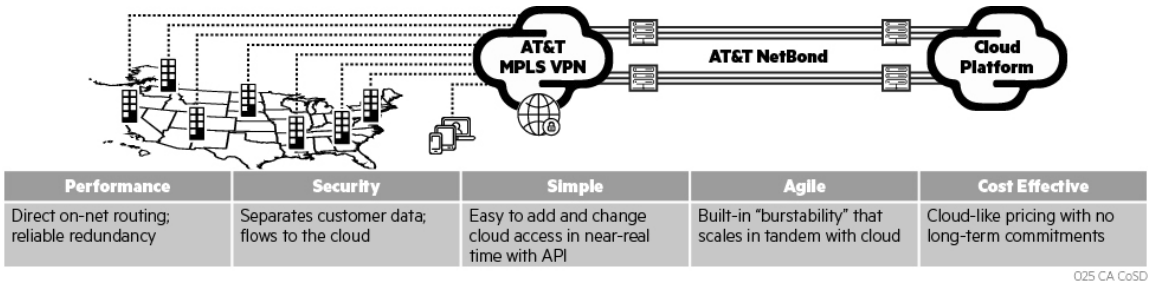
Building on Contractor's AVPN transport, AT&T's optional NetBond service would be made available on a per cloud provider basis, enabling secure, performance-assured cloud-to-enterprise peering, in turn isolating these

important services away from the unsecure and potentially congestion-prone Internet Service Provider (ISP) links. The NetBond service is represented as a proposed new RU, where the County can select peering relationships with designated cloud providers on a bandwidth scaling basis. Cloud provider side costs may apply and would be priced as new RUs when establishing a new cloud provider contract, as requested by the County.

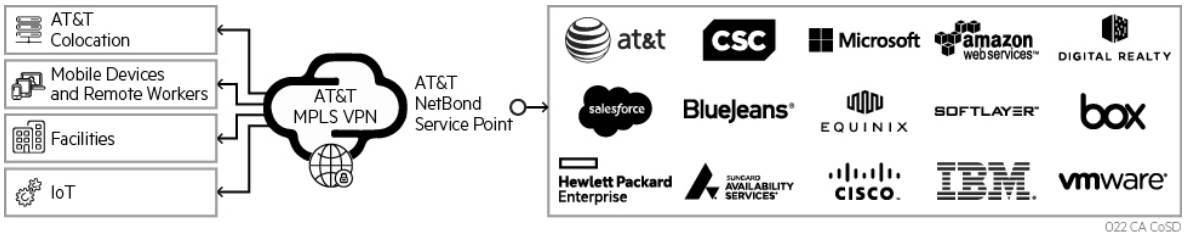
AT&T's NetBond service would terminate at the County's edge, providing a geo-redundant presence in line with stated objectives; coupled with the inherent redundancy of the Global AT&T Multiprotocol Label Switching (MPLS) infrastructure, NetBond would provide the highest available level of resiliency, to enable the continuity of the County presence and its ability to conduct business.

In support of the transition of Exchange to the O365 cloud, AT&T would enable Netbond functionality in a peering arrangement with Microsoft's ExpressRoute product. This would be designed and implemented in line with the specified transition plan and is priced as a separate resource unit that combines the NetBond RU with the ExpressRoute costs to complete the connectivity model for the service.

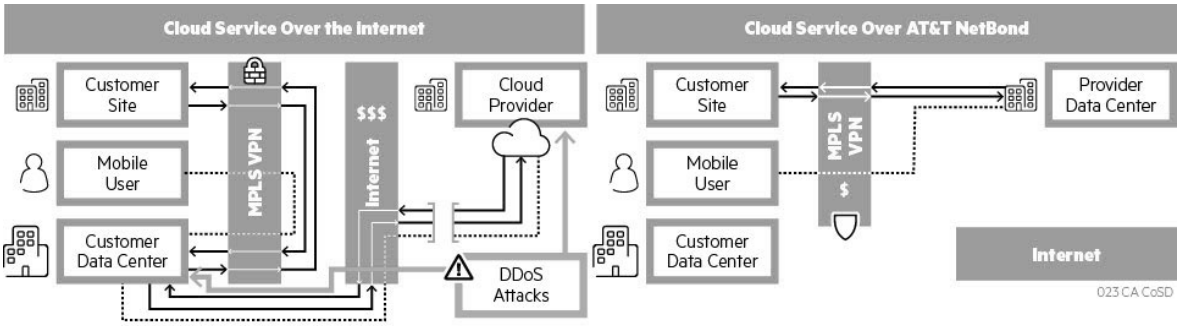
AT&T NetBond Benefits



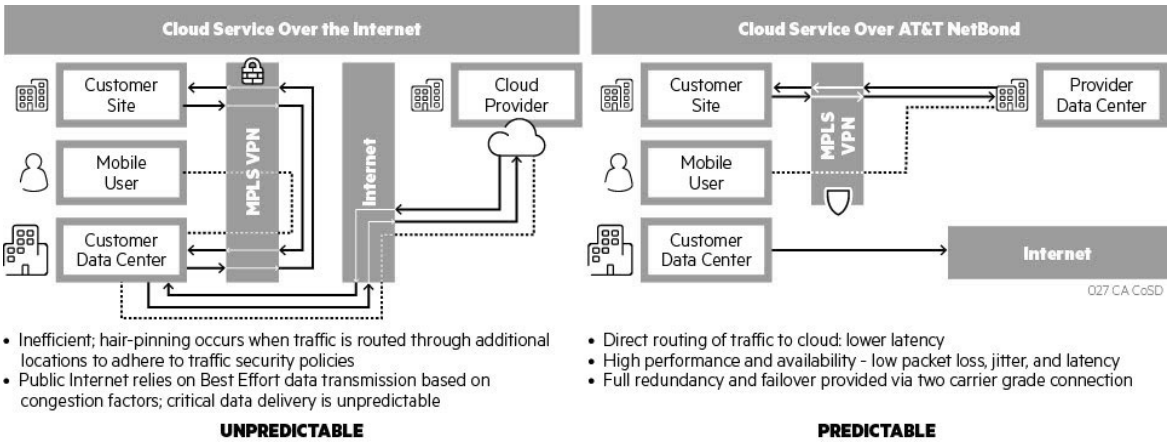
Well-known cloud services partners that AT&T currently supports via NetBond.



Security Benefits of AT&T NetBond



Performance Benefits of AT&T NetBond

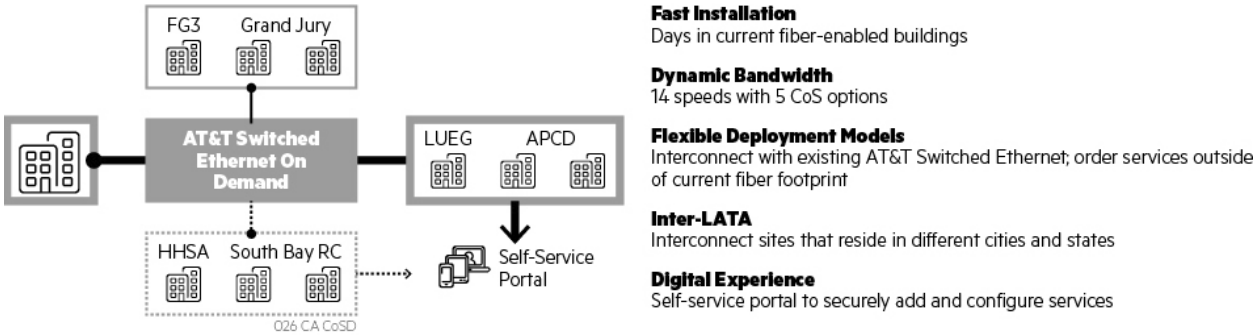


Migration to AT&T Switched Ethernet with Network on Demand

Contractor's transformation plan for the County's wide area network (WAN) includes migration of all 115 OPT-E-MAN Metro Ethernet connected sites to the AT&T Switched Ethernet with Network on Demand (ASE w/NOD). Additionally, all data T1 sites shall be evaluated for migration and where available without significant special construction costs, sites shall be migrated to this new service. Special construction costs apply when fiber based transport is unavailable in the "last mile" from an underground or above ground exchange nearby a given site. The fiber install from these local exchanges is included in normal construction, but installing extended runs to new areas with no local exchange would be grounds for special construction. During the design and provisioning process, Contractor shall provide a list of T1 sites to the County with special construction costs for consideration. It is believed that 80-90% of the existing T1 sites are eligible for migration to this new service.

Using software defined networking (SDN) capabilities inherent to ASE w/NOD, bandwidth can be adjusted within 15 minutes from as low as 2 MB to as high as 1 GB. Coupled with real-time capacity management capabilities, this new service would allow rapid response to County bandwidth needs as well as enable the planning of additional throughput for scheduled events. Additionally, the deployment of fiber-based services would further improve consistency, availability, and performance of the remote sites across the network. The figure below lists benefits of AT&T Switched Ethernet On-Demand Service.

Figure 3. AT&T Switched Ethernet On-Demand Service Benefits



ASE w/ NoD Site Redundancy

Contractor has evaluated enabling additional remote site redundancy at key County facilities. The facilities listed below are historically some of the most important to County business functions and are the recommended sites for this enhanced service. It's important to note that the site list includes two sites that are currently on the Gigabit backbone (Sites 18 & 33), but are planned for migration to ASE w/ Network on Demand as a part of the Network Transformation, Backbone Consolidation project (see next section).

Site #	Site Name	Street Address	City	Zip Code
13	Children's Service Center (Adoptions Center)	6950 Levant St.	San Diego	92111
18	MTS Trolley Tower (Mills Building)	1255 Imperial Ave.	San Diego	92113
19	Lemon Grove District Office / FRC	7065 Broadway	Lemon Grove	91945
33	Health Services Complex	3851 Rosecrans St.	San Diego	92110
35	Animal Control-Central Shelter	5480 Gaines St.	San Diego	92110
55	Oceanside Service Center	1315 Union Plaza Ct.	Oceanside	92054
56	A. B & Jessie Polinsky Children's Center	9400 Ruffin Ct.	San Diego	92123
57	Child Welfare Services - Central	4990 Viewridge Ave.	San Diego	92123
80	Assessor/Recorder/Clerk Kearny Mesa	9225 Clairemont Mesa Blvd.	San Diego	92123
81	Assessor/Recorder/Clerk San Marcos	141 E. Carmel St., Bldg. 1	San Marcos	92078
95	HHSA FRC Center South Bay	401 Mile of Cars	National City	91950
190	HHSA FRC Center Escondido	649 W. Mission Ave.	Escondido	92025
205	Edgemoor Geriatric Hospital	655 Park Center Dr.	Santee	92071
260	Assessor's Revenue and Recovery	590 3rd Ave.	Chula Vista	91910
290	Access 211	8765 Fletcher Pkwy.	La Mesa	91942

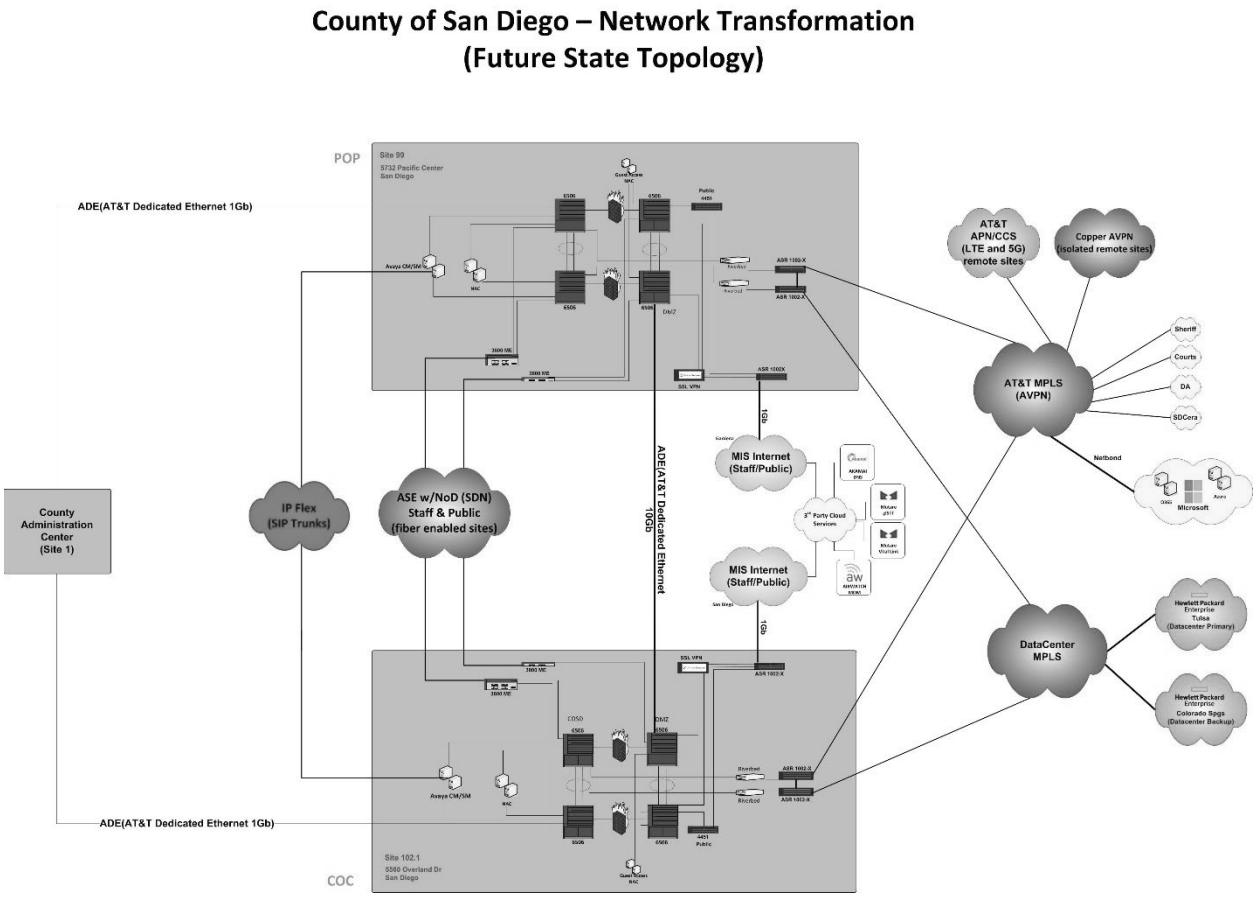
The standard Network on Demand design provides geo-redundant host circuits, however from the last Central Office, this diversity is reduced to a single fiber pathway to the remote site. The redundancy design involves provisioning a redundant circuit with diverse fiber path and infrastructure from an alternate central office. This secondary pathway extends to the remote site, entering via redundant entrance facilities. The circuits shall be ordered and built as stand-alone circuits and configured with minimal bandwidth, which leverages the Network on Demand near real time bandwidth provisioning capability to provide fully functional bandwidth in the event of a failure on the primary path.

Contractor shall provide the completion of requisite core transport design work which shall result in a per site construction cost for County consideration. This process shall also allow the County to evaluate cost of diverse entrance facilities. These one-time costs are responsibility of the County. The County may evaluate these costs and select sites that have the greatest benefit without being cost prohibitive. As these sites are selected, and one-time costs agreed, Contractor shall execute an order for the service. This offer shall remain valid over the first four (4) years of the contract term. County requests to add sites not previously listed shall be handled on a case by case basis.

Backbone Consolidation

AT&T also adheres to the concept of keeping it simple where possible. While some network solutions can be incredibly complex, the core architecture does not have to be. By reducing the number of core backbone sites (GigaMAN Connected), AT&T can simplify the network architecture while providing redundancy, sufficient bandwidth, and throughput for County business. This allows Contractor to right-size and tailor services in accordance with the needs of a location without the costs, equipment, and infrastructure inefficiencies that come with unnecessary capacity. The net result is standardization of transport connectivity across all County sites, providing the shortest path to services, in turn leading to predictable performance, improved security, reduced maintenance cost, and lower mean time to recovery (MTTR) in the event of an incident. The figure below illustrates the future-state network topology.

County of San Diego Network Transformation (Future State Topology)



Session Initiation Protocol (SIP) Core Expansion

Contractor's network team has already begun the process of transformation within the County to phase out Time Division Multiplexing (TDMbased voice connectivity in favor of Session Initiation Protocol (SIP)-based solutions. Contractor's SIP infrastructure is provided via two geo-redundant AT&T IP flex trunks that are dynamically available and sized to take a full production load of traffic in the event of a circuit failure. Currently, the SIP trunks are configured to support local outbound calling. Expanding on this foundation, Contractor plan to increase the capacity of these trunks to enable support of all Avaya core network controlled outbound calls, including local, long distance, and toll services. This expansion would eliminate outbound usage-based costs for these legacy resources units. Inbound calls would be migrated to SIP including Toll Free 800 services, which would substantially reduce the usage charges associated with Toll Free 800 services. Over the life of the Agreement, Contractor would continually evaluate the capabilities of these trunks to support additional voice and unified communication services.

Future T1 Migration for Non-ASE with Network on Demand Sites

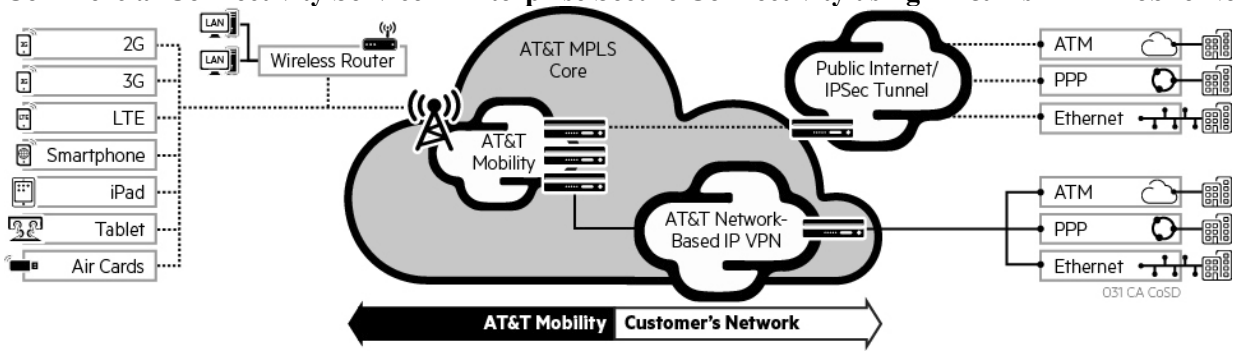
As identified earlier, T1 transport utilizing legacy TDM based connectivity, would be targeted for migration to ASE with NOD where possible. However, where fiber is not available without prohibitive construction cost, AT&T evaluates products such as copper-based AVPN that provides transport redundancy to the geo-redundant core. This service layers an AVPN service over a T1 copper circuit, providing AVPN cloud connectivity from a central office, creating pathway redundancy across the LAN. This solution continues to leverage the copper based wireline infrastructure that supports the site today, with a single point of failure still remaining on the "last mile"

of transport to the remote site. As Contractor evaluates its options for eliminating T1 sites these factors may drive Contractor to pursue other alternatives.

Such an alternative could leverage the AT&T mobility network infrastructure using Commercial Connectivity Services (CCS) over a private Access Point Network (APN) service. Using LTE/4G (or potentially even 5G connectivity as it is brought to market), this service allows for secure connectivity through Contractor's mobility infrastructure, to connect back into the County network's AVPN edge at the County Operations Center and AT&T POP. While this solution eliminates the "last mile" single point of failure, early deployments using the LTE network would need testing to fully assess the impact of potential latency issues. As Contractor looks further down the industry roadmap, advancements promised in 5G connectivity have the potential of providing a high speed, low latency service that could meet enterprise requirements.

Through a collaborative evaluation of these options, Contractor, in conjunction with the County, would develop a roadmap to migrate all T1 based technology to connectivity options which are in line with Contractor's geo-redundant core infrastructure. The figure below illustrates this concept.

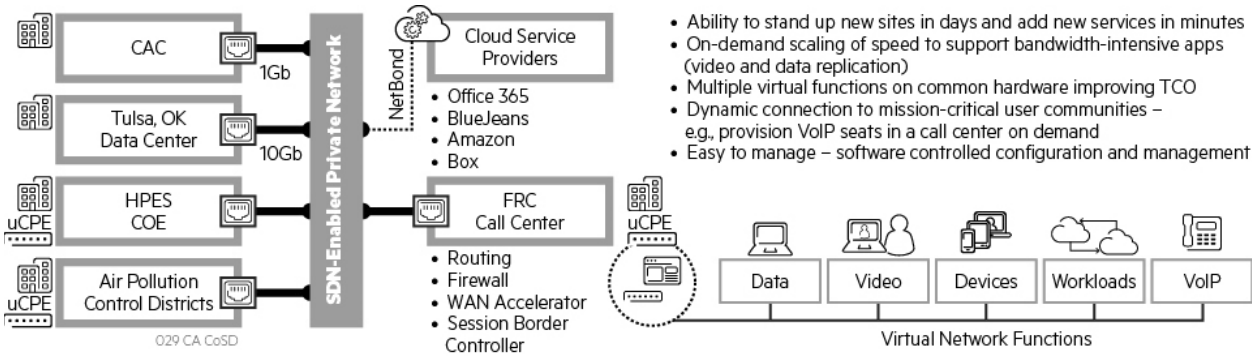
Commercial Connectivity Service – Enterprise Secure Connectivity using AT&T's LTE Mobile Network



Future Evolution of Software-Defined Networking-Based Services

During the life of the Agreement, AT&T would continually expand and improve its software-defined network (SDN) capabilities, where the local AT&T County network team would evaluate and recommend upgrades as they become viable and align with existing services. Midway through the Agreement term, Contractor anticipates key technical advances that could fundamentally affect the topology of the County network and the capital investment strategy. Building on the SDN foundation, new universal devices (Universal Customer Premises Equipment, or uCPE) could potentially represent a paradigm shift in how networks are provisioned and managed. Shifting capital cost to the provider, the County can take advantage of Network Function Virtualization, which provides services such as integrated LTE broadband backup, firewall, WAN optimization, and voice gateway functionality all on the same carrier managed device. Using Contractor's collaborative approach, Contractor would conduct production pilots, evaluate feasibility, determine business value, and make recommendations through the established Enterprise Architecture review process. The figure below illustrates the AT&T SDN enabled enterprise of the future.

AT&T SDN-Enabled Enterprise of the Future



As the needs of the County continue to evolve, Contractor would continue to collaborate with business unit and CTO staff and Contractor's cross-framework partners to understand the challenges and develop best-in-class solutions. Contractor believes that transformation is an iterative process, requiring strategic planning and vision coupled with practical approaches that ultimately make certain that functionality is provided to the customer in the most expedient way possible. Technologies identified in this solution are just the beginning of a contract lifecycle of change, but would provide a foundation for growth as Contractor moves forward as a trusted advisor to the County.

- Deployment plan for resources and use of facilities

The local, dedicated AT&T team—fully embedded in the solution lifecycle—provides all design, implementation, support, and monitoring of transformation activities. Technical personnel assigned to the County of San Diego and dedicated to the program are located at Contractor's Trade Street facility to maintain a fairly central base from which to service the County. All solutions leverage the AT&T Internet Data Center (IDC) in San Diego County as well as the County's Operations Center to hold the core hardware components and facilitate circuit terminations. Working from the local Trade Street facility, Contractor's SMEs would monitor, support, and maintain the remote services.

- Key methodologies and processes in solution

The local, dedicated AT&T team views transformation as an ongoing activity. By constantly monitoring what is currently available technology as well as keeping abreast emerging technology, Contractor is able to deliver concepts and ideas for consideration by the CTO. Contractor has already begun the task of installing ASE w/NOD at all new County sites; this task was preceded by the installation of two new host circuits, one each at the point of presence (POP) and County Operations Center (COC). Contractor would leverage this existing infrastructure as Contractor begins migration to ASE from the existing OPT-E-MAN connected county sites, with Contractor's project management staff coordinating the implementation(s). Work is also currently underway to consolidate the core GigaMAN backbone sites, with high-level architecture design already underway. The expectation is that the first two sites would be transitioned by approximately the end of the year.

Discussions with the County have already begun and are continuing related to cloud providers and the benefits that NetBond can provide. AT&T remains dedicated, so when and if the County decides this service is necessary—based on migration of various components to cloud providers and infrastructure—the local, dedicated AT&T team would bring in any resources needed to facilitate the entire process. This process would span final design and associated documentation, ordering of infrastructure components like circuits, and coordination with AT&T core services as well as cloud providers to provide a seamless transition. The local, dedicated AT&T team would continue to leverage all resources available within Contractor's local organizations (Engineering, Project Management, and Architecture) to provide all aspects of transition and transformation activities.

- Automated systems and tools involved in solution

The local, dedicated AT&T team uses a myriad of tools and automated systems to perform implementations and support operations and performance. These tools include Cisco Prime Infrastructure, the CA Spectrum suite, SNTC (Smart Net Total Care), Riverbed Cascade, and Panorama. Cisco Prime Infrastructure is used to centrally manage configuration as well as gather data related to changes, performance, inventory, and licensing. The CA Spectrum suite—which includes Spectrum and E-health—is used to monitor availability, performance, and inventory management; it also provides trending and analysis for traffic utilization. SNTC is a Cisco product used to manage support services as well as automate the process of gathering data for direct vendor support in the event of a problem. Riverbed Cascade is a deep packet analysis tool that uses NetFlow data, which is gathered passively and directed to it in an automated manner as well as active packet capture and analysis. Finally, Panorama is a Palo Alto Networks product that provides a central repository for logging, inventory of the Palo Alto components, licensing management, software image management, and analysis capability for the County security infrastructure.

Voice Services Transformation Project

- – Description of solution to meet the requirements

The solutions highlighted in this section include transformation initiatives planned for implementation early in the term as well evolutionary technologies that may arise later in the Agreement life cycle. Relative to statements focused on technology not yet available for deployment, AT&T would roadmap and evaluate the feasibility of these solutions during the Agreement life cycle. If identified as a viable replacement to existing services, AT&T would make recommendations for upgrades in line with refresh obligations or as otherwise agreed with the County.

AT&T's approach to transforming voice services focuses on enabling new features and capabilities used by both the End-Users and County constituents built on a foundation that is redundant, resilient, and highly available. The ultimate goal in developing the next architecture for voice services is to harden the core and edge locations and to offer robust and feature-rich UC for each and every End-User of enterprise voice services.

Core Network Transformation

Transformation activities at the Avaya Voice Core would migrate from any remaining traditional PBX architecture and provide an infrastructure reduction resulting in lower power consumption and reduced trouble tickets while minimizing disruption to users. This approach provides migration from the existing G650 Port carriers or other gateways, and upgrades them to G450 or G430 gateways. This transition would eliminate legacy IP Server Interface (IPSI) boards, mitigating risk by replacing end-of-life equipment and reducing the physical footprint in the data centers. This transition would take place at the Point of Presence POP as well as the County Operations Center (COC). In addition, the "TN" modules would be replaced with Media Modules in the G450s or G430s, and the digital signal processor (DSP) resources would be replaced with local media resources at the gateway as well as in the Avaya media servers.

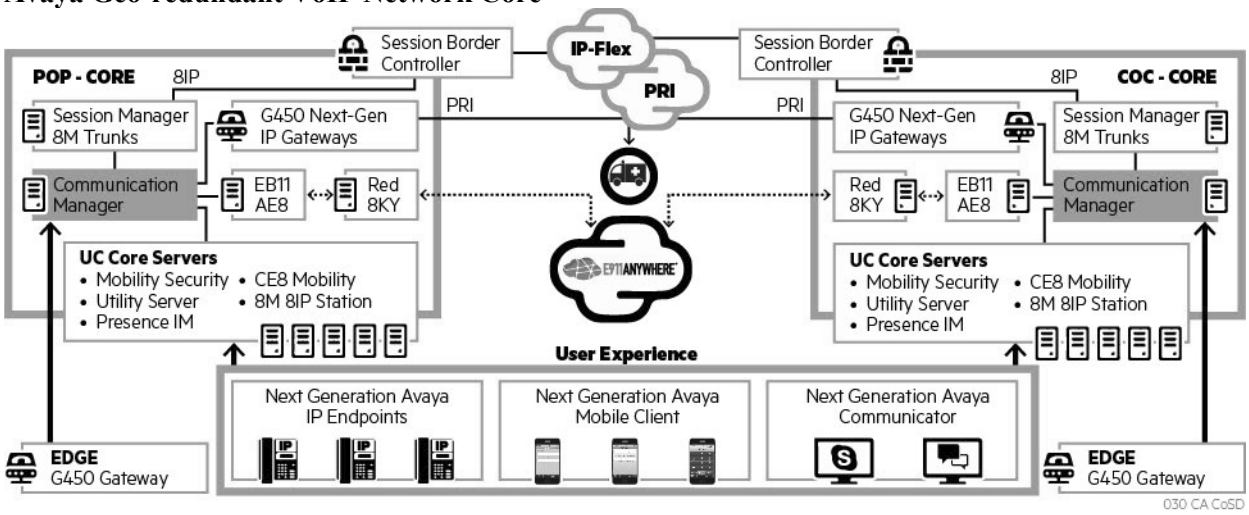
This highly available architecture would provide seamless failover between the COC and POP, with no single point of failure of the Core VoIP gateways. The architecture not only would provide centralized management between the two "Core" locations—POP and COC—but would also provide access to the remote locations, or locally survivable processor (LSP) sites.

Additional implementations would take place at the Core that would serve as the foundation for offering new and enhanced UC capabilities for End-Users, such as external mobile SIP endpoints on County- managed devices. This would be made possible by the Avaya Client Enablement Server as well as the Avaya Presence service for telephony presence on a mobile device.

Geo-redundant Voicemail

Contractor's solution includes the advancement and transformation of enterprise voicemail services, which replace the current, single-site-based voice messaging platform located at the AT&T POP, with a fault-tolerant, geo-redundant voice messaging platform located at the AT&T POP and COC. The new platform provides the ability for a standardized voicemail experience across all of the County's Avaya enterprise voice locations. This geo-redundant design incorporates live replication of the voicemail database, messages, and greetings between the AVST Call Servers at the AT&T POP and County Operations Center using AVST's never fail technology. The following figure illustrates the Avaya Geo-redundant VoIP Network Core. This solution is expected to be in place as the next agreement is signed. Using a roadmap strategy, AT&T Centrex users would be migrated over time to this platform, as specified below in the paragraph highlighting AT&T's Centrex migration roadmap.

Avaya Geo-redundant VoIP Network Core



The new platform provides the ability for a standardized voicemail experience across all of the County's Avaya enterprise voice locations.

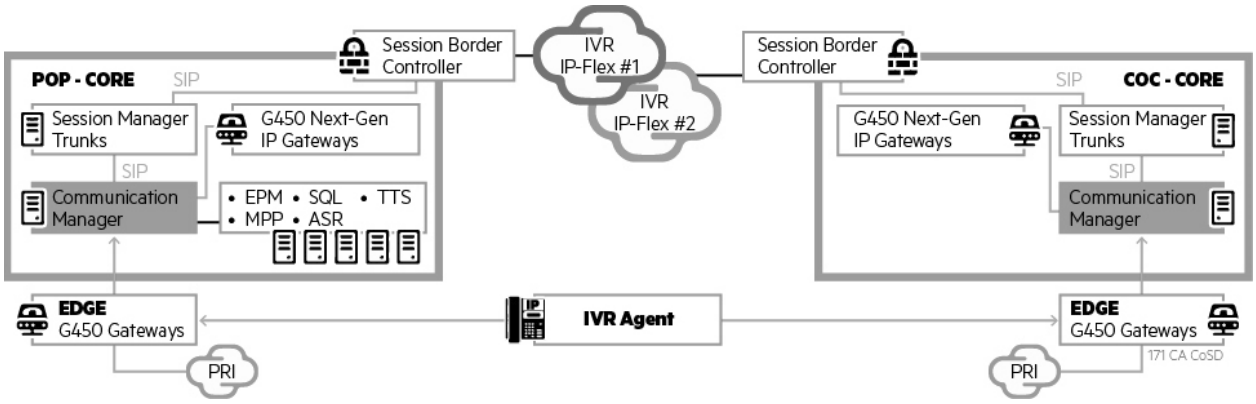
Interactive Voice Response (IVR) Transformation

Lastly, AT&T's transformation plan for Voice Services extends to Core adjunct services, such as its Interactive Voice Response (IVR) solution. The County's IVR infrastructure is built around the Avaya experience portal, which is a high availability contact center solution located at the AT&T POP. This platform provides access for external constituent service to County departments (such as Animal Services, Land Use Environmental Group, and various departments within the Health Human Services Agency) using features such as IVR, self-service, touch-tone, and speech recognition services. This scalable, high availability infrastructure provides many options for programming and agent integration, allowing customization for any type of constituent-facing contact center service.

The platform would undergo near term changes to external telephony connectivity as AT&T initiates plans to implement dedicated, fault tolerant inbound and outbound IP flex SIP trunks for the County's IVR infrastructure at the AT&T POP and County Operation Center. This change would prevent the Core IVR solution from impacting enterprise voice traffic, allowing business units to conduct high volume contact center activities such as outbound dialing campaigns. This new capability would provide a more standardized RU that business units can use to leverage the platform in meeting their business needs.

Over the term of the Agreement, AT&T would focus on roadmap initiatives and develop proposals to increase redundancy and resiliency of Core IVR applications as well as provide additional feature benefits such as automated agent call back and web chat.

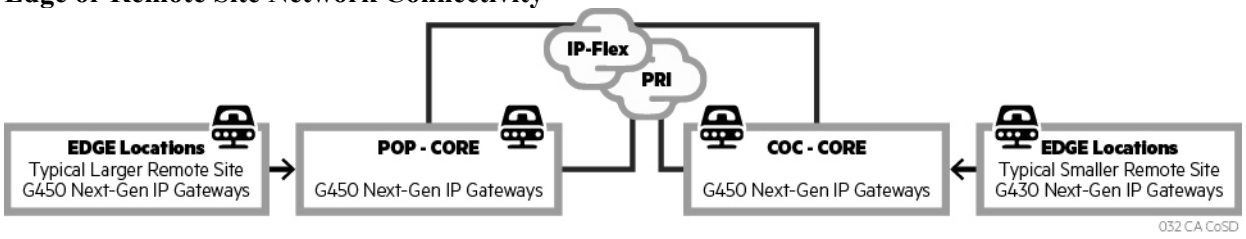
Avaya's Experience Portal leverages geo-redundant communication managers and redundant SIP trunking for inbound and outbound contact center traffic.



Edge Network Transformation

At the remote Edge, AT&T would replace all legacy cabinets and gateways (G650, MCC, SCC, CMC, and G700 series) with the latest generation of G450 or G430 gateways, providing LSP for resiliency. In the County, 81 sites have been identified as needing remote edge transformation to accommodate the implementation of VoIP phones. These 81 locations currently have digital telephones served from legacy cabinets and gateways. The Avaya G450 Media Gateway is a multi-purpose media gateway. The figure below**Error! Reference source not found.** illustrates Edge or Remote Site Network Connectivity. It works in conjunction with Avaya Communication Manager IP telephony software running on Avaya S8XXX Servers to help deliver intelligent communications to enterprises of all sizes. The G450 combines telephone exchange and data networking by providing public switched telephone network (PSTN) toll bypass and routing data and VoIP traffic over the WAN. The G450 features a VoIP engine, an optional WAN router, and Ethernet LAN connectivity. The G450 provides full support for Avaya IP and digital telephones as well as analog devices such as modems, fax machines, and telephones. Telephone services on a G450 are controlled by an Avaya S8XXX Server operating either as an External Call Controller (ECC) or as an Internal Call Controller (ICC). The G450 supports the Avaya S8300 Server as an ICC or, when the S8300 is installed in another media gateway, as an ECC. An ICC would be installed and used as a LSP. This is designed to take over call control in the event the ECC fails or the WAN link between the branch office and main location breaks. The LSP provides full-featured telephone service survivability for the branch office. The G450 itself also features Standard Local Survivability (SLS), which provides basic telephone services in the event that the connection with the primary ECC is lost.

Edge or Remote Site Network Connectivity



Centrex Migration

As detailed in the Voice Services section, the majority of voice services for the County are provided by the Avaya enterprise voice network. A small subset of the County's office sites does have voice services delivered by AT&T's Centrex business telephone service. Centrex service is typically deployed to smaller County sites that contain 1-20 users. At present, there are roughly 117 sites with Centrex voice services. While the AT&T Centrex business telephone services provide stable telephony and voicemail services, these locations are separated from

the remainder of the County's End-User population and are not able to take advantage of the full UC capabilities offered to Avaya enterprise users. With this in mind, the need to transform the features and capabilities for current Centrex voice services locations and to enable the users with the ability to use Avaya enterprise voice feature is a business priority. AT&T has developed a transformation approach to migrate a majority of these users' stations to a VoIP solution, while maintaining a roadmap for remote and intentionally off-net services to be executed during the term of the agreement.

The migration of Centrex users would begin with the deployment of stand-alone IP-based telephones at sites with existing data network functionality. This solution would provide services for VoIP telephone sets that is centrally managed by the Avaya geo-redundant voice cores at the AT&T POP and County Operations Center. While these sites would not have local survivable gateways, they would take advantage of the data network for their connectivity to the enterprise voice infrastructure. Of the roughly 117 Centrex sites across the County, 80 of these locations would be eligible for this service. Through this migration, over 65% of the Centrex remote sites and more than 272 individual stations would be converted to the Avaya enterprise standard. These sites/users would be provided new centralized voicemail and UC functionality as well as a new telephone set that leverages the County's investment in the data network for connectivity.

A greater challenge in the elimination of the legacy Centrex solution is associated with locations that do not have data network access. These locations are typically very small and remote locations that only require simple telephone service for communication. The migration of these services would be the topic of transformative roadmap planning during the term of the Agreement. Currently, AT&T is developing a Centrex replacement technology that is expected to provide transport and service options that would be evaluated for transformation. Some additional possibilities include the use of the mobility network for connectivity to the enterprise infrastructure, using an emerging technology called voice over LTE (Long Term Evolution).

Additionally, there are some remaining Centrex stations that have been placed throughout the County in locations with data network services where off-net phones are provided as a business requirement, such as elevator phones and emergency lines (red phones). As the Centrex replacement solutions mature, these solutions would also be evaluated for migration to a similar, off-network service so as to maintain the redundancy required for the specific use case.

VoIP Telephone Standard

The End-User experience is the single greatest change that would affect the County users in the proposed voice transformation. While the voice network is continually upgraded at the core, many telephone sets across the County have remained unchanged in over 15 years. By moving to new VoIP telephone sets, the County users would enjoy the benefits of a new device, along with improved reliability and performance.

There is significant value in resiliency that IP telephones offer over legacy TDM telephones. TDM devices require a dedicated port with a dedicated wire to connect to a local gateway. There are many points of potential failure, including the wire, gateway card, gateway power supply, gateway processor, and so forth. An IP telephone connects universally to any network port to facilitate registration to one of several points of call processing. An IP telephone would primarily be registered to the Session Manager Registrar at the core; there is a Session Manager Registrar at both core sites for high availability. In the event an edge location becomes fragmented from the WAN, the IP telephone would register locally to the G450 gateway with a local survivable processor (LSP).

Avaya/Skype for Business Integration

Another important pairing with a VoIP deployment is the implementation of E911 services. E911 allows for a continually managed registry of location data for each workstation so first responders have necessary information to effectively respond to an emergency call.

Another key End-User benefit associated with the Voice Transformation initiative is the integration of the Avaya enterprise voice system with Microsoft Lync (Skype for Business client). Using available licensing and open Application Programming Interfaces (API's), **Avaya Communicator** extends Avaya Aura real-time collaboration capabilities to Microsoft Lync 2010, 2013, or Skype for Business 2015, 2016 clients to provide users with a unified, consistent collaboration experience from their preferred applications and devices. The Avaya Communicator for Microsoft Lync service adds functionality to Microsoft Lync clients using only the Lync/Skype for Business standard client access license (CAL). Features include telephony presence aggregated with Lync's machine and calendar presence through Lync/Skype for Business client API and Lync/Skype for Business IM and desktop sharing, click-to-call control of PBX desk phones, voice and video, enterprise dial-plan support, toast pop-ups enabling incoming calls to be answered, and Reply with IM as well as a conversation window pop-up to access Avaya mid-call features and the ability through the Share My Bridge feature to launch a conference call and or collaboration session from within the client.

Avaya Collaboration Services

Avaya Collaboration Services interworks on the End-User PC with Communicator for Lync to provide UC services originated from Microsoft Office Suite, Outlook, SharePoint, and Internet Explorer as well as Mozilla Firefox and Google Chrome browsers.

When in Outlook or SharePoint, hovering over an End-User's name or presence indicator presents their contact details. The End-User now has the opportunity to IM, email, make a voice or video call, or schedule a meeting with this End-User. The End-User's presence is also displayed.

In addition, Collaboration Services would detect a number embedded in an email or a Word, Excel, PowerPoint, or SharePoint document and allow calls to be made to this number through Communicator for Lync. As with a call originated through the Lync/ Skype for Business End-User interface, a conversation window would be presented to provide the End-User with call control options for the duration of the call.

Collaboration Services automates the process of Join or Host a conference call. With this feature, the End-User can launch a conference call and/or a web collaboration session. The Collaboration Services would determine whether the End-User is the Host or a Participant to this call and uses the appropriate access passwords to access this call.

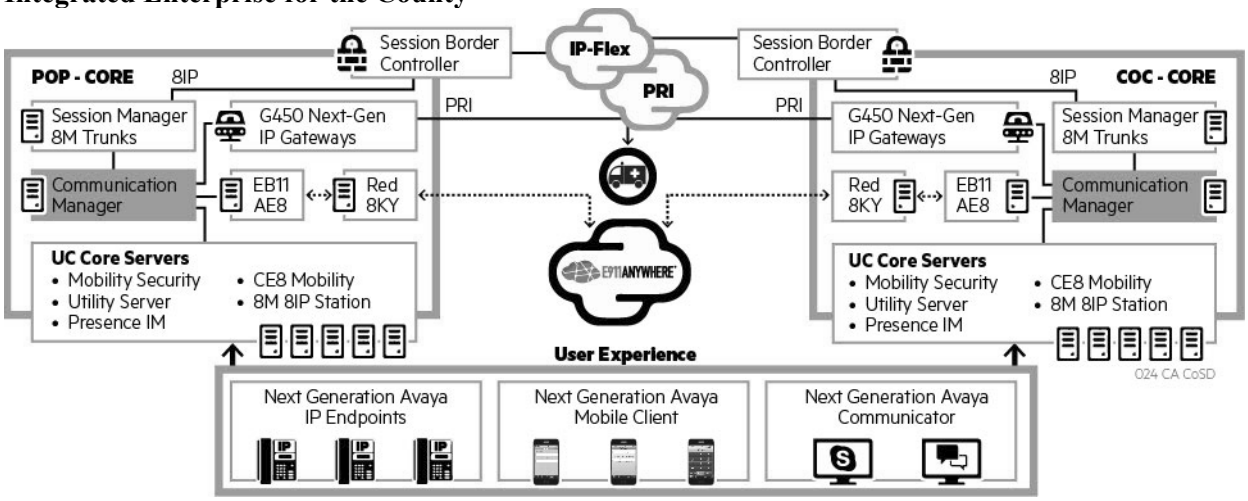
Collaboration Services, when used with Internet Explorer, Mozilla Firefox, and Google Chrome browsers, would recognize number patterns on web pages, and through the use of an intelligent algorithm applies enterprise, national, and/or international dialing rules to highlight these as phone numbers. These phone numbers can be dialed from a web site using the Avaya Communicator for Lync.

If a phone number is on an enterprise web page, Collaboration Services would take this number, access Active Directory, and pull down additional information for this End-User. This information is displayed on a contact card. The contact card is also populated with icons that enable the End-User to send an IM and see the presence of this contact, make a voice or video call to the contact, and schedule a meeting.

Integrated Enterprise Mobility

A final End-User benefit of the Voice Transformation initiative is integration of the End-User's voice and UC capabilities with their mobile device. Integrated Enterprise Mobility brings seamless interoperability with the desktop and desk phone. The figure below illustrates components of the County Integrated Enterprise experience.

Integrated Enterprise for the County



Integrated Enterprise Mobility brings seamless interoperability with the desktop and desk phone.

Features that span the desktop and desk phone are extended to the mobile End-User and are transparent in functionality. Examples include the following:

- Start a call from the County's desk (either desktop client or desk phone) and, if the County chooses to become mobile, simply select a button on the mobile app to move the call from the original location to the mobile device.
- Call processing from a mobile device extends a robust feature set (Hold, Transfer, Conference, Speaker, Mute, etc.) to the End-User so that transitioning from desktop or desk phone is seamless. The End-User experience is the same.
- The UC features of Avaya Communicator include visual voice mail to filter and sort voice messages. Use the visual voice mail feature to respond to important messages quickly. Communication History logs help the County traces the history of the County's enterprise calls and voice messages. Use Avaya Communicator to increase the productivity of the County's enterprise with tools that enhance collaboration, improve responsiveness, and lower costs for IT and End-User support.

- Deployment plan for resources and use of facilities

The local, dedicated team provides all the design, implementation, support, and monitoring of transformation activities and is fully embedded in the solution life cycle. Technical personnel assigned to the County are dedicated to the program and located at Contractor's Trade Street location, maintaining a central location from which to service the County. Additional leveraged resources may be engaged to support transformation and would operate under the direction of the local team.

All solutions use the AT&T POP as well as the County's Operations Center to hold the core hardware components and facilitate circuit terminations. All County facilities with voice network connectivity would house infrastructure and telephone sets necessary to provide service.

Key methodologies and processes in solution

The dedicated LCM team is embedded in the full life cycle of every enterprise voice and UC solution—from the initial gathering of requirements, through the design and implementation phases, to managing and monitoring, and even decommissioning when requested. Through customer meetings and service reviews, the team creates the proper solution that is chosen and sized appropriately.

Contractor would use standard Project Management methodologies in the scoping and execution of any new installation. AT&T architects and engineers would also use approved processes in their design and equipment placement activities. Enterprise voice and UC options are continually evaluated based on County business requirements in addition to current and emerging technologies.

Contractor's technical enterprise architecture team evaluates new products and standards to make recommendations to the CTO. When a recommendation is approved, Contractor's team moves forward with implementation recommendations including refresh of existing equipment and rollout schedules. For equipment issues, Contractor's Service Desk and engineering team work to identify and remediate the problem.

- Automated systems and tools involved in solution

To support quality voice service within the support levels defined by the new agreement, Contractor's subject matter experts (SMEs) use numerous automated tools. These tools enable Contractor to continuously monitor the overall health and performance of voice appliances, provide tools to assist in rapid restoration through fault isolation, and perform traffic analysis, as discussed below.

Contractor delivers complete manufacturer system maintenance coverage on all County Core Voice Services assets. The Avaya maintenance services include Avaya Expert Systems and Secure Access Link. Avaya Expert Systems provides the County Core Voice Services a maintenance database of more than 30,000 Artificial Intelligence Algorithms (AIAs) with scripted automation that is able to automatically correct many known system and software-related issues. Avaya Secure Access Link (SAL) is a centralized consolidation point for all Avaya Core systems for health and alarming monitoring, secure remote access using secure outbound-only HTTPS standards, and an integration point for Avaya Expert Systems. Together, these tools provide the County's Avaya Core Voice Services complete health monitoring and rapid issue resolution. Avaya Expert Systems and Secure Access Link are online and engaged 24/7 to diagnose and attempt to resolve known system alarms, clear many service-affecting issues, and escalate to engineering resources for prompt attention when necessary to allow service restoration or outage avoidance to County users.

Contractor's Voice Services team uses Nectar's Unified Communication Management Platform (UCMP) and leverages its complete suite of innovative features to provide the County enhanced integrated UC network services. Nectar provides multi-vendor management services including application dependency tree visual alerting and vendor knowledge modules, which assist Contractor's SMEs to proactively pinpoint and resolve cross-platform integrations issues to quickly restore services to County users. The UCMP also includes real-time network quality-of-service reporting using RTP (Real-time Transport Protocol) Control Protocol (RTCP) integration and can provide Contractor's team with the capability to create simulated traffic injection between designated network segments for analysis. This enables SMEs to monitor and report on all VoIP-related traffic transmissions. The quality-of-service reporting tool provides per-hop statistics, and in many cases assists in quickly identifying improper packet handling hop points, driving efficient resolution of network quality-of-service issues. The Nectar platform includes statistical resource utilization data gathering and storage that enables trending analysis and capacity planning so County users are not impacted by growing resource needs. Finally, all these capabilities are wrapped into an intuitive and customizable dashboard for use with visual and electronic alerting from sophisticated threshold configurations that drive the ability to acknowledge, respond to, and correct issues proactively in many cases before County users are aware of or report an issue.

E911 Manager would automate the E911 management process by connecting with the County's Geo-Redundant Avaya Communications Manager to the AT&T MPLS network to track and update VoIP, digital, and analog phone moves, adds, and changes.

E911 Anywhere is a cloud-based 911 call routing service that can connect a 911 call to more than 6,000 Public Safety Answering Points (PSAPs) in the U.S. and Canada.

Storage Architecture Transformation Project

- Key Considerations and Potential Alternative Approaches

Architect Storage to Embrace Tiers of Well-Defined Storage: The solution being implemented by Contractor during the data center consolidation architects the design to embrace tiers of well-defined storage. The key considerations that went into the storage solution include cost and the ability to meet the County's requirement to keep the storage infrastructure current by refreshing storage components every 5 years. Contractor also considered the storage growth requirements and developed a solution with 20% year-over-year growth projected for the first 5 years.

In addition to Contractor's solution, which builds on the storage that is in place for the County on completion of the transition activities, Contractor considered two alternatives:

Storage Tiering Alternative: Contractor considered providing a 3PAR 20000 with 15,000 RPM drives and/or SSD as Tier 1, 10,000 RPM drives as Tier 2, and 7,200 RPM drives as the archive tier. This would provide a clearer delineation of the tiers from a performance perspective but would have resulted in a higher total storage cost than Contractor's actual solution. Contractor would continually monitor the performance of the storage environment.

Shared Storage Alternative: The second alternative is to provide storage as a leveraged service. This approach is similar to cloud storage in that the storage infrastructure would be shared with other non-County of San Diego clients, but the storage volumes would be dedicated to the County of San Diego. There would be no co-mingling of data on storage volumes, but the underlying storage hardware would be shared. All storage volumes would be securely wiped after they are no longer needed by the County, to prevent any chance of the County's data being exposed to non-County of San Diego customers on the leveraged storage infrastructure. This solution provides a lower cost per GB of storage. Using leveraged storage, Contractor could also provide the required tiers of storage using either the recommended solution or the Storing Tiering Alternative. However, with this leveraged approach, the County would not be able to specify the hardware refresh to meet their desired schedule, so Contractor rejected this solution.

- Description of solution to meet the requirements

Solution Summary: Upon completion of the data center consolidation, the storage architecture shall comprise a dedicated storage area network (SAN) with a 3PAR 20000 storage array in Tulsa providing tier 1, 2, and archive storage to all data center servers, consolidated in Tulsa. End-User data storage shall be provided directly from the new network-attached storage (NAS)-capable 3PAR. Otherwise, End-User data storage shall be the same. All 3PAR data shall be backed up locally using HPE Data Protector with a StoreOnce Virtual Tape Library (VTL) as the backup target. All backup data and disaster recovery (DR)-required 3PAR data shall be replicated to the DR site in Colorado Springs. The data center solution shall include immutable storage, which would also be replicated to the DR site. For the San Diego sites, backup data shall be replicated to the DR site instead of being copied to tapes, for remote offsite storage. Finally, the immutable storage refresh and reconfiguration shall be a newer version of the same immutable storage.

The Contractor's storage architecture following transition includes updated storage equipment, which shall be refreshed on a 5-year cycle. The storage array technology is flexible and efficient, designed to keep pace with the County's requirements as they evolve. Tiers 1 and 2 have been redefined to reduce cost without sacrificing performance. The backup solution would consolidate all of the County's backup needs into one capacity-driven solution that eliminates physical tapes from the environment. The location of the immutable storage solution would change with the Data Center Consolidation, and the hardware would be refreshed.

Contractor would continually evaluate the various storage tiers used by the County as their storage requirements evolve, with an eye toward providing the right storage solution for each tier. However, the storage solution that would be in place following Transition provides ample opportunity for growth in terms of storage and

performance, and achieve tier storage service is based on 3PAR 20000 storage devices—the latest innovation in 3PAR enterprise storage from HPE.

Contractor would continually evaluate the County's storage archiving needs and consider a cloud-based archive storage solution if/when cloud-based archiving meets the County's approval.

Rationale: The solution Contractor provides meets the County's post transition requirements and would allow the County to transform its storage architecture over time, as needed. The 3PAR is capable of supporting 15 PB of usable storage capacity. It would support a range of disk drive technologies from 7,200 RMP, 10,000 RPM, and 15,000 RPM Serial Attached SCSI (SAS) drives and solid state disk drives (SSD). The 3PAR supports storage migration without interruption via 3PAR-enabled storage peer motion (SPM). The 3PAR supports the following:

- Thin provisioning (TP), which is a method of optimizing the efficiency with which the available space is used in SANs. TP operates by allocating disk storage space in a flexible manner among multiple users, based on the minimum space required by each End-User at any given time.
- Auto tiering is a real-time intelligent mechanism that continuously positions data on the appropriate class of storage based on how frequently the data is accessed. This improves application performance.
- Compression, which reduces the number of bits needed to store or transmit data.
- Data deduplication, which reduces storage needs by eliminating redundant data. Only one unique instance of the data is actually retained on storage media.
- Federal Information Processing Standard (FIPS) 140-2—data at rest encryption to protect against loss or theft.
- Industry standard redundant array of independent disks (RAID) configurations to meet disk fault tolerance requirements and optimize performance.
- Remote and local replication for future refresh migrations on live data (meaning no down time required).
- Quality of Service to make certain bandwidth is available when needed.

The immutable storage solution has the capacity to support future growth in data storage requirements. The County's Document Processing Center (DPC) storage, which also uses 3PAR, would allow the DPC storage to evolve as needed. The direct attached storage would remain the same, and Contractor would continually evaluate services that use direct attached storage and work with the County to determine when/if those services can be migrated to SAN and/or cloud storage.

Timing: Contractor performs weekly reviews to assess capacity usage and determine whether changes are needed, taking into account any anticipated changes from the County.

Risk Considerations: This approach poses minimal risk based on continued use of the same platform. All capabilities are currently available, and the County can take advantage of this on a schedule that meets its needs.

- Deployment plan for resources and use of facilities

The Contractor's Storage Administration team would perform the assessments on an ongoing basis, as described above.

Storage hardware would be located in the Tulsa data center and at the San Diego sites, which include the DPCs at Lemon Grove and Viewridge. The storage would be replicated to the DR site in Colorado Springs.

- Key methodologies and processes in solution

At the 5-year refresh cycle, Contractor would continue to use replication extensively. Contractor's storage administration staff is well versed in array-based replication capabilities and would be able to extend replication to include the new hardware with little to no disruption to the County's compute services.

- Automated systems and tools involved in solution

Enterprise storage (3PAR) has native replication capabilities built in and enabled by the storage array software. The primary tool used to accomplish the storage transformation would be SPM. This type of replication is automated and keeps storage in sync on both copies of the data.

- Key Considerations and Potential Alternative Approaches

Classify County data and assign it to the appropriate tier: When evaluating solutions to classify County data, Contractor took the following items into consideration:

- The significant volume of the County's unstructured data currently stored in file shares, SharePoint, Exchange, and a range of other repositories; however, not all unstructured data is to be treated the same way.
- It is important to be able to classify data based on its importance, sensitivity, and need for access.
- By classifying unstructured data, Contractor can automatically direct it to appropriate data tiers to reduce storage costs while providing the County with the appropriate access requirements.

This initiative, is a primarily technology-driven effort coupled with consulting services to guide configuration of the solution. The alternative approaches are tied to specific implementation models for the various product suites that could be used to deliver this auto-classification.

- Description of solution to meet the requirements

Currently, a wide range of products is available to support the automatic classification of unstructured data/content. Through the application of policy enforcement, content can be targeted to different tiers of storage. The County has assessed a range of these products and has found several that appear to meet the requirements. Contractor would work with the County to design, configure, and implement the selected product suite.

Contractor would recommend, however, the County implement HPE's ControlPoint software. HPE is recognized by Gartner as a leader in Information Governance and Information Management (IM/IG). ControlPoint provides a robust platform for identifying, analyzing, and managing diverse types of information stored in enterprise repositories. Through continuous monitoring of enterprise repositories, ControlPoint can classify unstructured data based on a range of County identified metadata, including standard classification structure of Public, Sensitive, and Confidential documents, applying policy to facilitate optimal storage strategy.

Rationale: Applying file management tools would help the County to reduce its information footprint by identifying redundant, obsolete, and trivial (ROT) data; this can lead to reduced storage costs.

- Redundant data consists of duplicates such as unauthorized copies of documents, emails, records, or database information residing in file shares, SharePoint sites, mail systems, and databases.
- Obsolete data consists of information that is no longer in use or is out of date. Determining whether data is obsolete can be based on its creation date, last modified date, or access date; then assess this information in conjunction with an appropriate retention policy.
- Trivial data is determined by file type, where the file type has no content value, such as executables, system files, and thumbnails.

Additionally, such a solution can be used to tag and classify unstructured data, and through automatic application of policy, data can be targeted to specific tiers of storage or even deleted if appropriate. Ultimately this would lower the total cost of storage.

Timing: After completion of transition, Contractor recommends approaching unstructured data classification on an enterprise scale. Contractor's approach begins with an assessment and a pilot of a limited set of data/ repositories, while building out the required solution architecture to support the County's entire unstructured data

environment. Contractor's solution includes resources to manage the indexing of the remaining data, keep indexing up to date throughout the Agreement, and cross-train others on the support team.

Risk Considerations: Given the volume of data currently stored by the County, an enterprise-wide implementation can expose significant risk. Contractor mitigates the potential risk by starting the project with an early assessment to help define and test the County's data categories. Following the Milestones presented below also mitigates this risk through careful planning and testing prior to enterprise-wide rollout.

Key Dependencies: This solution is dependent on the availability of tiered storage architecture and file management/auto-classification platform, whether ControlPoint or an alternative selected by the County.

Milestones: Key Milestones for the data classification project include the following:

- **Milestone 1 – Develop Data Categories** – Building on the County's existing set of categories such as security classifications—Public, Sensitive, or Confidential—Contractor would use automated tools and common categories to develop a set of categories specific to the County. These categories could include County Groups, Function, and Availability. Contractor would select a set of representative documents from the County's data repositories to use for training and benchmarking. This makes certain that the categories created are based on meaningful concepts and real business context. This capability improves the efficiency and accuracy of categories and the application of policy to content. Preparation of theses draft categories would not affect documents in production systems.
- **Milestone 2 – Refine and Test** – This step helps to determine the relevance of the categories to enterprise documents. Refining a category is done by adjusting the weighting of a term or the selection threshold, or by adding field text. These activities can be done individually or in combination. A category can be published, making it available for use in automatic policy execution against content managed by the tool suite.
- **Milestone 3 – Auto-Classification** – Once County data is categorized; Contractor applies policies for ongoing management. Policies can be created with keywords, metadata, and/or example documents. Using the desired tool suite, Contractor can automate policy application, governing all aspects of the information lifecycle including deletion prevention, storage management, and ultimately disposition management by applying policies at data creation. Additionally, de-duplicating data across repositories helps to minimize storage costs and reduce discovery times.
- **Milestone 4 – Knowledge Transfer** – Following the pilot effort, further described below as part of Contractor's methodology and key processes, and validation of results, Contractor's subject matter experts (SMEs) would conduct knowledge transfer to the support team for the County to maintain the system and to index all County unstructured data.
- **Milestone 5 – County-wide Rollout**

- Deployment plan for resources and use of facilities

Contractor would initially provide a team of SMEs to guide the planning and piloting efforts. This team would work onsite, collaborating with the County's staff and the support team to define requirements and validate the results of the project. This team would also conduct knowledge transfer to facilitate extending the implementation and support County-wide. Contractor SMEs would remain available as required to provide reachback support. The infrastructure for the product of choice would be installed in the Tulsa Data Center.

- Key methodologies and processes in solution

A data classification project begins by working collaboratively with the County to gain insight and understanding of the legacy data landscape. This helps Contractor to define the benefits of a full legacy data cleanup solution, create a Solution Roadmap illustrating the go-forward plan, and implement the auto-classification solution infrastructure. Contractor then conducts a pilot, where Contractor would sample approximately 1 TB of data currently residing on the County's existing file share environments to determine appropriate classification structure and to demonstrate how data can be targeted automatically to different tiers of storage based on the

classification. Additionally, the assessment would showcase where unstructured data exists and how frequently is it being referenced/used so that intelligent decisions can be made regarding data management, archiving, retention, and retirement. Following the pilot, Contractor SMEs would perform knowledge transfer to the Contractor account team to facilitate indexing of the remaining data and then applying the solution to provide ongoing auto-classification of unstructured data.

- Automated systems and tools involved in solution

Contractor would use ControlPoint software or an alternative platform selected by the County to auto-classify unstructured data.

- Key Considerations and Potential Alternative Approaches

Develop Archival Solutions for Portfolio Applications: The County has more than 400 applications currently supporting its departments and citizens. These applications rely on different types of data—some unstructured, such as document management and SharePoint oriented data—and some with structured data. It is important to consider and evaluate the full portfolio of applications to determine the appropriateness of data archiving to reduce the data footprint and storage costs. There are two potential alternative approaches:

- **Approach 1:** Conduct an enterprise-wide assessment to determine the applications that are to be targeted for data archiving. Based on this assessment, develop an enterprise plan for rolling out the archiving capability.
- **Approach 2:** Start with a pilot effort to validate the cost savings that can be realized by application data archiving. Then conduct an enterprise-wide assessment and develop the roadmap for expanding data archiving.

Contractor recommends Approach 2 because this provides the opportunity for a quick win to both measure the impact of data archiving and to demonstrate its potential to support additional applications across the County. Also, it reduces the near-term investment in hardware and software. Finally, it helps to better define the County's true requirements, which reduces the potential risk of oversizing the enterprise archiving environment.

- Description of solution to meet the requirements

Contractor sees this initiative focusing primarily on applications that have structured, rather than unstructured, data sources. Recognizing that not all applications have the same potential for data archiving, Contractor would focus on database-to-database archiving as the primary archive model.

A component of the Contractor's Information Management/Information Governance (IM/IG) Portfolio is the Structured Data Manager (SDM) tool. SDM automates application lifecycle management and structured data optimization by relocating inactive data from expensive production systems and legacy databases, while preserving data integrity and access. SDM enables retiring outdated applications through an automated process of extracting, validating, and deleting data.

Rationale: This unique solution significantly reduces capital expenses and administrative costs, and helps the County to respond quickly to legal and compliance requests. This enables the County to obtain maximum value from the data.

Timing: This initiative can begin at any time after Contract Effective Date (CED); however, Contractor recommends beginning this initiative after completion of Transition. This would make sure that all changes to the data center architecture are complete and would reduce the complexity of implementation.

Risk Considerations: Each application would have to be assessed and evaluated independently to determine the value of archiving data. There is a risk of overestimating the impact of application data archiving, leading to over-solutioning the archiving platform. Contractor addresses this risk by starting with a pilot effort for a single application that meets a common profile for successful archiving. Contractor would also assist the County to assess other applications and prioritize them for archiving based on the potential for storage or other savings.

Key Dependencies: There are no real dependencies—in fact, the County considered a pilot effort in 2015. However, as stated above, Contractor would recommend delaying the start of this initiative until after completion of the Transition phase of the Agreement.

Milestones: Key milestones for this initiative include the following:

- Milestone 1 – SDM Requirements and Analysis
- Milestone 2 – Architecture and Solution Design
- Milestone 3 – Foundation Build in Development/Test Environment
- Milestone 4 – Onboarding and Archiving of the Central Reporting System (CRS) Tax Data
- Milestone 6 – Knowledge Transfer and Testing
- Milestone 7 – Foundation Build in Production Environment
- Milestone 8 – Post Production Support and Documentation

- Deployment plan for resources and use of facilities

Contractor would initially provide a team of SMEs to guide the planning and piloting efforts. This team would collaborative onsite with the County's staff and the local support to define requirements and to validate the results of the project. The team would also conduct knowledge transfer to facilitate extending the implementation and support County-wide. Contractor SMEs would remain available as required to provide reachback support.

- Key methodologies and processes in solution

The County has in excess of 400 applications. The potential value for archiving portfolio data varies significantly from one application to another. Contractor recommends conducting a pilot effort on one of the County's applications to validate the potential for reducing application data storage requirements rather than starting with a County-wide implementation of Portfolio Application Archiving.

Previously, the County, with the support of Contractor, identified Treasurer-Tax Collector (TTC) CRS as a candidate for the pilot effort. Following the pilot, Contractor would work with the County to develop a strategy and roadmap for extending application data archiving to other County applications.

- Automated systems and tools involved in solution

Contractor plans to use the SDM tool, described above, to reduce the data footprint of the County's structured data. SDM software comprises an integrated set of components that facilitate design, deployment, and ongoing management of archiving processes throughout the lifecycle of applications and data. In addition, they deliver capabilities that address different levels of application complexity, data volumes, and archive access requirements. The components include the following:

- Designer – Provides a visual interface to model data and create business-aligned data migration rules with ease
- Data movement – Makes sure data relocation is performed to meet volume requirements while retaining application integrity at all times
- Archive access – Provides a full range of access capabilities to meet requirements for business operations, regulatory compliance, and legal discovery
- Job engine – Automates all archiving tasks with built-in recovery and restart
- Management console – Provides system configuration, job monitoring, job launching, and complete audit trail capabilities

- Key Considerations and Potential Alternative Approaches

Hyperconverged Integrated Systems: Hyperconverged infrastructure is designed to simplify the design and management of the computing environment by merging and pre-packaging the server, network, and storage components of infrastructure into pre-sized building blocks. To deliver the most value, hyperconverged systems would have to comprise nearly all of the infrastructure deployed in the data center; otherwise, the hyperconverged

solution becomes just another platform that has to be integrated and adapted to existing standards; this would increase rather than decrease overall complexity in the environment.

One possible application of hyperconvergence that the County could consider in the shorter term would be the implementation of hyperconverged infrastructure for servers deployed in County field sites. As systems come up for refresh, Contractor would compare available options in the marketplace for cost, compatibility with established management tools and fielded applications, and if a hyperconverged solution would yield benefits to the County, Contractor would recommend its implementation.

- Description of solution to meet the requirements

Contractor would implement Helion MPC and Helion Managed Cloud Broker (HMCB) during the Transition as Contractor builds the County's on-demand Dev/Test and Production environments as part of the data center consolidation. These platforms start the County on a path of greater standardization in the virtual/converged infrastructure environment. By implementing a private cloud with standard-sized building blocks of virtual infrastructure, Contractor would be able to test and validate whether a hyperconverged infrastructure would ultimately yield benefits for the County.

When the County is ready for hyperconvergence, Contractor would provide the technology partnership to achieve this. If Contractor is able to fully standardize over time on the x86 platform in the converged infrastructure, then the next logical step is to plan, design, and implement a hyperconverged infrastructure. During the planning phase Contractor would build the business case for hyperconvergence and would provide the County with alternative solution designs built on the most suitable and current technology and vendors available. HPE offers a wide range of hyperconverged systems that Contractor continues to advance and innovate with to suit various business cases and client needs.

To achieve the best possible outcomes from the County's investment in this technology and to meet its needs in a way that helps to better support County business, Contractor would consider and evaluate the following features to help the County select the optimal hyperconverged solution:

- **Integration for Seamless Coexistence**. Ability of the hyperconverged solution to integrate with the legacy environment. The hyperconverged solution must enable the County to fully integrate the new solution with the legacy environment. Existing server and storage assets must be able to coexist with the new environment until the eventual collapse of multiple administrative interfaces into fewer simpler tools.
- **Scalability**. Ability to grow the environment in a non-disruptive manner and the ability to scale up or scale out without replacing the initial equipment with new equipment. The solution must offer just-in-time growth capability to avoid the need to carry expensive inventory. Additionally, granularity in scalability is important to scale only the resources required in the increments that make sense for the County.
- **Data Mobility**. Ability to move data around to accommodate individual device outages—the ability to easily move data between the hyperconverged platform and other systems, without having to rely on consultants.
- **Data Protection**. Ability to protect data in the event of hardware failures, human error, or natural and manmade disasters while meeting desired SLAs, RPOs, and RTOs without the need for an additional software or hardware layer. Features Contractor would evaluate for the County include RAID or mirroring, fault tolerance, replication (synchronous and asynchronous) within the site and between sites as well as full disaster recovery capabilities.
- **Performance**. Ability to provide performance opportunities that are considered enterprise-class. This means that the solution is to support flash and, optionally, spinning disk. Ideally, both would be supported because they have different strengths and weaknesses. When it makes sense, the solution should be able to automatically tier storage systems to enable faster data access or, at the very least, have an accelerated method for handling data retrieval.

- **Availability**. Ability to provide availability at SLA levels that meet County requirements for all systems. To determine this, Contractor would evaluate ease of scalability, ease of management, ability to scale out storage, tolerance for node loss, cluster resiliency, and capabilities of automated failover.

Once Contractor has identified and received County approval of the plan, in a parallel but fully integrated mode of operation Contractor would execute a phased migration of the County's systems to the new hyperconverged infrastructure. Contractor's plan would also consider data center component refresh dates to maximize investments in the legacy environment prior to the migration.

Timing: Preparation for implementation of a hyperconverged infrastructure would occur during transition. Contractor recommends the actual implementation to occur as data center components come up for refresh.

Risk: None at this time.

Dependencies and Milestones:

- Prior to the County investing in a hyperconverged integrated solution, standardization on the Managed Private Cloud platform must be established
- To migrate to a hyperconverged infrastructure, existing legacy equipment would need to be refreshed onto the hyperconverged platform.
- Development of implementation strategy and plan.

- Key methodologies and processes in solution

With the implementation of hyperconverged systems, methodologies and process for deployment become easier as a result of the pre-configuration of server, network, and storage components of infrastructure into pre-sized building blocks. These systems include easy-to-use management tools designed to streamline implementation and management and help shield the administrator from much of the underlying architectural complexity.

Contractor's new hyperconverged systems deploy VMs in just five clicks, update hardware and firmware in just three clicks, and provide instant diagnostics and analytics to enable faster response to business needs.

- Deployment plan for resources and use of facilities

Contractor's facility approach is to deploy the new hyperconverged infrastructure at Contractor's primary data center in Tulsa, Oklahoma and/or in field sites as deemed appropriate.

- Automated systems and tools involved in solution

Contractor's vision is to dramatically simplify and streamline IT administration and operations management. While many hyperconverged integrated system solutions are available on the market today, Contractor is a market leader in hyperconverged systems. Contractor's hyperconverged systems offer an infrastructure that provides the following features/benefits:

- Rapid provisioning of VMs
- Flexibility and speed to add capacity in as little as 15 minutes
- Simple IT operations with firmware and driver updates in just three clicks
- 99.999% continuous data availability
- Federated lifecycle management
- Data fabric with data mobility across systems, sites, and cloud
- Lower startup cost with two-node entry and linear scaling
- 62% lower cost for disaster recovery
- Pay-as-you-grow flexible capacity model

Using HPE OneView as the common software-defined convergence platform, Contractor provides software-defined management for both Contractor's larger ConvergedSystem 700 powered by Intel models as well as the smaller CS200-HC models. The HPE OneView End-User experience (UX) makes managing and monitoring systems so easy, no manual is required. HPE OneView integrates with HPE Helion OpenStack and CloudSystem and has extensions to a variety of management software. With a commitment to provide clients with the most flexibility, Contractor has been continually and significantly expanding this ecosystem since 2015.

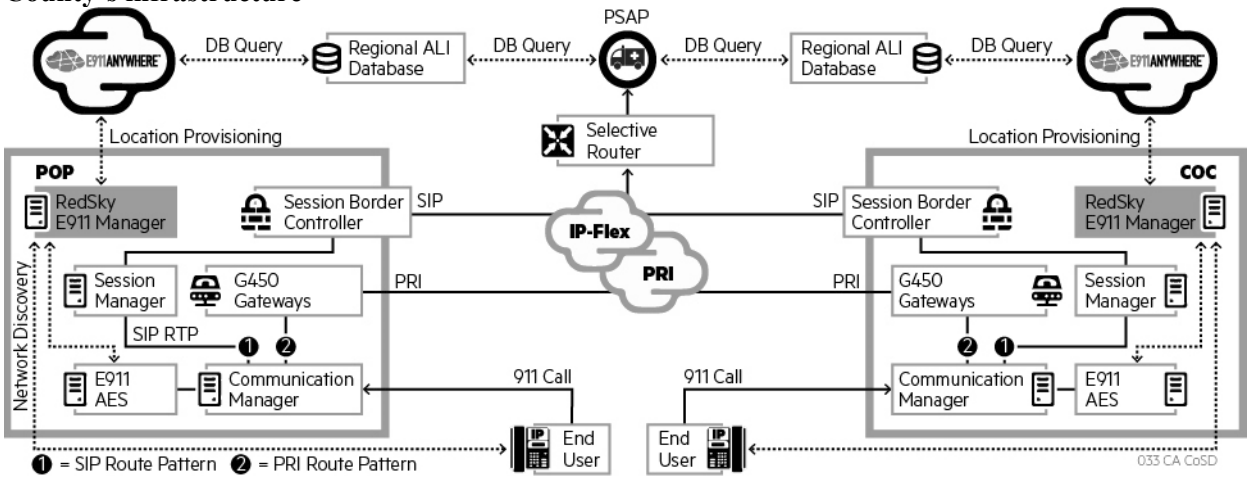
E911 Transformation Project

- Description of solution to meet the requirements

The solution highlighted in this section specifies the E-911 migration planned for implementation early in the Agreement at existing VoIP sites and ongoing in parallel with VoIP site upgrades.

Contractor recommends the adoption of the industry leading E911 Manager and E911 Anywhere by RedSky technologies. RedSky's E911 Manager® solution would be implemented in line with the County's geo-redundant network core, with infrastructure at the AT&T Point of Presence (POP) and the County Operations Center (COC). The primary application would run on an active host with a standby host that would take over in the event of failure of the primary server, enabling full redundancy.

Fully-integrated E911 solution would automate the E911 process by recognizing route patterns within the County's infrastructure



The E911 Manager would *automate the E911 management process by connecting with the County's Geo-Redundant Avaya Communications Manager via the AT&T MPLS network to track and update phone moves, adds and changes.*

To handle the growing deployment of VoIP services throughout the County, RedSky's E911 Manager would communicate with the Avaya Enterprise voice network to monitor registration events of VoIP endpoints. E911 Manager would use Layer 2 Network Discovery or Layer 3 Network Regions to determine the location of the End-User based on port, network device, or IP address and would update the Avaya Communication Managers with the proper Emergency Line Identification Number (ELIN) for 9-1-1 off-net calling. The E911 Manager server would create and store Automatic Location Identification (ALI) records as necessary and submit to RedSky's E911 Anywhere® cloud service in the required format for the local Public Safety Answering Point (PSAP).

To manage ALI information centrally—for County locations or to support mobile softphone users—the RedSky solution includes RedSky E911 Anywhere cloud service. E911 Anywhere is a cloud-based 9-1-1 call routing service that can connect a 9-1-1 call to more than 6,000 PSAPs in the USA and Canada. E911 Anywhere is an

effective choice for the County based on its distributed locations as well as the increase in mobile and desktop IP softphone users. The recommended solution by AT&T would feature the following:

- A fully automated E911 solution that would track the location of phones as phones move within the County's enterprise voice network
- An E911 software application located at the AT&T IDC and COC that would interface with the Geo-Redundant Avaya Communication Manager voice network
- A solution that connects with all Private Switch-Automatic Location (PS-ALI) Identification databases throughout the cities within the County
- A solution that provides Emergency On-Site notification to anyone working at the County of the location of a call placed to 9-1-1
- Geo-Redundant Active / Active Server construct located at the AT&T Internet Data Center (IDC) and COC for high availability and redundancy
- Reporting and metrics for auditing of all E911 activity
- As a "cloud-based" 9-1-1 call routing service, E911 Anywhere can send a 9-1-1 call to any PSAP in the U.S. or Canada (with County approval)

E911 is a necessity for the County enterprise VoIP deployment. As stated in the introduction, this solution would be integrated into the County's enterprise-wide VoIP migration, enabling functionality on a site-by-site basis over the length of the transformation initiative.

- Deployment plan for resources and use of facilities

For the e911 solution, Contractor shall ensure that AT&T leverages the local LCM (Life Cycle Management) team, in-house vendors, direct manufacturers, and carriers. Contractor shall ensure that AT&T personnel provides this support from its location on Trade Street in San Diego.

- Key methodologies and processes in solution

All support services—whether triage, new requests, change requests, or removals—are initiated by the County End-User to the Contractor Service Desk. All requests within the network framework for E911services would be directed to the AT&T LCM team for assessment and completion.

AT&T would leverage the RedSky's solution for updates to the PSAP routing and PS-ALI databases as County staff request Adds, Moves or Changes to their VoIP telephone stations. The tracking of VoIP phones is made possible by enabling Layer 3 Network Regions on the County's LAN. This is the most common method of tracking IP, SIP, and IP soft phones inside an enterprise. This method, which is specific to Network Regions or subnets, establishes a dedicated block of IP addresses associated to the region at the DHCP server. Each Network Region would then have assigned to it a physical address and an ELIN. Every time a VoIP phone registers to the Avaya Call Manager at the AT&T POP or County Operations Center, E911 Manager reviews the IP address of the VoIP phone to determine if the IP address falls into one of the IP address ranges set aside for the regions. If E911 Manager determines that a VoIP phone is in a Network Region, E911 Manager would provide the ELIN to the respective Avaya Communication Manager server at the AT&T POP or County Operations Center.

- Automated systems and tools involved in solution

E911 Manager solution would automate the E911 management process by connecting with the County's Geo-Redundant Avaya Communications Manager to the AT&T Multiprotocol Label Switching (MPLS) network to track and update VoIP, digital, and analog phone moves, adds, and changes.

E911 Anywhere is a cloud-based 9-1-1 call routing service that can connect a 9-1-1 call to more than 6,000 Public Safety Answering Points (PSAPs) in the U.S. and Canada.

Identity Federated Services Transformation Project

- Description of solution to meet the requirements

Contractor analyzed Okta, Oracle, and IAMaaS during the technology selection stage and recommended HPE's IAMaaS due to the maturity of the product and services, purchase and maintenance cost, and lower risk during implementation. However, if the County opts for another solution such as Okta or Oracle, Contractor would work with the County to plan and execute a successful implementation of either vendor's solution.

The recommended Identity Federated Services solution includes the following components:

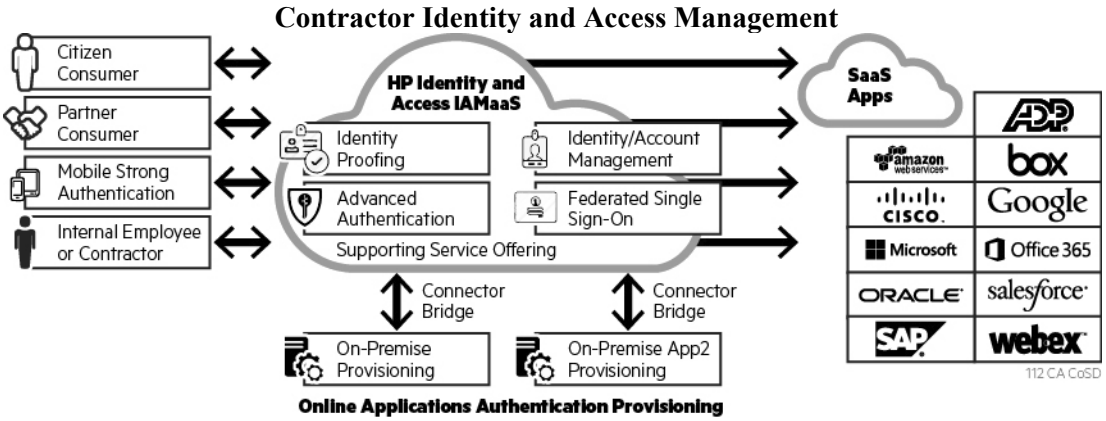
- The existing Oracle IDAM technology platform as its core
- Microsoft Active Directory Federation Services (ADFS)
- HPE's IAMaaS to enable the federation services where the County is acting as service provider and identity provider.

Contractor would use IAMaaS to integrate external constituents within the County's Identity Management Service. IAMaaS is a cloud-based IDAM) solution built using the Computer Associates (CA) secure cloud product for multi-tenancy. IAMaaS is hosted on the HPE Helion Managed Virtual Private Cloud for U.S. Public Sector. The following elements describe the main features of the IAMaaS solution and how they relate to the County:

- User life cycle management such as self-registration, password resets, and profile updates.
- Application access management to request access to applications.
- Hybrid provisioning cloud and on premise to create/update on-premise identity requirements.
- Identity synchronization on premise to make certain that relevant data is updated one way or bi-directionally.
- Reporting for compliance and audit.
- Identity proofing from the solution to County data stores.
- The single sign-on (SSO) Federation Hub can act as identity provider (IDP) and service provider (SP) to County software as a service (SaaS) applications.
- IAMaaS can act as a Federation Hub. External users can be authenticated to SaaS apps using their County/IAMaaS credentials, County credentials, or social login credentials like Facebook.
- The CA Security SaaS Validation Program helps SaaS vendors increase sales and adoption by simplifying and validating their SSO interoperability. It enables smooth integration of SaaS solutions into CA SSO environments in an End-User-friendly and cost-effective way.
- Credentials may include Forms, Integrated Windows Authentication (IWA), multi-factor authentication (MFA), public key infrastructure (PKI), Radius, OAuth, one-time password (OTP), and Risk.

The figure below illustrates the main elements of the IAMaaS solution and its relationship with the County, its citizens, employees, and partners. On the left side is each type of End-User who would interact with the service. Within the core or "cloud" of IAMaaS are the key services provided such as identity proofing, identity and account management, federated SSO, and advanced authentication. The resources and services to access are on the right; those services are both internal and external to the County IT environment, including third-party providers. Connectivity to the resources via the IAMaaS are enabled via industry-standard IDAM protocols.

IAMaaS solution



Providing secure IT services operations through robust End-User identity authentication.

Rationale: Contractor believes that expanding the current IDAM capability along with implementation of HPE's IAMaaS for identity management of external users provides the most cost-effective solution. This approach *provides a low risk, non-disruptive method* to expand on existing County investments and meets the County's architecture vision for identity management.

Timing: The timing for expansion of the existing County IDAM solution to include federation would coincide with the ConnectWellSD project or other timing as required by the County. Other elements of the solution such as federation requests to business partners would occur as the solution is deployed.

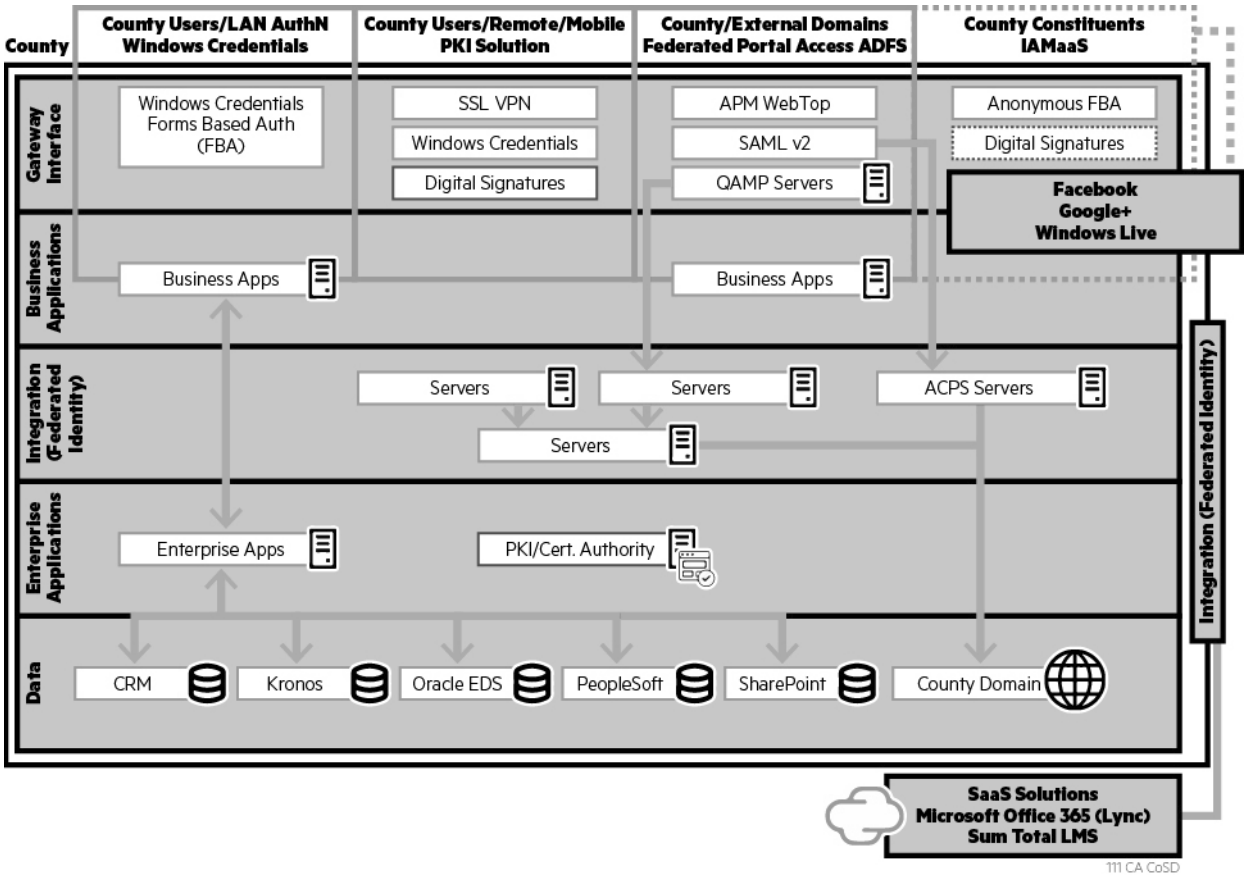
The figure below depicts the overall view of the IDAM solution and how Oracle, ADFS, and the HPE's IAMaaS would work together to provide identity federation. As seen in the figure, the core elements of the IDAM solution would work together to enable seamless federation between the County and third-party providers, external State and Federal agencies, and identity management for County residents.

The County ADFS 2.0 environment—a key component of the Identity Federated Services—has been operational since 2011, providing secured identity federation and web SSO capabilities for County and external business unit End-Users who require access ADFS-secured applications within the County network and in the cloud.

Earlier in 2016, the ADFS environment was upgraded to v3.0 with redundancy, and included a new test environment. By adding external access to the test ADFS server, this upgrade provides expanded use of the ADFS test environment for development and testing of new ADFS-secured applications.

Upgrading the ADFS environment was part of the County's overall IT roadmap to refresh and improve key infrastructure components and expand the County's IDAM solution. The key point is that this solution is strongly tied to the Identity and Access Management Services solution; it is a continuation of that capability but expanded to enable federation—much of the approach is duplicative.

The IDAM solution integrates Oracle, ADFS, and the HPE's IAMaaS



This solution offers minimal risk to the County and enables seamless federation between the County and third-party providers, external State and Federal agencies, and identity management for County residents.

Key Dependencies and Milestones: As a part of the overall IDAM effort, Identity Federated Services is encapsulated in the following list, which details the progressive steps of the IDAM solution and details what is being done today and what Contractor would perform in the future:

- Current/on-going effort – Oracle Federation Manager is currently deployed with Service Provider active and Identity Provider not active. Based on an existing request from the Department of Child Support Services (DCSS), Contractor plans to implement the Federation Acting as Identity Provider upon approval. To deliver the federation capability for DCSS, IAMaaS needs to be implemented simultaneously with Federation Acting as Identity Provider.
- Future – Develop a process for auto-onboarding new employees based on the information in PeopleSoft to create the Active Directory (AD) identities
- Future – Expand use of the existing platforms into all County business units and partners as well as work with the current Knowledge Integration Project (KIP) team (IBM) to expand to partners
- Future – Use Contractor's IAMaaS solution to expand to County residents and to act as the identity manager for County residents
- Future – Re-architect the solution to become a zero downtime solution
- Future – Federate with County third-party vendor applications

- Deployment plan for resources and use of facilities

Ongoing support for the IDAM service would be delivered by continental U.S.-based delivery resources in line with the County's requirements. With more than 5,000 security professionals who have IDAM expertise, Contractor has the experience to deliver even the most complex solutions.

The Contractor Tulsa Data Center would be the production data center, with the IDAM solution delivered from this location. This includes almost all web, application, and database servers, data storage, and data management. The Contractor disaster recovery (DR) site in Colorado Springs would provide the recovery site for the IDAM solution.

- Key methodologies and processes in solution

Contractor would adhere to the following key processes to deliver Identity Federated Services:

Solution Methodology: By incorporating the Contractor's IT Strategy & Architecture (ITSA) for Identity Federated Services, Contractor would take the same iterative approach, addressing issues and improvements in data quality and data management—in both practice and implementation. Through this process, Contractor would work closely with County data teams and other Contractor Transformation, Integration, and Architecture (TIA) data architects to define and manage County IT outsourcing enterprise data semantics. ITSA for Identity Management advocates a rapid, incremental, and iterative approach that can be aligned with the County's hybrid development methodology.

In addition to the ITSA, Contractor would use standard TOGAF (The Open Group Architecture Framework)-based architecture approach to develop the solution artifacts and produce the required documentation to make certain that the solution is documented correctly and that it also would lower the overall implementation risk to County. Contractor would integrate these key methodologies with the County's current Architecture and Solution reviews in conjunction with the County Technology Office (CTO) and relevant County groups.

For the Oracle IDAM Suite, Contractor would work with Contractor's IDAM architect to make certain that the design, development, and deployment of the Oracle suite follow standard Oracle design and deployment methods. This would facilitate operation of the Oracle platform within the design parameters. Any significant design changes to the platform or changes to the Oracle databases would follow Oracle mandated practices.

- Automated systems and tools involved in solution

Contractor would use the Oracle and Microsoft tools identified in the table below in support of Identity Federated Services.

Automated Tools for Support of Identity Federated Services

TOOL	PURPOSE
Identity Manager	• Oracle Identity Manager is designed to manage End-User access privileges across all of the County's resources, throughout the entire identity management lifecycle—from initial creation of access privileges to dynamically adapting to changes in business requirements. Identity Manager enables the incorporation of necessary business changes at minimal cost, while avoiding enforced customization.
Access Manager	• Oracle Access Manager provides adaptive authentication, federated single sign-on (SSO), risk analysis, and fine-grained authorization extended to mobile clients and mobile applications. Services can be licensed and enabled as required to meet the specific needs of the County.

TOOL	PURPOSE
Federation Manager	• Oracle Identity Federation (OIF) provides secure identity information exchange between external/internal partners. OIF provides account management for partner identities and integrations through support of industry federation standards. OIF protects existing IT investments by integrating with a wide variety of data stores, End-User directories, authentication providers, and applications.
Virtual Directory, Unified Directory	• Oracle Virtual Directory provides Internet and industry-standard Lightweight Directory Access Protocol (LDAP) and eXtensible Markup Language (XML) views of existing enterprise identity information without synchronizing or moving data from its native locations.
Microsoft tools and services also be used: • Microsoft Active Directory 2012 • Microsoft ADFS	• Microsoft Active Directory (2012) Domain Services (AD DS) provides a distributed database that stores and manages information about network resources and application-specific data from directory-enabled applications. Administrators can use AD DS to organize elements of a network—such as users, computers, and other devices—into a hierarchical containment structure. The hierarchical containment structure includes the AD forest, domains in the forest, and organizational units (OUs) in each domain. • ADFS (Active Directory Federated Services) provide County users with SSO access to systems and applications located across organizational boundaries. It uses a claims-based access control authorization model to maintain application security and to implement federated identity. (Claims-based authentication involves authenticating an End-User based on a set of claims about that End-User's identity contained in a trusted token. Such a token is often issued and signed by an entity that is able to authenticate the End-User by other means, and that is trusted by the entity doing the claims-based authentication.) It is part of the AD DS.

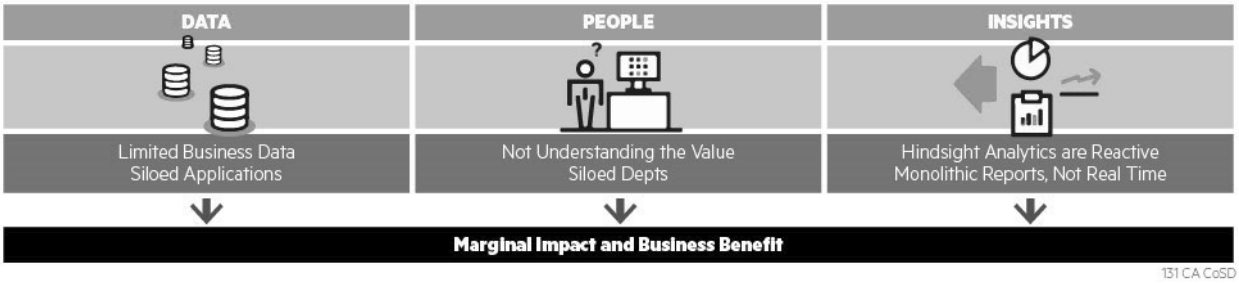
Enterprise Information Management Transformation Project

- Key Considerations and Potential Alternative Approaches

Contractor recommends implementation of an Enterprise Information Management (EIM) program to capitalize on the valuable data that is available but currently not harnessed. This shall provide the County with information it needs to make more informed decisions and present an enterprise view of the data that could be used to make richer programs available to the public.

The County has begun the journey to modernize the Information Architecture and Governance model a critical step as modernization and transformation of the IT infrastructure begins. The information architecture must address traditional "feeds and speeds," and include business definitions of information and the information processes to incorporate all data (structured, semi-structured, and unstructured (xml, flat files, scanner files).

Siloed business data, as shown in the figure below makes it difficult to take full advantage of the information available across the enterprise. To the County, this could mean employees are limited in their ability to perform certain job functions or provide the services citizens need. This can result in added frustration for both employees and citzens.



When data is siloed, it is more difficult and time consuming for County employees to find the information needed to support citizens.

EIM provides an essential framework for managing and governing information (data) across the enterprise and requires:

- Governance and stewardship
- Integration
- Methodologies and standards
- Architecture and technologies
- Enterprise data models

The payoff for an EIM solution is clear—the County would be better prepared to more rapidly meet the needs of employees and citizens by gaining greater insight from the data it collects, as shown in the figure below.

Integrated Data Across the Enterprise.

Easy access to all available data facilitates decision making and helps to achieve superior business outcomes.

As Contractor and the County develop a modernized Information Architecture and Governance model, Contractor would consider a wide-range of common challenges that include:

- Inconsistent definitions of key business data, leading to incomplete, incorrect business metrics
- Information that is not available, incomplete, inaccurate, and untimely to enable informed business decision
- Time-consuming, manual processes, adding to employee workload and citizen frustration
- Fragmented data, preventing or delaying comprehensive situational analysis and appropriate actions
- Siloed project work, preventing integration or extension across enterprise
- Inconsistent data, preventing standardization and reuse of processes, methods, among others
- Siloed decision making, which may be counterproductive to the enterprise
- Poor data quality and fragmented data security/auditability, exposing compliance risks (SOXA, HIPAA, ISSA, CCA, FRCP, Basel II Accord, PCI, EU Privacy Directive, etc.)
- Unknown data retention needs/requirements, transforming data assets into data liabilities (storage costs & exposure risks).

Contractor recommends EIM for developing a coherent and supportable Information Architecture and Governance model. This approach would focus on developing an information strategy and a roadmap for implementing the strategy, and then to invest in delivering the supporting initiatives.

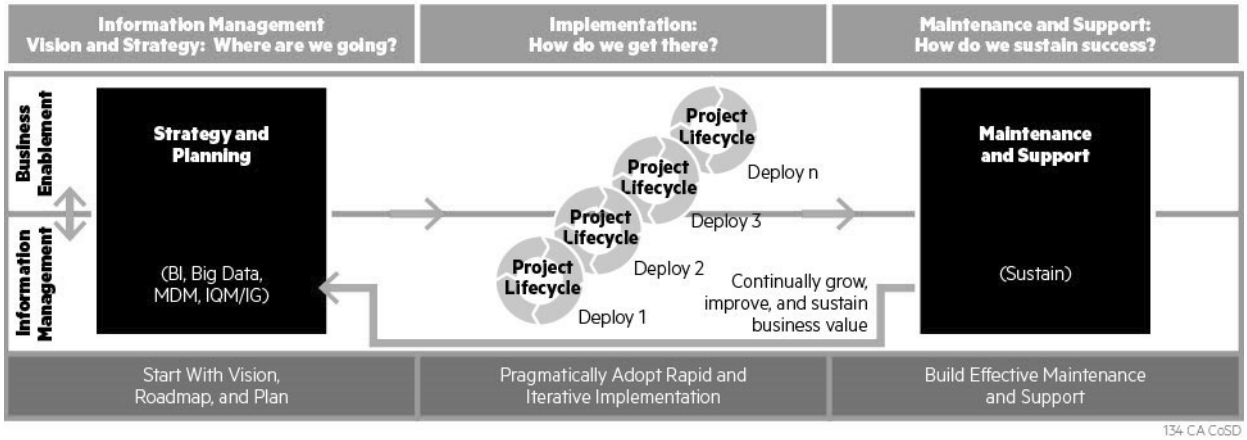
- Description of solution to meet the requirements

Contractor proposes a two-phased approach to establish a coherent EIM program. The first phase is a stand alone project. This project focuses on the objective defining the County's EIM program. Key deliverables from this project include: Vision and Strategy Document and EIM Roadmap.

The second phase is would consist of a number of separate projects detailed in the Roadmap from Phase 1. Each project would have well defined objectives and deliverables defined throughout the implementation process. Specific intitiatives/projects identified in the roadmap are executed in a rapid and iterative approach. Contractor scopes the implementation projects upon completion of the vision and strategy. Projects associated with the second phase would be completed via work request.

The figure below illustrates the Contractor approach to EIM. Of particular note, Contractor's approach is to address and align business enablement with information management.

Contractor Approach to EIM



Contractor's approach aligns business enablement and information management that address true business needs.

Rationale: EIM provides the framework for managing and governing information across the enterprise. An EIM program enables data sharing for better decision making and provides County leaders with insight into to the quality of services that they deliver to their citizens.

Timing: Contractor estimates the time required to develop the information management vision and strategy and roadmap to be a 3- to 4- month period that would occur after transition. Contractor would work with the County to determine the business needs and to document the supporting technical requirements. To minimize the County's time investment, while maximizing impact, Contractor would conduct information gathering through a series of focused discussions with stakeholders. This helps Contractor to have an accurate understanding of the current environment as well as the desired future state. At the end of this effort, Contractor would deliver a strategy and roadmap for review and approval by the County.

Risks: None identified.

Dependencies: Developing an effective EIM program is dependent on the active involvement of the business groups as well as the CTO.

Milestones: Key milestones in the planning and implementation of EIM include the following:

- **Milestone 1 – Business Needs Assessment.** A core component of the information gathering phase of the strategy and vision project that focuses on the needs of the business in terms of EIM.
- **Milestone 2 – Current State Assessment.** The second core component of the information gathering phase focuses on documenting the existing technical environment to support EIM
- **Milestone 3 – Desired State Gap Analysis.** The transition step into analysis and planning phase where Contractor documents the gaps between what the County's business needs are and the current technical environment.
- **Milestone 4 – Strawman Vision and Roadmap**. This milestone reflects Contractor draft strategy and roadmap for the County.
- **Milestone 5 – Final Vision and Roadmap.** Once the County reviews and approves, Contractor provides the final strategy and roadmap to guide implementation the of EIM program.

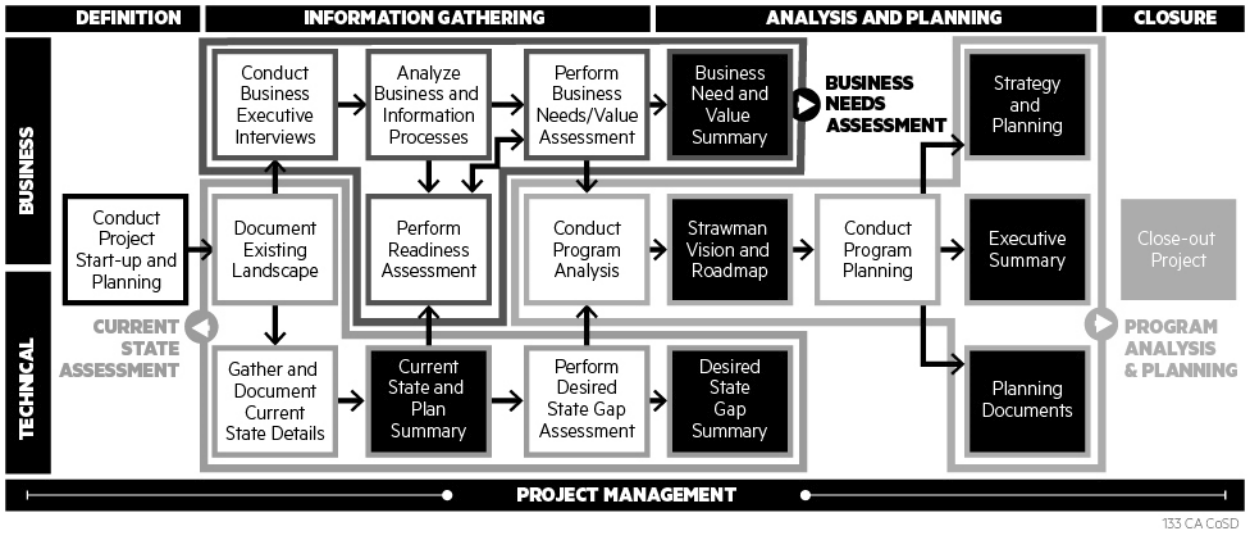
- Deployment plan for resources and use of facilities

For the development of the County's Information Management Strategy, Vision, and the supporting Roadmap, Contractor provides a small team of experienced consultants to work on-site in San Diego with the local support team and key County stakeholders.

- Key methodologies and processes in solution

During the past 40 years, Contractor has developed and documented its IT Solution Architecture (ITSA). This methodology. This methodology would provide the foundation for Contractor's EIM solution. The figure below identifies the detailed steps for both the development of strategy and vision and implementation.

Contractor Global Methods for Information Strategy Master Plan



Contractor uses a collaborative approach to identify and document requirements and gain concurrence for the way forward.

The methodology uses a collaborative approach to align business needs with technology by documenting the current state of technology, process and strategy. Through structured information gathering Contractor documents the desired state and analyze of this information to identify gaps between the current state and the desired state. Contractor uses this information to develop the roadmap to address the gaps. Each step in the framework results in detailed artifacts tailored to the County. Contractor's consultants are trained on the methodology and are experienced in guiding the process, making sure that the County's experience is positive and the results meet their information management needs.

While not included in the proposed initiative, Contractor anticipates that after the County develops its EIM strategy and roadmap, there would be a need to support implementation of EIM. Contractor has a mature methodology for implementation and is prepared to support the County in this phase. This methodology applies proven templates and suggests industry best practices to gather the correct information needed for successful implementation. Contractor would work with Contractor's account team and provide Contractor's expertise to help guide project implementation as identified in the County roadmap. Common implementation projects address information management/quality, master data management, information governance, enterprise data modeling, and development of enterprise standards.

- Automated systems and tools involved in solution

The process for planning and implementing EIM projects relies on standardized templates to gather and document requirements. These result in well-defined deliverables that are guided by an extensive set of artifacts and knowledge libraries. Contractor would use its existing methodologies and associated processes to develop the strategy and plan. As Contractor assesses the current environment and conduct a gap analysis, Contractor documents technology requirements for subsequent implementation projects.

Comprehensive Applications Threat Analysis (CATA) Service Transformation Project

- Description of solution to meet the requirements

Contractor's Comprehensive Applications Threat Analysis (CATA) service uses well-established return on investment (ROI) practices for quality improvement. These practices demonstrate that fixing defects after code implementation can be 30 to 100 times costlier than discovering, avoiding, or reducing the severity of defects early, during requirements analysis, architecture, and design. Conventional software development practices discover and fix only a small fraction of security vulnerabilities later in the application development life cycle; CATA enables achievement of a much higher level of assurance with security and lower rework costs. CATA minimizes security-related rework by helping get it right the first time by identifying security issues in higher layers of abstraction of the application (requirements, architecture, design). This can pervasively improve applications security to complement other efforts to address security issues in source code (static) and run-time behavior (dynamic).

Projects: CATA reviews would be conducted on a subset of the County's applications, selected and prioritized according to factors such as County-provided priority, sensitivity/criticality of data managed by application, impact if the application is compromised (confidentiality, integrity, or availability), significance/scope of application updates (especially new requirements, updated architecture, design, transformation/modernization), any available risk characterizations, and other factors agreed to by Contractor and the County. Likewise, prioritization criteria and decisions would be made for static security code reviews and applications vulnerability assessment and penetration testing. In cases where a CATA review is conducted, and it is deemed appropriate to conduct a follow-on CATA review on the same application (for instance, above the risk prioritization threshold for CATA reviews, and having another major release since prior review), a CATA delta review would be conducted, starting with the CATA baseline analysis initially performed or a prior CATA delta review.

Objectives: the identification of security requirements/controls gaps and vulnerability risks, and recommendations to address (close gaps, lower risks) for each security assessment (CATA, static security code review, vulnerability assessment / penetration test) to improve the security of these applications by a prioritized incorporation of the review recommendations.

Deliverables: A prioritized and vetted list of security findings from each of two CATA phases (Security Requirements Gap Analysis; and Architectural Threat Analysis) with project team commitments to address factored into before and after severities. These can be in the form of summary slides (most common form of deliverable), samples of which are shown below in the Key Methodologies section, or longer written reports at the County's option, which include additional explanatory narrative and background on the specific analysis results

that contributed to the findings. Findings from code review and vulnerability assessment and penetration testing are in the form of written reports describing findings, along with severities and remediation recommendations.

- Key methodologies and processes in solution

CATA is a two-phase activity—Security Requirements Gap Analysis and Architectural Threat Analysis—that includes interviews with Contractor development staff, analysis by Contractor staff and tools, and reporting.

The **Security Requirements Gap Analysis** determines security requirements and control gap for deployment of the application in compliance with applicable regulatory frameworks and industry best practices. The gap analysis would establish security control objectives and lay the groundwork for the threat analysis.

During the Security Requirements Gap Analysis phase, Contractor would identify relevant sources for security requirements derived from applicable regulatory requirements. Contractor then would establish traceability from the County's regulatory or business environment to a prioritized set of security requirements. From the information Contractor gathers through Contractor's proprietary templates and stakeholder interviews, Contractor would determine the plans and commitments for addressing these requirements, with special focus on already-designated technical solutions and already-documented security expectations, and the remaining gaps.

The Security Requirements Gap Analysis is based on:

- Expert system-like templates, with partially encoded expert security knowledge
- Weighted and prioritized input
- Data that is reviewed and calibrated by certified security reviewers
- Efficient, repeatable results
- Requirements traceability from a robust collection of governance sources, including regulations, laws, and best practices.

The end result is a Security Requirements Gap Analysis that would identify important security requirements that may not be met through current plans. It places these at-risk requirements in priority or severity order.

The figure below is a sample of summary level Security Requirements Gap Analysis findings, which would be part of a larger findings slide deck.

Security Requirements Gap Analysis Sample Summary of Findings

Remaining Disconnect and Review Progress	Current Release Impact	Future Roadmap
Lacking Least Privilege 	Daemons (Tomcat/JBoss) exposed to internet run with **full-privilege** accounts, **increasing security risks** and potentially increasing security-related **support cost.** Making customer compliance with GLB, BS7799, HIPAA, and PCI-DSS difficult.	**Next Release** **Modify** Tomcat/JBoss (and other **automated processes**) to **run** as restricted users with **least privilege needed.** It may be necessary to do that for Current Release, depending on Threat Analysis results.
Certificate Lifecycle Management 	Supports **only self-signed certificates,** which **require reliance** on **DNS (proven to be unsecure)** and do **not** allow for **revocation verification,** potentially causing **unauthorized access** to customer **credentials.** Making customer compliance with BS7799, HIPAA, and PCI-DSS difficult.	**Next Release** Add **support for CA signed certificates** and certificate **revocation** thru OCSP or CRL verification.
Missing Security Negative Tests 	**No Security Negative Tests** because QA has no experience with negative testing. Making customer compliance with BS7799, HIPAA, and PCI-DSS difficult.	**Next Release** Train QA team on security test tools (e.g., WebInspect) and **include security negative** tests to test plan.
Non-Configurable Cipher Suites 	The **cipher** and **hash algorithms** are **not configurable.** Thus, **customers** may **not** be able to **follow** their **IT policies** and **cannot disable weak algorithms.** Making customer compliance with HIPAA and PCI-DSS difficult.	**Future Release** Make **cipher and hash algorithms configurable.**

173 CA CoSD

This sample report shows an overall security assessment of Medium Risk from non-supported security requirements.

The **Architectural Threat Analysis** is an architecture-level review of the security properties of the underlying components and interfaces and provides recommendations for mitigating all identified moderate- and high-risk areas.

CATA combines information about the target application and deployment environment with target application security plans. A Contractor security consultant, uses CATA tools and templates that include a requirements traceability questionnaire and database, and an architectural threat analysis heuristic template. These tools add repeatability, semi-automated risk calculations, and serve as an "additional reviewer in the room." Contractor's security consultant then analyzes the resultant data.

In the Architectural Threat Analysis phase, the CATA team acts as an independent party, and would interview the designated Project Security Architect for the specified application or system. Contractor would then review architecture-level documents to gather information regarding architectural interfaces, components, data, and security characteristics, in addition to security mitigations already planned. Contractor has developed a repeatable process that uses a variety of well-established heuristics to identify interfaces and security properties that have the greatest risk of security defects. The Contractor analyst would factor in the risk reduction resulting from the mitigations and controls reportedly applied, and identify areas of residual elevated risk as well as technical control opportunities.

The Architectural Threat Analysis invariably finds unnecessarily elevated security risks that would benefit from additional technical controls. Contractor investigates specific solutions to address the security risks and provides recommendations based on best fit for the County's organization and mission. This task does not include implementation of the solutions. Architectural Threat Analysis can preempt building security flaws into applications based on the following elements:

- Expert system-like artifacts, encoded with first-order expert security knowledge
- Weighted and prioritized input
- Data that is reviewed and calibrated by certified security reviewers

- Efficient, repeatable results.

The figure below is a sample of summary level Architectural Threat Analysis findings (part of a larger findings slide deck).

Sample Architectural Threat Analysis Report

Security Risk Area and Review Progress	Past Behavior	Fix
Least Privilledge	All **process** daemons **running as root** gaining **full access** to the box and **defects can lead to unauthorized** code running as **root**	Create **restricted user** account and use it to **run** the process **daemons**
Support for Third-Party Certificates	Using **self-signed** certificates **hinders** customer **validation, exposing** customer and servers to **man-in-the-middle attacks.**	**Replaced self-signed certificates and provided** means for **validating the certificates** correctly
Full Privilledge Database Account	**Web application using** an admin **root account** was **unnecessarily** risking to **expose database data**	**Replaced admin** account by **restricted account**
Duplication of Validation Routines	Validation routines were disperse in the code raising the risk of missing bug fixes	**Integrate** in the project a **well-documented** validation **library**
World-Writable Directory	Web application **configuration files** were **world-writable exposing** them to an external **attacker** to be able to **modify important application characteristics**	Included **file system checks** in build **scripts**
Exposed Passwords	Web application and CC service would **leave credit card** information in **clear text** after **freeing memory**	**Wipe memory buffer** before freeing memory

174 CA CdSD

The Architectural Threat Analysis prevents security risks from being introduced into application code.

Missing or incomplete security requirements, architectural threats, and/or previously investigated remediation may be identified during the analysis. Contractor would report these findings based on their severity: High (Red), Moderate (Yellow), and Low (Green). Severities can be modified if required to match specific regulatory frameworks.

Findings would include a high-level executive summary, slide tables of individual prioritized findings with remediation recommendations, and if a written report is required, a technical discussion section.

While CATA is highly effective for proactively identifying and mitigating potential security risks in the targeted applications, Contractor recommends combining CATA with secure code analysis by a security expert using the Fortify tool or with hybrid combinations such as Contractor's human expert security code reviews, in addition to Contractor's applications vulnerability assessment and penetration testing. This would result in identifying vulnerabilities through both static and dynamic security analysis, as these highly complement CATA. Static security analysis identifies issues in source code, and dynamic security analysis identifies vulnerabilities in run-time behavior, while CATA identifies security issues in requirements, architecture, and high-level design.

CATA – Complementary Security Services: CATA is a high-level service focused on the requirements and architectural level. Problem areas identified through CATA can often be addressed through other Contractor security service offerings. The following additional services help assess whether the security designed in early stages is also implemented correctly:

- **Secure Code Analysis** – Provides validation that the application, once it has been designed correctly, is implemented as designed. This may be a combination of human expert security code review and automated static scanning, such as with HPE Fortify.

- **Applications Vulnerability Assessment** – Provides a further layer of validation that once the application is implemented as designed, known attack vectors do not "break" it. Vulnerability assessment can be performed not only prior to deployment, but also throughout the production lifetime of the application. The assessment can catch some emerging or "zero day" problems with applications that have already been deployed to the field.
- **Penetration Testing** – Penetrates beyond vulnerability assessment to test vulnerabilities discovered in vulnerability assessment for exploitability.

- Automated systems and tools involved in solution

HPE Fortify on Demand, CATA tools and templates, referenced above. Note that HPE Fortify is distinct from CATA, which analyzes analyses security requirements, architecture, and high-level design, and is human methodology, whereas Fortify is a product/tool to scan code statically (for instance Fortify SCA) and dynamically (WebInspect). These tools are highly complementary, and when used in combination with human expert and hybrid Secure Code Analysis and application vulnerability assessment and penetration testing, they cover security across all major aspects of the SDLC.

10. CONTRACTOR TOOLS

Following is a list of the tools used in Contractor's solution to provide services to the County.

RESOURCE / TOOL NAME	INFORMATION
Enterprise System List (ESL)	Type: Software Manufacturer: HPES Purpose/Use: ESL (Enterprise System List) is a Delivery-focused Configuration Management System for managing System/Application Configuration Items, Services/Contracts and Customer/Account Information. Other Information: Supported Services: Configuration Management Services
Asset Manager	Type: Software Manufacturer: HPE Purpose/Use: Tracks End-User and network assets Other Information: Supported Services: Configuration Management Services, End User Services, Domain Name Management Services Supported Services: Cross Functional
Discovery and Dependency Mapping Inventory (DDMI)	Type: Software Manufacturer: HPE Purpose/Use: discovers and reports assets found on the network; integrates with Asset Manager. Other Information: Supported Services: Cross Functional
Service Manager (HPSM)	Type: Software Manufacturer: HPE Purpose/Use: Used by the Service Desk and all support staff for ticketing of Incidents, Problems and Changes. Other Information: Supported Services: Service Delivery Management, Incident Management, Problem Management Services, Change Management Services, Release Management Services, Service Desk Services, End User Services, Core Software Services, County Retained Assets Services, Catalog Services, Network Printer Services, Configuration Management Services
End User Access (EUA)	Type: Software Manufacturer: HPES Purpose/Use: Service Portal Other Information: While the core software and interfaces are standardized and centrally controlled to interact with the rest of the cross functional tools, the Service Portal is separately instantiated and customized for each client for whom it is deployed.

RESOURCE / TOOL NAME	INFORMATION
	Supported Services: Project Management Services, Reporting Management Services, County Retained Asset Services, Catalog Services, Application Maintenance and Operations Services
Aries/Aldea	Type: Software Manufacturer: HPES Purpose/Use: Tool used by Contractor internally to request resources (e.g., staffing assignments, workload placement) from the broader Contractor community Other Information: Supported Services: Cross Functional
RevGen	Type: Software Manufacturer: SAP Ariba Purpose/Use: Procurement of products and services Other Information: Supported Services: Cross Functional
Enabling Delivery and Global Excellence (EDGE)	Type: Knowledge Repository Manufacturer: HPES Purpose/Use: EDGE is a holistic environment that includes all the information needed to enable Enterprise Services (ES) to deliver and excel in the global marketplace. EDGE supports all individuals in each of the ES business units by providing process artifacts that can be leveraged and used as part of their day-to-day work. Other Information: Supported Services: Architecture Services, Business Analyst Services, Project Management Services
Enterprise Architect	Type: Software Manufacturer: Sparx Systems Purpose/Use: Enterprise Architect provides full life cycle modeling for: Business and IT systems Software and Systems Engineering Real-time and embedded development Other Information: Supported Services: Architecture Services
ProVision	Type: Software Manufacturer: OpenText Purpose/Use: ProVision is Contractor's standard modeling tool, to be used for Business Process, Enterprise Architecture and IT solution modeling. It enables business & IT teams to visually create models, describing business process, process interactions and detailed workflow Other Information: Supported Services: Architecture Services, Business Analyst Services*

RESOURCE / TOOL NAME	INFORMATION
Disaster Recovery Subscription Services	Type: Disaster Recovery Subscription Services Manufacturer: various Purpose/Use: DR subscription services for all leveraged hardware and software used to provide: Server services, Storage services, Network services, Security services and Backup services Other Information: Note that the Centera and the dedicated firewalls located in the DR site are not considered to be part of this list, since they are dedicated to the County. Supported Services: Cross Functional
ArcSight Security Information and Event Management (SIEM)	Type: Software/appliance Manufacturer: HPE Purpose/Use: Event logging and monitoring Other Information: Supported Services: Security Services
Global Delivery Capacity & Performance Management (GDCPM)	Type: Software Manufacturer: HPES (based on SAS and other underlying tools) Purpose/Use: Collects, aggregates and analyzes capacity and performance data from various disparate sources for reporting and analysis Other Information: Supported Services: Capacity Planning and Performance Management Services
System Center Configuration Manager (SCCM)	Type: Software Manufacturer: Microsoft Purpose/Use: Hardware discovery and software distribution to End-User devices Other Information: Security patching of OS and distribution of desktop software Supported Services: End User Services, Core Software Services, County Retained Assets Services, Catalog Services, Application Maintenance and Operations Services, Initiatives: User Data Services
Leveraged Internet Service (LIS) firewalls in the Tulsa and Colorado Springs data centers	Type: Hardware Manufacturer: Checkpoint Purpose/Use: Internet access/security Other Information: In the future these are slated to be replaced by Fortinet firewalls Supported Services: Network Services
AT&T Commonly Shared Network	Type: equipment, tools, software, systems and other materials Manufacturer: Various Purpose/Use: For clarity, the AT&T Commonly Shared Network means (i) the public or shared networks of AT&T, its Affiliates and their subcontractors, and the equipment, tools, technologies, systems, software, and other materials that are components thereof; (ii) equipment, tools, technologies, systems, software and other materials used by AT&T, its Affiliates and their subcontractors in shared network management and back office environments including ,

RESOURCE / TOOL NAME	INFORMATION
	without limitation, TIRKs, iGEMS, BusinessDirect, Billing Edge, the AT&T Global Network Client and AT&T Connect and any other items listed above in this Exhibit; and (iii) all modifications, upgrades, derivative works, enhancements, improvements and extensions of any of the foregoing. Other Information: Supported Services: Network Services
SIMS (Security Information Management System)	Type: Software Manufacturer: AT&T Purpose/Use: Security event correlation Other Information: Supported Services: Network Services
SDNOM (Software Defined Network Order Management)	Type: Software Manufacturer: AT&T Purpose/Use: Circuit Ordering Other Information: Supported Services: Network Services
Nectar Unified Communication Management Platform	Type: Software Manufacturer: Nectar Purpose/Use: Voice Network Performance Management Other Information: Supported Services: Network Services
MDM-Airwatch SaaS Console (Mobile Device Management)	Type: Software Manufacturer: AT&T Purpose/Use: Mobile device management Other Information: Offers a centralized dashboard to enforce policies, set restrictions, and secure devices while in use, lost, or stolen. Supported Services: End User Services, County Retained Assets Services, Mobility Infrastructure Services
SORD (Service Order Retrieval and Distribution)	Type: Software Manufacturer: AT&T Purpose/Use: Service order entry Other Information: Supported Services: Network Services
Telegence	Type: Software Manufacturer: AT&T Purpose/Use: Billing Other Information: Supported Services: Network Services
BOSS (Billing and Ordering Support System)	Type: Software Manufacturer: AT&T Purpose/Use: Product billing, tracking and reporting Other Information: Supported Services: Network Services

RESOURCE / TOOL NAME	INFORMATION
DPSS (Data Products and Services System)	Type: Software Manufacturer: AT&T Purpose/Use: Data product and services tracking Other Information: Supported Services: Network Services
BusinessDirect/eBill	Type: Software Manufacturer: AT&T Purpose/Use: Account management Other Information: Supported Services: Network Services
Exchange Plus	Type: Software Manufacturer: AT&T Purpose/Use: Carrier resource tracking Other Information: Supported Services: Network Services
ICES (Integrated Customer Enterprise System) ServiceCenter/AssetCenter	Type: Software Manufacturer: AT&T Purpose/Use: Asset Inventory Other Information: Supported Services: Network Services
SAINT	Type: Software Manufacturer: AT&T Purpose/Use: Security scanning and testing Other Information: Supported Services: Network Services
Nmap	Type: Software Manufacturer: Nmap Purpose/Use: Network scanning and mapping Other Information: Supported Services: Network Services
WFA (Work Force Administration)	Type: Software Manufacturer: Telcordia Purpose/Use: Trouble ticketing and work flow Other Information: Supported Services: Network Services
TIRKS (Trunks Integrated Record Keeping System)	Type: Software Manufacturer: Telecordia Purpose/Use: Circuit design Other Information: Supported Services: Network Services
AOTS-TM (AT&T One Ticketing System – Trouble Management)	Type: Software Manufacturer: AT&T/Remedy Purpose/Use: trouble ticketing Other Information:

RESOURCE / TOOL NAME	INFORMATION
	Supported Services: Network Services
NMA (Network Monitoring and Analysis)	Type: Software Manufacturer: Telecordia Purpose/Use: Network monitoring Other Information: Supported Services: Network Services
Avaya Site Administration	Type: Software Manufacturer: Avaya Purpose/Use: Voice system administration Other Information: Supported Services: Network Services
Server Automation	Type: Software Manufacturer: HPE Purpose/Use: Distributing operating system and layered product patches and upgrades Other Information: The core mesh is a shared resource; distribution satellite servers within the County's network zones are dedicated to the County Supported Services: Managed Private Cloud
Operations Manager (HPOM)	Type: Software Manufacturer: HPE Purpose/Use: Monitoring and alerting for various data center components, such as servers, domain controllers, databases, etc. Other Information: Supported Services: Managed Private Cloud, Application Maintenance and Operations Services
Microsoft Office 365 Government Community Cloud	Type: Software as a Service Manufacturer: Microsoft Purpose/Use: E-Mail (Exchange Online), Collaboration (SharePoint Online, Skype for Business), Cloud File Management (OneDrive for Business) Other Information: Supported Services: Data Center Services
E2E Complete	Supported Services: Transition Schedule and Tasks Type: Software Manufacturer: BinaryTree Purpose/Use: Automation tool for migration of mail services from Exchange to the Microsoft Office 365 Cloud Other Information: Supported Services: Unified Communications Infrastructure Services
Helion Virtual Private Cloud for US Public Sector	Type: Infrastructure as a Service Manufacturer: HPE Purpose/Use: Virtual Private Cloud (VPC) for Windows and Linux environments. VPC is a Government Community Cloud currently used to run the County's Beach and Water Quality website.

RESOURCE / TOOL NAME	INFORMATION
	Other Information: Data Center Services
Watchdog	Type: Software Manufacturer: HPES Purpose/Use: Internally developed utility that monitors/removes privileged access implemented via non-approved methods Other Information: Supported Services: Security Services
StarTeam	Type: Software Manufacturer: Microfocus/Borland Purpose/Use: Software Change and Configuration Management Other Information: This tool may also be used in Business Analysis and Applications M&O Supported Services: Applications M&O
Together	Type: Software Manufacturer: Microfocus/Borland Purpose/Use: Together enables software to be designed using industry-standard UML notation and conventions. With a large number of built-in utilities to manage the software design process, validate designs and generate code, together helps maximize the efficiency and accuracy of the software development process Other Information: This tool may also be used in Business Analysis and Applications M&O Supported Services: Business Analyst Services
Agile Manager	Type: Software Manufacturer: HPE Purpose/Use: Agile project management is a SaaS (software-as-a-service) solution that helps teams to organize, plan, and execute Agile projects. Other Information: This tool may also be used in Business Analysis and Applications M&O Other Information: Supported Services: Applications M&O
Team Foundation Server	Type: Software Manufacturer: Microsoft Purpose/Use: Microsoft Team Foundation Server (TFS) is a set of tools and technologies that enable a team to collaborate and coordinate the development and build efforts for a .NET software product or completing a .NET software project. Other Information: This tool may also be used in Business Analysis and Applications M&O Supported Services: Configuration Management Services
MEGA	Type: Software Manufacturer: Mega

RESOURCE / TOOL NAME	INFORMATION
	Purpose/Use: to help enterprise architects and business stakeholders get a digital representation of their organization and its strategy, goals, business processes, and resources. Other Information: Supported Services: Architecture Services
Project and Portfolio Management (PPM)	Type: Software Manufacturer: HPE Purpose/Use: Project Management Integration, prioritization, demand management Other Information: SAAS Solution Supported Services: Architecture Services, Project Management Services, Business Analyst Services, Applications Maintenance and Operations Services
Apps (Applications) Manager	Type: Software Manufacturer: HPES Purpose/Use: to track and report on Portfolio Application information. Other Information: Supported Services: Architecture Services, Configuration Management Services
MS SharePoint	Type: Software Manufacturer: Microsoft Purpose/Use: Collaboration, Integration, Reporting and Workflow Other Information: Supported Services: Project Management, Reporting Management
myRequests	Type: Software Manufacturer: HPES Purpose/Use: Requests Management, Collaboration, Integration and Workflow Other Information: Supported Services: Project Management, Reporting Management
DocVault	Type: Software Manufacturer: HPES Purpose/Use: Collaboration and Document Storage Other Information: Custom Documentum and SharePoint Integration for storage of documentation Supported Services: Project Management, Reporting Management
Application Lifecycle Management (ALM)	Type: Software Manufacturer: HPE Purpose/Use: Quality Management, Testing Management and Measurement, functional testing. Manage test cases and test scripts and track test results Other Information: SAAS Solution Supported Services: Integration and Testing Services, Applications Development Services

RESOURCE / TOOL NAME	INFORMATION
Requirements Ambiguity Checker	Type: Software Manufacturer: HPE Purpose/Use: Requirements Validation Other Information: Supported Services: Integration and Testing Services
Performance Center	Type: Software Manufacturer: HPE Purpose/Use: Performance Testing Other Information: Supported Services: Integration and Testing Services
Unified Functional Tester	Type: Software Manufacturer: HPE Purpose/Use: Regression Testing Other Information: Supported Services: Integration and Testing Services
WebLogic Server 11gR1 Generic and Coherence	Type: Software Manufacturer: Oracle Purpose/Use: Middleware Other Information: Supported Services: Identity and Access Management Services
Identity Manager	Type: Software Manufacturer: Oracle Purpose/Use: Manage End-User access privileges Other Information: Supported Services: Identity and Access Management Services, Initiative: Identity Federated Services
Access Manager	Type: Software Manufacturer: Oracle Purpose/Use: Provides adaptive authentication, federated single sign-on (SSO), risk analysis, and fine-grained authorization extended to mobile clients and mobile applications. Other Information: Supported Services: Identity and Access Management Services, Initiative: Identity Federated Services
Fusion Middleware Repository Creation Utility 11g	Type: Software Manufacturer: Oracle Purpose/Use: Code Repository Other Information: Using SVN Supported Services: Identity and Access Management Services
Enterprise Content Management 11g	Type: Software Manufacturer: Oracle Purpose/Use: Content Management Other Information: Supported Services: Identity and Access Management Services

RESOURCE / TOOL NAME	INFORMATION
SQL Server Business Intelligence	Type: Software Manufacturer: Microsoft Purpose/Use: Creating SQL Queues and Reports Other Information: Supported Services: Reporting Management Services
MindMeister	Type: Software Manufacturer: Purpose/Use: Online mind mapping tool that enables users to capture, develop, and share ideas visually Other Information: Supported Services: Business Analyst Services*
Active Directory and Group Policy	Type: Software Manufacturer: Microsoft Purpose/Use: Used to manage the database of resources on the network Other Information: Microsoft environment printer management tools Supported Services: End User Services, Network Printer Services, Initiative: Identity Federated Services
Office Configuration Analyzer Tool (OffCAT)	Type: Software Manufacturer: Microsoft Purpose/Use: Provides a detailed report on installed Office programs and Highlights known problems Other Information: Supported Services: End User Services
Diagnostic Toolset	Type: Software Manufacturer: HPE Purpose/Use: Hardware diagnostics includes hard drive scanning repair, memory testing Other Information: Supported for Win7 and Win10 Supported Services: End User Services
Endpoint Protection / Encryption	Type: Software Manufacturer: Symantec Purpose/Use: Full disk and removable media encryption management. Anti-virus and anti-malware solution Other Information: Supported Services: End User Services, Core Software Services, Security Services
LogMeIn Rescue (LMI)	Type: Software Manufacturer: LogMeIn Purpose/Use: Provides secure remote control into End-User's device, to investigate and resolve issues Other Information: Supported Services: End User Services

RESOURCE / TOOL NAME	INFORMATION
Forcepoint Data Loss Prevention	Type: Software Manufacturer: WebSense Purpose/Use: Data loss protection on workstations Other Information: Supported Services: Core Software Services
Managed PKI	Type: Software Manufacturer: Symantec Purpose/Use: Device certificates for authentication Other Information: Supported Services: Core Software Services
Nessus	Type: Software Manufacturer: Tenable Network Security Purpose/Use: Vulnerability scans of workstations Other Information: Supported Services: Core Software Services, Security Services
Metasploit	Type: Software Manufacturer: Metasploit Purpose/Use: Validates that security of the core software configuration is acceptable prior to addition of new components to the configuration Other Information: Penetration Testing Supported Services: Core Software Services, Security Services
Expert Systems	Type: Software Manufacturer: Avaya Purpose/Use: Avaya maintenance services include Avaya Expert Systems and Secure Access Link (SAL). Avaya Expert Systems provides the County with Core Voice Services, a maintenance database of more than 30,000 artificial intelligence algorithms (AIAs) with scripted automation. These scripts automatically correct many known system- and software-related issues. Avaya SAL is a centralized consolidation point for all Avaya core systems for health and alarm monitoring, secure remote access using secure outbound-only HTTPS, and an integration point for Avaya Expert Systems. Other Information: Supported Services: Mobile Device Support Services, Voice Services, Initiative: Voice Services Transformation
Unified Communication Management Platform (UCMP)	Type: Software Manufacturer: Nectar Services Corp Purpose/Use: provides multivendor management services including application dependency, tree visual alerting, and vendor knowledge modules Other Information: Supported Services: Mobile Device Support Services, Voice Services, Initiative: Voice Services Transformation

RESOURCE / TOOL NAME	INFORMATION
CA eHealth	Type: Software Manufacturer: CA Technologies Purpose/Use: Performs capacity, performance, and trend analytics for circuits Other Information: Supported Services: Data Network Services, Video Conferencing Services, Wireless Network Access Services, Third-Party Network Access Services, IP Address Management Services
CA Spectrum	Type: Software Manufacturer: CA Technologies Purpose/Use: Monitors all network equipment—routers, switches, wireless access point (WAP) controllers, and WAPs—and provides alerts/alarms based on predefined parameters Other Information: Supported Services: Data Network Services, Remote Access Services, Video Conferencing Services, Wireless Network Access Services, Third-Party Network Access Services, IP Address Management Services, Initiatives: IT Application Portfolio Management Services
Cascade Shark	Type: Software Manufacturer: Riverbed Purpose/Use: Performs NetFlow data capture for subsequent troubleshooting and in-depth packet analysis by Cascade Pilot Other Information: Supported Services: Data Network Services, Application Maintenance and Operations Services*, Initiatives: IT Application Portfolio Management Services
Cascade Pilot	Type: Software Manufacturer: Riverbed Purpose/Use: Performs in-depth network packet analysis Other Information: Supported Services: Data Network Services
SMARTnet Total Care (SNTC)	Type: Software Manufacturer: Cisco Purpose/Use: Discovers and reports on all Cisco equipment and maintains the database of all Cisco equipment. Automates the process of gathering data for direct vendor support in the event of a problem. Other Information: Supported Services: Data Network Services, Initiatives: IT Application Portfolio Management Services
AirWave	Type: Software Manufacturer: Aruba Purpose/Use: Provides inventory and control of wireless access points and controllers Other Information: Supported Services: Data Network Services, Wireless Network Access Services

RESOURCE / TOOL NAME	INFORMATION
Prime Infrastructure	Type: Software Manufacturer: Cisco Purpose/Use: Provides Cisco equipment configuration management and control; backs up equipment configurations and manages licenses Other Information: Supported Services: Data Network Services, Wireless Network Access Services, Initiatives: IT Application Portfolio Management Services
Juniper JSA3800	Type: Software Manufacturer: Juniper Networks Purpose/Use: Collects logging information about all remote access connections and supports the routine review of the logs Other Information: Supported Services: Remote Access Services
Wireless Control System (WCS)	Type: Software Manufacturer: Cisco Purpose/Use: to measure and take action to maximize performance of the network, as well as to provide ongoing reporting. Other Information: Supported Services: Wireless Network Access Services
Luna Control Center	Type: Software Manufacturer: Akamai Purpose/Use: to perform the essential activities of external DNS support Other Information: Supported Services: External DNS Management Services
PAM Adonis and Proteus systems	Type: Software Manufacturer: BlueCat Networks Purpose/Use: to collectively fulfill all of the IPAM requirements and support adherence to the service level requirements Other Information: Supported Services: IP Address Management Services
MS Project	Type: Software Manufacturer: Microsoft Purpose/Use: planning and tracking Other Information: Supported Services: Project Management Services, New Site Installation Services
MS Excel	Type: Software Manufacturer: Microsoft Purpose/Use: planning and tracking Other Information: Supported Services: Project Management Services, New Site Installation Services

RESOURCE / TOOL NAME	INFORMATION
MS PowerPoint	Type: Software Manufacturer: Microsoft Purpose/Use: planning and tracking Other Information: Supported Services: Project Management Services, New Site Installation Services
Exchange Online Protection	Type: Software Manufacturer: Microsoft Purpose/Use: Antivirus protections, Antispam filters, Policy enforcement, Graymail detection, safe-unsubscribe, Email based threats (phishing, targeted attacks), Outbreak filters, Data Loss Prevention, Email Encryption Other Information: Supported Services: Security Services
Controlled Compliance Suite (CCS)	Type: Software Manufacturer: Symantec Purpose/Use: Policy compliance for servers Other Information: Supported Services: Security Services
Enterprise Reporter	Type: Software Manufacturer: Dell Purpose/Use: Active Directory Reporting Other Information: Supported Services: Security Services
Recovery Manager AD	Type: Software Manufacturer: Dell Purpose/Use: Restore deleted or corrupted objects and domain or forest Other Information: Supported Services: Security Services
Cloud Service Automation	Type: Software Manufacturer: HPE Purpose/Use: Automation of cloud management and provisioning Other Information: Supported Services: Managed Private Cloud
Helion Managed Cloud Broker	Type: Software Manufacturer: HPE Purpose/Use: This tool is extendable to remote virtual environments and can integrate with public cloud vendors such as Amazon Web Services and Microsoft Azure Other Information: Supported Services: Managed Private Cloud
Operations Orchestration Server (OO)	Type: Software Manufacturer: HPE Purpose/Use: Process workflow automation Other Information:

RESOURCE / TOOL NAME	INFORMATION
	Supported Services: Managed Private Cloud
Operations Orchestration Remote Access Server	Type: Software Manufacturer: HPE Purpose/Use: Remote access to OO Other Information: Supported Services: Managed Private Cloud
v-Center	Type: Software Manufacturer: VMware Purpose/Use: Server virtualization management Other Information: Supported Services: Managed Private Cloud
Infoscale	Type: Software Manufacturer: Veritas Purpose/Use: Filesystem management and clustering in specific Solaris environments Other Information: Supported Services: Managed Private Cloud*
Storage Foundation	Type: Software Manufacturer: Symantec Purpose/Use: Filesystem management and clustering in specific Solaris environments Other Information: Supported Services: Managed Private Cloud*
SiteScope	Type: Software Manufacturer: HPE Purpose/Use: for monitoring application thresholds and events Other Information: Supported Services: Managed Private Cloud
Codar	Type: Software Manufacturer: HPE Purpose/Use: For version-controlled, one-click deployments, rollbacks and promotions Other Information: Supported Services: Development and Test Services, Application Development Services
3PAR System Utilities	Manufacturer: 3PAR Purpose/Use: 3PAR array-based replication allows background replication of storage from one array to another. 3PAR Storage Peer Motion is used to migrate storage data volumes without any interruption in accessing the data. Other Information: Supported Services: Storage Services, Storage Architecture Type: Software

RESOURCE / TOOL NAME	INFORMATION
BUR Dashboard	Type: Software Manufacturer: HPES Purpose/Use: This notifies BUR admins and End-Users of both successful and missed backups. It identifies for the BUR admins which nodes to work and automates BUR jobs Other Information: Supported Services: Backup and Recovery Services
Print Server	Type: Software Manufacturer: BARR Systems Purpose/Use: To automate and control print and document output Other Information: Supported Services: Managed Print Services
Symantec Management Console	Type: Software Manufacturer: Symantec Purpose/Use: to provision and revoke certificates and configure applications to use those certificates, reporting, and administrative End-User management services Other Information: Supported Services: Public Key Infrastructure Services
Applications Performance Management (APM)	Type: Software Manufacturer: HPE Purpose/Use: Provides a 360-degree view that verifies the performance of desktop, web, and mobile apps for on premise, cloud, or hybrid environments Other Information: Supported Services: Application Maintenance and Operations Services*
Toad	Type: Software Manufacturer: Dell Purpose/Use: For Oracle software Other Information: Supported Services: Application Development Services
PST Capture	Type: Software Manufacturer: Microsoft Purpose/Use: For searching and harvesting PST files Other Information: Supported Services: Transition Schedule and Tasks
DoubleTake	Type: Software Manufacturer: Vision Solutions Purpose/Use: a migration tool that performs a complete server copy from the source server onto the target server. Other Information: Supported Services: Consolidated and Single Data Center

RESOURCE / TOOL NAME	INFORMATION
PlateSpin	Type: Software Manufacturer: NetIQ Purpose/Use: Similar to DoubleTake, PlateSpin performs a complete server copy from the source server to the target server, if needed. It allows source servers to be copied as an image that can be transported using an approved portable storage device Other Information: Supported Services: Consolidated and Single Data Center
Panorama	Type: Software Manufacturer: Palo Alto Networks Purpose/Use: Provides a central repository for logging, inventory of the Palo Alto components, licensing management, software image management, and analysis Other Information: Supported Services: Initiatives: IT Application Portfolio Management Services
E911 Manager	Type: Software Manufacturer: Unknown Purpose/Use: Automates the E911 management process by connecting with the County's Geo-Redundant Avaya Communications Manager to the AT&T MPLS network to track and update VoIP, digital, and analog phone moves, adds, and changes. Other Information: Supported Services: Initiative: Voice Services Transformation, Initiative: E911
E911 Anywhere	Type: Software Manufacturer: Unknown Purpose/Use: A cloud-based 911 call routing service that can connect a 911 call to more than 6,000 Public Safety Answering Points (PSAPs) in the U.S. and Canada. Other Information: Supported Services: Initiative: Voice Services Transformation, Initiative: E911
SPM	Type: Software Manufacturer: Unknown Purpose/Use: Unknown Other Information: Supported Services: Initiative: Storage Architecture
ControlPoint	Type: Software Manufacturer: HPE Purpose/Use: Analyzing unstructured data for cleaning up and archive Other Information: Supported Services: Initiative: Storage Architecture
SDM	Type: Software Manufacturer: HPE

RESOURCE / TOOL NAME	INFORMATION
	Purpose/Use: To reduce the data footprint of structured data Other Information: Supported Services: Initiative: Storage Architecture
OneView	Type: Software Manufacturer: HPE Purpose/Use: Common software-defined convergence platform Other Information: Supported Services: Initiative: Storage Architecture
Federation Manager Identity Federation (OIF)	Type: Software Manufacturer: Oracle Purpose/Use: Provides secure identity information exchange between external/internal partners. OIF provides account management for partner identities and integrations. OIF integrates with a wide variety of data stores, End-User directories, authentication providers, and applications. Other Information: Supported Services: Initiative: Identity Federated Services
Virtual Directory, Unified Directory	Type: Software Manufacturer: Oracle Purpose/Use: Internet and industry-standard Lightweight Directory Access Protocol (LDAP) and eXtensible Markup Language (XML) views of existing enterprise identity information without synchronizing or moving data from its native locations. Other Information: Supported Services: Initiative: Identity Federated Services
Active Directory Federated Services (ADFS)	Type: Software Manufacturer: Microsoft Purpose/Use: Provide users with SSO access to systems and applications located across organizational boundaries. Other Information: Supported Services: Initiative: Identity Federated Services
Fortify on Demand	Type: Software Manufacturer: HPE Purpose/Use: To scan code statically Other Information: Supported Services: Other Proposed Initiative: Comprehensive Applications Threat Analysis (CATA) Service
Netcool	Type: Software Manufacturer: IBM Purpose/Use: Monitoring data center network devices Other Information: Supported Services: Network Services

RESOURCE / TOOL NAME	INFORMATION
Network Node Management Interface (NNMi)	Type: Software Manufacturer: HPE Purpose/Use: Monitoring performance/capacity of data center circuits and devices Other Information: Supported Services: Network Services
Wireshark	Type: Software Manufacturer: Wireshard Purpose/Use: such as for deep packet capture analysis Other Information: Supported Services: Network Services
Bluejeans	Type: Software Manufacturer: Bluejeans Purpose/Use: portal access to evaluate End-User and conference usage and detail Other Information: Supported Services: Video Conferencing Services
Enterprise Manager	Type: Software Manufacturer: Oracle Purpose/Use: to provide performance metrics, historical data, trending & reporting. Other Information: Supported Services: Supported Services: Video Conferencing Services
PVCS	Type: Software Manufacturer: Serena Purpose/Use: Archived project documents and application code Other Information: Supported Services: Supported Services: Applications Services, Project Management Services
AssetEdge Lease Manager	Type: Software Manufacturer: HPE Financial Services Purpose/Use: Lease tracking Other Information: Supported Services: Asset Management Services
PKI	Type: Software Manufacturer: Microsoft Purpose/Use: Certificate authentication Other Information: Supported Services: Security Services
Pretty Good Privacy (PGP)	Type: Software Manufacturer: Symantec Purpose/Use: File encryption Other Information: Supported Services: Security Services

RESOURCE / TOOL NAME	INFORMATION
StoreServ Management Console	Type: Software Manufacturer: HPE Purpose/Use: 3PAR management and reporting console for converged management of both File and Block on HPE 3PAR StoreServ Storage systems. Other Information: Supported Services: Storage Services, Storage Architecture
3PAR Command Line interface (3PAR CLI)	Type: Software Manufacturer: HPE Purpose/Use: To monitor, manage, and configure 3PAR storage Systems. Other Information: Supported Services: Storage Services, Storage Architecture

*Tool is listed as an option for use with this Service

11. COUNTY APPLICATIONS BY PA-ID

PAID	NAME
PA1002	AIS Master Mailing List
PA1005	AAB Labels

Appendix 4.3-2 – Audio/Video Conference Rooms Configuration and Support

Table of Contents

1. Small A/V Conference Room Configuration 3

2. Medium A/V Conference Room Configuration 4

3. Large A/V Conference Room Configuration 5

4. System Support....8

5. Construction Considerations 9

1. SMALL A/V CONFERENCE ROOM CONFIGURATION

1.1. Functionality Description

Small Conference Room that is enabled for wireless conferencing. Includes a 55" monitor display, two dongles for wireless conferencing using BYOD, HDMI at table, table box and over floor raceway, and 4K USB Camera with microphone.

1.2. Display

- A 55" display monitor will fit room dimension of approximately 16x12 up to 18x14
- Display mounted on wall with an articulating arm to allow easy servicing of equipment mounted behind display
- Small device mounting system

1.3. Source Devices

- 1 Camera mounted above the display
- 1 Dongle base unit mounted behind display
- 2 Dongles for BYOD connectivity to the display and camera
- 1 Receiver mounted behind display
- 1 Transmitter mounted under table
- 1 Table box for HDMI cable to pass through

1.4. Audio

- 1 Array microphone built into the camera to allow far end to hear
- 1 Set of display speakers will allow program audio and far end audio to be heard in the room

1.5. System Components

Components subject to change and be replaced with equal or better products:

Component Description	Qty

2. MEDIUM A/V CONFERENCE ROOM CONFIGURATION

2.1. Functionality Description

Medium Conference Room that is enabled for wireless conferencing. Includes one 85" display monitor, two dongles for wireless conferencing using BYOD, HDMI at table, two table boxes and over floor raceway, and 4K USB Camera with microphone.

2.2. Display

- One 85" Displays will fit room dimensions of approximately 24x13 up to 26x14
- Display will be mounted on wall
- Pull-Out small device mounting system

2.3. Source Devices

- 1 Camera mounted above the display
- BYOD PC mounted behind display
- 1 Dongle base unit mounted behind display
- 2 Dongles for BYOD connectivity to the display and camera
- 1 Wireless keyboard and mouse provided for computer
- 1 Receiver mounted behind display
- 1 Transmitter mounted under table
- 1 HDMI distribution amplifier provided to drive both displays

- 1 Table box for HDMI cable to pass through
- 1 Table box for power and USB charging

2.4. Audio

- 1 Array microphone built into the camera will allow the far end to hear the room participants
- 1 Display speakers will allow program audio and far end audio to be heard throughout the room

2.5. System Components

Components subject to change and be replaced with equal or better products:

Description	Qty
85IN COMMERCIAL 4K UHD LED WIFIMNTR	1
Micro-Adjust Fixed Wall Mount X-Large	1
PROXSLIDE PLT15X10	1

RJ45 INSERT CAT6A SH 180	1

3. LARGE A/V CONFERENCE ROOM CONFIGURATION

3.1. Functionality Description

Large Simple Conference Room that is enabled for wireless conferencing. Includes a 6000 lumen projector and fixed frame 130” screen, two dongles for wireless conferencing using BYOD, HDMI at table, three

table boxes and over floor raceway, 4K USB Camera with microphone, and a ceiling beam tracking microphones and ceiling speakers.

3.2. Display

- A 6000-lumen laser projector and 130" fixed frame screen will fit room dimensions of approximately 32x13 up to 34x14
- Projector will be ceiling mounted with above ceiling equipment storage
- Projection screen mounted on wall

3.3. Source Devices

- 1 Camera mounted below the screen
- 1 In-wall recessed camera box to house the camera and the USB 3.0 extender
- 1 Dongle base unit mounted on top of projector
- 2 Dongles for BYOD connectivity to the projector and camera
- 1 Receiver mounted in above ceiling equipment box at projector location
- 1 Transmitter mounted under table
- 1 Table box will be provided for HDMI cable to pass through
- 2 Table boxes provided for power and USB charging

3.4. Audio

- Beam tracking ceiling microphones will allow far end to hear room participants
- Ceiling speakers will allow program audio and far end audio to be heard in throughout room
- An audio DSP will be installed and programmed

3.5. System Components

Components subject to change and be replaced with equal or better products:

Description	Qty
Pro L1060U Laser Projector, 6000 Lumens, WUXGA, White	1
UTB CONTOURAE BLACK HDC1.1 130D	1

4. SYSTEM SUPPORT

4.1. System Support on the System shall be provided for 3 years from the date of installation in accordance with the terms set forth below.Definitions

4.1.1. System – the components which make up the Small, Medium and Large Simple Conference Rooms as listed in this Schedule, with the exception of Consumables and Obsolete Equipment outside the initial 3-Year support period.

4.1.2. Business Hours – Monday to Friday, 8:00AM – 5:00PM PST, excluding County holidays.

4.1.3. Obsolete Equipment – system components (though possibly still in use) that are no longer made and/or supported by manufacturer, or products with formal end of life as defined by their manufacturer.

4.1.4. Consumables – parts such as recording media, batteries, projection lamps and diskettes.

4.2. System Recertification

Two on-site scheduled recertification sessions per year (from install date) to perform necessary cleaning, adjustments, functional tests, replacement of parts, and repairs to keep the equipment in good and efficient operating condition.

4.3. Training

On-site training, provided on an as needed basis but no more than once per quarter, to ensure that system users understand the system functionality and how to operate it. The training must be scheduled at least 2 weeks in advance.

4.4. Asset Tracking

Management of the system's individual electronic components and reporting of description, model, serial numbers, in-service dates, and physical location.

4.5. Technical Support

4.5.1. Priority Support by Phone – response within 2 business hours during Business Hours.

4.5.2. Priority Support Onsite – response within 8 business hours to perform troubleshooting, to localize and diagnose faults where the onsite location is within 60-mile radius of support center location, while 24 business hours if outside the 60 mile radius.

4.5.3. Repair or replacement of faulty equipment with exclusion of Obsolete Equipment that is outside the initial 3-Year support period.

4.5.4. Provision of materials and repair parts excluding Consumables.

4.5.5. Software updates.

4.5.6. Loaner Equipment when repair or replacement cannot be completed or provided within a Business Day. This is limited to tabletop LCD projectors and flat screen monitors under 50". Tabletop projectors are not integrated into a system. Flat screen monitors will be installed onto a wall if reasonably possible.

4.5.7. Recycling of system equipment and Consumables.

5. CONSTRUCTION CONSIDERATIONS

5.1. The County will be responsible for coordinating and paying for the necessary modifications to the room as directed by Contractor. The costs associated with any modifications are not included in Contractor's scope of work. The following work is not included in the Small, Medium and Large Simple Conference Rooms Resource Units:

- All conduits, high voltage, wiring panels, breakers, relays, boxes, receptacles, etc.
- Concrete saw cutting and/or core drilling
- Fire wall, ceiling, roof and floor penetration
- Necessary gypsum board replacement and/or repair
- Necessary ceiling tile or T-bar modifications, replacements and/or repair
- Structural support of equipment
- Installation of ceiling mounted projection screen
- All millwork (moldings, trim, cut outs, etc.)

- Patching and Painting
- Permits

5.2. The following are Contractor's Assumptions:

- Contractor shall assign a Project Coordinator to manage installation of Small, Medium and Large Conference Room from start to finish.
- Room(s) match(es) the drawings provided by County.
- Site preparation by the County includes electrical and data placement per System specification.
- Site preparation will be verified by Contractor project coordinator prior to installation being scheduled.
- All work areas should be clean and dust free prior to the beginning of on-site installation of electronic equipment.
- County communication of readiness will be considered accurate and executable by Contractor project coordinator.
- There is ready access to the building / facility and the room(s) for equipment and materials.
- There is secure storage available for equipment during a multi-day installation.
- County provided equipment (e.g., laptop) and existing cabling are in good working condition and will integrate into the designed solution. Any necessary repair, replacement and/or configuration of these items will be made at an additional cost to County.
- All network configurations including IP addresses are to be provided, operational and functional before installation begins.
- Cable or satellite drops must be in place with converter boxes operational before the completion of installation.
- Document review, feedback on drawings and response to correspondence will be provided by the County within seven business days or as agreed upon with Contractor.

END OF SCHEDULE

Schedule 4.4 – Asset Management Upgrades and Enhancements

Table of Contents

1. Overview 3

2. Methodology 3

1. OVERVIEW

Contractor shall provide the technology management and upgrade/refresh services necessary to maintain all Hardware and Software used by the County in connection with the Services at manufacturers' current levels and releases to meet the County's ongoing functional and performance requirements and to maintain a current, stable, and productive working environment.

2. METHODOLOGY

2.1. Contractor shall conduct Hardware refreshes on all Hardware Assets provided by the Contractor (including Purchased Assets) based on cycles described in the appropriate Service Framework sections of Schedule 4.3. Unless otherwise indicated in Schedule 4.3, a "hardware refresh" means a complete, full box replacement (i.e. a new serial number). Certain exceptions apply, as more fully described in Schedule 4.3.

2.2. Contractor shall maintain currency on all Software Assets provided by Contractor, including any Purchased Assets that are Software, and shall upgrade such Software Assets to the latest commercially available version of the Software no later than one (1) year after the release date, unless otherwise approved by the County.

2.3. Notwithstanding anything in part 2.2 above to the contrary, Contractor shall promptly provide all security patches, service packs and other maintenance releases for Software provided by Contractor (including any Purchased Assets that are Software) as soon as such patches, packs or releases are made commercially available.

2.4. Contractor shall provide a deployment plan and communication plan to include impacted applications and business departments.

END OF SCHEDULE

Schedule 4.8 – Service Levels

11.10 Root Cause Analysis Action Closure....91
12 Transition Service Levels....92
13 Special Requirements....92
14 Network Credit Table Examples....92

1 OVERVIEW

Each Service Level has been created to identify key performance measures that will be used to evaluate Contractor's delivery of Services. The overriding goal in developing Service Levels is to monitor and measure performance of the County's most significant business requirements. The expectation is that new Service Levels will be added, deleted or changed to reflect changing or new business requirements. The continuous improvement in effective and reliable provision of Services for Service Levels on yearly basis is expected.

2 HIGH LEVEL REQUIREMENTS

2.1. Contractor shall post all Service Levels reports to the Service Portal.

2.2. Contractor shall maintain a live and up-to-date dashboard of current, selected Service Levels on the Service Portal.

2.3. Contractor shall immediately respond to requests for Services from the offices of the Chief Administrative Office (CAO) and Board of Supervisors (BOS) by dispatching personnel onsite. Site visits will be coordinated through the County Technology Office representative.

3 INCIDENT SERVICE LEVEL SEVERITIES

Severity	Description	Definition
1	Critical	Incidents that cause a complete and immediate work stoppage affecting a Priority 1 Application affecting multiple users. Any single-user Incident involving a Priority 1 Application will be handled operationally as a Severity 1 but will be reported as a Severity 4. In addition, any Incident related to life, health or safety Sites, including but not limited to, the following: • Polinsky Center (entire site data system) or Auto Attendant • Rosecrans Psych Hospital (entire site Data System) • Edgemoor Hospital (entire site data system)

Severity	Description	Definition
2	Urgent	Incidents that cause a complete and immediate work stoppage affecting a Priority 2 Application affecting multiple users. In addition, any Service Request meeting the following criteria: • All Data or Voice down at any County Site • Auto Attendants or ACDs • Video teleconferencing systems located at the Probation Department and Public Defender • Internet access (entire County) • Intranet access (entire County) • File Services (more than one (1) user) • Print Services (more than one (1) user) • E-mail Services (more than one (1) user) • Security violation • Identity management system (more than one (1) user) • Any Interactive Voice System (IVS) Application • Toll-free number • Remote access Service (more than one (1) user) • County badge reader system (entire system only)
3	Important	Incidents that cause a complete and immediate work stoppage affecting a Priority 3 Application affecting multiple users. In addition, any Service Request meeting the following criteria: • Jail Blue Phones • Voice mail system (more than one (1) user) • Audio systems • All other video teleconferencing systems • Alarm circuits • SCADA monitoring circuits • Any non-priority 1 or 2 multiple-user Incident
4	Low	An Incident that affects a single End-User's ability to perform his/her normal daily activities.

3.1 Incident Service Level Reporting Exclusions

Tickets pertaining to the following shall not be included in the calculations for the Incident Service Levels:

- Status Tickets
- Internal Contractor Tickets
    - The exclusion of internal contractor tickets will not result in the exclusion of any End-User generated tickets with the same root cause.
- Duplicate tickets directly related to a master ticket

- Power Outage time will be excluded unless the Contractor is responsible for directly or indirectly causing the power outage.
- Equipment and circuits funded through the E-Rate Program used for internet access by public visitors at the County to the San Diego County Branch Libraries.

4 OUTPUT DELIVERY SCHEDULES

The distribution of reports by Contractor for managed print Services (as set forth in the Data Center Services Framework) shall be in accordance with the following schedule:

Location Description	Trips / Day	Drop Points / Location	Delivery Days	Delivery Time(s) No Later Than
County Administration Center 1600 Pacific Coast Highway Mail Room 050	1	1	Monday – Friday	9:00 AM
County Operations Center 5560 Overland Dr Suite 180 & 5530 Overland Dr Suite 410	1	2	Monday - Friday	9:00 AM
San Diego County Jail 1173 Front St	1	1	Monday - Friday	9:00 AM
Downtown Courthouse Hall of Justice 220 West Broadway	1	1	Monday - Friday	7:30 AM
San Diego Superior Court-Kearny Mesa 8950 Clairemont Mesa Boulevard	1	1	Monday - Friday	7:30 AM
Vista Superior Court 325 South Melrose Dr	1	1	Monday - Friday	7:30 AM

5 SERVICE LEVEL SUMMARIZATION AND WEIGHTING FACTORS

The Service Levels are summarized in the table below. Service Level weighting factors apply as indicated in the table below. The County will adjust Weighting Factors in accordance with Schedule 16.8.

Service Level Weighting Table			
Service Level ID	**Framework**	**Service Level**	**Weighting**
	Cross Functional	Severity 1 (S1) Incidents	
1		1A – S1 Incidents Revolved in ≤ 4 hours	13%
2		1B – S1 Incidents Revolved in ≤ 8 hours	9%
3		1C – Average of 4% of total S1 Incidents with longest resolution times	3%
	Cross Functional	Severity 2 (S2) Incidents	
4		2A – S2 Incidents Revolved in ≤ 6 hours	12%
5		2B– S2 Incidents Revolved in ≤ 10 hours	8%
6		2C – Average of 4% of total S2 Incidents with longest resolution times	3%
	Cross Functional	Severity 3 (S3) Incidents	
7		3A – S3 Incidents Revolved in ≤ 8 hours	7%
8		3B – S3 Incidents Revolved in ≤ 12 hours	3%
9		3C – Average of 4% of total S3 Incidents with longest resolution times	1%
	Cross Functional	Severity 4 (S4) Incidents	
10		4A – S4 Incidents Revolved in ≤ 10 hours	11%
11		4B – S4 Incidents Revolved in ≤ 16 hours	5%
12		4C – Average of 4% of total S3 Incidents with longest resolution times	2%
13	Cross Functional	Add End-User Account	0%

Service Level Weighting Table			
Service Level ID	**Framework**	**Service Level**	**Weighting**
13-1	Cross Functional	Add End-User Account (Interim)	
		13-1a – 3 Business Days	3%
		13-1b – 5 Business Days	
		13-1c - Edgemoor NetSolutions application	n/a
14	Cross Functional	Terminate End-User	3%
15	Cross Functional	Budgetary Estimate Request	3%
16	Cross Functional	Project Estimate Request	3%
17	Cross Functional	Accuracy of Chargeback Billing	4%
18	Cross Functional	Annual Disaster Recovery (DR) Test	0%
19	Cross Functional	Application Recovery Post-Disaster	0%
20	Cross Functional	Asset Tracking	0%
21	Cross Functional	Root Cause Analysis	3%
22	Cross Functional	Filling Vacant Key Personnel Positions	3%
55	Cross Functional	Root Cause Analysis Corrective and Preventative Action Completion	6%
23	Service Desk	Incident Resolution Confirmation Notice	3%
24	Service Desk	Password Resets	
		24a – Password Resets within 30 minutes	3%
		24b – Password Resets within 60 minutes	
25	Service Desk	Response Time	
		A – Speed-to-Answer Time in 75 seconds	3%
		B – Speed-to-Answer Time in 90 seconds	

Service Level Weighting Table			
Service Level ID	**Framework**	**Service Level**	**Weighting**
		C – Call Abandonment Rate	
		D – Email Response Time	
		E – Voice Mail Response Time	
26	Service Desk	Service Repair Scheduling	3%
27	Service Desk	Customer Satisfaction	4%
28	Service Desk	First Call Resolution	0%
54	Service Desk	First Call Resolution – 2nd Generation	3%
29-1	End-User	Operating System (OS)/Microsoft Office Patches Involving Technical Issues and Security Vulnerabilities	3%
29-2	End-User	Operating System (OS) and Core Software Patching for Critical and Zero Day Vulnerabilities	
29-3	End-User	Core Software Patching Involving Technical Issues and Security Vulnerabilities	
30	End-User	Software IMAR	4%
		30a – Software License Available	
		30b – Software License Not Available	
		30c – Move/Remove	
31	End-User	Hardware IMAR	3%
		31a – Hardware License Available	
		31b – Hardware License Not Available	
		31c – Move/Remove	
32	End-User	OIC Additions and Removals	3%
33	Network	Transaction Response Time – Internet/Intranet Availability	

Service Level Weighting Table			
Service Level ID	**Framework**	**Service Level**	**Weighting**
		33a – Transaction Response Time – Intranet within 0.5 seconds	3%
		33b – Transaction Response Time – Intranet within 0.75 seconds	
34	Network	Transaction Response Time – Data Center	
		34a – Transaction Response Time – Data Center within 1 second	3%
		34b – Transaction Response Time – Data Center within 3 seconds	
35	Network	Voice System Call Blocking	3%
36	Network	Data Network Availability	
		36a – Average Availability	3%
		36b – Individual Site via Fiber	
		36c – Individual Site via Copper	
37	Network	Internet Availability	3%
38	Network	Voice Network Availability	3%
39	Data Center	Output Delivery	3%
40	Data Center	Daily Backup	3%
41	Data Center	Quarterly Backup/Restore Test	0%
42	Data Center	Data Restore	
		42a – Data 30 days old or less	1%
		42b – Data 31 days old or more	
43	Data Center	Server Decommission	3%
44	Data Center	[Reserved]	0%
44-1	Data Center	Server Provisioning – Physical (Excludes Oracle)	0%

Service Level Weighting Table			
Service Level ID	**Framework**	**Service Level**	**Weighting**
44-2	Data Center	Server Provisioning – Virtual	2%
44-3	Data Center	Server Provisioning – Oracle	2%
45	Data Center	[Reserved]	
46	Data Center	Server Software Update	
		46-1 – Server Software Update - Operating system patching and updates for Windows and Linux servers	2%
		46-2 – Server Software Update - Operating system patching for Solaris and AIX servers	
		46-3 – Server Software Update - Operating System Patching for Critical and Zero Day Vulnerabilities	1%
		46-4 – Server Software Update - Middleware patching for Production PAIDs	1.5%
		46-5 – Server Software Update - Application Patching for Production PAIDs	1.5%
47	Data Center	Server Availability	3%
48	Applications	Project Management Plan Rework	2%
49	Applications	Service Request Schedule Performance	6%
50	Applications	Variance to Application Budget	6%
51	Applications	Application Availability	
	Applications	51-1 – Application Availability (P1)	1.7%
	Applications	51-2 – Application Availability (P2)	1.7%
	Applications	51-3 – Application Availability (P3)	1.6%
52	Applications	Documentation Update Accuracy	3%

Service Level Weighting Table			
Service Level ID	**Framework**	**Service Level**	**Weighting**
53	Applications	Application Response Time	0%
		53a – Application Response Time – Priority 1 Applications	
		53b – Application Response Time – Priority 2 Applications	
		53c – Application Response Time – Priority 3 Applications	

6 CROSS FUNCTIONAL SERVICE LEVELS

6.1 Severity 1 Incidents

Service Level	Severity 1 Incidents		
Service Level ID	1, 2, 3		
Definition	Time to restore service from time of Incident report to Service Desk Note: Any S1 incident whose duration > 4 or 8 hours, and time exclusions were taken by Contractor, are subject to review/approval by the County. Any exceptions taken shall be reported with the monthly SL reports and maintained by Contractor.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Percent of incidents resolved for D1, D2 and D3 designation	**1A:** D1 = S1 incidents resolved ≤ 4 hours **1B:** D2 = S1 incidents resolved ≤ 8 hours **1C:** D3 = average of 4% of the total S1 incidents with longest resolution times	D1 ≥ 91% of total S1 incidents for Month D2 ≥ 96% of total S1 incidents for Month D3 ≤ 16 hours	D1 ≥ 95.5% D2 ≥ 98% Same formula but modified to 2% of the total S1 incidents with longest resolution times
Formula	**1A:** (Total S1 incidents per Month resolved ≤ 4 hours / total S1 incidents) **1B:** (Total S1 incidents per Month resolved ≤ 8 hours / total S1 incidents) **1C:** Average of 4% of S1 Incidents per Month with longest restore time		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Ticket Duration: Service Desk receipt through service restoration		

6.2 Severity 2 Incidents

Service Level	Severity 2 Incidents		
Service Level ID	4, 5, 6		
Definition	Time to restore service from time of Incident report to Service Desk Note: Any S2 incident whose duration > 6 or 10 hours, and time exclusions were taken by Contractor, are subject to review/approval by the County. Any exceptions taken shall be reported with the monthly SL reports and maintained by Contractor.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Percent of incidents resolved for D1, D2 and D3 designation	**2A:** D1 = S2 incidents resolved ≤ 6 hours **2B:** D2 = S2 incidents resolved ≤ 10 hours **2C:** D3 = average of 4% of the total S2 incidents with longest resolution times	D1 ≥ 91% of total S2 incidents for Month D2 ≥ 96% of total S2 incidents for Month D3 ≤ 20 hours	D1 ≥ 95.5% D2 ≥ 98% Same formula but modified to 2% of the total S2 incidents with longest resolution times
Formula	**2A:** (Total S2 incidents per Month resolved ≤ 6 hours / total S2 incidents) **2B:** (Total S2 incidents per Month resolved ≤ 10 hours / total S2 incidents) **2C:** Average of 4% of S2 Incidents per Month with longest restore time		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Ticket Duration: Service Desk receipt through service restoration		

6.3 Severity 3 Incidents

Service Level	Severity 3 Incidents		
Service Level ID	7, 8, 9		
Definition	Time to restore service from time of Incident report to Service Desk		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Percent of incidents resolved for D1, D2 and D3 designation	**3A:** D1 = S3 incidents resolved ≤ 8 hours **3B:** D2 = S3 incidents resolved ≤ 12 hours **3C:** D3 = average of 4% of the total S3 incidents with longest resolution times	D1 ≥ 92% of total S3 incidents for Month D2 ≥ 96% of total S3 incidents for Month D3 ≤ 24 hours	D1 ≥ 96% D2 ≥ 98% Same formula but modified to 2% of the total S3 incidents with longest resolution times
Formula	**3A:** (Total S3 incidents per Month resolved ≤ 8 hours / Total S3 incidents) **3B:** (Total S3 incidents per Month resolved ≤ 12 hours / Total S3 incidents) **3C:** Average of 4% of S3 Incidents per Month with longest restore time		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Ticket Duration: Service Desk receipt through service restoration		

6.4 Severity 4 Incidents

Service Level	Severity 4 Incidents		
Service Level ID	10, 11, 12		
Definition	Time to restore service from time of Incident report to Service Desk		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Percent of incidents resolved for D1, D2 and D3 designation	**4A:** D1 = S4 incidents resolved ≤ 10 hours **4B:** D2 = S4 incidents resolved ≤ 16 hours **4C:** D3 = average of 4% of the total S4 incidents with longest resolution times 6 AM to 6 PM Monday-Friday, excluding the County's holidays	D1 ≥ 92% of Total S4 incidents for Month D2 ≥ 96% of Total S4 incidents for Month D3 ≤ 32 hours	D1 ≥ 96% D2 ≥ 98% Same formula but modified to 2% of the total S4 incidents with longest resolution times
Formula	**4A:** (Total S4 incidents per Month resolved ≤ 10 hours / total S4 incidents) **4B:** (Total S4 incidents per Month resolved ≤ 16 hours / total S4 incidents) **4C:** Average of 4% of S4 Incidents per Month with longest restore time		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Ticket Duration: Service Desk receipt through service restoration		

6.5 Add/Modify End-User Account

Service Level	Time duration for creation of and/or changes to End-User account from time of Service Request		
Service Level ID	13		
Definition	Measures the time to add and/or modify new End-User account		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
End-User account addition or modification Service Request completed	3 business days or by the date described in the Service Request or scheduled due date	90%	95%
Formula	Number of End-User Account creation requests completed within Performance Target/total number End-User Account creations requested Algorithm: 100 x ((A – E) / (B – D)) >= 90% where A – # of requests for account and/or access creation and/or change completed within 3 business days or by date described in the service request or by scheduled due date (# Traditional + # Automated CSRF + # Peoplesoft) B – Total # of requests for account and/or access creation and/or change (# Traditional + # Automated CSRF + # Peoplesoft) D – # of requests for account and/or access creation and/or change for non-County employees (i.e. external agencies, Contractor staff, Contractor managed vendors) (# Traditional + # Automated CSRF) E – For non-County employees (i.e. external agencies, Contractor staff, Contractor managed vendors) (# Traditional + # Automated CSRF), # of requests for account and/or access creation and/or change completed within 3 business days or by date described in the service request or by scheduled due date. Clock starts when: • Parent ticket and line items created by Help Desk or Automated CSRF Workflow for account creation and/or		

	access requests to be processed via manual provisioning and any incomplete items or items open to interpretation resolved • Request approved and released by Automated CSRF Workflow for account creation and/or access requests to be processed via automated provisioning • Request released by Peoplesoft for account creation and default access defined per the PeopleSoft business rules to be processed via automated provisioning
	Requests for User IDs received from the same County department on the same day, in excess of twenty (20) or more, an Contractor team member will contact the requestor to determine the required delivery date for some or all of the User IDs requested, and/or solicit approval for an exception from the CIO or designee.
Measurement Interval	Monthly
Reporting Period	Monthly
Measurement Tool/Source Data	Contractor-provided

6.6 Add/Modify End-User Account (Interim)

Service Level	Time duration for creation of and/or changes to End-User account from time of Service Request (SR)		
Service Level ID	13-1		
Definition	Measures the time to add and/or modify new End-User account		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
End-User account addition or modification SR completion	13-1a. 3 business days or by the date described in the SR or scheduled due date	13-1a. 60%	13-1a. 80%
	13-1b. 5 business days or by the date described in the SR or scheduled due date	13-1b. 95%	13-1b. 97.5%
	13-1c. Edgemoor NetSolutions application - 1 hour from the receipt of the SR from the receipt of the SR during business hours (8:00am - 5:00pm Mon-Fri)	N/A	N/A

Formula	13-1a. Total # of requests for account and/or access creation and/or change completed within 3 business days or by date described in the service request or by scheduled due date divided by number of requests >= 60% **Algorithm:** 100 x ((A – E) / (B – D)) >= 60% where A – # of requests for account and/or access creation and/or change completed within 3 business days or by date described in the service request or by scheduled due date B – Total # of requests for account and/or access creation and/or change D – # of requests for account and/or access creation and/or change for non-County employees (i.e. external agencies, Contractor staff, Contractor managed vendors) E – For non-County employees (i.e. external agencies, Contractor staff, Contractor managed vendors), # of requests for account and/or access creation and/or change completed within 3 business days or by date described in the service request or by scheduled due date. 13-1b. Total # of requests for account and/or access creation and/or change completed within 5 business days or by date described in the service request or by scheduled due date divided by number of requests >= 95% **Algorithm:** 100 x ((A – E) / (B – D)) >= 95% where

	A – # of requests for account and/or access creation and/or change completed within 5 business days or by date described in the service request or by scheduled due date B – Total # of requests for account and/or access creation and/or change D – # of requests for account and/or access creation and/or change for non-County employees (i.e. external agencies, Contractor staff, Contractor managed vendors) E – For non-County employees (i.e. external agencies, Contractor staff, Contractor managed vendors), # of requests for account and/or access creation and/or change completed within 5 business days or by date described in the service request or by scheduled due date. For clarity, only 13-1a and 13-1b must be met for this Service Level. 13-1c will not be measured for SL purposes. Clock starts when parent ticket and line items created by Service for account creation and/or access requests to be processed via manual provisioning and any incomplete items or items open to interpretation resolved. Requests for User IDs received from the same County department on the same day, in excess of twenty (20) or more, Contractor team member will contact the requestor to determine the required delivery date for some or all of the User IDs requested, and/or solicit approval for an exception from the CIO or designee.
Measurement Interval	Monthly
Reporting Period	Monthly
Measurement Tool/Source Data	Contractor-provided

6.7 Terminate End-User Account

Service Level	Time duration for termination of End-User account from time of authorized request by County.		
Service Level ID	14		
Definition	Time duration from the County authorized request to the termination of End-User authorized access for the organization or Contractor.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
End-User deletion Service Request completed	1 business day or by requested due date*	98%	99%
Formula	End-User account termination requests completed within Performance Target / Total End-User account deletion requests. **Algorithm:** 100 x ((A – C – D – E – F) / (B – C – D – E – F)) >= 98% where **Inclusions:** A – # of requests for account termination completed within 1 business day or by requested due date B – Total # of requests for account terminations **Exclusions:** C – # of requests without request for account termination, i.e., those requests with only access removal D – # of requests for non-County employees (i.e., external agencies, Contractor staff, Contractor managed vendors) E – # of requests for bulk user terminations (over 20 users on one request) F – * # of requests for which the requested due date is prior to request approval, or less than 1 business day Clock starts when ticketing system termination tasks are created by the Service Desk or as a part of a Ticketing system workflow.		

	a) For End-User account terminations, County business rules dictate the Active Directory account be disabled and retained for 2 years prior to deletion. For SL purposes, the disabling of the Active Directory account is counted. b) Request for access deletions that are not a termination are not included
Measurement Interval	Monthly
Reporting Period	Monthly
Measurement Tool/Source Data	The ticketing tool supplied by Contractor automatically records date and time stamps for each activity within a process.

6.8 Budgetary Estimate Request

Service Level	Time Duration to complete a Budgetary Estimate		
Service Level ID	15		
Definition	Length of time to provide budget estimate in response to Service Requests, including schedule and cost estimates or make contact with Requester to negotiate a Budgetary Estimate delivery date for Service Requests.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Request Completion	Proposal for Development completed within 5 business days	95%	97.5%
Formula	**Proposal for Development = 100 x (C/D)** (C) = Total Proposal for Development Completed within 5 business days (D) = Total Proposal for Development requested		
Measurement Interval	Daily		
Reporting Period	Monthly		
Measurement Tool/Source Data	Proposal for Development completed within 5 business days or as negotiated with requestor		

6.9 Project Estimate Request

Service Level	Time Duration to complete a Project Estimate		
Service Level ID	16		
Definition	Length of time to provide a Project Estimate in response to a Project Estimate Service Request, including schedule and costs estimates or make contact with Requester to negotiate a Project Estimate delivery date for Service Requests. Time excludes any County incurred time needed to update/define requirements needed to complete the estimate.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Request Completion	10 business days or as negotiated	95%	97.5%
Formula	Number of Project Estimate requests submitted within target/Total number of Project Estimate requests		
Measurement Interval	Daily		
Reporting Period	Monthly		
Measurement Tool/Source Data	Project Estimates completed within 10 business days or as negotiated with requestor		

6.10 Accuracy of Chargeback Billing

Service Level	Accuracy of billing: chargeback billing accuracy		
Service Level ID	17		
Definition	Measures the accuracy of chargeback billing		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Accuracy	Valid charges and credits	98%	99%
Formula	(Total number of charges – Number of disputed charges resolved in County favor – Low Org change requests not executed) / Total number of charges A rate error impacting more than one chargeback item is counted as a single error. Low Org requests not executed are counted as individual errors.		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	ITrack Chargeback Data and Change Requests • Disputed Charges are those submitted via ITrack as Delete requests. • Low Org Change Requests are those submitted via ITrack Move requests.		

6.11 Annual Disaster Recovery (DR) Test

Service Level	Annual test of DR plan		
Service Level ID	18		
Definition	Once per year activity to test DR preparedness		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Test Completion	Annual test of the DR plan completed and accepted by County in accordance with the criteria agreed upon by County and Contractor prior to execution of each annual test	100%	No earnback provision
Formula	Number of instances within Performance Target/Total number of instances during Measurement Period		
Measurement Period	Once		
Reporting Period	Annual		
Measurement Tool/Source Data	Contractor DR Test Report		

6.12 Application Recovery Post-Disaster

Service Level	Recovery of Applications following disaster		
Service Level ID	19		
Definition	Recovery of applications after a disaster		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Application Recovery	P1 Apps — 48 hours with ≤28 hours of data loss P2 Apps — 72 hours with ≤28 hours of data loss	100%	No earnback provision
Formula	Number of instances within Performance Target/total number of instances during Measurement Interval		
Measurement Interval	Designated recovery period following a disaster		
Reporting Period	Periodically throughout the recovery period		
Measurement Tool/Source Data	Contractor-provided		

6.13 Asset Tracking

Service Level	Management of Assets		
Service Level ID	20		
Definition	Effective management of Assets		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Accurate tracking of Asset components	Accuracy of serial numbers, assigned Location/Person, Hardware/Software configuration	99%	99.5%
Formula	This SL is a comparison of 8 fields as discovered via SCCM (EUS assets), DDMi (Datacenter Assets), scripts (Storage assets) and Spectrum (AT&T Network assets) in a given month versus the data for those assets as found in Asset Manager 9 (AM9). Asset types measured will be all Desktop, Workstation, Laptop, Windows Tablet, Server, Storage, and Network. Attributes that will used to measure this SL: 1. Device Name 2. Serial Number 3. Brand 4. Model 5. Location (CoSD Site Level) 6. Status (Deployed) 7. OS (EUS and Servers) 8. Owner Login ID (EUS) The denominator will be the (number of assets auto-discovered in a given month) * (number of fields), with location only gathered for Desktops, Workstations, Laptops, and Windows Tablets. The numerator will be the (number of fields that matched between AssetManager and autodiscovery) Example Calculation: 15,000 Assets discovered in month. Of those, there were 200 fields that failed. (15000*8)-200 / (15000*8) = 99.83% Matching will be done based on Computer Name. Location (not a discoverable field) will be scored based on County issued ITrack location disputes which are deemed valid, after confirming an IMAR or ITrack CR had been submitted and not properly executed. Owner Login ID will be scored based on County issued ITrack Owner Login ID disputes which are		

	deemed valid, after confirming an IMAR or ITrack CR had been submitted and not properly executed.
Measurement Interval	Monthly
Reporting Period	Monthly
Measurement Tool/Source Data	System provided by the Contractor to track and report out-of-compliance activities

6.14 Root Cause Analysis

Service Level	Root Cause Analysis conducted on critical incidents		
Service Level ID	21		
Definition	Assessment of Problems and their causes, with resolutions		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Elapsed Time to produce RCA report	7 business days from S1 and S2 Incidents or other Incidents as requested by County starting at Incident Resolution	99%	99.5%
Formula	Number of instances within Performance Target/total number of instances during Measurement Interval Note – completion criteria for publication of RCA shall be per the identified process in the Standards and Procedures manual		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Measured by the Ticket management system		

6.15 Key Personnel Vacant Position

Service Level	Filling vacant Key Personnel positions		
Service Level ID	22		
Definition	Duration a Key Position is vacant beyond required timeframe to fill		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Number of days position is vacant	2 business day after Key Position becomes vacant	100%	No earnback provision
Formula	Vacant Key Positions filled within the target/all vacant Key Positions filled		
Measurement Interval	Daily		
Reporting Period	Monthly		
Measurement Tool/Source Data	Formal notification in writing of the individual filling the position. If the individual is an interim, a target date for the permanent assignment shall be provided.		

7 SERVICE DESK SERVICE LEVELS

7.1 Incident Resolution Confirmation Notice

Service Level	Providing a Resolution Confirmation notice for all Incident tickets and Service Requests		
Service Level ID	23		
Definition	Total time elapsed to provide all resolution confirmation notices via automated email notification and/or telephone call to the End-User. Service Desk may leave a message with a phone number to call back with any questions. For Incident Tickets, if a message is left, the Incident Ticket shall remain open in a pending closure status for 24 hours to allow the End-User the opportunity to confirm the incident is Resolved.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Schedule	Confirmation Notice within 30 minutes of Incident resolution	99%	99.5%
Formula	Number of instances within Performance Target/Total number of instances during Measurement Interval		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Recording the confirmation notice received in the Ticket management system		

7.2 Password Reset Completion

Service Level	Length of time between password reset request and completion		
Service Level ID	24		
Definition	All requests		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Schedule	• 30 minutes • 60 minutes	• 95% within 30 minutes • 99% within 60 minutes	• 97.5% within 30 minutes • 99.5% within 60 minutes
Formula	Number of instances within Performance Target/total number of instances during Measurement Interval		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Recording the request completion in the Ticket Management System		

7.3 Response Time

Service Level	Response Time for: • Speed-to-answer • Call abandonment rate • Email Response Time • Voice Mail Response Time		
Service Level ID	25		
Definition	Response Time is the duration (measured in seconds) the End-User requires to connect with the Contractor's contact center representative. The Contractor will provide toll-free telephone lines in sufficient quantity to handle the call volume; ACD system(s) to record call date, time and duration information; and electronic interfaces to all systems for monitoring and reporting.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**

• A. Speed-to-answer Time	• ≤ 75 seconds beginning 1st full month of 1st year of measurement in effect; 65 seconds for 2nd year of measurement in effect; 55 seconds for 3rd year of measurement in effect; 45 seconds for 4th year + of measurement in effect	• 90%	• 95%
• B. Speed-to-answer Time	• ≤ 90seconds	• 99%	• 99.5%
• Call abandonment rate	• ≤5%	• 100%	• Same formula, but performance target modified to 2.5%
• Online Response Time	• ≤1 hour	• 95%	• 97.5%
• Voice Mail Response Time	• ≤30 minutes	• 95%	• 97.5%
Formula	Number of instances within Performance Target divided by Total number of instances during Measurement Interval All Respond Time metrics must be met for this Respond Time Service Level. However, if Call Abandonment rate is 4% or less then B. Speed-to-answer Time is considered met for the current month.		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Contractor-provided		

7.4 Service Repair Scheduling

Service Level	The amount of time necessary to schedule a Service Repair		
Service Level ID	26		
Definition	The elapsed time from the time the call is determined to be a desktop Incident Ticket until the End-User is contacted to schedule an onsite service appointment.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Time to complete scheduling	Within 90 minutes	98%	99%
Formula	Number of instances within Performance Target/Total number of instances during Measurement Interval		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Desktop Incident resolution Tickets only		

7.5 Customer Satisfaction

Service Level	Customer Satisfaction after Service performance		
Service Level ID	27		
Definition	Measures the performance of the Service provided to End-User		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Positive Evaluation Percentage	Percentage of Positive Survey Evaluations (Score 3 and 4)	▪ Year 1 (May 2022 - April 2023) ≥ 90.0% Year 2 and onward (May 2023 – onward) ≥ 91.0%	94%
Formula	Percentage of Positive Survey Evaluations = Total number of survey evaluations returned scoring 3 and 4 divided by Total number of surveys returned. Surveys will be rated on the following four (4) point scale: 1 – Highly Dissatisfied, 2 – Dissatisfied, 3 – Satisfied, 4 – Highly Satisfied. Internal Contractor tickets will be excluded from the survey population. Contractor shall calculate SL performance based on a statistically valid sample which is defined as a 95% confidence level with a 5% margin of error, .5% standard deviation, using a mutually agreed calculator found in the public domain: https://www.qualtrics.com/experience-management/research/determine-sample-size/. If there is insufficient number of surveys returned for a statistically valid sample for a given month, the low volume condition provision as per Section 2.10 – Low Volume Conditions, of Schedule 16.8 – Fee Reductions applies.		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Survey data, ServiceNow		

7.6 First Call Resolution

Service Level	Resolution on first call		
Service Level ID	28		
Definition	First call resolution applies when an end-user request or issue is resolved prior to the conclusion of the call or chat with the Service Desk.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Percent completed	Call resolved	66%	75%
Formula	Number of tickets closed and resolved on first call or chat/total number of calls and chats during Measurement Interval.		
Measurement Interval	Daily		
Reporting Period	Monthly		
Measurement Tool/Source Data	Contractor provides a system with date and time stamp capabilities to track and report out-of-compliance activities.		

7.7 First Call Resolution – 2nd Generation

Service Level	Resolution on first call		
Service Level ID	54		
Definition	First call resolution applies when an end-user request or issue is resolved prior to the conclusion of the call or chat to include hot hand-offs to support tiers other than Service Desk. On implementation of end user enablement projects (e.g. self-service or self-help projects), the parties shall mutually agree this SL shall receive 0% weighting for a duration of 6 months (or as mutually agreed); after the six months, the parties shall either validate the current performance target or mutually agree on a revised performance target.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Percent completed	Call resolved	70%	No earnback provision
Formula	Number of tickets closed and resolved on first call (continuous call) or chat/total number of calls and chats during Measurement Interval		
Measurement Interval	Daily		
Reporting Period	Monthly		
Measurement Tool/Source Data	Contractor provides a system with date and time stamp capabilities to track and report out-of-compliance activities. (Service Manager, chat, SSPR tool).		

8 END-USER SERVICE LEVELS

8.1 Critical Software Patches

Service Level	Operating System (OS) / Microsoft Office patches involving technical issues and security vulnerabilities		
Service Level ID	29-1		
Definition	Implementation of OS patches and updates for desktop computing assets.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Time to Implement	Measured from the approved mandatory installation deadline which must occur within the timeline respective to the update/patch highest severity rating, per the most recent approved Security Patch Management Procedure (XF.006.006). Example: If the highest severity rating is high, the patch must be deployed within 30 days of the patch release date. If the patch/update is made available on November 1st, the approved mandatory installation must commence before December 1st. If the approved mandatory installation deadline is November 15th, the SLA must be met by December 15th.	93% all PCs	96.5% all PCs

Formula	Qty of workstations patched/updated over patch cycle period ÷ (Qty of workstations in the environment - Qty of Unknown workstations - Qty of Exempt workstations) Unknown workstations are those that have not connected to the County network for an extended period (at least 90 days) and have not accepted the deployment. Exempt workstations are those that have been approved and documented as exempt. Acceptable Exceptions are limited to prevent disruption of critical business functions (i.e., TTC Property Tax collection periods November-December and March – April; employee benefit enrollment in October; ROV election blackout periods; fiscal year end processing; calendar year-end freeze).
Measurement Interval	Monthly based on Patch Cycle, not on the calendar month.
Reporting Period	Monthly based on Patch Cycle Initial Report - delivered 7 days prior to completion of the Patch Cycle period Final Report - delivered within 72 hours after Patch Cycle period
Measurement Tool/Source Data	Contractor-provided

Service Level	Operating System (OS) and Core Software patching for Critical and Zero Day Vulnerabilities		
Service Level ID	29-2		
Definition	Implementation of Core Software and OS patches and updates specifically identified as Critical or Zero Day Vulnerabilities. Core Software is defined in Schedule 5, Report 64.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Time to Implement	Measured from the approved mandatory installation deadline which must occur within 15 calendar days as defined per the most recent approved Security Patch Management Procedure (XF.006.006). Example: If the severity rating is Critical, the patch must be deployed within 15 days. If the patch/update is made available on November	93% all PCs	96.5% all PCs

	1st, the approved mandatory installation must commence before November 15th. If the approved mandatory installation deadline is November 5th, the SLA must be met by November 20th.		
Formula	Qty of workstations patched/updated over patch cycle period ÷ (Qty of workstations in the environment - Qty of Unknown workstations - Qty of Exempt workstations). Unknown workstations (at least 90 days) are those that have not connected to the County network for an extended period and have not accepted the deployment. Exempt workstations are those that have been approved and documented as exempt. Acceptable Exceptions are limited to prevent disruption of critical business functions (i.e., TTC Property Tax collection periods November-December and March – April; employee benefit enrollment in October; ROV election blackout periods; fiscal year end processing; calendar year-end freeze).		
Measurement Interval	As needed based on Critical and Zero Day Vulnerabilities produced with vendor remedy.		
Reporting Period	Initial Report - delivered on day 9 from patch availability from the vendor Final Report - delivered within 72 hours after Patch Cycle period		
Measurement Tool/Source Data	Contractor-provided		

Service Level	Core Software patching involving technical issues and security vulnerabilities		
Service Level ID	29-3		
Definition	Implementation of Core Software patches for desktop computing assets. Core Software is defined in Schedule 5, Report 64.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Time to Implement	Measured from the approved mandatory installation deadline which must occur within the timeline respective to the update/patch highest severity rating, per the most recent approved Security Patch Management Procedure (XF.006.006). Example: If the highest severity rating is high, the patch must be deployed within 30 days of	93% all PCs	96.5% all PCs

	the patch release date. If the patch/update is made available on November 1st, the approved mandatory installation must commence before December 1st. If the approved mandatory installation deadline is November 15th, the SLA must be met by December 15th.		
Formula	(Qty of workstations patched/updated over patch cycle period + Qty of in progress workstations patched/updated over patch cycle period) ÷ (Qty of workstations in the environment – Qty of Unknown workstations – Qty of Exempt workstations). In Progress workstations are those that have received the deployment, but the user has not taken the necessary action for the install to complete. Unknown workstations are those that have not connected to the County network for an extended period (at least 90 days) and have not accepted the deployment. Exempt workstations are those that have been approved and documented as exempt. Acceptable Exceptions are limited to prevent disruption of critical business functions (i.e., TTC Property Tax collection periods November-December and March – April; employee benefit enrollment in October; ROV election blackout periods; fiscal year end processing; calendar year-end freeze).		
Measurement Interval	Monthly based on Patch Cycle, not on the calendar month.		
Reporting Period	As Core Patches are Released. Initial Report - delivered 7 days prior to completion of the Patch Cycle period Final Report - delivered within 72 hours after Patch Cycle period		
Measurement Tool/Source Data	Contractor-provided		

8.2 Software IMAR

Service Level	Completion of Software IMAR		
Service Level ID	30		
Definition	Acceptable time required to Install, Move, Add or Remove Software at a desktop upon County authorization of Service Request (SR) for items covered in the Optional Items Catalogue (OIC).		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Elapsed Time	30a) 2 business days after an add SR is authorized by County or by requested date in SR or date scheduled by Contractor and accepted by requestor when software license is available at time of SR	30a) 90%	30a) 95%
	30b) 7 business days after an add SR is authorized by County or by requested date in SR or date scheduled by Contractor (based on vendor delivery date) and accepted by requestor if software license is not available at the time of the SR	30b) 90%	30b) 95%
	30c) 3 business days after a move or remove SR is authorized by County or by requested date in SR or date scheduled by Contractor and accepted by requestor Business Day Monday — Friday 6 a.m. to 6 p.m., excluding the County Holidays	30c) 90%	30c) 95%

Formula	Number of instances within Performance Target/Total number of instances during Measurement Interval. User requests that specify IMAR execution will be measured from the point of the scheduled time. 30a) Number of requests completed within 2 business days or by requested date in SR or date scheduled by Contractor and accepted by requestor (when software license is available) divided by number of requests completed (when software license is available) >= 90% 30b) Number of requests completed within 7 business days or by requested date in SR or date scheduled by Contractor and accepted by requestor (when software license is not available) divided by number of requests completed (when software license is not available) >= 90% 30c) Number of software move/remove requests completed within 3 business days or by requested date in SR or date scheduled by Contractor and accepted by requestor divided by number of software move/remove requests completed >= 90% For clarity 30a, 30b, and 30c must be met for this Service Level. Clock will be suspended if County approval is required.
Measurement Interval	Monthly
Reporting Period	Monthly
Measurement Tool/Source Data	Contractor-provided

8.3 Hardware IMAR

Service Level	Completion of Hardware IMAR		
Service Level ID	31		
Definition	Acceptable time required to Install, Move, Add or Remove Hardware upon County authorization of Service Request (SR). This applies to End User Resource Unit hardware such as desktop computing devices, network printers, and telephones.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Elapsed Time	31a) 3 business days after an add or install SR is authorized by County or by requested date in SR or date scheduled by Contractor and accepted by requestor when hardware is available at time of SR	31a) 90%	31a) 95%
	31b) 7 business days after an add or install SR is authorized by County or by requested date in SR or date scheduled by Contractor (based on vendor delivery date) and accepted by requestor if hardware is not available at the time of the SR	31b) 90%	31b) 95%
	31c) 3 business days after a move or remove SR is authorized by County or by requested date in SR or date scheduled by Contractor and accepted by requestor Business Day Monday — Friday 6 a.m. to 6 p.m., excluding the County Holidays	31c) 90%	31c) 95%

Formula	Number of instances within Performance Target/Total Number of instances during Measurement Interval. Service Requests that specify IMAR execution will be measured from the point of the scheduled time. 31a) Number of requests completed within 3 business days or by requested date in SR or date scheduled by Contractor and accepted by requestor (when hardware is available) divided by number of requests completed (when hardware is available) >= 90% 31b) Number of requests completed within 7 business days or by requested date in SR or date scheduled by Contractor and accepted by requestor (when hardware is not available) divided by number of requests completed (when hardware is not available) >= 90% 31c) Number of hardware move/remove requests completed within 3 business days or by requested date in SR or date scheduled by Contractor and accepted by requestor divided by number of hardware move/remove requests completed >= 90% For clarity, 31a, 31b, and 31c must be met for this Service Level. Clock may only be suspended if County approval is required.
Measurement Interval	Monthly
Reporting Period	Monthly
Measurement Tool/Source Data	Contractor-provided

8.4 OIC Additions, Updates and Removals

Service Level	Completion of addition, update, or removal request pertaining to Optional Items Catalog (OIC)		
Service Level ID	32		
Definition	The elapsed time between Catalog Review Board (CRB) approval of Service Request (SR) to add, remove or update item to or from the OIC and completion of the SR with completion defined as when OIC is updated with addition, removal, or update of item.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Elapsed time	30 Days	80%	90%
Formula	Number of instances within Performance Target/Total number of instances during Measurement Interval		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Contractor-provided		

9 NETWORK SERVICE LEVELS

9.1 Transaction Response Time — Internet/Intranet Access

Service Level	Internet/Intranet systems. Response is measured from each Site		
Service Level ID	33		
Definition	Length of time host systems and networks transmit and process requests across the Internet/Intranet and return data to End-User's screen. Internet/ Intranet Respond Time will be measured by accessing the County Internet/ Intranet Sites		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Response Time	Intranet – Within 0.5 seconds Internet – Within 0.75	98% 98%	99% 99%
Formula	1. Test transactions will be sent to designated County endpoints for Intranet/Internet locations every 15 minutes. 2. These transactions will be tested 6 a.m. to 6 p.m. M-F, excluding County Holidays. 3. The algorithm shall be: Number of Internet/Intranet transactions per hour (4) x number of hours checked per day (12) x number of days per Month. 4. The percentage is derived from the number of passing transactions/number of possible transactions		
Measurement Interval	Every 15 minutes		
Reporting Period	Monthly		
Measurement Tool/Source Data	Time is measured using a defined sampling scheme, data transfer sizes and network Locations. The current measurement tool is network probes, replaced by APM after deployment		

9.2 Transaction Response Time – Data Center

Service Level	Transaction Response Time for Server Systems — Local Network		
Service Level ID	34		
Definition	Length of time host systems and networks transmit and process requests and return data to End-User's screen. Response Time will be measured using a defined sampling scheme, data transfer sizes and network Locations. County Sites and management of the probes used will be documented in the Standards and Procedures Manual.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Response Time	24/7	• 95% within 1 seconds • 99% within 3 seconds	• 97.5% • 99.5%
Formula	1. Test transactions will be sent to an endpoint selected at random. This will be repeated 100 times, and the average response time of the 100 transactions will be recorded. 2. Step 1 will be repeated twice a day, at 9 a.m. and 10 a.m. as well as 2 p.m. and 3 p.m., two days a Week, on chosen business days at random. 3. At the conclusion of the calendar Month, the recorded data for all samples will be added together, divided by the number of samples, and reported.		
Measurement Interval	See formula		
Reporting Period	Monthly		
Measurement Tool/Source Data	Time is measured using a defined sampling scheme, data transfer sizes and network Locations. The current measurement tool is network probes, replaced by APM after deployment		

9.3 Voice System Call Blocking

Service Level	Voice system call blocking		
Service Level ID	35		
Definition	Percentage of calls blocked, or experiencing busy service, measured per trunk route		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Calls blocked	24/7	Blocking not to exceed 1% of all calls during each hour by route unless otherwise directed by the County	Not to exceed 0.5% of all calls during each hour by route unless otherwise directed by the County
Formula	Number of calls blocked or experiencing busy service each hour per trunk/total calls attempted per hour per trunk. This metric will be calculated for each hour of the Month for each phone switch.		
Measurement Interval	Hourly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Tool supplied by the Contractor automatically records date and time stamps for each activity within a process, including uptime and downtime data		

9.4 Data Network Availability

Service Level	The percentage of time that the data network is available.		
Service Level ID	36a, 36b, 36c		
Definition	The time during which the network is fully functioning and normal business operations can be carried out with no data loss, downtime, or performance degradation during available site hours.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Availability	**36a:** D1 = average availability of all network circuits and active components	D1 ≥ 99.95% aggregate availability	D1: ≥ 99.975%
	36b: D2 = Individual site connected via fiber with the lowest availability	D2 ≥ 99.5% per fiber Site availability	D2: ≥ 99.75%
	36c: D3 = Individual site connected via copper with the lowest availability	D3 ≥ 99% per copper Site availability	D3: ≥ 99.5%
Formula	**36A** Components include all circuits and active data network components Component Availability (%) = 100% - Component Unavailability (%) Component Unavailability = Component outage duration / Available Component Hours Component outage duration does not include scheduled outages 36A = if Average Component Availability of All Active Components >= 99.95%, then Pass; otherwise, Fail. **36B & 36C** Site availability (%) = 100% - Site Unavailability Site Unavailability = Total Outages at Site / Site Available Hours Outages do not include scheduled outages 36B= If Site Availability for all Sites linked via fiber >= 99.5%, then Pass; otherwise, see credit table 4.8.14. 36C = If Site Availability for all Sites linked via copper >= 99%, then Pass; otherwise, see credit table 4.8.14.		

Measurement Interval	Monitor Continuously/Measure Daily
Reporting Period	Monthly
Measurement Tool/Source Data	Tool supplied by the Contractor automatically records date and time stamps for each activity within a process, including uptime and downtime data. All performance criteria are to be measured on a per circuit and component basis.

9.5 Internet Availability

Service Level	The availability of the Internet. The percentage of time that the Internet is available for normal business operations.		
Service Level ID	37		
Definition	Percentage of time Internet access is available		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Availability	24/7	99.80%	99.9%
Formula	Availability (%) = 100% — Unavailability (%) Where Unavailability is defined as: (Sum of Outage Duration x 100%) / (Schedule Time — Planned Outage)		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Tool supplied by the Contractor automatically records date and time stamps for each activity within a process, including uptime and downtime data		

9.6 Voice Network Availability

Service Level	The percentage of time that the Voice Services (telephone, PBX or voice mail) is available for normal business operations		
Service Level ID	38		
Definition	Percentage of time that the Voice Services are available for use		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Availability	24/7	99.80%	99.9%
Formula	Availability (%) = 100% — Unavailability (%) Where Unavailability is defined as: (Sum of Outage Duration x 100%)/(Schedule Time — Planned Outage)		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Tool supplied by the Contractor automatically records date and time stamps for each activity within a process, including uptime and downtime data		

10 DATA CENTER SERVICE LEVELS

10.1 Output Delivery

Service Level	Delivery of printed output		
Service Level ID	39		
Definition	Percentage of time that the printed output is created and delivered on time and free from errors and omissions		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Percent Attained	Per County schedule Monday — Friday 6 a.m. to 6 p.m., excluding the County Holidays	98%	99%
Formula	Number of times output met the print window for delivery/total output deliveries		
Measurement Interval	Daily		
Reporting Period	Monthly		
Measurement Tool/Source Data	The tool supplied by the Contractor automatically records date and time stamps each activity within a process, including uptime and downtime data		

10.2 Daily Backup

Service Level	Daily Backup for: • Incremental • Full		
Service Level ID	40		
Definition	Backup of files that have changed or are new since the last daily backup including a full backup once a week		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Backup complete	Monthly	99.95	No Earnback
Formula	Daily: Number of objects successfully backed up within Measurement Interval divided by Ttotal number of objects within Measurement Interval Monthly: Number of objects successfully backed up within the month divided by Total number of objects for the month		
Measurement Interval	Daily and Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	The tool supplied by the Contractor automatically records date and time stamps each activity within a process. Contractor shall create a Severity 2 Incident ticket in every event which an object failed to be backed up for two consecutive days. Note: Objects can be a UNIX Filesystem, Windows Volume, a Windows or UNIX folder, NetApp or NAS shares/directories, VMWare server image or OS Volume.		

10.3 Quarterly Backup / Restore

Service Level	Addresses any gaps in proper operation of backup and restore		
Service Level ID	41		
Definition	Confirmation that the backup and restore is properly operating		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Successful test completion	Test completed and confirmed	100%	No earnback provision
Formula	Successful test completion		
Measurement Interval	Monthly		
Reporting Period	Quarterly		
Measurement Tool/Source Data	Contractor-provided		

10.4 Data Restore

Service Level	Data restore measurements: • Restore Service Request for production data • Restore Service Request for recovery of test data or data volume backups		
Service Level ID	42		
Definition	Initiation of restore Service Request		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
a. Respond Time data 30 days old or less b. Respond Time data 31 days old or more	a. ≤3 hours from Service Request submittal b. ≤8 hours from Service Request submittal	a. 95% b. 95%	a. 97.5% b. 97.5%
Formula	Restore initiation within the required timeframes, SL success requires meeting performance targets on both a AND b.		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Contractor-provided		

10.5 Server Decommission

Service Level	Completion of decommission request		
Service Level ID	43		
Definition	Removal of either a physical or a virtual Server from active status and from active billing, if applicable		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Completion Time	Server decommission Monday — Friday 6 a.m. to 6 p.m., excluding the County Holidays	• 95% within 3 business days • 100% within 30 business days	• 97.5% within 3 business days • No earnback provision
Formula	Number of Servers decommissioned within target/total number of Servers authorized for removal during Measurement Interval		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Contractor-provided		

10.6 Server Provisioning

Service Level	Server Provisioning		
Service Level ID	44		
Definition	Provisioning a physical production or test Server for use in the network following date of Solution Design Document (SDD) approval. Note: Server provisioning is defined as Operating System is installed, and tools (as defined in the Build Docs) are installed for management, monitoring, backups and anti-virus, network configuration and on-line, and project team has access and authorization in-place.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Completion	• **44-a Physical (excluding Oracle):** within 40 business days from SDD approval	• 95%	• 97.5%
	• **44-b Virtual:** within 8 business days from SDD approval	• 95%	• 97.5%
	• **44-a Physical (Oracle):** within 59 business days from SDD approval	• 95%	• 97.5%
Formula	• **44-a** Number of Servers Requested for Provisioning within Performance Target / Total Number of Servers Requested • **44-b** Number of Servers Requested for Provisioning within Performance Target / Total Number of Servers Requested • **44-c** Number of Servers Requested for Provisioning within Performance Target / Total Number of Servers Requested Business Day: Monday - Friday 6 a.m. to 6 p.m., excluding the County Holidays		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Contractor-provided		

10.7 [Reserved]

10.8 [Reserved]

10.9 [Reserved]

10.10 [Reserved]

10.11 Server Software Update

Service Level	Operating System Patching for Windows and Linux servers		
Service Level ID	46-1		
Definition	Implementation of operating system patches and updates for Windows and Linux servers		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Time to Implement	Within the Patch Cycle, starting on the day after Patch Tuesday of current month, when patches and updates made available from Microsoft and RedHat, through Monday before Patch Tuesday of the next month. Example: If Patch Tuesday for November is November 9th and Patch Tuesday for December is December 14th, the patch cycle for the period is November 10th through December 9th. Acceptable Exceptions are limited to prevent disruption of critical business functions (i.e., TTC Property Tax collection periods November-December and March – April; employee benefit enrollment in October; ROV election blackout periods; fiscal year end processing; calendar year-end freeze).	95%	97%
Formula	Quantity of Windows and Linux servers patched/updated over patch cycle divided by the Quantity of Windows and Linux servers in the environment (less approved exceptions).		
Measurement Interval	Monthly based on Patch Cycle, not the calendar month.		
Reporting Period	Monthly based on Patch Cycle, delivered on the Wednesday after completion of the Patch Cycle. Example: If Patch Tuesday for November is November 9th and Patch Tuesday for December is December 14th, the patch cycle for the period is November 10th through December 9th. Report delivery date December 15th.		
Measurement Tool/Source Data	Contractor-provided (Ansible)		

Service Level	Operating System Patching for Solaris and AIX servers
Service Level ID	46-2

Definition	Implementation of operating system patches and updates for Solaris and AIX servers.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Time to Implement	Within the Patch Cycle, starting on the day after Patch Tuesday of current month, through Monday before Patch Tuesday of the next month. Oracle and IBM release patches on a quarterly basis, not monthly. Example: If Patch Tuesday for January is January 11th and Patch Tuesday for February is February 8th, the patch cycle for the period is January 12th through February 7th. Acceptable Exceptions are limited to prevent disruption of critical business functions (i.e., TTC Property Tax collection periods November-December and March – April; employee benefit enrollment in October; ROV election blackout periods; fiscal year end processing; calendar year-end freeze).	95%	97%
Formula	Quantity of Solaris and AIX servers patched/updated over patch cycle divided by the Quantity of Solaris and AIX servers in the environment (less approved exceptions).		
Measurement Interval	Quarterly based on Patch Cycle, not on the calendar month.		
Reporting Period	Quarterly based on Patch Cycle, delivered on the Wednesday after completion of the Patch Cycle. Example: If Patch Tuesday for January is January 11th and Patch Tuesday for February is February 8th, the patch cycle for the period is January 12th through February 7th. Report delivery date February 9th.		
Measurement Tool/Source Data	Contractor-provided (Ansible)		

Service Level	Operating System Patching for Critical and Zero Day Vulnerabilities
Service Level ID	46-3
Definition	Implementation of operating system (Linux, Windows, Solaris and AIX) patches and updates specifically identified as Critical or Zero Day Vulnerabilities

Service Measure	Performance Target	SL Performance (%)	SL Earnback
Time to Implement	Within 24 hours of patches or updates being made available from operating system vendor(s) and 98% within 72 hours. A client approved Emergency Change Request is required pre-deployment or post-deployment Acceptable Exceptions are limited to prevent disruption of critical business functions (i.e., TTC Property Tax collection periods November-December and March – April; employee benefit enrollment in October; ROV election blackout periods; fiscal year end processing; calendar year-end freeze).	92%	95%
Formula	Quantity of servers patched/updated divided by Quantity of servers impacted by the Critical or Zero Day Vulnerability in the environment (less approved exceptions).		
Measurement Interval	As needed based on Critical and Zero Day Vulnerabilities produced with vendor remedy.		
Reporting Period	As needed but within 24 hours of implemented patches and updates for Critical or Zero Day Vulnerabilities for initial report and within 96 hours for the final report.		
Measurement Tool/Source Data	Contractor-provided		

Service Level	Middleware Vulnerability Remediation for Production PAIDs		
Service Level ID	46-4		
Definition	Remediation of 'critical' and 'high' vulnerabilities found in middleware software that support production applications.		
Service Measure	Performance Target	SL Performance (%)	SL Earnback
Time to implement	Within the rolling 60-day Remediation Cycle (RC), starting on the first day of month and last day of following month (generally 60 days). SL report and exceptions report shall be delivered on the 14th of the month immediately following completion of the RC.	80%	90%

	Example: If RC #1 period is June 1st through July 31st with reporting due August, then RC #2 period is July 1st through August 31st with reporting due September and so on. Example timeline: • Vulnerability scan execution – June 1st • RC #1 period start – June 1st • Vulnerability scan execution – July 1st • RC #2 period start – July 1st • RC #1 period end – July 31st • Vulnerability scan execution – August 1st • RC #3 period start – August 1st • Delivery of report for cycle #1 – August 14th • RC #2 period end – August 31st • Vulnerability scan execution – September 1st • Delivery of report for cycle #2 – September 14th • RC #3 period end – September 30th • Vulnerability scan execution – October 1st • Delivery of report for cycle #3 – October 16th Acceptable exceptions are limited to: • Preventing disruption of critical business functions (i.e., TTC Property Tax collection periods November-December and March – April); Employee benefit enrollment in October; ROV election blackout periods; fiscal year end processing; calendar year-end freeze; etc.). • Current application version not certified for update of middleware. • Significant upgrade project in progress for PAID will be impacted. Vulnerability remediation shall be applied to development, test, and production environments. Vulnerabilities are identified in the vulnerability scan data provided by the ITO Security team. Though scanning is done more often, the scan data used for this SL will be		

	from the scans executed on the 1st of the month of the appropriate remediation period months.		
Formula	Quantity of in-scope "critical" and "high" middleware vulnerabilities (as identified in the vulnerability scan data) remediated during the RC **divided by** Quantity of in-scope "critical" and "high" middleware vulnerabilities (as identified in the vulnerability scan data) at the beginning of the RC. "In-scope" quantity excludes acceptable exceptions. "Remediated during the RC" is calculated by comparing the in-scope vulnerability scan results from the end of the current RC to the in-scope vulnerability scan results from the beginning of the current RC. Any in scope vulnerabilities from the beginning of the RC that is no longer evidenced at end of the RC data, is considered "remediated". For example, for the RC period June 1st through July 31st, formula calculation is as follows: (Quantity of "critical" and "high" middleware vulnerabilities remediated d June RC) ——————— **divided by**——————— (Quantity of in-scope "critical" and "high" middleware vulnerabilities on Ju Furthermore, for the subsequent RC period July 1st through August 31st, formula calculation is as follows: (Quantity of "critical" and "high" middleware vulnerabilities remediated d July RC) ——————— **divided by**——————— (Quantity of in-scope "critical" and "high" middleware vulnerabilities on Ju		
Measurement Interval	Monthly, based on rolling 60-day RC.		
Reporting Period	Bi-monthly (every two months), based on RC, delivered on the 14th of the month after completion of the RC. The exceptions report will also be delivered on the 14th of the month after completion of the RC. If the 14th of the month is a weekend or holiday, the report will be provided on the next business day. Example: For the RC period June 1st through July 31st, the SL and exceptions reports shall be delivered on August 14th. For the subsequent RC period July 1st through August 31st, the SL and exceptions reports shall be September 14th, and so on.		
Measurement Tool/Source Data	Contractor-provided		

Service Level	Application Vulnerability Remediation for Production PAIDs		
Service Level ID	46-5		
Definition	Remediation of 'critical' and 'high' vulnerabilities found at the application level for production applications.		
Service Measure	Performance Target	SL Performance (%)	SL Earnback
Time to Implement	Within the rolling 60-day Remediation Cycle (RC), starting on the first day of month and last day of following month (generally 60 days). SL report and exceptions report shall be delivered on the 14th of the month immediately following completion of the RC. Example: If RC #1 period is June 1st through July 31st with reporting due August, then RC #2 period is July 1st through August 31st with reporting due September and so on. Example timeline: • Vulnerability scan execution – June 1st • RC #1 period start – June 1st • Vulnerability scan execution – July 1st • RC #2 period start – July 1st • RC #1 period end – July 31st • Vulnerability scan execution – August 1st • RC #3 period start – August 1st • Delivery of report for cycle #1 – August 14th • RC #2 period end – August 31st • Vulnerability scan execution – September 1st • Delivery of report for cycle #2 – September 14th • RC #3 period end – September 30th • Vulnerability scan execution – October 1st • Delivery of report for cycle #3 – October 16th Acceptable exceptions are limited to: • Preventing disruption of critical business functions (i.e., TTC Property Tax collection periods November-December and March – April; Employee benefit enrollment in October; ROV election blackout periods; fiscal year end processing; calendar year-end freeze; etc.). • Vulnerability remediation requires an application upgrade. • Significant upgrade project in progress for PAID will be impacted. Vulnerability remediation shall be applied to development, test, and production environments.	80%	90%

	Vulnerabilities are identified in the vulnerability scan data provided by the ITO Security team. Though scanning is done more often, the scan data used for this service level will be from the scans executed on the 1st of the month of the appropriate remediation period months.		
Formula	Quantity of in-scope "critical" and "high" application vulnerabilities (as identified in the vulnerability scan data) remediated during the RC **divided by** Quantity of in-scope "critical" and "high" application vulnerabilities (as identified in the vulnerability scan data) at the beginning of the RC. "In-scope" quantity excludes acceptable exceptions. "Remediated during the RC" is calculated by comparing the in-scope vulnerability scan results from the end of the current RC to the in-scope vulnerability scan results from the beginning of the current RC. Any in scope vulnerabilities from the beginning of the RC that is no longer evidenced at end of the RC data, is considered "remediated". For example, for the RC period June 1st through July 31st, formula calculation is as follows: (Quantity of "critical" and "high" application vulnerabilities remediated during the June RC) **divided by** (Quantity of in-scope "critical" and "high" application vulnerabilities on June 1st scan) Furthermore, for the subsequent RC period July 1st through August 31st, formula calculation is as follows: (Quantity of "critical" and "high" application vulnerabilities remediated during the July RC) **divided by** (Quantity of in-scope "critical" and "high" application vulnerabilities on July 1st scan)		
Measurement Interval	Monthly, based on rolling 60-day RC.		
Reporting Period	Bi-monthly (every two months), based on RC, delivered on the 14th of the month after completion of the RC. The exceptions report will also be delivered on the 14th of the month after completion of the RC. If the 14th of the month is a weekend or holiday, the report will be provided on the next business day. Example: For the RC period June 1st through July 31st, the SL and exceptions reports shall be delivered on August 14th. For the subsequent RC period July 1st through August 31st, the SL and exceptions reports shall be September 14th, and so on.		
Measurement Tool/Source Data	Contractor-provided		

10.12 Server Availability

<table>
<tr><td>Service Level</td><td colspan="3">The percentage of time that the server is available</td></tr>
<tr><td>Service Level ID</td><td colspan="3">47</td></tr>
<tr><td>Definition</td><td colspan="3">The percentage of time that the system is available for business operations.</td></tr>
<tr><td>Service Measure</td><td>Performance Target</td><td>SL Performance (%)</td><td>SL Earnback</td></tr>
<tr><td>Availability</td><td>24/7</td><td>99.5% - 99.8% per production Server per Step Reduction Schedule Table
95% per test Server
95% per utility Server</td><td>99.9% per production Server

97.5% per test Server
97.5% per utility Server</td></tr>
<tr><td>Formula</td><td colspan="3">Availability (%) = 100% — Unavailability (%)
Where Unavailability is defined as: (Sum of Outage Duration x 100%)/((Schedule Time — (Planned Outage))

Use the Step Reduction Schedule Table to determine the applicable Fee Reduction percentage and subsequently calculate the Fee Reduction amount for a given month. Determine the Fee Reduction percentage based on sum total of Servers that missed the SL Performance and 6-month interval in which given month occurs. For example, in January 2021, four servers missed the SL Performance. Since January 2021 is in the ‘Months 7-12’ interval, a 25% Fee Reduction percentage applies for calculating the Fee Reduction amount.

Step Reduction Schedule Table
<table>
<tr><th>Step</th><th>Sum Total of Servers that Missed SL Performance</th><th>*Months 1-6 Fee Reduction 99.5% per Production Server</th><th>**Months 7-12 Fee Reduction 99.8% per Production Server</th><th>***Months 13+ Fee Reduction 99.8% per Production Server</th></tr>
<tr><td>0</td><td>0 to 3</td><td>0%</td><td>0%</td><td>25%****</td></tr>
<tr><td>1</td><td>4 to 6</td><td>25%</td><td>25%</td><td>50%</td></tr>
<tr><td>2</td><td>7 to 9</td><td>50%</td><td>50%</td><td>75%</td></tr>
<tr><td>3</td><td>10+</td><td>100%</td><td>100%</td><td>100%</td></tr>
</table>
</td></tr>
</table>

	*July – December 2020 ** January – June 2021 *** July 2021 and after **** One server miss at 0%, 2 or 3 server miss are at 25% For clarity, unplanned outage time shall not be accrued if the server is part of a high availability system/cluster, where the service provided by the server system/cluster remains available. Utility Servers exist in the environment to optimize support capabilities. No County traffic passes through these servers and they have no direct impact on access, availability, or performance of County users or data. Utility Servers provide: • Redundant Accessibility • Administration of Services • Administration of Cyber Security and Compliance • Command Line Interfaces for Administration of ESXi As of 08/10/2020, there are nine utility servers: USSDSCOSD780, USSDSCOSD781, USPLSCOSD105, USTLSCOSD105, USSDGACSD0001, USTLPACSD0001, USPLVUCSD025, USTLVUCSD050, and USTLPOCSD0012.
Measurement Interval	Monthly
Reporting Period	Monthly
Measurement Tool/Source Data	Tool supplied by the Contractor automatically records date and time stamps for each activity within a process, including uptime and downtime data

11 APPLICATIONS SERVICE LEVELS

11.1 Project Management Plan Rework

Service Level	Each Project Management Plan (PMP) rejection that requires revision, and: a) the revision is delivered during the Measurement Period; and b) the rationale for rejection is either due solely to Contractor-related issues, or a combination of Contractor and County issues		
Service Level ID	48		
Definition	Project delay in Business Hours due to Rejection and Revision of PMP. The number of Business Hours delayed is defined as the number of business hours from the County's notification date to Contractor of a PMP rejection through, and including, the County's receipt of Contractor's revised PMP. As a part of the rejection process, the County will identify the category that the rejection falls within, as well as the specific rejection reason. 1. Contractor Caused Reasons for Rejection (SL clock starts) must be categorized as: A. Project scope is incorrect based on county input document provided B. Contractor Math error C. Contractor Schedule issue D. Contractor Fees applied incorrectly E. Changes made after "draft" review 2. County Caused Reasons for Rejection (SL clock does not start) must be categorized as: A. County requested changes to scope B. County requested changes to list of planned work products to be delivered C. PMP timeframe for approval has expired D. County requested changes to business requirements E. Time is lost solely due to contract disputes/reasons		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Schedule	Number of Business Hours delayed during Measurement Period ≤Target Baseline Total of County Business Hours delayed	The Target Baseline Total of Business Hours delayed is • 102 hours	No Earnback provision

Formula	Average Number of County Business Hours Delayed = sum of County Business Hours Delayed on each applicable PMP in the Measurement Period/number of PMPs If the rationale for rejection of a PMP is a combination of Contractor and County issues, then the applicable Business Hours Delayed on the specific PMP for the purposes of this algorithm will be reduced by 50%, or as mutually agreed-upon by the Parties.
Measurement Interval	Monthly
Reporting Period	Monthly
Measurement Tool/Source Data	Metric data is created by the Contractor using Service Request Tracking Sheets

11.2 Service Request Schedule Performance

Service Level	Each completed Service Request with an approved PMP. Exclusions: • Firm fixed price Service Requests This SL will be in effect for each in-flight Service Request which had an approved PMP prior to the implementation of this SL. Exceptions to this will be on a case-by-case basis and will be agreed upon prior to the implementation of this SL.		
Service Level ID	49		
Definition	Service Requests completed within last approved schedule excluding any non-approved project revisions as identified via formal change request process.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Schedule	Meet SPI target Monday — Friday 6 a.m. to 6 p.m., excluding the County Holidays	SPI ≥ 0.90	No Earnback provision
Formula	'm' = multiplier for Fee Adjustment calculation. 'm' = 0.05 'n' = factor for Fee Adjustment calculation. 'n' = 165,000 SL Fee Adjustment = m * (n/SPI^2)		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Last approved schedule and SPI		

11.3 Variance to Application Budget

Service Level	Service Request Budget Performance		
Service Level ID	50		
Definition	Measurement of performance to budget and how the Contractor meets its projections excluding any non-approved project revisions as identified via formal change request process.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Budget	Adherence to budget	CPI => 0.90	No Earnback provision
Formula	'm' = Multiplier for fee reduction. 'm'=0.05 Service Level Fee Reduction = m * (Last Approved Budget / CPI)		
Measurement Interval	Each completed Service Request with an approved Project Management Plan (PMP). Exclusions: • Firm Fixed Price Service Requests This Service Level shall be in effect for each in-flight Service Request which had an approved PMP prior to the implementation of this Service Level. Exceptions to this shall be on a case-by-case basis and will be agreed upon prior to the implementation of this Service Level. The types of costs that are to be included in the budget and actual calculations for the Service Level are labor billed through resource units as defined in the Agreement. The fee reduction upper bound is the weighting percentage of the at risk pool.		
Reporting Period	Monthly		
Measurement Tool/Source Data	Last approved budget and CPI		

11.4 Application Availability

Service Level	Measurement of service for general application availability		
Service Level ID	51		
Definition:	The percentage of time that the application is available for normal business operations. Application environments that have performance issues not within control of the Contractor to correct and as demonstrated by the Contractor will be eligible for an exclusion at the County CIO's discretion		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Availability	Available 24/7	99.90% P1, P2 and P3 applications	99.95% P1, P2 and P3 applications
Formula	Total available hours for P1 / total hours in measurement period for P1 AND Total available hours for P2 / total hours in measurement period for P2 AND Total available hours for P3 / total hours in measurement period for P3		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Tool supplied by the Contractor automatically records date and time stamps for each activity within a process, including uptime and downtime data		

11.5 Application Availability (Priority 1)

Service Level	Measurement of service for general application availability for Priority 1 (P1) applications		
Service Level ID	51-1		
Definition:	The percentage of time that the application is available for normal business operations. Application environments that have performance issues not within control of the Contractor to correct and as demonstrated by the Contractor will be eligible for an exclusion at the County CIO's discretion		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Availability	Available 24/7	99.90%	99.95%
Formula	Total available hours for P1 / total hours in measurement period for P1		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Tool supplied by the Contractor automatically records date and time stamps for each activity within a process, including uptime and downtime data		

11.6 Application Availability (Priority 2)

Service Level	Measurement of service for general application availability for Priority 2 (P2) applications		
Service Level ID	51-2		
Definition:	The percentage of time that the application is available for normal business operations. Application environments that have performance issues not within control of the Contractor to correct and as demonstrated by the Contractor will be eligible for an exclusion at the County CIO's discretion.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Availability	Available 24/7	99.90%	99.95%
Formula	Total available hours for P2 / Total hours in measurement period for P2		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Tool supplied by the Contractor automatically records date and time stamps for each activity within a process, including uptime and downtime data		

11.7 Application Availability (Priority 3)

Service Level	Measurement of service for general application availability for Priority 3 (P3) applications		
Service Level ID	51-3		
Definition:	The percentage of time that the application is available for normal business operations. Application environments that have performance issues not within control of the Contractor to correct and as demonstrated by the Contractor will be eligible for an exclusion at the County CIO's discretion.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Availability	Available 24/7	99.90%	99.95%
Formula	Total available hours for P3 / Total hours in measurement period for P3		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Tool supplied by the Contractor automatically records date and time stamps for each activity within a process, including uptime and downtime data		

11.8 Documentation Update Accuracy

Service Level	Measures adherence to update the Applications configuration repository and Application architectural documents
Service Level ID	52

Definition:	Projects that require updates to in-scope artifacts or repositories are refreshed according to the established process
	In scope project items include:
	Architecture Documents (with exclusion of those PAIDs receiving SaaS support):
	• Solution Design Documents required for:
	  o New Implementation of an application
	  o Upgrade of and existing application
	  o Tech Refresh
	• Architecture Diagrams required for:
	  o New Implementation of an application
	  o Upgrade of and existing application
	  o Tech Refresh
	  o TPAR for new/modified firewall rule
	  o Third party IP address change
	
	Specified Apps Manager fields (with exclusion of those PAIDs receiving SaaS support):
	1. Support Bundle – Must be completed.
	2. Application Status – Current Status or Pending Status is set to correct status
	3. Production Release Date –Is set to the date identified for the change to be implemented
	4. NDSR – must be yes if an NDSR is identified during the project and reset to 'No' when the NDSR Period of Performance has expired.
	5. Certificates (If none-"None" in name field)
	  a. Name - cannot be blank
	  b. Type - cannot be blank
	  c. Issuer - cannot be blank
	  d. Expired Date - cannot be blank
	  e. Issue Date - cannot be blank
	  f. Contractor Contact Email - cannot be blank
	6. Servers (X number of servers)
	  a. Server Name - cannot be blank
	  b. Server Environment - cannot be blank
	  c. Server Location - cannot be blank
	  d. Server Purpose - cannot be blank

	7. Software (X items of s/w needed for the application) a. Name – updated/entry created if RFC identifies that SW was installed, removed or updated. b. Version – updated/entry created if RFC identifies that SW was installed, removed or updated. c. Vendor – updated/entry created if RFC identifies that SW was installed, removed or updated. 8. Application Associations/Dependencies a. PAID – updated/entry created if RFC identifies application association. b. App Name/Dependency Type – updated/entry created if RFC identifies application association. c. Portfolio – updated/entry created if RFC identifies application association. 9. Application Interfaces a. Name – updated/entry created if RFC identifies interface. b. Description – updated/entry created if RFC identifies interface. c. Type – updated/entry created if RFC identifies interface. d. Frequency – updated/entry created if RFC identifies interface. 10. MSI a. Name – updated/entry created if RFC identifies new, removed or updated MSI. 11. Active Directory (AD)/Service Account (SVC) a. Name – updated/entry created if RFC identifies new, removed or updated Service Account or AD Account. b. Type – updated/entry created if RFC identifies new, removed or updated Service Account or AD Account. 12. Document Link to current Configuration Instructions a. Doc Type – must be completed b. Name – must be completed c. Link – must be completed and linked documents must be updated as validated by the 'Modified' date in the file properties of the configuration instruction. 13. Document Link to current Installation Instructions a. Doc Type – must be completed b. Name – must be completed c. Link – must be completed and linked documents must be updated as validated by the 'Modified' date in the file properties of the Installation Instructions. 14. Document Link to current Architecture Diagram a. Doc Type – must be completed b. Name – must be completed c. Link – must be completed and linked documents must be updated as validated by the 'Modified' date in the file properties of the Architecture Diagram.

	15. Document link to current Solution Design Document a. Doc Type – must be completed b. Name – must be completed c. Link – must be completed and linked documents must be updated as validated by the 'Modified' date in the file properties of the SDD.		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Document updated	In Scope documents updated per schedule. Schedule will be derived from open actions during CRCB readiness review. Readiness review items determined from the weekly Approved RFC's spreadsheet used by the CRCB.	95%	97.5%

Formula	For documented RFCs: Total in scope documents and Apps Manager fields completed correctly and those that met action due dates as identified during Review /total in scope documents and Apps Manager fields for documented RFCs Each in scope document is counted separately. Each in scope Apps Manager field is counted separately.
Measurement Interval	Monthly
Reporting Period	Monthly
Measurement Tool/Source Data	Document and field compliance are measured and documented during the Change control process. The source data that triggers an event to be in-scope for this SL is the weekly Approved RFC's spreadsheet. The Gate Review Coordinator resource documents compliant items and necessary actions in the Gate Visibility Board and tracks to completion. Schedule is identified as action date on the Visibility board and 95% of those follow up dates are met. Maximum due date is 15 business days from Apps Manager actions identified. For instances where a new or updated SDD or Architecture diagram is required, the new/updated SDD or Architecture diagram would be submitted to EA for approval within 15 business days. SL for each artifact is measured based on the identified completion month of the last action due date for that artifact, not the completion month of the associated RFC.

11.9 Application Response Time

<table>
<tr><td>Service Level</td><td colspan="3">Response Time of the Application for End-User to include all functions of the Application. Application environments that have performance issues not within control of the Contractor to correct and as demonstrated by the Contractor will be eligible for an exclusion at the County CIO’s discretion.</td></tr>
<tr><td>Service Level ID</td><td colspan="3">53</td></tr>
<tr><td>Definition</td><td colspan="3">Effective Response Time for End-Users accessing the Application</td></tr>
<tr><td>Service Measure</td><td>Performance Target</td><td>SL Performance (%)</td><td>SL Earnback</td></tr>
<tr><td>Response Time</td><td>Response Time 24/7 <2 seconds</td><td>Aggregate 98% Per Application</td><td>NA</td></tr>
<tr><td>Formula</td><td colspan="3">Use the Step Reduction Schedule Table to determine the applicable Fee Reduction percentage and subsequently calculate the Fee Reduction amount for a given month. Determine the Fee Reduction percentage based on sum total of Applications that missed the SL Performance and interval in which given month occurs. For example, in January 2022, two Priority 1 Applications missed the SL Performance. Since January 2022 is in the ‘Months 1-9’ interval, a 50% Fee Reduction percentage applies for calculating the Fee Reduction amount.

Step Reduction Schedule Tables for Priority 1, 2, and 3 Applications:
<table>
<tr><th>Priority 1 Applications</th><th>October 2021 – August 2023</th><th>September 2023 and after</th></tr>

11.10 Root Cause Analysis Action Closure

Service Level	Root Cause Analysis Corrective and Preventative Action Completion		
Service Level ID	55		
Definition	Closure of identified corrective and preventative actions from Root Cause Analyses (SL 24)		
Service Measure	**Performance Target**	**SL Performance (%)**	**SL Earnback**
Elapsed Time to produce RCA report	Actions closed within published timeframe (subject to mutual agreement)	99%	99.5%
Formula	Number of instances within Performance Target/total number of instances during Measurement Interval For clarity – actions requiring CoSD approval/support may be excluded subject to mutual agreement.		
Measurement Interval	Monthly		
Reporting Period	Monthly		
Measurement Tool/Source Data	Measured by the Problem management system		

12 TRANSITION SERVICE LEVELS

The County recognizes that transitioning from one primary Contractor to another requires a unique level of cooperation and facilitation between the Legacy Provider and the Contractor. In general, the Contractor will assume responsibility for Service Framework-specific Service Levels upon Cutover of the applicable Service Framework. The Contractor will not be responsible for Service Levels (or portions of Service Levels) relating to Service Frameworks that are not within its control. For Service Levels that span Service Frameworks (e.g., Incident Service Levels), the Contractor shall have responsibility when the fix is within a Service Framework for which the Contractor has already assumed control and responsibility.

13 SPECIAL REQUIREMENTS

In addition to Service Levels, Contractor shall comply with the Special Service Levels specified in Schedule 4.8 Services Levels - Exhibit 4.8-1 Special Service Levels.

14 NETWORK CREDIT TABLE EXAMPLES

SL36b and 36c shall compute SL credits based on the following:

Network Availability: Allow 1 failure for availability target every 100 sites (rounded up)

0% of allocated weight if # of failures is less than or equal to allowable failures

25% of allocated weight if # of failures exceeds allowable failures

50% of allocated weight if # of failures exceeds 2x allowable failures

100% of allocated weight if # of failures exceeds 3x allowable failures

For clarity, if the number of sites is 1 to 100, the allowable failure count is 1; if the number of sites is 101 to 200, the allowable failure count is 2; if the number of sites is 201 to 300, the allowable failure count is 3, etc.

Examples based on 125 T1 sites and 171 Fiber sites (1 allowable failure for T1, 2 allowable failures for Fiber):

Example #1 - One "Fiber" location does not meet its individual availability target; no SL credit is due to the County

Example #2 - Three "Fiber" locations do not meet their individual availability targets; an SL credit of 25% of the allocated weight is due to the County

Example #3 - Three "Fiber" locations do not meet their individual availability targets and three "T1" locations do not meet their individual availability targets; an SL credit of 75% of the allocated weight is due to the County (25% + 50%)

Example #4 - Three "Fiber" locations do not meet their individual availability targets; six "T1" locations do not meet their individual availability targets; an SL credit of 100% of the allocated weight is due to the County (25% + 100%; however the maximum credit due is capped at 100% of the assigned weight)

END OF SCHEDULE

4.1. Overview 14

4.2. Definitions 14

4.3. Special SL Support Services 14

4.4. Notification 16

1. OVERVIEW

The County may require an escalated level of support, referred to as Special Service Level (SL) support, to meet business needs. The Contractor shall, at minimum, perform the Special SL support requirements set forth in this Schedule.

2. REGISTRAR OF VOTERS SPECIAL LEVEL (SL) SUPPORT

2.1. Overview

Contractor shall provide Special SL support for the Registrar of Voters (ROV) as described herein to support Statewide and Special elections.

2.1.1. Statewide Elections

The ROV requires Special SL support during Statewide Elections. The period of Special SL support is typically five (5) months, beginning one hundred and twenty (120) calendar days before Election Day and thirty (30) calendar days after Election Day. The ROV will define the actual period of support and notify Contractor accordingly per Notification procedures outlined in this Schedule.

During the period of Special SL support, the following apply:

- Immediate Response
- Escalated Priority
- Freeze on Network Changes
- Onsite Support

2.1.2. Election Support Coordination Special Election

The ROV requires Special SL support during Special Elections, which may include non-statewide and countywide elections. The period of Special SL support is typically a thirty (30) calendar day period, beginning twenty-nine (29) calendar days before Election Day and the day of the Election. The ROV will define the actual period of support for each election and notify Contractor accordingly per Notification procedures outlined in this Schedule. The ROV also reserves the right to invoke Statewide Election SL for Special Elections.

During the period of Special SL support, the following apply:

- Immediate Response

- Escalated Priority
- Freeze on Network Changes

2.1.3. Small and/or Non Statewide Elections

For small and/or non-statewide Special Elections, the ROV may not engage Special SL support. Additionally, non-statewide Special Elections will not receive the dedicated onsite coverage as shown in Table ROV-1. However, the ROV also reserves the right to invoke Statewide Election SL for Small and/or Non-Statewide Elections.

2.2. SL Support Components

2.2.1. Immediate Response

During the period of Special SL support, all election-related IT and/or telecommunication issues communicated to Contractor shall require immediate response meaning that the appropriate Framework(s) and personnel shall be engaged to restore normal operation without delay.

Immediate response shall also be afforded to ROV Service Requests during the period of Special SL support. Additionally, priority is given to infrastructure and application projects identified as supporting an election.

2.2.2. Escalated Priority

During the period of Special SL support, all election-related IT and/or telecommunication tickets are handled as Priority 1; however, these do not count toward the calculation of the SL achievement.

2.2.3. Dedicated Onsite Support

Contractor personnel shall be physically present at the ROV during the period of Special SL support set forth in Table ROV-1. Contractor personnel not included in Table ROV-1 are considered on-call. The Dedicated Onsite Support requirement may be shortened with the concurrence of ROV and FGG GITM.

The following apply to Dedicated Onsite Support:

- One hour break for meals are permissible during the period of Special SL support.

- Support may be provided in shifts provided the start and end times of each shift is staggered to provide continuity of support.
- Security, Applications, firewall rule and Framework management support are all provided on an on-call/as-required basis throughout the period of Special SL support.
- Dedicated onsite support for cell phone services is provided under a separate Service Request and is not part of Special SL support.

2.2.3.1. Table ROV-1

Resource	Period of Onsite, Dedicated Support	Comments
Election Coordination Manager	1. Twelve (12) calendar days prior to Election Day 8:00 AM – 5:00PM 2. Election Day 6:30AM - close	1. Provides coordination support as required throughout entire Special SL Support period, including onsite attendance at key meetings. 2. Sufficiently qualified personnel may include Desktop Services Manager or a Framework Manager. 3. Coordinate desktop and server patches to not interfere with election operations.
Desktop Technician	1. Twelve (12) calendar days prior to Election Day 8:00 AM – 5:00PM 2. Election Day 6:00AM - 10:00PM	On-site support for Voter's Choice Act (VCA) laptops including break/fix and image configuration.
Telecommunications Management Support	1. Four (4) days prior to Election Day 8:00 AM – 5:00PM (days selected by the ROV) 2. Election Day 6:00AM -10:00PM	On-site support for voice and data services.
Telecommunications Voice System Support	1. Six (6) days prior to the Election Day 8:00AM – 5:00PM (days selected by ROV)	Requires call center/ACD Specialist.

Resource	Period of Onsite, Dedicated Support	Comments
	2. Election Day 6:00AM - 10:00PM	
Network Engineer	1. Seven (7) days prior to Election Day 8:00AM – 5:00PM (days selected by ROV) 2. Election Day 6:00AM - 10:00PM	1. Check Cradlepoint devices for connectivity. 2. Ensure all devices are loaded with an AT&T and Verizon SIM card for redundancy. 3. Fail over SIM cards if primary connection is unstable. 4. Fix Cradlepoint devices at ROV. 5. Network support as needed.

2.2.4. Freeze on Network Changes

The period of Special SL support establishes a 'freeze' on network changes that may impact ROV. However, the 'freeze' may be waived for certain changes and/or the 'freeze period' may be shortened with concurrence of the ROV, FG3 GITM and CTO.

2.2.5. Election Support Coordination

Contractor shall provide an Election Coordination Manager for the management of all Special SL support activities. The Election Coordination Manager is responsible for the coordination of election-related projects, requests and Problem resolution activities. The Election Coordination Manager must be qualified to manage all different Frameworks that may be engaged to support the election. Additionally, the Election Coordination Manager must have the authority to escalate and secure resources as needed for IT and telecommunication issues that arise during the period of Special SL support.

Election Coordination Manager Support activities include, but are not limited to:

- Capacity analysis and Service provisioning for phone systems/hotlines.
- Capacity analysis and provisioning of End User devices (VCA laptop image, VCA laptop).
- Capacity analysis and provisioning for any needed changes or improvements of network equipment (switches, routers, virtual circuits, Cradlepoint devices, cache boxes, etc.).

- Coordination and management of any Third-Parties or Services procured through Contractor to provide election-related Services.
- Coordination of any Services with ROV engaged Third-Parties.
- Coordination of modifications to existing process documentation and Service Desk scripts
- Securing and managing staff assigned to support the election process.
- Coordination of other tasks as requested to support election processes.

2.3. Notification

The ROV or the FG3 Executive Office shall invoke the Special SL support via a Service Request (SR). An authorized SR that the Contractor receives includes the start and end of the period of Special SL support.

For designated Statewide Elections requiring the dedicated onsite support described under Period of Onsite, Dedicated Support in Table ROV-1, the period of Special SL support must be initiated for a minimum period of ninety (90) calendar days prior to the election and continue for a period of thirty (30) calendar days following the Election. Notification

3. TREASURER-TAX COLLECTOR SPECIAL SERVICE LEVEL (SL) SUPPORT

3.1. Overview

Contractor shall provide Special SL support for the San Diego County Treasurer Tax Collector (TTC) as described herein to support Tax Collection and Tax Sale Events.

3.1.1. Tax Collection Event

TTC requires Special SL support during two (2) annual Tax Collection Events. A Tax Collection Event facilitates the payment of annual property tax installments, due April 10th and December 10th. The day of the due date and the days leading up to it generate a heavy load of payments for processing. Special SL support ensures that TTC is able to provide tax collection services efficiently thereby meeting the needs of its customers.

TTC will define the period of Special SL support for each Tax Collection Event and notify Contractor accordingly per Notification procedures outlined in this Schedule. The Contractor shall,

at minimum, provide all requirements outlined in Special SL Requirements and Table TTC-1: Tax Collection Event Special SL Support Activities Timeline during this period.

3.1.2. Tax Sale Event

TTC requires Special SL support for the annual Tax Sale Event, which generally occurs in the spring. The Tax Sale Event facilitates the sale of tax-defaulted property for the sole purpose of recovery of back taxes. The Tax Sale Event is held on a non-county site within San Diego County and may be conducted in conjunction with another County department and/or an online event.

TTC will define the period of Special SL support for each Tax Sale Event and notify Contractor accordingly per Notification procedures outlined in this schedule. The Contractor shall, at minimum, provide all requirements outlined in Special SL Requirements and Table TTC-2: Tax Sale Event Special SL Support Activities Timeline during this period.

3.2. Special SL Requirements

3.2.1. Immediate Response

During the period of Special SL support, all event-related IT and/or telecommunication issues communicated to Contractor shall require immediate response meaning that the appropriate Service Framework(s) and personnel shall be engaged to restore normal operation without delay.

Immediate response shall also be afforded to TTC Service Requests during the Special SL support period. Additionally, priority is given to infrastructure and Application projects identified as supporting the Tax Event.

3.2.2. Escalated Priority

During the period of Special SL support, all tax event related IT and/or telecommunication Tickets are handled as Priority 1; however, these do not count toward calculation of SLs.

3.2.3. Dedicated Onsite Support

Contractor personnel shall be physically present at the TTC during period of Special SL support as set forth in Table TTC-1: Tax Collection Event Special SL Support Activities Timeline and TTC-

2: Tax Sale Event Special SL Support Activities Timeline. Contractor personnel not included in Tables TTC-1 and TTC-2 are considered on-call during the period of Special SL support.

3.2.4. Tax Event Engineering Services

Contractor shall provide Engineering Services resources to support the following:

- Provide support for tax event-related meetings, both scheduled and ad hoc
- Set up training rooms
- Set up Tax Event facilities
- Manage PC and printer hardware setup, delivery and breakdown
- Train County staff
- Provide Tax Event support

3.2.5. Applications Services

Contractor shall provide Applications Services support during the Special SL support period upon TTC request. An authorized Service Request documenting activities and tasks required of Application Services Framework must be received by Contractor for each Tax Event requiring Application Services support.

3.2.6. Other Technical Support

Contractor shall make available a network project manager for meetings set forth in Table TTC-1: Tax Collection Event Special SL Support Activities Timeline and TTC-2: Tax Sale Event Special SL Support Activities Timeline.

Contractor shall make available Network and Desktop Assets required to support Tax Events. An authorized Service Request documenting Assets needed must be received by Contractor for each Tax Event requiring Network and Desktop Assets.

3.2.7. Tax Event Support Coordination

Contractor shall provide a Tax Event Coordination Manager for the management of all Special SL support activities. The Tax Event Coordination Manager is responsible for the coordination of Projects, requests and Problem resolution activities related to the Tax Event. The Tax Coordination Event Manager must be qualified to manage all Frameworks that may be engaged to support the Tax Event. Additionally, the Tax Event Coordination Manager must have the authority to escalate

and secure resource as needed for IT and telecommunication issues that arise during the period of Special SL support.

Tax Event Coordination Manager Support activities include, but are not limited to:

- Development and execution of the Tax Event Project Plan
- Coordination of Tax Event set up and testing
- Oversight of provisioning any needed changes in network equipment
- Management of any Third-Parties or Services procured through Contractor to provide Tax Event related Services
- Coordination of Contractor-provided IT services with TTC engaged Third-Parties
- Securing and managing staff assigned to support Tax Events
- Coordination of other tasks required to provide support for Tax Events
- Coordination with Applications project managers or Applications Technical Leads (ATLs) regarding Service Requests performed in support of Tax Events

3.5. Notification

The TTC or FG3 Executive Office shall invoke the Special SL support via a Service Request. An authorized Service Request must be received by Contractor sixty (60) calendar days prior to the date of the Tax Event.

Request for additional days of Special SL support ("Daily Coverage") requires an authorized Service Request to be received by Contractor ten (10) calendar days prior to beginning date of additional coverage.

Daily Coverage Support may be terminated early per TTC request. An authorized Service Request must be received by Contractor three (3) calendar days prior to new end date of Daily Coverage.

4. ASSESSOR/RECORDER/COUNTY CLERK ACCLAIM SPECIAL SERVICE LEVEL (SL) SUPPORT

4.1. Overview

Standard Contractor support coverage for Assessor / Recorder / County Clerk (ARCC) e-Recording comprises of Contractor's e-Recording Coordination Manager being available via business phone, cell phone, or page during normal business hours, and via cell phone or page, in an on-call status, during non-business hours. ARCC is also provided an updated roster of Contractor Desktop Technicians on-call for after hours and weekend issues.

Contractor shall provide Special SL support for ARCC e-Recording as described herein to support the extremely high volume of e-Recording at designated periods throughout the year.

4.2. Definitions

4.2.1. ARCC Month End Event - An extremely high volume of e-Recording is expected the last two business days of each month. During this period, ARCC requires special support of their information technology infrastructure and applications at all ARCC sites.

4.2.2. ARCC Holiday Event - An extremely high volume of e-Recording the business day before and the business day after each official County holiday. During this period, ARCC requires special support of their information technology infrastructure and applications at all ARCC sites.

4.2.3. 'At the ready'- Refers to a heightened state of preparedness. An individual who is 'at the ready' will be in a constant state of preparedness to immediately respond to ARCC calls, be able to immediately access the County network and applications, and take necessary action(s) required to resolve technical issues.

4.3. Special SL Support Services

Special SL Support Services are defined as follows:

4.3.1. Immediate Response - During the period of Special SL support, a problem or outage called in to the Help Desk or communicated to on-site Contractor personnel will result in an immediate

response and effort to resolve the problem. This response is delivered by the appropriate Contractor framework(s) and the personnel necessary to restore operation without delay.

4.3.2. Escalated Priority - During the period of Special SL support, each Special SL-related ticket is handled as a Severity 1 (S1); however, these tickets do not count S1 for SL calculation purposes.

4.3.3. e-Recording Support Coordination - Contractor shall provide an e-Recording Coordination Manager to coordinate all Special SL support services. The e-Recording Coordination Manager is responsible for the coordination of all e-Recording requests and problem resolution activities therefore the designated resource must be qualified to manage all the different frameworks engaged to support e-Recording and must have the authority to escalate tickets and secure necessary resources to resolve any issues.

4.3.4. Applications Support - During the period of Special SL support, the e-Recording Coordination Manager will be 'at the ready' during normal ARCC business hours (08:00 to 17:00 PST) and before-hours (07:00 to 08:00 PST) and after-hours (17:00 to 20:00 PST). The Contractor e-Recording Coordination Manager will own the incident until it is resolved and will work in concert with the Incident Manager to drive the issue to resolution. As the owner of the incident, the Contractor e-Recording Coordination Manager will work with any ARCC 3rd party vendor and any Contractor resources necessary and will take ownership of the incident resolution as the primary vendor for the ARCC.

4.3.5. Incident Management Support - During the period of Special SL support, an Incident Manager will be 'at the ready' during normal ARCC business hours (08:00 to 17:00 PST) and before-hours (07:00 to 08:00 PST) and after-hours (17:00 to 20:00 PST). This elevated support is already funded via the existing infrastructure resource units. The Incident Manager will be immediately available via business or cell phone and will coordinate with the Contractor e-Recording Coordination Manager to:

i. Immediately assess the situation.
ii. Identify and engage the resources necessary to resolve the incident.
iii. Open up a technical bridge, if needed.
iv. Provide regular status to ARCC, CTO, and Contractor from incident report through incident resolution.
v. Ensure that when a multi-user issue is reported, the incident is automatically paged out and Incident Manager is automatically engaged by the Contractor Help Desk.

4.3.6. CAC On-site Support - During the period of Special SL support, an on-site Desktop Technician will be physically at the CAC and 'at the ready' during normal business hours (08:00 to 17:00 PST) and before-hours (07:00 to 08:00 PST) and after-hours (17:00 TO 20:00 PST) while ARCC is operational. The on-site Desktop Technician(s) will provide immediate analysis and resolution of operational related issues. Regular business hours support is already funded via the existing infrastructure resource units. Elevated, after hours, 'at the ready' support will be funded via this Special Level.

4.3.7. Database Administrator (DBA) Support - During the period of Special SL support, a DBA resource will be 'at the ready' during normal ARCC business hours (08:00 to 17:00 PST) and before-hours (07:00 to 08:00 PST) and after-hours (17:00 to 20:00 PST) while ARCC is operational. The DBA will constantly monitor the application database during this time. Regular business hours support is already provided and is funded on a time & materials basis, as needed. Elevated, after hours, 'at the ready' support will be funded via this Special Level.

4.3.8. Additional Support - Along with the elevated, 'at the ready' personnel identified above, Contractor's leveraged resources (System Administrators, Server Administrators, Network Personnel, Security Personnel, etc.) already provide 7x24 coverage and will be on-call to provide elevated support for this Special SL. This elevated support is already funded via the existing infrastructure resource units.

4.3.9. Reporting - Contractor will provide the ARCC with AM, Mid-Day, and PM Systems checks of the (1) database, (2) server, and (3) network.

4.4. Notification

The ARCC or the Finance and General Government Group (FG3) Executive Office initiates Special SL Support Services for ARCC Holiday Event or ARCC Special Support Daily Coverage by submitting an IMAR to Contractor. For Fixed Price Support of ARCC Holiday Event, an IMAR must be received by Contractor at least 30 calendar days prior to the date of the Event, with start and end dates specified. For ARCC Special Support Daily Coverage, an IMAR must be received by Contractor at least ten days prior to start date of the Special SL Support Daily Coverage period, with both the beginning and ending dates specified. In the event that ARCC wishes to terminate Special SL Support Daily Coverage earlier than requested, an IMAR must be received by Contractor at least three days prior to the new end date, with new end date specified.

END OF SCHEDULE

Schedule 5 – Invoices and Reports

Contents

1. Overview 3

2. Objectives 3

3. Deliverables/Reports by Framework 4

1. OVERVIEW

Contractor shall provide usage/inventory data that the County can use to chargeback Contractor's fees to County projects or Departments. This data consists of the quantity of usage or inventory data and an associated County project number or Department, if available and applicable. The data also include a Service identifier linked to a specific billing element, as well as a date of Service, if applicable. Usage data reports must be totaled and summarized by project number and/or Department, as required by the County. Detail and summary information reported monthly in a standard electronic file format provided by the County not later than the 10th of each month, for Services performed in the preceding month.

2. OBJECTIVES

2.1. The Contractor shall provide reports and information to the County to demonstrate the Contractor's compliance with the Service Levels in addition to the reports specified in this Section. Contractor is required to retain data to generate reports for historical purposes during the Term.

2.2. The County will define the requirements for any project numbering system needed to track such elements as mainframe usage or applications maintenance and development hours. The County will also provide and update the Department information that Contractor shall maintain in the inventory databases.

2.3. The County will provide and update the Business Unit (Department) and POETA (Project, Org, Expenditure, Task, and Award) information that Contractor shall maintain in the inventory databases. In addition, Contractor shall create and utilize summary usage report formats, subject to the County's approval, to enable the County to chargeback Contractor's fees.

2.4. During Transition, Contractor shall work with designated personnel from the County to develop specific policies and procedures regarding establishing and using Department/project numbers and establishing/updating Department information for the inventory databases. In addition, with the County's approval, Contractor shall develop summary usage report formats to enable the County to chargeback Contractor's fees.

2.5. Inventory data is a snapshot of the information on the last day of Contractor's accounting month. Usage data reports shall be totaled and summarized by Business Unit (Department) and Business Group, as required by the County. Detail and summary information shall be reported monthly in a standard electronic file format not later than the 10th of each month, for Services performed in the preceding month.

2.6. All reports shall be posted in the online Service Portal that is available to authorized County End-Users.

2.7. The contents of the SnP Manual for all Frameworks shall be referenced in the monthly Schedule 5 report, "Schedule 5 Invoices and Reports List".

2.8. Content management (add/remove/change) of the Schedule 5 Reports will be done with a Service Request.

3. DELIVERABLES/REPORTS BY FRAMEWORK

The Schedule 5 Reports List maintains the deliverables/reports that Contractor is required to provide to the County on a regularly scheduled basis under the Agreement is not intended to be an exhaustive list of each and every report that Contractor is required to provide to the County as specifically required by the Agreement. Contractor shall also provide to the County such additional reports as appropriate from time to time or as the County requests pursuant to Services provided in this Agreement.

END OF SCHEDULE

Exhibit 5.1 – Telecom Fees

Table of Contents

1. Telecom Transport Services 3
2. Charges for Telecom Transport Services 3
3. Quality, Performance and Remedies 3
4. Contractor Not Responsible for Unauthorized Use 3
5. Telecom Usage 4
6. Taxes 4

1. TELECOM TRANSPORT SERVICES

AT&T Corp. and its affiliates (the "Telecom Vendor") are approved subcontractors and are the actual providers of the Telecom Transport Services and that County will receive such Telecom Transport Services from the Telecom Vendor. As used herein, "Telecom Transport Services" means: High Capacity Service, Primary Rate Service, DS3 Service, PBX Trunk Service, Super Trunk Service, SONET Ring and Access Service, GigaMan® Service, Optical Carrier Network Point-to-Point Service, Message Telecommunications Service, Centrex Service, OPT-E-Man® Service, Long Distance Voice Services, SBC PremierSERVSM Frame Relay Service, SBC PremierSERVSM Asynchronous Transfer Mode, SBC PremierSERVSM Dedicated Internet Access, Series and 200 Voice Mail. The Telecom Transport Services are private services and are not common carrier services.

2. CHARGES FOR TELECOM TRANSPORT SERVICES

The service parameters, if any, for the Telecom Transport Services will be those set forth in the applicable tariff, regulations, or service guide of the Telecom Vendor providing the Telecom Transport Services. Peraton Enterprise Solutions LLC (Contractor) shall assist County in the reporting of any problems with the Telecom Transport Services.

3. QUALITY, PERFORMANCE AND REMEDIES

Contractor shall furnish the County Technology Office with a single invoice, inclusive of all charges related to the Telecom Transport Services. Each single invoice shall include an itemized accounting of Resource Units incurred during the immediately preceding month. Below the total charges identified on the single invoice, Contractor shall instruct County what portion of the total charges must be remitted directly to the Telecom Vendor related to the Telecom Transport Services, and the net resulting amount being remitted directly to Contractor. County shall pay this amount to the Telecom Vendor within forty-five (45) days of County's receipt of the single invoice for all Services provided under the Agreement.

4. CONTRACTOR NOT RESPONSIBLE FOR UNAUTHORIZED USE

Contractor will not be responsible for any unauthorized County use of the Telecom Transport Services.

5. TELECOM USAGE

County will maintain policies relative to and provide assistance for: (i) preventing the abuse or fraudulent use of the Telecom Transport Services, (ii) preventing any information, data or message from being transmitted over the network by County which would constitute libel, slander, infringement of copyright, invasion of privacy, violation of trans-border data flow regulations, access or alteration of private or personally identifiable records or data, (iii) any database maintenance functions that may be required to implement E911 service at any County location, or (iv) any compliance that may be required with the Communications Assistance for Law Enforcement Act and related regulations.

6. TAXES

As part of the invoice instructions to be provided to the County by Contractor pursuant to Paragraph 2 above, all fees payable by County to Contractor and the Telecom Vendor (as contained in the single invoice referred to in Paragraph 2 above) shall be inclusive of all taxes, including any applicable telecommunications surcharges or fees, or any related telecommunications taxes imposed, levied, or assessed by government authorities or otherwise charged by the Telecom Vendor on the Telecom Transport Services. Such surcharges, fees or taxes will be included in the amount to be remitted directly to the Telecom Vendor. Contractor acknowledges that County shall have no obligation to pay or be liable for any such surcharges, fees or taxes that may be imposed, levied or assessed "outside of" or in addition to the amounts directly remitted to the Telecom Vendor, as described in Paragraph 2 above.

END OF EXHIBIT

Schedule 7.2 – End-User Satisfaction Surveys

Table of Contents

1. Overview 3

2. Survey Objectives....3

3. Survey Process 3

1. OVERVIEW

For each Service Framework, Contractor shall conduct periodic customer satisfaction surveys to discern End-User perception with respect to Service delivery. Contractor shall ensure that survey results are monitored and reviewed and that necessary corrective actions are taken to improve performance. County shall be informed regularly of survey results per agreed upon format and have input on corrective actions and performance improvement activities.

2. SURVEY OBJECTIVES

2.1. Monitor End-User satisfaction with respect to Service delivery.

2.2. Identify and promptly address less than satisfactory survey results.

2.2. Maintain consistently high End-User satisfaction with respect to Service delivery.

3. SURVEY PROCESS

3.1 Design Survey

Contractor shall design a user-friendly, web-based survey that can be completed within five (5) minutes by an End-User. Contractor shall obtain County approval prior to distribution of a new or modified survey.

3.1 Selection of Survey Population

Contractor shall distribute one thousand (1000) surveys each month across the County. Contractor shall randomly select survey population from Break-Fix (BF) and Service Request (SR) requestors based on BF and SR tickets in active or completed status within the preceding thirty (30) day period. An End-User shall receive no more than two (2) surveys per calendar year.

3.3 Survey Distribution

Contractor shall send notice of survey to survey population via email. The email shall include survey instructions, information about the Break-Fix (BF) and Service Request (SR) for which information is being sought, and a direct link to the web-based survey.

Contactor shall accommodate Business Groups that have in place a centralized SR and BF system by allowing survey to be forwarded to and completed by someone other than the requester.

3.4 Response Monitoring

Contractor shall monitor survey response rate to ensure a one hundred (100) percent completion rate. As needed, Contractor may send a follow up email to End-User requesting completion of survey.

3.5 Survey Results

Contractor shall monitor and maintain survey results. For less than satisfactory results or feedback, the associated BF or SR ticket will be reviewed to establish appropriate corrective actions. Contractor shall report survey results and any associated corrective actions to County per agreed upon format. Contractor shall meet with County on a weekly basis to discuss results and corrective actions.

END OF SCHEDULE

Schedule 7.3.1 – Standards and Procedures

Table of Contents

1. Overview 3

2. High Level Requirements 3

3. Standards and Procedures Manual Topic List 3

1 OVERVIEW

The Standards and Procedures (SnP) Manual lists specific steps to be followed by role who will be held accountable for certain activities. A policy will be formed when there is a need to establish formal policies that the teams must abide by. A policy will often reference a Standards and Procedures Manual for specific steps. In addition to standard procedures, the SnP Manual will also contain all documented standards (e.g. Hardware, Software, bricks and patterns, etc.).

2 HIGH LEVEL REQUIREMENTS

2.1 The SnP Manual shall be posted in the Service Portal.

2.2 The SnP Manual shall be accessible to authorized End-Users to the appropriate Service Framework section(s).

2.3 The SnP Manual shall be assigned a designated document manager responsible for the organization of documents, review periods, posting of completed sections, Service Framework section numbering assignment, etc.

2.4 The SnP Manual shall provide a clear formal procedure to create, update, and maintain the SnP Manual integrity and updated information.

2.5 The contents of the SnP Manual for all Frameworks shall be referenced in the monthly Schedule 5 report, Schedule 7.3.1 List.

2.6 Content management (add/remove/change) of the SnP Manual will be via a Service Request.

3 STANDARDS AND PROCEDURES MANUAL TOPIC LIST

3.1 The SnP Manual topic list will be maintained in the Schedule 5 report**,** "Schedule 7.3.1 Standards and Procedures List".

END OF SCHEDULE

Schedule 7.6 — Shared Resources

Table of Contents

1. Overview 3
2. Cross-Functional Equipment, Software, Tools and Systems....3
3. Service Desk Equipment, Software, Tools and Systems....5
4. End-User Equipment, Software, Tools and Systems....5
5. Network Equipment, Software, Tools and Systems....6
6. Data Center Equipment, Software, Tools and Systems....8
7. Applications Maintenance and Operations Equipment, Software, Tools and Systems....9
8. Applications Development Equipment, Software, Tools and Systems....9

1. OVERVIEW

Contractor shall provide a listing of Shared Resources by Component within each Service Framework in Schedule 7.6 – Shared Resources. For each Shared Resource, the following information shall be included: resource / tool name, type (Software or Machine), manufacturer, version, purpose or use, and any other information of relevance the Contractor deems necessary.

For software or infrastructure that runs in the data center, or as a service, the hardware that runs this software is also a shared resource.

2. CROSS-FUNCTIONAL EQUIPMENT, SOFTWARE, TOOLS AND SYSTEMS

Resource / Tool Name	Information
Enterprise System List (ESL)	**Type:** Software **Manufacturer:** HPES **Version:** 16.1.1 **Purpose/Use:** ESL (Enterprise System List) is a Delivery focused Configuration Management System for managing System/Application Configuration Items, Services/Contracts and Customer/Account information. **Other Information:**
Asset Manager	**Type:** Software **Manufacturer:** HPE **Version:** 3.7P1 **Purpose/Use:** Tracks end-user and network assets **Other Information:**
Discovery and Dependency Mapping Inventory (DDMI)	**Type:** Software **Manufacturer:** HPE **Version:** 9.32 P1 **Purpose/Use:** discovers and reports assets found on the network; integrates with Asset Manager. **Other Information:**
Service Manager	**Type:** Software **Manufacturer:** HPE **Version:** 4.0.5p31 **Purpose/Use:** Used by the Service Desk and all support staff for ticketing of Incidents, Problems and Changes. **Other Information:**
End User Access (EUA)	**Type:** Software **Manufacturer:** HPES **Version:** 2.1.6 **Purpose/Use:** Service Portal **Other Information:** While the core software and interfaces are standardized and centrally controlled to interact with the rest of the cross

Resource / Tool Name	Information
	functional tools, the Service Portal is separately instantiated and customized for each client for whom it is deployed.
Aries/Aldea	**Type:** Software **Manufacturer:** HPES **Version:** 3.5.6 / 8.9.3 **Purpose/Use:** Tool used by HPES internally to request resources (e.g., staffing assignments, workload placement) from the broader HPE community **Other Information:**
RevGen	**Type:** Software **Manufacturer:** SAP Ariba **Version:** 9r1 **Purpose/Use:** Procurement of products and services **Other Information:**
Enabling Delivery and Global Excellence (EDGE)	**Type:** Knowledge Repository **Manufacturer:** HPES **Version:** 4.3 **Purpose/Use:** EDGE is a holistic environment that includes all the information needed to enable Enterprise Solutions (ES) to deliver and excel in the global marketplace. EDGE supports all individuals in each of the ES business units by providing process artifacts that can be leveraged and used as part of their day-to-day work. **Other Information:**
Enterprise Maps	**Type:** Software **Manufacturer:** HPE **Version:** 3.0 **Purpose/Use:** HPE Enterprise Maps software plans and drives IT transformation roadmaps by mapping the overall IT landscape with business outcomes. **Other Information:** Enterprise Maps is certified as ArchiMate 2 Tool and incorporates principles from TOGAF Enterprise Architecture Framework
Enterprise Architect	**Type:** Software **Manufacturer:** Sparx Systems **Version:** 9.3 **Purpose/Use:** Enterprise Architect provides full life cycle modeling for: Business and IT systems Software and Systems Engineering Real-time and embedded development **Other Information:**
ProVision	**Type:** Software **Manufacturer:** OpenText **Version:** 9.0.2 **Purpose/Use:** ProVision is HPES's standard modeling tool, to be used for Business Process, Enterprise Architecture and IT solution modeling. It enables business & IT teams to visually create models, describing business process, process interactions and detailed workflow **Other Information:**
Disaster Recovery Subscription Services, consisting of all	**Type:** Disaster Recovery Subscription Services **Manufacturer:** various

Resource / Tool Name	Information
leveraged hardware and software used to provide: Server services Storage services Network services Security services Backup services	**Version:** N/A **Purpose/Use:** Leveraged hardware and software **Other Information:** Note that the Centera and the dedicated firewalls located in the DR site are not considered to be part of this list, since they are dedicated to the County.
ArcSight Security Information and Event Management (SIEM)	**Type:** Software/appliance **Manufacturer:** HPE **Version:** 6.9.1 **Purpose/Use:** Event logging and monitoring **Other Information:**
Global Delivery Capacity & Performance Management (GDCPM)	**Type:** Software **Manufacturer:** HPES (based on SAS and other underlying tools) **Version:** 2.0 **Purpose/Use:** Collects, aggregates and analyzes capacity and performance data from various disparate sources for reporting and analysis **Other Information:**

3. SERVICE DESK EQUIPMENT, SOFTWARE, TOOLS AND SYSTEMS

Software used in providing Service Desk services is listed in the Cross-Functional section, since this software is also used by other frameworks.

IVR and ACD hardware and software, and other tools/facilities used by the Service Desk are internal to Contractor, and are not listed individually

4. END-USER EQUIPMENT, SOFTWARE, TOOLS AND SYSTEMS

Resource / Tool Name	Information
System Center Configuration Manager (SCCM)	**Type:** Software **Manufacturer:** Microsoft **Version:** 2012 **Purpose/Use:** Discovery and software distribution to end-user devices **Other Information:**

5. NETWORK EQUIPMENT, SOFTWARE, TOOLS AND SYSTEMS

Resource / Tool Name	Information
Leveraged Internet Service (LIS) firewalls in the Tulsa and Colorado Springs data centers	**Type:** Hardware **Manufacturer:** Checkpoint **Version:** D2 **Purpose/Use:** Internet access/security **Other Information:** In the future these are slated to be replaced by Fortinet firewalls
AT&T Commonly Shared Network	**Type:** Equipment, tools, software, systems and other materials **Manufacturer:** Various **Version:** N/A **Purpose/Use:** For clarity, the AT&T Commonly Shared Network means (i) the public or shared networks of AT&T, its Affiliates and their subcontractors, and the equipment, tools, technologies, systems, software, and other materials that are components thereof; (ii) equipment, tools, technologies, systems, software and other materials used by AT&T, its Affiliates and their subcontractors in shared network management and back office environments including , without limitation, TIRKs, iGEMS, BusinessDirect, Billing Edge, the AT&T Global Network Client and AT&T Connect and any other items listed above in this Exhibit; and (iii) all modifications, upgrades, derivative works, enhancements, improvements and extensions of any of the foregoing.
SIMS (Security Information Management System)	**Type:** Software **Manufacturer:** AT&T **Version:** n/a **Purpose/Use:** Security event correlation **Other Information:**
SDNOM (Software Defined Network Order Management)	**Type:** Software **Manufacturer:** AT&T **Version:** 1.0 Release 1604 **Purpose/Use:** Circuit Ordering **Other Information:**
Nectar Unified Communication Management Platform	**Type:** Software **Manufacturer:** Nectar **Version:** 5.5.2.1 **Purpose/Use:** Voice Network Performance Management **Other Information:**
MDM-Airwatch SaaS Console (Mobile Device Management)	**Type:** Software **Manufacturer:** AT&T **Version:** 8.2 **Purpose/Use:** Mobile device management **Other Information:**
SORD (Service Order Retrieval and Distribution)	**Type:** Software **Manufacturer:** AT&T **Version:** 8.1.10 **Purpose/Use:** Service order entry **Other Information:**
Telegence	**Type:** Software

Resource / Tool Name	Information
	Manufacturer: AT&T **Version:** 1602.3 **Purpose/Use:** Billing **Other Information:**
BOSS (Billing and Ordering Support System)	**Type:** Software **Manufacturer:** AT&T **Version:** 8.1.01 **Purpose/Use:** Product billing, tracking and reporting **Other Information:**
DPSS (Data Products and Services System)	**Type:** Software **Manufacturer:** AT&T **Version:** N/A **Purpose/Use:** Data product and services tracking **Other Information:**
BusinessDirect/eBill	**Type:** Software **Manufacturer:** AT&T **Version:** N/A **Purpose/Use:** Account management **Other Information:**
Exchange Plus	**Type:** Software **Manufacturer:** AT&T **Version:** 13.1 **Purpose/Use:** Carrier resource tracking **Other Information:**
ICES (Integrated Customer Enterprise System) ServiceCenter/AssetCenter	**Type:** Software **Manufacturer:** AT&T **Version:** 5.1.2 **Purpose/Use:** Asset Inventory **Other Information:**
SAINT	**Type:** Software **Manufacturer:** AT&T **Version:** 7.20.13 **Purpose/Use:** Security scanning and testing **Other Information:**
Nmap	**Type:** Software **Manufacturer:** Nmap **Version:** v7.0 **Purpose/Use:** Network scanning and mapping **Other Information:**
WFA (Work Force Administration)	**Type:** Software **Manufacturer:** Telcordia **Version:** n/a **Purpose/Use:** Trouble ticketing and work flow **Other Information:**
TIRKS (Trunks Integrated Record Keeping System)	**Type:** Software **Manufacturer:** Telcordia **Version:** n/a **Purpose/Use:** Circuit design **Other Information:**

Resource / Tool Name	Information
AOTS-TM (AT&T One Ticketing System – Trouble Management)	**Type:** Software **Manufacturer:** AT&T/Remedy **Version:** n/a **Purpose/Use:** trouble ticketing **Other Information:**
NMA (Network Monitoring and Analysis)	**Type:** Software **Manufacturer:** Telcordia **Version:** n/a **Purpose/Use:** Network monitoring **Other Information:**
Avaya Site Administration	**Type:** Software **Manufacturer:** Avaya **Version:** 6.0 **Purpose/Use:** Voice system administration **Other Information:**

6. DATA CENTER EQUIPMENT, SOFTWARE, TOOLS AND SYSTEMS

Resource / Tool Name	Information
Server Automation	**Type:** Software **Manufacturer:** HPE Software **Version:** 10.11 **Purpose/Use:** Distributing operating system and layered product patches and upgrades **Other Information:** The core mesh is a shared resource; distribution satellite servers within the County's network zones are dedicated to the County
Operations Manager	**Type:** Software **Manufacturer:** HPE Software **Version:** 9.2 **Purpose/Use:** Monitoring and alerting for various data center components, such as servers, domain controllers, databases, etc.
Microsoft Office 365 Government Community Cloud	**Type:** Software as a Service **Manufacturer:** Microsoft **Version:** 2016 **Purpose/Use:** E-Mail (Exchange Online), Collaboration (SharePoint Online, Skype for Business), Cloud File Management (OneDrive for Business)
E2E Complete	**Type:** Software **Manufacturer:** BinaryTree **Version:** 4.0 **Purpose/Use:** Automation tool for migration of mail services from Exchange to the Microsoft Office 365 Cloud
Helion Virtual Private Cloud for US Public Sector	**Type:** Infrastructure as a Service **Manufacturer:** HPE **Version:** 7.6

Resource / Tool Name	Information
	Purpose/Use: Virtual Private Cloud (VPC) for Windows and Linux environments. VPC is a Government Community Cloud currently used to run the County's Beach and Water Quality website.
Watchdog	**Type:** Software **Manufacturer:** HPES **Version:** N/A **Purpose/Use:** Internally developed utility that monitors/removes privileged access implemented via non-approved methods

7. APPLICATIONS MAINTENANCE AND OPERATIONS EQUIPMENT, SOFTWARE, TOOLS AND SYSTEMS

All tools identified for applications development may also be used in the applications Maintenance and Operations (M&O) environment.

8. APPLICATIONS DEVELOPMENT EQUIPMENT, SOFTWARE, TOOLS AND SYSTEMS

Resource / Tool Name	Information
StarTeam	**Type:** Software **Manufacturer:** Microfocus/Borland **Version:** N/A **Purpose/Use:** Software Change and Configuration Management **Other Information:** This tool may also be used in Business Analysis and Applications M&O
Together	**Type:** Software **Manufacturer:** Microfocus/Borland **Version:** N/A **Purpose/Use:** Together enables software to be designed using industry-standard UML notation and conventions. With a large number of built-in utilities to manage the software design process, validate designs and generate code, Together helps maximize the efficiency and accuracy of the software development process **Other Information:** This tool may also be used in Business Analysis and Applications M&O
Agile Manager	**Type:** Software **Manufacturer:** HPE **Version:** N/A **Purpose/Use:** Agile project management is a SaaS (software-as-a-service) solution that helps teams to organize, plan, and execute Agile projects. **Other Information:** This tool may also be used in Business Analysis and Applications M&O
Team Foundation Server	**Type:** Software **Manufacturer:** Microsoft **Version:** N/A

Resource / Tool Name	Information
	Purpose/Use: Microsoft Team Foundation Server (TFS) is a set of tools and technologies that enable a team to collaborate and coordinate the development and build efforts for a .NET software product or completing a .NET software project. **Other Information:** This tool may also be used in Business Analysis and Applications M&O

END OF SCHEDULE

Schedule 8.1 – License for Use of County Facilities and Property

LICENSE FOR USE OF COUNTY FACILITIES AND PROPERTY

This license agreement ("License") is entered into on _____ between the County of San Diego, a political subdivision of the State of California ("County"), and Peraton Enterprise Solutions LLC ("Licensee").

RECITALS

A. Licensee wishes to the use County-owned property ("Property") defined in Section 1 Premises for _____.

B. County is willing to permit Licensee to use the Property subject to the terms and conditions contained in this License.

C. Unless otherwise set forth herein, all terms in this License shall be as defined in the Information Technology and Telecommunications Service Agreement between the County of San Diego and _____ dated _____ ___, 2016.

LICENSE

1. Premises. Licensee may use _____San Diego, California. The _____ are collectively referred to in this License as the "Premises", and are further described in Exhibit "A" DESCRIPTION OF PREMISES of this License.

2. Term. The term of this License commences on the Effective Date of the Information Technology and Telecommunications Service Agreement between the County of San Diego and _____ dated _____ ___, 2016, and expires the end of the Initial Term and any Renewal Term(s).

3. Use. Licensee may use the Premises for the sole purpose of providing the Services. Licensee is not authorized to use the Premises on any other days or at any other times other than the times stated in Section 2 Term or use any other part of the Premises not described in Exhibit "A". If the County's Director, Department of General Services ("Director") determines that Licensee's use of the Premises on these days and/or at these times

would in any way conflict or be inconsistent with the conduct of County business, the Director may unilaterally change the days and/or times Licensee may use the Premises or may terminate this License immediately without incurring any liability to Licensee.

4. Access. Licensee shall not impede the flow of vehicular traffic on, or restrict public access to or from, the Property. Licensee shall not interfere with County operations at the Property or Premises. When on the Property and Premises, Licensee and Licensee's guests and invitees shall drive only on established roadways and driveways.

5. License. This License is not a lease, does not create or convey an easement and does not convey any interest or estate in real property to Licensee. County may terminate this License at any time. County may enter the Premises covered by this License at any time.

6. Insurance. Licensee shall comply with the Insurance Requirements set forth in the Information Technology and Telecommunications Service Agreement between the County of San Diego and _____ dated _____ ___, 2016.

7. License Fee. In accordance with the County Board of Supervisors Policy B-29, Fees, Grants, Revenue Contracts - Department Responsibility for Cost Recovery, the County is receiving full compensation for the license through the Agreement and Contractor's provision of Services therein.

8. Defense and Indemnity. To the fullest extent permitted by law, County shall not be liable for, and Licensee shall defend and indemnify County and its elected officials, officers, agents, employees and volunteers (collectively, "County Parties"), against any and all claims, deductibles, self-insured retentions, demands, liability, judgments, awards, fines, mechanics' liens or other liens, labor disputes, losses, damages, expenses, charges or costs of any kind or character, including attorneys' fees and court costs (collectively, "Claims"), that arise out of or are in any way connected to this License or Licensee's use of the Premises arising either directly or indirectly from any act, error, omission or negligence of Licensee or its officers, employees, agents, contractors, licensees, servants, guests or invitees including, without limitation, Claims caused by the sole passive negligent act or the concurrent negligent act, error or omission, whether active or passive, of County Parties. Licensee shall have no obligation, however, to defend or indemnify County Parties from a Claim if it is determined by a court of competent jurisdiction that the Claim was caused by the sole active negligence or willful misconduct of County Parties.

9. Maintenance, Cleanup and Repair. Licensee shall conduct its operations in an orderly manner and shall leave the Premises in as clean and good a condition as when Licensee entered the Premises pursuant to this License. If Licensee damages any County property or facilities or incurs excessive cleanup of the Premises, Licensee shall promptly inform the Director and shall promptly reimburse the County for the full costs that County incurs to repair the damage or replace the item.

10. Storage. Licensee shall not store or leave any personal property or equipment on or in the Premises without obtaining the prior written consent of the Director of General Services.

11. License on Site. Licensee shall have a copy of this License available at all times when Licensee is using the Premises. Licensee shall show a copy of this License to County staff upon request.

12. Compliance with Stormwater Laws. Licensee's use of the Premises is subject to all present or future federal, state and local laws, statutes, regulations, ordinances, policies, guidelines and orders ("Stormwater Laws") regarding the discharge of pollutants into the stormwater conveyance system. Licensee's compliance with Stormwater Laws may include requirements for Licensee to develop, install, implement and maintain pollution prevention measures, source control measures and Best Management Practices ("BMPs"). BMPs can include operational practices, water or pollutant management practices, physical site features, or devices to remove pollutants from stormwater, to affect the flow of stormwater or to infiltrate stormwater to the ground. BMPs applicable to Licensee's use of the Premises may include a requirement that all materials, wastes or equipment with the potential to pollute urban runoff be stored in a manner that either prevents contact with rainfall and stormwater, or contains contaminated runoff for treatment and disposal. Licensee's is required to, and shall use, operate, maintain, develop, redevelop and retrofit the Premises, as necessary, in accordance with Stormwater Laws restricting the discharge of non-stormwater at or from the Premises; and Stormwater Laws requiring pollution prevention measures, source control measures, or the installation or use of BMPs. Licensee shall develop, install, implement and/or maintain at Licensee's sole cost and expense, any BMPs or similar pollution control devices required by Stormwater Laws and any implementing regulations or guidance.

Licensee understands and acknowledges that the Stormwater Laws applicable to Licensee's use of the Premises may be changed from time to time by federal, state and/or local authorities, and that additional requirements may become applicable based on changes in Licensee's activities or development or redevelopment by Licensee's or County. Licensee shall conduct stormwater training and perform regular stormwater self-

inspections, and maintain records of all stormwater training and self-inspections and provide all necessary documentation to County upon request.

Licensee shall develop, install, implement, and maintain any additional BMPs and/or other pollution control practices at the Premises at Licensee's sole cost and expense. To the extent there is a conflict between any federal, state or local law, Licensee shall comply with the more restrictive provision. If County receives any fine or fines from any regulatory agency as a result of Licensee's failure to comply with Stormwater Laws, Licensee shall reimburse County for the entire amount of the fine(s).

13. Hazardous Substances. Licensee shall be solely responsible for fully complying with all present or future federal, state and local laws, statutes, regulations, ordinances, policies, guidelines and orders of any governmental entity regarding contaminated soils, hazardous materials or environmental cleanup, regardless of whether or not the obligation to comply is an obligation of the land owner. If any hazardous substance spills, leaks or is discharged from any facility on the Premises, Licensee shall immediately make all repairs necessary to prevent further spills, leaks or discharges and shall immediately clean up and promptly dispose of the spilled hazardous substance and any soil contaminated by the spill. If the Licensee fails to make the required repairs, to clean up the spill or to properly dispose of any contaminated soil, County may after written notice to Licensee take all steps County deems necessary to make the necessary repairs, to clean up the spill and to dispose of any contaminated soil. The Licensee shall reimburse the County for the cost of all repair and cleanup work performed by the County. Licensee shall reimburse the County for the cost of any work, plus administrative expenses, within thirty (30) days of receiving a bill for the work from the County. Licensee shall be solely responsible for paying all fines, damages and penalties imposed by any governmental agency regarding the production, storage, distribution, processing, handling, disposing, spilling, leaking or discharging of any hazardous substance.

Licensee shall indemnify, defend, reimburse and hold harmless County, its elected officials, officers, employees and agents from any and all liability, claims, damages or injuries to any person, including injury to the County or any of County's elected officials, officers, employees, agents, representatives, guests, licensees, invitees, patrons, or of any other person, and all expenses of investigating and defending against all liability, claims, damages or injuries, arising from or alleged to have arisen from or in connection with the presence of hazardous substances, toxic materials or hazardous waste upon, about or beneath the Premises or migrating to or from the Premises or arising in any manner out of the violation of any governmental regulation pertaining to hazardous substances, toxic materials or hazardous waste which condition exists after the execution of this License.

14. Assignment. Licensee shall not assign or transfer any interest in this License.

15. Notices. Any notice required or permitted to be given pursuant to this License shall be written and shall be effective (a) when personally delivered to the recipient or sent by facsimile transmission; or (b) on the third business day after being sent by the United States Postal Service, postage prepaid and addressed to the party as follows:

If to County: County of San Diego
Department of General Services
Real Estate Services Division
5560 Overland Avenue
Suite 410
San Diego, California 92123

AND

As required by the notice provisions of the Information Technology and Telecommunications Service Agreement between the County of San Diego and Peraton Enterprise Solutions LLC dated November 15, 2016.

16. Entire Agreement. This License and any exhibits attached to this License constitutes the entire agreement between County and Licensee with respect to the License Premises. All other representations, oral or written, are superseded by this License. Neither party is relying on any representation outside of this License. This License may be changed only by written amendment signed by County and Licensee.

17. Interpretation. This License shall be governed by the laws of the State of California. However, the provisions of this License shall be strictly construed against Licensee.

18. Corporation in Good Standing. If Licensee is a California corporation, Licensee warrants that it is a corporation in good standing and is currently authorized to do business in California.

19. Authority to Sign. Licensee represents and warrants that it has full power and authority to execute and fully perform its obligations under this License without the need for any further action, and that the person executing this License on behalf of Licensee is the duly designated agent of Licensee and is authorized to act on behalf of Licensee.

END OF SCHEDULE

Schedule 10.1.1 — Contractor Key Personnel

Table of Contents

1. Overview 3

2. Key Personnel.....3

1. OVERVIEW

Schedule 10.1.1 – Contractor Key Personnel describes the primary functions for each key position. The personnel filling key positions shall be deemed to be Key Personnel for the purposes of this Agreement. A list of the Key Personnel shall be maintained in the Standards and Procedures Manual.

2. KEY PERSONNEL

Key Personnel	High Level Description
Account Executive	Serves as the County's single point of contact with the Contractor and is responsible for the successful execution of the Agreement. The Account Executive must be knowledgeable about the County's business and the Services. The Account Executive works closely with the County Chief Information Officer (CIO) to ensure that the Services are aligned with the County's goals and expectations. All other Key Personnel listed in this Schedule must directly or indirectly report to the Account Executive.
Deputy Account Executive	Works closely with the Account Executive in executing the Agreement. The Deputy Account Executive must be knowledgeable about the County's business and the Services.
Enterprise Service Delivery Manager (SDM)	Oversees and manages operational delivery of IT and Telecommunication Services to the County. Oversees the activities of all Service Delivery Managers to ensure consistently high service performance across the County.
FG3 Service Delivery Manager (SDM)	Oversees the delivery of IT and Telecommunication Services to FG3. The FG3 SDM ensures consistently high service performance, monitors service delivery and evaluates feedback to develop quality improvement processes. The FG3 SDM must have the authority to escalate across frameworks and secure resources as needed for IT and Telecommunication issues. The FG3 Service Delivery Manager works closely with the FG3 Group Information Technology Manger and Departmental IT staff.
HHSA Service Delivery Manager (SDM)	Oversees the delivery of IT and Telecommunication Services to HHSA. The HHSA SDM ensures consistently high service performance, monitors service delivery and evaluates feedback to develop quality improvement processes. The HHSA SDM must have the authority to

Key Personnel	High Level Description
	escalate across frameworks and secure resources as needed for IT and Telecommunication issues. The HHSA SDM works closely with the HHSA Group Information Technology Manger and Departmental IT staff.
PSG Service Delivery Manager (SDM)	Oversees the delivery of IT and Telecommunication Services to PSG. The PSG SDM ensures consistently high service performance, monitors service delivery and evaluates feedback to develop quality improvement processes. The PSG SDM must have the authority to escalate across frameworks and secure resources as needed for IT and Telecommunication issues. The PSG SDM works closely with the PSG Group Information Technology Manger and Departmental IT staff.
LUEG Service Delivery Manager (SDM)	Oversees the delivery of IT and Telecommunication Services to LUEG. The LUEG SDM ensures consistently high service performance, monitors service delivery and evaluates feedback to develop quality improvement processes. The LUEG SDM must have the authority to escalate across frameworks and secure resources as needed for IT and Telecommunication issues. The LUEG SDM works closely with the LUEG Group Information Technology Manger and Departmental IT staff.
Special Service Levels Service Delivery Manager (SDM)	Oversees Special Service Level (SL) Requirements as defined in Exhibit 4.8.1 – Special Service Level Requirements of the Agreement, emergency and/or disaster related incidents, Board of Supervisors meetings, and support for the Clerk of the Board, Chief Administrative Office, and Board of Supervisors Offices. The Special SL SDM must have the authority to escalate across frameworks and secure resources as needed for IT and Telecommunication issues. The Special SL SDM will report to the representative of the County Technology Office (CTO) responsible for managing the SDMs. If there is an overlap period between Special SL support periods, the Contractor shall assign another resource(s) such that each active Service Request for Special SL support has a dedicated resource for the coordination and management of activities.

Key Personnel	High Level Description
	During periods when there are no active Service Requests for Special SL support, the CTO representative will direct the Special SLs SDM on other important activities and will also perform the responsibilities of the SDM as assigned by the Enterprise SDM.
Contracts Manager	Oversees the delivery of Contract Management Services. The Contracts Manager must be knowledgeable about the County's business and the Services. The Contracts Manager ensures consistently high performance in Contracts and Acquisition Services, monitors service delivery and evaluates feedback to develop quality improvement processes.
Chief Information Security Officer (CISO)	The CISO is responsible for aligning security initiatives, architectures, processes, and service delivery with enterprise programs and business objectives, ensuring that information assets and technologies are adequately protected. The Contractor CISO works closely with the County's CISO in identifying, developing, implementing, and maintaining security-related processes that reduce the organization's operational risks.
Chief Technology Architect (CTA)	The CTA is responsible for providing principles, best practices, innovation, market trends, and future-looking models for the County's IT infrastructure; and serving as a bridge for all the architecture groups and areas as described in Schedule 4.3 for the CTA. The Contractor CTA works closely with the County's CTA to oversee and coordinate the top-down approach to managing and sharing data, systems, and processes.
Cross Functional Services Manager	Oversees the delivery of Cross Functional Services. The Cross Functional Services Manager ensures consistently high service performance, monitors service delivery and evaluates feedback to develop quality improvement processes. The Cross Functional Services Manager ensures integration and consistency across Service Frameworks and functional resources to deliver quality service.
Service Desk Manager	Oversees the delivery of Service Desk Services. The Service Desk Manager ensures consistently high service performance, monitors service delivery and evaluates feedback to develop quality improvement

Key Personnel	High Level Description
	processes. The Service Desk Manager must have the authority to escalate and secure resources as needed to resolve issues.
End User Services Manager	Oversees the delivery of End User Services. The End User Services Manager ensures consistently high service performance, monitors service delivery and evaluates feedback to develop quality improvement processes. The End User Services Manager must have the authority to escalate and secure resources as needed to resolve issues.
Network Services Manager	Oversees the delivery of Network Services. The Network Services Manager ensures consistently high service performance, monitors service delivery and evaluates feedback to develop quality improvement processes. The Network Services Manager must have the authority to escalate and secure resources as needed to resolve issues.
Data Center Services Manager	Oversees the delivery of Data Center Services. The Data Center Services Manager ensures consistently high service performance, monitors service delivery and evaluates feedback to develop quality improvement processes. The Data Center Services Manager must have the authority to escalate and secure resources as needed to resolve issues.
Enterprise Applications Services Manager	Oversees the delivery of Applications Development and Maintenance and Operations Services. The Applications Services Manager ensures consistently high service performance, monitors service delivery and evaluates feedback to develop quality improvement processes. The Applications Services Manager must have the authority to escalate and secure resources as needed to resolve issues.
Project Management Office (PMO) Manager	The PMO Manager is responsible for ensuring the consistency, predictability, efficiency, and effectiveness of the Contractor's project delivery capability. The PMO Manager provides leadership in best practices and is highly customer-focused.
Transition Services Manager	Oversees the delivery of Transition Services. The Transition Services Manager oversees the transition from the Legacy Provider to the Contractor while ensuring consistently high service performance, monitoring service delivery and evaluating feedback to develop quality improvement processes. The Transition Services Manager must have the authority to escalate and secure resources as needed to resolve issues.

Key Personnel	High Level Description
Enterprise Application Architect (EAA)	The EAA is responsible for leading the improvement of application quality, integration, and cost-effectiveness. This includes reviewing business and technical requirements, focusing on solution development throughout the project lifecycle, establishing and maintaining data standards, enterprise taxonomies, information management strategies and overall efforts to continuously improve the provision of Services in the EAA's areas of responsibility and areas as described in Schedule 4.3 for the EAA. The Contractor EAA works closely with the County's CTA in the governance and oversight of all application development across the enterprise and will act as a standing member of the Enterprise Architecture Governance Group.
Innovation Officer (IO)	The IO is responsible for driving continuous innovation and transformation of County services and leading the Innovation Management Services Office. This innovation leverages information technology, but is led from a business perspective. The IO will work directly with the County CTA in the governance and oversight of innovation and transformation initiatives. The IO will establish the charter, governance model and dev/ops agile environment to provide rapid prototyping of new business concepts and technology to determine feasibility and predict business outcome. The IO will meet with County business to determine concepts for innovation and will develop innovation based on functional business needs first. A full understanding of emerging business trends and technologies will be core responsibilities of the IO with additional responsibilities outlined in Schedule 4.3.

END OF SCHEDULE

Schedule 10.3 — Relationship Management

Table of Contents

1. Overview 3

2. High Level Requirements 3

3. Relationship Counterpart 4

4. Relationship Management Roles and Responsibilities 4

1. OVERVIEW

This Schedule 10.3 (Relationship Management) sets forth the roles and responsibilities of the entities for the relationship management ("Relationship Management") provided under the Agreement as part of the Services. Relationship Management are the activities, as further detailed in this Schedule 10.3, required to support County's overall relationship with the Contractor.

County recognizes that Relationship Management Services are an essential component for successful contract management and ongoing County - Contractor relationship satisfaction. County requires a relationship with Contractor based on the following key ingredients, including:

- Mutual trust and respect
- Excellent communication between both Entities
- Well-defined objectives and service levels
- Appropriate governance structures
- Well-defined roles and responsibilities

2. HIGH LEVEL REQUIREMENTS

The Contractor relationship management team will work with the County team to achieve a number of County relationship goals and objectives, including:

- Delivery of high-quality IT and telecommunication services to support County business needs
- Continued high customer satisfaction from all technical and operational End-Users of Services
- Continuous recommendation of improvements to the functionality, creation and delivery of Services—to the extent that County business objectives would be better served
- Development of the business rationale and benefits of any proposed changes and communicate these to the team and other County stakeholders, as appropriate
- Working within the mutually-agreed upon structure regarding processes and procedures
- Assisting County in its planning activities as required
- Ensuring sufficient and continued communication

The following are additional County and Contractor relationship management functions that are essential to managing the relationship:

- Financial management
- Performance management
- Contract management

3. RELATIONSHIP COUNTERPART

The following table defines the hierarchy and relationship counterpart by County and Contractor roles.

County of San Diego	Contractor
Chief Administrative Officer	Executive Vice President & General Manager
Assistant Chief Administrative Officer	Vice President of State, Local and Education, U.S. Public Sector
Chief Information Officer	Account Executive
CTO Contract Manager	Contracts Manager

4. RELATIONSHIP MANAGEMENT ROLES AND RESPONSIBILITIES

Relationship Management Roles and Responsibilities		
Strategy and Planning	**Contractor**	**County**
1. Provide Contractor with County strategic business and technology imperatives that require Contractor support.		X
2. Recommend services, technologies and/or products to County's IT management that add value to County.	X	
3. Review projects and project plans.	X	
4. Review and approve projects and project plans.		X
5. Develop strategic IT plan to support County strategic business plans.		X
6. Participate in the development of County strategic business plans, as requested by County.	X	
7. Develop/implement operational plans in accordance with authorized strategic IT plan, architecture and implementation strategies.	X	
8. Review and approve operational plans in accordance with authorized strategic IT plan, architecture and implementation strategies.		X
9. Provide IT research assistance on new technologies.	X	
10. Provide Business case assistance and preparation, as required.	X	

Relationship Management Roles and Responsibilities		
11. Provide IT solutions, expertise, and advisory services that are appropriately aligned with County's needs and business focus.	X	
12. Establish business criteria for all services, standards and delivery requirements.		X
13. Recommend appropriate Services, standards and procedures.	X	
14. Review and approve all recommended services, standards and procedures.		X
15. Adhere to County Policies and Standards.	X	
16. Develop, document and maintain Standards and Procedures Manual.	X	
17. Approve Standards and Procedures Manual.		X
18. Provide the Standards and Procedures Manual electronically (and in a manner such that it can be accessed via the Service Portal.	X	
19. Communicate to all End-Users the availability of and methodology for accessing the Standards and Procedures Manual.	X	
20. Develop Demand Management Report (DMR), which shall include forecasts of expected changes in Services demand.		X
21. Review and analyze DMR.	X	
22. Provide input to demand forecasts for DMR.	X	
23. Develop response to demands in the DMR.	X	
24. Develop and provide action plans as a result of review of DMR.	X	
25. Approve DMR action plans.		X
Contract Management	**Contractor**	**County**
26. Monitor contract terms, technology operations and management processes to ensure compliance.		X
27. Monitor and revise contracts as applicable and review recommended contract modifications provided by the other party.		X
28. Monitor and revise contracts as applicable and review recommended contract modifications provided by the other party.	X	
29. Provide data required to assess fee reductions and incentives.	X	
30. Identify and manage Contractor fee reductions, based on performance information and contract terms.		X
31. Approve changes.		X
32. Implement changes.	X	

Relationship Management Roles and Responsibilities		
33. Conduct regularly reviews of the risk exposure of the relationship and overall transaction between County and Contractor using a framework, which includes without limitation: • Security audit including access rights • Quality of service delivery • Delayed service delivery • Business continuity and disaster recovery • Non-performance or inability to deliver Services • Quality of the 'Relationship'		X
34. Participate in regular reviews of the risk exposure of the relationship and overall transaction between County and Contractor.	X	
Relationship Management	**Contractor**	**County**
35. Provide support and commitment of County executives to the relationship.		X
36. Provide support and commitment of Contractor executives to the relationship.	X	
Financial Management	**Contractor**	**County**
37. Establish, maintain and ensure an asset register for all assets relevant to the Services is being managed.	X	
38. Establish, maintain and ensure a contract register for all contracts relevant to the Services is being managed.	X	
39. Review asset register and contract register.		X
40. Provide Contractor data to a third-party benchmarking vendor for use in conducting periodic cost and performance benchmark comparison upon request.	X	
41. Monitor and manage financial administration practices and procedures associated with the Agreement.		X
42. Provide data in order to conduct charge back per County requirements.	X	
43. Identify billing disparities and work with Contractor to identify corrective actions.		X
44. Implement corrective actions for billing disparities.	X	
45. Provide a monthly report of Services consumed and any variances to plan.	X	

Relationship Management Roles and Responsibilities		
46. Maintain an audit trail and records of all costs incurred under the Agreement and net book value for assets.	X	
47. Proactively ensure that all unnecessary costs are eliminated, and that costs are managed in an efficient manner.	X	
48. Approve all cost controls.		X
49. Maintain full records of assets (including ownership) used to support the delivery of Services under the Agreement and upon request, make such records available to County for review.	X	
Service Level Management	**Contractor**	**County**
50. Manage and coordinate all delivery aspects of the Services.	X	
51. Provide periodic written performance management reports to County on Service Levels (SLs) and conduct periodic scheduled and ad hoc review meetings as required.	X	
52. Review and monitor Contractor performance against SLs, return-on-investment metrics, performance improvement plans and industry benchmarks.		X
53. Ensure Contractor understanding of and adherence to SLs and any implementations of required changes to achieve such SLs.	X	
54. Ensure in-scope technical solutions are consistent with County's business strategy and architecture.	X	
55. Ensure Contractor performance meets business requirements.	X	
56. Conduct a formal review and report on root causes of service delivery or other relationship related matters, and document such findings.	X	
Resource Management	**Contractor**	**County**
57. Ensure that staffing, technology and skill levels are adequate to achieve contract objectives.	X	
58. Inform County of any potential Key Personnel staffing changes and of any new personnel assignments planned for new projects and Services.	X	
59. Review and authorize Key Personnel changes to existing Services and personnel for new projects and Services.		X
60. Define any constraints for the use of subcontractors.		X
61. Provide Contractor staff turnover data when requested by County.	X	

Relationship Management Roles and Responsibilities		
62. Provide monthly an updated contractor organization chart related to roles supporting and/or delivering Service to the County.	X	
Integration Management	**Contractor**	**County**
63. Provide information on integration requirements.		X
64. Define integration solutions.	X	
65. Approve integration solutions.		X
66. Develop Operating Level Agreements (OLAs) between third-party Entities and Contractor if other third-party Contractors of Services are providing services that integrate or impact upon those defined in the Agreement.	X	
Customer Satisfaction Management	**Contractor**	**County**
67. Provide periodic written performance management reports to County on SLs and conduct periodic scheduled and ad-hoc review meetings as required.	X	
68. Conduct customer satisfaction survey.	X	
69. Participate in and review customer satisfaction survey.		X

END OF SCHEDULE

Schedule 12.1.1 – Information Privacy and Security, Criminal Offender Record Information, California Law Enforcement Telecommunication Systems, and County Facility Access

Table of Contents

1. Overview....3

2. Business Associate Agreement....5

3. Privacy and Security of Personal Information and Personally Identifiable Information 12

4. Data Security Requirements 16

5. CORI/CLETS Requirements 24

6. Personnel Access 29

7. Miscellaneous 31

1. OVERVIEW

A. This Schedule 12.1.1 is intended to protect the privacy and security of specified County information that Contractor may receive, access, store, maintain or transmit, under this Agreement, and to comply with the applicable federal and State laws and regulations governing the access, use and disclosure of the specified County information. The County information subject to the requirements of this Schedule consists of:

1. Protected Health Information (PHI), as defined under the Health Insurance Portability and Accountability Act of 1996, Public Law 104-191; and
2. Personal Information (PI) as defined under the California Civil Code Section 1798.3. PI may include data provided to the County by the State of California or by the Social Security Administration (SSA); and
3. Personally Identifiable Information (PII) as defined under the Information Exchange Agreement (IEA) between the State of California and the SSA dated October 11, 2014, which incorporates the Computer Matching and Privacy Protection Agreement (CMPPA) between the SSA and the State of California's Health and Human Services Agency dated July 2, 2014; and
4. Criminal Offender Record Information (CORI) as defined by California Penal Code sections 11075 and 13102, including information from the California Law Enforcement Telecommunications System (CLETS), the County of San Diego Probation Case Management System (PCMS), and local County records.
5. This Schedule does not reduce any other obligation set forth in the Agreement or any other law or regulation governing the information. To the extent another provision of the Agreement requires different protection of information subject to the requirements of this Schedule, the provisions requiring greater protection of the information shall prevail.

B. This Schedule consists of the following parts:

1. Section 1, Business Associate Agreement;
2. Section 2, Privacy and Security of PI and PII;
3. Section 3, Data Security Requirements; and
4. Section 4, CORI/CLETS; and
5. Section 5, Miscellaneous.

C. Definitions: Capitalized terms used in this Section 1, and for which no definition in this Section 1 is provided, shall be defined as otherwise defined in the Agreement. Terms used, but not otherwise defined, in this Section 1 shall have the same meaning as those terms as are defined in 45 Code of Federal Regulations (CFR) section 160.103 and 164.501. (All regulatory references in this BAA are to Title 45 of the CFR unless otherwise specified.)

1 "Breach"

1.2 For Sections 1 and 2 of this Exhibit 12.1.1, "Breach" shall have the same meaning given to such term under HIPAA.

1.3 For purposes of Section 3 of this Exhibit 12.1.1, "Breach" "Breach" shall have the same meaning given to such term under the IEA and CMPPA. It shall include a "PII loss," as defined in the CMPPA, and both a "Breach of the security of the system" and a "Notice Triggering Personal Information" event, as identified in CIPA (Civil Code section 1798.29).

2 "Business Associate" shall have the same meaning as the term under HIPAA, and for purposes of this Agreement, shall mean the Contractor. "Contractor Employees" shall mean, for purposes of this Schedule 12.1.1, Contractor's officers, directors, employees, volunteers and interns.

3 "CORI" shall mean records and data compiled by criminal justice agencies for purposes of identifying criminal offenders and of maintaining as to each such offender a summary of arrests, pretrial proceedings, the nature and disposition of criminal charges, sentencing, incarceration, rehabilitation, and release (Cal. Pen. Code sections 11075 and 13102). CORI includes but is not limited to information from the CLETS, PCMS, and local County records.

4 "County Hybrid Entity" shall mean that part of County designated as the hybrid entity subject to the Standards for Privacy of Individually Identifiable Health Information set forth in sections 160 and Part 164, Subparts A and E and those parts of County designated as business associates of other entities subject to the Standards for Privacy of Individually Identifiable Health Information set forth in Parts 160 and 164, Subparts A and E.

5 "County PHI" shall have the same meaning as "Protected Health Information" (PHI) below, specific to PHI received from, or accessed, created, stored, maintained, transmitted, used, disclosed, or received by Contractor, or its subcontractors and agents, on behalf of County, under this Agreement.

6 "County PII/PI" shall have the same meaning as Personally Identifiable Information/Personal Information as below, specific to PII/PI received by Contractor from County or acquired or created by Contractor in connection with performing the functions, activities, and services specified in this Section 2 on County's behalf.

7 "Covered Entity" shall generally have the same meaning as the term "covered entity" at section 160.103, and for purposes of this BAA, shall mean County-Hybrid Entity.

8 "HIPAA" means collectively the Health Insurance Portability and Accountability Act of 1996, Public Law 104-191, the Health Information Technology for Economic and Clinical Health Act, Public Law 111-005, 42 U.S.C. section 17921 et seq., and their implementing privacy and security regulations at 45 CFR Parts 160 and 164.

9 "Individual" shall have the same meaning as the term ''individual'' in section 164.501 and shall include a person who qualifies as a personal representative in accordance with section 164.502(g).

10 "Personal Information" shall have the same meaning given to such term in CIPA, section 1798.3(a).

11 "Personally Identifiable Information" (PII) shall have the same meaning given to such term in the IEA and the CMPPA.

12 "Protected Health Information" (PHI) shall have the same meaning as the term "protected health information" in section 164.501 and is limited to information created or received by Contractor from or on behalf of County.

13 "Required by law" shall have the same meaning as the term ''required by law'' in section 164.501.

14"Secretary" shall mean the Secretary of the United States Department of Health and Human Services or his or her designee.

15 "Security incident" means the attempted and successful unauthorized access, use, disclosure, modification, or destruction of County PHI, County PI or PII, confidential data, or interference with system operations in an information system that processes, maintains or stores County PHI.

16 "Unsecured PHI" shall have the meaning given to such term under HIPAA and, 42 U.S.C., section 17932(h), and any guidance issued pursuant to such regulations.

2. BUSINESS ASSOCIATE AGREEMENT

2.1. Recitals

2.1.1. This Section 1, Business Associate Agreement ("BAA") constitutes a Business Associate relationship as that term is defined and used in HIPAA.

2.1.2. The County may, from time-to-time, disclose to the Contractor certain information pursuant to the terms of this BAA, some of which may constitute PHI, including PHI in electronic media under federal law.

2.1.3. As set forth in this BAA, Contractor, hereafter, is the Business Associate of County, acting on County's behalf and providing services, or performing or assisting in the performance of activities on County's behalf, which may include accessing, creation, receipt, storing, maintenance, transmittal, use or disclosure of PHI.

2.2. Contractor Responsibilities

2.2.1. General Obligations

2.2.2. Permitted Uses and Disclosures of County PHI by Contractor. Contractor shall only use County PHI as required by the Agreement or as required by law. Any such use or disclosure shall, to the extent practicable, be limited to the limited data set as defined in section 164.514(e)(2), or if needed, to that which is minimally necessary to accomplish the intended purpose of such use or disclosure in compliance with HIPAA.

2.2.3. Except as otherwise limited in this Agreement, Contractor may use or disclose County PHI on behalf of, or to provide services to, County for the purposes set forth in the Agreement, if such use or disclosure of PHI would not violate HIPAA if done by County.

2.2.4. Except as otherwise limited in the Agreement, Contractor may use County PHI to provide Data Aggregation services to County as permitted by sections 164.504(e)(2)(i)(B).

2.2.5. Prohibited Uses and Disclosures

2.2.6. Contractor shall not disclose County PHI to a health plan for payment or health care operations purposes if County PHI pertains solely to a health care item or service for which the health care provider involved has been paid out of pocket in full and the Individual requests such restriction, in accordance with 42 U.S.C. section 17935(a) and HIPAA.

2.2.7. Contractor shall not directly or indirectly receive remuneration in exchange for County PHI, except with the prior written consent of County and as permitted by 42 U.S.C. section 17935(d)(2).

2.2.8. Safeguards

2.2.8.1. Contractor shall comply with HIPAA regarding any and all operations conducted on behalf of County under this Contract and shall use appropriate safeguards that comply with HIPAA to prevent the unauthorized use or disclosure of County PHI.

2.2.8.2. Contractor shall develop and maintain a written information privacy and security program that complies with HIPAA, and that includes administrative, physical, and technical safeguards appropriate to the size and complexity of the Contractor's operations and the nature and scope of its activities.

2.2.9. Security. Contractor shall ensure the continuous security of all computerized data systems and paper documents containing County PHI. These steps shall include, at a minimum:

2.2.9.1. Comply with all Standards put forth in Section 3, Data Security Requirements, of this Schedule 12.1.1;

2.2.9.2. Achieve and maintain compliance with HIPAA; and

2.2.9.3. Provide a level and scope of security that is at least comparable to the level and scope of security established by the Office of Management and Budget in OMB Circular No. A-130, Appendix III - Security of Federal Automated Information Systems, which sets forth guidelines for automated information systems in federal agencies, and as otherwise required by the Agreement.

2.2.10. Mitigation of Harmful Effects. Contractor shall mitigate, to the extent practicable, any harmful effect that is known to Contractor of a use or disclosure of County PHI by Contractor, Contractor's Employees, Contractor's agents, Contractor's subcontractors or Contractor's vendor, and/or in violation of the requirements of the Contract.

2.2.11. Contractor's Agents, Subcontractors and Vendors. Contractor shall ensure that any agent, subcontractor or vendor to whom it provides County PHI, imposes the same conditions on such agents, subcontractors and vendors that apply to Contractor with respect to County PHI under this BAA, and that comply with all applicable provisions of HIPAA, including requirements that such agents, subcontractors and vendors implement reasonable and appropriate administrative, physical, and technical safeguards to protect County PHI. Contractor shall incorporate, when applicable, the relevant provisions of this BAA into each subcontract to such agents, subcontractors and vendors, including the requirement that any security incidents or breaches of unsecured County PHI be reported to Contractor.

2.2.12. In accordance with section 164.504(e)(1)(ii), upon Contractor's knowledge of a material breach or violation by any agent, subcontractor or vendor of the agreement between Contractor and the agent, subcontractor and vendor, Contractor shall:

2.2.12.1. Provide an opportunity for the agent, subcontractor or vendor to end the violation and terminate the agreement if the agent, subcontractor or vendor does not end the violation within the time specified by County; or

2.2.12.2. Immediately terminate the agreement if the agent, subcontractor or vendor has violated a material term of the agreement and cure is not possible.

2.2.13. Availability of Information to County. Contractor shall provide access to County PHI at the request of County, in the time and manner designated by County, pursuant to section 164.526.

2.2.14. Contractor shall use the forms and processes developed by County for this purpose and shall respond to all requests for access to records requested by County within forty-eight (48) hours of receipt of such request by producing records or verifying that there are none.

2.2.15. Contractor shall make internal practices, books, and records relating to the use and disclosure of County PHI received from, or created or received by Contractor on behalf of County available to County, or at the request of County to the Secretary, in a time and manner designated by County or the Secretary.

2.2.16. Cooperation with County. Contractor shall cooperate and assist County to the extent necessary to ensure County's compliance with the applicable terms of HIPAA, such as, but not limited to:

2.2.16.1. Documentation of Disclosures. Contractor shall document disclosures of County PHI and make these disclosures available to County in accordance with HIPAA, including but not limited to sections 164.528, and 42 USC section 17935, and in the time and manner designated by County.

2.2.16.2. If Contractor maintained electronic health records as of January 2009, when requested, Contractor shall provide an accounting of disclosures including those for Treatment, Payment, and Healthcare Operations (TPO). If Contractor acquired electronic health records for County after January 1, 2009, or acquires electronic records for County, when requested, Contractor shall provide an accounting of disclosures, including those for TPO, effective with disclosures on or after the date the electronic health record was or is acquired, or on or after January 1, 2011, whichever date is later.

2.2.16.3. The electronic accounting of disclosures shall include the three (3) years prior to the request for an accounting. Contractor shall provide to County, in the time and manner designated by County, but no more than sixty (60) calendar days after County's request, an accounting of disclosures necessary to meet the requirements in section 164.528.

2.2.16.4. Reporting of Unauthorized Use or Disclosure. Contractor shall implement reasonable systems for the discovery of and prompt reporting to County of any use or disclosure of County PHI not allowed for by the Agreement and/or any transmission of unsecured County PHI. Contractor shall provide all reports of unauthorized uses or disclosures simultaneously to the COR and County Privacy Officer.

2.2.17. Initial Report

2.2.17.1. Contractor shall notify County COR and County Privacy Officer immediately by telephone call and by email upon the discovery of a breach of unsecured County PHI in electronic media or in any other media if County PHI was, or is reasonably believed to have been, accessed or acquired by an unauthorized person, or upon the discovery of a suspected security incident that involves data provided to County by the SSA.

2.2.17.2. Contractor shall notify County COR and County Privacy Officer by email within twenty-four (24) hours of the discovery of any suspected security incident, breach or loss of County PHI.

2.2.17.3. A suspected security incident or breach shall be treated as discovered by Contractor or its agent, subcontractor or vendor as of the first day the breach or security incident is known, even if it is not confirmed, or by exercising reasonable diligence would have known, to any person (other than the person causing or committing the security incident or breach) who is a Contractor Employee or agent, subcontractor or vendor of Contractor.

2.2.17.4. Reporting shall additionally include emailing to the County COR and County Privacy Officer of the "County Privacy Incident Report" form within twenty-four (24) hours of any above incident, to include all information known at the time of the notification. Contractor shall report using the form attached hereto as Exhibit 12.1.1-1.

2.2.17.5. Investigation and Investigation Report. Contractor shall immediately investigate such security incident, breach, or unauthorized access, use or disclosure of County PHI. Within seventy-two (72) hours of the discovery, Contractor shall submit an updated "County Privacy Incident Report" to County COR and County Privacy Officer.

2.2.17.6. Complete Report. Contractor shall provide a complete report of the investigation within five (5) working days of the discovery of the breach or unauthorized use or disclosure. The report shall be submitted on the "County Privacy Incident Report" form and shall include an assessment of all known factors relevant to a determination of whether a breach occurred under applicable provisions of HIPAA and applicable federal and State law. The report shall also include a full, detailed corrective action plan, including information on measures that were taken to halt and/or contain the improper use or disclosure. The report shall be submitted to the County COR and County Privacy Officer. If County requests information in addition to that listed on the "County Privacy Incident Report" form, Contractor shall make reasonable efforts to provide County with such information. County will review and, appropriate, approve the determination of whether a breach occurred, Individual notifications are required, and the corrective action plan is adequate. County action or inaction in determining whether a breach occurred, the need for notifications or any correction shall not relieve Contractor of any federal or State requirements with which Contractor must comply.

2.2.18. Responsibilities for Notification of Breaches. If County determines that the cause of a breach of County PHI is attributable to Contractor, Contractor Employees or Contractor's subcontractors, agents or vendors, Contractor shall notify Individuals of the breach or unauthorized use or disclosure when notification is required under federal or State law and shall pay any costs of such notifications, as well as any costs associated with the breach. The notifications shall comply with the requirements set forth in 42 U.S.C. section 17932 and its implementing regulations, including, but not limited to, the requirements that:

2.2.18.1. Notifications be made to Individuals without unreasonable delay and in no event later than sixty (60) calendar days from the date the breach was discovered. County shall approve the time, manner and content of any such notifications before notifications are made.

2.2.18.2. Notifications shall be made to media outlets and to the Secretary, if a breach of unsecured County PHI involves more than five-hundred (500) residents of the State of California or its jurisdiction. County shall approve the time, manner and content of any such notifications before notifications are made.

2.2.18.3. Nothing in this Schedule 12.1.1 shall limit or reduce Contractor's indemnification or other responsibilities set forth in the Agreement, nor shall anything in this Schedule 12.1.1 reduce or limit Contractor's liability to County or any third party as set forth in the Agreement.

2.2.18.4. Corrective Action. Upon discovery of a breach or suspected security incident, intrusion or unauthorized access, use or disclosure of County PHI, Contractor shall take prompt corrective action to mitigate any risks or damages involved with the breach or security incident and to protect the operating environment; and any action pertaining to such unauthorized disclosure required by applicable federal and State laws and regulations.

2.2.19. Designation of Individuals

2.2.19.1. Contractor shall designate a privacy officer to oversee its data privacy program who shall be responsible for carrying out the requirements of this Agreement and for communicating on Privacy matters with County.

2.2.19.2. Contractor shall designate a security officer to oversee its data security program who shall be responsible for carrying out the requirements of this Agreement and for communicating on security matters with County.

2.2.20. County Responsibilities. County shall not request Contractor to use or disclose County PHI in any manner that would not be permissible under HIPAA if done by County.

3. PRIVACY AND SECURITY OF PERSONAL INFORMATION AND PERSONALLY IDENTIFIABLE INFORMATION

3.1. Recitals

3.1.1. The purpose of this Section 2 of Schedule 12.1.1 is to set forth Contractor's Privacy and Security obligations with respect to PI and PII that the Contractor may access, create, receive, maintain, use, store or disclose for or on behalf of County pursuant to this Agreement. Specifically, this Section 2 applies to PI and PII that is not PHI, and therefore, is not addressed in Section 1, the Business Associate Agreement, of this Schedule 12.1.1. To the extent that data is both PHI and PI, or both PHI and PII, both Sections 1 and 2 of this Schedule 12.1.1 govern its use.

3.1.2. The IEA requires County to extend the IEA's terms to contractors who receive data provided to County from the SSA, or data provided to County from the SSA through the State. If Contractor receives such data from County, Contractor must comply with the IEA.

3.2. Contractor Responsibilities

3.2.1. Permitted Uses and Disclosures of County PII/PI by Contractor. Contractor shall only use County PII/PI to perform functions, activities, or services for or on behalf of County pursuant to this Agreement, provided that such use or disclosure does not violate any applicable federal or State law or regulation.

3.2.2. Confidentiality of Alcohol and Drug Abuse records. Contractor shall comply with all confidentiality requirements set forth in Title 42 Code of Federal Regulations, Chapter 1, Subchapter A, Part 2, as applicable.

3.2.3. Prohibited Uses and Disclosures. Contractor shall not use or disclose County PII/PI, other than as permitted or required by the Agreement or as permitted or required by law.

3.2.4. Safeguards

3.2.4.1. Contractor shall use appropriate and reasonable administrative, technical, and physical safeguards to protect the security, confidentiality, and integrity of County PII/PI and to prevent use or disclosure of County PII/PI, other than as provided for by the Agreement.

3.2.4.2. Contractor shall develop and maintain a written information privacy and security program that includes administrative, physical, and technical safeguards appropriate to the size and complexity of the Contractor's operations and the nature and scope of its activities.

3.2.5. Security. Contractor shall take any and all steps necessary to ensure the continuous safety of all data systems containing County PII/PI. The Contractor shall, at a minimum:

3.2.5.1. Comply with all of the data system security precautions listed in Section 3 of this Schedule 12.1.1, Data Security Requirements; and

3.2.5.2. Provide a level and scope of security that is at least comparable to the level and scope of security established by the Office of Management and Budget in OMB Circular No. A-130, Appendix III - Security of Federal Automated Information Systems, which sets forth guidelines for automated information systems in Federal agencies; and

3.2.5.3. Provide a level and scope of security that is no less than otherwise provided by the Agreement; and

3.2.5.4. If the data includes County PII, Contractor shall also comply with the Privacy and Security requirements in the CMPPAA and the IEA.

3.2.6. Mitigation of Harmful Effects. To mitigate, to the extent practicable, any harmful effect that is known to Contractor of a use or disclosure of County PII/PI by Contractor or its agents, in violation of this Schedule 12.1.1.

3.2.7. Contractor's Employees, Agents, Subcontractors and Vendors. Contractor shall ensure that any Contractor Employee, agent, subcontractor or vendor that accesses, creates, receives, maintains, stored, uses, discloses, receives or transmits County PII/PI on behalf of the Contractor shall adhere to the same restrictions, conditions, and requirements that apply to the Contractor. Contractor shall incorporate, when applicable, the relevant provisions of this Schedule 12.1.1 into each subcontract or sub-award to such agents, subcontractors and vendors, including the requirements related to security incidents or breaches of unsecured County PII/ PI.

3.2.8. Availability of Information. Contractor shall make County PII/PI available to County for purposes of oversight, inspection, amendment, and response to request for records, injunctions, judgments, and orders for production of County PII/PI. Contractor shall provide a list of all Contractor Employees, subcontractors, vendors and agents who have access to County PII/PI, including employees, agents and vendors of its subcontractors, agents and vendors, at the request of County. Contractor shall provide any requested records to County within forty-eight (48) hours of such request.

3.2.9. Internal Practices. Contractor shall make internal practices, books, and records relating to the use and disclosure of County PII/PI received from, or created or received by Contractor on behalf of County available to County, in a time and manner designated by County. Confidentiality shall not prevent County, its agents, or any other governmental entity from accessing such records if that access is legally permissible under the applicable federal or State regulations.

3.2.10. Cooperation with County. Contractor will cooperate and assist County, in the time and manner designated by County, to ensure County's compliance with applicable federal and State laws and regulations, such as, but not limited to CIPA. Contractor's cooperation shall include, but is not limited to: accounting of disclosures, correction of errors, production, disclosures of a security breach, and notice of such breach to affected individuals that involve County PII/PI and Contractor.

3.2.11. Reporting of Breaches and Security Incidents. Contractor shall implement reasonable systems for the discovery of, prompt reporting to County of, and prompt corrective action regarding any use or disclosure, or suspected use or disclosure, of County PII/PI not provided for by the Agreement and/or any transmission of unsecured County PII/PI and shall take the following steps:

3.2.11.1. Contractor shall make all reports required by this Section 2 of breaches and security incidents simultaneously to County COR and County Privacy Officer.

3.2.11.2. Initial Reporting

3.2.11.2.1. Reporting shall be immediate, by both telephone and email, upon the discovery of a breach of unsecured County PII/PI in electronic media or in any other media if County PII/PI was, or is reasonably believed to have been, accessed or acquired by an unauthorized person, or upon the discovery of a suspected security incident that involves data provided to County by the SSA.

3.2.11.2.2. Reporting shall be within twenty-four (24) hours by email of the discovery of any suspected security incident, intrusion or unauthorized access, use or disclosure of County PII/ PI in violation of this Section 2, or potential loss of confidential data affecting this Section 2.

3.2.11.2.3. A breach or suspected security incident shall be treated as discovered by Contractor as of the first day on which the breach is known, even if not confirmed, or by exercising reasonable diligence would have been known, to any person (other than the person committing the breach) who is an employee, officer or other agent of the Contractor.

3.2.11.2.4. Reporting shall additionally include emailing of the "County Privacy Incident Report" form within twenty-four (24) hours of any above incident, to include all information known at the time of the notification. Contractor shall use the form attached hereto as Exhibit 12.1.1-1. Investigation and Investigation Report. Contractor shall immediately investigate such security incident or breach. Within seventy-two (72) hours of the discovery, Contractor shall submit an updated "County Privacy Incident Report."

3.2.11.2.5. Complete Report. Contractor shall provide a complete report of the investigation within five (5) working days of the discovery of the breach or unauthorized use or disclosure. The report shall be submitted on the "County Privacy Incident Report" form and shall include an assessment of all known factors relevant to a determination of whether a breach occurred under applicable provisions of federal and State law. The report shall also include a full, detailed corrective action plan, including information on measures that were taken to halt and/or contain the improper use or disclosure. If County requests information in addition to that listed on the "County Privacy Incident Report" form, Contractor shall make reasonable efforts to provide County with such information. County will review and approve the determination of whether: a breach occurred, individual notifications are required, and the corrective action plan is adequate.

3.2.11.2.6. Responsibility for Reporting Breaches. If County determines that the cause of a breach of County PII/PI is attributable to Contractor, Contractor Employees, or Contractor's subcontractors, agents or vendors, Contractor is responsible for all required reporting as specified under CIPA section 1798.29(a) and as may be required under IEA, as well as any other federal or State law and shall pay any costs of such notifications, as well as any costs associated with the breach. County shall approve the time, manner, and content of any such notifications and County's review and approval must be obtained before the notifications are made. If the Contractor believes duplicate reporting of the same breach or incident may occur, because its subcontractors or agents may report the breach or incident to County as well, Contractor shall notify County and may take action to prevent duplicate reporting.

3.2.12. Nothing in this Schedule 12.1.1 shall limit or reduce Contractor's indemnification or other responsibilities set forth in the Agreement, nor shall anything in this Schedule 12.1.1 reduce or limit Contractor's liability to County or any third party as set forth in the Agreement.

3.2.13. Corrective Action. Upon discovery of a breach or suspected security incident, intrusion or unauthorized access, use or disclosure of County PII/PI, Contractor shall take prompt corrective action to mitigate any risks or damages involved with the breach and to protect the operating environment; and any action pertaining to such unauthorized disclosure required by applicable federal and State laws and regulations.

3.2.14. Designation of Individuals. Contractor shall appoint Privacy and Security officials who are accountable for compliance with this Section 2 and for communicating Privacy and Security matters to County.

4. DATA SECURITY REQUIREMENTS

4.1. Contractor shall ensure the continuous security of all data systems and paper documents containing County PHI and/or County PII/PI. The security obligations set forth herein are in addition to those set forth in the Agreement, and shall not lessen or decrease Contractor's security obligations. These steps shall include, at a minimum:

4.2. Personnel Controls. Contractor shall ensure that all workforce members who assist in the performance of functions or activities on behalf of County, or access or disclose County PHI and/or County PII/PI, shall:

4.2.1. Have undergone a thorough Contractor background check, with evaluation of the results to assure that there is no indication that the worker may present a risk to the security, privacy, or integrity of County PHI and/or County PII/PI, prior to the workforce member obtaining access to County PHI and/or County PII/PI. The Contractor shall retain each workforce member's Contractor background check documentation for a period of three (3) years following contract termination.

4.2.2. Complete privacy and security training, at least annually, at Contractor's expense. Each of Contractor's Employees, and Contractor's agents, subcontractors and vendors and their employees, who receive information privacy and security training shall sign a certification, indicating the person's name and the date on which the training was completed. These certifications shall be retained for a period of six (6) years following contract termination, and shall be available to County upon request.

4.2.3. Sign a confidentiality statement that includes, at a minimum, General Use, Security and Privacy Safeguards, Unacceptable Use, and Enforcement Policies. The statement shall be signed by the workforce member prior to access to County PHI and/or County PII /PI and shall be renewed annually. The Contractor shall retain each person's written confidentiality statement for County inspection for a period of six (6) years following contract termination. The form of the Confidentiality Statement is attached hereto as Exhibit 12.1.1-2.

4.2.4. Be appropriately sanctioned if they fail to comply with security and privacy policies and procedures, including termination of employment when appropriate.

4.3. Physical Security Controls. Contractor shall safeguard County PHI and/or County PII/PI from loss, theft, inadvertent disclosure, and therefore shall:

4.3.1. Ensure County PHI and/or County PII/PI is used and stored in an area that is physically safe from access by unauthorized persons during both working hours and nonworking hours;

4.3.2. Secure all areas of Contractor facilities where Contractor workers use or disclose County PHI and/or County PII/PI. The Contractor shall ensure that these secured areas are only accessed by authorized individuals with properly coded key cards, authorized door keys or other access authorization, and access to premises is by official identification;

4.3.3. Issue Contractor Employees who assist in the administration of County PHI and/or County PII/PI identification badges and require Contractor Employees to wear badges at facilities where County PHI and/or County PII/PI is stored or used;

4.3.4. Ensure each location where County PHI and/or County PII/PI is used or stored has procedures and controls that ensure an individual whose access to the facility is terminated:

4.3.4.1. Is promptly escorted from the facility by an authorized Contractor Employee; and

4.3.4.2. Immediately has their access revoked to any and all County PHI and/or County PII/PI.

4.3.5. Ensure there are security guards or a monitored alarm system twenty-four (24) hours a day, seven (7) days a week at facilities where County PHI and/or County PII/PI is stored;

4.3.6. Ensure data centers with servers, data storage devices, and critical network infrastructure involved in the use or storage of County PHI and/or County PII/PI have perimeter security and access controls that limit access to only authorized Information Technology Staff. Visitors to the data center area must be escorted by authorized Contractor Employees at all times;

4.3.7. Store paper records with County PHI and/or County PII/PI in locked spaces in any facilities that are multi-use, meaning that there are County PHI and/or County PII/PI functions and Contractor functions in one building in work areas that are not securely segregated. The contractor shall have policies that state Contractor Employees shall not leave records with County PHI and/or County PII/PI unattended at any time in cars or airplanes and shall not check County PHI and/or County PII/PI on commercial flights; and

4.3.8. Use all reasonable means to prevent non-authorized personnel and visitors from having access to, control of, or viewing County PHI and/or County PII/PI.

4.4. Technical Controls. Contractor shall ensure that:

4.4.1. All workstations and laptops that process and/or store County PHI and/or County PII/PI shall:

4.4.1.1. Be encrypted using a FIPS 140-2 certified algorithm which is 128bit or higher, such as Advanced Encryption Standard (AES). The encryption solution shall be full disk; and

4.4.1.2. Install and actively use comprehensive anti-virus software solution with automatic updates scheduled at least daily.

4.4.1.3. Apply critical security patches. There shall be a documented patch management process which determines installation timeframe based on risk assessment and vendor recommendations. All applicable patches shall be installed within thirty (30) days of vendor release.

4.4.1.4. All servers containing unencrypted County PHI and/or County PII/PI shall have sufficient administrative, physical, and technical controls in place to protect that data, based upon a risk assessment/system security review.

4.4.1.5. Only the minimum necessary amount of County PHI and/or County PII/PI required to perform necessary business functions may be copied, downloaded, or exported.

4.4.1.6. All electronic files that contain County PHI and/or County PII/PI shall be encrypted when stored on any removable media or portable device (i.e. flash drives, cameras, mobile phones, CD/DVD, backup media, etc). Encryption shall be a FIPS 140-2 certified algorithm, which is 128bit or higher, such as AES.

4.4.1.7. All users shall be issued a unique user name for accessing County PHI and/or County PII/PI. Username shall be promptly disabled, deleted, or the password changed upon the transfer or termination of an employee with knowledge of the password, at maximum within twenty-four (24) hours.

4.4.1.8. Passwords shall be:

4.4.1.8.1. At least eight characters;

4.4.1.8.2. A non-dictionary word;

4.4.1.8.3. Changed at least every ninety (90) days;

4.4.1.8.4. Changed immediately if revealed or compromised; and

4.4.1.8.5. Composed of characters from at least three of the following four groups from the standard keyboard:

4.4.1.8.6. Upper case letters (A-Z)

4.4.1.8.7. Lower case letters (a-z)

4.4.1.8.8. Arabic numerals (0-9)

4.4.1.8.9. Non-alphanumeric characters (punctuation symbols)

4.4.1.9. Passwords shall not be shared and shall not be stored in readable format on the computer.

4.4.1.10. Appropriate management control and oversight, in conjunction with County of the function of authorizing individual user access to County PHI and/or County PII/PI and over the process of maintaining access controls numbers and passwords.

4.4.1.11. When no longer needed, all County PHI and/or County PII/PI shall be wiped using the Gutmann or US Department of Defense (DoD) 5220.22-M (7 Pass) standard, or by degaussing. Media may also be physically destroyed in accordance with NIST Special Publication 800-88.

4.4.1.12. All systems providing access to, transport of, or storage of County PHI and/or County PII/PI shall:

4.4.1.12.1. Provide an automatic timeout, requiring re-authentication of the user session after no more than twenty (20) minutes of inactivity.

4.4.1.12.2. Display a warning banner stating: i) that the data that may be accessed is confidential, ii) that the systems accessed are logged, and iii) that authorized users' use of PHI/PII/PI data is exclusively for County business purposes. Users must be directed to log off the system if they do not agree with these requirements. If County provides a warning banner to be implemented by Contractor, Contractor's implementation shall satisfy this requirement except to the extent that Contractor is otherwise obligated to provide a warning banner for its business purposes.

4.4.1.12.3. Maintain an automated audit trail that identifies the user or system process which initiates a request for County PHI and/or County PII/PI, or which alters County PHI and/or County PII/ PI. The audit trail shall be date and time stamped, shall log both successful and failed accesses, shall be read only, and shall be restricted to authorized users. If County PHI and/or County PII/ PI is stored in a database, database logging functionality shall be enabled. Audit trail data shall be archived for at least three (3) years after occurrence, and shall be available to County upon request.

4.4.1.12.4. Use role based access controls for all users, enforcing the principle of least privilege.

4.4.1.12.5. Be protected by a comprehensive intrusion detection and prevention solution if they are accessible via the internet.

4.4.1.12.6. All data transmissions of County PHI and/or County PII/PI outside the secure internal network shall be encrypted using a FIPS 140-2 certified algorithm which is 128bit or higher, such as AES. Encryption can be end to end at the network level, or the data files containing County PHI and/or County PII/PI can be encrypted. This requirement pertains to any type of County PII/PI in motion such as website access, file transfer, and E-Mail.

4.5. Audit Controls. Contractor shall ensure:

4.5.1. All systems processing and/or storing County PHI and/or County PII/PI shall have at least an annual system risk assessment/security review which provides assurance that administrative, physical, and technical controls are functioning effectively and providing adequate levels of protection. Reviews should include vulnerability scanning tools.

4.5.2. All systems processing and/or storing County PHI and/or County PII/PI shall have a routine procedure in place to review system logs for unauthorized access.

4.5.3. All systems processing and/or storing County PHI and/or County PII/PI shall have a documented change control procedure that ensures separation of duties and protects the confidentiality, integrity and availability of data.

4.5.4. Investigate anomalies in usage of County PHI and/or County PII/PI identified by County and report conclusions of such investigations and remediations to County.

4.6. Business Continuity / Disaster Recovery Controls

4.6.1. Contractor shall establish a documented plan to enable continuation of critical business processes and protection of the security of electronic County PHI and/or County PII/PI in the event of an emergency. Emergency means any circumstance or situation that causes normal computer operations to become unavailable for use in performing the work required under this Agreement for more than twenty-four (24) hours.

4.6.2. Contractor shall ensure Data Centers with servers, data storage devices, and critical network infrastructure involved in the use or storage of County PHI or PII/PI, must include sufficient environmental protection such as cooling, power, fire prevention, detection, and suppression.

4.6.3. Contractor shall have established documented procedures to backup County PHI and/or County PII/PI to maintain retrievable exact copies of County PHI and/or County PII/PI. The plan shall include a regular schedule for making backups, storing backups offsite, an inventory of backup media, and an estimate of the amount of time needed to restore County PHI and/or County PII/PI should it be lost. At a minimum, the schedule shall be a weekly full backup and monthly offsite storage of County data.

4.7. Paper Document Controls. Contractor shall ensure:

4.7.1. County PHI and/or County PII/PI in paper form shall not be left unattended at any time, unless it is locked in a file cabinet, file room, desk or separate office inside a larger office. Unattended means that information is not being observed by an employee authorized to access the information. County PHI and/or County PII/PI in paper form shall not be left unattended at any time in vehicles and shall not be checked in baggage during commercial flights.

4.7.2. Visitors to areas where County PHI and/or County PII/PI are contained shall be escorted and County PHI and/or County PII/PI shall be kept out of sight while visitors are in the area.

4.7.3. County PHI and/or County PII/PI shall be disposed of through confidential means, such as cross cut shredding and pulverizing.

4.7.4. County PHI and/or County PII/PI shall not be removed from the premises of the Contractor except for identified routine business purposes or with express written permission of County.

4.7.5. Faxes containing County PHI and/or County PII/PI shall not be left unattended and fax machines shall be in secure areas. Fax cover sheets shall contain a confidentiality statement instructing persons receiving faxes in error to destroy them. Fax numbers shall be verified with the intended recipient before sending the fax.

4.7.6. Mailings of County PHI and/or County PII/PI shall be sealed and secured from damage or inappropriate viewing of County PHI and/or County PII/PI to the extent possible. Mailings which include 500 or more individually identifiable records of County PHI and/or County PII/PI in a single package shall be sent using a tracked mailing method which includes verification of delivery and receipt, unless the prior written permission of County's Privacy Officer to use another method is obtained.

4.7.7. Contractor shall mitigate, to the extent practicable, any harmful effect that is known to Contractor of a use or disclosure of County PHI and/or County PII/PI by Contractor or its agents, including a subcontractor, and/or in violation of the requirements of the Agreement.

5. CORI/CLETS REQUIREMENTS

5.1. Application. This Section 4, CORI/CLETS Requirements, applies to all Contractor employees, agents and subcontractors with access or potential access to CORI systems including those individuals with only unescorted access to County facilities/properties that store, process or transmit CORI/CLETS information in order to ensure the safety of program offenders and the integrity of this program. Access, or potential access to CORI/CLETS, can be in the form of hardcopy documentation, verbal communication, or other forms of information sharing, as well as access to Probation's facilities where CORI/CLETS is created, stored, handled or discussed.

5.2. Training Requirements. Contractor shall ensure that all Contractor Employees, agents and subcontractors, with physical and logical access to CORI and/or the facilities that secure CORI systems (unless these individuals are escorted by authorized personnel at all times) shall receive CORI/CLETS training from a certified CLETS/National Crime Information Center (NCIC) within six (6) months of assignment to this Agreement and biennially thereafter, in accordance with FBI Criminal Justice Information Services Security Policy (FBI CJIS) section 5.2 and California CLETS Policies, Practices and Procedures (PPP)section 1.8.3.A.4. CORI/CLETS training, which will include laws, policies, and consequences regarding access to, and use of, criminal offender record information, will be provided by the Probation Department if needed.

5.3. Training Reporting. A list of all persons with "physical and logical" access to CORI, his or her title, e-mail address and phone number(s) must be sent to the COR with the person's last date of training. Contractor shall complete the CORI/CLETS Training Request Form (Exhibit 12.1.1-2) for all employees, agents, volunteers, and subcontractors that have not received CORI/CLETS training or are required to renew his or her training. Contractor shall forward this list and form, within 30 days of employee, agent, volunteer and/or subcontractor assignment, to the Probation Department, 9444 Balboa Avenue, Suite 500, San Diego, CA 92123 Attention: Contracts Unit.

5.4. CORI/CLETS Clearance Requirements. In addition to the background check requirements of the Agreement, Contractor shall ensure that background checks are required and completed by all Contractor Employees, subcontractors, agents and vendors with access to CORI/CLETS information, systems and its facilities as provided under section 5.12 of the FBI CJIS and section 1.9.2 of the PPP.

5.4.1. At a minimum, the following background checks shall be completed and approved prior to performance under this Agreement:

5.4.1.1. Criminal background clearance through the Probation Department (Background Division), State of California Department of Justice (DOJ) and Federal Bureau of Investigation (FBI);

5.4.1.1.1. Out-of-State Background Checks: Contractor shall request a "hard card" from Probation for each out-of-state Contractor Employee, Subcontractor, agent or vendor, and Probation will provide to Contractor a "hard card" from the FBI. Each individual shall take the "hard card" to a local law enforcement agency, get fingerprinted and submit the cards to Probation at the following location: 9444 Balboa Avenue, Suite 500, San Diego, CA 92123, Attn: Background Division. Probation will then send the cards to the State Department of Justice, which will conduct both DOJ and FBI background checks.

5.4.1.2. Driving record through the State of California Department of Motor Vehicle (DMV);

5.4.1.3. Drug testing.

5.4.1.4. Background check packages must be submitted to the Probation Department located at 9444 Balboa Avenue, Suite 500, San Diego, CA 92123 Attention: Background Division. The Contractor is advised to keep copies of all applications/background check packages submitted to the Probation Department.

5.4.1.5. Incomplete Packages will not be accepted. A typical background package includes:

5.4.1.6. A complete signed Security Clearance Request Form,

5.4.1.7. A clean, valid, and legible copy of Social Security Card or Social Security Administration abstract,

5.4.1.8. A clean, valid and legible copy of a Driver's license, or State-issued Identification Card,

5.4.1.9. For Contractor Employees who are not citizens of the United States: either a valid Resident Alien Badge or valid form of picture identification,

5.4.1.10. For Contractor Employees requesting electronic access authorization: a complete Access Registration Form

5.4.1.11. Contractors are required to submit one check covering the cost of the background check process for all employees. The check should be made payable to: County of San Diego. Questions regarding associated costs should be directed to the COR.

5.4.1.12. If applicable, Contractor must have completed Livescan applications for each Contractor Employee, agent, subcontractor, vendor and their employees in addition to the background package. Contractor shall obtain a Livescan application from the Probation Department. County may provide Contractor with information on various Livescan locations and fees. A fee is required by the Department of Justice and collected by the Livescan operator. Contractor shall pay all Livescan associated fees.

5.4.1.13. Background checks generally take 4-6 weeks to process. The Probation Department will notify Contractor directly, or through the COR, the results of submitted background checks. If the background screening results are acceptable, Contractor Employee may begin services under the Agreement.

5.4.1.14. Results of Criminal Background Clearance. If a background check indicates a criminal record inappropriate to be assigned to this Agreement, that individual shall not be assigned to perform services under the Agreement.

5.4.2. Inappropriate Criminal Record. An inappropriate criminal record may include, but is not limited to:

5.4.2.1. Felony convictions of any kind;

5.4.2.2. Convictions of crimes of moral turpitude (prostitution, sex offenses, etc.);

5.4.2.3. Exhibiting patterns of criminal behavior;

5.4.2.4. Exhibiting patterns of anti-social behavior;

5.4.2.5. Convictions for illegal immigrant smuggling;

5.4.2.6. Outstanding warrants and/or unresolved investigations;

5.4.2.7. A misdemeanor conviction;

5.4.2.8. More than three Failure to Appear citations within the last two years;

5.4.2.9. Receipt of subsequent arrest notices after approval and issuance of access to CORI/CLETS and/or a County facility, and/or

5.4.2.10. As otherwise required by federal and state law, including but not limited to Section 5.12 of the FBI Criminal Justice Information Services Security Policy and Section 1.9.2 of the California CLETS Policies, Practices and Procedures (PPP).

5.4.3. Review of Violations. County shall evaluate any Penal Code or other statutory violations individually and make a determination as to whether the violation precludes an individual's ability to efficiently carry out Agreement functions.

5.4.4. Removal of Employees, Volunteers or Subcontractors. Contractor shall immediately remove a Contractor Employee or agent, subcontractor or vendor from duties related to the Agreement if the updated clearance indicates a criminal record inappropriate to be assigned to the Agreement.

5.4.5. Duration of Background Checks. Background checks for Contract Employees and subcontractors, agents and vendors shall be valid for five years. Background reinvestigations shall be conducted every five years unless Rap Back is implemented. ("Rap Back" is a national fingerprint and criminal history system maintained by the FBI CJIS Division service that allows authorized agencies to receive notification of subsequent criminal activity reported to the FBI committed by persons of interest.)

5.4.6. Department of Motor Vehicles (DMV). Contractor shall obtain and review the DMV record of any of Contractor's Employees who are assigned to the Agreement and whose job duties include, or may include, driving. Such Contractor Employees are referred to in this section as "Drivers." Contractor shall enroll in the State of California's DMV Employer Pull Notice Program (EPN) and ensure that all staff are added and enrollment properly maintained. The EPN Program can be found at: Employer Pull Notice Program - California DMV.

5.4.6.1. Drivers shall have no more than three violation points for traffic violations, at fault accidents, and misdemeanor convictions within the last year. As stated in the Vehicle Code, Section 12810.5, "four or more points in 12 months…shall be prima facie presumed to be a negligent operator of a motor vehicle."

5.4.6.2. All Drivers shall maintain a valid California Driver License. Exceptions must be approved by the COR on a case-by-case basis prior to employment of contract staff.

5.4.7. Drug Testing. Contractor shall cause Contractor Employees assigned to the Agreement to undergo drug testing. No person shall be assigned to the Agreement who tests positive for any illegal drugs, including marijuana. Contractor shall also comply with County of San Diego Board of Supervisors Policy C-25, which can be found at: http://www.sdcounty.ca.gov/cob/policy/ .

5.4.7.1. Contractor shall subsequently conduct reasonable-suspicion testing of Contractor Employees as deemed necessary by Contractor.

5.4.8. Tuberculosis Testing. Contractor shall cause Contractor Employees assigned to the Agreement, and having direct contact with minors, to undergo annual testing for tuberculosis. Contractor may retest a Contractor Employee who tests positive for tuberculosis. Contractor may, in cases where a Contractor Employee has falsely tested positive in the past, accept a letter from the employee's physician that states that the employee is not exhibiting symptoms of active tuberculosis that would warrant additional x-rays and examination. Any Contractor Employee who is confirmed to have infectious tuberculosis shall not be assigned to Agreement functions where the Contractor Employee may come into contact with minors.

5.4.9. Contractor Employee, Agent, Subcontractor and Agent References. Contractor shall obtain and verify personal and prior employment references where available from Contractor Employees, subcontractors, agents and vendors assigned to the Agreement. Contractor shall evaluate any negative references and determine whether any such information precludes the employee from carrying out the functions of the Agreement.

5.4.10. Education Requirements. Contractor shall confirm compliance with education requirements as specified in the Agreement.

5.4.11. Exceptions. Exceptions to compliance with the aforementioned clearance requirements must be approved by the COR on a case-by-case basis.

5.4.12. Employee/Volunteer Statement. Per PPP section 1.5.1, all contractor employees, agents, volunteers and subcontract personnel with "physical and logical" access to CORI/CLETS shall sign the Employee/Volunteer Statement Form (Exhibit 12.1.1-3).

5.5. Maintenance of Records. Maintenance of CORI/CLETS Training Records: Parties shall maintain records of all training, testing, and proficiency affirmation of CORI/CLETS in accordance with section 1.8.3.A.3 of the PPP and shall be made available for inspection, upon request, by the other party.

5.6. Changes to Access. Contractor shall notify Probation of any changes in writing or email for Contractor Employees, agents, subcontractors or vendors assigned to the Agreement within thirty days of assignment or termination.

5.7. Private Management Control Agreement. In order to access the CLETS/CORI systems, the Contractor shall sign the Private Management Control Agreement (Exhibit 12.1.1-4).

5.8. Security Addendum. The Federal Bureau of Investigation (FBI) Criminal Justice Information Services (CJIS) Security Addendum (Exhibit 12.1.1-5) shall be signed.

5.9. Compliance with Laws. All CORI/CLETS rules, regulations, policies, practices and procedures will be adhered to by all parties involved, at all times. Contractor's failure to comply with any applicable laws and regulations is considered a breach of security and may result in the termination for default of the Agreement.

6. PERSONNEL ACCESS

6.1. In addition to the other background requirements set forth in this Schedule 12.1.1, it is the "County's policy to require that all permanent, temporary and seasonal employees, contractors and volunteers be issued and display a County ID card while on duty and/or within County facilities". Therefore, Contractor personnel performing Services at a Location shall comply with (i) County Administration Manual 0040-06 County Identification / Access Card Program and (ii) Department of General Service Policy and Procedure – Facilities Section entitled 3.1.6 SECURITY, as described in Section 12.1.3 of the Agreement.

6.2. Background Investigation

6.2.1. Background Investigations

Background investigations on Contractor personnel shall be conducted in accordance with the Standards and Procedures Manual and the Department of General - Services Policy & Procedures sections entitled 3.1.6.1 SECURITY CARD ACCESS SYSTEM and 3.1.6.4 CONTRACT SERVICE PROVIDER SECURITY REQUIREMENTS.

All Contractor personnel requiring access to any IT and telecommunications system supporting the delivery of the Services shall have passed an employee background investigation that is equivalent to that of the County. If the Contractor's employee background investigation policy, processes and procedures does not meet County standards, then the Contractor may use the County's background investigation process to fulfill this requirement.

6.2.2. County's Notification to Contractor

Contractor will be notified in the event that any Contractor personnel do not pass the background investigation. The County will not provide reasons or comments justifying such decision. However, should Contractor believe that there has been a mistake, then Contractor may bring the matter to the attention of the CIO.

6.2.3. County Issued I.D. Cards

6.2.3.1. After each Contractor personnel has successfully passed background investigation, the County will issue a County identification card (County ID card). The County ID card identifies Contractor personnel as being authorized to enter County facilities for the performance of Services and must be worn at all times during the performance of Services within any of the County's facilities.

6.2.3.2. County I.D. cards are for the exclusive use of the individual named and pictured on the card. Such cards shall remain the property of the County and shall be returned upon demand, or upon the termination or resignation of the individual, or upon termination or expiration of the Agreement.

6.2.3.3. Contractor shall assume all responsibility for all Contractor personnel's use of and the return of the County I.D. cards. Contractor shall be assessed one hundred (100) dollars (or such other fee as may be set forth in the Standards and Procedures Manual) for each County I.D. card not returned to the County. At the expiration and or termination of the Agreement, all or a portion of final payment may, at County's sole discretion, be withheld until all cards are accounted for.

6.2.4. Keys for County Facilities

6.2.4.1. Contractor may be temporarily issued a set of keys for County facilities that do not have guards on duty. Contractor shall assume all responsibilities for the use and prompt return of the keys. Any Contractor personnel holding keys to the County facilities shall use such keys solely to gain access to perform Services.

6.2.4.2. Keys issued to Contractor shall remain the property of the County and shall be returned upon demand or upon the termination or expiration of the Agreement. In addition to any other costs or damages, Contractor shall be assessed one hundred (100) dollars (or such other fee as may be set forth in the Standards and Procedures Manual) for each key not returned and will be further assessed the actual cost for parts and locksmith services to remove the lost key from the facility keying system(s).

6.2.4.3. If any key or access control card (County I.D. card) is lost or stolen, Contractor shall immediately notify the CIO in writing with the following information: the facility for which key(s) was lost, who lost the key(s), where the key(s) was lost, and the date / time loss was discovered.

6.2.4.4. Unauthorized duplication of keys to County facilities is a misdemeanor under Chapter 3, Section 469 of the California, Standard Penal Code.

6.2.5. Alarm Systems

6.2.5.1. The County has alarm systems in numerous facilities. In some instances there are multiple alarm systems within a facility. Contractor may be issued alarm codes and be instructed to properly operate the alarm systems. Contractor shall ensure that any Contractor personnel operating the alarm system be fluent in English. Failure to operate the alarm system correctly will result in a false alarm. Contractor will be responsible for all costs associated with false alarms.

6.2.5.2. In the event of a life threatening emergency, Contractor will instruct its personnel to use the standard operating procedures for emergency response, i.e. to call 911.

7. MISCELLANEOUS

7.1. Disclaimer. County makes no guarantee that compliance with this Agreement will be satisfactory for the Contractor's own purposes.

7.2. Amendment. The Parties agree to take action as necessary to amend this Schedule 12.1.1 from time-to-time as is necessary for County to comply with the requirements of any and all applicable other federal or State laws and regulations.

7.3. Judicial or Admin Proceedings. Contractor will notify County if it is named as a defendant in any criminal, civil, or administrative proceeding for a violation of any applicable security or privacy law.

7.4. Assistance in Litigation or Admin Proceedings. Contractor shall make itself and any of its agents available, at no cost to County, to testify, or otherwise, in the event of litigation or administrative proceedings commenced against County, its directors, officers, or employees, based on claimed violations of any applicable confidentiality, privacy, or security law or regulation, whether federal or State, if that litigation or proceeding involves actions of Contractor or its agents, except those where Contractor or its agents are named as an adverse party.

7.5. Interpretation. Any ambiguity in this Schedule 12.1.1 shall be resolved in favor of a meaning that permits County to comply with the applicable federal or State law or regulation.

7.6. Conflict. If a conflict between any of the standards contained in any of these enumerated sources of standards is found, Contractor shall follow the most stringent standard. The most stringent standard means that safeguard which provides the highest level of protection to County PHI and/or County PII/PI from unauthorized disclosure.

7.7. Regulatory References. All references in this Schedule 12.1.1 to any regulation or law mean the regulation or law currently in effect, including those legal and regulatory changes that occur after the effective date of this Agreement.

7.8. Survival. The respective rights and obligations of County and Contractor under this Schedule 12.1.1 shall survive the termination of the Agreement.

7.9. No Waiver of Obligations. No change, waiver, or discharge of any liability or obligation hereunder or any one or more occasions shall be deemed a waiver of performance of any continuing or other obligation, or shall prohibit enforcement of any obligation, an any other occasion.

7.10. Due Diligence. Contractor shall exercise due diligence and shall take reasonable steps to ensure that it remains in compliance with this Schedule 12.1.1 and is in compliance with all applicable federal and State laws and regulations, and that its agents, subcontractors, and vendors are in compliance with their obligations as required by this Schedule 12.1.1.

7.11. Effect of Termination. Upon termination of the Contract, for any reason, with respect to any and all County PHI and/or County PII/PI received from County, or created or received by Contractor on behalf of County:

7.11.1. Contractor shall return or destroy all County PHI and/or County PII/PI and retain no copies of County PHI and/or County PII/PI, except County PHI and/or County PII/PI necessary for Contractor to continue its proper management and administration or to carry out its legal responsibilities, as mutually agreed upon by the Parties.

7.11.2. Upon mutual agreement of the Parties that return or destruction of County PHI and/or County PII/PI is infeasible, Contractor shall extend the protections of this Schedule to such County PHI and/or County PII/PI for so long as Contractor maintains such County PHI and/or County PII/PI.

7.11.3. Contractor shall return to County or destroy, as determined by County, County PHI and/or County PII/PI retained by Contractor when it is no longer needed by Contractor for its proper management and administration or to carry out its legal responsibilities.

7.11.4. This provision shall apply to County PHI and/or County PII/PI that is in the possession of subcontractors or agents of Contractor.

END OF SCHEDULE

Exhibit 12.1.1-3 – Employee-Volunteer Statement Form

CLETS EMPLOYEE/VOLUNTEER STATEMENT

Print Form

Use of information from the California Law Enforcement Telecommunications System (CLETS) and the Department of Motor Vehicles record information

As an employee/volunteer of San Diego County Probation Department, you may have access to confidential criminal records, the Department of Motor Vehicle records or other criminal justice information, much of which is controlled by statute. All information from the CLETS is based on the "need-to-know" and the "right-to-know" basis. The misuse of such information may adversely affect an individual's civil rights and violates the law and/or CLETS policies.

Penal Code (PC) section 502 prescribes the penalties relating to computer crimes. PC sections 11105 and 13300 identify who has access to state and local summary criminal history information and under which circumstances it may be released. PC sections 11141-11143 and 13302-13304 prescribe penalties for misuse of state and local summary criminal history information. Government Code section 6200 prescribes the felony penalties for misuse of public records and information from the CLETS. California Vehicle Code section 1808.45 prescribes the penalties relating to misuse of the Department of Motor Vehicle record information.

Penal Code sections 11142 and 13303 state:

> **"Any person authorized by law to receive a record or information obtained from a record who knowingly furnishes the record or information to a person not authorized by law to receive the record or information is guilty of a misdemeanor."**

Any employee/volunteer who is responsible for the CLETS misuse is subject to immediate dismissal from employment. Violations of the law may result in criminal and/or civil action.

I HAVE READ THE ABOVE AND UNDERSTAND THE POLICY REGARDING MISUSE OF ALL INFORMATION FROM THE CLETS.

Exhibit 12.1.1-4 – Private Management Control Agreement

CLETS PRIVATE CONTRACTOR MANAGEMENT CONTROL AGREEMENT

Print Form

Agreement to allow California Law Enforcement Telecommunications System (CLETS) access by

_____ (Public law enforcement/criminal justice agency) , _____ (ORI)

to _____ (Private Contractor)

to perform _____ (Type of service) services on its behalf.

Access to the CLETS is authorized to public law enforcement and criminal justice agencies (*hereinafter referred to as the CLETS subscribing agency*) only, which may delegate the responsibility of performing the administration of criminal justice functions (e.g., dispatching functions or data processing/information services) in accordance with the Federal Bureau of Investigation's (FBI) Criminal Justice Information Services (CJIS) Security Addendum to a private contractor. The private contractor may access systems or networks that access the CLETS on behalf of the CLETS subscribing agency to accomplish the above-specified service(s). This agreement must be received by the California Department of Justice (CA DOJ) prior to the subscribing agency permitting access to the CLETS. The performance of such delegated services does not convert that agency into a public criminal justice agency, not automatically authorize access to state summary criminal history information. Information from the CLETS is confidential and may be used only for the purpose(s) for which it is authorized. Violation of confidentiality requirements or access authorizations may be subject to disciplinary action or criminal charges.

Pursuant to the policies outlined in the *CLETS Policies, Practices, and Procedures (PPP)* and the Federal Bureau of Investigation's (FBI) *CJIS Security Policy*, it is agreed the CLETS subscribing agency will maintain responsibility for security control as it relates to the CLETS access. Security control is defined as the ability of the CLETS subscribing agency to set, maintain, and enforce:

1. Standards for the selection, supervision, and termination of personnel. This does not grant hiring/firing authority to the CLETS subscribing agency, only the authority to grant CLETS access to personnel who meet these standards and deny it to those who do not.

2. Policies governing the operation of computers, access devices, circuits, hubs, routers, firewalls, and other components that make up and support a telecommunications network and related CA DOJ criminal justice databases used to process, store, or transmit criminal justice information, guaranteeing the priority, integrity, and availability of service needed by the criminal justice community.

Security control includes, but is not limited to, the supervision of applicable equipment, systems design, programming, and operating procedures associated with the development, implementation, and operation of any computerized message-switching or database systems utilized by the served law enforcement agency or agencies. Computer sites must have adequate physical security to protect against any unauthorized viewing or access to computer terminal, access devices, or stored/printed data.

CLETS PRIVATE CONTRACTOR MANAGEMENT CONTROL AGREEMENT

Additionally, it is the responsibility of the CLETS subscribing agency to ensure that all private contractors receiving information from the CLETS meet the minimum training, certification, and background requirements that are also imposed on the CLETS subscribing agency's staff. The minimum requirements are applicable also to staff having access to record storage areas containing information from the CLETS. The minimum requirements include, but are not limited to:

1. Prior to allowing the CLETS access, train, functionally test, and affirm the proficiency of all the CLETS computer operators to ensure compliance with the CLETS and the FBI's National Crime Information Center (NCIC) policies and regulations, if applicable. Biennially, provide testing and reaffirm the proficiency of all the CLETS operators, if applicable.

2. State and FBI criminal offender record information searches must be conducted prior to allowing access to the CLETS computers, equipment, or information. If the results of the criminal offender record information search reveal a record of any kind, access will not be granted until the CLETS subscribing agency can review the matter to decide if access is appropriate. If a felony conviction of any kind is found, access shall not be granted.

3. Each individual must sign a CLETS Employee/Volunteer Statement form (HDC 0009) prior to operating or having access to CLETS computers, equipment, or information.

In accordance with CLETS/NCIC policies, the CLETS subscribing agency has the responsibility and authority to monitor, audit, and enforce the implementation of this agreement by the private contractor. The private contractor agrees to cooperate with the CLETS subscribing agency in the implementation of this agreement and to accomplish the directives for service under the provisions of this agreement. The CLETS Management Control Agreement (HDC 0004B) shall be updated when the head of either agency changes or immediately upon request from the CA DOJ.

By signing this agreement, the vendors and private contractors certify they have read and are familiar with the contents of (1) the FBI's CJIS Security Addendum, (2) the NCIC 2000 Operating Manual, (3) the FBI's CJIS Security Policy, (4) Title 28, Code of Federal Regulations, Part 20, and (5) the CLETS PPP and agree to be bound by their provisions. Criminal offender record information and related data, by its very nature, is sensitive and has potential for great harm if misused. Access to criminal offender record information and related data is therefore limited to the purpose(s) for which the CLETS subscribing agency has entered into the contract. Misuse of the system by, among other things: accessing it without authorization; accessing it by exceeding authorization; accessing it for an improper purpose; use, dissemination, or secondary dissemination of information received as a result of this contract for a purpose other than that envisioned by the contract, may subject me to administrative and criminal penalties. Accessing the system for an appropriate purpose and then using, disseminating, or secondary dissemination of information received for another purpose other than execution of the contract also constitutes misuse. Such exposure for misuse includes, but is not limited to, suspension or loss of employment and prosecution for state and federal crimes.

Exhibit 12.1.1-5 – Federal Bureau of Investigations Criminal Justice Information Services Security Addendum

FEDERAL BUREAU OF INVESTIGATION
CRIMINAL JUSTICE INFORMATION SERVICES
SECURITY ADDENDUM

Print Form

CERTIFICATION

I hereby certify that I have read and am familiar with the contents of (1) the Security Addendum, (2) the NCIC 2000 Operating Manual, (3) the Policy and Reference Manual, (4) the CJIS Security Policy, and (5) Title 28, Code of Federal Regulations, Part 20, and agree to be bound by their provisions.

I recognize that criminal history record information and related data, by its very nature, is sensitive and has potential for great harm if misused. I acknowledge that access to criminal offender record information and related data is therefore limited to the purpose(s) for which a government agency entered into the contract incorporating this Security Addendum. I understand that misuse of the system by, among other things, accessing it without authorization, accessing it by exceeding authorization, accessing it for an improper purpose, using, disseminating, or re-disseminating information received for another purpose other than the execution of the contract also constitutes misuse. I further understand the occurrence of misuse does not depend upon whether I receive additional compensation for such authorized activity. Such exposure for misuse include, but is not limited to, suspension or loss of employment and prosecution for state and federal crimes.

1. OVERVIEW

Exhibit 16.1 – Fees, including the Exhibits and Appendices attached hereto, describes the methodology for billing with respect to the Services provided under the Agreement. The Fees set forth herein represent the total amounts payable by the County with respect to all Services to be performed under the Agreement, whether or not a particular Service is associated with a particular Resource Unit Fee. All capitalized terms used and not defined in this Schedule shall have the meanings given to them in Schedule A – Definitions. All references to Exhibit 16.1-1 below shall be deemed to be references to Exhibit 16.1-6 for purposes of calculating applicable fees and credits during the Option Term.

2. EXHIBITS AND APPENDICES

The Exhibits and Appendices set forth in the table of contents above are attached to this Schedule 16.1 and incorporated hereto.

Reference Number	Title
Exhibit 16.1-1	Resource Unit Summary
Exhibit 16.1-1a	Fees Sample Calculations
Exhibit 16.1-1 Appendix 1	New Site Install Variable Components
Exhibit 16.1-2	Resource Unit Price Decomposition
Exhibit 16.1-3	Maximum Annual Fee
Exhibit 16.1-4	Labor Categories
Exhibit 16.1-5	Firm Fixed Price for Applications Maintenance and Operations
Exhibit 16.1-5b	Firm Fixed Price for Applications Maintenance and Operations
Exhibit 16.1-6	Resource Unit Summary Option Term
Exhibit 16.1-7	ELA Pricing Adjustments

3. TRANSITION SERVICES

Contractor shall perform all Services with respect to Transition on a milestone payment basis as further set forth below.

Transition Milestone	Milestone Date	Transition Fees
Cutover of the Service Desk Services Framework	4/30/2018	$0.00
Cutover of the Application Services Framework	6/30/2017	$0.00

Transition Milestone	Milestone Date	Transition Fees
Cutover of the End-User Services Framework	7/31/2017	$0.00
Cutover of the Network Services Framework	8/31/2017	$0.00
Cutover of the Data Center Services Framework	4/30/2018	$0.00
Cutover of the Cross Functional Services	4/30/2018	$0.00
Full and complete transition of all Service Frameworks	4/30/2018	$ 7,212,700.17

The Milestone Date refers to the date by which the applicable Transition Milestone must be achieved. The Transition Fees refers to the Fee associated with completion and acceptance by the County of Transition Milestone. In the event that Contractor fails to meet a Transition Milestone by the Milestone Date set forth above, the County may decrement any amount of Transition Fees applicable to such Critical Milestone reasonably determined by the County to represent the diminishment in value of the Services to the County and not as a penalty.

4. DEFINED TERMS

4.1. Banding

"Banding" shall mean incremental decrease or increase in Resource Unit Fees due to the volume of Resource Units consumed above or below the defined Baseline Volume.

4.2. Baseline Volume

"Baseline Volume" shall mean, for any Resource Unit, the specified quantities of such Resource Units as set forth in Exhibit 16.1-1.

4.3. Bundled Resource Unit

"Bundled Resource Units" shall mean Resource Units indicated on Exhibit 16.1-1 for which the Baseline Volumes and the County's actual volumes of consumption are each aggregated for the purposes of determining in which Resource Unit Fee band the individual Resource Units in such bundle are to be charged.

4.4. Resource Unit Fee

"Resource Unit Fee" shall mean, for any Resource Unit, the specified charge for such Resource Unit as set forth in Exhibit 16.1-1.

5. DISENTANGLEMENT FEES

For any termination as set forth in Section 17 of the Agreement and during the period of any Disentanglement of any Terminated Services, the County shall only pay the Resource Unit Fee for the 90% to 110% range for such Resource Unit.

6. CAPITALIZATION AND DEPRECIATION

Except for Shared Resources, all such acquisitions shall, for purposes of the County's rights upon Disentanglement pursuant to Section 6.3.6 of the Agreement be capitalized, accounted for, and depreciated by Contractor in accordance with the guidelines set forth in herein, without regard to the actual method of acquisition (i.e., whether by purchase, lease, or other method of financing).

6.1. Capitalization

Assets used to provide the Services shall be capitalized as follows:

6.1.1. Computing Hardware

Computing hardware shall be capitalized and depreciated if the cost is $5,000 or greater and the useful life is greater than one (1) year. Computer workstation components required to make the workstation functional, are typically grouped as a system to determine the capitalization threshold. Capitalized amounts include equipment cost, sales tax, shipping, and installation.

6.1.2. Computing Software

Computer software shall be capitalized and depreciated per the following:

6.1.2.1 COTS – if the cost is $50,000 or greater and the useful life is greater than one (1) year.

6.1.2.2 Internally Developed – if the cost is $100,000 or greater and the useful life is greater than one (1) year.

6.1.2.3 Operating system Software that is required to make a system functional is capitalized as part of the system.

6.1.2.4 Capitalized PC and server Software is depreciated over the life of the hardware asset.

Capitalized amounts include Software cost, sales tax, shipping, and installation.

6.1.3. Software Agreements

Software agreements shall be capitalized and depreciated if the cost is $50,000 or greater and the useful life is greater than one (1) year. Multiyear license agreements must be at least $50,000 for each year of the agreement.

6.1.4. Voicemail and Network Infrastructure

Hardware and software for voice and network are capitalized and depreciated if the cost is $5,000 or greater and the useful life is greater than one (1) year. Capitalized amounts include equipment cost, sales tax, shipping and installation.

6.1.5. Leasehold Improvements

Leasehold Improvements are capitalized if the project is $25,000 or more and depreciated over the shorter of the estimated useful life of the improvement or the life of the lease.

6.1.6. Furniture

Free standing furniture and fixtures are capitalized if the cost is $5,000 or greater and the useful life is a minimum of two (2) years. The assets must also be identifiable and controllable.

6.2. Depreciation

Assets used to provide the Services applicable to a Resource Unit shall be depreciated using the straight line method over the number of years indicated in Exhibit 16.1-1 for such Resource Unit.

7. RESOURCE UNIT FEES

This section pertains to the methodology of Resource Unit Fee calculations and changes related to Resource Unit Fee and/or its volumes.

7.1. Monthly Service Charge

Following Cutover for each Service Framework during the Term, Contractor shall calculate, on the last day of each calendar month on either a snapshot or cumulative basis as indicated in Exhibit 16.1-1, the quantity of Resource Units applicable to such Service Framework utilized by the County during that month. Contractor shall report such quantities to the County in accordance with the format described in Section 16.2 and Schedule 5 of the Agreement, together with the supporting

information and documentation required under such Section and Schedule. Such quantities shall be used to calculate the Monthly Services Charge as follows:

7.1.1. Non-Bundled Resource Units

The County's actual monthly volume for Non-Bundled Resource Units shall be multiplied by the applicable Resource Unit Fees as set forth in Exhibit 16.1-1 and, if applicable, corresponding to the volume band in which the County's actual volume of consumption falls during such month. An example of this calculation is set forth in Appendix 16.1-1a.

7.1.2. Bundled Resource Units

If the County's actual monthly volume for Bundled Resource Units falls between 90% and 110%, inclusive, of the sum of the Baseline Volumes for such Bundled Resource Units, then the actual monthly volume of each Resource Units in such bundle shall be multiplied by the applicable Resource Units Fee for the 90% to 110% range as set forth in Exhibit 16.1-1, even if the actual monthly volume for a particular Resource Unit falls outside of such range.

If the County's actual monthly volume for Bundled Resource Units outside the 90% to 110% range described above, then the actual monthly volume of each Resource Unit in such bundle shall be multiplied by the applicable Resource Unit Fee as set forth in Exhibit 16.1-1 corresponding to the volume band in which the County's actual volume of consumption of such individual Resource Unit falls during such month. An example of this calculation is set forth in Appendix 16.1-1a.

7.2. Volumes Outside of Existing Bands

7.2.1. Non-Bundled Resource Units

If, in any Contract Year, the County's actual consumption is (i) greater than one hundred thirty percent (130%) of the Baseline Volume for such Resource Unit or (ii) is less than seventy percent (70%) of the Baseline Volume for such Resource Unit, then the Parties shall negotiate in good faith new pricing bands, as applicable, for such Resource Units. While such negotiations are pending, the County's consumption of such Resource Units shall continue to be invoiced at the then current Resource Unit Fees for such Resource Units until the Parties establish new pricing bands for such Resource Units.

7.2.2. Bundled Resource Units

If, in any Contract Year, the County's actual consumption is (i) greater than one hundred thirty percent (130%) of the sum of the Baseline Volumes for the Resource Units in the same group of Bundled Resource Units as indicated in Exhibit 16.1-1 or (ii) is less than seventy percent (70%) of the sum of the Baseline Volumes for the Resource Units in the same group of Bundled Resource Units as indicated in Exhibit 16.1-1, then the Parties shall negotiate in good faith new pricing bands, as applicable, for such Resource Units. While such negotiations are pending, the County's consumption of such Resource Units shall continue to be invoiced at the then current Resource Unit Fees for such Resource Units until the Parties establish new pricing bands for such Resource Units.

7.3. Addition and Removal of Resource Units

The Parties may add or remove Resource Units upon mutual written agreement. For the purposes of added Resource Units, Contractor may charge the County for such Resource Unit commencing on the date the Contractor obtains a signature from an authorized representative of the County confirming the County's acceptance of the delivery and/or installation of such Resource Unit. For the purposes of removed Resource Units, Contractor shall no longer charge the County for and the County shall have no obligation to pay for such Resource Units as of, and after the date that the County submits a request for the removal of such Resource Units that is executed by an authorized representative of the County.

7.4. Addition and Removal of Resource Unit Volumes

Resource Units may only be added to or removed from the County's volumes pursuant to a written acceptance of the addition or removal of a Resource Unit executed by an authorized representative of the County.

8. CROSS FUNCTIONAL SERVICES

This section pertains to the Fees associated with Section 2 – Cross Functional Services in Schedule 4.3 and listed in Exhibit 16.1-1.

8.1. Contract and Acquisition Management Services

8.1.1. Third Party Agreements

As part of the Services, Contractor will administer for the County certain Hardware and Software that is in addition to the Hardware and Software that Contractor uses to provide the Services described in the Schedules and for which Contractor is paid a Resource Unit Fee or other Fee. Contractor's administration responsibilities for this Hardware and Software

include, as set forth below, procurement (market analysis, competitive or sole source procurement, negotiation of agreements, licenses, amendments, and the like), administration of license, maintenance and service agreements, Service Desk support, payment, tracking of the Hardware and Software (including the license and service provisions, limitations, expiration and renewal periods), maintenance agreements (including agreement provisions, limitations, expiration and renewal periods), and tracking and reporting on the status of the administration of the Hardware and Software on the Service Portal described in Schedule 4.3, Cross Functional Section 2.3, and any other administrative or management related activities.

The Resource Unit approach to Third-Party Agreements is set forth in the table below and examples of calculation are set forth in Appendix 16.1-1a.

Resource	Description	Fee
Third Party Negotiation – Large	Negotiation of an agreement with a new Third-Party vendor in excess of $500,000.	$10,000
Third Party Negotiation – Small	Negotiation of an agreement with a new Third-Party vendor up to $500,000.	$5,000

<table>
<tr><th>Resource</th><th>Description</th><th>Fee</th></tr>
<tr><td>Third Party Transaction</td><td>Fees applied to a Transaction for products and/or services which are not provided by services for which Contractor is paid a Resource Unit.

Transaction is defined as a master contract with a Third-Party in which multiple Purchase Orders (POs) and PO Change Requests may be submitted to Third-Party. If there is no master contract with a Third-Party, Transaction is defined as a PO and PO Change Request(s) submitted to Third-Party.

• Fee percentages are calculated based on the Transaction amount and applied to the invoice amount. In the event of a multi-year license agreement, Fees are calculated on the aggregate charges. In addition, if a true up is required, the applicable fee shall be calculated on the true up amount.</td><td>1. For the following products and services, the Fee is 5% of the Transaction amount with a minimum fee of $100 and maximum fee of $50,000:
• Portfolio Software - Perpetual License Purchase
• Portfolio Software - Perpetual License Maintenance Renewal
• Hardware
• Hardware Maintenance
• Universal Power Supply (UPS)

2. For the following products and services, there is a tiered Fee structure per table below based on the Transaction amount:
• Labor Statement of Work
• Labor Agency Contractor
• Portfolio Software - SaaS
• Portfolio Software - Subscription

<table><tr><th>Percentage Tier</th><th>Transaction Amount</th></tr><tr><td>5%</td><td>Up to $1M</td></tr><tr><td>4%</td><td>Greater than $1M – up to $10M</td></tr><tr><td>3%</td><td>Greater than $10M</td></tr></table>
When a Change Request modifies a Transaction such that a different percentage tier applies, the applicable tier will be applied when the transaction amount threshold is reached.</td></tr>
</table>

A new third-party vendor is defined as a vendor with whom Contractor does not have a current agreement applicable to the transaction, whether never existed or expired, for which new terms and conditions must be negotiated. In the event that Third-Party Negotiation RUs apply, Contractor will notify the County in advance.

8.1.2. Pre-Approved Vendors List

Contractor shall maintain a minimum number of pre-approved vendors based on County demand:

Contract Year	Number of Procurement Requests	Minimum Pre-Approved Vendors
CY1	n/a	Five (5)
CY2 – CY7	< 15	Five (5)
	15 – 25	Seven (7)
	26 – 50	Ten (10)
	51+	Fifteen (15)

8.2. Domain Name Management Services

As part of the Domain Name Management Services, Contractor shall administer and manage all domain names for the County to meet the requirements described in Schedule 4.3, Cross Functional section 2.20. County will be charged a fixed monthly Resource Unit Fee for this service, as listed on Exhibit 16.1-1, for an unlimited number of domain names. The fixed monthly Resource Unit Fee includes transfer of County managed domain names to Contractor.

8.3. Business Analyst Services

As part of the Business Analyst Services, Contractor shall provide the County with five (5) Full Time Equivalent (FTE) Business Analyst positions to meet the requirements described in Schedule 4.3, Cross Functional section 2.21. The pool of 5 FTEs is subject to resource management at County discretion. County will be charged a fixed monthly Resource Unit Fee for this service, as listed on Exhibit 16.1-1. The Business Analyst Resource Unit Fee, which is an hourly labor rate, shall only apply if County requests an additional Business Analyst(s) for work not covered by the 5 FTEs provided in the Business Analyst Services.

8.4. Chief Technical Architect Services

As part of the Chief Technical Architect Services, Contractor shall provide the County with one (1) Full Time Equivalent Chief Technical Architect position to meet the requirements described in Schedule 4.3, Cross Functional section 2.22, Exhibit 16.1-4, and Schedule 10.1.1. County will be charged a fixed monthly Resource Unit Fee for this service, as listed on Exhibit 16.1-1.

8.5. Enterprise Application Architect Services

As part of the Enterprise Application Architect Services, Contractor shall provide the County with one (1) Full Time Equivalent Enterprise Application Architect position to meet the requirements described in Schedule 4.3, Cross Functional section 2.23, Exhibit 16.1-4, and Schedule 10.1.1. County will be charged a fixed monthly Resource Unit Fee for this service, as listed on Exhibit 16.1-1. Other architect services (e.g., applications architect) will be charged using the Resource Units in Exhibit 16.1-1 based on Labor Categories in Exhibit 16.1-4.

8.6. Innovation Management Services

8.6.1. Overview

As part of the Innovation Management Services, Contractor shall provide the County with one (1) Full Time Equivalent Innovation Officer (IO) position to meet the requirements described in Schedule 4.3, Cross Functional section 2.24, Exhibit 16.1-4, and Schedule 10.1.1. County will be charged a fixed monthly Resource Unit (RU) Fee for this service, as listed on Exhibit 16.1-1.

In Year 1 of the Agreement, the IO will be deployed for this Service. Effective Year 2 of the Agreement, the IO can be supplemented by additional staff based on the recommendation of the IO and approval of the CIO.

8.6.2. Innovation Fund

County and Contractor shall establish the Innovation Fund to support the Innovation Management Services activities. The parties will manage the Innovation Fund jointly.

8.6.3. Funding

The County and Contractor will co-fund the Innovation Fund. Effective Year 2 of the Agreement, both parties will contribute $500,000 on an annual basis thereby making available $1,000,000 in the Innovation Fund per year for innovation-related activities. The parties may change the funding by written agreement.

8.6.4. Use of Innovation Fund

Innovation Fund shall be used to add staffing to the Core Innovation Team on as needed basis, as mutually agreed to by the Contractor and County. The parties shall use either the Core Innovation Team Member Resource Unit or applicable Labor Category Resource Unit, whichever rate is lowest. Innovation Fund may also be used for rapid-cycle experiments, fast-

fail and agile proofs of concepts, Infrastructure as a Service (IaaS) cloud environments (e.g., AWS) to support Innovation activities, subject matter expert support to augment Innovation activities and material costs to perform Innovation activities approved by a joint governance committee consisting of County and Contractor personnel.

The County and Contractor will split all innovation projects costs 50/50 and, as much as possible, Contractor will leverage the Resource Units in the existing Agreement as the basis for pricing. Should the parties jointly agree to go outside of the Innovation Fund for costs incurred, the County will be charged 50% of the applicable Resource Unit Fee.

8.7. Project Management Services

As part of the Project Management Services, Contractor shall administer and manage a Project Management Office (PMO) to meet the requirements described in Schedule 4.3, Cross Functional section 2.9. County will be charged a fixed monthly Resource Unit Fee for this service, as listed on Exhibit 16.1-1. Project management for Applications Development-related activities will be charged according to the Labor Categories and associated Resource Units in Exhibits 16.1-4 and 16.1-1, respectively. Project management for infrastructure-related activities is covered within the Resource Units and will not be charged separately.

9. SERVICE DESK SERVICES

Reserved.

10. END USER SERVICES

This section pertains to the Fees associated with Section 4 – End User Services in Schedule 4.3 and listed in Exhibit 16.1-1.

10.1. Early Refresh

This section pertains to the Fees associated with Section 4.5.4 – Early Refresh in Schedule 4.3 and listed in Exhibit 16.1-1.

10.1.1. Early Refresh – Desktop

The Early Refresh – Desktop Resource Unit Fee shall apply if County requests to replace a desktop asset with more than six (6) months remaining prior to schedule refresh date and the replacement asset is of a different technology (e.g. Desktop - Engineering

Workstation to Laptop). An upgrade to the newest version of an asset is ineligible for Early Refresh. County will be charged the Resource Unit Fee listed in Exhibit 16.1-1 for each remaining month until the schedule refresh date.

10.1.2. Early Refresh – Mobile PC

The Early Refresh – Mobile PCs Resource Unit Fee shall apply if County requests to replace a Mobile PC asset with more than six (6) months remaining prior to schedule refresh date and the replacement asset is of a different technology (e.g. Laptop – Standard to Tablet - Convertible). An upgrade to the newest version of an asset is ineligible for Early Refresh. County will be charged the Resource Unit Fee listed in Exhibit 16.1-1 for each remaining month until the schedule refresh date.

10.2. [reserved]

10.3. Catalog Services

This section pertains to the Fees associated with Section 4.10 – Catalog Services in Schedule 4.3.

10.3.1. Optional Item Catalog

As described in Schedule 4.3, the Contractor shall provide and maintain an online Optional Item Catalog (OIC). The OIC shall be the vehicle by which the County will purchase optional software, hardware and training.

The Contractor will invoice the County the total of the actual cost of the OIC item plus a 10% handling charge on the actual cost of such OIC item. This handling charge represents the Contractor's administrative and procurement cost associated with the acquisition of the OIC item on behalf of the County.

The County may, in its sole discretion, offer the Contractor an opportunity to establish the price and other terms for the procurement of optional hardware and software requested by the County. The County shall then determine, in its sole discretion, whether Contractor's proposed price and terms reflect the most favorable price and terms (including warranties and discounts) otherwise available. If Contractor's proposed price and terms are not the most favorable, Contractor shall have the opportunity to meet or beat the best price and terms discovered in the market by the County.

10.3.2. Desktop Applications Directory

The Optional Item Catalog includes the Desktop Applications Directory (DAD), which is a list of Desktop Applications supported by the Contractor. The baseline number of Desktop Applications in the DAD shall be four hundred and seventy-five (475).

It is the intent of the Parties to reasonably limit the Desktop Applications in the DAD. The Parties will determine the monthly average number of Desktop Applications in the DAD on December 31st of each Contract Year. Should the monthly average number of Desktop Applications exceed or fall below the baseline, the Parties agree to adjust the Fee for each Resource Unit in the Desktop Computing Services for the upcoming Contract Year as follows:

Desktop Applications in the DAD	**Fee added to or subtracted from each Resource Unit Fee in "Desktop Computing**
291-390	- $0.50
391-475	0
476-540	+ $0.50

Whether a Desktop Application is to be counted toward the DAD shall be determined by the County in its sole discretion based on various factors including but not limited to:

- Desktop Application executes solely on the desktop
- Desktop Application is a unique application, not just a different version
- Desktop Application is not a driver or other Software required to enable accessory hardware to properly operate or to install or delete other applications
- Desktop Application is not a font or a font set
- Desktop Application is not management Software, tools or utilities that the Contractor installs to provide the Services
- Desktop Application is not part of the Laptops, Desktops, Tablets and County Retained Devices

10.3.3. Addition to Optional Item Catalog

For any and all Services related to the addition of hardware that requires testing, as approved by the Catalog Review Board, or software to the Optional Item Catalog, Contractor shall perform any and all such Services pursuant to a Service Request submitted by County for a one-time

Resource Unit Fee per Schedule 16.1-1. Contractor shall be responsible for any and all costs associated with such activities beyond the Resource Unit Fee.

10.3.4. Updates to Desktop Application Directory Software

For any and all Services related to version updates to the Desktop Applications listed in the Optional Item Catalog, Contractor shall perform any and all such Services pursuant to a Service Request submitted by County for a one-time Resource Unit Fee per Schedule 16.1.-1. Contractor shall be responsible for any and all costs associated with such activities for such application beyond the Resource Unit Fee.

10.4. Electronic Signature Services

This section pertains to the Fees associated with Section 4.5.2.12 – Electronic Signature Services in Schedule 4.3 and listed in Exhibit 16.1-1.

The Electronic Signature Resource Unit (RU) Fee shall apply when a County user sends an agreement that requests at least one Adobe electronic signature (e-signature). This is referred to as an Adobe e-signature transaction. County will be charged the RU Fee listed in Exhibit 16.1-1 for each Adobe e-signature transaction.

10.5. Digital Signage Services

This section pertains to the Digital Signage Resource Unit (RU) associated with the services described in Schedule 4.3 Section 4.13, Digital Signage Services, and listed in Exhibit 16.1-1, Fees Summary by Resource Unit.

The Digital Signage Services RU is a three-year subscription commitment. When a County department purchases a subscription(s), they are authorizing to be billed the monthly RU Fee from the month that the subscription(s) was activated by Contractor through to the end of the three-year commitment. Contractor shall notify department no later than three months prior to end of subscription term and verify whether subscription is to be terminated or renewed. If the latter, Contractor will renew for a new three-year period and install new hardware device.

10.6. Survey Solution Support Services

This section pertains to the Fees associated with Section 4.16 in Schedule 4.3 and listed in Exhibit 16.1-1. The Survey Solution Support Services Resource Unit (RU) Fee shall apply only for County

users who have been assigned the role of Administrative User in SurveyMonkey, per an authorized Service Request.

10.7. Electronic File Sharing Services

This section pertains to the Electronic File Sharing Services Resource Unit (RU) associated with the services described in Schedule 4.3 Section 4.12, File Sharing Services, and listed in Exhibit 16.1-1, Fees Summary by Resource Unit.

The Electronic File Sharing Services provides for the following user types in the Box solution:

- County Staff
- Customer – member of the public as Unmanaged User
- Vendor – Third-party County vendor as Unmanaged User
- ITO Staff

Unmanaged users are unpaid personal accounts used to collaborate on the County-owned content and are within County's managed domain. Unmanaged users do not belong to the County electronic file sharing enterprise and their accounts are unlicensed. For clarity, managed County user folder(s) or file(s) that are shared with unmanaged users retain the same security, permissions, retention rules that are established by the managed County user. However, any free Unmanaged user has the ability to set up their own private folders, upload and share content with other users (internal and external) without being constrained by the enterprise settings that have been established by the County. Additionally, the County administrator(s) are not able to see the user activity, or any reports on the user.

The County will be charged the RU Fee listed in Exhibit 16.1-1 only for users assigned the "County Staff" role.

11. NETWORK SERVICES

This section pertains to the Fees associated with Section 5 – Network Services in Schedule 4.3 and listed in Exhibit 16.1-1.

11.1. Voice Services

This section pertains to the Fees associated with Section 5.7 – Voice Services in Schedule 4.3 and listed in Exhibit 16.1-1.

11.1.1. Voice Calls

County shall be billed for voice calls using the applicable Resource Unit based on the definitions and billing method set forth below.

Resource Unit	Definition	Billing Method
Calls: On-Net	Calls placed between County Locations	Per second
Calls: Off-Net Local	Calls placed from County Locations to Non-County locations with 619, 858, 442 and 760 prefix	Per second
Calls: Off-Net Long Distance	Calls placed from County Locations to Non-County locations within California outside of area codes 619, 858, 442 and 760 prefix.	Per second
Calls: Off-Net Long Distance	Calls placed from County Locations to Non-County locations outside California buy within United States and its territories.	Per second
Calls: International	Calls placed from County Locations to Non-County locations outside the United States and its territories.	Per second
Calls: Toll Free 800 Service (San Diego & Imperial)	Calls that are placed by the public to County Toll Free 800 numbers within San Diego and Imperial Counties.	Per second
Calls: Toll Free 800 Service	Calls that are placed by the public to County Toll Free 800 numbers outside San Diego and Imperial Counties but within California.	Per second
Calls: Toll Free 800 Service	Calls that are placed by the public to County Toll Free 800 numbers outside California but within United States and its territories.	Per second
Calls: Casual Use	Includes collect calls, person to person calls, person to person collect calls, remote calls, operator assistance calls, 3rd party calls, dial one calls, dedicated calls and other miscellaneous calls.	Per second
Calls: Conference	Calls placed to a conference bridge line.	Per second
Calls: Directory	Calls placed to obtain a listed telephone directory number.	Per call

11.1.2. Pay Phone

A Pay Phone located at County facilities as required by statute shall be billed at a flat monthly Resource Unit Fee per Exhibit 16.1-1.

11.1.3. Interactive Voice Services

County will be charged the applicable Interactive Voice Services (IVS) Resource Unit Fee based on the IVS components deployed for IVS application, as described in Schedule 4.3, Section 5.17.3. Tiered pricing (i.e., Small, Medium, and Large) will be based on the higher tier of the IVS Components deployed based on the table below.

Resource Unit	**IVS Component Deployed**
Interactive Voice Services - Small	Any of the following: • Automated Call Distribution • Auto Attendant • Call Management System
Interactive Voice Services - Medium	Any of the following: • Automated Call Recording • Virtual Wallboards • Agent Softphone
Interactive Voice Services - Large	Any of the following: • Interactive Voice Response • Short Message Service • Work Force Management • Physical Wallboards

11.1.4 Virtual Phone Advanced Features

County shall be billed the Virtual Phone Services – Microsoft (MS) Teams Advanced Features monthly Resource Unit for each active call flow in Microsoft Teams. In addition, the designated low org of each call flow shall be billed for the applicable number of MS Resource Account (RA) licenses associated with the call flow. MS Teams RA licenses requires an annual commitment and may not be terminated during its commitment term.

In Microsoft Teams, all auto attendants and call queues within a call flow require a RA, which is associated with a Microsoft Teams Phone RA license to ensure they are correctly identified by the system and properly function, regardless of whether the RA will be assigned a telephone number.

11.2. Network Access

This section pertains to the Network Access Resource Units associated with the services described in Schedule 4.3 Section 5 – Network Services and listed in Exhibit 16.1-1.

Devices, services and County users accessing the County network are subject to a Network Access Resource Unit Fee based on technology(s) through which network is accessed:

- Network Access - Static Wired – Device or service accesses County network at a County location through a wired connection only.
- Network Access - Wired/Wireless – County user accesses County network from a County location through a wired connection or Wireless Access Point connection.
- Virtual Private Network (VPN) Level 1 – Optional service that is an add-on to the Network Access - Wired/Wireless access capability.
- Virtual Private Network (VPN) Level 2 – Optional service that is an add-on to the Network Access - Wired/Wireless access capability.

The Network Access Resource Units are bundled; therefore, the monthly Fee applied to each resource unit is based on the total volume of the bundle.

11.3. Remote Site Redundancy for Key County Sites

At the County's option, on a site-by-site basis, during Years 1 through 4, Contractor shall provide a secondary circuit, at no additional monthly recurring cost to the County, to as many as fifteen sites provided that the County pays the fees associated with special construction costs for each Key site.

11.4. Remote Site Redundancy for T-1 Site

The County may elect, on a site-by-site basis, Contractor shall provide a secondary circuit based on LTE or like technology, at no additional monthly recurring cost to the County, provided that the County pays the fees associated with and special construction costs, if needed.

11.5. New Site Installation Services

This section pertains to the New Site Installation Resource Units (RUs) associated with the services described in Schedule 4.3 Section 5.16, New Site Installation Services, and listed in Exhibit 16.1-1, Fees Summary by Resource Unit.

The Site Type is determined by the number of Cable Drops, as defined in Section 5.16 of Schedule 4.3,

Operational Services, to be installed at the New Site. The Cable Drop threshold levels for each Site type are also described in Section 5.16 of Schedule 4.3, Operations Services.

The Fees associated with establishing a new County Site consists of two parts:

1. **New Site Install Fixed Component RU Fee** – This Fee applies to all New Site installations and covers all of the one-time activities required to be performed by the Contractor to establish the New Site as listed in Schedule 4.3, Operations Services.

   The New Site Install Fixed Component RU Fee is determined by the Site Type:

Site Type	Resource Unit
I	New Site Install– Type I Fixed Component
II	New Site Install– Type II Fixed Component
III	New Site Install– Type III Fixed Component
IV	New Site Install– Type IV Fixed Component
V	New Site Install– Type V Fixed Component
VI	New Site Install– Type VI Fixed Component

2. **New Site Install Variable Component RU Fee** – These set of Fees apply to the activities, as set forth in Schedule 4.3, Operations Services, required to install the cabling infrastructure in a New Site.

   The County has the option of either utilizing the Contractor to perform any or all these activities or contracting with a Third Party directly.

   There are five New Site Install Variable Component RUs related to a Site Type, each representing the cost associated with the deployment of the component of infrastructure per Site Type:

   - New Site Install Variable Component – Cable Drop
   - New Site Install Variable Component – Main Distribution Frame (MDF)
   - New Site Install Variable Component – Intermediate Distribution Frame (IDF)
   - New Site Install Variable Component – Back Bone cable (BB)
   - New Site Install Variable Component – Project Management (PM)

   The County will only be billed for applicable New Site Install Variable Components if Contractor is selected to perform such activities. The process to determine the total New Site

Install Variable Component RU Fee consists of:

1. Projection of the number of Cable Drops to be deployed in the New Site to determine the Site Type;
2. Assessment of the Variable Components required to support the installation based on Site Type.
3. By submitting a Service Request, the County may select a larger Variable Component (such as an MDF or IDF) than that recommended based on assessment. Additionally, if technical requirements change during installation, County will be notified of any required modification of the previously assessed RU Fee.

If the County opts to procure cabling installation services outside the Agreement:

1. Six months after the Turnover Date, a final accounting of number of Cable Drops installed to that point will be determined. If the number of Cable Drops exceeds the thresholds for the previously assessed Site Type by 10%:
    a. The applicable RU Fees for the additional Cables Drops shall be applied.
    b. If applicable, the Fixed and Variable Component charges shall be adjusted to the new Site Type;
2. Standards for these infrastructure components will be provided in the form of Cabling Standards document. Once completed, any defect in workmanship or materials found in wiring during the length of the warranty period granted to the County by their vendor, will be either: 1) referred to the County for resolution with their vendor or 2) repaired by the Contractor team. Any repairs performed by the Contractor team will be billable to the County through a Service Request.

11.6. Zoom Video Support Conferencing Services

This section pertains to the Zoom Video Support Conferencing Services Resource Unit (RU) associated with the services described in Schedule 4.3 Section 5.9, Video Conferencing Services, and listed in Exhibit 16.1-1, Fees Summary by Resource Unit.

The Zoom Video Support Conferencing Services RU will cover the following activities performed and procured by the Contractor for the administration and support of all enterprise paid-for accounts through the three-year agreement with Zoom:

- Re-assignment of paid user licenses and management of any STOP IMARs for paid licenses that are no longer needed.

- Resolution of Break/Fix incident tickets/calls for paid user licenses.
- Generation and posting of a monthly Schedule 5 report of Zoom accounts. Reporting of free accounts will also be included and will list free and paid accounts of users by low org. The report will be titled Zoom Users – Free and Paid Accounts by Low Org. This report will be the standard report generated from the Zoom portal.

Zoom licenses are not included in the Zoom Video Support Conferencing Services RU and must be acquired separately through OIC.

11.7. Mobility Services

This section pertains to the Mobility Services Resource Units (RUs) associated with the services described in Schedule 4.3 Section 5.18 - Mobility Services, and listed in Exhibit 16.1-1, Resource Unit Price Summary.

11.7.1. Mobile Devices in the Optional Item Catalog (OIC) – AT&T shall make mobile devices and mobile WiFi routers available for one-time purchase from the OIC in conjunction with the Mobility Services RUs.

11.7.2. FirstNet Mobility Services RU Fee – This Fee applies to mobile devices purchased from the OIC and to any eligible County mobile device that is enrolled for this service. This RU covers the following services provided by AT&T: Unlimited voice, text, and data service; FirstNet enabled service for all County users; and Free calling to Mexico and Canada.

11.7.3. FirstNet Mobility Services – Tethered – This Fee applies to mobile devices purchased from the OIC and to any eligible County mobile device that is enrolled for this service. This RU covers the following services provided by AT&T: Unlimited voice, text, and data service; FirstNet enabled service for all County users; Tethering Capability; and Free calling to Mexico and Canada.

11.7.4. Mobility Services – Hot Spot – This Fee applies to WiFi devices purchased from the OIC and covers the following services provided by AT&T: Unlimited data access for the mobile Wi-Fi router.

The Mobility Services RUs are not bundled; therefore, the monthly Fee applied to each RU is based on the individual volumes.

12. DATA CENTER SERVICES

This section pertains to the Fees associated with Section 6 – Data Center Services in Schedule 4.3 and listed in Exhibit 16.1-1.

12.1. Infrastructure Services

Contractor shall administer and manage the infrastructure environment to meet the requirements described in Schedule 4.3, Section 6.8. County will be charged a fixed monthly Resource Unit Fee for this service, as listed in Exhibit 16.1-1. This Resource Unit Fee includes the cost of hardware, software and labor associated with administering the environment as described in Exhibit 16.1-2.

12.2. Development and Test Services

12.2.1. Break/Fix Environment for Applications Maintenance & Operations (M&O)

Contractor shall administer and manage data center and infrastructure environment for the break/fix environment for Applications M&O to meet the requirements described in Schedule 4.3, section 6.9 and 7.2.2. County will be charged a fixed monthly Resource Unit Fee for this service, as listed in Exhibit 16.1-1. This Resource Unit Fee includes the cost of servers and storage associated with administering the environment.

12.2.2. Test/Development Environment for Applications Development

Contractor shall administer and manage data center and infrastructure environment for the test/development environment for Applications Development to meet the requirements described in Schedule 4.3, section 6.9 and 7.3.2. County will be charged a fixed monthly Resource Unit Fee for this service, as listed on Exhibit 16.1-1. This Resource Unit Fee includes the cost of servers and storage associated with administering the environment.

12.3. Storage and Data Management Services

This section pertains to the Fees associated with Section 6.12 – Storage and Data Management Services in Schedule 4.3 and listed in Exhibit 16.1-1.

Billing for Storage Services is as follows:

- Attached Storage – actual usage and 20% of the actual usage

- Storage - Primary Tier – actual usage and 20% of the actual usage
- Storage - Secondary Tier – actual usage and 20% of the actual usage
- Storage - Archive Tier – actual usage and 20% of the actual usage
- Storage - Immutable Tier – flat rate fee
- Storage - DPC – flat rate fee

Ad Hoc circumstances where an intermediate snapshot needs to be taken on a regular basis in order to facilitate backups and maintain application performance, will be considered a billable activity only after review and approval by the CIO or designee.

12.4. Cloud Services

This section pertains to the Fees associated with Cloud Services infrastructure support for applications hosted in either Amazon Web Services (AWS) or Microsoft Azure (MS Azure). Contractor shall administer and manage AWS and MS Azure to meet the requirements described in Schedule 4.3 and Schedule 4.8. Contractor will bill the County the applicable fixed monthly Resource Unit Fee for this service, as listed in Exhibit 16.1-1 and described below:

12.4.1. Cloud Infrastructure as a Service (IaaS) is for the support services provided by Contractor for each Infrastructure as a Service (IaaS) instance in the AWS and MS Azure clouds. Contractor shall provide the following support for IaaS: Software License / Maintenance (Operating System, Monitoring, Patching, Discovery, Antivirus); Build; Monitoring; Patching; Quality Control; Problem/Incident/Change Management; Upgrades; Decommission; Tech Refresh; Tools Management/Configuration; Server Security; Support to Applications, Service Level support; and Support to Architecture and Engineering.

12.4.2. Cloud Platform as a Service (PaaS) is for the support services provided by Contractor for each Platform as a Service instance in the AWS and MS Azure clouds. Contractor shall provide the following support for PaaS: Software License / Maintenance (Monitoring and Discovery); Build; Monitoring; Quality Control; Problem/Incident/Change Management; Decommission; Tools Management/Configuration; Server Security; Support to Applications, Service Level support; and Support to Architecture and Engineering.

12.4.3. Netbackup Solution AWS is for the daily backup/replication of AWS West Commercial tenant and the AWS East Commercial tenant for disaster recovery purposes. Contractor shall provide both licensing and support. Contractor will bill AWS backup storage associated with Netbackup Solution AWS plus a markup of 5% on a monthly basis.

12.4.4. Contractor will bill the County for AWS and MS Azure services consumed by business applications (e.g., compute, storage, database) plus a markup of 5% on a monthly basis.

12.4.5. Contractor will bill the County for AWS services associated with providing Core services in both AWS GovCloud and AWS Commercial Cloud plus a markup of 5% on a monthly basis. AWS services are limited to the following Core Services: Logging (CloudTrail), Monitoring (CloudWatch), Network Foundation (VPC), Security (GuardDuty, SecurityHubs, SecretsManager), Governance (AWSConfig), Directory Services (AWS DirectoryService), Compute (EC2), Database (RDS), Storage (S3, FSX, EBS), and Supporting Services (SNS, ELB, APIGateway, etc.)

Contractor will also bill the County for the services provided by AWS and MS Azure plus a markup of 5% on a monthly basis. These services are based on consumption based and therefore variable.

12.5. Low Code Application Platform – Outsystems

This section pertain to the Low code Application Platform – Outsystems Resource Unit (RU) associated with the services described in Schedule 4.3, Section 6.7.1 and listed in Exhibit 16-1-1, Fees Summary by Resource Unit.

12.5.1. The Low Code Application Platform – Outsystems RU is based on the Outsystems solution. The County will be charged the RU Fee listed in Exhibit 16.1-1 only for the internal County users and will provide access to unlimited number of applications within the platform. Enterprise licenses for external users will be charged separately.

13. APPLICATIONS SERVICES

13.1. Application Maintenance and Operations Services

See Exhibit 16.1-5b for details.

13.2. Application Development Services

13.2.1. Procurement of Applications Development

The County can procure Applications Development services for one-time IT Work through Contractor via any of the methods described below. If the resulting solution requires additional software licensing or hardware not already covered by the Agreement, this shall be handled through existing language in the Agreement for third-party agreements.

13.2.2. Contractor Developed

Per County Service Request, Contractor shall develop and price a solution based on a Statement of Work. Solution may be firm fixed price or time and materials based using the Resource Units in Exhibit 16.1-1 and the Labor Categories in Exhibit 16.1-4.

13.2.3. Pre-Approved Vendors

Per County Service Request, Contractor shall conduct a competitive procurement amongst the vendors on the pre-approved vendors list (maintained in the Standards and Procedures Manual), soliciting a priced solution based on a Statement of Work agreed to by both the County and Contractor. This activity is within the scope of the Contract and Acquisition Management Services.

13.2.4. Request for Proposal

Per County Service Request, Contractor shall conduct a competitive Request for Proposal (RFP) procurement process for a priced solution based on a Statement of Work agreed to by both the County and Contractor. County will be charged the Acquisition Manager Resource Unit Fee on an hourly basis as listed on Exhibit 16.1-1 should this effort require resources beyond what is provided in Contract and Acquisition Management Services.

13.2.5. Firm Fixed Price Projects

The County can request a firm fixed price (FFP) for certain IT work. Projects eligible for FFP work requests will be one-time efforts with specific time frames, scopes of work and defined deliverables. A project may include both Contractor and Third Party labor cost; Contractor labor cost only; and/or required hardware costs not already apart of the Agreement. Software licensing costs can be handled through existing language in the Agreement.

The County will provide a Statement of Work (SOW) to allow Contractor to adequately determine the requirements and costs associated with the project. The SOW will contain the project scope, project management requirements, reporting requirements, deliverables and schedule requirements, and validation and acceptance criteria, as well as specific warranty requirements (if applicable) and any terms that are different than contained in the underlying Agreement. The County may choose to require a performance bond or some other security vehicle depending upon the cost and scope level of the project being considered. The County will also establish as a part of the SOW the payment terms for the particular project, including performance and/or value-based payment methodologies. In some instances, the County may identify some terms in the underlying Agreement that may not apply to a given FFP Service Request and any exclusions, will be negotiated prior to final County approval of the FFP Service Request. The payment terms and SOW shall encompass the tasks required for the resulting solution to be included immediately after the conclusion of the project in the Applications Portfolio and Applications Maintenance and Operations Services. All aspects of the finalized SOW must be agreed to by both the County and Contractor prior to execution of the FFP Service Request.

FFP Service Request will be issued accordingly based on County selected procurement method as described in Section 13.2.1. Regardless of selected method, FFP Service Request will be subject to the requirements as called out in the Agreement for such documents. As with all work requests, appropriate cost breakdowns will be required from Contractor for review by the County.

Negotiations may be initiated by either party with respect to requirements, pricing or any other aspect of the project at any time after the submission of the SOW by the County until such time as the Service Request has been signed off and approved by both Contractor and the County. Any changes in project scope must include the proposed impact to pricing and schedule, which will be negotiated and mutually agreed to by both parties.

14. SPECIAL SERVICE LEVELS

This section pertains to the Fees associated with Schedule 4.8-1 and listed in Exhibit 16.1-1.

14.1. Registrar of Voters

The Special Service Level (SL) Support for Registrar of Voters (ROV) shall be billed at a pro-rated daily Resource Unit Fee per Exhibit 16.1-1. An authorized Service Request from ROV shall detail the start and end date of Special SL Support.

14.2. Treasurer-Tax Collector

The Special Service Level (SL) Support for Treasurer-Tax Collector (TTC) shall be billed as follows:

14.2.1. Fixed Price Event Coverage – Tax Collection

A one-time Resource Unit (RU) Fee for Special SL Support shall be billed per Tax Collection. The RU Fee covers a five (5) day period that is selected by TTC and detailed in the Service Request.

14.2.2. Fixed Price Event Coverage – Tax Sale

A one-time RU Fee for Special SL Support shall be billed per Tax Sale. The RU Fee covers a five (5) day period that is selected by TTC and detailed in the Service Request.

14.2.3. Special SL Support Daily Coverage

A daily RU Fee for Special SSL Support beyond the five (5) days included in the Fixed Price Event Coverage shall be billed if invoked by TTC. An authorized Service Request from TTC shall detail the start and end date of additional Special SL Support period.

14.3. Assessor / Record / County Clerk (ARCC) Acclaim

The Special Service Level (SL) Support for ARCC Acclaim shall be billed as follows:

14.3.1. Fixed Price Event Coverage – ARCC Month End

A Resource Unit (RU) for Special SL Support for ARCC Acclaim shall be billed per ARCC Month End Event. Due to the nature of the ARCC Month End Event, it will be billed automatically on every billing cycle. The Resource Unit Fee covers the last two business days of each month.

14.3.2. Fixed Price Event Coverage – ARCC Holiday Event

An RU for Special SL Support for ARCC Acclaim shall be billed per ARCC Holiday Event, if invoked. The Resource Unit Fee covers the business day before and business day after a County holiday.

14.3.3. Special SL Support Daily Coverage

ARCC may elect to invoke Special SL support beyond the days included in the Fixed Price Event Coverage. Should this be the case, the ARCC Special Support Daily Coverage rate will be charged for each additional day.

14.3.4. Immediate Response and Escalated Priority

Immediate Response and Escalated Priority apply to Applications as well as Infrastructure framework efforts related to e-Recording regardless of whether those efforts are being paid for via the Fixed Price Event Coverage, Special Support Daily Coverage, or by a separate Applications work request.

14.3.5. Application Support

Although the Special SL Support applies to work performed by the Applications Framework, payment for Application Services is provided on a time and materials basis under labor rates stated in the Agreement and is not part of the SL billing.

END OF SCHEDULE

*Schedule 4.3 Reference includes the Section reference for the specific requirements for this particular Resource Unit but it still includes all general requirements applicable to such Resource Unit in the higher levels of the obligations hierarchy as described in Schedule 4.3. For example, the Resource Unit for Desktop - Standard Workstation includes not only the responsibilities as stated in Section 4.5 of the End-User Services Section of Schedule 4.3, but also the responsibilities in Sections 4.1 through 4.3 of the End-User Services Section, as well as the responsibilities and requirements in Section 1 of Schedule 4.3.
**Baseline volume is undetermined at this time
*** The mainframe RU unit volumes are based on the R24 CPUs
****With the exception of 2.3.1.4 and 2.3.1.5, and their respective requirements

1. OVERVIEW

Schedule 16.1-1a – Fees Sample Calculations, describes the calculation steps for determining the applicable Resource Unit Fee for Resource Units where banding applies.

2. NON-BUNDLED RESOURCE UNITS CALCULATION

For Resources Units in Exhibit 16.1-1 without a 'bundle' designation (e.g., B1 or B2), the applicable Resource Unit Fee band is determined based on the County's actual volume of consumption for such Resource Unit.

Sample Calculation Data:

Resource Unit (RU): Voice Single Line

Sample Actual Monthly Volume: 3,700

1. Given that the Baseline Volume (per Contract Year) for Voice Single Line per Exhibit 16.1-1 is 39648, the Monthly Baseline volume is 3304.

   Voice Single Line Baseline Volumes (per Contract Year) ÷ 12

   39,648 ÷ 12 = 3,304

2. Given that the Monthly Baseline Volume for Voice Single Line is 3304, the monthly volume thresholds for the various bands are as follows:

   90-110% Threshold for Voice Jack - Single-Line = 3,634 (110% x 3,304)

   110-120% Threshold for Voice Jack - Single-Line = 3,965 (120% x 3,304)

   120-130% Threshold for Voice Jack - Single-Line = 4295 (130% x 3,304)

3. Given that the Sample Actual Monthly Volume is 3700, the 110-120% band should be used to calculate monthly charge for Voice Single Line.

   110-120% Band RU Fee = $2.00 (for purposes of this example only)

   Actual Monthly Volume = 3,700

   Calculation = $2.00 x 3,700

   Sample Monthly Service Fee = $7,400

3. BUNDLED RESOURCE UNITS CALCULATION

For Resources Units in Exhibit 16.1-1 with a 'bundle' designation (e.g. B1 or B2), the applicable Resource Unit Fee band is determined based on the aggregate Actual Monthly volume of all Resource Units within the bundle.

Example 1: In this example, the Actual Monthly volume for the bundle falls within the 90-110% band and therefore all Resource Units within the bundle will use the 90-110% band RU Fee.

Sample Calculation Data:

Resource Unit (RU): Desktop – Standard Workstation

Bundle Designation: B1

Sample Actual Monthly Volume for Desktop – Standard Workstation: 8,000

Sample Actual Monthly Volume for B1: 16,000

a) Given that the Baseline Volume (per Contract Year) for bundle 'B1' per Exhibit 16.1-1 is 179388, the Monthly Baseline volume is 14949.

B1 Baseline Volumes (per Contract Year) ÷ 12

179,388 ÷ 12 = 14,949

b) Given that the Monthly Baseline Volume for bundle 'B1' is 14949, the monthly volume thresholds for the various bands are as follows:

90-110% Threshold for B1= 16,444 (110% x 14,949)

110-120% Threshold for B1= 17,939 (120% x 14,949)

120-130% Threshold for B1= 19,434 (130% x 14,949)

c) Given that the Sample Actual Monthly Volume for bundle 'B1' is 16000, the 90-110% band should be used to calculate monthly charge for Desktop – Standard Workstation and all other Resource Units within the bundle.

90-110% Band RU Fee = $2.00 (for purposes of this example only)

Actual Monthly Volume = 8,000

Calculation = $2.00 x 8,000

Sample Monthly Service Fee = $16,000

Example 2: In this example, the Actual Monthly volume for the bundle falls outside the 90-110% band and therefore the banding in Exhibit 16.1-1 should be applied individually to each Resource Unit within the bundle.

Sample Calculation Data:

Resource Unit (RU): Desktop – Standard Workstation

Bundle Designation: B1

Sample Actual Monthly Volume for Desktop – Standard Workstation: 8,000

Sample Actual Monthly Volume for B1: 17,000

a) Given that the Baseline Volume (per Contract Year) for bundle 'B1' per Exhibit 16.1-1 is 179388, the Monthly Baseline volume is 14949.

B1 Baseline Volumes (per Contract Year) ÷ 12

179,388 ÷ 12 = 14,949

b) Given that the Monthly Baseline Volume for bundle 'B1' is 14949, the monthly volume thresholds for the various bands are as follows:

90-110% Threshold for B1= 16,444 (110% x 14,949)

110-120% Threshold for B1= 17,939 (120% x 14,949)

120-130% Threshold for B1= 19,434 (130% x 14,949)

c) Given that the Sample Actual Monthly Volume for bundle 'B1' is 17000 falls outside of the 90-110% band, the banding for Desktop – Standard Workstation in Exhibit 16.1-1 applies instead of the banding for B1.

d) Given that the Baseline Volume (per Contract Year) for Desktop –Standard Workstation per Exhibit 16.1-1 is 112776, the Monthly Baseline volume is 9398.

Desktop – Standard Workstation Baseline Volumes (per Contract Year) ÷ 12

112,776 ÷ 12 = 9,398

e) Given that the Monthly Baseline Volume for Desktop –Standard Workstation is 9398, the monthly volume thresholds for the various bands are as follows:

70-80% Threshold for Desktop – Standard Workstation = 7,518 (80% x 9,398)

80-90% Threshold for Desktop – Standard Workstation = 8,458 (90% x 9,398)

90-110% Threshold for Desktop – Standard Workstation = 10,338 (110% x 9,398)

f) Given that the Sample Actual Monthly Volume for Desktop – Standard Workstation is 8000, the 80-90% band should be used to calculate monthly charge for Desktop – Standard Workstation.

80-90% Band RU Fee = $1.00 (for purposes of this example only)

Actual Monthly Volume = 8,000

Calculation = $1.00 x 8,000

Sample Monthly Service Fee = $8,000

4. THIRD PARTY AGREEMENTS FEES CALCULATION

Below are sample calculations for the three-tiered level pricing for Third-Party Agreements.

4.1. Third Party Negotiation – Large

Example 1: County requests Contractor to contract and purchase software licenses and implementation labor from company AAA. Company AAA is not a third-party vendor currently contracted by Contractor in support of the Services. The vendor price of the software is $300,000 plus $50,000 for the first year of software maintenance. The vendor price for implementation labor is $200,000.

a) Given that company AAA is not a Third-Party vendor currently contracted by Contractor in support of Services, and the transaction amount is in excess $500,000, the Third Party Negotiation – Large Resource Unit Fee applies.

   Third Party Negotiation – Large = $10,000

b) Additionally, the Third Party Transaction Resource Unit Fee of 5% applies to the transaction amount.

   ($300,000 + $50,000 + $200,000) x 5% = $27,500

Total fees are $37,500.

4.2. Third Party Negotiation – Small

Example 1: County requests Contractor to contract and purchase software licenses from company BBB. Company BBB is not a Third-Party vendor currently contracted by Contractor in support of the Services. The vendor price of the software is $80,000 plus $20,000 for the first year of software maintenance.

a) Given that company BBB is not a Third-Party vendor currently contracted by Contractor in support of Services, and the transaction amount is less than $500,000, the Third Party Negotiation – Small Resource Unit Fee applies.

   Third Party Negotiation – Small = $5,000

b) Additionally, the Third Party Transaction Resource Unit Fee of 5% applies to the transaction amount.

   ($80,000 + $20,000) x 5% = $5,000

Total fees are $10,000.

4.3. Third Party Transaction

Example 1 (License Maintenance Renewal): Per County request, Contractor procures software maintenance renewal from vendor AAA. Vendor AAA is a Third-Party vendor that has not contracted with Contractor before. Contractor issues a Purchase Order (PO) in the amount of $20,000 for the software maintenance renewal.

Given that Contractor negotiated a new agreement with Vendor AAA, the Third Party Negotiation – Small and Third Party Transaction Resource Unit Fees apply.

Formula:	Third Party Negotiation – Small + (5% x PO amount)
Fee Calculation:	$5,000 + (5% x $20,000) = $6,000
	Note: The Third Party Transaction Fee of 5% is applied to each invoice received from Vendor AAA.

Example 2 (Perpetual License Purchase): Per County request, Contractor procures perpetual licenses from vendor BBB. Vendor BBB is a Third-Party vendor already contracted by Contractor in support of the Services. Contractor issues a PO in the amount of $1.1M for the perpetual licenses.

Given that Contractor did not negotiate a new agreement with Vendor BBB, only the Third Party Transaction Resource Unit Fee applies.

Formula:	5% x PO amount
Fee Calculation:	5% x $1.1M = $55,000
Actual Fee:	$50,000 (due to fee maximum of $50,000)
	Note: The Third Party Transaction Fee of 5% is applied to each invoice received from Vendor BBB up to the maximum amount of $50,000.

Example 3 (Hardware): Per County request, Contractor procures one large scanner not available in the Optional Item Catalog or as a Resource Unit. The scanner is purchased through a Third-Party vendor already contracted by Contractor in support of the Services. Contractor issues a PO in the amount of $1,000 for the scanner.

Given that Contractor did not negotiate a new agreement with Third-Party vendor, only the Third Party Transaction Resource Unit Fee applies.

Formula:	5% x PO amount
Fee Calculation:	5% x $1,000 = $50
Actual Fee:	$100 (due to fee minimum of $100)
	Note: The Third Party Transaction Fee of $100 is applied to the invoice.

Example 4 (Labor Statement of Work): Per County request, Contractor contracts with vendor DDD for a project. Vendor DDD has not contracted with Contractor before. Contractor issues a PO in the amount of $750,000 based on a Statement of Work.

Given that Contractor negotiated a new agreement with Vendor DDD, the Third Party Negotiation – Large and Third Party Transaction Resource Unit Fees apply.

Formula: Third Party Negotiation – Small + (5% x PO amount)

Fee Calculation: $10,000 + (5% x $750,000) = $47,500

Note: The Third Party Transaction Fee of 5% is applied to each invoice received from Vendor DDD.

Example 5 (Labor Statement of Work Change Request): Per County request, Contractor issues a Change Request to Vendor DDD (see Example 4 above) in the amount of $500,000. The PO total is now $1.2M.

Formula: (5% x PO amount up to $1M) +
(4% x PO amount between $1M - $10M)

Fee Calculation: (5% x $1M) + (4% x $250,000) = $60,000

Note: The applicable Third Party Transaction Fee Tier is applied to each invoice received from Vendor DDD. The 5% fee is applied until aggregate amount of all invoices from the vendor reaches the $1M threshold, then the 4% fee is applied to any further invoice.

Example 6 (Labor Statement of Work): Per County request, Contractor contracts with vendor EEE for a project. Vendor EEE is a Third-Party vendor already contracted by Contractor in support of the Services. Contractor issues a PO in the amount of $3M based on a Statement of Work.

Given that Contractor did not negotiate a new agreement with Vendor EEE, only the Third Party Transaction Resource Unit Fee applies.

Formula: 4% x PO amount

Fee Calculation: 4% x $3M = $120,000
Note: The Third Party Transaction Fee Tier of 4% is applied to each invoice received from Vendor EEE.

Example 7 (SaaS License Subscription): Per County request, Contractor procures licenses from vendor FFF through a three-year subscription agreement with a Total Contract Value of $1.8M. Vendor FFF is a Third-Party vendor already contracted by Contractor in support of the Services. Contractor issues a PO in the amount of $600K for the 1st year of subscription.

Given that Contractor did not negotiate a new agreement with Vendor FFF, only the Third Party Transaction Resource Unit Fee applies.

Formula: 4% x PO amount
Fee Calculation: 4% x $600,000 = $24,000 for the 1st year
4% x $600,000 = $24,000 for the 2nd year
4% x $600,000 = $24,000 for the 3rd year
Note: The Third Party Transaction Fee Tier of 4% is applied to each invoice received from Vendor FFF.

5. VIRTUAL PHONE – MICROSOFT (MS) TEAMS PHONE ADVANCED FEATURES RESOURCE ACCOUNT CALCULATION

Below are sample calculations for the Resource Account Licenses associated with Virtual Phone – Microsoft (MS) Teams Phone Advanced Feature RU.

Example 1: County department has one (1) call flow with two (2) auto-attendants and one (1) call queue.

In addition to being billed the Virtual Phone – Microsoft (MS) Teams Phone Advanced features monthly Resource unit (RU) fee, the County department shall be billed for three (3) Resource Account licenses monthly via the Catalog RU and the applicable number of Virtual Phone – MS Teams Phone RU associated with the call flow.

Example 2: County department has two (2) call flows set-up with ten (10) auto-attendants and five (5) call queues. The County department will be billed as follows:

2 x Virtual Phone – MS Teams Phone Advanced Features monthly RU fee

Thirty (30) Resource Account licenses monthly RU fee

Applicable number of Virtual Phone – MS Teams Phone RU associated with the call flow

END OF SCHEDULE

				End User Services		$ 44,495.03	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Security Management services in support of End User Services.
				Network Services		$ 57,901.58	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Security Management services in support of Network Services.
				Data Center Services		$ 39,146.40	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Security Management services in support of Data Center Services.
				Application Maintenance & Operations Services		$ 31,603.34	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Security Management services in support of Applications Maintenance & Operations Services.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Application Development Services		$ 60,354.50	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Security Management services in support of Application Development Services.
				Hardware		$ -	N/A
				Software		$ 2,657.88	Represents Software tools to support the County Environment.
				Labor		$ 238,089.26	Represents the labor to support Security Management Services as defined in Schedule 4.3, Section 2.6.
Malware Protection	Schedule 4.3 Section 2.6	Month	Fixed Monthly Per Unit		$ 5,062.50		
				Hardware			
				Software		$ 2,812.50	Represents the estimate of the Non-OS License Software.
				Hardware Maintenance			N/A
				Software Support		$ 2,250.00	Third-Party vendor and ITO support, including implementation of County required changes and modifications after the initial integration.
Secure Internet Access	Schedule 4.3 Section 2.6	Month	Fixed Monthly Per Unit		$ 27,100.00		
				Hardware			N/A
				Software		$ 17,500.00	Represents the estimate of the Non-OS License Software.
				Hardware Maintenance			N/A
				Software Support		$ 9,600.00	Third-Party vendor and ITO support, including implementation of County required changes and modifications after the initial integration.
Multi-Factor Authentication Service	Schedule 4.3 Section 2.6	Month	Fixed Monthly Per Unit		$ 42,152.00		
				Hardware		$ -	
				Operating System License		$ -	
				Other Software License		$ 22,500.00	Represents the estimate of the Non-OS License Software.
				Hardware Maintenance		$ -	
				Software Maintenance		$ 19,652.00	Represents costs associated with software maintenance along with the labor and resources for support by vendor and Contractor.
Service Delivery Management Services	Schedule 4.3 - Section 2.7	Month	Fixed Monthly Fee Per Unit		$ 197,508.06		
				Service Desk Services		$ 6,368.85	Represents the portion of Service Delivery Management labor attributable to providing Service Desk Services.
				End User Services		$ 39,107.13	Represents the portion of Service Delivery Management labor attributable to providing End User Services.
				Network Services		$ 36,803.24	Represents the portion of Service Delivery Management labor attributable to providing Network Services.
				Data Center Services		$ 34,406.17	Represents the portion of Service Delivery Management labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 27,776.49	Represents the portion of Service Delivery Management labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 53,046.18	Represents the portion of Service Delivery Management labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 197,508.06	Represents the labor to support SDM Services as defined in Schedule 4.3, Section 2.7.
Project Management Services	Schedule 4.3 - Section 2.9	Month	Fixed Monthly Fee Per Unit		$ 133,967.13		
				Service Desk Services		$ 3,597.84	Represents the portion of Project Management labor attributable to providing Service Desk Services.
				End User Services		$ 22,092.06	Represents the portion of Project Management labor attributable to providing End User Services.
				Network Services		$ 43,183.15	Represents the portion of Project Management labor attributable to providing Network Services.
				Data Center Services		$ 19,436.43	Represents the portion of Project Management labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 15,691.26	Represents the portion of Project Management labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 29,966.39	Represents the portion of Project Management labor attributable to providing Application Development Services.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 133,967.13	Represents the labor to support Project Management Services as defined in Schedule 4.3, Section 2.9.
Integration and Testing Services	Schedule 4.3 - Section 2.10	Month	Fixed Monthly Fee Per Unit		$ 36,346.87		
				Service Desk Services		$ 976.14	Represents the portion of Integration and Testing labor attributable to providing Service Desk Services.
				End User Services		$ 5,993.84	Represents the portion of Integration and Testing labor attributable to providing End User Services.
				Network Services		$ 11,716.10	Represents the portion of Integration and Testing labor attributable to providing Network Services.
				Data Center Services		$ 5,273.33	Represents the portion of Integration and Testing labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 4,257.22	Represents the portion of Integration and Testing labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 8,130.24	Represents the portion of Integration and Testing labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 36,346.87	Represents the labor to support Integrated and Testing Services as defined in Schedule 4.3, Section 2.10.
Incident Management Services	Schedule 4.3 - Section 2.11	Month	Fixed Monthly Fee Per Unit		$ 3,316.47		
				Service Desk Services		$ 89.07	Represents the portion of Incident Management labor attributable to providing Service Desk Services.
				End User Services		$ 546.91	Represents the portion of Incident Management labor attributable to providing End User Services.
				Network Services		$ 1,069.04	Represents the portion of Incident Management labor attributable to providing Network Services.
				Data Center Services		$ 481.17	Represents the portion of Incident Management labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 388.45	Represents the portion of Incident Management labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 741.84	Represents the portion of Incident Management labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 3,316.47	Represents the labor to support Incident Management Services as defined in Schedule 4.3, Section 2.11.
Problem Management Services	Schedule 4.3 - Section 2.12	Month	Fixed Monthly Fee Per Unit		$ 3,316.47		
				Service Desk Services		$ 89.07	Represents the portion of Problem Management labor attributable to providing Service Desk Services.
				End User Services		$ 546.91	Represents the portion of Problem Management labor attributable to providing End User Services.
				Network Services		$ 1,069.04	Represents the portion of Problem Management labor attributable to providing Network Services.
				Data Center Services		$ 481.17	Represents the portion of Problem Management labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 388.45	Represents the portion of Problem Management labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 741.84	Represents the portion of Problem Management labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 3,316.47	Represents the labor to support Problem Management Services as defined in Schedule 4.3, Section 2.12.
Change Management Services	Schedule 4.3 - Section 2.13	Month	Fixed Monthly Fee Per Unit		$ 9,310.92		
				Service Desk Services		$ 250.06	Represents the portion of Change Management labor attributable to providing Service Desk Services.
				End User Services		$ 1,535.43	Represents the portion of Change Management labor attributable to providing End User Services.
				Network Services		$ 3,001.30	Represents the portion of Change Management labor attributable to providing Network Services.
				Data Center Services		$ 1,350.86	Represents the portion of Change Management labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 1,090.57	Represents the portion of Change Management labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 2,082.71	Represents the portion of Change Management labor attributable to providing Application Development Services.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 9,310.92	Represents the labor to support Change Management Services as defined in Schedule 4.3, Section 2.13.
Release Management Services	Schedule 4.3 - Section 2.14	Month	Fixed Monthly Fee Per Unit		$ 10,477.58		
				Service Desk Services		$ 281.39	Represents the portion of Release Management labor attributable to providing Service Desk Services.
				End User Services		$ 1,727.82	Represents the portion of Release Management labor attributable to providing End User Services.
				Network Services		$ 3,377.36	Represents the portion of Release Management labor attributable to providing Network Services.
				Data Center Services		$ 1,520.13	Represents the portion of Release Management labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 1,227.21	Represents the portion of Release Management labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 2,343.67	Represents the portion of Release Management labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 10,477.58	Represents the labor to support Release Management Services as defined in Schedule 4.3, Section 2.14.
Configuration Management	Schedule 4.3 - Section 2.15	Month	Fixed Monthly Fee Per Unit		$ 18,074.33		
				Service Desk Services		$ 485.41	Represents the portion of Configuration Management labor attributable to providing Service Desk Services.
				End User Services		$ 2,980.58	Represents the portion of Configuration Management labor attributable to providing End User Services.
				Network Services		$ 5,826.10	Represents the portion of Configuration Management labor attributable to providing Network Services.
				Data Center Services		$ 2,622.29	Represents the portion of Configuration Management labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 2,117.00	Represents the portion of Configuration Management labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 4,042.95	Represents the portion of Configuration Management labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 18,074.33	Represents the labor to support Configuration Management Services as defined in Schedule 4.3, Section 2.15.
Capacity Planning and Performance Management Services	Schedule 4.3 - Section 2.16	Month	Fixed Monthly Fee Per Unit		$ 17,497.78		
				Service Desk Services		$ 469.92	Represents the portion of Capacity Planning and Performance Management labor attributable to providing Service Desk Services.
				End User Services		$ 2,885.50	Represents the portion of Capacity Planning and Performance Management labor attributable to providing End User Services.
				Network Services		$ 5,640.26	Represents the portion of Capacity Planning and Performance Management labor attributable to providing Network Services.
				Data Center Services		$ 2,538.64	Represents the portion of Capacity Planning and Performance Management labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 2,049.47	Represents the portion of Capacity Planning and Performance Management labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 3,913.99	Represents the portion of Capacity Planning and Performance Management labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 17,497.78	Represents the labor to support Capacity Planning and Performance Management Services as defined in Schedule 4.3, Section 2.16.
Disaster Recovery Management Services	Schedule 4.3 - Section 2.17	Month	Fixed Monthly Fee Per Unit		$ 208,849.96		
				Service Desk Services		$ 104.42	Represents the labor required to manage, update and test the Disaster Recovery Plan for Service Desk Services.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				End User Services		$ 208.85	Represents the labor required to manage and update Disaster Recovery Plan documents for End User Services. This includes providing input to County Business Continuity Plans and supporting testing as needed.
				Network Services		$ 41,769.99	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support Network Disaster Recovery Services.
				Data Center Services		$ 156,324.19	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support Data Center Disaster Recovery Services.
				Application Maintenance & Operations Services		$ 10,442.50	Represents the labor required to manage, update and test the Technical Recovery Plans for individual Applications, within the scope of the Data Center Disaster Recovery Plan.
				Application Development Services		$ -	N/A
				Hardware		$ 124,535.16	Represents the servers routers, switches, and storage equipment required to support DR environment.
				Software		$ 34,298.94	Represents the software costs associated with DR hardware used to support the DR environment.
				Labor		$ 50,015.86	Represents the labor to support Disaster Recovery Management Services as defined in Schedule 4.3, Section 2.17.
Identity Access Management Services	Schedule 4.3 - Section 2.18	Month	Fixed Monthly Fee Per Unit		$ 147,777.10		
				Service Desk Services		$ 3,968.72	Represents the portion of Identity Access Management labor attributable to providing Service Desk Services.
				End User Services		$ 24,369.42	Represents the portion of Identity Access Management labor attributable to providing End User Services.
				Network Services		$ 47,634.68	Represents the portion of Identity Access Management labor attributable to providing Network Services.
				Data Center Services		$ 21,440.03	Represents the portion of Identity Access Management labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 17,308.79	Represents the portion of Identity Access Management labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 33,055.47	Represents the portion of Identity Access Management labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ 23,731.41	Includes Symantec PKI Maintenance and Tools for IDAM resources to support the County environment.
				Labor		$ 124,045.69	Represents the labor to support Identity Access Management Services as defined in Schedule 4.3, Section 2.18.
Reporting Management Services	Schedule 4.3 - Section 2.19	Month	Fixed Monthly Fee Per Unit		$ 73,993.82		
				Service Desk Services		$ 1,987.19	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Reporting Management services in support of Service Desk Services.
				End User Services		$ 12,202.07	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Reporting Management services in support of End User Services.
				Network Services		$ 23,851.27	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Reporting Management services in support of Network Services.
				Data Center Services		$ 10,735.29	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Reporting Management services in support of Data Center Services.
				Application Maintenance & Operations Services		$ 8,666.72	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Reporting Management services in support of Applications Maintenance & Operations Services.
				Application Development Services		$ 16,551.28	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Reporting Management services in support of Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 73,993.82	Represents the labor to support Reporting Management Services as defined in Schedule 4.3, Section 2.19.
Domain Name Management Services	Schedule 4.3 - Section 2.20	Month	Fixed Monthly Fee Per Unit		$ 1,523.67		
				Service Desk Services		$ -	N/A
				End User Services		$ -	N/A
				Network Services		$ 1,523.67	Represents the portion of Domain Name Management labor attributable to providing Network Services.
				Data Center Services		$ -	N/A

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Application Maintenance & Operations Services		$ -	N/A
				Application Development Services		$ -	N/A
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 1,523.67	Represents the labor to support Domain Name Management Services as defined in Schedule 4.3, Section 2.20.
Business Analyst Services	Schedule 4.3 - Section 2.21	Month	Fixed Monthly Fee Per Unit		$ 79,296.61		
				Service Desk Services		$ 2,985.45	Represents the portion of Business Analyst Services labor attributable to providing Service Desk Services.
				End User Services		$ 18,331.81	Represents the portion of Business Analyst Services labor attributable to providing End User Services.
				Network Services		$ 3,964.83	Represents the portion of Business Analyst Services labor attributable to providing Network Services.
				Data Center Services		$ 16,128.19	Represents the portion of Business Analyst Services labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 13,020.47	Represents the portion of Business Analyst Services labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 24,865.86	Represents the portion of Business Analyst Services labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 79,296.61	Represents the labor to support Business Analyst Services as defined in Schedule 4.3, Section 2.21.
Chief Technical Architect Services	Schedule 4.3 - Section 2.22	Month	Fixed Monthly Fee Per Unit		$ 18,188.23		
				Service Desk Services		$ 3,031.37	Represents the portion of CTA labor attributable to providing Service Desk Services.
				End User Services		$ 3,031.37	Represents the portion of CTA labor attributable to providing End User Services.
				Network Services		$ 3,031.37	Represents the portion of CTA labor attributable to providing Network Services.
				Data Center Services		$ 3,031.37	Represents the portion of CTA labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 3,031.37	Represents the portion of CTA labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 3,031.37	Represents the portion of CTA labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 18,188.23	Represents the labor to support CTA Services as defined in Schedule 4.3, Section 2.22.
Enterprise Applications Architect Services	Schedule 4.3 - Section 2.23	Month	Fixed Monthly Fee Per Unit		$ 18,188.23		
				Service Desk Services		$ 3,031.37	Represents the portion of EAA labor attributable to providing Service Desk Services.
				End User Services		$ 3,031.37	Represents the portion of EAA labor attributable to providing End User Services.
				Network Services		$ 3,031.37	Represents the portion of EAA labor attributable to providing Network Services.
				Data Center Services		$ 3,031.37	Represents the portion of EAA labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 3,031.37	Represents the portion of EAA labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 3,031.37	Represents the portion of EAA labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 18,188.23	Represents the labor to support EAA Services as defined in Schedule 4.3, Section 2.23.
Innovation Management Services	Schedule 4.3 - Section 2.24	Month	Fixed Monthly Fee Per Unit		$ 20,069.65		
				Service Desk Services		$ 3,344.94	Represents the portion of Innovation Management labor attributable to providing Service Desk Services.
				End User Services		$ 3,344.94	Represents the portion of Innovation Management labor attributable to providing End User Services.
				Network Services		$ 3,344.94	Represents the portion of Innovation Management labor attributable to providing Network Services.
				Data Center Services		$ 3,344.94	Represents the portion of Innovation Management labor attributable to providing Data Center Services.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Application Maintenance & Operations Services		$ 3,344.94	Represents the portion of Innovation Management labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 3,344.94	Represents the portion of Innovation Management labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 20,069.65	Represents the labor to support Innovation Management Services as defined in Schedule 4.3, Section 2.24.
Service Desk Services	Section 3.0	Month	Fixed Monthly Fee Per Unit		$ 198,226.81		
				Service Desk Services		$ 5,323.60	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support Service Desk Services.
				End User Services		$ 32,688.91	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support End User Services.
				Network Services		$ 63,896.71	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support Network Services.
				Data Center Services		$ 28,759.46	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support Data Center Services.
				Application Maintenance & Operations Services		$ 23,217.84	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support App Maintenance Services.
				Application Development Services		$ 44,340.29	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support App Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 198,226.81	Represents the labor to support Service Desk Services as defined in Schedule 4.3, Section 2.3.
Duo Hardware Token MFA	Schedule 4.3 - Section 4.5.2	Account	Fixed Monthly Fee Per Unit		$ 5.28		
				Hardware		$ -	N/A
				Software License		$ 2.97	Represents the cost of software license subscription.
				IMARS		$ 2.31	Represents labor costs for IMAR activities, Tier 1 Helpdesk.
Electronic Signature	Schedule 4.3 - Section 4.5.2	Transaction	Fixed Fee Per Unit		$ 1.01		
				Hardware		$ -	N/A
				Hardware (Refresh Labor)		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software License		$ -	N/A
				Software Maintenance		$ 0.81	Represents the cost associated to the software maintenance and labor costs.
				IMAR's		$ 0.0074	Represents the cost associated to the IMAR labor.
				Service Desk		$ 0.19	Represents costs associated with Service Desk labor.
Desktop - 3D Workstation	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Fee Per Unit		$ 273.69		
				Hardware		$ 145.06	Represents the costs of acquiring the asset. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 26.90	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 28.71	Represents break-fix services, primarily labor and parts.
				Software License		$ 21.51	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 39.47	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 10.78	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 1.26	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - Advanced Engineering Workstation	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Fee Per Unit		$ 210.24		
				Hardware		$ 120.00	Represents the costs of acquiring the asset. The component fee is the monthly lease payments for a leasing term of 4 years.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Hardware (Refresh Labor)		$ 18.92	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 20.24	Represents break-fix services, primarily labor and parts.
				Software License		$ 15.13	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 27.74	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 7.64	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.57	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - Advanced Workstation	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Fee Per Unit		$ 94.11		
				Hardware		$ 49.88	Represents the costs of acquiring the asset. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 9.25	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 9.87	Represents break-fix services, primarily labor and parts.
				Software License		$ 7.40	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 13.57	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 3.71	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.43	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - Engineering Workstation	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Fee Per Unit		$ 111.13		
				Hardware		$ 64.61	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 10.72	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 7.88	Represents break-fix services, primarily labor and parts.
				Software License		$ 7.47	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 16.31	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 3.57	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.56	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - Gold Engineering Workstation	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Fee Per Unit		$ 295.72		
				Hardware		$ 205.48	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 18.92	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 20.24	Represents break-fix services, primarily labor and parts.
				Software License		$ 15.13	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 27.74	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 7.64	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.57	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - Mini Workstation	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Fee Per Unit		$ 64.96		
				Hardware		$ 30.56	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 6.00	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 5.31	Represents break-fix services, primarily labor and parts.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Software License		$ 6.05	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 14.53	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 2.00	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.50	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - Small Form Factor with Optical Drive	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Fee Per Unit		$ 64.96		
				Hardware		$ 30.56	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 6.00	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 5.31	Represents break-fix services, primarily labor and parts.
				Software License		$ 6.05	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 14.53	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 2.00	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.50	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - Standard Workstation	Schedule 4.3 - Section 4.5.3	Quantity	Fixed Monthly Per Unit		$ 64.96		
				Hardware		$ 30.56	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 6.00	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 5.31	Represents break-fix services, primarily labor and parts.
				Software License		$ 6.05	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 14.53	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 2.00	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.50	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - Scanner	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Per Unit		$ 136.17		
				Hardware		$ 105.13	Represents the costs of acquiring the asset, including feeder consumable kit. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 3.12	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 24.11	Represents break-fix services, primarily labor and parts, including annual preventive maintenance.
				Software License		$ -	N/A
				Software Maintenance		$ -	N/A
				IMAR's		$ 3.81	Represents labor costs for IMAR activities.
Laptop - Engineering	Schedule 4.3 - Section 4.5.3	Device	Fixed monthly fee per unit		$ 165.27		
				Hardware		$ 87.76	Represents the costs of acquiring the asset. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 16.26	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 17.39	Represents break-fix services, primarily labor and parts.
				Software License		$ 12.96	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 23.93	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 6.54	Represents labor costs for IMAR activities.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Desktop Application Directory Maintenance		$ 0.43	Represents the labor associated with maintaining the Desktop Application Directory.
Laptop - Ruggedized	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Per Unit		$ 188.33		
				Hardware		$ 120.73	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 11.27	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 10.60	Represents break-fix services, primarily labor and parts.
				Software License		$ 17.30	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 24.11	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 3.76	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.56	Represents the labor associated with maintaining the Desktop Application Directory.
Laptop - Standard	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Per Unit		$ 86.55		
				Hardware		$ 40.41	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 7.91	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 5.33	Represents break-fix services, primarily labor and parts.
				Software License		$ 12.38	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 17.35	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 2.64	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.52	Represents the labor associated with maintaining the Desktop Application Directory.
Laptop - Standard LTE	Schedule 4.3 - Section 4.5.3	Device	Fixed monthly fee per unit		$109.10		
				Hardware		$ 57.93	Represents the costs of acquiring the asset. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 10.74	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 11.47	Represents break-fix services, primarily labor and parts.
				Software License		$ 8.56	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 15.80	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 4.32	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.28	Represents the labor associated with maintaining the Desktop Application Directory.
Laptop - Ultra Portable	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Per Unit		$ 93.86		
				Hardware		$ 45.20	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 8.07	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 7.63	Represents break-fix services, primarily labor and parts.
				Software License		$ 12.45	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 17.25	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 2.69	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.56	Represents the labor associated with maintaining the Desktop Application Directory.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
Laptop - Ultra Portable 2in1	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Per Unit		$ 106.48		
				Hardware		$ 51.27	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 9.21	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 8.66	Represents break-fix services, primarily labor and parts.
				Software License		$ 14.13	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 19.57	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 3.07	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.56	Represents the labor associated with maintaining the Desktop Application Directory.
Tablet - Convertible	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Per Unit		$ 95.28		
				Hardware		$ 50.70	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 7.30	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 6.99	Represents break-fix services, primarily labor and parts.
				Software License		$ 11.41	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 15.94	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 2.43	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.51	Represents the labor associated with maintaining the Desktop Application Directory.
Tablet - Ruggedized	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Per Unit		$ 209.83		
				Hardware		$ 139.68	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 11.44	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 11.00	Represents break-fix services, primarily labor and parts.
				Software License		$ 17.95	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 25.38	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 3.81	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.57	Represents the labor associated with maintaining the Desktop Application Directory.
Tablet - Surface Pro	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Per Unit		$ 106.92		
				Hardware		$ 56.89	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 8.03	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 7.85	Represents break-fix services, primarily labor and parts.
				Software License		$ 12.80	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 18.10	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 2.68	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.57	Represents the labor associated with maintaining the Desktop Application Directory.
Tablet - Surface Pro LTE	Schedule 4.3 - Section 4.5.3	Device	Fixed monthly fee per unit		$138.02		

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Hardware		$ 73.28	Represents the costs of acquiring the asset. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 13.58	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 14.52	Represents break-fix services, primarily labor and parts.
				Software License		$ 10.82	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 19.98	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 5.47	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.37	Represents the labor associated with maintaining the Desktop Application Directory.
County Retained Device	Schedule 4.3 - Section 4.7.3	Device	Fixed Monthly Per Unit		$ 103.09		
				Software License		$ 12.34	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 17.45	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 72.75	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.55	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - DCSS	Schedule 4.3 - Section 4.7.3	Device	Fixed Monthly Per Unit		$ 36.23		
				Hardware (Refresh Labor)		$ 3.36	Represents the labor for providing support for refresh tasks, on a 4-year cycle.
				Hardware Maintenance		$ 5.81	Represents break-fix services, primarily labor and parts.
				Software License		$ 5.43	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 10.44	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 8.74	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.53	Represents the labor associated with maintaining the Desktop Application Directory.
				Printer Maintenance		$ 1.91	Represents Level 2 printer support.
Laptop - DCSS	Schedule 4.3 - Section 4.7.3	Device	Fixed Monthly Per Unit		$ 44.31		
				Hardware (Refresh Labor)		$ 3.36	Represents the labor for providing support for refresh tasks, on a 3-year cycle.
				Hardware Maintenance		$ 7.23	Represents break-fix services, primarily labor and parts.
				Software License		$ 6.65	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 13.12	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 10.89	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.68	Represents the labor associated with maintaining the Desktop Application Directory.
				Printer Maintenance		$ 2.38	Represents Level 2 printer support.
Mobile Devices Support Services - Intune	Section 4.8	Device	Fixed Monthly Fee Per Unit		$ 7.51		
				Software License		$ -	Represents the costs of AirWatch software licenses upgrades/refresh. The aggregated cost is apportioned over the volume of Mobile Devices.
				Software Maintenance		$ 1.94	Represents costs associated with the labor and resources for Level 2 support and centralized hosting costs for Mobile Services applications.
				IMAR's		$ 5.57	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ -	N/A

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
Printer - Color Network Workgroup - Large Format (CNWP-LF)	Schedule 4.3 - Section 4.11.3	Device	Fixed Monthly Fee Per Unit		$ 165.77		
				Hardware		$ 86.99	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 3.32	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 72.39	Represents break-fix services, primarily labor and parts.
				IMAR's		$ 3.07	Represents labor costs for IMAR activities.
Printer - Color Network Workgroup - Standard Format (CNWP)	Schedule 4.3 - Section 4.11.3	Device	Fixed Monthly Fee Per Unit		$ 67.57		
				Hardware		$ 40.87	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 1.01	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 23.33	Represents break-fix services, primarily labor and parts.
				IMAR's		$ 2.36	Represents labor costs for IMAR activities.
Printer - Monochrome Network Workgroup - Standard Format (MNWP)	Schedule 4.3 - Section 4.11.3	Device	Fixed Monthly Fee Per Unit		$ 60.49		
				Hardware		$ 36.37	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 1.21	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 21.81	Represents break-fix services, primarily labor and parts.
				IMAR's		$ 1.10	Represents labor costs for IMAR activities.
Printer - Monochrome Network Workgroup - Large Format (MNWP-LF)	Schedule 4.3 - Section 4.11.3	Device	Fixed Monthly Fee Per Unit		$ 97.43		
				Hardware		$ 67.29	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 1.95	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 26.63	Represents break-fix services, primarily labor and parts.
				IMAR's		$ 1.56	Represents labor costs for IMAR activities.
Printer - Monochrome Network High Volume - Large Format (MNWP-LF-H)	Schedule 4.3 - Section 4.11.3	Device	Fixed Monthly Fee Per Unit		$ 158.88		
				Hardware		$ 101.17	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 2.35	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 48.77	Represents break-fix services, primarily labor and parts.
				IMAR's		$ 6.59	Represents labor costs for IMAR activities.
Electronic File Sharing Services	Schedule 4.3 -- Section 4.12	User	Fixed Monthly Fee Per Unit		$ 81.25		
				Hardware		$ -	N/A
				Hardware maintenance		$ -	N/A
				Software		$ 37.26	Represents the license cost attributable to providing this service.
				Labor		$ 43.99	Represents the labor cost (e.g. Service Desk, IMAR, platform administration) to support the solution.
A/V Conference Room - Large	Schedule 4.3 - Section 4.13	Install	Fixed Fee Per Unit		$ 64,563.91		
				Hardware		$ 53,588.05	Represents the costs to acquire the Hardware
				Software		$ -	
				Labor		$ 10,975.86	Represents the costs to perform the labor for install and ongoing support

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
A/V Conference Room - Medium	Schedule 4.3 - Section 4.13	Install	Fixed Fee Per Unit		$ 34,671.93		
				Hardware		$ 28,777.70	Represents the costs to acquire the Hardware
				Software		$ -	
				Labor		$ 5,894.23	Represents the costs to perform the labor for install and ongoing support
A/V Conference Room - Small	Schedule 4.3 - Section 4.13	Install	Fixed Fee Per Unit		$ 25,004.76		
				Hardware		$ 20,753.95	Represents the costs to acquire the Hardware
				Software		$ -	
				Labor		$ 4,250.81	Represents the costs to perform the labor for install and ongoing support
Digital Signage Services	Schedule 4.3 - Section 4.14	Subscription	Fixed Monthly Fee Per Unit		$ 68.37		
				Hardware		$ 40.00	Represents the third party costs associated with original configuration and monthly subscription payments for a agreed upon term.
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ -	N/A
				Labor		$ 28.37	Represents costs associated with various with initial installation, help desk, and break/fix labor and support.
Survey Solution Support Services	Schedule 4.3 - Section 4.16	Administrator	Fixed Monthly Fee Per Unit		$ 48.94		
				Hardware		$ -	
				Hardware Maintenance		$ -	
				Software License		$ -	
				Solution support		$ 48.94	Represents costs associated with labor activities to support the solution.
Network Access - Static Wired	Schedule 4.3 - Section 5.5	Device	Fixed Monthly Fee Per Unit		$ 55.93		
				Hardware		$ 15.69	Represents the costs of acquiring network assets and support the Refresh tasks. The component fee is comprised of the monthly depreciation of a combination of 4 and 5 year refresh cycles.
				Hardware Maintenance		$ 11.08	Represents break-fix services, labor and parts.
				Software		$ 1.85	Represents the costs of software licenses upgrades/refresh. Based on a refresh cycle of 4 years on core network systems and 5 years for edge switches, the aggregated cost is apportioned over the baseline volume of Network Access users.
				Software Maintenance		$ 6.46	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 20.86	Represents labor costs for IMAR activities and circuit costs.
Network Access - Static Wired (Library)	Schedule 4.3 - Section 5.5	Device	Fixed Monthly Fee Per Unit		$ 49.77		
				Hardware		$ 15.69	This component represents the costs of acquiring network assets including switches, routers, security & NAC systems and tools. The component fee is comprised of the monthly amortization of a combination of 4 year refresh cycles for routers and security systems and 5 year refresh cycles for switches.
				Hardware Maintenance		$ 11.08	This component represents break-fix services for hardware assets, primarily labor and parts.
				Software		$ 1.85	This component represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 4 years for core network systems and 5 years for edge switches, the aggregated cost is apportioned over the baseline volume of Network Access users.
				Software Maintenance		$ 6.46	This component represents costs associated with the labor and resources for Level 2 software support.
				IMAR		$ 11.66	This component represents labor costs for IMAR activities
				Circuit		$ 3.03	Residual circuits costs
Uninterrupted Power Supply Support Services	Schedule 4.3 - Section 5.5	Device	Fixed Monthly Fee Per Unit		$ 110.00		
				Hardware			
				Hardware maintenance			

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Software		$ 82.50	Represents costs associated with monitoring platform
				Software maintenance		$ 24.20	Represents costs associated with maintenance of monitoring platform and labor to support Break/Fix activities
				IMAR's		$ 3.30	Represents costs associated with IMARs for the addition of new devices for support
Virtual Private Network Access - Level 1	Schedule 4.3 - Section 5.6	Active Account	Fixed Monthly Fee Per Unit		$ 9.40		
				Hardware		$ 2.35	This component represents the costs of acquiring network assets including routers, VPN concentrators, Application Persistence servers, security & NAC systems and tools. The component fee is comprised of the monthly amortization of a combination of 4 year refresh cycles for routers and security systems.
				Hardware Maintenance		$ 1.70	This component represents break-fix services, primarily labor and parts.
				Software		$ 0.36	This component represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 4 years for core network systems.
				Software Maintenance		$ 1.17	This component represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 0.95	This component represents labor costs for IMAR activities.
				Circuits		$ 2.88	This component represents the cost for intersite bandwidth facilities and Internet access.
Virtual Private Network Access - Level 2	Schedule 4.3 - Section 5.6	Active Account	Fixed Monthly Fee Per Unit		$ 10.91		
				Hardware		$ 1.78	Represents the cost of incremental hardware not included in Infrastructure Services.
				Hardware Maintenance		$ 0.86	Represents break-fix services, primarily labor and parts, not included in Infrastructure Services.
				Software		$ 0.32	Represents the costs of software license acquisition and management.
				Software Maintenance		$ 5.59	Represents software maintenance costs and labor and resources for Level 2 support.
				IMAR's		$ 2.36	Represents labor costs for IMAR activities.
				Circuits		$ -	N/A
Portal - External Users	Schedule 4.3 - Section 5.6	User	Fixed Monthly Fee Per Unit		$ 8.00		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software License		$ 4.00	Represents the cost of software license upgrades/refresh.
				Software Maintenance		$ 1.90	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR		$ 2.10	Represents labor costs for IMAR activities.
Portal - Portfolio Application	Schedule 4.3 - Section 5.6	Application	Fixed Monthly Fee Per Unit		$ 210.90		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software License		$ 110.00	Represents the cost of software license upgrades/refresh.
				Software Maintenance		$ 70.90	Represents costs associated with the labor and resources for Software Maintenance support.
				Break Fix		$ 30.00	Represents labor costs for Break Fix activities.
GSMS Short Code Setup	Schedule 4.3 - Section 5.7	Event	Fixed Fee Per Unit		$ 3,700.00		
				Hardware		$ -	N/A
				Hardware maintenance		$ -	N/A
				Software		$ 3,700.00	Represents the license cost attributable to providing GSMS Short Code Setup.
				Software maintenance		$ -	N/A
				IMAR's		$ -	N/A
				Circuits		$ -	N/A
GSMS Short Code Support	Schedule 4.3 - Section 5.7	Month	Fixed Monthly Fee Per Unit		$ 1,507.63		
				Hardware		$ -	N/A
				Hardware maintenance		$ -	N/A
				Software		$ -	N/A
				Software maintenance		$ 1,507.63	Represents the software maintenance cost (e.g. patches, upgrades) attributable to providing GSMS Short Code Support.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				IMAR's		$ -	N/A
				Circuits		$ -	N/A
GSMS Messages	Schedule 4.3 - Section 5.7	Message	Fixed Fee Per Unit		$ 0.028		
				Hardware		$ -	N/A
				Hardware maintenance		$ -	N/A
				Software		$ 0.028	Represents the license cost attributable to providing GSMS Messages.
				Software maintenance		$ -	N/A
				IMAR's		$ -	N/A
				Circuits		$ -	N/A
IP Conference Phone	Schedule 4.3 - Section 5.7.3	Phone	Fixed Monthly Fee Per Unit		$ 59.72		
				Hardware		$ 27.87	This component represents the costs of Enterprise voice systems comprised of multiple geo-redundant server clusters, IP infrastructure, gateways, IP Conference Phone, and support the Refresh tasks. The component fee is comprised of the monthly amortization of 5 year refresh cycles.
				Hardware Maintenance		$ 6.60	Represents break-fix services, primarily labor and parts.
				Software		$ 2.20	Represents the costs of software licenses upgrades/refresh based on the refresh cycle of 5 years
				Software Maintenance		$ 2.20	Represents software programming support
				IMAR's		$ 12.95	represents the labor costs for IMAR activities
				Circuits		$ 7.90	Represents the cost for bandwidth and circuitry
Virtual Phone - Microsoft (MS) Teams Phone	Schedule 4.3 - Section 5.7.3	Active Line	Fixed Monthly Fee per Unit		$ 16.85		
				Hardware		$ 2.56	This component represents the costs associated with the hardware required to deploy and operated the AT&T provided Direct Routing solution
				Hardware maintenance		$ 0.26	This component represents break-fix services for enterprise direct routing hardware
				Software		$ 8.36	This component represents cost system and application software, include Microsoft Teams phone license, required to provide direct routing
				Software maintenance		$ 0.19	This component represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 5.48	This component represents labor and support costs for the Direct Routing solution
				Circuits		$ -	
Voice-Avaya Legacy Support	Schedule 4.3 - Section 5.7.3	Month	Fixed Monthly Fee Per Unit		$ 416,688.00		
				Hardware		$ 114,006.35	This component represents enterprise costs of voice system hardware which are fixed
				Hardware maintenance		$ 34,842.50	This component represents break-fix services for enterprise voice hardware
				Software		$ 92,977.50	This component represents the costs of Enterprise voice systems comprised of multiple geo-redundant server clusters, gateways and support the Refresh tasks. The component fee is comprised of the monthly amortization of 5 year refresh cycles.
				Software maintenance		$ 27,242.02	This component represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 105,105.30	This component represents labor and support costs for Voice Services which are fixed
				Circuits		$ 42,514.33	This component represents the proportion of Voice Services costs of enterprise circuits
Voice Analog Line	Schedule 4.3 - Section 5.7.3	Active Line	Fixed Monthly Fee Per Unit		$ 47.55		
				Hardware		$ 14.99	Represents the costs of Enterprise voice systems comprised of multiple geo-redundant server clusters, analog to IP adapters, gateways and support the Refresh tasks. The component fee is comprised of the monthly amortization of 5 year refresh cycles.
				Hardware Maintenance		$ 4.44	Represents break-fix services, primarily labor and parts.
				Software		$ 2.22	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 5 years for voice based systems, the aggregated cost is apportioned over the baseline volume of telephones.
				Software Maintenance		$ 2.22	Represents costs associated with the labor and resources for Level 2 support.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				IMAR's		$ 18.78	Represents labor costs for IMAR activities.
				Circuits		$ 4.90	Represents the cost for intersite bandwidth facilities and PSTN access.
Voice Single-Line	Schedule 4.3 - Section 5.7.3	Active Line	Fixed Monthly Fee Per Unit		$ 22.84		
				Hardware		$ 6.46	This component represents enterprise costs of voice system hardware which are user volume sensitive. It is comprised of telephone sets and cabling hardware
				Hardware maintenance		$ 0.78	This component represents break-fix services, primarily labor and parts
				Software			
				Software maintenance			
				IMAR's		$ 10.35	This component represents labor and support costs for Voice Services which are volume sensitive
				Circuits		$ 5.25	This component represents the proportion of Voice Services costs of enterprise circuits for intersite bandwidth facilities and PSTN access
Voice Multi-Line	Schedule 4.3 - Section 5.7.3	Active Line	Fixed Monthly Fee Per Unit		$ 25.05		
				Hardware		$ 6.33	This component represents enterprise costs of voice system hardware which are user volume sensitive. It is comprised of telephone sets and cabling hardware
				Hardware maintenance		$ 0.77	This component represents break-fix services, primarily labor and parts
				Software			
				Software maintenance			
				IMAR's		$ 10.18	This component represents labor and support costs for Voice Services which are volume sensitive
				Circuits		$ 7.77	This component represents the proportion of Voice Services costs of enterprise circuits for intersite bandwidth facilities and PSTN access
Cloud Access Security Broker	Schedule 4.3 - Section 5.8	Month	Fixed Monthly Fee Per Unit		$ 15,450.12		
				Hardware		$ -	N/A
				Hardware maintenance		$ -	N/A
				Software		$ 14,350.12	Represents the license cost attributable to providing CASB capability
				Software maintenance		$ 1,100.00	Represents the cost associated with the support of the CASB capability
				IMAR's		$ -	N/A
				Circuits		$ -	N/A
Town Hall Services	Schedule 4.3 - Section 5.9	Event	Fixed Fee Per Unit		$ 76,730.20		
				Hardware		$ 13,920.45	12+ VM Servers with Storage Area Network and 4 Video Network Edge appliances (CDN). 5 Year Refresh cycle included.
				Hardware Maintenance		$ 1,962.50	Cloud based and premise based, the 12+ Servers are Cloud based and the VNEs are premise based.
				Software		$ 37,204.55	AVMS/QUMU application license and VNE/CDN licenses. 5 year refresh cycle included.
				Software Maintenance		$ 4,665.43	Application, Content Distribution and Portal support.
				IMAR's		$ 17,045.45	Townhall administrator and Portal updates.
				Circuits		$ 1,931.82	Origination and distribution bandwidth. Originator connectivity limited to available facilities.
Video Conferencing Services - Personal	Schedule 4.3 - Section 5.9	System	Fixed Monthly Fee Per Unit		$ 315.70		
				Hardware		$ 112.72	Represents the costs of VTC roll-about system codec and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 5 year refresh cycles.
				Hardware Maintenance		$ 30.64	Represents break-fix services, primarily labor and parts.
				Software		$ 13.19	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 5 years for VTC systems, the aggregated cost is apportioned over the baseline volume of VTC end points.
				Software Maintenance		$ 33.94	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 37.51	Represents labor costs for IMAR activities.
				Circuits		$ 87.69	Represents the cost for intersite bandwidth facilities, Internet and PSTN access.
Video Conferencing Services - Room System	Schedule 4.3 - Section 5.9	System	Fixed Monthly Fee Per Unit		$ 895.13		

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Hardware		$ 300.90	Represents the costs of VTC room system codecs and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 5 year refresh cycles.
				Hardware Maintenance		$ 96.25	Represents break-fix services, primarily labor and parts.
				Software		$ 37.40	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 5 years for VTC systems, the aggregated cost is apportioned over the baseline volume of VTC end points.
				Software Maintenance		$ 96.25	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 106.35	Represents labor costs for IMAR activities.
				Circuits		$ 257.98	Represents the cost for intersite bandwidth facilities, Internet and PSTN access.
Webex Video Conferencing Services	Schedule 4.3 - Section 5.9	Subscription	Fixed Monthly Fee Per Unit		$ 47.86		
				Software License		$ 43.12	Cost to acquire the Software subscription
				Labor		$ 4.74	IMAR and service administration
Video Streaming and Archiving Services	Schedule 4.3 - Section 5.10	System	Fixed Monthly Fee Per Unit		$ 7,210.62		
				Hardware		$ 1,110.97	Represents the switching and router costs of a dedicated VLAN for Video Streaming services and support the Refresh tasks. The component fee is comprised of the monthly amortization of 5 year refresh cycles for the switch and 4 year refresh cycles for the router.
				Hardware Maintenance		$ 902.30	Represents break-fix services, primarily labor and parts.
				Software		$ 88.81	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 5 years for the switch and 4 years for the router, the aggregated cost is apportioned to a single encoder.
				Software Maintenance		$ 902.30	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 1,540.17	Represents labor costs for IMAR activities.
				Circuits		$ 2,666.06	Represents the cost for intersite bandwidth facilities and Internet access.
Video Streaming - COC Chambers	Schedule 4.3 - Section 5.10	System	Fixed Monthly Fee Per Unit		$ 1,210.00		
				Hardware		$ 186.34	Represents the switching and router costs of a dedicated VLAN for Video Streaming services and support the Refresh tasks. The component fee is comprised of the monthly amortization of 5 year refresh cycles for the switch and 4 year refresh cycles for the router.
				Hardware Maintenance		$ 151.25	Represents break-fix services, primarily labor and parts.
				Software		$ 18.15	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 5 years for the switch and 4 years for the router, the aggregated cost is apportioned to a single encoder.
				Software Maintenance		$ 150.04	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 260.15	Represents labor costs for IMAR activities.
				Circuits		$ 444.07	Represents the cost for intersite bandwidth facilities and Internet access.
Wireless Access Point	Schedule 4.3 - Section 5.12	Device	Fixed Monthly Fee Per Unit		$ 160.18		
				Hardware		$ 51.26	This component represents the costs of acquiring WiFi access assets including a Wireless Access Point and a proportional amount of redundant controllers/NAC and support the Refresh tasks. The component fee is comprised of the monthly amortization of 3 year refresh cycles.
				Hardware Maintenance		$ 30.43	This component represents break-fix services, primarily labor and parts.
				Software		$ 18.69	This component represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 3 years for WiFi network systems, the aggregated cost is apportioned over the baseline volume of Wireless Access Points.
				Software Maintenance		$ 46.45	This component represents costs associated with the labor and resources for Level 2 support and the County WAN/LAN connectivity.
				IMAR's		$ 13.35	This component represents labor costs for IMAR activities.
Network Access - Wire/Wireless	Schedule 4.3 - Section 5.12	Active Account	Fixed Monthly Fee Per Unit		$ 66.68		
				Hardware		$ 16.97	Represents the costs of acquiring network assets including switches, routers, security & NAC systems and tools. The component fee is comprised of the monthly amortization of a combination of 4 year refresh cycles for routers and security systems and 5 year refresh cycles for switches.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Hardware Maintenance		$ 12.59	Represents break-fix services, labor and parts.
				Software		$ 2.91	Represents the costs of software licenses upgrades/refresh. Based on a refresh cycle of 4 years on core network systems and 5 years for edge switches, the aggregated cost is apportioned over the baseline volume of Network Access users.
				Software Maintenance		$ 6.78	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 5.57	Represents labor costs for IMAR activities.
				Circuits		$ 21.86	Represents the cost for intersite bandwidth facilities and Internet access.
3rd-Party Network Access - Category 1	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 536.92		
				Hardware		$ 198.41	Represents the costs of acquiring network assets and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 4 year refresh cycles.
				Hardware Maintenance		$ 103.77	Represents break-fix services, labor and parts.
				Software		$ 30.79	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 4 years for core network systems, the aggregated cost is apportioned over the baseline volume of 3rd Party Network Access users.
				Software Maintenance		$ 131.04	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 72.91	Represents labor costs for IMAR activities.
3rd-Party Network Access - Category 2	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 544.44		
				Hardware		$ 198.38	Represents the costs of acquiring network assets and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 4 year refresh cycles.
				Hardware Maintenance		$ 103.75	Represents break-fix services, labor and parts.
				Software		$ 30.78	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 4 years for core network systems, the aggregated cost is apportioned over the baseline volume of 3rd Party Network Access users.
				Software Maintenance		$ 139.77	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 71.76	Represents labor costs for IMAR activities.
3rd-Party Network Access - Category 3	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 548.74		
				Hardware		$ 198.91	Represents the costs of acquiring network assets and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 4 year refresh cycles.
				Hardware Maintenance		$ 104.03	Represents break-fix services, primarily labor and parts.
				Software		$ 30.87	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 4 years for core network systems, the aggregated cost is apportioned over the baseline volume of 3rd Party Network Access users.
				Software Maintenance		$ 138.36	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 76.58	Represents labor costs for IMAR activities.
3rd Party Network Access - IP Sec - 5 Mbps	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 255.85		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 243.59	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 12.26	Represents labor costs for IMAR activities.
3rd Party Network Access - IP Sec - 10 Mbps	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 427.31		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 414.97	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 12.33	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (1 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 153.51		

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 141.25	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 12.26	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (2 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 260.12		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 247.85	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 12.26	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (3 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 373.93		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 361.84	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 12.09	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (4 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 473.32		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 458.80	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 14.53	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (5 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 613.55		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 599.04	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 14.52	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (6-10 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 1,155.51		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 1,127.07	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 28.45	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (20 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 1,907.15		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 1,850.34	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 56.81	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (30 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 2,504.79		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Software		$ -	N/A
				Software Maintenance		$ 2,447.97	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 56.82	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (40 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 2,879.77		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 2,822.95	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 56.82	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (50 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 3,032.09		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 2,975.27	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 56.82	Represents labor costs for IMAR activities.
3rd Party Network Access – Microsoft Teams Rooms	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 359.17		
				Hardware			
				Hardware Maintenance			
				Software			
				Software Maintenance		$ 334.35	This component represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR		$ 24.82	This component represents labor costs for IMAR activities.
				Circuit			
External DNS Management	Schedule 4.3 - Section 5.14	Month	Fixed Monthly Fee Per Unit		$ 28,373.54		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ 1,340.21	N/A
				Software Maintenance		$ 25,804.16	Represents costs associated with the labor and resources for Level 2 support and access bandwidth. Also includes the cost of Akamai service.
						$ 1,229.17	Represents labor costs for IMAR activities.
External DNS Management Enhancement	Schedule 4.3 - Section 5.14	Month	Fixed Monthly Fee Per Unit		$ 28,373.54		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Platform Support		$ 1,340.21	Monitor Bot Management dashboard and respond to incidents.
				Software Maintenance		$ 25,804.16	Represents costs associated with the labor and resources for Level 2 support related to the Kona Security and Bot Management services.
				IMAR's		$ 1,229.17	Represents labor costs for IMAR activities.
New Site Install - Type I Fixed Component	Schedule 4.3 - Section 5.16	Install	Fixed Fee Per Unit		$ 232,875.88		
				Hardware		$ -	N/A (Network Hardware/systems provided as part of Network Access RUs).
				Software		$ -	N/A (Network Systems software provided as part of Network Access RUs).
				Labor		$ 232,875.88	Represents the labor costs associated with the establishment of New Sites. To include: development of design standards; core circuit order and installation; planning and engineering; installation of Network hardware and software (not including the hardware and software); provisioning and turn up of the New Site, and project management.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
New Site Install - Type II Fixed Component	Schedule 4.3 - Section 5.16	Install	Fixed Fee Per Unit		$ 116,437.94		
				Hardware		$ -	N/A (Network Hardware/systems provided as part of Network Access RUs).
				Software		$ -	N/A (Network Systems software provided as part of Network Access RUs).
				Labor		$ 116,437.94	Represents the labor costs associated with the establishment of New Sites. To include: development of design standards; core circuit order and installation; planning and engineering; installation of Network hardware and software (not including the hardware and software); provisioning and turn up of the New Site, and project management.
New Site Install - Type III Fixed Component	Schedule 4.3 - Section 5.16	Install	Fixed Fee Per Unit		$ 80,073.31		
				Hardware		$ -	N/A (Network Hardware/systems provided as part of Network Access RUs).
				Software		$ -	N/A (Network Systems software provided as part of Network Access RUs).
				Labor		$ 80,073.31	Represents the labor costs associated with the establishment of New Sites. To include: development of design standards; core circuit order and installation; planning and engineering; installation of Network hardware and software (not including the hardware and software); provisioning and turn up of the New Site, and project management.
New Site Install - Type IV Fixed Component	Schedule 4.3 - Section 5.16	Install	Fixed Fee Per Unit		$ 67,793.32		
				Hardware		$ -	N/A (Network Hardware/systems provided as part of Network Access RUs).
				Software		$ -	N/A (Network Systems software provided as part of Network Access RUs).
				Labor		$ 67,793.32	Represents the labor costs associated with the establishment of New Sites. To include: development of design standards; core circuit order and installation; planning and engineering; installation of Network hardware and software (not including the hardware and software); provisioning and turn up of the New Site, and project management.
New Site Install - Type V Fixed Component	Schedule 4.3 - Section 5.16	Install	Fixed Fee Per Unit		$ 16,791.25		
				Hardware		$ -	N/A (Network Hardware/systems provided as part of Network Access RUs).
				Software		$ -	N/A (Network Systems software provided as part of Network Access RUs).
				Labor		$ 16,791.25	Represents the labor costs associated with the establishment of New Sites. To include: development of design standards; core circuit order and installation; planning and engineering; installation of Network hardware and software (not including the hardware and software); provisioning and turn up of the New Site, and project management.
New Site Install - Type VI Fixed Component	Schedule 4.3 - Section 5.16	Install	Fixed Fee Per Unit		$ 3,197.05		
				Hardware		$ -	N/A (Network Hardware/systems provided as part of Network Access RUs).
				Software		$ -	N/A (Network Systems software provided as part of Network Access RUs).
				Labor		$ 3,197.05	Represents the labor costs associated with the establishment of New Sites. To include: development of design standards; core circuit order and installation; planning and engineering; installation of Network hardware and software (not including the hardware and software); provisioning and turn up of the New Site, and project management.
Interactive Voice Services - Small	Schedule 4.3 - Section 5.17	System	Fixed Monthly Fee Per Unit		$ 687.50		
				Hardware		$ 37.18	Represents the costs of acquiring IP PBX systems that provide Auto Attendant and ACD functions with Contact Management Services and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 5 year refresh cycles.
				Hardware Maintenance		$ 136.57	Represents break-fix services, primarily labor and parts.
				Software		$ 74.39	Represents the costs of software licenses upgrades/refresh and programming. Based on the Refresh Cycle of 5 years for voice based systems, the aggregated cost is apportioned over the baseline volume of IVS systems.
				Software Maintenance		$ 222.72	Represents costs associated with the labor and resources for Level 2 support.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				IMAR's		$ 88.43	Represents labor costs for IMAR activities.
				Circuits		$ 128.20	Represents the cost for intersite bandwidth facilities and PSTN access.
Interactive Voice Services - Medium	Schedule 4.3 - Section 5.17	System	Fixed Monthly Fee Per Unit		$ 2,722.50		
				Hardware		$ 147.22	Represents the costs of acquiring IP PBX systems that provide Auto Attendant and ACD functions with Contact Management Services with Virtual Wall Boards, Automated Call Recording infrastructure and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 5 year refresh cycles.
				Hardware Maintenance		$ 540.83	Represents break-fix services, primarily labor and parts.
				Software		$ 294.60	Represents the costs of software licenses such as Automatic Call Recording, Virtual Wall Boards and Agent Softphones, upgrades/refresh and programming. Based on the Refresh Cycle of 5 years for voice based systems, the aggregated cost is apportioned over the baseline volume of IVS systems.
				Software Maintenance		$ 881.99	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 350.17	Represents labor costs for IMAR activities.
				Circuits		$ 507.68	Represents the cost for intersite bandwidth facilities and PSTN access.
Interactive Voice Services - Large	Schedule 4.3 - Section 5.17	System	Fixed Monthly Fee Per Unit		$ 8,234.60		
				Hardware		$ 445.31	Represents the costs of acquiring IP PBX systems that provide Auto Attendant and ACD functions with Contact Management Services with Wall Boards, Integrated Voice Response (IVR), Computer-Telephony Interface (CTI), Short Message Service (SMS), Work Force Management (WFM) and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 5 year refresh cycles.
				Hardware Maintenance		$ 1,635.82	Represents break-fix services, primarily labor and parts.
				Software		$ 891.06	Represents the costs of software licenses including IVR, CTI, SMS and WFM, upgrades/refresh and programming. Based on the Refresh Cycle of 5 years for voice based systems, the aggregated cost is apportioned over the baseline volume of IVS systems.
				Software Maintenance		$ 2,667.71	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 1,059.15	Represents labor costs for IMAR activities.
				Circuits		$ 1,535.56	Represents the cost for intersite bandwidth facilities and PSTN access.
Interactive Voice Services - Support for County Retained	Schedule 4.3 - Section 5.17	System	Fixed Monthly Fee Per Unit		$ 616.58		
				Hardware		$ 42.87	Represents the costs of acquiring PBX trunking hardware and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 5 year refresh cycles.
				Hardware Maintenance		$ 59.45	Represents break-fix services, labor and parts.
				Software		$ 1.14	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 5 years for voice based systems, the aggregated cost is apportioned over the baseline volume of County owned IVS systems.
				Software Maintenance		$ 30.87	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 53.27	Represents labor costs for IMAR activities.
				Circuits		$ 428.98	Represents the cost for intersite bandwidth facilities and PSTN access.
FirstNet Mobility Services	Schedule 4.3 - Section 5.18	Device	Fixed Monthly Fee Per Unit		$ 31.49		
				Support Services		$ 2.06	Includes billing and admin support
				NASPO based carrier plan		$ 29.43	Represents the carrier costs with Taxes and Surcharges included
FirstNet Mobility Services - Tethered	Schedule 4.3 - Section 5.18	Device	Fixed Monthly Fee Per Unit		$ 36.60		
				Support Services		$ 2.06	Includes billing and admin support
				NASPO based carrier plan		$ 34.54	Represents the carrier costs with Taxes and Surcharges included
Mobility Services Hot Spot	Schedule 4.3 - Section 5.18	Device	Fixed monthly fee per unit		$ 25.58		
				Support Services		$ 2.06	Includes billing and admin support
				NASPO based carrier plan		$ 23.52	Represents the carrier costs with Taxes and Surcharges included

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
Citrix Account	Schedule 4.3 - Section 6	Account	Fixed Monthly Fee Per Unit		$ 20.68		
				Hardware		$ 8.05	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware Maintenance		$ 7.39	Represents break-fix services, primarily labor and parts, including reporting activities.
				Software Licenses		$ 1.55	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years.
				Software Maintenance		$ 3.69	Represents costs associated with the labor and resources for Software Maintenance support.
Virtual Guest Server - Cloud IaaS	Schedule 4.3 - Section 6	Server	Fixed Monthly Per Unit		$ 551.27		
				Hardware		$ -	N/A
				Operating System License		$ 38.59	Represents the cost of software license upgrades/refresh.
				Other Software License		$ 27.56	Represents an allocation of corporate tools charges.
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 485.12	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Guest Server - Cloud PaaS	Schedule 4.3 - Section 6	Server	Fixed Monthly Per Unit		$ 413.45		
				Hardware		$ -	N/A
				Operating System License		$ -	N/A
				Other Software License		$ 20.67	Represents an allocation of corporate tools charges.
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 392.78	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Clonetab Solution	Schedule 4.3 - Section 6	Month	Fixed Monthly Per Unit		$ 6,211.24		
				Hardware		$ 263.32	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 18.81	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Storage		$ 5,270.83	Represents the storage costs necessary to implement the solution
				Other Software License		$ 28.21	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 39.50	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 590.58	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
DIMSNET Solution	Schedule 4.3 - Section 6	Month	Fixed Monthly Fee Per Unit		$ 15,369.32		
				Hardware		$ 1,873.96	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 113.76	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Storage		$ 9,681.66	Represents the storage costs necessary to implement the solution
				Other Software License		$ 170.62	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 281.10	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 3,248.22	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
WildFire Scanning Service	Schedule 4.3 - Section 6	Month	Fixed Monthly Fee Per Unit		$ 6,658.80		
				Hardware		$ 510.81	Represents the hardware costs, installation and monthly cost for the duration of the service.
				Hardware Maintenance		$ -	
				Software License		$ 5,223.43	Represents the costs related to the third party software subscription services
				Platform support		$ 924.56	Represents costs associated with monitoring activities and responding to incidents.
NetBackup Solution	Schedule 4.3 - Section 6	Month	Fixed Monthly Fee Per Unit		$ 107,963.65		
				Hardware		$ 86,631.99	Represents the hardware, hardware maintenance and software subscription cost.
				Hardware Maintenance		$ -	

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Software License		$ -	Represents the costs related to the third party software subscription services
				Solution support		$ 21,331.66	Represents costs associated with labor activities to support the solution.
Mainframe	Schedule 4.3 - Section 6.6	CPU Hour***	Fixed Monthly Fee Per Unit		$ 96.63		
				Hardware		$ -	N/A
				Operating System License		$ 20.29	Represents the cost of software license upgrades/refresh. The aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ -	N/A
				Hardware Maintenance		$ 3.87	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 72.47	Represents costs associated with operating system license maintenance and the labor and resources for Level 2 support.
AS/400	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 3,118.66		
				Hardware		$ -	N/A
				Operating System License		$ -	N/A
				Other Software License		$ -	N/A
				Hardware Maintenance		$ 1,746.45	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 1,372.21	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Copia Fax Line	Schedule 4.3 - Section 6.7	Fax Line	Fixed Monthly Fee Per Unit		$ 125.00		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software License		$ -	N/A
				Software Maintenance		$ -	N/A
				Circuits		$ 125.00	Represents the cost for intersite bandwidth facilities and PSTN access.
Low Code Application Platform - OutSystems	Schedule 4.3 Section 6.7	User	Fixed Monthly Per Unit		$ 54.06		
				Hardware		$ 8.91	Represents the costs associated to the platform cloud hosting.
				Software License		$ 21.17	Represents the software licenses costs of the platform and users licenses.
				Software Maintenance		$ 11.16	Represents vendor support costs.
				Support Labor		$ 12.82	Represents costs associated with platform support.
Oracle Exadata Services - Eighth Rack	Schedule 4.3 - Section 6 .7	Server	Fixed Monthly Fee Per Unit		$ 10,380.95		
				Hardware		$ 4,159.43	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years. Exadata X6-2 Eighth Rack 2 x Exadata Server Nodes (22 cores, 512 GB memory each) 18 x Exadata Storage Nodes (43 TB useable - high redundancy) Bare Metal Install
				Hardware (Refresh Labor)		$ 499.19	Represents the labor to install and refresh hardware amortized over the estimated asset life. This cost does not include data migration and remediation labor.
				Support Labor		$ 706.67	Represents the labor costs to support the Oracle Exadata servers ,
				Software License		$ 1,200.00	Represents the software license costs to support the Oracle Exadata servers ,
				Hardware Maintenance		$ 2,495.66	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 1,320.00	Represents costs associated with various software maintenance costs.
Oracle Exadata Services - Backup and Recovery	Schedule 4.3 - Section 6.7	Used Terabyte	Fixed Monthly Fee Per Unit		$ 122.88		
				Hardware		$ 32.81	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Operating System License		$ 2.97	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 9.93	Represents the estimate of the Non-OS License Software.
				Hardware Maintenance		$ 10.81	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 66.36	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Oracle Exadata X8M - Production	Schedule 4.3 - Section 6 .7	Server	Fixed Monthly Fee Per Unit		$ 40,951.09		
				Hardware		$ 8,811.20	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years. - Exadata X8M -2 Quarter Rack - 2 x Exadata Server Nodes (48 cores, 1.5 TB memory each) - Each of the 3 High Capacity Storage Cells includes: - 36 x 14 TB disk drives, 1.5 TB of Persistent Memory - 504 TB of raw disk space - 150 TB of usable with High Redundancy ASM storage
				Hardware (Install/Refresh Labor)		$ 274.32	Represents the labor to install and refresh hardware amortized over the estimated asset life. This cost does not include data migration and remediation labor.
				Support Labor		$ 1,452.05	Represents the labor costs to support the Oracle Exadata servers.
				Software license		$ 10,962.28	Represents the software license costs to support the Oracle Exadata servers, including Oracle Active Data Guard and Advanced Security.
				Hardware Maintenance & Hosting		$ 7,262.54	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software maintenance		$ 12,188.70	Represents costs associated with various software maintenance costs, including Oracle Active Data Guard and Advanced Security.
Oracle Exadata X8M - Development / Test	Schedule 4.3 - Section 6 .7	Server	Fixed Monthly Fee Per Unit		$ 33,503.21		
				Hardware		$ 8,811.20	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years. - Exadata X8M -2 Quarter Rack - 2 x Exadata Server Nodes (48 cores, 1.5 TB memory each) - Each of the 3 High Capacity Storage Cells includes: - 36 x 14 TB disk drives, 1.5 TB of Persistent Memory - 504 TB of raw disk space - 150 TB of usable with High Redundancy ASM storage
				Hardware (Install/Refresh Labor)		$ 274.32	Represents the labor to install and refresh hardware amortized over the estimated asset life. This cost does not include data migration and remediation labor.
				Support Labor		$ 1,452.05	Represents the labor costs to support the Oracle Exadata servers.
				Software license		$ 7,435.62	Represents the software license costs to support the Oracle Exadata servers, including Advanced Security.
				Hardware Maintenance & Hosting		$ 7,262.54	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software maintenance		$ 8,267.48	Represents costs associated with various software maintenance costs, including Advanced Security.
Oracle Exadata X8M - Business Continuity	Schedule 4.3 - Section 6 .7	Server	Fixed Monthly Fee Per Unit		$ 41,268.64		
				Hardware		$ 9,082.07	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years. - Exadata X6-2 Quarter Rack - 2 x Exadata Server Nodes (48 cores, 1.5 TB memory each) - Each of the 3 High Capacity Storage Cells includes: - 36 x 14 TB disk drives, 1.5 TB of Persistent Memory - 504 TB of raw disk space - 150 TB of usable with High Redundancy ASM storage - Oracle Platinum Gateway Server

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Hardware (Refresh Labor)		$ 292.56	Represents the labor to install and refresh hardware amortized over the estimated asset life. This cost does not include data migration and remediation labor.
				Support Labor		$ 1,452.05	Represents the labor costs to support the Oracle Exadata environment.
				Software License		$ 10,962.28	Represents the software license costs to support the Oracle Exadata servers, including Oracle Active Data Guard and Advanced Security.
				Hardware Maintenance		$ 7,290.97	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 12,188.70	Represents costs associated with various software maintenance costs, including Oracle Active Data Guard and Advanced Security.
Physical Server UNIX - Large	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 4,878.56		
				Hardware		$ 2,000.22	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Hardware (Refresh Labor)		$ 73.18	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating system license		$ -	N/A
				Software license		$ 48.79	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 487.85	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software maintenance		$ 2,268.53	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server UNIX - Medium	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 2,894.99		
				Hardware		$ 1,331.70	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Hardware (Refresh Labor)		$ 57.90	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating System License		$ -	N/A
				Other Software License		$ 43.42	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 202.65	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 1,259.31	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server UNIX - Small	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 1,811.71		
				Hardware		$ 724.69	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Hardware (Refresh Labor)		$ 36.23	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating System License		$ -	N/A
				Other Software License		$ 36.23	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 289.88	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 724.68	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server UNIX - X-Large	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 5,238.56		
				Hardware		$ 2,147.81	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Hardware (Refresh Labor)		$ 78.58	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating System License		$ -	N/A
				Other Software License		$ 52.39	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 523.85	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 2,435.93	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server Unix - X-Large - CWSD Dev/Test	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 4,976.63		
				Hardware		$ 2,040.42	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Hardware (Refresh Labor)		$ 74.65	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating System License		$ -	N/A
				Other Software License		$ 49.77	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 497.66	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Software Maintenance		$ 2,314.13	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server Wintel - Large	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 1,676.75		
				Hardware		$ 586.86	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 33.53	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating System License		$ -	N/A
				Other Software License		$ 50.30	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 88.03	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 918.02	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server Wintel - Medium	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 1,167.08		
				Hardware		$ 350.12	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 23.34	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating System License		$ -	N/A
				Other Software License		$ 35.01	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 52.52	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 706.08	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server Wintel - Small	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 940.41		
				Hardware		$ 263.32	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 18.81	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating System License		$ -	N/A
				Other Software License		$ 28.21	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 39.50	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 590.58	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server Wintel - X-Large	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 1,960.86		
				Hardware		$ 856.80	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Hardware (Refresh Labor)		$ 33.53	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating system license		$ -	N/A
				Software license		$ 50.30	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 102.20	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software maintenance		$ 918.02	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server Wintel - X-Large - CWSD Dev/Test	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 1,862.82		
				Hardware		$ 813.96	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 31.86	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating system license		$ -	N/A
				Software license		$ 47.79	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 97.09	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software maintenance		$ 872.12	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Guest Server - Windows	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 616.08		
				Hardware		$ -	N/A

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Operating System License		$ 43.13	Represents the cost of software license upgrades/refresh. Based on the physical host refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 30.80	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 542.15	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Guest Server - Windows - CWSD Dev/Test	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 585.28		
				Hardware		$ -	N/A
				Operating System License		$ 40.97	Represents the cost of software license upgrades/refresh. Based on the physical host refresh cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 29.26	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 515.05	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Guest Server - Unix	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 1,293.77		
				Hardware		$ -	N/A
				Operating System License		$ 90.56	Represents the cost of software license upgrades/refresh. Based on the physical host refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 38.81	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 1,164.39	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Guest Server - Unix - CWSD Dev/Test	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 1,229.08		
				Hardware		$ -	N/A
				Operating System License		$ 86.04	Represents the cost of software license upgrades/refresh. Based on the physical host refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 36.87	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 1,106.17	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Guest Server - Linux	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 646.88		
				Hardware		$ -	N/A
				Operating System License		$ 45.28	Represents the cost of software license upgrades/refresh. Based on the physical host refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 32.34	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 569.26	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Guest Server - Linux - CWSD Dev/Test	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 614.54		
				Hardware		$ -	N/A
				Operating System License		$ 43.02	Represents the cost of software license upgrades/refresh. Based on the physical host refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 30.73	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ -	N/A

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Software Maintenance		$ 540.79	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Host Server - Windows/Linux	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 5,328.61		
				Hardware		$ 2,930.74	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 106.57	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating system license		$ -	N/A
				Software license		$ 159.86	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 498.00	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software maintenance		$ 1,633.44	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Host Server - Windows / Linux - CWSD Dev/Test	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 5,062.18		
				Hardware		$ 2,784.20	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 101.24	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating system license		$ -	N/A
				Software license		$ 151.87	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 473.10	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software maintenance		$ 1,551.77	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Acclaim Riverbed	Schedule 4.3 - Section 6.8	Server	Fixed Monthly Fee Per Unit		$ 1,905.36		
				Hardware		$ 854.43	Represents the hardware costs, architecture, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ -	n/a
				Operating System License		$ -	n/a
				Other Software License		$ -	n/a
				Hardware Maintenance		$ 720.93	Represents the third party costs to maintain the hardware.
				Support Labor		$ 330.00	Represents Contractor labor to install and break fix the hardware.
						$ -	n/a
Infrastructure Services	Schedule 4.3 – Section 6.8	Month	Fixed Monthly Fee Per Unit		$ 325,304.45		
				Service Desk Services		$ -	N/A
				End User Services		$ 84,836.57	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Infrastructure Services in support of End User Services.
				Network Services		$ 165,829.28	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Infrastructure Services in support of Network Services.
				Data Center Services		$ 74,638.60	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Infrastructure Services in support of Data Center Services.
				Application Maintenance & Operations Services		$ -	N/A
				Application Development Services		$ -	N/A
				Hardware		$ 151,635.62	Represents the hardware cost of the Routers, Switches and circuit costs, Servers. Refresh has been included based on depreciation period shown on Exhibit 16.1-1.
				Software		$ 45,891.24	Represents the software costs associated with Infrastructure hardware and Software to run the environment.
						$ 127,777.59	Represents the Labor to support Infrastructure Services as defined in Section 2.8 of the Technical Proposal.
Development & Test Services	Schedule 4.3 - Section 6.9	Month	Fixed Monthly Fee Per Unit		$ 223,622.34		
				Service Desk Services		$ -	N/A
				End User Services		$ -	N/A
				Network Services		$ -	N/A

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Data Center Services		$ -	N/A
				Application Maintenance & Operations Services		$ 79,074.75	Represents the portion of Dev and Test services attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 144,547.59	Represents the portion of Dev and Test services attributable to providing Application Development Services.
				Hardware		$ 88,183.39	Represents the hardware cost of the Routers, Switches and circuit costs, Servers to support the Development and Test environment. Refresh has been included based on depreciation period shown on Exhibit 16.1-1.
				Software		$ 25,007.28	Represents the software costs associated with Development and Test Services Software.
				Labor		$ 110,431.67	Represents the Labor to support Development and Test Environment as defined in Section 2.8 of the Technical Proposal.
Virtual Fax	Schedule 4.3 - Section 6.10	Account	Fixed Monthly Fee Per Unit		$ 38.28		
				Hardware		$ -	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System License		$ -	Represents the cost of software license upgrades/refresh.
				Other Software License		$ 27.05	Represents the estimate of the Non-OS License Software.
				Hardware Maintenance		$ -	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 7.03	Represents costs associated with software maintenance along with the labor and resources for support by vendor and Contractor.
				IMAR		$ 4.20	Represents the labor costs for IMAR activities.
Attached Storage – AS/400	Schedule 4.3 – Section 6.12	Used Gigabyte	Fixed Monthly Fee Per Unit		$ 0.695		
				Hardware		$ -	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System license		$ -	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ -	Represents the estimate of the Non-OS License Software
				Hardware maintenance		$ 0.185	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software maintenance		$ 0.510	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Attached Storage – Mainframe	Schedule 4.3 – Section 6.12	Used Gigabyte	Fixed Monthly Fee Per Unit		$ 6.73		
				Hardware		$ -	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System license		$ -	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ -	Represents the estimate of the Non-OS License Software
				Hardware maintenance		$ 2.09	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software maintenance		$ 4.64	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Attached Storage - Unix	Schedule 4.3 - Section 6.12	Used Gigabyte	Fixed Monthly Fee Per Unit		$ 1.07		
				Hardware		$ 0.34	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System License		$ -	N/A
				Other Software License		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 0.73	Represents costs associated with storage management software, and the labor and resources for Level 2 support.
Attached Storage - WINTEL	Schedule 4.3 - Section 6.12	Used Gigabyte	Fixed Monthly Fee Per Unit		$ 0.82		
				Hardware		$ 0.29	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Operating System License		$ -	N/A
				Other Software License		$ -	N/A
				Hardware Maintenance		$ -	N/A

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Software Maintenance		$ 0.53	Represents costs associated with storage management software, and the labor and resources for Level 2 support.
Storage - Archive Tier	Schedule 4.3 - Section 6.12	Used Gigabyte	Fixed Monthly Fee Per Unit		$ 0.30		
				Hardware		$ 0.16	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System License		$ 0.01	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 0.03	Represents the estimate of the Non-OS License Software in support of the DPC.
				Hardware Maintenance		$ 0.07	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 0.03	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Storage - Primary Tier	Schedule 4.3 - Section 6.12	Used Gigabyte	Fixed Monthly Fee Per Unit		$ 0.74		
				Hardware		$ 0.18	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System License		$ 0.02	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 0.06	Represents the estimate of the Non-OS License Software in support of the DPC.
				Hardware Maintenance		$ 0.07	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 0.41	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Storage - Secondary Tier	Schedule 4.3 - Section 6.12	Used Gigabyte	Fixed Monthly Fee Per Unit		$ 0.52		
				Hardware		$ 0.13	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System License		$ 0.02	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 0.05	Represents the estimate of the Non-OS License Software in support of the DPC.
				Hardware Maintenance		$ 0.05	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 0.27	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Storage - Document Processing Center 1	Schedule 4.3 - Section 6.12	Unit	Fixed Monthly Fee Per Unit		$ 16,579.20		
				Hardware		$ 8,602.76	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years
				Operating System License		$ 1,650.55	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 928.44	Represents the estimate of the Non-OS License Software in support of the DPC.
				Hardware Maintenance		$ 3,444.79	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 1,952.66	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Storage - Document Processing Center 2	Schedule 4.3 - Section 6.12	Unit	Fixed Monthly Fee Per Unit		$ 9,828.00		
				Hardware		$ 5,099.64	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years
				Operating System License		$ 978.43	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 550.37	Represents the estimate of the Non-OS License Software in support of the DPC.
				Hardware Maintenance		$ 2,042.04	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 1,157.52	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Storage - Immutable Tier (1 TB)	Schedule 4.3 - Section 6.12	1 Terabyte	Fixed Monthly Fee Per Unit		$ 638.62		
				Hardware		$ 318.67	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
				Operating System License		$ 180.73	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ -	N/A
				Hardware Maintenance		$ 49.17	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 90.05	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Storage - Immutable Tier (500GB)	Schedule 4.3 - Section 6.12	512 Gigabyte	Fixed Monthly Fee Per Unit		$ 319.31		
				Hardware		$ 159.02	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System License		$ 90.05	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ -	N/A
				Hardware Maintenance		$ 24.59	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 45.66	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Enterprise Application Access	Schedule 4.3 - Section 6.26	Month	Fixed Monthly Fee Per Unit		$ 75,117.37		
				Hardware		$ -	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System License		$ -	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 54,000.00	Represents the estimate of the Non-OS License Software.
				Hardware Maintenance		$ -	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 21,117.37	Represents costs associated with software maintenance along with the labor and resources for support by vendor and Contractor.
Optional Item Catalog (OIC) - Software Addition	Exhibit 16.1 - Section 10.2	Add	Fixed Fee Per Unit		$ 2,450.00		
				Hardware		$ 221.32	Represents the lab workstations used to test MSI packing.
				Operating System License		$ -	
				Other Software License		$ 48.28	Represents desktop software packaging and installation kit software.
				Hardware Maintenance		$ -	
				Software Maintenance		$ 2,180.40	Represents the labor costs for adding software to the catalog of available software.
Optional Item Catalog (OIC) - Update	Exhibit 16.1 - Section 10.2	Update	Fixed Fee Per Unit		$ 1,400.00		
				Hardware		$ 112.56	Represents the lab workstations used to test MSI packing.
				Operating System License			
				Other Software License		$ 26.15	Represents desktop software packaging and installation kit software.
				Hardware Maintenance			
				Software Maintenance		$ 1,261.29	Represents the labor costs for updating software to the catalog of available software.
Transition Services - Service Desk Framework	Schedule 2.1	Milestone	Fixed Fee Per Unit		$ -		
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ -	N/A
Transition Services - Application Services Framework	Schedule 2.1	Milestone	Fixed Fee Per Unit		$ -		
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ -	N/A

Exhibit 16.1-2 Resource Unit Price Decomposition - **Pricing Decomposition valid through December 31, 2023.**

Resource Unit (RU)	*Reference	Unit of Measure	Pricing Method	*Decomposition*	Resource Unit Fee	Component Fee	Component Description
Transition Services - End User Services Framework	Schedule 2.1	Milestone	Fixed Fee Per Unit		$ -		
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ -	N/A
Transition Services - Network Services Framework	Schedule 2.1	Milestone	Fixed Fee Per Unit		$ -		
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ -	N/A
Transition Services - Data Center Services Framework	Schedule 2.1	Milestone	Fixed Fee Per Unit		$ -		
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ -	N/A
Transition Services - Cross Functional Services Framework	Schedule 2.1	Milestone	Fixed Fee Per Unit		$ -		
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ -	N/A
Transition Services - Transition Completion	Schedule 2.1	Milestone	Fixed Fee Per Unit		$ 7,212,700.17		
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 7,212,700.17	See TS7 - Completion tab for details.

*Schedule 4.3 Reference includes the Section reference for the specific requirements for this particular Resource Unit but it still includes all general requirements applicable to such Resource Unit in the higher levels of the obligations hierarchy as described in Schedule 4.3. For example, the Resource Unit for Desktop - Standard Workstation includes not only the responsibilities as stated in Section 4.5 of the End-User Services Section of Schedule 4.3, but also the responsibilities in Sections 4.1 through 4.3 of the End-User Services Section, as well as the responsibilities and requirements in Section 1 of Schedule 4.3.
**The mainframe RU unit volumes are based on the R24 CPUs
***With the exception of 2.3.1.4 and 2.3.1.5 and their respective requirements

Exhibit 16.1-3 – Maximum Annual Fee

1. OVERVIEW

Maximum Annual Fee is based on the quantities provided in Exhibit 16.1-1. Contract Year 1 includes the Transition Costs in addition to twelve months of operations.

Contract Year	Maximum Annual Fee
1	**$57,377,735.09**
2	**$172,000,000.00**
3	**$191,000,000.00**
4	**$207,845,282.00**
5	**$207,547,801.00**
6	**$205,822,123.00**
7	**$219,955,694.00**
8	**$222,628,614.00**

Exhibit 16.1-4 – Labor Categories

Table of Contents

1. Overview 4

2. APPLICATION SERVICES LABOR CATEGORIES 4

2.1. Acquisition Manager 4

2.2. Application Architect 5

2.3. Application Developer 6

2.4. Application Developer – Associate 8

2.5. Application Test Lead 9

2.6. Application Test Developer 10

2.7. Business Analyst 11

2.8. Database Administrator 12

2.9. Program Manager 14

2.10. Project Manager 15

2.11. Project Scheduler 16

2.12. Systems Analyst 18

2.13. Senior Application Developer 19

2.14. Web Designer 20

2.15. Desktop Engineer 21

2.16. Gate Review Coordinator 21

2.17. Junior Developer 24

2.18. Data Entry Clerk 24

2.19. Senior Curam Interface Architect 26

2.20. Senior Curam Application Developer 28

2.21. Senior Curam Business Analyst 29

2.22. Intern 31

2.23. Applications Developer - Advanced Technology 32

2.24. Network Architect 32

2.25. Network Engineer 33
2.26. Senior Network Engineer 34
2.27. Technology Transition and Adoption Coordinator (T-TAC) 35
2.28. Information Security Engineer 39
3. KEY PERSONNEL LABOR CATEGORIES 41
3.1. Chief Technical Architect (CTA) 41
3.2. Enterprise Application Architect (EAA) 42
3.3. Innovation Officer (IO) 43
4. NAMED PERSONNEL LABOR CATEGORIES 44
4.1. Applications Developer – ERP Principal 44
4.2. Electronic Health Records (EHR) Program Manager 46

1. OVERVIEW

Exhibit 16.1-4 – Labor Categories provides descriptions of billable and non-billable labor categories for this Agreement. The Contractor shall bill the County using the applicable labor category rate as per the role or task(s) performed by personnel. For example, if the task or role being provided by personnel falls within Business Analyst labor category, hours associated with such role or task(s) shall be billed at the Business Analyst labor category rate. Non-billable labor categories describe the qualifications for designated Key Personnel.

Personnel billing to a labor category rate must meet the requirements of said labor category unless otherwise approved by the County.

2. APPLICATION SERVICES LABOR CATEGORIES

2.1. Acquisition Manager

The Acquisition Manager is responsible for the procurement activities necessary for Contract Management to execute procurement. The Acquisition Manager role performs pre-procurement activities (e.g. stack and rank, request for information, market studies) and goes up to coordinating negotiations and ends at the handoff for the actual procurement activates. This includes activities such as research, requirements development, vendor ranking, and assessment. The Acquisition Manager works with various Frameworks and Framework Components such as Contract Management Services, Asset Management, Applications Maintenance and Operations, and Applications Development.

Knowledge, Skills and Abilities:

Knowledge of:

- Current technology and trends in the profession
- County business and functions

Skills and Abilities:

- Manage Request for Information (RFI) activities
- Manage Request for Proposal (RFP) activities
- Perform market scan for potential solutions or vendors
- Perform portability assessment and recommendations for Cloud Service procurements
- Perform stack & rank of Provider(s) for potential products and/or services
- Establish and maintain cooperative working relationships

- Communicate effectively with both technical and non-technical users, both in written and verbal form
- Work independently and in a team environment

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree and a minimum seven (5) years of experience working on acquisitions and procurement; OR
2. Associate degree with two (2) additional years of experience; OR
3. High school diploma with four (4) additional years of experience.

2.2. Application Architect

An Application Architect serves as the team lead across all architecture domains including Technical, Security, Data and Application. An Application Architect is responsible for defining IT strategy, evaluating technologies, defining standards, designing solution and reference architectures that solve stated business objectives, supporting the development of architectural frameworks and integrating them with coherent and consistent architectural views.

Knowledge, Skills and Abilities:

Knowledge of:

- Business process design techniques
- Platform architectures and network architectures
- Application design, architecture and development
- Entity modeling
- Test planning
- Current technology and trends in the profession
- County business and functions

Skills and Abilities:

- Lead the overall design of cross-functional, multi-platform, and Web-based application systems; oversees all application system processes
- Lead the application architecture definition / development
- System design and development

- Direct mapping activities on specific technology platforms
- Provide technical guidance to application development teams and consults on integration and conversion activities
- Conduct reviews, and analyzes organizational needs and goals to develop and implement applications
- Assess performance, tuning and capacity requirements to determine key technology decision
- Oversee the activities of the Database Administrator and the Software Configuration Analyst
- High-level entity modeling activities
- Ensure effective software configuration management across applications
- Assesses and effectively manages risks associated with their business objectives
- Establish and maintain cooperative working relationships
- Communicate effectively with both technical and non-technical users, both in written and verbal form
- Work independently and in a team environment
- Develop following work products: Conceptual Architecture Diagram, Interface Design Document, System Architecture Study, Vendor Requirements Questionnaire, and Engineering Documents

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree in management information systems or computer science and a minimum seven (7) years of experience working on software application development projects, of which (3) years must have been associated with application requirements management; OR
2. Associate degree with two (2) additional years of experience in software application development; OR
3. High school diploma with four (4) additional years of experience in software application development.

2.3. Application Developer

An Application Developer acts under general supervision, and can act in a lead capacity on application assignments, and/or on complex data processing problems.

Knowledge, Skills and Abilities:

Knowledge of:

- Computer programming
- Principles of designing methods of processing data
- Electronic data processing equipment and its capabilities
- Software Development Life Cycle (SDLC) methodology
- Business Process Management (BPM)
- Service Oriented Architecture (SOA)
- Technical report writing
- Statistical methods
- Software engineering disciplines including: Microsoft .NET, J2EE, SharePoint, Business Intelligence
- Current technology and trends in the profession

Skills and Abilities:

- Analyze data and situations, reason logically and creatively, identify problems, draw valid conclusions, and develop effective solutions
- Write complex programs and develop detailed program specifications
- Use programming and scripting languages, vendor packages and software development tool
- Establish and maintain cooperative working relationships
- Communicate effectively with both technical and non-technical users, both in written and verbal form
- Work independently and in a team environment
- Develop following work products: Unit Test Plan, Computer Programs, Software Configuration Item List, and Root Cause Analysis Form

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree in management information systems or computer science and a minimum three and half (3.5) years of experience working on software application development projects of which two (2) years must be in a single language unless technology precludes it; OR

2. Associate degree with two (2) additional years of experience in software application development; OR
3. High school diploma with four (4) additional years of experience in software application development.

2.4. Application Developer – Associate

An Application Developer – Associate acts under general supervision on projects, enhancements and operational support for various business applications.

Knowledge, Skills and Abilities:

Knowledge of:

- Software Development Life Cycle (SDLC) methodology
- Business Process Management (BPM)
- Service Oriented Architecture (SOA)
- Software engineering disciplines including: Microsoft .NET, J2EE, SharePoint,
- Business Intelligence

Skills and Abilities:

- Analyze data and situations, reason logically and creatively, identify problems, draw valid conclusions
- Write programs from detailed program specifications
- Apply creative thinking in the support of business applications
- Establish and maintain cooperative working relationships
- Communicate effectively with both technical and non-technical users, both in written and verbal form
- Work independently and in a team environment
- Develop following work products: Unit Test Plan, Computer Programs, Software Configuration Item List, and Root Cause Analysis Form

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree in Computer Science, Systems Engineering or related degrees; OR

2. Associate degree with two (2) years of experience in software application development; OR
3. High school diploma with four (4) years of experience in software application development.

2.5. Application Test Lead

An Application Test Lead provides technical leadership for all testing activities of assigned projects and assigns work to others on the testing team. An Application Test Lead is responsible for the leading the development and implementation of comprehensive test plans to support application development lifecycles.

Knowledge, Skills and Abilities:

Knowledge of:

- Industry standard testing practices
- Current technology and trends in the profession
- Testing processes, testing metrics and testing tool development
- Testing analysis and design and functional and performance models
- Automated testing tools

Skills and Abilities:

- Plan and lead the analysis of the testing requirements of a project in order to define testing strategy
- Define metrics to be collected to monitor the performance and effectiveness of testing
- Identify and recommend improvements to testing methods and standards for a project through an assessment of current testing practices
- Supports implementation of recommended improvements
- Establish and maintain cooperative working relationships
- Communicate effectively with both technical and non-technical users, both in written and verbal form
- Work independently and in a team environment
- Develop following work products: test strategies and plans, complex testing scenarios and test cases, test reports and work assignments

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Master's or equivalent university degree in management information systems or computer science with a minimum of four (4) years of experience delivering multiple testing services to complex projects; OR
2. Bachelor's or equivalent university degree in Computer Science, Systems Engineering or related degrees with additional two (2) years of experience; OR
3. Associate degree with additional four (4) years of experience; OR
4. High school diploma with additional six (6) years of experience.

2.6. Application Test Developer

An Application Test Developer analyzes complex test results from the scripts, reports on test tool and testing progress and results, facilitates defect resolution and documents final test results in order to complete testing engagement. An Application Test Developer is responsible for developing test cases and scripts and other testing tools in order to implement the comprehensive test plans developed by the Application Test Lead and executing test plans to support application development lifecycles, application upgrades and maintenance.

Knowledge, Skills and Abilities:

Knowledge of:

- Industry standard testing practices
- Current technology and trends in the profession
- Testing processes, testing metrics and testing tool development
- Testing analysis and design and functional and performance models
- Automated testing tools

Skills and Abilities:

- Understand requirements, design specifications, and testing strategy to develop test scenarios
- Selects test design techniques and develop testing metrics collection plans in order to plan and prepare for testing
- Develop and validate models and scripts for testing
- Develop and review test summary reports
- Develop technical tools needed to support testing strategy
- Develop technical test plans and technical test scenarios
- Develop and validate technical test specifications and tools
- Evaluate and validate test cases and scripts

- Application testing
- Evaluate test automation tools and validate testing environments in order to develop test specifications and automated testing tools
- Establish and maintain cooperative working relationships
- Communicate effectively with both technical and non-technical users, both in written and verbal form
- Work independently and in a team environment
- Develop following work products: test plans, complex testing scenarios, test scripts, test tools and other automated testing, test cases and test reports

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Master's or equivalent university degree in management information systems or computer science and a minimum of four (4) years of experience delivering multiple testing services to complex projects; OR
2. Bachelor's or equivalent university degree in Computer Science, Systems Engineering or related degrees with additional two (2) years of experience; OR
3. Associate degree with additional four (4) years of experience; OR
4. High school diploma with additional six (6) years of experience.

2.7. Business Analyst

A Business Analyst works closely with County departments to develop and document functional business requirements that serve as the basis for exploration of system-related solutions. The Business Analyst understands, or is able to quickly grasp, the essential functions of a business and is able to produce business requirements documents, use cases, and business justifications; and is capable of developing and analyzing business process reengineering alternatives.

The Business Analyst is able to work with technical staff and solution architects to analyze potential alternatives and add incremental value through development and/or acquisition efforts, including participation in evaluations, selections, test development, organizational change initiatives, etc.

Knowledge, Skills and Abilities:

Knowledge of:

- Principles of Project Management
- County business, and business functions in a specific department, division, or other area of focus
- General understanding of automated solutions and the systems development life-cycle
- Business requirements documentation
- Use Case approach
- Current technology and trends in the profession
- Proficiency in the use of Microsoft Office Products including Visio and Project

Skills and Abilities:

- Strong analytical and problem solving skills
- Perform risk assessment analysis and identify risk mitigation strategies
- Ability to differentiate between as-is business processes/systems and true business objectives (that my encompass other process/system alternatives)
- Ability to contribute to statements of work, collaborating with Systems Analyst or others
- Establish and maintain cooperative working relationships
- Communicate effectively with both technical and non-technical users, both written and verbal
- Work independently and in a team environment
- Develop following work products: Business Requirements Document, Functional Requirements Document, use cases, and end user guides

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree in a technical discipline and a minimum two (2) years of experience working with the specific business function, or a demonstrated capability to work with the business function in a structured process to develop necessary understanding of the business; AND
2. Minimum two (2) years of experience developing business functional requirements and use cases.

2.8. Database Administrator

A Database Administrator is responsible for configuring and maintaining a database(s), and supporting end users. A Database Administrator provides technical knowledge/expertise in the use of the Database Management System(s) including: table structure design, backup/restore/recovery processes and

procedures, performance analysis and tuning, data file sizing, upgrade/patch support, storage allocation, table space allocation, user account management, and may generating SQL scripts.

Knowledge, Skills and Abilities:

Knowledge of:

- Database Performance Tuning
- Database Security
- Database Management
- Data Maintenance
- Operating Systems
- Information Security Policies
- Current technology and trends in the profession

Skills and Abilities:

- Identify database requirements and design proposed systems
- Define database physical structure and functional capabilities, database security, data back-up, and recovery specifications
- Installs revised or new systems
- Maintain database performance by calculating optimum values for database parameters; implementing new releases; completing maintenance requirements; evaluating computer operating systems and hardware products
- Establish and enforce organization standards
- Establish and maintain cooperative working relationships
- Communicate effectively with both technical and non-technical users, both in written and verbal form
- Work independently and in a team environment

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree in management information systems or computer science and minimum of six (6) years of experience working as Database Administrator; OR
2. Associate degree with two (2) additional years of experience; OR
3. High school diploma with four (4) additional years of experience.

2.9. Program Manager

A Program Manager directs and manages the most complex programs that consist of multiple projects and work streams. A Program Manager may also be designated for the most complex projects with County approval. Complex projects are defined as having labor costs greater than $2,000,000 (excluding license or hardware costs) or projects so designated by the GITM.

A Program Manager is responsible for managing all activities related to a complex project, including: coordination of resources, inclusive of Contractor internal resources, County resources and third parties/vendors; developing a detailed project plan to monitor and track progress; managing change to project scope, schedule and cost; stakeholder communications; risk management, including assessment of impacts across multiple work streams; performance measurement; organizational change management; and ensuring that the project is on-time, within scope, and within budget.

A Program Manager interacts with all levels of staff within the County as well as its vendors, including senior, upper and executive management.

Knowledge, Skills and Abilities:

Knowledge of:

- Principles of project management
- Management principles and techniques in project planning and administration
- Management techniques to lead project teams
- Methods and practices of budget, schedule preparation and management
- County business and functions
- Current technology and trends in the profession

Skills and Abilities:

- Plan, organize, and direct the activities and tasks of a project
- Coordinate the resources (internal and external) for the execution of projects
- Prepare and present effective oral and written reports to project team, stakeholders, sponsors, steering committee and all levels of management
- Use interdisciplinary teams effectively in the conduct of the project
- Manage project budget and resource allocation

- Reason logically and creatively and use a variety of analytical and research techniques to solve complex problems
- Work within tight deadline
- Establish and maintain cooperative working relationships
- Proficiency in the use of cost and schedule tools
- Proficiency in the use of Microsoft Office Products including Visio and Project

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree and a minimum of 4,500 hours of project management experience within the last five (5) years; OR
2. Associate degree and a minimum of 6,000 hours of project management experience within the last five (5) years; OR
3. High school diploma or equivalent secondary school credential and a minimum of 7,500 hours of project management experience within the last five (5) years; AND
4. Project Management Professional (PMP) certification or equivalent credential with County approval.

2.10. Project Manager

A Project Manager is responsible for the managing all activities related to a project including: coordination of resources, inclusive of Contractor internal resources, County resources and third parties/vendors; developing a detailed project plan to monitor and track progress; managing change to project scope, schedule and cost; stakeholder communications; risk management; performance measurement; and ensuring that project is on-time, within cope and within budget.

A Program Manager interacts with all levels of staff within the County as well as its vendors, including senior, upper and executive management.

Knowledge, Skills and Abilities:

Knowledge of:

- Principles of project management
- Management principles and techniques in project planning and administration

- Management techniques to lead project teams
- Methods and practices of budget, schedule preparation and management
- County business and functions
- Current technology and trends in the profession

Skills and Abilities:

- Plan, organize, and direct the activities and tasks of a project
- Coordinate the resources (internal and external) for the execution of projects
- Prepare and present effective oral and written reports to project team, stakeholders, sponsors, steering committee and all levels of management
- Use interdisciplinary teams effectively in the conduct of the project
- Manage project budget and resource allocation
- Reason logically and creatively and use a variety of analytical and research techniques to solve complex problems
- Work within tight deadline
- Establish and maintain cooperative working relationships
- Proficiency in the use of cost and schedule tools
- Proficiency in the use of Microsoft Office Products including Visio and Project

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree and a minimum of 3,000 hours of project management experience within the last five (5) years; OR
2. Associate degree and a minimum of 4,500 hours of project management experience within the last five (5) years; OR
3. High school diploma or equivalent secondary school credential and a minimum of 6,000 hours of project management experience within the last five (5) years; AND
4. Project Management Plan (PMP) certification or equivalent credential with County approval.

2.11. Project Scheduler

A Project Scheduler develops and maintains project schedules and supports Program Manager with project scheduling and analysis. The Project Scheduler is responsible for implementing standard processes, tools and program planning and control practices for project schedules. The Project Scheduler will communicate

weekly activities that are to occur, and maintain activities according to baseline. The Project Scheduler will also track and report SPI.

Knowledge, Skills and Abilities:

Knowledge of:

- Principles of Project Management
- Critical Path Analysis
- Earned Value Management

Skills and Abilities:

- Develop and maintain Integrated Master Plan (IMP) and Integrated Master Schedule (IMS) detail schedule
- Develop schedules that include project phasing, project milestones, and represent critical relationships between program tasks as required to plan, coordinate, and visualize all significant program activities
- Assess project schedule risks for effective mitigation
- Develop and analyze planning, scheduling and change related metrics/reports, including critical path analysis, resource analysis, etc.
- Analyze trends, develop reports, facilitate communication and provide feedback on performance
- Conduct Earned Value Analysis
- Establish and maintain cooperative working relationships
- Demonstrate good communication skills, both written and verbal; communicate effectively with both technical and non-technical users
- Work independently and in a team environment
- Proficiency in the use of Microsoft Office Products including Visio and Project

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree and a minimum 6 years experience in scheduling and project management; AND
2. Proficiency in Microsoft Project.

2.12. Systems Analyst

A Systems Analyst implements computer system requirements by defining and analyzing system problems; designing and testing standards and solutions. A Systems Analyst is responsible for eliciting, documenting, and analysis of requirements for the development, installation, implementation, procurement, or support of custom developed systems or third party developed systems.

Knowledge, Skills and Abilities:

Knowledge of:

- Principles of Project Management
- Data processing, hardware platforms, and enterprise software applications
- System Design
- Software Development Process, Software Documentation, Software Testing
- County business and functions
- Current technology and trends in the profession
- Proficiency in the use of Microsoft Office Products including Visio and Project

Skills and Abilities:

- Strong analytical and problem solving skills
- Perform risk assessment analysis and identify risk mitigation strategies
- Establish and maintain cooperative working relationships
- Communicate effectively with both technical and non-technical users, both in written and verbal form
- Work independently and in a team environment
- Develop following work products: Requirements Document, Project Proposal, Requirements Traceability matrix, and Risk Management Plan

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree in management information systems and a minimum six (6) years of experience working on software application development projects, of which (3) years must have been associated with application requirements management; OR
2. Associate degree with two (2) additional years of experience in software application development; OR

3. High school diploma with four (4) additional years of experience in software application development.

2.13. Senior Application Developer

A Senior Application Developer creates and updates the most complex applications and/or resolves the most complex data processing problems. A Senior Application Developer is responsible for code design and implementation using system configuration and code to provide solutions.

Knowledge, Skills and Abilities:

Knowledge of:

- Computer programming
- Electronic data processing equipment and its capabilities
- Software development cycle
- Principles of designing methods of processing data
- Technical report writing
- Statistical methods
- Current technology and trends in the profession

Skills and Abilities:

- Analyze data and situations, reason logically and creatively, identify problems, draw valid conclusions, and develop effective solutions
- Write complex programs and develop detailed program specifications
- Use programming and scripting languages, vendor packages and software development tool
- Establish and maintain cooperative working relationships
- Communicate effectively with both technical and non-technical users, both in written and verbal form
- Work independently and in a team environment
- Develop following work products: Unit Test Plan, Computer Programs, Software Configuration Item List, and Root Cause Analysis Form

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree in management information systems or computer science and a minimum eight (8) years of experience working on software application development projects; OR
2. Associate degree with two (2) additional years of experience in software application development; OR
3. High school diploma with four (4) additional years of experience in software application development.

2.14. Web Designer

A Web Designer designs and builds web sites using a variety of graphics software applications, techniques, and tools. A Web Designer acts under general supervision, and can act in a lead capacity or work independently on application assignments, and/or on complex data processing problems.

Knowledge, Skills and Abilities:

Knowledge of:

- User interface design and development
- Digital imaging
- Web development
- Content management
- Multimedia design
- Multimedia programming and technology (e.g. HTML, Photoshop, Illustrator)
- Current technology and trends in the profession

Skills and Abilities:

- Design webpage layout
- Determine technical requirements
- Update websites
- Establish and maintain cooperative working relationships
- Communicate effectively with both technical and non-technical users, both in written and verbal form
- Work independently and in a team environment
- Develop following work products: Unit Test Plan, Computer Programs, Software Configuration Item List, Graphics, and Animation

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree in management information systems or computer science and minimum of two (2) years of experience working on software development projects of which at least one (1) year must be in web design; OR
2. Associate degree with two (2) additional years of experience in software development; OR
3. High school diploma with four (4) additional years of experience in software development.

2.15. Desktop Engineer

The Desktop Engineer will support application packaging, deployments, documentation, and release control in an Enterprise environment, and perform baseline image creation for multiple hardware configurations. Provide advice, technical consultation, and guidance to internal teams and external clients by analyzing and resolving problems and evaluating alternative means of satisfying user requirements, research and implement new technology to service the client and the team while staying up to date on the latest solutions, and communicate with the vendors to ensure the best option is provided. Oversee multiple projects and teams to meet project milestones, schedules, and scope in alliance with best practices, identify reoccurring issues, and work with IT and business partners to remediate using the problem management process.

Education and/or Experience:

- 5+ years of experience in a professional work environment
- 18+ months of experience with deploying software in a Windows environment
- BA or BS degree preferred
- Certification in Microsoft Operating Systems or Engineering, including MCSE preferred

2.16. Gate Review Coordinator

The IT PMO Gate Review Coordinator (GRC) role and responsibility is as an active team member in (a) the execution of all project management processes and procedures, and (b) proactive leadership in the review and remediation of all associated artifacts from project inception through final delivery. This role will assure that the mission of each individual project is accomplished as specified by the County of San Diego and ITO.

Knowledge, Skills and Abilities:

- Facilitate Project Gate Review process and procedures as a member of the project team
    - Ensure proper level of tailoring for Gate Review artifacts based upon identified project risk
    - Ensure project team and customer throughout the project life cycle in accordance with the Gate Review schedule
    - Ensure requirements tracking through project life cycle
    - Ensure Project artifact compliance to the Requirements Traceability Matrix (RTM) and track issues and corrective actions
    - Participate in the development of the County Project Evaluation & Classification
    - Tool (CPECT) risk classification tool and assist in the evaluation of results
    - Monitor Project Risk and Opportunities Register
    - Conduct independent risk reviews & monitor/report risk mitigation activities
    - Ensure that 3rd Party Vendor performance and deliverables/artifacts conform to
    - ITO policies and procedures
    - Recommend/Implement lessons learned for continuous improvement

- Review project deliverables and remediate as part of project team
    - Identify potential issues in cost, schedule & technical performance which could
    - Impact project artifacts and deliverables
    - Participate in Work Product Peer Reviews (WPPRs)
    - Review project issue closure plans
- Manage project Gate artifact review and approval workflow
    - Evaluate artifacts prior to Gate Review and coordinate with Project Manager
    - (PM)/Technical Leads on remediation efforts as required
    - Establish/verify the review criteria for each artifact are achieved prior to Gate Review (these criteria are also used during Gate Review)
        - Gate Entry Criteria verification checklist
        - Gate Review Input verification checklist
        - Review criteria and Go/No-Go conditions
    - Ensure Stakeholders have reviewed artifacts and completed templates prior to Gate Review
- Manage project Gate Review process
    - Prepare Schedule/Agenda and notify participants including Gate Review lead-time scheduling for Stakeholders
    - Lead Gate Review and rules of engagement for Gate/Artifacts (Go/No-Go decision)

  - Capture/Verify Gate Review artifact action items with participants during Gate Review and distribute
  - Capture Gate Review attendees, decisions and action items in the designated repository
- Ensure project Gate Review closure
  - Capture final updates on action items and post to designated repository
  - Ensure that Gate Review action items are closed per schedule and report nonconformance to PM

Education and/or Experience:

The GRC will have experience in Mission Assurance developing and applying MA processes and procedures specific to the full project development life cycle. To be considered for this position, the candidate must minimally meet the knowledge, skills, and abilities listed below:

- Bachelor's Degree
- 5 years working in a product engineering and/or a IT service environment with focus on all aspects of the product /service lifecycle to include development, verification, deployment and operation within an IT managed service environment
- 3 years in the analysis of service performance gaps and process improvement
- 3 year experience and demonstrated knowledge of program management processes (e.g., risk management)
- 3 year experience implementing product engineering or IT service (ITIL) processes within a variety of systems or services environments; involving systems or services teams in the definition, documentation, deployment and improvement of processes.
- Candidates with these preferred qualifications will be given preferential consideration:
  - Bachelor's degree in System Engineering or where there is no technical (B.S) degree, post graduate certifications in IT related areas
  - Demonstrated proficiency in communication and/or facilitation skills which will be needed in dealing with a variety of stakeholders across the Operating Unit to include program technical staff, program managers, senior managers and customer representatives
  - Proficiency in all Microsoft Office products

    Certification or extensive experience in system engineering methodologies or frameworks (i.e., CMMI-DEV, ITIL V2 or ITIL V3) which support technical aspects of the program

2.17. Junior Developer

Junior Developers perform technical or business tasks at the direction of an experienced manager or coach. Duties include:

- Assists in the design, coding, and testing of technical solutions.
- Assists in systems requirements analysis, data analysis and engineering, systems design, quality assurance, systems testing, configuration management, and application documentation.
- Prepares reports, manuals and other documentation on the status, operation and maintenance of software.
- Develops simple data queries for existing or proposed databases or repositories.

Knowledge, Skills, and Abilities:

Knowledge of:

- Database software
- Spreadsheets
- Word processing
- Development Methodologies (e.g., Waterfall, Agile, Iterative)
- Proficiency in the development language or environment being used

Skills and Abilities:

- Strong oral and written communication skills

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education I experience:

1. Undergraduate students with major in Computer Science oz related field and GPA of 3.0 or above.
2. Bachelor's Degree in Computer Science or related field.
3. Recent formal technical training with a certificate in application coding, database administration, or other applicable technical training and 2 years or less actual experience.

2.18. Data Entry Clerk

A Data Entry Clerk transfers data from paper formats into computer files or database systems using keyboards, data recorders or optical scanners. Duties include:

- Prepares source data for computer entry by compiling and sorting information; establishing entry priorities.
- Processes source documents by reviewing data; resolves discrepancies by using standard procedures or returning incomplete documents to the team leader for resolution.
- Verifies entered data by reviewing, correcting, deleting, or reentering data; combining data from systems when account information is incomplete; purging files to eliminate duplication of data.
- Complies with data integrity and security policies.
- Maintains client confidence and protects operations by keeping information confidential.
- Retrieves data from the database or electronic files as requested.
- Updates data and deletes unnecessary files.

Knowledge, Skills, and Abilities:

Knowledge of:

- Database software
- Spreadsheets
- Word processing

Skills and Abilities:

- Good typing and numeric key antsy skills.
- Good spelling, grammar, and punctuation skills
- Strong reading comprehension
- Attention to detail

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education /experience:

1. High school diploma
2. Formal computer training
3. Proficient in relevant computer applications such as MS Office
4. Accurate keyboard skills and proven ability to enter data at the required speed
5. Knowledge of clerical and administrative procedures

2.19. Senior Curam Interface Architect

A Senior Curam Interface Architect serves as the team lead across all architecture domains affected by the interface of one system to another. A Senior Curam Interface Architect is responsible for defining IT strategy, evaluating technologies, defining standards, designing solution and reference architectures that solve stated business objectives, in support of system interfaces.

For the ConnectWellSD program, this role will:

- Report to the ES Program Manager
- Interface with the IBM developers to define requirements
- Update technical architecture documents, as needed
- Work with the IBM developers to develop clear specifications
- Signoff on all developer specifications to the ES technical team
- Work with the ES technical team to resolve issues and provide technical direction
- Work with the ES technical team to deliver solutions

Knowledge, Skills and Abilities:

Knowledge of:

- Curam
- IBM's Social Program Management platform
- MDM
- Service Oriented Architecture (SOA), service buses
- Business process design techniques
- Platform architectures and network architectures
- Application design, architecture and development
- Entity modelling
- Test planning
- Current technology and trends in the profession
- County business and functions

Skills and Abilities:

- Lead the overall design of cross-functional, multi-platform, and Web-based data interfaces
- Lead the interface architecture definition / development
- System design and development
- Direct mapping activities on specific technology platforms

- Provide technical guidance to interface development teams and consults on integration activities
- Conduct reviews, and analyses organizational needs and goals to develop and implement interfaces
- Assess performance, tuning and capacity requirements to determine key technology decision
- Ensure effective software configuration management across applications
- Assesses and effectively manages risks associated with their business objectives
- Establish and maintain cooperative working relationships
- Communicate effectively with both technical and non-technical users, both in written and verbal form
- Work independently and in a team environment
- Develop following work products: Conceptual Architecture Diagram, Interface Design Document, System Architecture Study, Vendor Requirements Questionnaire, and Engineering Documents

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree in management information systems or computer science and a minimum eight (8) years of experience working on software application development projects, of which (3) years must have been associated with application requirements management; OR
2. Associate degree with two (2) additional years of experience in software application development; OR
3. High school diploma with four (4) additional years of experience in software interface development.
4. At least 5 years' experience in system development for an HHSA organization

Restrictions on use:

The use of this Resource Unit is limited to the following:

1. Limited to ConnectWellSD program
2. Limited to maximum of one (1) resources assigned to this RU
3. Requires approval from County for the named resource
4. Cannot be transferred to another ES employee without written County consent

2.20. Senior Curam Application Developer

A Senior Curam Application Developer acts with minimal supervision, and can act in a lead capacity on application assignments, and/or on complex data processing problems.

For the ConnectWellSD program, this role will:

- Report to the ES Program Manager
- Perform Curam team leadership function
- Perform break-fix function, and allocate break-fix work to junior Curam team members
- Perform system enhancements/modifications to requirements
- Identify and implement performance improvements
- Troubleshoot outages and reported system issues
- Mentor and train junior Curam team members

Knowledge, Skills and Abilities:

Knowledge of:

- Computer programming
- Curam
- IBM's Social Program Management platform
- Principles of designing methods of processing data
- Electronic data processing equipment and its capabilities
- Software Development Life Cycle (SDLC) methodology
- Business Process Management (BPM)
- Service Oriented Architecture (SOA)
- Technical report writing
- Statistical methods
- Software engineering disciplines including: Microsoft .NET, J2EE, SharePoint, Business Intelligence
- Current technology and trends in the profession

Skills and Abilities:

- Analyze data and situations, reason logically and creatively, identify problems, draw valid conclusions, and develop effective solutions
- Write complex programs and develop detailed program specifications
- Use programming and scripting languages, vendor packages and software development tool

- Establish and maintain cooperative working relationships
- Communicate effectively with both technical and non-technical users, both in written and verbal form
- Work independently and in a team environment
- Develop

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree in management information systems or computer science and a minimum six (6) years of experience working on software application development projects of which two (2) years must be in a single language unless technology precludes it; OR
2. Associate degree with two (2) additional years of experience in software application development; OR
3. High school diploma with four (4) additional years of experience in software application development.
4. At least 5 years' experience in system development for an HHSA organization

Restrictions on use:

The use of this Resource Unit is limited to the following:

1. Limited to ConnectWellSD program
2. Limited to maximum of two (2) resources assigned to this RU
3. Requires approval from County for the named resource
4. Cannot be transferred to another ES employee without written County consent

2.21. Senior Curam Business Analyst

A Senior Curam Business Analyst works closely with County departments to develop and document functional business requirements that serve as the basis for exploration of system-related solutions. The Senior Curam Business Analyst understands, or is able to quickly grasp, the essential functions of a business and is able to produce business requirements documents, use cases, and business justifications; and is capable of developing and analyzing business process reengineering alternatives.

The Senior Curam Business Analyst is able to work with technical staff and solution architects to analyze potential alternatives and add incremental value through development and/or acquisition efforts, including participation in evaluations, selections, test development, organizational change initiatives, etc.

For the ConnectWellSD program, this role will:

- Report to the ES Program Manager
- Work with the Application Architect to define ConnectWellSD roadmap and strategy
- Advocate the roadmap and strategy to newly engaged HHSA departments
- Guide requirements definition for HHSA departments to meet departmental business needs as well as ConnectWellSD strategic intent
- Identify opportunities in:
    - Overlap of functional requirements between various HHSA departments
    - New functional requirements for future ConnectWellSD scope consideration
- Advise County Program Manager on departmental issues, concerns, and risks
- Propose solutions to identified issues and risks
- Facilitate and improve testing plans to eliminate defects first occurring late in test cycle
- Mentor and train junior ConnectWellSD BAs

Knowledge, Skills and Abilities:

Knowledge of:

- Curam
- IBM's Social Program Management platform
- Principles of Project Management
- County business, and business functions in a specific department, division, or other area of focus
- General understanding of automated solutions and the systems development life-cycle
- Business requirements documentation
- Use Case approach
- Current technology and trends in the profession
- Proficiency in the use of Microsoft Office Products including Visio and Project

Skills and Abilities:

- Strong analytical and problem-solving skills
- Perform risk assessment analysis and identify risk mitigation strategies
- Ability to differentiate between as-is business processes/systems and true business objectives (that may encompass other process/system alternatives)

- Ability to contribute to statements of work, collaborating with Systems Analyst or others
- Establish and maintain cooperative working relationships
- Communicate effectively with both technical and non-technical users, both written and verbal
- Work independently and in a team environment
- Develop following work products: Business Requirements Document, Functional Requirements Document, use cases, and end user guides

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree in a technical discipline and a minimum six (6) years of experience working with the specific business function, or a demonstrated capability to work with the business function in a structured process to develop necessary understanding of the business; AND
2. Minimum two (2) years of experience developing business functional requirements and use cases.
3. At least 5 years' experience in requirements development for an HHSA organization

Restrictions on use:

The use of this Resource Unit is limited to the following:

1. Limited to ConnectWellSD program
2. Limited to maximum of one (1) resource assigned to this RU
3. Requires approval from County for the named resource
4. Cannot be transferred to another ES employee without written County consent

2.22. Intern

An Intern serves to support the Innovation Services program. To be considered for the intern position, a student must be enrolled at a college/university and meet the following requirements:

- Major in Computer Science, Industrial System Engineering, Information Technology, Computer Engineering, or related IT discipline preferred
- Past leadership and/or project management experience
- Community and/or campus involvement
- Interest/experience in information technology; software development expertise is a plus
- Ability to use popular office software and social media
- Ability to perform quantitative and qualitative analytics
- Ability to adapt quickly to a changing environment

- Ability to understand business processes and identify opportunities for improvement
- Ability to learn new concepts and assimilate information

Interns will perform technical or business tasks at the direction of an experienced manager or coach.

Duties include:

- Support Research
- Assist in pilots or proof-of-concepts
- Work and collaborate with technology partners and end-users
- Rapidly learn and leverage technologies

Knowledge, Skills and Abilities:

Knowledge of:

- Web technology applications
- Data Management
- Cloud-based technology

Additional Skills:

- Take direction well and be a motivated self-starter
- Strong oral and written communication skills
- Comfort with team collaboration

2.23. Applications Developer - Advanced Technology

The ADAT labor category is applicable when tasks require a deep understanding of new and emerging technologies and/or in complex application integration projects. Additionally, only pre-approved resources who meet the established qualifications are eligible to charge against the ADAT labor category.

ADAT tasks, qualifications, and pre-approved resources are documented in Schedule 5 Report 165 – ADAT Resource List.

2.24. Network Architect

The Network Architect is responsible for maintaining the design and integrity of the internal network. Provides expert technical assistance to team members on high-level system and networking request. Oversees the coordination, partnerships and management of technology vendors, outside consultants and internal dotted line resources as needed. As subject matter expert in the end to end network, works closely with business partners to identify and quantify business issues associated with specific projects, develop and implement business strategy, and assist in setting strategic technical direction in support of customer facing organizations.

Knowledge, Skills and Abilities:

Knowledge of:

- Current technology and trends in the profession
- County business and functions

Skills and Abilities

- Reviews and approves proposed technical network designs to insure business requirements are met
- Provides leadership for projects, including such activities as developing business cases, defining business and or technical requirements and preparing detailed plans and schedules
- Reviews and interprets technical documentation and vendor specifications for inclusion/ adaptation into network standards
- Proficient in network design

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Qualifying education/experience:

- CNP or higher certification or equivalent experience
- Must have 10+ years of experience focused on Cisco switching and routing technologies
- Expertise in working on large complex enterprise networks

2.25. Network Engineer

The Network Engineer is responsible the implementation and deployment of network hardware and software. Assists in operational testing and implementation of new hardware and configurations.

Knowledge, Skills and Abilities:

Knowledge of:

- Current technology and trends in the profession
- County business and functions
- Hardware and software installation methods and procedures

Skills and Abilities:

- Assists in technical troubleshooting of all network troubles
- Provides field support for break/fix repair of network elements
- Provides installation and support for network projects such as equipment refresh

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Qualifying education/experience:

- CCNA or Higher certification
- Must have 3-5 years of experience focused on Cisco switching and routing technologies
- Expertise in working on different sized networks

2.26. Senior Network Engineer

The Network Engineer is responsible for the overall all day to day monitoring, maintenance, administration, and performance management of specific network elements and services. Assists in the coordination, partnership and management of technology vendors, outside consultants and internal dotted line resources as needed.

Conducts operational laboratory testing and configuration of new hardware and network software. Provides the technical troubleshooting and leadership skills required to recover from the most complex network problems in real time to restore service.

Knowledge, Skills and Abilities:

Knowledge of:

- Current technology and trends in the profession
- County business and functions

Skills and Abilities:

- Provides the senior level technical troubleshooting of all network troubles
- Implements technical network designs to insure business requirements are met
- Maximizes network performance by monitoring performance; troubleshooting network problems and outages; scheduling upgrades; collaborating with network architects on network optimization
- Assists in development of business cases, defining business and or technical requirements and preparing detailed plans and schedules
- Reviews and interpret technical documentation and vendor specifications for inclusion/ adaptation into network standards

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Qualifying education/experience:

- CCNA or Higher certification
- Must have 5+ years of experience focused on Cisco switching and routing technologies
- Expertise in working on large complex enterprise networks

2.27. Technology Transition and Adoption Coordinator (T-TAC)

The Technology Transition & Adoption Coordinator (T-TAC) will be responsible for outlining, planning, and implementing organizational change to ensure successful transition from current state use of technology to future state use of technology in County of San Diego.

The focus of the T-TAC is to ensure all end-users are prepared for change and realize benefits brought about by system implementations.

The scope will include:

- Establish and support the design, implementation, and evolution of organizational change management strategies and plans to engage, inspire, reduce resistance, increase adoption rates, and motivate people to embrace the significant changes associated with information and technology efforts.
- Conduct impact assessments to evaluate the organizational, cultural, and operational implications of proposed changes associated with information and technology efforts. Collect and evaluate data to synthesize information to report on the progress of all projects to their respective stakeholders and leadership.
- Collaborate with stakeholders at all levels of the organization to identify potential barriers, risks, and challenges associated with technology change initiatives and develop mitigation strategies.
- Advise and provide recommendations to stakeholders on matters of significance by identifying change metrics to track, and coordinate with subject matter experts to build and maintain metrics scorecard for change readiness of projects.
- Conduct impact assessments to evaluate the organizational, cultural, and operational implications of proposed changes associated with information and technology efforts. Collect and evaluate data to synthesize information to report on the progress of all projects to their respective stakeholders and leadership.

- Provide guidance to functional areas, including coordinating with subject matter experts to identify training requirements and designs holistic, integrated training plans to drive adoption of processes and programs while maintaining program standards and ensuring successful transition for end- users.
- Provide coaching and support to leaders and managers to enhance their change leadership capabilities and promote a positive change culture.
- Plan and organize training programs to build change management capabilities within the organization to ensure successful transition for end-users.
- Monitor and measure the effectiveness of change management initiatives, identify areas for improvement, and implement corrective actions as needed.
- Collaborate with cross-functional teams to ensure alignment, consistency, and integration of change activities across the organization.
- Stay up to date with industry best practices, trends, and emerging technologies related to organizational change management associated with information and technology efforts in the context of local government.
- Develop and implement strategic communications plans that promote awareness and understanding of the strategic objectives of IT transformation efforts.
- Build and maintain solid partnerships with project stakeholders to better develop, coordinate, direct, and facilitate strategic communications designed to meet organizational goals.
- Develop content and direct creative execution to provide a consistent, targeted, and impactful messaging to all stakeholders.
- Develop a tailored engagement strategy for each stakeholder group to address their concerns and aid them in becoming champions of change.
- Build and maintain solid partnerships with project stakeholders to better develop, coordinate, direct, and facilitate stakeholder relationships and strategic communications to meet organizational goals.
- Guide and assist with implementing communication plans at project level for information and technology initiatives to ensure goals, values and communication standards are consistently depicted, as needed.

Knowledge, Skills, and Abilities:

The T-TAC will have the following responsibility:

- Program Level Standards and Strategies: Lead the development and support implementation of fit-for-purpose change management strategies to accelerate return on investment; collaborate across

program and technical teams to remain integrated with broader program plans by utilizing proven change management methodologies and techniques.

- Assessments: Guide teams through perform quantitative and qualitative assessments for key stakeholder groups to drive development of data-driven change strategies to facilitate the transformation from "current state" to "desired state" by utilizing proven analytical tools for readiness assessments, impact assessments, risk assessments, performance metrics and balanced scorecards.
- Stakeholder Engagement: Plan, develop, and work with leadership and change networks to deliver communications and creative engagement activities, driving understanding about key changes.
- Communications Development: Work closely with subject matter experts, leadership, and communications offices to develop and drive consistent key program messaging and content including identifying and defining methods and channels to drive organizational changes.
- Training and Capability Building: Work with subject matter experts to organize and facilitate training programs as part of technology transitions and/or adoption for end-users, provide coaching and support to leaders and managers in such matters.
- Change Facilitation: Facilitate meetings, focus groups and listening sessions, develop surveys, and utilize additional methods to conduct stakeholder analyses and identify potential barriers, risks, and challenges associated with change initiatives. Facilitate technology-related organizational change activities across teams, promoting understanding and support for new applications and platforms.
- Industry Best Practices: Stay informed on industry trends / leading best practices around organizational change management as it relates to information and technology efforts in the context of local government and proactively incorporate those leading practices into evolving methodologies, tools, templates, processes, and organizational thinking for continuous improvements.
- Additional Deliverables: Including but not limited to various strategic plans focusing on organizational change, stakeholder engagement, communications, and user adoption.

Qualifications, Education and/or Experience:

The candidate must have the following qualifications:

- Bachelor's degree in organizational leadership or related field.
- Minimum of eight years of experience executing organizational change management initiatives for complex government organizations.
- Prosci® or equivalent change management certification.
- Strong executive presence and the ability to work with and influence senior leaders.

- Experience with information and technology efforts in the context of local government large scale implementations of enterprise-wide platforms or new technology.
- Experience leading major organizational change efforts associated with information and technology in the context of local government or within a public sector organization of similar size and complexity to County of San Diego.
- Proven track record of successfully leading and managing complex organizational change initiatives with measurable outcomes.
- Experience in strategic planning and organizational psychology/development and bringing about successful culture change, including risk assessment and mitigation.
- Experience developing strategic communication plans and demonstrated ability to communicate effectively with a wide variety audience, leveraging modes of communication most appropriate for audience and subject matter, including live presentations, written messages, newsletters, etc.
- Experience in developing training programs and materials in support of change initiatives.
- Demonstrated ability to utilize proven analytical tools for readiness assessments, focus groups, surveys, impact assessments, risk assessments, performance metrics and balanced scorecards.
- Experience leading and facilitating groups, presenting briefings, and working with senior leadership teams.
- Knowledge of competency modeling, job task analysis, training needs assessments, and human capital study methods.
- Strong organizational skills, be detail-oriented and work in an accelerated development environment with ability to plan, prioritize, and make decisions on multiple time-sensitive projects.
- Strategic thinker with ability to make connections across workstreams and matrixed organizations.
- Excellent communication, facilitation, and interpersonal skills, with the ability to effectively collaborate with stakeholders at all levels of the organization.
- Strong project management skills, including the ability to develop and execute organizational change management plans and deliverables on time and within budget.
- Highly skilled in use of Microsoft applications including, but not limited to: Outlook, Word, PowerPoint, Excel, OneDrive, OneNote, Visio, Project, SharePoint, Teams and Publisher.
- Ability to analyze complex problems, identify root causes, and develop creative and practical solutions.
- Knowledge of Health and Human Services operations, processes, and regulations is a plus.

2.28. Information Security Engineer

The Security Engineer is responsible for solution design review, implementation activities, application and infrastructure assessment, compliance enforcement, and identity governance management of internally developed and third-party integrated applications. This includes activities such as vendor assessments, solution assessments, risk assessments, privacy impact assessments, architectural reviews, application/code reviews, infrastructure reviews, compliance reviews and enforcement, role-based identity and access provisioning, research, requirements development, vendor ranking, and assessment. The Information Security Engineer works with various Frameworks and Framework Components such as Contract Management Services, Asset Management, Applications Development, Architecture Development, and Maintenance and Operations. The Information Security Engineer labor category may only be utilized for the performance of services that Contractor is not already required to perform under the Agreement.

Knowledge, Skills and Abilities:

Knowledge of:

- Current technology and trends in the profession
- County business and functions

Skills and Abilities:

- Participation in vendor review, assessment, contracts, and onboarding activities
- Participation in solution development, review, assessment, and onboarding activities
- Perform security audit (controls tests) activities
- Perform security risk assessments of potential solutions or vendors
- Perform security risk assessments of existing solutions or vendors
- Perform penetration testing activities
- Perform solution or vendor regulatory and standards compliance assessments
- Perform solution vulnerability scanning assessments
- Perform solution threat modeling assessments
- Perform secure coding assessments
- Perform application integration of single sign-on activities
- Perform implementation of role-based access provisioning
- Perform role-based and least privilege access assessments
- Design, build, review, and implement infrastructure and application security audit logging changes
- Perform CIS benchmark hardening activities

- Perform Enterprise environment baseline hardening activities (implementation of guardrails, security controls, policies) (e.g. AWS cloud)
- Design, build, review and implement Active Directory Schema, User Object, Device Object, and Group Policy changes
- Design, build, review, and implement enterprise Certificate/PKI service changes
- Design, build, review and implement Akamai WAF, BOT, Site Shield, API web property security configuration changes
- Design, build, review, implement, and administer Palo Alto Prisma CASB solution and policies
- Design, build, review, and implement secure email gateway/mail flow architecture changes
- Design, build, review, and implement automation scripts
- Define regulatory controls and changes
- Define solution hardening standards
- Define secure application development standards

Education and/or Experience:

Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree and a minimum seven (7) years of experience working in information security architecture, information security governance, risk and compliance, information security threat and vulnerability management, and/or identity governance and administration; **OR**
2. Information Assurance Management (IAM) **or** Information Assurance Technical (IAT) certifications level 3 plus 5 years' experience.
3. IAM **o**r IAT certification level 2 plus 7 years' experience.
4. IAM **or** IAT certification level 1 plus 9 years' experience.

3. KEY PERSONNEL LABOR CATEGORIES

3.1. Chief Technical Architect (CTA)

The CTA is responsible for providing principles, best practices, innovation, market trends, and future-looking models for the County's IT infrastructure; and serving as a bridge for all the architecture groups and areas as described in Schedule 4.3 for the CTA.

The Contractor CTA works closely with the County's CTA to oversee and coordinate the top-down approach to managing and sharing data, systems, and processes.

Skills and Abilities:

- Exceptional interpersonal skills, including teamwork, facilitation and negotiation.
- Strong leadership skills.
- Analytical and technical skills.
- Written and verbal communication skills.
- Planning and organizational skills.
- Knowledge of all components of holistic enterprise architecture.
- Knowledge of business re-engineering principles and processes.
- Basic knowledge of financial models and budgeting.
- Familiarity with basic graphical modeling approaches, tools and model repositories.
- Familiarity with basic information management practices.
- Exposure to multiple, diverse technologies and processing environments.
- Proven skills and ability to:
    - Participate in the creation or support of the enterprise architecture function/program.
    - Understand, advocate and support the enterprise's IT strategies.
    - Provide analysis of the current IT environment to detect critical deficiencies and recommend solutions for improvement.
    - Provide analysis of technology industry and market trends to determine their potential impact on the enterprise architecture.
    - Balance the long-term ("big picture") and short-term implications of individual decisions.
    - Translate business needs into technical requirements.
    - Estimate the financial impact of technical alternatives.
    - Apply multiple solutions to business problems.

- Leverage existing platforms and services to meet business needs
- Rapidly comprehend the functions and capabilities of new technologies

Education and/or Experience:

Bachelor's degree in computer science, computer engineering, electrical engineering, systems analysis or a related field of study, or equivalent experience. Seven to 10 years of experience in at least two IT disciplines (such as technical architecture, information architecture, enterprise architecture, applications architecture or applications development) in a multi-tiered environment.

3.2. Enterprise Application Architect (EAA)

The EAA is responsible for leading the improvement of application quality, integration, and cost-effectiveness, including reviewing business and technical requirements; assessing, developing and maintaining application standards and architectures; enhancing solution development throughout the project lifecycle; establishing and maintaining data standards, enterprise taxonomies, information management strategies and overall efforts to continuously improve the provision of Services in the EAA's areas of responsibility as described in Schedule 4.3.

The Contractor EAA shall work closely with the County CTA in the governance and oversight of all application development across the enterprise and shall act as a standing member of the Enterprise Architecture Governance Group.

Skills and Abilities:

- Strong knowledge of software development practices and architectures
- Knowledge of information management practices and data architectures
- Knowledge of security-related best practices related to applications and information management
- Proven skills and abilities to:
    - Provide oversight on the design and implementation of cross-functional, multi-platform, and Web-based application systems
    - Provide input into application architecture definition / development
    - Review system design and development processes
    - Provide technical guidance to application development teams and consult on integration and conversion activities
    - Provide guidance and direction on applications portfolio rationalization activities

- Conduct reviews, and analyze organizational needs and goals to develop and implement applications
- Perform high-level entity modeling activities
- Ensure effective software configuration management across applications
- Assesses and effectively manage risks
- Establish and maintain cooperative working relationships between technical and business parties
- Communicate effectively with technical and non-technical users, both in written and verbal form
- Work independently and in a team environment

Education and/or Experience:

Bachelor's or equivalent university degree in management information systems or computer science and a minimum ten (10) years of experience working on software application development projects, of which (3) years must include responsibility for applications architectures.

3.3. Innovation Officer (IO)

The IO is responsible for establish a culture and environment of driving progressive business process change throughout the County. The IO shall be familiar with bimodal approaches to IT and business, skilled in agile and rapid prototyping, strong communications skill to interact with County business and familiarity with innovation and transformation adoption and implementation. The IO shall have experience in developing an innovation charter, rules of engagement for innovation, governance model and success criteria for innovation and continuously improve Innovation Management Services as described in Schedule 4.3.

Skills and Abilities:

- Skilled in seed funding for innovation initiatives
- Natural leadership with excellent verbal/communications skills
- A collaborative working style that moves others to action by planning, motivating and organizing work tasks.
- Strong, demonstrated skills in leading, motivating and supporting staff.
- Extensive program/project management skills.
- Strong personnel management skills.

- Thorough and creative problem solving skills.
- Ability to thrive in a demanding, fast-paced environment requiring a high degree of productivity, adaptability, innovation and follow-through.
- Ability to track and juggle multiple tasks/priorities.
- Self-motivated with ability to work well independently as well as part of a team, and able to provide leadership within that environment.
- Ability to develop and manage budgets and lead and direct others with this responsibility.

Education and/or Experience:

Bachelor's or equivalent university degree in management information systems or computer science and a minimum ten (10) years of experience. A minimum of five years' experience in strategic program development and business model development. Demonstrated public-sector experience in the development and bringing-to-market of programs and services within the context of sustainable business models that both fulfill mission and drive net revenue.

4. NAMED PERSONNEL LABOR CATEGORIES

4.1. Applications Developer – ERP Principal

Applications Developer - ERP Principal serves as the team lead across all ERP architecture domains affected by the interface of one system to another. An Applications Developer - ERP Principal is responsible for evaluating technologies, defining standards, designing and developing solution and reference architectures that solve stated business objectives, in support of ERP interfaces and various custom product enhancements in accordance with standards provided by Oracle.

Applications Developer - ERP Principal is a proficient and effective software developer whose exceptional capabilities and expertise in the ERP domain justifies a premium rate. This labor category will only be used when the tasks that need to be performed require a high level of expertise in ERP applications. It is the combination of the task(s) and individual expertise that justifies the use of this labor category.

For the County's ERP program, this role will:

- Report to the Contractor's Applications Manager
- Interface with the County's Chief ERP Manager to define requirements
- Update Application Implementation Methodology (AIM) MD50, MD 70, etc. technical documents, as needed

- Work with the County to develop new specifications and solutions
- Perform system enhancements/modifications to requirements
- Work with the Contractor's technical team to resolve issues and deliver solutions
- Identify and implement performance improvements

Knowledge, Skills and Abilities:
Knowledge of:

- ERP applications such as EBS, PeopleSoft, Kronos, SAP/Ariba. Ivalua, etc.
- ERP development tools, Forms Designer, Reports, B I Publisher, SQR, etc.
- Design and development of advanced features such as direct upload and download of data files from Application
- In-depth knowledge of the ERP modules and entity modeling
- Fusion Middleware, Service Oriented Architecture (SOA), service buses
- Business process design techniques
- Application design, architecture and development
- Test planning
- Current technology and trends in the profession
- County business and functions

Skills and Abilities:

- Develop advance script utilities to help team reduce the development time
- Lead the overall design of cross-functional, multi-platform, and web-based data interfaces
- Lead the interface definition, mapping, development, and integration with external applications
- System design and development
- Direct mapping activities on specific technology platforms for ERP Applications
- Provide technical guidance to interface, forms, reports development teams and consults on integration activities
- Conduct reviews and analyzes organizational needs and goals to develop and implement interfaces
- Assess performance, tuning and capacity requirements to determine key technology decision
- Ensure effective software configuration management across applications
- Assess and effectively manage risks associated with their business objectives
- Establish and maintain cooperative working relationships
- Communicate effectively with both technical and non-technical users, both in written and verbal form

- Work independently and in a team environment
- Develop following work products: Interface Design, Create/Update Application Implementation Methodology (AIM) MD50, MD 70, etc., technical documents

Education and/or Experience:
Education, training, and/or experience that demonstrate possession of the knowledge, skills and abilities listed above. Examples of qualifying education/experience:

1. Bachelor's or equivalent university degree in management information systems or computer science and a minimum eight (10) years of experience working on ERP application development projects, of which (3) years must have been associated with application requirements management; OR
2. Associate degree with two (2) additional years of experience in ERP application development; OR
3. High school diploma with four (4) additional years of experience in ERP application development
4. At least 5 years of experience in ERP application development for large state and local organizations

Restrictions on use:

The use of this Resource Unit (RU) has the following limitations:

1. Limited to the County's ERP program
2. Maximum of two (2) named resources can be assigned to this Labor Category
3. Named resources must be pre-approved by County
4. Roles and responsibilities cannot be transferred to another resource without written County consent

4.2. Electronic Health Records (EHR) Program Manager

The EHR Program Manager is responsible for the Electronic Health Records (EHR) implementation and support services of existing EHR.

The EHR Program Manager shall work directly with the Health and Human Services Agency (HHSA), the Director, IT Services and/or other leader(s) designated by the HHSA Director;

Education and/or Experience:

- Bachelor's degree or equivalent relevant work experience;
- 5+ years of relevant experience in IT program management;
- 3+ years of relevant Health and Human Services domain experience;
- 3+ years of program management of Electronic Health Record solution deployments at large healthcare organizations;

- 3+ years of experience working in health IT supporting hospital and/or clinical operations;
- In addition, the EHR Program Manager preferably should have the following qualifications:
- 7+ years of relevant Health and Human Services domain experience;
- 5+ years of program management of EHR solution deployments at large healthcare organizations;
- 5+ years of experience working in health IT supporting hospital and/or clinical operations; and
- Develops technical program/project management best practices/templates and provide training/mentoring to project teams.

END OF EXHIBIT

Exhibit 16.1-5 – Firm Fixed Price for Applications Maintenance and Operations – Portfolio Applications

Exhibit 16.1-5 Firm Fixed Price for Applications Maintenance & Operations - Portfolio Applications

Application	Description	Cloud App?	Bundle
15Five	15Five is a complete performance management solution to develop your team throughout all stages of the employee lifecycle, from their first day to their last. The more intentional you are with your employee performance strategy now, means less exit interviews in the future.	Yes	HHSA SaaS Support
A&C Captiva Scanning	The County of San Diego (CoSD) /Auditor and Controller (A&C) utilizes a combination of software platforms to capture and store COSD/A&C documents and public records, including data that needs to be kept in perpetuity. Scanning and indexing of this information is done through the Captiva Capture software while retrieval and storage utilize the EMC Application Xtender / File Access Manager product suites. The COSD/A&C utilizes a combination of software platforms to capture and store documents and public records. A&C sites run Captiva Capture and use local scanners to scan and index documents throughout the day. After these documents are scanned, indexed and verified, the index and images are released to the Application Xtender servers (USPLVUCSD075 for index information and USPLVUCSD184 for images).	No	FG3 Full Support
A&C FTP Processes	The federal health and human services departments - Office of Child Support Enforcement (OCSE), will be sending A&C electronic income withholding orders (e-IWO), basically wage garnishment orders, in PDF format. A&C would like these documents deposited into an inbound folder. Once those PDF files are received, A&C staff will review them and provide a response via an acknowledgement on those same PDF files, which will be deposited in an outbound folder for pick up by OCSE using the same SFTP delivery method.	No	FG3 Full Support
AAB Labels	Batch printing of AAB mailing labels & Backup Inquiry.	No	FG3 Full Support
ACAP/ACVV Values, Rates,Apportion	Maintains taxing agency fund values, tax rates, and apportionment ratios. Computes revenue apportionment and allocates to taxing agency funds.	No	FG3 Full Support
Accela Automation (BCMS) (LEAMS)	Accela Automation (BCMS - Business Case Management System) and LEAMS (LUEG Enterprise Asset Management System (go live 4/4/16). LEAMS and BCMS are implemented as separate agencies within Accela Automation.	No	LUEG Full Support
Accounts Receivable and Trust	Manage Receivables&Trust Funds	No	FG3 Full Support
A-Check	A-Check is a DMV approved Employer Pull Notice agent. DHR uses this to monitor employees driving records.	Yes	FG3 SaaS Support
ACL - AuditBond/ Results Manager	Provides a means for the public to confidentially report fraud, abuse and other complaints	Yes	FG3 SaaS Support
ACL Audit Exchange - AuditBond/Results Manager	The ACL - Audit Exchange application provides CoSD with the ability to perform oversight, fraud detection, identify non policy approved use of CoSD issued P-Cards via the running of analytics against P-Card use data.	Yes	FG3 SaaS Support
ACRC Roll Corrections Process	Auditor/Controller PTS Roll Corrections Process - Client-Server - also see PA1047 - Application of changes in property status not identified in prior tax billings	No	FG3 Full Support
ACST/TC Auditor Secured Tax Billing	Auditor system for maintaining Secured Property Tax information	No	FG3 Full Support
ACTI Tax Rate Area Index	Tax Rate Area management system	No	FG3 Full Support
ACUS Auditor Unsecured Prpty Tax Billing	Auditor system for creating tax bills for unsecured properties	No	FG3 Full Support
Administrative Investigations Management	This application is a case management system for the Citizen's Law Enforcement Review Board (CLERB). This application resides in the CITRIX farm and is reached through a shared named "AIM". Problems that the Applications team cannot address will go to the 3rd party COTS Vendor (On Target LLC). HPES' responsibility is to facilitate the vendor's maintenance or upgrade. 3rd party COTS vendor On Target Performance Systems is the leading innovator of human resources software applications and consulting services for Law Enforcement and Corrections. It provides supervisor with the skills and information required to manage employee performance.	No	FG3 Coordinated Support
Adobe Analytics	Web analytics for web site statistics and analysis.	No	FG3 Coordinated Support
Adobe Captivate Prime	External Facing Learning Management System provided by cloud and Adobe systems	Yes	LUEG SaaS Support
Adobe e-Forms APCD Inspections	The objective of this solution is to implement an eForm-based solution for APCD Inspectors to be able to prepare field inspection reports in a highly efficient and accurate manner. The inspectors will be working in an off-line mode without access to the County network. It is necessary to capture digital pictures of violations, include those pictures in the violation report and preserve the high-resolution digital images separate from the violation reports. Data captured in the inspection reports must be transferred to the Accela system when the inspector has access to the County network.	No	Other Full Support
Adobe e-Forms AWM Inspections	The objective of this solution is to implement an eForm-based solution for AWM Inspectors to be able to prepare field inspection reports in a highly efficient and accurate manner. The inspectors will be working in an off-line mode without access to the County network. It is necessary to capture digital pictures of violations, include those pictures in the violation report and preserve the high-resolution digital images separate from the violation reports. Data captured in the inspection reports must be transferred to the Accela system when the inspector has access to the County network. The EDPP LiveCycle technology will be used to implement the project.	No	LUEG Full Support

Exhibit 16.1-5 Firm Fixed Price for Applications Maintenance & Operations - Portfolio Applications

Application	Description	Cloud App?	Bundle
Adobe e-Forms DEH Inspections	This is an eForm-based solution for DEH CUPA/Hazmat Inspectors to be able to prepare field inspection reports in a highly efficient and accurate manner. The inspectors will be working in an off-line mode without access to the County network. It is necessary to capture digital pictures of violations, include those pictures in the violation report and preserve the high-resolution digital images separate from the violation reports. Data captured in the inspection reports must be transferred to the Accela system when the inspector has access to the County network.	No	LUEG Full Support
Adoptions Assistance Program	End-user maintained application to track aid payments for Childrens' Services, AAP ****Access, PC platform**** End-user maintained application to track Adoption aid payments for Child Welfare Services. This database is used primarily by one person to document new and on-going AAP-eligible clients. Queries and Reports are used to create lists for sending out letters for bi-annual AAP Contract Renewals. Timelines for renewals are to be in compliance with State and Federal law. At any given time, there are over 6, 000 active AAP cases maintained by San Diego County.	No	HHSA Coordinated Support
Adoptions Matching Program	End-user maintained application to match adoption applicants to available children for Children's Services - ****Access, PC platform****	No	HHSA Coordinated Support
Adult Rep (formerly SubPayeePro)	Manages the money for clients that cannot do this for themselves. Funds are deposited into the bank electronically or manually. Bills are paid for clients out of the funds deposited in their "accounts"	Yes	HHSA SaaS Support
Agricultural Preserves	Ag Preserve data base and tracking	No	FG3 Coordinated Support
AIDS Regional Information and Evaluation System	The AIDS Regional Information and Evaluation System (ARIES) was developed by Architier, for the State of California Office of AIDS, the County of San Diego (COSD), the County of San Bernardino, and the State of Texas (the Partners). ARIES will enhance services for clients with HIV by helping Providers automate, plan, manage and report on client data. ARIES will allow the County to provide client level reporting to both State and Federal funding sources. State ASP	No	HHSA Full Support
AIS - IHSS Documentum	This application is an Imaging and content management solution for their AIS In-Home Supportive Services (IHSS) Program with Kofax for the Imaging and Documentum for the Content management system. This implementation will allow Scanning to provide case, client and provider related digital content to be stored into Documentum for the stakeholders.	No	HHSA Full Support
AIS Case Management	Provides content management solution for AIS Case Management Program with Documentum content management system to provide case related digital content stored in Documentum to stakeholders. Key aspects of this application include: • Documentum Integration with AIS Case Management • Scanning and Imaging • Security • Simple user interface • Version management	No	HHSA Full Support
AIS Master Mailing List	Application stored 1200 unique address lists. The Add/Edit Mailing List allows staff to add new people to one or more mailing lists and change addresses. The fields also allow to search for people in the list by name or by organization/agency. The "categories" refer to different mailing lists. By entering "1" in the Category ID box and adding the word "Bulletin" in the Category box, the person is added to the bulletin mailing list. There are several possible numbers linking to a variety of mailing lists. Many of those lists are not used, but could be restarted. Only about 3-4 categories are used now. Staff can also make a mail merge of people in certain categories as well. Regularly, labels are printed from this software for either the bulletin or the Safe Seniors newsletter. Staff also has a Zip code account to help with cost of mailing, as the labels are presorted by Zip code	No	HHSA Full Support
AIS Ombudsman	Provides a content management solution for AIS Ombudsman Program with Documentum content management system to provide volunteer, complaint and facility related digital content stored in Documentum to stakeholders.	No	HHSA Full Support
AIS-IHSS Kofax Imaging	Electronic Content Management (ECM) system for scanning, storing, and retrieving IHSS case files	No	HHSA Full Support
AlertSanDiego	Blackboard Connect (aka AlertSanDiego) is the region's emergency mass notification system. The system allows authorized users (County, cities, special districts) to conduct external (i.e. public alert and warning) and internal (i.e. notifications) to recipients via voice, email, and text message. The system contains all listed and unlisted landline phone numbers (E-911 data), AlertSanDiego registrants, and internal notification lists (e.g. EOC activation lists and staff notification callouts). This program enhances the regions ability to communicate with the public and provide timely emergency information in the event of a disaster.	Yes	PSG SaaS Support
ALEX	AIS provides services to older adults, people with disabilities and their family members, to help keep clients safely in their homes, promote healthy and vital living, and publicize positive contributions made by older adults and persons with disabilities. AIS has more than 30 programs and provides a wide range of services, including information and assistance, advocacy, coordination, assessment, and authorization of direct services. ALEX supports the referral intake and processing for these programs: IHSS, MSSP, SOAR, Linkages, APS, ST, I and A.	No	HHSA Full Support

Exhibit 16.1-5 Firm Fixed Price for Applications Maintenance & Operations - Portfolio Applications

Application	Description	Cloud App?	Bundle
AlinIQ Inventory Management System (IMS)	Web based Laboratory Inventory Management System installed in the San Diego County Public Health Laboratory on Rosecrans.	No	HHSA Coordinated Support
Alzheimer's Project AEM Website (SDAlzheimersProject.org)	Alzheimer's Project AEM website on Adobe Experience Manager (AEM) platform.	No	HHSA Full Support
Amazon Web Services (AWS) EC2 GovCloud	Amazon Web Services Elastic Cloud Computing (AWS EC2) GovCloud is a tool to quickly analyze, optimize, and discard unneeded IT solutions. Outcome is to reduce agency spending, reduce time to implementation, and to have a better understanding of a solution prior to any further spending or committments.	Yes	HHSA SaaS Support
American Legal Code Codification	The contractor publishes the County of San Diego Administrative Code and the County of San Diego Regulatory Code in print, on CD-ROM and on the Internet. The contractor accepts the Codes in Folio Views CD-ROM format and maintains an Internet site containing both the Administrative Code and County Code of Regulatory Ordinances. The Internet site is made available to the public at no charge to the users and allows the public to search the Administrative and Regulatory codes. The contractor updates the Internet site within five days of receiving updates from the County. The contractor also offers hard copies and CD-ROM copies of each complete Code and subscriptions to a monthly update service. In the 1990s, the Clerk of the Board outsourced its production and distribution of the Countys Administrative and Regulatory codes. Since 2000, the County has made the Administrative and Regulatory codes available online for the public and internal staff through an outside contractor. The contractor provides this service based on Purchasing & Contracting Request for Bids (RFB) NO. 5453. It is cost efficient to use the same contractor for online code publishing that provides hard copy updates to the Administrative and Regulatory codes.	Yes	FG3 SaaS Support
Animal Control - Lost and Found/Pet Adoptions	Web Application for Animal Control Lost and Found and Pet Adoption.	No	PSG Full Support
AP Invoice Imaging System	Accounts Payable Invoice Imaging System (APIIS). APIIS is based on the Electronic Data Processing Platform (EDPP). EDPP is PA2563. The Accounts Payable Invoice Imaging System (APIIS) is a replacement for the County of San Diego's XenDocs Imaging System, which serves as the repository for scanned Accounts Payable invoice-related documents and enables County of San Diego (CoSD) staff to search, view and manage those scanned documents. APIIS will provide new features and functionality to enable the County to streamline AP Invoice processes, in addition to functionality currently provided by the XenDocs Imaging System. As such, the County will be able to maintain its core Accounts Payable Invoice document processes, and to continue utilizing its established base of over one-hundred PC workstations distributed throughout the County, at approximately fifty-three department sites. As the new replacement for the XenDocs Imaging System, APIIS will define the way in which the scanned AP documents are organized, stored and managed for the Oracle Accounts Payable (AP) module of the CoSD's Oracle E-Business Suite (EBS).	No	FG3 Full Support
APCD - OpenGov	Budgeting, planning, and projections system	Yes	Other SaaS Support
Applications Manager	Applications Manager (AppsMgr) is a web-based tool used to track and report on portfolio (PAID) applications, cloud (CAID) applications, infrastructure applications (IAID) and desktop applications (DAID). Each application can be associated with Servers that it uses, the Software products it uses, and the relevant MSIs, and Contacts such as the vendor, owner, and primary support contact. Reports can be generated onscreen or exported to Excel. Requests for new portfolio applications are initiated in AppsMgr and get assigned a unique PAID by the AppsMgr administrator. Additionally, application changes are submitted to the AppsMgr administrator for approval. Approved changes are logged in the Change Log and included in the CoSD Portfolio Applications Catalog. Additionally, the application displays information on Cloud applications and its' contacts which is populated and updated via a scheduled task.	No	ITO ITO Owned Support
APS Imaging	The Documentum web based application which allows the scanning, indexing, and retrieval of documents. Document are imported into the Documentum system and placed in the appropriate folders with the appropriate security. Webtop is using to retrieve the documents.	No	HHSA Coordinated Support
ARCC Captiva Scanning Solution	The ARCC Captiva Scanning Solution is utilized for scanning Prop 8 Assessment requests and other department capture needs.	No	FG3 Full Support
ARCC E-Commerce	ARCC e-commerce	No	FG3 Full Support
ARCC Intranet Applications	Public access to PCs for Assessor Maps for a fee	No	FG3 Full Support
ARCC Mills Act DB	Tracks Mills Act exempt property	No	FG3 Coordinated Support
ARCC SharePoint Site	The ARCC Department has implemented a SharePoint Environment that supports both Intranet and Internet access. Support is performed by the Peraton SharePoint Team. Note: Patching to this app requires that the database be taken out of high availability mode.	No	FG3 Full Support

Exhibit 16.1-5 Firm Fixed Price for Applications Maintenance & Operations - Portfolio Applications

Application	Description	Cloud App?	Bundle
ARCCs AX/WX/WFM Applications	Applicationxtender (AX), Webxtender (WX), and Workflow Manager (WFM) are software components from the EMC Documentum ApplicationXtender Product Suite used by the ARCC for their "Imaging" applications. The Workflow Manager component allows them to implement "workflow process" to their image capture procedures. NOTE: ApplicationXtender and WebXtender are used by other business groups in the County.	No	FG3 Full Support
ArcGIS Online	Online mapping and data services	Yes	LUEG SaaS Support
Archive-It	The service will be used to capture and archive public ARCC webpages.	Yes	FG3 SaaS Support
Articulate 360	Articulate 360 is a cloud based application that allows users to develop and publish educational content for distributed use. This application will be used to provide educational programs for Parks and Recreation managed natural resources.	Yes	LUEG SaaS Support
ASAD Secured Prpty Assess Info System	Assessor Secured Property Assessment online/Database management system	No	FG3 Full Support
ASAPnet Desktop	This is a project to provide desktop computing, printing, and collaboration to Reserve Firefighters (non-County employees) remotely located at County fire stations.	Yes	PSG SaaS Support
ASAS Secured Prpty Assess Ownership&Valu	Assessor Secured Property Ownership and Valuation management system (Includes Prop 58 System)	No	FG3 Full Support
ASPA Supplemental Property System	Secured property supplemental assessment management system	No	FG3 Full Support
ASRC Roll Corrections Process	Assessor Roll Corrections Process - MF with Client-Server DB - also see PA1017 - Application of changes in property status not identified in prior tax billings Configuration & installation docs tied to PA1017	No	FG3 Full Support
Assessment Appeals Board System	Tracking/scheduling of Appeals	No	FG3 Full Support
Athena IDX	Managed Care Application for CMS Program. The application is an Linux hosted application that is accessed through the Web. The Web is set up on window servers (test & prod) The URL on the window servers accesses the application and associated database which run on Linux servers (test & prod). The application also includes a module that utilizes the sFTP server for retrieving data from UHC (UHC interface) and NetChemistry (AuthMed interface) for use in the IDX application.	No	HHSA Full Support
Auditor & Controller Managed Forms	This solution includes the implementation of Adobe PDF e-Forms for the Auditor & Controller (A&C) Department. County Users will view and fill-out the forms using Adobe Acrobat 2017 or higher. The A&C Information Technology Management Services group will be responsible for publishing the PDF e-Forms in the "Forms" section of their departmental SharePoint site (i.e. County's "InSite").	No	FG3 Full Support
AutoCAD	AutoCad Civil 3D Network This Server can not be Refreshed or migrated unless the Name and MAC number are the same on the New Server.	No	LUEG Coordinated Support
Autocad	Tool used to create maps	No	FG3 Coordinated Support
AutoCAD Raster Design	Autocad integrated tool	No	FG3 Coordinated Support
AutoLISP Files	CAD customization language environment	No	FG3 Coordinated Support
Automated Import tool for Performance Review	Performance Appraisal forms are verified and imported. The overall business imperative is to verify that Performance Appraisals are submitted in a timely manner and according to policy and that they are imported to the correct Employee folder in Documentum. Provide controls to ensure the accuracy of both the information on the Performance Appraisal form and the importation into Documentum.	No	FG3 Coordinated Support
AXAddOns	The AXAddOns application is a set of Macros/Utilities installed on client workstations to facilitate their interaction with AX applications. Special Awareness Application Script - Extra macros, schemes, and keyboard mappings files required for ARCC Applications XTender	No	FG3 Coordinated Support
Axcelerate eDiscovery	The Axcelerate eDiscovery application is used to automate the e-discovery process. Uses digital forms of documents.	No	FG3 Coordinated Support
Beach and Water Quality (BWQ)	Beach and bay sampling is currently being conducted by Department of Environmental Health (DEH) at 78 beaches across San Diego County. The Board of Supervisors have directed LEUG to update the beach and bay monitoring page (http://www.sdcounty.ca.gov/deh/water/beach_bay.html) to provide beach water quality data that is easier to access and understand by delivering it in a format that supports multiple device types and formats (i.e., "how they want it" and "when they wants it").	No	LUEG Full Support
BHS Emergency Rental Assistance Program	This application assists with the provisioning of housing funds for Covid19 housing eviction relief. It is also known as ERAP for short. The application was created and will be supported by Basc LLC and hosted on AWS. A similar application was created for for Housing and Community Development Services. It includes a secure website with modules for applicants and administration staff which will be accessible via internet and mobile devices (including smart phones and tablets).	No	HHSA Coordinated Support

Exhibit 16.1-5 Firm Fixed Price for Applications Maintenance & Operations - Portfolio Applications

Application	Description	Cloud App?	Bundle
BHS Financial Management System	BOARD Cloud is a SaaS version of the BOARD all-in-one platform, which allows one to analyze, plan, simulate and forecast. It is designed to offer seamless connection to cloud data systems in real time. BOARD Cloud allows you to deliver enterprise analytics, planning and forecasting that fully leverages existing software investments.	No	HHSA Coordinated Support
Bitly	Established in 2008, Bitly is a URL shortening service and a link management platform. It is privately held and based in New York City, with offices in Denver and San Francisco. Bitly shortens 600 million links per month for use in social networking, SMS, and email.	Yes	PSG SaaS Support
BlackLegacyNowSD.com	The BlackLegacyNow site provides education, multiple resources, and awareness of African-American infant mortality and preterm birth to the public. Additionally, it is a source for the public to connect to the San Diego County Perinatal Equity Initiative (PEI) program.	Yes	HHSA SaaS Support
B-Link	Fraud Referral system This is a Microsoft Dynamic 365 Cloud application that will be BPAI's case management system replacing their current FRTS, PTS and Hotline applications. The application will integrate with CALWIN, CMIPS, and EDPP.	No	PSG Full Support

BOS District Two Website (AEM)	WWW County Web Site	No	FG3 Full Support
BrightSign	The BrightSign Network is an affordable and scalable subscription-based hosted service, providing the complete infrastructure to serve and support a digital signage network. It stores and delivers remote content to one or many units.	Yes	LUEG SaaS Support
Brown Armstrong	Brown and Armstrong will provide annual audit and review services for 1) The County Investment Pool and its financial statements2) Investment policy compliance	Yes	FG3 SaaS Support
Budget Books	The Budget Books Application provides a means for the County to store historical financial documents. In 2014 PA2447 Budget Books was migrated to EDPP and now resides in the COSDGEN Repository. Budget Books contain budget documentation dating back to the 1928-1929 fiscal years. This PAID has the following traits: • No association with any other application • Users access the repository via CARA • At one time, documents were imported via Kofax Ascent Capture • Documents prior to 1998 were imported in TIFF format. In 2009, Wave TSG was contracted to provide PDF +Text Rendition and Versioning for all documents in the Budget Books Cabinet. • The department no longer scans or imports documents to this repository. Budget Books is used primarily for historical research. The last folder created was for the 2009-10 Fiscal year. • The Budget Books Cabinet is configured for full text indexing so that it can be used with Xplore for integrated searching. • No retention policies have been configured. However, these documents are historical and therefore must conform to the "Permanent" retention policy. • No customizations have been provided. For specific information on Users, Groups, and ACLs, please refer to either the Solution Design or Migration Specification Documents within DocVault.	No	FG3 Full Support
Building Automation System (BAS)	This application allows for the Tridium devices (JACEs) to send data. JACEs collect the data from the different building control systems like HVAC, etc and then send the data to the NiagaraAX software installed on the VM server.	No	FG3 Coordinated Support
Business Audit Tracking	Audit tracking for Assessor Business Division	No	FG3 Coordinated Support
Buynet II	Web based purchasing tool	No	FG3 Full Support
CAL FIRE CAD2CAD	This application is used by CoSD "CAL FIRE" to coordinate and track Fire Vehicles and Resources across appropriate locations and interface with the State systems.	No	PSG Coordinated Support

Exhibit 16.1-5 Firm Fixed Price for Applications Maintenance & Operations - Portfolio Applications

Application	Description	Cloud App?	Bundle
Calameo	Calameo is an easy document sharing and publishing service that lets you create online magazines from your offline documents. You could upload PDF files, spreadsheets, word documents and powerpoint presentations to create reports, magazines, catalogs, brochures etc and publish it online. Once published, it can be easily shared across multiple social networks, emailed to customers and added to the community where you can get feedback from readers on the published material.	Yes	LUEG SaaS Support
California Medical Services NET	CMSNET is a cat 2 Client/Server application. The server and the application are maintained by State CMSNet Help Desk (Brian); CMSHELP@DHS.CA.GOV 866-685-8449	No	HHSA Coordinated Support
CalWIN	The entire integrated system comprised of and connecting all CalWIN System Software, Local Office Hardware, Project Facilities Hardware, and Third Party Software licensed by COUNTIES or licensed by VENDOR. This is an ASP application hosted by the CALWIN project. ASP is a language similar to VBScript developed by Microsoft. ASP is included and supported by IIS (included with Windows Server).	No	HHSA Full Support
CalWIN CERMS	This is a Documentum Application, used by County Eligibility Staff to retrieve, view, store and modify eligibility forms and client documents. This is the replacement of the old DoRES application. CERMS ACS Project - The objective of this project is to utilize the USPS Address Correction Service (ACS) to receive electronic nixie notifications from the USPS in lieu of having the physical mail pieces returned. The electronic nixie notifications would be used ot automatically generate synthetic documents that contain all relevant information about undeliverable mail pieces. Those synthetic documents would be automatically stored in CERMS and would be processed by the WMS.	No	HHSA Full Support
CalWIN CIS Data Mart	CIS database for CalWIN	No	HHSA Full Support
CALWIN Interfaces - no interactive login	This PAID consists of the interface pieces of Calwin PA2241. A few of the interfaces call an application called Transform(PA2605) which reformats the printed warrants with County of San Diego specific requirements (Series 27, 28, 29). Other interfaces included in PA2344 are things such as “Positive Pay”, “Direct Deposit”, “CalHEERs”, “Collections”, “Childsupport”, etc.	No	HHSA Full Support
CampaignDocs.net	Keeps track of candidate filing information/disclosure statements. Allows candidates to file for office on line. Data in this system is open to the public, and most data is available to the public via web browser, however there are specific additional regulations governing the release of some of the data	Yes	FG3 SaaS Support
Candidate & Measure Portal	SaaS solution to enable submissions of Candidate Statements, measure text and any other measure content that need to be collected by the ROV for each election cycle. The objective is to reduce the task of scanning, cutting and pasting from hard copy submission or word docs into a template for ROV.	Yes	FG3 SaaS Support
Cantata Health Netsolutions	NetSolutions vendor is now Experience Care. Primary clinical medical record system including MDS, Resident Trust and medical billing. It includes Physicians Orders, eDocuments, ePrescribing, Progress Notes, Quality Assurance, User Defined Assessment, Tracks resident information, including census, reimbursement, clinical, and contact data. NetSolutions also contains AR/billing software, beginning with complete registration data, continuing to claims paid on first submission Hospital for medical billing to Medicare & Medi-Cal.	No	HHSA Coordinated Support
Canva	Canva is a graphic design tool with extensive templates, graphics, color pallettes, and other design elements. It allows templates and branding to be established, and promotes collaborative development of materials.	Yes	FG3 SaaS Support
CapitolTrack	This application is used by S&IA to track State Bills that are introduced and amended during the California legislative session.	Yes	FG3 SaaS Support
CAR	CAR is a Microsoft Access application used by the County of San Diego Department of human Resources to maintain Classification Activity Requests. DHR users access the application using the Citrix remote access solution.	No	FG3 Full Support
Card Access System (CAMS)	CAMS (Access Management) has a web based application for access management control. The web interface allows maintenance of employee data and access history. CAMS (Access Management) also has a workstation component which creates and prints the access badges. The badge printing is managed from several locations to provide independent badge control at the departmental level; each location prints unique badges that can only be used at that location – the exception being General Services who manages all county-wide badges excluding the restricted departments. Locations include: the Department of General Services, the District Attorney’s Office, the Sheriff’s Department, the Courts and the Probation Department	No	FG3 Coordinated Support
Case Review System	Supervisor and QA Review of Cases	No	HHSA Coordinated Support
CDPH External Connect Gateway (ECG) Quick Connect	External Connect Gateway (ECG) Quick Connect (QC) is the California Department of Public Health's (CDPH) web portal solution that provides a secure means of transmitting daily COVID-19 case data from CoSD to the state.	Yes	HHSA SaaS Support
CECRIS	CECRIS is a CDSS information system development project with the primary goal of: [1] Providing a single integrated system that supports end-to-end processing of the CEC and CA 800 processes to fully meet the business needs; [2] Creating a flexible and expandable system to accommodate federal and state mandated modifications and reporting requirements; [2] Complying with federal and state program guidelines and standard accounting principles; and [4] Comply with state IT and security standards.	Yes	HHSA SaaS Support

Exhibit 16.1-5 Firm Fixed Price for Applications Maintenance & Operations - Portfolio Applications

Application	Description	Cloud App?	Bundle
Central Replay System	Compliance regulations require HHSA to maintain legacy call recordings, storage, and playback for a period of 10 years. Avaya's Central Replay System (CRS) provides HHSA with the ability to store recordings indefinitely and access the recordings as needed. No new recordings will be added via this solution.	No	HHSA Coordinated Support
Cerner CareTracker – On Premise	CareTracker application uses wall-mounted touch screen devices placed strategically throughout Edgemoor Hospital to allow staff members to record supportive documentation of all types. Information for all departments is retrieved in a variety of formats for MDS completion, care planning, and staff management. The Application consists of 3 programs, the main CareTracker Application, the QlikView publishing server and a QlikView web server for viewing the QlokView data. Each of the server runs Windows server and access a database server running SQL Server on Windows Server. The kiosks communicate with the server via two appliances (computers) located in the phone closet at Edgemoor hospital that act as a FIFO buffer between the kiosks and the server. 11/02/21 - Application PA2561 is used 24/7. All maintenance windows must be coordinated in advance with customer.	No	HHSA Coordinated Support
Cerner RHO	Cerner RHO is a suite of applications offered by the vendor Cerner Corporation (http://www.cerner.com/public/) and is used at the San Diego County Psychiatric Hospital (SDCPH) and Inpatient and Outpatient pharmacies. PA2732-Cerner RHO includes Millennium RHO and Cerner Retail Pharmacy RHO. Millennium RHO is accessed by hospital clerical staff, doctors, nurses and pharmacists to track patient information, chart patient data, and dispense medication. At the Inpatient Pharmacy and hospital there are 4 Rx stations that dispense drugs, one in each unit, Units A (EPU), B, C and D, and 5 label (Zebra) printers, one in each unit and one in the pharmacy to print lab specimen labels and prescription labels. Special printers for the wristbands worn by patents and barcode scanners for the patient wristbands, wireless vitals monitoring instruments and wireless iPods and iPads for use in charting patient data, and large wall mounted touchscreen computers in each unit to display patient information for the patients in each unit. Cerner Retail Pharmacy RHO is used by the Outpatient pharmacy to dispense medications to county residents who are NOT inpatients of the San Diego County Psychiatric Hospital (SDCPH). Cerner Retail Pharmacy RHO utilizes standard laser printers to print prescription labels and uses scanners to scan prescriptions and signature pads for patients to sign for the receipt of prescriptions.	No	HHSA Coordinated Support
Chameleon	Animal Management: Chameleon is an integrated shelter software case management system for the entire Animal Services agency. It helps to track all the data for shelter, law enforcement, licensing and dispatch programs within the department. Finding Rover. Finding Rover is a Third Party Mobile App that uses Animal Facial Recognition against the Picture data provide from the Animal Database. AP Refund. Deaf Link	"Deaf Link is used to translate emergency public information into American Sign Language to recipients that have selected to receive their alerts in that format. Namely the Deaf, Blind, or hard of hearing. Deaf Link also performs ASL interpretation via teleconference in emergency shelters.	Yes	PSG SaaS Support
DeedAuction	Online service that helps facilitate the sale of tax defaulted properties via an online auction.	Yes	FG3 SaaS Support
DGS Generic Filing Cabinet	The DGS Generic File Cabinet was established to provide a central place to store an access documents. The business reason for choosing Documentum over Windows is so that, by policy, the paper copy of each document may be discarded once imported into the repository. In addition, the Personnel Folder provides a supplemental function for storing personnel records that fall outside the scope of responsibilities for the Department of Human Resources. In 2014, the DGS Generic File Cabinet was migrated to the new Enterprise Document Processing Platform (EDPP). This PAID has the following characteristics: • The DGS Generic File Cabinet resides in the COSDGEN Repository • There are no other applications associated with this PAID • Users import and access content directly through CARA • Folder Navigation and basic search tools are used to locate content • There are no custom jobs, workflows or coding • The Personnel Folder is the only folder with indexing	No	FG3 Coordinated Support
DHR BENEFITS ELECTRONIC DOCUMENTS UPLOAD	DHR BENEFITS ELECTRONIC DOCUMENTS UPLOAD system is a simple and easy to use web interface that will allow DHR users to import Benefits documents into the DHR Documentum repository. Features:• The Benefits Division of DHR will use this import tool to import electronic documents into DHR Documentum Repository. • System has the ability to convert different format (.doc, .xls, .jpeg, .png, .tiff & .bmp) documents to PDF• System has the ability to track the document / batch progress from Web Import tool until it reaches Documentum repository.• System has the ability to save the incomplete uploads and complete them at a later time.• System has the ability to auto-populate relevant data from PeopleSoft based on Employee ID.• System has the ability to import the Following Benefit Document types to the Documentum repository.o DHR COBRA Documentso DHR Benefits Misco DHR Beneficiary Designationso DHR Enrollment Formso DHR Personal Worksheeto DHR Confirmation Statemento DHR FMLA Misco DHR Temporary Employee. ebtEDGE	The program is apart of the Statewide EBT System. It is a state support ASP.	No	HHSA Coordinated Support
eCivis Allocate	eCivis Allocate is a cloud-based, multi-tenant, SaaS solution that provides Cost Allocation services. The Cost Allocation Plan (CAP) is a formal means of accumulating and identifying indirect costs and central support service charges that ensures each department bears its fair share of the total costs for services. The application is hosted on the Google Cloud, which provides a secure stack from physical controls to data storage.	No	FG3 Coordinated Support
Eco-Visio	Visitor count data analyses are presented in the form dashboard. Data is visible at any given moment, saved in real time on the SaaS solution. Dashboards consist of a variety of interactive dynamic data visualization modules.	Yes	LUEG SaaS Support
Efforts To Outcome	ETO Software™ allows users to quantify and qualify the efforts that create and foster the client and inter/intra-agency relationships that drive the human services industry. ETO™ provides a structure and a common language for relationship management, analysis and decision-making at every level of an organization. It has been determined that ETO meets the requirement for CWS. In addition, other counties within California use ETO to meet the same requirements in a hosted (ASP) environment.	No	HHSA Full Support
Efforts to Outcomes (ETO) - PHS	Note: State hold this contract - see attached ETO software is a web-based, remotely hosted application being used by the State of California, Department of Public Health as the new data collection and reporting system for the Black Infant Health (BIH) Program.	Yes	HHSA SaaS Support
eForms Repository	This is to store eForms during and after their business lifecycle with the idea that this App may be shared by multiple county departments and agencies that don't have their own storage solution.	No	FG3 Full Support

Exhibit 16.1-5 Firm Fixed Price for Applications Maintenance & Operations - Portfolio Applications

Application	Description	Cloud App?	Bundle
EK Health - Managed Care	Its a SaaS system that does not have a direct cost to it. The way the cost component is structured is the vendor while providing three distinct services to the County will be paid just a flat fee per transaction for the two of three services and a flat fee plus percentage for the third service. The system itself wont cost anything, there is no maintenance or licensing fee or any IT related charges.	Yes	FG3 SaaS Support
Electronic Approval Workflow	This application is to automate the countywide routing and approvals of Board Letters and related documents to improve efficiency and reduce costs. Workflow automation supports the County's Green Initiative by reducing automobile traffic associated with manually processing Board Letter documentation, in addition to aligning with the County's Required Disciplines of Information Technology, Continuous Improvement and Fiscal Stability. Key Functionalities Ability to obtain secure, documented electronic approval/rejection of documents from any County computer, off-site computer or any smart phones allows IMAPI 24 hours a day/7 days a week without manually transporting materials. Full functionality must be available from network desktop computers and off-site computers (with use of VPN). Approval functionality must be available from any smart Phone allows IMAPI.	No	FG3 Full Support
Electronic Municipal Market Acces	The Electronic Municipal Market Access website, or EMMA®, is the official repository for information on virtually all municipal securities. EMMA provides free public access to official disclosures, trade data, credit ratings and other resources and tools for understanding the municipal securities market. EMMA is an award-winning website, recognized by the National Federation of Municipal Analysts and the National Association of State Treasurers' State Debt Management Network. The Municipal Securities Rulemaking Board (MSRB) operates the EMMA website under authority granted by the U.S. Securities and Exchange Commission (SEC).The EMMA website was established to increase the transparency of the municipal securities market by providing free public access to municipal securities disclosures and data. EMMA provides investors, state and local governments and other market participants with key information and tools to put that information into context.	Yes	FG3 SaaS Support
Electronic Public Document Library	Website for allowing public to search and retrieve APCD documents. San Diego County Air Pollution Control District is required by Assembly Bill 423 to make documents available to the public through a public search Website, effective by the end of calendar year 2021. APCD will define the record types and associated document types to be made available to the public through the public search website, available on the internet.	No	Other Full Support
Eligibility Case Comments	CalWIN, Welfare-to-Work (WTW), and QESD Case Comments tools allow the user to collect information from a customer. All the information captured through the use of several sub-forms is consolidated and displayed at the bottom of the main form so the user can copy and paste it into a different system. These tools do not have a back-end; Information entered is not saved. HTML, JavaScript, and CSS were used to create the user interface (main form and several sub-forms).	No	HHSA Full Support
Elite	The Application contains data used to determined initial and ongoing eligibility for rental assistance for qualified residents of San Diego County. It also generates rental assistance payment to landlords. Data included the database is personal information and financial record. Data is to be treated as highly confidential.	No	HHSA Full Support
Emergency Aid Tracking	This application is used to track information related to children receiving emergency aid, and related family members. The application tracks this by creating a case number, and then associating impacted family members to the case, along with a questionnaire. The application was previously part of a web app that was retired (PA2341), then migrated to Microsoft SharePoint, and now is on the Microsoft Dynamics CRM 2016 Framework.	No	HHSA Full Support
Emergency Rental Assistance Program	This application assists with the provisioning of housing funds for Covid19 victims. It is also known as ERAP for short. The application was created and will be supported by Basc LLC and hosted on AWS.	No	HHSA Coordinated Support
Emissions Inventory System	The Emission Inventory System (EIS) application replaces the old desktop EASIER system with a modern, stable, web-based application that addresses the technological limitations of the existing legacy application by supporting internal staff in addition to the target regulated community and other external parties. The new EIS more effectively supports and facilitates the core functions of APCD's Toxic Emissions Inventory Section (within the Engineering Division) and provides extensive and flexible ad-hoc and standardized reporting capabilities, caseload management tools, workflow management, and a modern, intuitive user interface. EIS fits County of San Diego's Land Use & Environment Group's vision "to create a collaborative environment that empowers the Citizens and County Staff, and enables the LUEG business processes to deliver high value quality services in the most efficient and timely manner."	No	Other Full Support
emocha Mobile Health Inc.	emocha adherence solutions provide tools to improve patient adherence to medication and treatment. Through video-based Directly Observed Therapy (VDOT), patients can report symptoms and record themselves taking medication at their own convenience, while providers assess videos and adherence analytics on a web-based portal. emocha is used around the world to monitor adherence through VDOT, smart-pill bottle integrations, SMS reminders, and more. The platform has been a solution for opioid addiction therapy, hepatitis C, and tuberculosis medication adherence.	Yes	HHSA SaaS Support

Application	Description	Cloud App?	Bundle
EMS LEMSIS Data Mart	The EMS team is currently migrating to a cloud system from ImageTrend which does not have the flexibility in reporting needed for Epidemiology trending. Therefore, the data gathered in the ImageTrend system will need to be sent to the County and put into a DB for complex querying on a daily basis. EMS also needs a replacement tool for MS Access to pull data from the SQL DB into SPSS.	No	PSG Full Support
Energy Management	BuildingOS is a comprehensive cloud based software solution that manages building performance and energy consumption across County facilities. The system shall includes an ability for necessary customizations to allow the County to deliver actionable building intelligence. The system integrates with the existing Builiding Automation Systems and the Tririga application.	No	FG3 Coordinated Support
Enterprise Document Processing Platform	This platform will be used to host all Documentum applications.	No	FG3 Full Support
Enterprise Email Solution	The Enterprise Email solution consists of two parts. 1. A website that email submissions are posted to from multiple County websites. The email is either processed and sent to IronPort for delivery or a record in written to the WEBPROD email database.2. An executable runs every 1 minute and reads the email database table on the WEBPROD database. All records with a status of zero (unprocessed) are read and processed and sent to IronPort for delivery. Successful entries are then deleted from the table. Entries that have errors are flagged for later review.	No	FG3 Full Support
Enterprise Oracle BI	The intent of the DW is to create metadata that can easily be accessed and manipulated for report generation and analysis, move the County to new technology, allow users to join data from various applications (i.e., Oracle E-business, Kronos Timekeeping, PeopleSoft HR and Payroll, Performance Budgeting, Documentum, Itrack) for reporting, and provide end users with an overall robust and flexible data analytical and reporting capability	No	FG3 Full Support
EOS	Library/publication tracking	Yes	FG3 SaaS Support
EPI HIE SFTP Access	This application is a user interface from 4 CoSD workstations to the Health Information Exchange (HIE). The HIE allows doctors, nurses, pharmacists, other health care providers and patients to appropriately access and securely share a patient's vital medical information electronically, improving the speed, quality, safety and cost of patient care.	No	HHSA Full Support
ePoll Book - ROV	ePoll books allows an ROV election worker to check-in a potential voter, identify ballot type, and print a confirmation receipt. Each ePoll book aka touchpad has a copy of all 1.8 million registered voters in San Diego County. This system vendor is TENEX was procured via DPC RFP 9595. The solution is certified by the CA SOS.The ePoll book will securely connect via WiFi via Cradlepoint device running dual SIM cards (AT&T and Verizon). Perspecta will be providing and managing the Cradlepoint for each election. Precinct Central (TENEX cloud solution) has a highly fine-tuned, performance-tested strategy for data updates. The robust communication framework ensures all locations are current with voter information and guards against double voting. The basic process flow for real-time updates behaves as follows: Each Touchpad is connected to a secure Cloud repository through a secure Cradlepoint connection. Using the secure connection, changes made at the elections office are automatically communicated to all Touchpad devices at all voting locations. At voting locations, as voters check in on the Touchpad, their vote type, ballot style, time, location, and operator are all saved to their voter record. This information is securely transmitted to the central server. All information received at the central server is packaged and securely pushed out to all Touchpad units at the voting locations. If a voter attempts to go to another voting location to vote, the poll worker will see that the voter has already voted and what method the voter voted by. While Precinct Central is fully capable of communicating information across the jurisdiction in real-time, it is important to note, that the connectivity and real-time updates are not a requirement to operate the electronic poll book. In the event that connectivity is lost or not available, each Touchpad is fully capable of operating stand-alone. Further, each Touchpad directly communicates to other Touchpads at the vot	Yes	FG3 SaaS Support
ERMS Bin Tracking	Bin Content Tracking is a web-based application utilizing Barcodes and readers for entering and tracking the status & location of documents being processed at the DPC.	No	HHSA Full Support

LAFCO ApplicationXtender (AX) Imaging Environment	LAFCO is currently leveraging ARCC's Kofax document scanning and ApplicationXtender (AX) environments for their document content management requirements. They are about to embark on an extensive "back-file" scanning effort for their historical documents/records, and implementing new day-forward scanning procedures. This project includes the implementation of new infrastructure to support their full-text search requirements and configuration of separate Centera Immutable Storage Pools that is consistent with the AX File Access Manager (FAM) environment	No	FG3 Full Support
LCPtracker Professional	LCPtracker Pro is a cloud-based prevailing wage and workforce compliance management solution. The application is ideal for public agencies and prime contractors that need to ensure all contractors on their project, even down to the lower-tier subcontractors, are compliant. Additionally, clients can track detailed worker information and leverage dynamic reporting to monitor workforce initiatives.---------- accounts/access are handled by Vendor	No	HHSA Coordinated Support
LeagueLineup	League Management Software	Yes	LUEG SaaS Support
Learning Health Care Network (LHCN)	With UC Davis oversight, there will be a development of an EP LHCN software application (app) to support the ongoing data-driven learning and program development across the state. This LHCN will collect and visualize real-time data at the individual, clinic, county and state levels to inform consumer and program level decisions and develop learning opportunities for individuals, staff, programs and administrators, in order to improve consumer outcomes. In addition, this project will include training and technical assistance to San Diego identified EP providers to help them fully utilize the data in routine clinical care. The associated evaluation will examine the impact of the LHCN on the EP programs, and will quantify the cost of implementation and utilization, in order to support statewide efforts for early identification and treatment of psychosis. This project is an innovative approach to state-level learning and real-time outcomes monitoring for consumers, their families, and the identified EP Provider in San Diego. Additionally, this project allows for collaboration and learning between other designated participating Counties in California with EP programs.	Yes	HHSA SaaS Support
Lectora Online	Online training development tool	Yes	FG3 SaaS Support
Lexipol On-line Policy Manual Development Service	Lexipol is used to manage the departmental policies for Probation.	Yes	PSG SaaS Support
Lexis State Net	Legislative Research Tool hosted by LexisNexis. LexisNexis State Net is the premier online legislative and regulatory intelligence and tracking application forthe 50 States and Congress. State Net allows clients to monitor and manage pending legislative and regulatory activity so they can confidently assess the impact to their organization. County users enter commentary and notes into system and use workflow to manage legislative analysis process.	Yes	HHSA SaaS Support

Parcel Quest	TTC exchanges information and in return get access to use their system/service to get map view of properties.	Yes	FG3 SaaS Support
Partner Engagement System	The Partner Engagement System (PES) is hosted in Microsoft O365 Government Cloud using Dynamics 365 and is a web-based, multi-user application originally built by Microsoft using the CRM Online platform. The PES facilitates the Live Well San Diego partner workflow process from inquiry, onboarding of partner, to ongoing support and communication with the partner. The PES supports internal and external customer service the County collaborates across County groups to engage new partners. Executives and Managers are able to stay up to date with pending and ongoing partnerships through real time, custom reports and dashboards. The PES provides a tool to help the County measure progress of the Live Well San Diego vision through the collective impact of partner activities and outcomes that are linked to the Areas of Influence and Indicators. The PES does not contain any customer/client data; however, it does contain data about Live Well San Diego County partner organizations (i.e., name of entity, entity POC, entity location, sector, reach, commitments to further the LWSD vision & outcomes). Each partner reports information about actions their organization is taking in support of CoSD's Live Well initiatives which is later included in LWSD Annual Report published to the public. The addition of Dynamics 365 Portal provides limited partner access to enable more real-time reporting and contains a knowledge base managed (e.g., data entered) by the County. Application is fully supported by Perspecta.	No	HHSA Full Support
PARTS - Public Authority Registry Tracking System	The PARTS (Pubic Authority Registry Tracking System) application will manage the providers and consumers for IHSS Public Authority.	No	HHSA Full Support
PatternStream	The new Pattern Stream Automated Documents System (PADS) allows users to rapidly set up, test, modify, run, and save automated publishing projects. Information can be acquired quickly from a standard database, XML and HTML files, as well as other files. PADS generates Adobe FrameMaker, Postscript, and Acrobat files as output for electronic distribution and print. PADS is accessed via Terminal Services (or Remote Desktop) as a desktop application that sits on an AWS EC2 instance, ec2padswp014374. All supporting applications that are needed to support PADS reside on ec2padswp014374 (i.e., MS Office, Adobe FrameMaker, and Acrobat).	No	FG3 Coordinated Support
PCC Staffing Database	Access Database used for tracking staff at PCC, including training, assignments and scheduling.	No	HHSA Coordinated Support

Exhibit 16.1-5 Firm Fixed Price for Applications Maintenance & Operations - Portfolio Applications

Application	Description	Cloud App?	Bundle
Probation Electronic Medical Records (PEMR)	The Probation Electronic Medical Record (PEMR) is a web-based correctional medical records system that provides for comprehensive correctional medical practice management, tracking every activity related to an inmate's healthcare, streamlining the complex workflow, providing practical efficiencies and easy access to inmate health records via a user-friendly, dynamic and intuitive interface.A medical record is generated at the time of booking. There are about 650 to 800 minors (children under 18 years of age) in the system at any given time. Some of those minors have been in the system more than once but they keep the same Medical Record number (MR#) for life. The retention time for medical records is 10 years. After the age of 18, their records are boxed up and stored at Iron Mountain. Those records will be destroyed after 10 years. Upon launching the PEMR system, there will be approximately 625 active Medical Records in the system. There are some records kept in the system for probationers that are over the age 18. It can receive and store records for probationers up to age 21.Each Medical Record contains approximately 10 standardized forms, plus the documentation from the providers that accompany them. Depending on the kids' length of stay, health problems and times that they have been in and out of the system, there are typically 1 to 4 volumes of Medical Records and of which some can go up to 6 volumes. (A volume can be several inches thick of paper.)	No	PSG Coordinated Support
Probe Information Services Inc - Investigative Srvs	Probe Information Services, Inc. The vendor will receive a request that includes personal identifiable information and medical information; this information will be entered into their system in order to perform the services requested and then provide a report (that contains such information), which may include video.	Yes	FG3 SaaS Support
Progen	Construction Project Management Application	No	FG3 Coordinated Support
Progen	This application is provided to DGS as a component of a construction consulting contract. The application is not contracted for separately, but is a tool used by the vendor to provide their services. The Department of General Services (DGS) utilizes the Gordian Group for the maintenance and administration of its JOC program. Support from the Gordian Group includes publication of the Unit Price Book (Construction Task Catalog), monitoring of local area construction pricing used by the County, permission to use their licensed proprietary software system (PROGEN), technical support as well as construction management training to all County and Contractor employees, and a full range of system management services throughout the entire JOC process.DGS Project Management Division uses the PROGEN product as a project and contract management system for the JOC program. PROGEN functions includes: Trackso Job Order Contract (JOC) amounto Project numbero Contract numbero Contract amounto Contractoro Contractor information (address, phone number, email)o Facility addresses	Yes	FG3 SaaS Support
Project Clean Water Website	This contract is to obtain expert consultant services to support and maintain the existing Project Clean Water website. The Regional Water Quality Control Board requires the County of San Diego, and other parties listed under the MS4 Permit (Order No. R9-2013-0001), to develop, update and maintain an internet based Regional Clearinghouse that is made available to the public. The Project Clean Water website currently serves as the Regional Clearinghouse for the County of San Diego and other parties under the MS4 Permit. The website provides required public access to water quality data, map layers, plans, reports, and other documents and files.	Yes	LUEG SaaS Support

Application	Description	Cloud App?	Bundle
Public Health Lab Telemetry	DicksonOne DataLogger is a third-party, vendor supported proprietary Cloud-based SaaS application used by Public Health Lab (PHL) Telemetry department to monitor and record real-time temperatures and other critical parameters related to analytical and diagnostic testing. Continuous temperature monitoring and documentation is required by regulatory agencies for equipment used to store patient samples, test kits, reagents, and supplies. Monitored equipment includes refrigerators, freezers, water baths, and incubators. This monitoring system continuously monitors and records temperature and humidity readings and sends real-time malfunction alerts to County staff. It is also used by the County Immunization department (CA6219) and the Pharmacy department (PA2816). Data logging devices are on a VLAN located at Site 33.1.	No	HHSA Coordinated Support
PulsePoint AED	PulsePoint AED is a simple-to-use app that enables you to help build the public AED registry in your community or anywhere! When a cardiac emergency strikes, finding an Automated External Defibrillator (AED) can help save a life. But that takes knowing where AEDs are located.AEDs that are managed using PulsePoint AED are accessible to emergency dispatchers and disclosed to emergency responders, including nearby citizens trained in CPR and off-duty professionals such as firefighters, paramedics, and nurses. Instead of asking the caller if there is an AED available, dispatch center staff can inform callers of nearby lifesaving devices.There is never a charge to use any aspect of the PulsePoint registry. PulsePoint is a public, non-profit organization providing the app and hosted AED registry for free as part of its core mission to improve cardiac arrest survival. Lets save some lives together.	Yes	PSG SaaS Support
Purchasing and Contracting Documentum Repository	Documentum is the system of record for all documents related to contracts and purchase orders for the County of San Diego. The Purchasing and Contracts Records Application was created to provide a user-friendly means for importing, searching and retrieving these documents. In addition, County employees and the public may search and view content based on permissions established by the department. The Purchasing and Contracting Records Application consists of the following areas of functionality: 1) The EDPP Enterprise Documentum Platform based on Documentum 2) ImageTrust for scanning 3) A custom web-viewer that allows users to import and search for documents based on user permissions. 4) An interface with EBS (Oracle Financials PA2150) to integrate viewing, and indexing 5) Leveraging the new County Website standard, Adobe AEM to provide internally and externally facing access to content The Purchasing and Contracting Records Application content resides within the COSDGEN Repository in Documentum.	No	FG3 Coordinated Support
Pyxis	The Pyxis Med-stations from Becton Dickinson, CareFusion division are being used by Health and Human Services Agency (HHSA) San Diego County Psychiatric Hospital (SDCPH) for inpatient services. The Pyxis medication cart dispensing system will automate aspects of SDCPH's medication process including dispensing patient medication, provide the ability to monitor medication stock levels thereby ensuring availability of medications, while reducing overstocking (daily inventory reconciliation are accurate). Pyxis will interface with PA2732-Cerner Millennium RHO and receive patient ADT (Admission, Discharge and Transfer) Orders, and receive medication orders from Cerner Millennium and dispense medications for SDCPH through Pyxis, with the goal of reducing medication errors and provide for the means to dispense medications outside of normal Pharmacist hours. The Pyxis system is vendor supported.	No	HHSA Coordinated Support

Exhibit 16.1-5 Firm Fixed Price for Applications Maintenance & Operations - Portfolio Applications

Application	Description	Cloud App?	Bundle
Pyxis Knowledge Portal	SDCPH Pharmacy desires to upgrade its 4 of its current Pyxis 4000 Medstation to the Pyxis ES Platform. By upgrading to this platform solution, SDCPH Pharmacy will have access to BD's Knowledge Portal. Knowledge Portal is an intuitive, web-based application that quickly translates data into actionable information. Data and key performance indicators (KPIs) can be accessed with just a few clicks to help optimize devices and standardize hospital policies, without data overload or additional manual steps.The Pyxis ES solution is a 3rd party solution that is managed by the vendor within a 3rd party isolated VLAN in Rosescrans, SD. The Knbwledge Portal solution is a cloud hosted solution in the SuperNap Datacenter in Las Vegas, NV. There are many advantages for SDCPH Pharmacy to upgrade to the Pyxis ES Platform Solutions and thus obtain access to the Knowledge Portal which comes standard with the solutions. See below for details:1) The records retention feature is primary, plus having data in one area instead of a hybrid. - The current data is stored in Perspecta's environment. Once 30 days had passed, Perspecta's server does not allow useable information in a readable format, therefore putting SDCPH Pharmacy at risk in the event of audit.- In the Knowledge Portal platform, records retention is up to 10 years2) Another benefit with the platform upgrade, it will come with software upgrades as the current platform is discontinued. Newer software has a patient centric approach which should decrease med errors and increase patient safety. 3) Medication management integration with Cerner Millennium (SDCPH's current Electronic Health Records system) - There is an interface built between the two so that medication info can be transferred back and forth.- The Pyxis ES Platform integrates with the Cerner Millennium system itself and various applications such as Discern Analytics, PowerChart, PharmNet, so pharmacists can draw upon this medication dispensing data	Yes	HHSA SaaS Support
Q Continuum System	Q is a HIPAA compliant, Internet-based tool for client centric, data reporting. This application is used by AIS staff in numerous programs. The tool is used for assessments, care plans and logging services. Information about individual consumers is shared within the provider network. This application serves as a "data warehouse" for data that crosses numerous AIS support programs.	No	HHSA Coordinated Support
Qmatic - Clerk of the Board	This application is used by customers to schedule Passport Appointments online and then the Clerk of the Board Passport Office employees use the application to manage the appointments once the customer enters the building.	No	FG3 Full Support
Q-MATIC ARCC	The ARCC offices use Q-MATIC Orchestra to manage a queue of customers via system created tickets. Customers are given a printed ticket or mobile text which is called to service counters via audio PA system, video queue display TV monitors, mobile text, mobile app, and/or on service counter LED where the ticket is being served. Q-MATIC saves ticket service information, allowing the generation of reports showing service performance, wait times etc. Customers can also schedule appointments via an online appointment web interface. Appointment confirmation emails are sent to the person who scheduled the appointment. The system is live at all ARCC County sites.	No	FG3 Coordinated Support
Q-Matic COB	Q-Matic is a queuing system to manage Clerk of the Board passport customers. Q-Matic will be providing the Orchestra software via a cloud solution.	Yes	FG3 SaaS Support
Q-Matic HHSA EO	Client Visit Management (CVM) is shared by the FRCs with the ability to handle minor differences between the sites. Some of the functionalities are: 1. Appointment / Check-in,2. New application, 3. Orientation and 4. Other (AKA: Q-Matic).	No	HHSA Full Support
Q-Matic LUEG	Line Queue Management... Customer Flow Management System - used for customer intake, routing customers to the appropriate LUEG permitting counter (e.g. DPLU, DEH, or DPW) and capturing actions conducted by staff for customers. Includes QSuite and Management Portal software with the following optional modules: Calendaring and SDK Wait Times. The public-facing application displays wait times for permitting services at Site 5 and allows the public to schedule appointments.	No	LUEG Coordinated Support
Qualtrax	Qualtrax is a compliance management software for the forensic industry. It centralize auditable data into a single web-based interface, automate required processes for equipment calibration, purchase requests, customer complaints and more.	Yes	HHSA SaaS Support

This project will also allow those same tax bills to be printed in PDF format and placed in a shared folder for use by authorized TTC personnel.	No	FG3 Coordinated Support
TTC AEM Internet Site (SDTTC.COM)	TTC web site WWW.SDTTC.COM on the AEM platform (Adobe Experience Manager)	No	FG3 Full Support
TTC ApplicationXtender and WebXtender	Documentum ApplicationXtender Product Suite (File Access Manager, WebXtender (aka. AX .NET Web Access), and AppXtender).	No	FG3 Full Support

Exhibit 16.1-5 Firm Fixed Price for Applications Maintenance & Operations - Portfolio Applications

Application	Description	Cloud App?	Bundle
TTC Automated Lien Recording Application	TTC currently utilizes a workstation based process with dependencies on (3) MS-Access Databases to electronically submit Tax Lien documents to the SECURE Electronic Recording Delivery System (ERDS) Portal for recording of documents. Orange County has developed an Automated Lien Recording component to submit the Tax Lien documents using the SECURE API so that batch submittal process is automated (as opposed to single file drag and drop method that TTC previously utilized).	No	FG3 Full Support
TTC Bloomberg Gateway	Monitor stock market; track stock history; obtain news events critical to stock market; chart stocks; perform "what if" scenarios.	No	FG3 Coordinated Support
TTC Business Intelligence (TTCBI)	TTCBI is a Power BI reporting system used by the IPTS group. Reports were developed using Power BI Desktop and Power BI Report Builder.	No	FG3 Full Support
TTC CMS	Cloud-Based email subscription service for the Treasurer-Tax Collector to notify the public about important property tax information.	No	FG3 Coordinated Support
TTC CRS (Central Reporting System)	CRS is part of the custom-developed TTC WITS (PA2581) framework. Imports County of San Diego property tax payments from six payment systems: Cashiering, mail, CORTAC, eLockbox, web, and IVR phone payments. Imported via an applications scheduler and web-based user interface to collect, process, and reconcile property tax payments for transmission to the Mainframe. Exchanges data with an Oracle database, which stores data and performs back-end data processing and produces a number of reports. An end-of-day process creates a formatted file on another server for scheduled Mainframe processing. The output is a reconciled property tax bill and a number of reports.	No	FG3 Full Support
TTC Debt Management System	The County, through the TTC, has entered into agreements with school districts and community colleges in the county, to act as the paying agent and registrar for over 200 bond issuances. In its role as paying agent, the TTC pays the principal of, redemption premium, if any, and interest on each bond in accordance with the provisions of the bond resolutions under which the bonds are issued. Replace the current MS Access solution with SAP Sybase SQL anywhere client server solution.	No	FG3 Coordinated Support
TTC Electronic Relationship Management	TTC Electronic Relationship Management (eRM) application is a custom application built by Perspecta and RSM US LLC for the Treasurer-Tax Collector. The application resides on the CoSD Microsoft O365 Government Cloud and uses the Dynamics 365 application. The application will be a way for the TTC department to track tax payer activities across a number of use-cases.	No	FG3 Full Support
TTC EPS Express Manager	Transaction Database and report generation tool for IVR and Web Tax Payments.	No	FG3 Coordinated Support
TTC Interactive Web Response (IWR)	This is a 24/7 public facing website for constituents to view and pay their property tax bills online via E-Check or credit card. Payments are processed through a third-party vendor, Heartland Payment Systems (HPS). Post-payment data is returned and stored in the EPS database. IWR interfaces with the following PAIDs for tax collection: PA1308 - TTC Sonant IVR, ACD, and Phone Payment System, PA2438 - TTC WITS, and PA2601 - TTC EPS. Taxpayers can access the IWR website on any web-capable device (www.sdttc.com). CoSD TTC Financial staff must be authorized for access to the IWR environment to manage the maintenance web page. Sonant and Perspecta technical staff have access to the environment to support the application using County AD accounts.	No	FG3 Full Support
TTC iPayment Cashiering	Browser based property tax cashiering application.	No	FG3 Coordinated Support
TTC J.P. Morgan Chase Banking	Banking for County of San Diego	No	FG3 Coordinated Support
TTC Mobile Home Tax Clearance Database	TTC Mobile Home Tax Clearance Database is an MS Access 2016 database located on a NAS share that the users must be granted access to. It receives a once-per-year data transfer that is manually imported into the MS Access database. Perspecta is responsible for managing the application. The MS Access application runs on Citrix. Users receive a desktop icon as part of the Citrix client install package.	No	FG3 Coordinated Support
TTC Phone Payment System	Interactive Voice Response (IVR) system for the purpose of paying property taxes over the phone via credit card	No	FG3 Coordinated Support
TTC SeeTrans	Application to query historical tax payment transactions	No	FG3 Full Support
TTC Sharepoint iTTC	TTC requires a SharePoint Site Collection instance in the collaboration space that is supported by ES, as it will house TTC's official intranet for interdepartment and intradepartment view only. In the future, TTC will submit requests via VLRs to create forms and workflows in this site collection instance. This SharePoint site will reside in the GCC and use SharePoint Online	No	FG3 Full Support
TTC Sonant IVR, ACD and Phone Payment System	Interactive Voice Response (IVR) system, created by Sonant Corporation, allows taxpayers to use a telephone to pay their property tax payment, have a duplicate tax bill mailed to them, or transfer to another system called Automated Call Distribution (ACD) system which permits them to make property tax payment inquiries. The IVR system accesses the Master Tax File on the mainframe and the Web Integrated Tax System (WITS) for payment status to obtain property tax information.	No	FG3 Coordinated Support
TTC Sympro	Sympro is Treasury Management System. The software is access by securing a VPN Connection and RDP to a Vendor hosted server. Sympro has replaced Sungard.	No	FG3 Coordinated Support
TTC Tax Sale Database	Control, reporting of property eligible for Public Tax Sale; includes a Point-Of-Sale Module.	No	FG3 Full Support

Exhibit 16.1-5 Firm Fixed Price for Applications Maintenance & Operations - Portfolio Applications

Application	Description	Cloud App?	Bundle
TTC TRCC Cortac (Mainframe)	Generate electronic media for tax agencies	No	FG3 Full Support
TTC TRDS Defaulted Secured Data Mgmt (Mainframe)	Tax Collector system for managing secured tax billing and collections for accounts that are in default	No	FG3 Full Support
TTC TRRT Unsecured Tax Refund Mgmt System (Mainframe)	Tax Collector system for managing refund actions for Unsecured property tax accounts	No	FG3 Full Support
TTC TRST Tax Collector Secured Tax Collect (Mainframe)	Tax Collector system for collecting and managing Secured property tax bill amount for the current year	No	FG3 Full Support
TTC TRTC Carryover (Mainframe)	Secured Property Tax - Carry Over Roll	No	FG3 Full Support
TTC TRTH Secured Tax History Info System (Mainframe)	Tax Collector system used to display 5 most current years of Secured Tax billing and collection history data by parcel	No	FG3 Full Support
TTC TRUS Unsecured Property Tax System (Mainframe)	Maintains unsecured property tax master files. Posts Wits tax payments, computes penalties, generates reports, produces bulk tax bills and on-demand tax bills for remote printers. Provides interfaces to Wits and IVR payment packages and Trustref refunds.	No	FG3 Full Support
TTC Trustref (TTC Financial Apps)	Financial Reporting System for taxpayer refunds.	No	FG3 Full Support
TTC WARP (Wire Access Request Portal)	External entities wire request system. Used by school districts and other external entities for whom the County manages funds collected for those entities via taxes. This is just a "workflow" application where external entities request a wire transfer of tax funds from their County managed account to their bank. The actual wire transfer of those funds is made via a different application.	No	FG3 Full Support
TTC Wausau ImageRPS	Image Based Remittance Processing System	No	FG3 Coordinated Support
TTC Web Payment System	Heartland Payment System (HPS) is an off-site credit card and echeck payment system utilized by TTC for their Web tax payment systems. HPS has developed the Frontend Web-site and the back-end CC and eCheck processing for the web site. HPS is a subcontractor to Perspecta	No	FG3 Full Support
TTC WITS (Web Integrated Tax System)	This Web Integrated Tax System (WITS), PA2438, is a series of custom web services and methods that interface with payment systems provided by CoSD vendors. The WITS application interfaces with the CoSD Mainframe and contains business rules that send the proper tax payment information to the various tax payment system.	No	FG3 Full Support
Twitter	Social Media Site	Yes	FG3 SaaS Support
Unique Management Chat Service	Unique Management Services will provide chat support to Library customers through the website www.sdcl.org. This support would address any questions customers may choose to get a response to through the chat service. This would offload a large portion of this support function from Library staff, thereby allowing them to offer more programs and to provide personal service to customers at the Branch.	Yes	LUEG SaaS Support
Uptime Robot	It monitors your websites every 5 minutes and alerts you if your sites are down.It asks for your websites headers and gets status codes like "200-ok", "404-not found", etc. every 5 minutes (or more depending on the monitor's settings),If the status code doesn't indicate a problem, we are goodIf the status code is~400+ and 500+, then the site is not loadingIn order to make sure the site is down, Uptime Robot makes several more checks in the next 30 seconds,If the site is still down, it sends an alert.	Yes	PSG SaaS Support
uQR.me	The vendor provides QR codes which redirect traffic to County public AEM pages. The vendor provides traffic analytics through Google Analytics for Businesses, and all the information is stored by Google and anonymized.	Yes	LUEG SaaS Support
US Bank	TTC Treasury Division will use software to manage, track, and verify bond payments made by a bank paying agent for the 42 school districts and 5 community college General Obligation Bonds for the County of San Diego.	Yes	FG3 SaaS Support
Utility Manager Pro	Track and report on utility usage costs - specifically for SDG&E invoices received by the County.MS Access Database accessed by client software on users desktop computers - Desktop shortcut should be: “C:\Program Files (x86)\LPB Energy Management\UtilityManager\UM40.EXE” "U:\utilitymanager\UM40.MDB" ; Drive Shared Mapping: U = \\USTLGPCSD0002\UtilityManager	No	FG3 Coordinated Support
Vector Mobile Inspection	CityGov Application: Vector Mobile App gives field technicians an easy and effective way to access and enter Accela data while in the field.	No	LUEG Coordinated Support
VectorSolutions	The Vector Learning Management System (LMS) is a Training Solution built with unique features and functionality to fit the training needs of critical industries. It provides one place for all of your training needs - from assigning, tracking and reporting on course completions, to tracking license and credential requirements, to identifying employee skill gaps. The Vector LMS makes it easier to build a culture of training, safety, and compliance.	Yes	LUEG SaaS Support
Veriform	VeriForm is a checklist management system that helps ensure that staff are following standardized protocols essential to meeting quality objectives and improving care. For example, checklists can help make sure that medications are properly stored in areas outside of the cleanroom.	Yes	HHSA SaaS Support
Verizon Wireless Email to Text for Pollworkers	Verizon Wireless provided services for ROV staff to send mass email reminders to text messaging to over 8000 Pollworkers. This application is accessed through the Verizon Wireless portal where the ROV staff can send text messages to pollworker cell phones.	Yes	FG3 SaaS Support

Exhibit 16.1-5 Firm Fixed Price for Applications Maintenance & Operations - Portfolio Applications

Application	Description	Cloud App?	Bundle
Vet Pro Web	Veteran Case Management software application, developing & tracking claims and awards for veterans, mandated by CA Dept of Veterans Affairs	Yes	HHSA SaaS Support
Video Management System	A single application to access all HHSA security cameras feeds from one interface. The functionality includes: Administration, view multi-display, personalized dashboard with alarm widgets, track key indicators in one center location, video events and system health in real time, and the ability to provide instant access to federated entities such as CoSD Sheriff. Support is a combination of Perspecta and Vendor.	No	HHSA Coordinated Support
Viking Data Entry System	Viking Data Entry (VDE) is used by ARCC to capture forms data elements from various property assessments, appraisals, change in ownerships, claims, and other documents. The captured data elements are validate and compiled into custom formatted batches for high speed ingestion into the mainframe for Real Property updates.	No	FG3 Full Support
Vimeo	Human Resources Talen Development Division produces video segments that are incorporated into our E-Learning trainings. The video's need to be uploaded to a platform that can handle the bandwidth needed to stream an HD video to multiple users. YouTube is a solution we have used in the past, but due to the ads, the inability to replace/update a video with the same url, and the limited privacy functions we feel VIMEO.com is a more robust solution.	Yes	FG3 SaaS Support
Vimeo	Founded in 2004, Vimeo is a web-based video hosting tool. Vimeo allows you to create, share, and discover videos online and worldwide. Vimeo has redundant data centers to help with having high-speed playback and redundancy for backup.	Yes	PSG SaaS Support
Visme	Visme will be used as a tool to help communicate project management timelines, milestones, and relevant project information (via one-pagers, fact sheets, and process/logic flow models) to internal team members (project staff, ops staff and BHS executives) and other CoSD HHSA staff through engaging and professional static digital content.Visme is different from already available solutions (Visio, Microsoft Publisher, PowerPoint, etc.) in the sense that it is significantly more user friendly, and offers a large portfolio of standard layouts and Templates. The large volume of projects that the BHS PMO manages requires the use of a more efficient and user-friendly solution. The application is hosted on Amazon Web Services and their data center is located in the US region (northern VA). Visme owns their own servers at AWS. Data is encrypted at rest and are 100% secure.	Yes	HHSA SaaS Support
Vital Records Information System	VRIS is a web user interface for coding death and fetal certificates. This is the main functionality of the utility. Data captured and reviewed from this process then gets stored to the Vitals database (used to be called IDCMS) and also gets exported to AppXtender. Application servers are using F5 load balancing.	No	HHSA Full Support
VitalChek	VitalChek Network Inc. is a secure web based solution for credit card transaction processing. VitalChek allows HHSA program to provide faster service to the customers due to real time receipts of credit card payment.	Yes	PSG SaaS Support
Volunteer Tracking System AIS	Volunteer management software that is used by the Ombudsman Program	No	HHSA Coordinated Support
Voter Roster Capture	The San Diego Registrar of Voters (SDROV) will implement a capture solution to scan pre-printed Rosters of Voters and automatically recognize and extract the Voter IDs of voters that cast a ballot. Handwritten rosters associated with provisional ballots would also be scanned, but no Voter IDs would be extracted.A key project goal is to be able to capture approximately 250,000 pages of rosters and upload the extracted Voter IDs within several business days. Accurate Voter ID recognition is mandatory.1. Phase 1 will include form design, scan/capture, and export components of post-processed data for saving images as flat files on SAN/NAS storage as well as comma-separated value file for importing to EMS.	No	FG3 Full Support
Vyond (was GoAnimate)	Vyond is a monthly subscription that gives our multimedia designers access to a library of animated characters and backdrops and then create animated videos for use in County online trainings and videos.	Yes	FG3 SaaS Support
Wasp AssetCloud	App sescription from provider website, https://www.waspbarcode.com/asset-tracking: "Wasp is the only asset tracking solution provider that offers all the necessary software, hardware, and asset tags you need to implement an asset management system. This makes AssetCloud not only the most feature-rich asset tracking software in the industry, but also makes it the most complete solution available from one provider." "Easy-to-Use Asset Tracking Software.Automate your organization's fixed asset tracking for improved check-in/check-out processes, faster auditing, and error-free reporting."	Yes	PSG SaaS Support
Weather Monitoring and Flood Warning System	Hydstra is a software for managing large amounts of time-series data in the hydro power, water resources and wastewater industries. Hydstra offers a complete solution to environmental data management conducting: Data Acquisition Data Management Data Analysis Modelling and Simulation Automated Task Scheduling	No	LUEG Full Support
Web Application for Legacy Payroll Data and Reports	Web front end for reports for Legacy Payroll data migration for the Human Resources Payroll System and the Online Payroll History.	No	FG3 Full Support
Web Confidential Morbidity Report (WebCMR)	A web base solution for tracking and reporting disease incidents and outbreaks using a comprehensive suite of case management tools.	Yes	HHSA SaaS Support

Exhibit 16.1-5 Firm Fixed Price for Applications Maintenance & Operations - Portfolio Applications

Application	Description	Cloud App?	Bundle
WebEOC	WebEOC provides crisis coordination for the San Diego Operational Area. It is used to share information during disasters or planned events that require coordination between emergency responders. This does not provide any direct information to the public. This is for Emergency responders and decision makers only.	Yes	PSG SaaS Support
WebTrak (ANOMS)	WebTrak (ANOMS) is a system provided to the citizens which allows them to access a website to view flight information around McClellan Palomar Airport. Citizens can identify an aircraft and submit noise complaints online. Airport staff then use a back office system (ANOMS) to review flight logs to determine if a violation occurred.	Yes	LUEG SaaS Support
Weebly	Website design, hosting, storage, and support for Aging & Independence Services websites.	Yes	HHSA SaaS Support
Wellness Incentive	SharePoint site to automate the processing of the Wellness Incentive program by allowing the submission of the necessary documentation in order to be eligible for the incentive payout. Participants currently submit two documents via email for processing. If it is determined that the documents are complete, certain information (Employee Name, ID, etc) is sent to Central Payroll for the payout. It is vital that duplicates are not submitted. This site handles the submission and approval. Once approved, the process to send data to central payroll is not part of this site.	No	FG3 Full Support
Western Limited, Inc - Investigative Services	Western LimitedThe vendor will receive a request that includes personal identifiable information and medical information; this information will be entered into their system in order to perform the services requested and then provide a report (that contains such information), which may include video.	Yes	FG3 SaaS Support
Westlaw Form Builder	Used to facilitate legal document/form assembly.	Yes	FG3 SaaS Support
When I Work	Workforce scheduling SaaS service that will be used by county staff to schedule nurses and healthcare volunteers working in alternate care centers in support of COVID-19 response. Nurses and volunteers will access the service to view schedules and work assignments.	Yes	HHSA SaaS Support
When2Work	When2Work is a web based work shift scheduling app for 200+ election workers and 100+ MBDO locations.	Yes	FG3 SaaS Support
WITS	ADS system that tracks data for CALOMS WITS is a centrally hosted administrator supported data processing system designed for reuse by State substance abuse & mental health services agencies & SAMHSA grantee programs . It supports realtime data processing starting with data collection at treatment clinics This application is hosted by the vendor group SAMHSA (Substance Abuse & Mental Health Services Administration) . SAMHSA manages the general administration of the WITS program through it subsidiaries . For more details about SAMHSA access the website : http://www.samhsa.gov/about Contact Info: Richard Thoreson Email:Rthoreso@SAMHSA.gov Phone: (301) 443- 5325	No	HHSA Coordinated Support
Wonderware SCADA IAAS Services	The Wonderware SaaS System is a basic station control and data acquisition (SCADA) system which will monitor and manage various wastewater facilities across San Diego county.	Yes	LUEG SaaS Support
Workflow Manager for Revenue and Recovery Remittance System	WebServer IIS front end	No	FG3 Full Support
Workschedule.net	This is a staff work scheduling system for our facilities that operate 24/7.	Yes	PSG SaaS Support
YouTube	Social Media Video Site	Yes	FG3 SaaS Support
Zoll Case Review Software	Quickly transmit essential clinical data, includingCPR quality, ECG, and EtCO2, directly from anX Series® Advanced monitor/defibrillator orZOLL AED 3® BLS defibrillator. The pushof a button ensures that key metrics aredelivered to QA/QI personnel no cards or cables are required	Yes	PSG SaaS Support
Zoom Business	Zoom is a video communications company that affords its users video conferencing remotely using cloud-based computing. It is a Software as a Service (SaaS) that provides you with an easy and stress-free platform to hold online meetings, mobile collaboration as well as video conferencing.	Yes	HHSA SaaS Support
Zoom Pro with Webinar/Event Addon	OERJ staff will use Zoom Pro with Webinar/Events add-on to provide virtual meetings with collaboration to the public and constituents with the option for interpretation.	Yes	FG3 SaaS Support

1. OVERVIEW

This Exhibit describes the methodology for billing with respect to Applications Maintenance and Operations (M&O).

2. FIRM FIXED PRICE MODEL

2.1. Overview

Contractor shall provide a Firm Fixed Price (FFP) option for Applications M&O. The Applications M&O FFP activities shall be maintained in the Standards and Procedures and shall be supported by the administration and maintenance of the Break/Fix environment (included in the Development & Test Services Resource Unit) as per tables below.

Costs	Services					
	Applications Development Service	Applications M&O Service	Production Infrastructure (servers and storage)	All Storage (not Production)	Physical Server/Virtual Servers (not Production)	Backups
Applications M&O FFP	Not included	Included	Not included	Not Included	Not Included	Not Included
Development / Test FFP	Not included	Not included	Not included	Included for Development / Test and Break/Fix Usage	Included for Development / Test and Break/Fix Usage	Included for Development / Test and Break/Fix Usage

Costs	Managed Private Cloud			
	Development / Test Physical HOSTS For Virtual Environment	Development / Test Virtual Environment	Break/Fix Physical HOSTS For Virtual Environment	Break/Fix Virtual Environment
Applications M&O FFP	Not included	Not included	Not included	Not included
Development / Test FFP	Included	Included	Included	Included

The Applications M&O shall consist of three categories of support: Full, Coordinate, and SaaS. Applications will be placed in the applicable support category per the Standard and Procedures.

2.2. Periodical Review by Applications Review Board (ARB)

An ARB shall be established to perform a collaborative evaluation of the applications that have been enhanced, added to or retired from the FFP Application List and determine whether the Applications M&O Resource Unit Fee warrants adjustment. The ARB shall meet quarterly and upon County request or

in the event Contractor identifies a material change to the FFP Application List as further detailed in the Standards and Procedures. A material change is defined as additions or deletions of applications from the FFP Application List that affect the M&O support and/or server environment, and that meet any of the following criteria:

1. Affects fifty (50) or more End-Users.
2. Requires addition or deletion of five (5) or more servers to/from Development / Test environment.

2.3. New Portfolio Applications

For incremental changes to the FFP Applications List - Full and Coordinated Support categories, Contractor shall evaluate the support, operations, and maintenance requirements for such change and determine whether those requirements present a change in the workload and then propose the appropriate FFP Fee adjustments to the ARB, as per the process set forth in the Standard and Procedure Manual.

In the event that there is a net add of 100 applications to the FFP Applications List - SaaS Support category in the Contract Year, Contractor shall evaluate adjustment to the FFP and if applicable, propose the appropriate FFP Fee adjustment to the ARB. The net add threshold will be reviewed at the end of the Contract Year and adjusted upon mutual agreement between Parties.

2.4. Retired Portfolio Applications

For retired applications in the FFP Applications List - Full and Coordinated Support categories, Contractor shall evaluate the support, operations, and maintenance requirements for the incremental change and determine whether those requirements present a change in the workload and then propose the appropriate FFP Fee adjustments to the ARB, as per the process set forth in the Standard and Procedure Manual. Retired applications are defined as applications no longer being used by the County and have been requested by County to be removed from the portfolio.

3. ANNUAL FEE

3.1. Applications M&O Fee Options

Contractor shall provide the following Applications M&O FFP options: Low Org, Group and County. The FFP options will breakdown the annual fee by support category: Full, Coordinate, and SaaS. County may select one of the options at the onset of the Agreement and such option will be in place through end

of Contract Year (CY) 2. Effective CY3, County may select a different FFP option or move to a time and materials (T&M) pricing model with a 60-day prior notice to Contractor. Combining any of the FFP options with T&M is not allowed.

In the event that the County selects a different FFP option in CY3 or any subsequent CY, Contractor shall at that time provide County with updated pricing for all FFP options for review. The updated pricing shall breakout the FFP options at the support category level. In the event that the County selects the T&M pricing model in CY3 or any subsequent CY, the principles and process set forth in the Schedule 4.3-1 Contractor's Solution, *Alternate Time & Materials model to provide Applications Maintenance and Operations services*, shall be applied.

Contractor shall prorate the FFP over twelve (12) months and charge the County a fixed monthly Resource Unit (RU) Fee for Applications M&O accordingly. The FFP is subject adjustment based on ARB decisions, and annual reduction in fees starting CY3.

3.2. Applications M&O Fee Option Selected

The table below provides the Applications M&O Fee option selected by the County for Contract Year.

Contract Year	Applications M&O FFP Option
1	County Level
2	County Level
3	County Level
4	County Level
5	County Level
6	County Level
7	County Level
8	County Level

3.3. Annual Reduction in Cost

Contractor shall reduce the annual cost of Applications M&O FFP from previous year as per the table below. Contractor shall base the reduction on the overall Applications M&O FFP at the end of the fiscal year. Optional Year Percentage Reduction will be negotiated based on experience during the Base Period.

Contract Year	Percentage Reduction
2	0%
3	2%
4	2%
5	2%
6	2%

Contract Year	Percentage Reduction
7	2%

*Schedule 4.3 Reference includes the Section reference for the specific requirements for this particular Resource Unit but it still includes all general requirements applicable to such Resource Unit in the higher levels of the obligations hierarchy as described in Schedule 4.3. For example, the Resource Unit for Desktop - Standard Workstation includes not only the responsibilities as stated in Section 4.5 of the End-User Services Section of Schedule 4.3, but also the responsibilities in Sections 4.1 through 4.3 of the End-User Services Section, as well as the responsibilities and requirements in Section 1 of Schedule 4.3.
**Baseline volume is undetermined at this time
*** The mainframe RU unit volumes are based on the R24 CPUs
****With the exception of 2.3.1.4 and 2.3.1.5, and their respective requirements

				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 18,978.04	Represents the labor to support Configuration Management Services as defined in Schedule 4.3, Section 2.15.
Capacity Planning and Performance Management Services	Schedule 4.3 - Section 2.16	Month	Fixed Monthly Fee Per Unit		$ 18,372.67		
				Service Desk Services		$ -	Represents the portion of Capacity Planning and Performance Management labor attributable to providing Service Desk Services.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				End User Services		$ 3,029.77	Represents the portion of Capacity Planning and Performance Management labor attributable to providing End User Services.
				Network Services		$ 5,922.27	Represents the portion of Capacity Planning and Performance Management labor attributable to providing Network Services.
				Data Center Services		$ 2,665.57	Represents the portion of Capacity Planning and Performance Management labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 2,151.95	Represents the portion of Capacity Planning and Performance Management labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 4,109.68	Represents the portion of Capacity Planning and Performance Management labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 18,372.67	Represents the labor to support Capacity Planning and Performance Management Services as defined in Schedule 4.3, Section 2.16.
Disaster Recovery Management Services	Schedule 4.3 - Section 2.17	Month	Fixed Monthly Fee Per Unit		$ 194,230.46		
				Service Desk Services		$ 97.12	Represents the labor required to manage, update and test the Disaster Recovery Plan for Service Desk Services.
				End User Services		$ 194.23	Represents the labor required to manage and update Disaster Recovery Plan documents for End User Services. This includes providing input to County Business Continuity Plans and supporting testing as needed.
				Network Services		$ 38,846.09	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support Network Disaster Recovery Services.
				Data Center Services		$ 145,381.50	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support Data Center Disaster Recovery Services.
				Application Maintenance & Operations Services		$ 9,711.52	Represents the labor required to manage, update and test the Technical Recovery Plans for individual Applications, within the scope of the Data Center Disaster Recovery Plan.
				Application Development Services		$ -	N/A
				Hardware		$ 115,817.70	Represents the servers routers, switches, and storage equipment required to support DR environment.
				Software		$ 31,898.01	Represents the software costs associated with DR hardware used to support the DR environment.
				Labor		$ 46,514.75	Represents the labor to support Disaster Recovery Management Services as defined in Schedule 4.3, Section 2.17.
Identity Access Management Services	Schedule 4.3 - Section 2.18	Month	Fixed Monthly Fee Per Unit		$ 137,432.70		
				Service Desk Services		$ 3,690.91	Represents the portion of Identity Access Management labor attributable to providing Service Desk Services.
				End User Services		$ 22,663.56	Represents the portion of Identity Access Management labor attributable to providing End User Services.
				Network Services		$ 44,300.25	Represents the portion of Identity Access Management labor attributable to providing Network Services.
				Data Center Services		$ 19,939.23	Represents the portion of Identity Access Management labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 16,097.17	Represents the portion of Identity Access Management labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 30,741.59	Represents the portion of Identity Access Management labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ 22,070.21	Includes Symantec PKI Maintenance and Tools for IDAM resources to support the County environment.
				Labor		$ 115,362.49	Represents the labor to support Identity Access Management Services as defined in Schedule 4.3, Section 2.18.
Reporting Management Services	Schedule 4.3 - Section 2.19	Month	Fixed Monthly Fee Per Unit		$ 77,693.51		
				Service Desk Services		$ 2,086.55	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Reporting Management services in support of Service Desk Services.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				End User Services		$ 12,812.17	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Reporting Management services in support of End User Services.
				Network Services		$ 25,043.83	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Reporting Management services in support of Network Services.
				Data Center Services		$ 11,272.05	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Reporting Management services in support of Data Center Services.
				Application Maintenance & Operations Services		$ 9,100.06	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Reporting Management services in support of Applications Maintenance & Operations Services.
				Application Development Services		$ 17,378.85	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Reporting Management services in support of Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 77,693.51	Represents the labor to support Reporting Management Services as defined in Schedule 4.3, Section 2.19.
Domain Name Management Services	Schedule 4.3 - Section 2.20	Month	Fixed Monthly Fee Per Unit		$ 1,599.85		
				Service Desk Services			N/A
				End User Services			N/A
				Network Services		$ 1,599.85	Represents the portion of Domain Name Management labor attributable to providing Network Services.
				Data Center Services			N/A
				Application Maintenance & Operations Services			N/A
				Application Development Services			N/A
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 1,599.85	Represents the labor to support Domain Name Management Services as defined in Schedule 4.3, Section 2.20.
Business Analyst Services	Schedule 4.3 - Section 2.21	Month	Fixed Monthly Fee Per Unit		$ 83,261.44		
				Service Desk Services		$ 3,134.73	Represents the portion of Business Analyst Services labor attributable to providing Service Desk Services.
				End User Services		$ 19,248.40	Represents the portion of Business Analyst Services labor attributable to providing End User Services.
				Network Services		$ 4,163.07	Represents the portion of Business Analyst Services labor attributable to providing Network Services.
				Data Center Services		$ 16,934.60	Represents the portion of Business Analyst Services labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 13,671.50	Represents the portion of Business Analyst Services labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 26,109.15	Represents the portion of Business Analyst Services labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 83,261.44	Represents the labor to support Business Analyst Services as defined in Schedule 4.3, Section 2.21.
Chief Technical Architect Services	Schedule 4.3 - Section 2.22	Month	Fixed Monthly Fee Per Unit		$ 19,097.64		
				Service Desk Services		$ 3,182.94	Represents the portion of CTA labor attributable to providing Service Desk Services.
				End User Services		$ 3,182.94	Represents the portion of CTA labor attributable to providing End User Services.
				Network Services		$ 3,182.94	Represents the portion of CTA labor attributable to providing Network Services.
				Data Center Services		$ 3,182.94	Represents the portion of CTA labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 3,182.94	Represents the portion of CTA labor attributable to providing Application Maintenance & Operations Services.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Application Development Services		$ 3,182.94	Represents the portion of CTA labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 19,097.64	Represents the labor to support CTA Services as defined in Schedule 4.3, Section 2.22.
Enterprise Applications Architect Services	Schedule 4.3 - Section 2.23	Month	Fixed Monthly Fee Per Unit		$ 19,097.64		
				Service Desk Services		$ 3,182.94	Represents the portion of EAA labor attributable to providing Service Desk Services.
				End User Services		$ 3,182.94	Represents the portion of EAA labor attributable to providing End User Services.
				Network Services		$ 3,182.94	Represents the portion of EAA labor attributable to providing Network Services.
				Data Center Services		$ 3,182.94	Represents the portion of EAA labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 3,182.94	Represents the portion of EAA labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 3,182.94	Represents the portion of EAA labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 19,097.64	Represents the labor to support EAA Services as defined in Schedule 4.3, Section 2.23.
Innovation Management Services	Schedule 4.3 - Section 2.24	Month	Fixed Monthly Fee Per Unit		$ 21,073.13		
				Service Desk Services		$ 3,512.19	Represents the portion of Innovation Management labor attributable to providing Service Desk Services.
				End User Services		$ 3,512.19	Represents the portion of Innovation Management labor attributable to providing End User Services.
				Network Services		$ 3,512.19	Represents the portion of Innovation Management labor attributable to providing Network Services.
				Data Center Services		$ 3,512.19	Represents the portion of Innovation Management labor attributable to providing Data Center Services.
				Application Maintenance & Operations Services		$ 3,512.19	Represents the portion of Innovation Management labor attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 3,512.19	Represents the portion of Innovation Management labor attributable to providing Application Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 21,073.13	Represents the labor to support Innovation Management Services as defined in Schedule 4.3, Section 2.24.
Service Desk Services	Section 3.0	Month	Fixed Monthly Fee Per Unit		$ 184,350.93		
				Service Desk Services		$ 4,950.95	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support Service Desk Services.
				End User Services		$ 30,400.68	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support End User Services.
				Network Services		$ 59,423.94	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support Network Services.
				Data Center Services		$ 26,746.30	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support Data Center Services.
				Application Maintenance & Operations Services		$ 21,592.59	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support App Maintenance Services.
				Application Development Services		$ 41,236.47	Represents the portion of Labor, Hardware, Software and Other Direct Costs to support App Development Services.
				Hardware		$ -	N/A
				Software		$ -	N/A
				Labor		$ 184,350.93	Represents the labor to support Service Desk Services as defined in Schedule 4.3, Section 2.3.
Duo Hardware Token MFA	Schedule 4.3 - Section 4.5.2	Account	Fixed Monthly Fee Per Unit		$ 5.28		
				Hardware		$ -	N/A
				Software License		$ 2.76	Represents the cost of software license subscription.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				IMARS		$ 2.15	Represents labor costs for IMAR activities, Tier 1 Helpdesk.
Electronic Signature	Schedule 4.3 - Section 4.5.2	Transaction	Fixed Fee Per Unit		$ 1.01		
				Hardware		$ -	N/A
				Hardware (Refresh Labor)		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software License		$ -	N/A
				Software Maintenance		$ 0.81	Represents the cost associated to the software maintenance and labor costs.
				IMAR's		$ 0.01	Represents the cost associated to the IMAR labor.
				Service Desk		$ 0.19	Represents costs associated with Service Desk labor.
Desktop - 3D Workstation	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Fee Per Unit		$ 254.53		
				Hardware		$ 134.91	Represents the costs of acquiring the asset. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 25.02	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 26.70	Represents break-fix services, primarily labor and parts.
				Software License		$ 20.00	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 36.71	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 10.03	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 1.17	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - Advanced Engineering Workstation	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Fee Per Unit		$ 195.52		
				Hardware		$ 111.60	Represents the costs of acquiring the asset. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 17.60	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 18.82	Represents break-fix services, primarily labor and parts.
				Software License		$ 14.07	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 25.80	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 7.11	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.53	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - Advanced Workstation	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Fee Per Unit		$ 87.52		
				Hardware		$ 46.39	Represents the costs of acquiring the asset. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 8.60	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 9.18	Represents break-fix services, primarily labor and parts.
				Software License		$ 6.88	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 12.62	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 3.45	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.40	Represents the labor associated with maintaining the Desktop Application Directory.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

Desktop - Engineering Workstation	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Fee Per Unit		$ 103.35		
				Hardware		$ 60.09	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 9.97	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 7.33	Represents break-fix services, primarily labor and parts.
				Software License		$ 6.95	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 15.17	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 3.32	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.52	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - Gold Engineering Workstation	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Fee Per Unit		$ 295.72		
				Hardware		$ 205.48	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 18.92	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 20.24	Represents break-fix services, primarily labor and parts.
				Software License		$ 15.13	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 27.74	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 7.64	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.57	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - Mini Workstation	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Fee Per Unit		$ 60.41		
				Hardware		$ 28.42	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 5.58	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 4.94	Represents break-fix services, primarily labor and parts.
				Software License		$ 5.63	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 13.52	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 1.86	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.46	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - Scanner	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Per Unit		$ 139.09		
				Hardware		$ 107.38	Represents the costs of acquiring the asset, including feeder consumable kit. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 3.19	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 24.63	Represents break-fix services, primarily labor and parts, including annual preventive maintenance.
				Software License		$ -	N/A
				Software Maintenance		$ -	N/A
				IMAR's		$ 3.89	Represents labor costs for IMAR activities.
Desktop - Small Form Factor with Optical Drive	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Per Unit		$ 60.41		

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Hardware		$ 28.42	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 5.58	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 4.94	Represents break-fix services, primarily labor and parts.
				Software License		$ 5.63	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 13.52	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 1.86	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.46	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - Standard Workstation	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Fee Per Unit		$ 60.41		
				Hardware		$ 28.42	Represents the costs of acquiring the asset. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 5.58	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 4.94	Represents break-fix services, primarily labor and parts.
				Software License		$ 5.63	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 13.52	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 1.86	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.46	Represents the labor associated with maintaining the Desktop Application Directory.
Laptop - Engineering	Schedule 4.3 - Section 4.5.3	Device	Fixed monthly fee per unit		$ 156.01		
				Hardware		$ 82.84	Represents the costs of acquiring the asset. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 15.35	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 16.42	Represents break-fix services, primarily labor and parts.
				Software License		$ 12.23	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 22.59	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 6.17	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.41	Represents the labor associated with maintaining the Desktop Application Directory.
Laptop - Ruggedized	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Per Unit		$ 175.15		
				Hardware		$ 112.28	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 10.48	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 9.86	Represents break-fix services, primarily labor and parts.
				Software License		$ 16.09	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 22.43	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 3.49	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.53	Represents the labor associated with maintaining the Desktop Application Directory.

				IMAR's	[redacted]	$ 2.86	Represents labor costs for IMAR activities.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Desktop Application Directory Maintenance		$ 0.52	Represents the labor associated with maintaining the Desktop Application Directory.
Tablet - Convertible	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Per Unit		$ 88.61		
				Hardware		$ 47.15	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 6.79	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 6.50	Represents break-fix services, primarily labor and parts.
				Software License		$ 10.61	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 14.82	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 2.26	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.47	Represents the labor associated with maintaining the Desktop Application Directory.
Tablet - Ruggedized	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Per Unit		$ 195.14		
				Hardware		$ 129.90	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 10.64	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 10.23	Represents break-fix services, primarily labor and parts.
				Software License		$ 16.69	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 23.60	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 3.55	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.53	Represents the labor associated with maintaining the Desktop Application Directory.
Tablet - Surface Pro	Schedule 4.3 - Section 4.5.3	Device	Fixed Monthly Per Unit		$ 99.43		
				Hardware		$ 52.91	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 7.47	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 7.30	Represents break-fix services, primarily labor and parts.
				Software License		$ 11.90	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 16.83	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 2.49	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.53	Represents the labor associated with maintaining the Desktop Application Directory.
Tablet - Surface Pro LTE	Schedule 4.3 - Section 4.5.3	Device	Fixed monthly fee per unit		$ 127.64		
				Hardware		$ 67.77	Represents the costs of acquiring the asset. The component fee is the monthly lease payments for a leasing term of 3 years.
				Hardware (Refresh Labor)		$ 12.56	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 13.43	Represents break-fix services, primarily labor and parts.
				Software License		$ 10.01	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 18.48	Represents costs associated with the labor and resources for Software Maintenance support.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				IMAR's		$ 5.06	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.34	Represents the labor associated with maintaining the Desktop Application Directory.
County Retained Device	Schedule 4.3 - Section 4.7.3	Device	Fixed Monthly Per Unit		$ 95.87		
				Software License		$ 11.48	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 16.23	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 67.65	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.51	Represents the labor associated with maintaining the Desktop Application Directory.
Desktop - DCSS	Schedule 4.3 - Section 4.7.3	Device	Fixed Monthly Per Unit		$ 33.69		
				Hardware (Refresh Labor)		$ 3.13	Represents the labor for providing support for refresh tasks, on a 4-year cycle.
				Hardware Maintenance		$ 5.40	Represents break-fix services, primarily labor and parts.
				Software License		$ 5.05	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 9.71	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 8.13	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.50	Represents the labor associated with maintaining the Desktop Application Directory.
				Printer Maintenance		$ 1.78	Represents Level 2 printer support.
Laptop - DCSS	Schedule 4.3 - Section 4.7.3	Device	Fixed Monthly Per Unit		$ 41.21		
				Hardware (Refresh Labor)		$ 3.13	Represents the labor for providing support for refresh tasks, on a 3-year cycle.
				Hardware Maintenance		$ 6.73	Represents break-fix services, primarily labor and parts.
				Software License		$ 6.18	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 3 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Software Maintenance		$ 12.21	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR's		$ 10.13	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ 0.63	Represents the labor associated with maintaining the Desktop Application Directory.
				Printer Maintenance		$ 2.21	Represents Level 2 printer support.
Mobile Devices Support Services - Intune	Section 4.8	Device	Fixed Monthly Fee Per Unit		$ 7.89		
				Software License		$ -	Represents the costs of AirWatch software licenses upgrades/refresh. The aggregated cost is apportioned over the volume of Mobile Devices.
				Software Maintenance		$ 2.04	Represents costs associated with the labor and resources for Level 2 support and centralized hosting costs for Mobile Services applications.
				IMAR's		$ 5.85	Represents labor costs for IMAR activities.
				Desktop Application Directory Maintenance		$ -	N/A
Printer - Color Network Workgroup - Large Format (CNWP-LF)	Schedule 4.3 - Section 4.11.3	Device	Fixed Monthly Fee Per Unit		$ 154.16		
				Hardware		$ 80.90	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 3.08	Represents the labor to install and refresh hardware amortized over the estimated asset life.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Hardware Maintenance		$ 67.32	Represents break-fix services, primarily labor and parts.
				IMAR's		$ 2.86	Represents labor costs for IMAR activities.
Printer - Color Network Workgroup - Standard Format (CNWP)	Schedule 4.3 - Section 4.11.3	Device	Fixed Monthly Fee Per Unit		$ 62.84		
				Hardware		$ 38.01	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 0.94	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 21.70	Represents break-fix services, primarily labor and parts.
				IMAR's		$ 2.19	Represents labor costs for IMAR activities.
Printer - Monochrome Network Workgroup - Standard Format (MNWP)	Schedule 4.3 - Section 4.11.3	Device	Fixed Monthly Fee Per Unit		$ 56.25		
				Hardware		$ 33.82	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 1.13	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 20.29	Represents break-fix services, primarily labor and parts.
				IMAR's		$ 1.02	Represents labor costs for IMAR activities.
Printer - Monochrome Network Workgroup - Large Format (MNWP-LF)	Schedule 4.3 - Section 4.11.3	Device	Fixed Monthly Fee Per Unit		$ 90.61		
				Hardware		$ 62.58	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 1.81	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 24.77	Represents break-fix services, primarily labor and parts.
				IMAR's		$ 1.45	Represents labor costs for IMAR activities.
Printer - Monochrome Network High Volume - Large Format (MNWP-LF-H)	Schedule 4.3 - Section 4.11.3	Device	Fixed Monthly Fee Per Unit		$ 147.76		
				Hardware		$ 94.09	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 2.19	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Hardware Maintenance		$ 45.36	Represents break-fix services, primarily labor and parts.
				IMAR's		$ 6.13	Represents labor costs for IMAR activities.
Electronic File Sharing Services	Schedule 4.3 -- Section 4.12	User	Fixed Monthly Fee Per Unit		$ 81.25		
				Hardware		$ -	N/A
				Hardware maintenance		$ -	N/A
				Software		$ 37.26	Represents the license cost attributable to providing this service.
				Labor		$ 43.99	Represents the labor cost (e.g. Service Desk, IMAR, platform administration) to support the solution.
A/V Conference Room - Large	Schedule 4.3 - Section 4.13	Install	Fixed Fee Per Unit		$ 64,563.91		
				Hardware		$ 53,588.05	Represents the costs to acquire the Hardware
				Software		$ -	
				Labor		$ 10,975.86	Represents the costs to perform the labor for install and ongoing support
A/V Conference Room - Medium	Schedule 4.3 - Section 4.13	Install	Fixed Fee Per Unit		$ 34,671.93		
				Hardware		$ 28,777.70	Represents the costs to acquire the Hardware
				Software		$ -	
				Labor		$ 5,894.23	Represents the costs to perform the labor for install and ongoing support

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

A/V Conference Room - Small	Schedule 4.3 - Section 4.13	Install	Fixed Fee Per Unit		$ 25,004.76		
				Hardware		$ 20,753.95	Represents the costs to acquire the Hardware
				Software		$ -	
				Labor		$ 4,250.81	Represents the costs to perform the labor for install and ongoing support
Digital Signage Services	Schedule 4.3 - Section 4.14	Subscription	Fixed Monthly Fee Per Unit		$ 73.84		
				Hardware		$ 43.20	Represents the third party costs associated with original configuration and monthly subscription payments for a agreed upon term.
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ -	N/A
				Labor		$ 30.64	Represents costs associated with various with initial installation, help desk, and break/fix labor and support.
Survey Solution Support Services	Schedule 4.3 - Section 4.16	Administrator	Fixed Monthly Fee Per Unit		$ 48.94		
				Hardware		$ -	
				Hardware Maintenance		$ -	
				Software License		$ -	
				Solution support		$ 48.94	Represents costs associated with labor activities to support the solution.
Network Access - Static Wired	Schedule 4.3 - Section 5.5	Device	Fixed Monthly Fee Per Unit		$ 59.74		
				Hardware		$ 16.76	Represents the costs of acquiring network assets and support the Refresh tasks. The component fee is comprised of the monthly depreciation of a combination of 4 and 5 year refresh cycles.
				Hardware Maintenance		$ 11.83	Represents break-fix services, labor and parts.
				Software		$ 1.97	Represents the costs of software licenses upgrades/refresh. Based on a refresh cycle of 4 years on core network systems and 5 years for edge switches, the aggregated cost is apportioned over the baseline volume of Network Access users.
				Software Maintenance		$ 6.90	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 22.27	Represents labor costs for IMAR activities and circuit costs.
Network Access - Static Wired (Library)	Schedule 4.3 - Section 5.5	Device	Fixed Monthly Fee Per Unit		$ 51.26		
				Hardware		$ 16.16	This component represents the costs of acquiring network assets including switches, routers, security & NAC systems and tools. The component fee is comprised of the monthly amortization of a combination of 4 year refresh cycles for routers and security systems and 5 year refresh cycles for switches.
				Hardware Maintenance		$ 11.41	This component represents break-fix services for hardware assets, primarily labor and parts.
				Software		$ 1.90	This component represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 4 years for core network systems and 5 years for edge switches, the aggregated cost is apportioned over the baseline volume of Network Access users.
				Software Maintenance		$ 6.66	This component represents costs associated with the labor and resources for Level 2 software support.
				IMAR's		$ 12.01	This component represents labor costs for IMAR activities
				Circuit		$ 3.12	Residual circuits costs
Uninterrupted Power Supply Support Services	Schedule 4.3 - Section 5.5	Device	Fixed Monthly Fee Per Unit		$ 115.50		
				Hardware		$ -	
				Hardware maintenance		$ -	
				Software		$ 86.63	Represents costs associated with monitoring platform
				Software maintenance		$ 25.41	Represents costs associated with maintenance of monitoring platform and labor to support Break/Fix activities

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				IMAR's		$ 3.47	Represents costs associated with IMARs for the addition of new devices for support
Virtual Private Network Access - Level 1	Schedule 4.3 - Section 5.6	Active Account	Fixed Monthly Fee Per Unit		$ 9.88		
				Hardware		$ 2.47	This component represents the costs of acquiring network assets including routers, VPN concentrators, Application Persistence servers, security & NAC systems and tools. The component fee is comprised of the monthly amortization of a combination of 4 year refresh cycles for routers and security systems.
				Hardware Maintenance		$ 1.78	This component represents break-fix services, primarily labor and parts.
				Software		$ 0.38	This component represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 4 years for core network systems.
				Software Maintenance		$ 1.23	This component represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 1.00	This component represents labor costs for IMAR activities.
				Circuits		$ 3.02	This component represents the cost for intersite bandwidth facilities and Internet access.
Virtual Private Network Access - Level 2	Schedule 4.3 - Section 5.6	Active Account	Fixed Monthly Fee Per Unit		$ 11.46		
				Hardware		$ 1.87	Represents the cost of incremental hardware not included in Infrastructure Services.
				Hardware Maintenance		$ 0.90	Represents break-fix services, primarily labor and parts, not included in Infrastructure Services.
				Software		$ 0.34	Represents the costs of software license acquisition and management.
				Software Maintenance		$ 5.87	Represents software maintenance costs and labor and resources for Level 2 support.
				IMAR's		$ 2.48	Represents labor costs for IMAR activities.
				Circuits		$ -	N/A
Portal - External Users	Schedule 4.3 - Section 5.6	User	Fixed Monthly Fee Per Unit		$ 8.00		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software License		$ 4.00	Represents the cost of software license upgrades/refresh.
				Software Maintenance		$ 1.90	Represents costs associated with the labor and resources for Software Maintenance support.
				IMAR		$ 2.10	Represents labor costs for IMAR activities.
Portal - Portfolio Application	Schedule 4.3 - Section 5.6	Application	Fixed Monthly Fee Per Unit		$ 210.90		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software License		$ 110.00	Represents the cost of software license upgrades/refresh.
				Software Maintenance		$ 70.90	Represents costs associated with the labor and resources for Software Maintenance support.
				Break Fix		$ 30.00	Represents labor costs for Break Fix activities.
GSMS Short Code Setup	Schedule 4.3 - Section 5.7	Event	Fixed Fee Per Unit		$ 3,885.00		
				Hardware		$ -	N/A
				Hardware maintenance		$ -	N/A
				Software		$ 3,885.00	Represents the license cost attributable to providing GSMS Short Code Setup.
				Software maintenance		$ -	N/A
				IMAR's		$ -	N/A
				Circuits		$ -	N/A
GSMS Short Code Support	Schedule 4.3 - Section 5.7	Month	Fixed Monthly Fee Per Unit		$ 1,507.63		
				Hardware		$ -	N/A
				Hardware maintenance		$ -	N/A
				Software		$ -	N/A

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Software maintenance		$ 1,507.63	Represents the software maintenance cost (e.g. patches, upgrades) attributable to providing GSMS Short Code Support.
				IMAR's		$ -	N/A
				Circuits		$ -	N/A
GSMS Messages	Schedule 4.3 - Section 5.7	Message	Fixed Fee Per Unit		$ 0.03		
				Hardware		$ -	N/A
				Hardware maintenance		$ -	N/A
				Software		$ 0.03	Represents the license cost attributable to providing GSMS Messages.
				Software maintenance		$ -	N/A
				IMAR's		$ -	N/A
				Circuits		$ -	N/A
IP Conference Phone	Schedule 4.3 - Section 5.7.3	Phone	Fixed Monthly Fee Per Unit		$ 62.70		
				Hardware		$ 29.26	This component represents the costs of Enterprise voice systems comprised of multiple geo-redundant server clusters, IP infrastructure, gateways, IP Conference Phone, and support the Refresh tasks. The component fee is comprised of the monthly amortization of 5 year refresh cycles.
				Hardware Maintenance		$ 6.93	Represents break-fix services, primarily labor and parts.
				Software		$ 2.31	Represents the costs of software licenses upgrades/refresh based on the refresh cycle of 5 years
				Software Maintenance		$ 2.31	Represents software programming support
				IMAR's		$ 13.60	represents the labor costs for IMAR activities
				Circuits		$ 8.29	Represents the cost for bandwidth and circuitry
Virtual Phone - Microsoft (MS) Teams Phone	Schedule 4.3 - Section 5.7.3	Active Line	Fixed Monthly Fee per Unit		$ 17.69		
				Hardware		$ 2.69	This component represents the costs associated with the hardware required to deploy and operated the AT&T provided Direct Routing solution
				Hardware maintenance		$ 0.27	This component represents break-fix services for enterprise direct routing hardware
				Software		$ 8.78	This component represents cost system and application software, include Microsoft Teams phone license, required to provide direct routing
				Software maintenance		$ 0.20	This component represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 5.75	This component represents labor and support costs for the Direct Routing solution
				Circuits		$ -	
Voice-Avaya Legacy Support	Schedule 4.3 - Section 5.7.3	Month	Fixed Monthly Fee Per Unit		$ 437,522.40		
				Hardware		$ 119,706.67	This component represents enterprise costs of voice system hardware which are fixed
				Hardware maintenance		$ 36,584.63	This component represents break-fix services for enterprise voice hardware
				Software		$ 97,626.38	This component represents the costs of Enterprise voice systems comprised of multiple geo-redundant server clusters, gateways and support the Refresh tasks. The component fee is comprised of the monthly amortization of 5 year refresh cycles.
				Software maintenance		$ 28,604.12	This component represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 110,360.57	This component represents labor and support costs for Voice Services which are fixed
				Circuits		$ 44,640.05	This component represents the proportion of Voice Services costs of enterprise circuits
Voice Analog Line	Schedule 4.3 - Section 5.7.3	Active Line	Fixed Monthly Fee Per Unit		$ 50.74		

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Hardware		$ 15.99	Represents the costs of Enterprise voice systems comprised of multiple geo-redundant server clusters, analog to IP adapters, gateways and support the Refresh tasks. The component fee is comprised of the monthly amortization of 5 year refresh cycles.
				Hardware Maintenance		$ 4.74	Represents break-fix services, primarily labor and parts.
				Software		$ 2.37	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 5 years for voice based systems, the aggregated cost is apportioned over the baseline volume of telephones.
				Software Maintenance		$ 2.37	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 20.04	Represents labor costs for IMAR activities.
				Circuits		$ 5.22	Represents the cost for intersite bandwidth facilities and PSTN access.
Voice Single-Line	Schedule 4.3 - Section 5.7.3	Active Line	Fixed Monthly Fee Per Unit		$ 23.98		
				Hardware		$ 7.56	This component represents enterprise costs of voice system hardware which are user volume sensitive. It is comprised of telephone sets and cabling hardware
				Hardware maintenance		$ 2.24	This component represents break-fix services, primarily labor and parts
				Software		$ 1.12	
				Software maintenance		$ 1.12	
				IMAR's		$ 9.47	This component represents labor and support costs for Voice Services which are volume sensitive
				Circuits		$ 2.47	This component represents the proportion of Voice Services costs of enterprise circuits for intersite bandwidth facilities and PSTN access
Voice Multi-Line	Schedule 4.3 - Section 5.7.3	Active Line	Fixed Monthly Fee Per Unit		$ 26.30		
				Hardware		$ 7.44	This component represents enterprise costs of voice system hardware which are user volume sensitive. It is comprised of telephone sets and cabling hardware
				Hardware maintenance		$ 0.90	This component represents break-fix services, primarily labor and parts
				Software		$ -	
				Software maintenance		$ -	
				IMAR's		$ 11.92	This component represents labor and support costs for Voice Services which are volume sensitive
				Circuits		$ 6.05	This component represents the proportion of Voice Services costs of enterprise circuits for intersite bandwidth facilities and PSTN access
Virtual Phone – Microsoft (MS) Teams Phone Advanced Features	Schedule 4.3 Section 5.7.3	Call Flow	Fixed Monthly Fee Per Unit		$ 32.56		
				Hardware		$ -	
				Hardware maintenance		$ -	
				Software		$ -	
				Software maintenance		$ 11.19	Represents costs for maintenance of ACD/AA and monitoring
				IMAR's		$ 21.37	Represents labor costs for IMAR activities
Cloud Access Security Broker	Schedule 4.3 - Section 5.8	Month	Fixed Monthly Fee Per Unit		$ 15,450.12		
				Hardware		$ -	N/A
				Hardware maintenance		$ -	N/A
				Software		$ 14,350.12	Represents the license cost attributable to providing CASB capability
				Software maintenance		$ 1,100.00	Represents the cost associated with the support of the CASB capability
				IMAR's		$ -	N/A
				Circuits		$ -	N/A
Town Hall Services	Schedule 4.3 - Section 5.9	Event	Fixed Fee Per Unit		$ 76,730.20		

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Hardware		$ 13,920.45	12+ VM Servers with Storage Area Network and 4 Video Network Edge appliances (CDN). 5 Year Refresh cycle included.
				Hardware Maintenance		$ 1,962.50	Cloud based and premise based, the 12+ Servers are Cloud based and the VNEs are premise based.
				Software		$ 37,204.55	AVMS/QUMU application license and VNE/CDN licenses. 5 year refresh cycle included.
				Software Maintenance		$ 4,665.43	Application, Content Distribution and Portal support.
				IMAR's		$ 17,045.45	Townhall administrator and Portal updates.
				Circuits		$ 1,931.82	Origination and distribution bandwidth. Originator connectivity limited to available facilities.
Video Conferencing Services - Personal	Schedule 4.3 - Section 5.9	System	Fixed Monthly Fee Per Unit		$ 331.49		
				Hardware		$ 118.36	Represents the costs of VTC roll-about system codec and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 5 year refresh cycles.
				Hardware Maintenance		$ 32.18	Represents break-fix services, primarily labor and parts.
				Software		$ 13.85	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 5 years for VTC systems, the aggregated cost is apportioned over the baseline volume of VTC end points.
				Software Maintenance		$ 35.64	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 39.38	Represents labor costs for IMAR activities.
				Circuits		$ 92.07	Represents the cost for intersite bandwidth facilities, Internet and PSTN access.
Video Conferencing Services - Room System	Schedule 4.3 - Section 5.9	System	Fixed Monthly Fee Per Unit		$ 955.44		
				Hardware		$ 321.18	Represents the costs of VTC room system codecs and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 5 year refresh cycles.
				Hardware Maintenance		$ 102.73	Represents break-fix services, primarily labor and parts.
				Software		$ 39.92	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 5 years for VTC systems, the aggregated cost is apportioned over the baseline volume of VTC end points.
				Software Maintenance		$ 102.73	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 113.51	Represents labor costs for IMAR activities.
				Circuits		$ 275.36	Represents the cost for intersite bandwidth facilities, Internet and PSTN access.
Zoom Video Conferencing Support Services	Schedule 4.3 - Section 5.9	Paid Account License	Fixed Monthly Fee Per Unit		$6.95		
				Hardware		$ -	n/a
				Hardware Maintenance		$ -	n/a
				Software		$ -	n/a
				Software Maintenance		$ 4.49	Represents the cost associated with support and maintenance of licenses, including initial assignment, reassignment and true up, break-fix and monthly reporting of free and paid accounts, power and casual users.
				IMAR		$ 2.46	Represents the cost associated with IMAR activities
Video Streaming and Archiving Services	Schedule 4.3 - Section 5.10	System	Fixed Monthly Fee Per Unit		$ 7,283.61		
				Hardware		$ 1,122.22	Represents the switching and router costs of a dedicated VLAN for Video Streaming services and support the Refresh tasks. The component fee is comprised of the monthly amortization of 5 year refresh cycles for the switch and 4 year refresh cycles for the router.
				Hardware Maintenance		$ 911.44	Represents break-fix services, primarily labor and parts.
				Software		$ 89.71	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 5 years for the switch and 4 years for the router, the aggregated cost is apportioned to a single encoder.
				Software Maintenance		$ 911.44	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 1,555.76	Represents labor costs for IMAR activities.
				Circuits		$ 2,693.05	Represents the cost for intersite bandwidth facilities and Internet access.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

Video Streaming - COC Chambers	Schedule 4.3 - Section 5.10	System	Fixed Monthly Fee Per Unit		$ 1,282.60		
				Hardware		$ 197.52	Represents the switching and router costs of a dedicated VLAN for Video Streaming services and support the Refresh tasks. The component fee is comprised of the monthly amortization of 5 year refresh cycles for the switch and 4 year refresh cycles for the router.
				Hardware Maintenance		$ 160.33	Represents break-fix services, primarily labor and parts.
				Software		$ 19.24	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 5 years for the switch and 4 years for the router, the aggregated cost is apportioned to a single encoder.
				Software Maintenance		$ 159.04	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 275.76	Represents labor costs for IMAR activities.
				Circuits		$ 470.71	Represents the cost for intersite bandwidth facilities and Internet access.
Wireless Access Point	Schedule 4.3 - Section 5.12	Device	Fixed Monthly Fee Per Unit		$ 168.19		
				Hardware		$ 53.82	This component represents the costs of acquiring WiFi access assets including a Wireless Access Point and a proportional amount of redundant controllers/NAC and support the Refresh tasks. The component fee is comprised of the monthly amortization of 3 year refresh cycles.
				Hardware Maintenance		$ 31.95	This component represents break-fix services, primarily labor and parts.
				Software		$ 19.62	This component represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 3 years for WiFi network systems, the aggregated cost is apportioned over the baseline volume of Wireless Access Points.
				Software Maintenance		$ 48.77	This component represents costs associated with the labor and resources for Level 2 support and the County WAN/LAN connectivity.
				IMAR's		$ 14.02	This component represents labor costs for IMAR activities.
Network Access - Wire/Wireless	Schedule 4.3 - Section 5.12	Active Account	Fixed Monthly Fee Per Unit		$ 68.86		
				Hardware		$ 17.52	Represents the costs of acquiring network assets including switches, routers, security & NAC systems and tools. The component fee is comprised of the monthly amortization of a combination of 4 year refresh cycles for routers and security systems and 5 year refresh cycles for switches.
				Hardware Maintenance		$ 13.01	Represents break-fix services, labor and parts.
				Software		$ 3.00	Represents the costs of software licenses upgrades/refresh. Based on a refresh cycle of 4 years on core network systems and 5 years for edge switches, the aggregated cost is apportioned over the baseline volume of Network Access users.
				Software Maintenance		$ 7.00	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 5.75	Represents labor costs for IMAR activities.
				Circuits		$ 22.58	Represents the cost for intersite bandwidth facilities and Internet access.
3rd-Party Network Access - Category 1	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 548.07		
				Hardware		$ 202.53	Represents the costs of acquiring network assets and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 4 year refresh cycles.
				Hardware Maintenance		$ 105.92	Represents break-fix services, labor and parts.
				Software		$ 31.43	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 4 years for core network systems, the aggregated cost is apportioned over the baseline volume of 3rd Party Network Access users.
				Software Maintenance		$ 133.76	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 74.42	Represents labor costs for IMAR activities.
3rd-Party Network Access - Category 2	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 555.21		
				Hardware		$ 202.30	Represents the costs of acquiring network assets and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 4 year refresh cycles.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Hardware Maintenance		$ 105.80	Represents break-fix services, labor and parts.
				Software		$ 31.39	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 4 years for core network systems, the aggregated cost is apportioned over the baseline volume of 3rd Party Network Access users.
				Software Maintenance		$ 142.53	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 73.18	Represents labor costs for IMAR activities.
3rd-Party Network Access - Category 3	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 568.32		
				Hardware		$ 206.01	Represents the costs of acquiring network assets and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 4 year refresh cycles.
				Hardware Maintenance		$ 107.74	Represents break-fix services, primarily labor and parts.
				Software		$ 31.97	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 4 years for core network systems, the aggregated cost is apportioned over the baseline volume of 3rd Party Network Access users.
				Software Maintenance		$ 143.29	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 79.31	Represents labor costs for IMAR activities.
3rd Party Network Access - IP Sec - 5 Mbps	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 255.85		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 243.59	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 12.26	Represents labor costs for IMAR activities.
3rd Party Network Access - IP Sec - 10 Mbps	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 442.39		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 429.62	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 12.77	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (1 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 153.51		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 141.25	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 12.26	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (2 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 260.12		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 247.86	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 12.26	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (3 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 340.45		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Software Maintenance		$ 329.45	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 11.00	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (4 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 473.32		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 458.79	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 14.53	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (5 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 609.53		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 595.11	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 14.42	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (6-10 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 1,166.54		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 1,137.82	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 28.72	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (20 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 1,907.15		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 1,850.34	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 56.81	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (30 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 2,504.79		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 2,447.97	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 56.82	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (40 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 2,879.77		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 2,822.95	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 56.82	Represents labor costs for IMAR activities.
3rd Party Network Access - Virtual Access (50 Mbps)	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 3,032.09		
				Hardware		$ -	N/A

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 2,975.27	Represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 56.82	Represents labor costs for IMAR activities.
3rd Party Network Access - Microsoft Teams Rooms	Schedule 4.3 - Section 5.13	Network	Fixed Monthly Fee Per Unit		$ 369.66		
				Hardware			
				Hardware Maintenance			
				Software			
				Software Maintenance		$ 344.15	This component represents costs associated with the labor and resources for Level 2 support and access bandwidth.
				IMAR's		$ 25.51	This component represents labor costs for IMAR activities.
External DNS Management	Schedule 4.3 - Section 5.14	Month	Fixed Monthly Fee Per Unit		$ 15,275.83		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Software Maintenance		$ 12,220.03	Represents costs associated with the labor and resources for Level 2 support and access bandwidth. Also includes the cost of Akamai service.
				IMAR's		$ 3,055.80	Represents labor costs for IMAR activities.
External DNS Management Enhancement	Schedule 4.3 - Section 5.14	Month	Fixed Monthly Fee Per Unit		$ 29,539.27		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software		$ -	N/A
				Platform Support		$ 1,395.14	Monitor Bot Management dashboard and respond to incidents.
				Software Maintenance		$ 26,864.46	Represents costs associated with the labor and resources for Level 2 support related to the Kona Security and Bot Management services.
				IMAR's		$ 1,279.67	Represents labor costs for IMAR activities.
New Site Install - Type I Fixed Component	Schedule 4.3 - Section 5.16	Install	Fixed Fee Per Unit		$ 244,519.76		
				Hardware		$ -	N/A (Network Hardware/systems provided as part of Network Access RUs).
				Software		$ -	N/A (Network Systems software provided as part of Network Access RUs).
				Labor		$ 244,519.76	Represents the labor costs associated with the establishment of New Sites. To include: development of design standards; core circuit order and installation; planning and engineering; installation of Network hardware and software (not including the hardware and software); provisioning and turn up of the New Site, and project management.
New Site Install - Type II Fixed Component	Schedule 4.3 - Section 5.16	Install	Fixed Fee Per Unit		$ 122,259.84		
				Hardware		$ -	N/A (Network Hardware/systems provided as part of Network Access RUs).
				Software		$ -	N/A (Network Systems software provided as part of Network Access RUs).
				Labor		$ 122,259.84	Represents the labor costs associated with the establishment of New Sites. To include: development of design standards; core circuit order and installation; planning and engineering; installation of Network hardware and software (not including the hardware and software); provisioning and turn up of the New Site, and project management.
New Site Install - Type III Fixed Component	Schedule 4.3 - Section 5.16	Install	Fixed Fee Per Unit		$ 84,706.98		

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Hardware		$ -	N/A (Network Hardware/systems provided as part of Network Access RUs).
				Software		$ -	N/A (Network Systems software provided as part of Network Access RUs).
				Labor		$ 84,706.98	Represents the labor costs associated with the establishment of New Sites. To include: development of design standards; core circuit order and installation; planning and engineering; installation of Network hardware and software (not including the hardware and software); provisioning and turn up of the New Site, and project management.
New Site Install - Type IV Fixed Component	Schedule 4.3 - Section 5.16	Install	Fixed Fee Per Unit		$ 71,182.99		
				Hardware		$ -	N/A (Network Hardware/systems provided as part of Network Access RUs).
				Software		$ -	N/A (Network Systems software provided as part of Network Access RUs).
				Labor		$ 71,182.99	Represents the labor costs associated with the establishment of New Sites. To include: development of design standards; core circuit order and installation; planning and engineering; installation of Network hardware and software (not including the hardware and software); provisioning and turn up of the New Site, and project management.
New Site Install - Type V Fixed Component	Schedule 4.3 - Section 5.16	Install	Fixed Fee Per Unit		$ 17,630.81		
				Hardware		$ -	N/A (Network Hardware/systems provided as part of Network Access RUs).
				Software		$ -	N/A (Network Systems software provided as part of Network Access RUs).
				Labor		$ 17,630.81	Represents the labor costs associated with the establishment of New Sites. To include: development of design standards; core circuit order and installation; planning and engineering; installation of Network hardware and software (not including the hardware and software); provisioning and turn up of the New Site, and project management.
New Site Install - Type VI Fixed Component	Schedule 4.3 - Section 5.16	Install	Fixed Fee Per Unit		$ 3,356.91		
				Hardware		$ -	N/A (Network Hardware/systems provided as part of Network Access RUs).
				Software		$ -	N/A (Network Systems software provided as part of Network Access RUs).
				Labor		$ 3,356.91	Represents the labor costs associated with the establishment of New Sites. To include: development of design standards; core circuit order and installation; planning and engineering; installation of Network hardware and software (not including the hardware and software); provisioning and turn up of the New Site, and project management.
Interactive Voice Services - Small	Schedule 4.3 - Section 5.17	System	Fixed Monthly Fee Per Unit		$ 721.88		
				Hardware		$ 39.04	Represents the costs of acquiring IP PBX systems that provide Auto Attendant and ACD functions with Contact Management Services and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 5 year refresh cycles.
				Hardware Maintenance		$ 143.40	Represents break-fix services, primarily labor and parts.
				Software		$ 78.11	Represents the costs of software licenses upgrades/refresh and programming. Based on the Refresh Cycle of 5 years for voice based systems, the aggregated cost is apportioned over the baseline volume of IVS systems.
				Software Maintenance		$ 233.86	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 92.85	Represents labor costs for IMAR activities.
				Circuits		$ 134.61	Represents the cost for intersite bandwidth facilities and PSTN access.
Interactive Voice Services - Medium	Schedule 4.3 - Section 5.17	System	Fixed Monthly Fee Per Unit		$ 2,858.63		
				Hardware		$ 154.59	Represents the costs of acquiring IP PBX systems that provide Auto Attendant and ACD functions with Contact Management Services with Virtual Wall Boards, Automated Call Recording infrastructure and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 5 year refresh cycles.
				Hardware Maintenance		$ 567.87	Represents break-fix services, primarily labor and parts.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Software		$ 309.33	Represents the costs of software licenses such as Automatic Call Recording, Virtual Wall Boards and Agent Softphones, upgrades/refresh and programming. Based on the Refresh Cycle of 5 years for voice based systems, the aggregated cost is apportioned over the baseline volume of IVS systems.
				Software Maintenance		$ 926.09	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 367.68	Represents labor costs for IMAR activities.
				Circuits		$ 533.07	Represents the cost for intersite bandwidth facilities and PSTN access.
Interactive Voice Services - Large	Schedule 4.3 - Section 5.17	System	Fixed Monthly Fee Per Unit		$ 8,646.33		
				Hardware		$ 467.58	Represents the costs of acquiring IP PBX systems that provide Auto Attendant and ACD functions with Contact Management Services with Wall Boards, Integrated Voice Response (IVR), Computer-Telephony Interface (CTI), Short Message Service (SMS), Work Force Management (WFM) and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 5 year refresh cycles.
				Hardware Maintenance		$ 1,717.61	Represents break-fix services, primarily labor and parts.
				Software		$ 935.61	Represents the costs of software licenses including IVR, CTI, SMS and WFM, upgrades/refresh and programming. Based on the Refresh Cycle of 5 years for voice based systems, the aggregated cost is apportioned over the baseline volume of IVS systems.
				Software Maintenance		$ 2,801.09	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 1,112.10	Represents labor costs for IMAR activities.
				Circuits		$ 1,612.33	Represents the cost for intersite bandwidth facilities and PSTN access.
Interactive Voice Services - Support for County Retained	Schedule 4.3 - Section 5.17	System	Fixed Monthly Fee Per Unit		$ 638.68		
				Hardware		$ 44.41	Represents the costs of acquiring PBX trunking hardware and support the Refresh tasks. The component fee is comprised of the monthly depreciation of 5 year refresh cycles.
				Hardware Maintenance		$ 61.58	Represents break-fix services, labor and parts.
				Software		$ 1.18	Represents the costs of software licenses upgrades/refresh. Based on the Refresh Cycle of 5 years for voice based systems, the aggregated cost is apportioned over the baseline volume of County owned IVS systems.
				Software Maintenance		$ 31.97	Represents costs associated with the labor and resources for Level 2 support.
				IMAR's		$ 55.18	Represents labor costs for IMAR activities.
				Circuits		$ 444.36	Represents the cost for intersite bandwidth facilities and PSTN access.
FirstNet Mobility Services	Schedule 4.3 - Section 5.18	Device	Fixed Monthly Fee Per Unit		$ 33.06		
				Support Services		$ 2.16	Includes billing and admin support
				NASPO based carrier plan		$ 30.90	Represents the carrier costs with Taxes and Surcharges included
FirstNet Mobility Services - Tethered	Schedule 4.3 - Section 5.18	Device	Fixed Monthly Fee Per Unit		$ 38.43		
				Support Services		$ 2.16	Includes billing and admin support
				NASPO based carrier plan		$ 36.27	Represents the carrier costs with Taxes and Surcharges included
Mobility Services Hot Spot	Schedule 4.3 - Section 5.18	Device	Fixed monthly fee per unit		$ 26.85		
				Support Services		$ 2.16	Includes billing and admin support
				NASPO based carrier plan		$ 24.69	Represents the carrier costs with Taxes and Surcharges included
Citrix Account	Schedule 4.3 - Section 6	Account	Fixed Monthly Fee Per Unit		$ 20.68		
				Hardware		$ 8.05	Represents the costs of acquiring the asset and support for Refresh tasks. The component fee is the monthly lease payments for a leasing term of 4 years.
				Hardware Maintenance		$ 7.39	Represents break-fix services, primarily labor and parts, including reporting activities.
				Software Licenses		$ 1.55	Represents the cost of software license upgrades/refresh. Based on the Refresh Cycle of 4 years.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Software Maintenance		$ 3.69	Represents costs associated with the labor and resources for Software Maintenance support.
Virtual Guest Server - Cloud IaaS	Schedule 4.3 - Section 6	Server	Fixed Monthly Per Unit		$ 534.73		
				Hardware		$ -	N/A
				Operating System License		$ 37.43	Represents the cost of software license upgrades/refresh.
				Other Software License		$ 26.73	Represents an allocation of corporate tools charges.
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 470.56	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Guest Server - Cloud PaaS	Schedule 4.3 - Section 6	Server	Fixed Monthly Per Unit		$ 401.05		
				Hardware		$ -	N/A
				Operating System License		$ -	N/A
				Other Software License		$ 20.05	Represents an allocation of corporate tools charges.
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 381.00	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Clonetab Solution	Schedule 4.3 - Section 6	Month	Fixed Monthly Per Unit		$ 6,211.24		
				Hardware		$ 263.32	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 18.81	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Storage		$ 5,270.83	Represents the storage costs necessary to implement the solution
				Other Software License		$ 28.21	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 39.50	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 590.58	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
DIMSNET Solution	Schedule 4.3 - Section 6	Month	Fixed Monthly Fee Per Unit		$ 15,369.32		
				Hardware		$ 1,873.96	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 113.76	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Storage		$ 9,681.66	Represents the storage costs necessary to implement the solution
				Other Software License		$ 170.62	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 281.10	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 3,248.22	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
WildFire Scanning Service	Schedule 4.3 - Section 6	Month	Fixed Monthly Fee Per Unit		$ 6,658.80		
				Hardware		$ 510.81	Represents the hardware costs, installation and monthly cost for the duration of the service.
				Hardware Maintenance		$ -	
				Software License		$ 5,223.43	Represents the costs related to the third party software subscription services
				Platform support		$ 924.56	Represents costs associated with monitoring activities and responding to incidents.
NetBackup Solution	Schedule 4.3 - Section 6	Month	Fixed Monthly Fee Per Unit		$ 107,963.65		
				Hardware		$ 86,631.99	Represents the hardware, hardware maintenance and software subscription cost.
				Hardware Maintenance		$ -	
				Software License		$ -	Represents the costs related to the third party software subscription services
				Solution support		$ 21,331.66	Represents costs associated with labor activities to support the solution.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

Mainframe	Schedule 4.3 - Section 6.6	CPU Hour***	Fixed Monthly Fee Per Unit		$ 89.87		
				Hardware		$ -	N/A
				Operating System License		$ 18.87	Represents the cost of software license upgrades/refresh. The aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ -	N/A
				Hardware Maintenance		$ 3.59	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 67.40	Represents costs associated with operating system license maintenance and the labor and resources for Level 2 support.
AS/400	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 2,962.73		
				Hardware		$ -	N/A
				Operating System License		$ -	N/A
				Other Software License		$ -	N/A
				Hardware Maintenance		$ 1,659.13	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 1,303.60	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Copia Fax Line	Schedule 4.3 - Section 6.7	Fax Line	Fixed Monthly Fee Per Unit		$ 125.00		
				Hardware		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software License		$ -	N/A
				Software Maintenance		$ -	N/A
				Circuits		$ 125.00	Represents the cost for intersite bandwidth facilities and PSTN access.
Low Code Application Platform - OutSystems	Schedule 4.3 Section 6.7	User	Fixed Monthly Per Unit		$ 54.06		
				Hardware		$ 8.91	Represents the costs associated to the platform cloud hosting.
				Software License		$ 21.17	Represents the software licenses costs of the platform and users licenses.
				Software Maintenance		$ 11.16	Represents vendor support costs.
				Support Labor		$ 12.82	Represents costs associated with platform support.
Oracle Exadata Services - Eighth Rack	Schedule 4.3 - Section 6 .7	Server	Fixed Monthly Fee Per Unit		$ 10,380.95		
				Hardware		$ 4,159.43	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years. Exadata X6-2 Eighth Rack 2 x Exadata Server Nodes (22 cores, 512 GB memory each) 18 x Exadata Storage Nodes (43 TB useable - high redundancy) Bare Metal Install
				Hardware (Refresh Labor)		$ 499.19	Represents the labor to install and refresh hardware amortized over the estimated asset life. This cost does not include data migration and remediation labor.
				Support Labor		$ 706.67	Represents the labor costs to support the Oracle Exadata servers ,
				Software License		$ 1,200.00	Represents the software license costs to support the Oracle Exadata servers ,
				Hardware Maintenance		$ 2,495.66	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 1,320.00	Represents costs associated with various software maintenance costs.
Oracle Exadata Services - Backup and Recovery	Schedule 4.3 - Section 6.7	Used Terabyte	Fixed Monthly Fee Per Unit		$ 122.88		
				Hardware		$ 32.81	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Operating System License		$ 2.97	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 9.93	Represents the estimate of the Non-OS License Software.
				Hardware Maintenance		$ 10.81	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 66.36	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Oracle Exadata X8M - Production	Schedule 4.3 - Section 6 .7	Server	Fixed Monthly Fee Per Unit		$ 40,951.09		
				Hardware		$ 8,811.20	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years. - Exadata X8M -2 Quarter Rack - 2 x Exadata Server Nodes (48 cores, 1.5 TB memory each) - Each of the 3 High Capacity Storage Cells includes: - 36 x 14 TB disk drives, 1.5 TB of Persistent Memory - 504 TB of raw disk space - 150 TB of usable with High Redundancy ASM storage
				Hardware (Install/Refresh Labor)		$ 274.32	Represents the labor to install and refresh hardware amortized over the estimated asset life. This cost does not include data migration and remediation labor.
				Support Labor		$ 1,452.05	Represents the labor costs to support the Oracle Exadata servers.
				Software license		$ 10,962.28	Represents the software license costs to support the Oracle Exadata servers, including Oracle Active Data Guard and Advanced Security.
				Hardware Maintenance & Hosting		$ 7,262.54	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software maintenance		$ 12,188.70	Represents costs associated with various software maintenance costs, including Oracle Active Data Guard and Advanced Security.
Oracle Exadata X8M - Development / Test	Schedule 4.3 - Section 6 .7	Server	Fixed Monthly Fee Per Unit		$ 33,503.21		
				Hardware		$ 8,811.20	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years. - Exadata X8M -2 Quarter Rack - 2 x Exadata Server Nodes (48 cores, 1.5 TB memory each) - Each of the 3 High Capacity Storage Cells includes: - 36 x 14 TB disk drives, 1.5 TB of Persistent Memory - 504 TB of raw disk space - 150 TB of usable with High Redundancy ASM storage
				Hardware (Install/Refresh Labor)		$ 274.32	Represents the labor to install and refresh hardware amortized over the estimated asset life. This cost does not include data migration and remediation labor.
				Support Labor		$ 1,452.05	Represents the labor costs to support the Oracle Exadata servers.
				Software license		$ 7,435.62	Represents the software license costs to support the Oracle Exadata servers, including Advanced Security.
				Hardware Maintenance & Hosting		$ 7,262.54	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software maintenance		$ 8,267.48	Represents costs associated with various software maintenance costs, including Advanced Security.
Oracle Exadata X8M - Business Continuity	Schedule 4.3 - Section 6 .7	Server	Fixed Monthly Fee Per Unit		$ 41,268.64		

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Hardware		$ 9,082.07	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years. - Exadata X6-2 Quarter Rack - 2 x Exadata Server Nodes (48 cores, 1.5 TB memory each) - Each of the 3 High Capacity Storage Cells includes: - 36 x 14 TB disk drives, 1.5 TB of Persistent Memory - 504 TB of raw disk space - 150 TB of usable with High Redundancy ASM storage - Oracle Platinum Gateway Server
				Hardware (Refresh Labor)		$ 292.56	Represents the labor to install and refresh hardware amortized over the estimated asset life. This cost does not include data migration and remediation labor.
				Support Labor		$ 1,452.05	Represents the labor costs to support the Oracle Exadata environment.
				Software License		$ 10,962.28	Represents the software license costs to support the Oracle Exadata servers, including Oracle Active Data Guard and Advanced Security.
				Hardware Maintenance		$ 7,290.97	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 12,188.70	Represents costs associated with various software maintenance costs, including Oracle Active Data Guard and Advanced Security.
Physical Server UNIX - Large	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 4,537.06		
				Hardware		$ 1,860.20	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Hardware (Refresh Labor)		$ 68.06	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating system license		$ -	N/A
				Software license		$ 45.37	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 453.70	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software maintenance		$ 2,109.73	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server UNIX - Medium	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 2,692.34		
				Hardware		$ 1,238.48	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Hardware (Refresh Labor)		$ 53.85	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating System License		$ -	N/A
				Other Software License		$ 40.39	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 188.47	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 1,171.16	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server UNIX - Small	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 1,684.89		
				Hardware		$ 673.96	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Hardware (Refresh Labor)		$ 33.70	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating System License		$ -	N/A
				Other Software License		$ 33.70	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 269.58	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 673.95	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server UNIX - X-Large	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 5,238.56		
				Hardware		$ 2,147.81	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Hardware (Refresh Labor)		$ 78.58	Represents the labor to install and refresh hardware amortized over the estimated asset life.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Operating System License		$ -	N/A
				Other Software License		$ 52.39	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 523.85	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 2,435.93	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server Unix - X-Large - CWSD Dev/Test	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 4,628.27		
				Hardware		$ 1,897.59	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Hardware (Refresh Labor)		$ 69.42	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating System License		$ -	N/A
				Other Software License		$ 46.29	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 462.82	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 2,152.14	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server Wintel - Large	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 1,559.37		
				Hardware		$ 545.78	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 31.19	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating System License		$ -	N/A
				Other Software License		$ 46.78	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 81.87	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 853.76	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server Wintel - Medium	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 1,085.38		
				Hardware		$ 325.61	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 21.71	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating System License		$ -	N/A
				Other Software License		$ 32.56	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 48.84	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 656.65	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server Wintel - Small	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 874.58		
				Hardware		$ 244.88	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 17.49	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating System License		$ -	N/A
				Other Software License		$ 26.24	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 36.73	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software Maintenance		$ 549.23	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server Wintel - X-Large	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 1,823.60		
				Hardware		$ 796.83	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Hardware (Refresh Labor)		$ 31.19	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating system license		$ -	N/A
				Software license		$ 46.78	Represents an allocation of corporate tools charges and anti-virus costs to support servers.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Hardware Maintenance		$ 95.05	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software maintenance		$ 853.76	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Physical Server Wintel - X-Large - CWSD Dev/Test	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 1,732.42		
				Hardware		$ 756.98	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 29.63	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating system license		$ -	N/A
				Software license		$ 44.44	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 90.29	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software maintenance		$ 811.07	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Guest Server - Windows	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 572.95		
				Hardware		$ -	N/A
				Operating System License		$ 40.11	Represents the cost of software license upgrades/refresh. Based on the physical host refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 28.65	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 504.20	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Guest Server - Windows - CWSD Dev/Test	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 544.31		
				Hardware		$ -	N/A
				Operating System License		$ 38.10	Represents the cost of software license upgrades/refresh. Based on the physical host refresh cycle of 4 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 27.21	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 479.00	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Guest Server - Unix	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 1,203.20		
				Hardware		$ -	N/A
				Operating System License		$ 84.22	Represents the cost of software license upgrades/refresh. Based on the physical host refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 36.10	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 1,082.88	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Guest Server - Unix - CWSD Dev/Test	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 1,143.04		
				Hardware		$ -	N/A
				Operating System License		$ 80.02	Represents the cost of software license upgrades/refresh. Based on the physical host refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 34.29	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ -	N/A

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Software Maintenance		$ 1,028.73	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Guest Server - Linux	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 601.60		
				Hardware		$ -	N/A
				Operating System License		$ 42.11	Represents the cost of software license upgrades/refresh. Based on the physical host refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 30.08	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 529.41	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Guest Server - Linux - CWSD Dev/Test	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 571.52		
				Hardware		$ -	N/A
				Operating System License		$ 40.01	Represents the cost of software license upgrades/refresh. Based on the physical host refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 28.58	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 502.93	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Host Server - Windows / Linux	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 4,955.61		
				Hardware		$ 2,725.58	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 99.11	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating system license		$ -	N/A
				Software license		$ 148.67	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 463.14	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software maintenance		$ 1,519.10	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Virtual Host Server - Windows / Linux - CWSD Dev/Test	Schedule 4.3 - Section 6.7	Server	Fixed Monthly Fee Per Unit		$ 4,707.83		
				Hardware		$ 2,589.31	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ 94.15	Represents the labor to install and refresh hardware amortized over the estimated asset life.
				Operating system license		$ -	N/A
				Software license		$ 141.24	Represents an allocation of corporate tools charges and anti-virus costs to support servers.
				Hardware Maintenance		$ 439.98	Represents the cost of the Maintenance Agreement for hardware support and break-fix services.
				Software maintenance		$ 1,443.15	Represents costs associated with various software license and maintenance costs, along with the labor and resources for Level 2 support.
Acclaim Riverbed	Schedule 4.3 - Section 6.8	Server	Fixed Monthly Fee Per Unit		$ 1,905.36		
				Hardware		$ 854.43	Represents the hardware costs, architecture, installation and monthly lease payments for a leasing term of 4 years.
				Hardware (Refresh Labor)		$ -	n/a
				Operating System License		$ -	n/a
				Other Software License		$ -	n/a
				Hardware Maintenance		$ 720.93	Represents the third party costs to maintain the hardware.
				Support Labor		$ 330.00	Represents Contractor labor to install and break fix the hardware.
				Software Maintenance		$ -	n/a

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

Infrastructure Services	Schedule 4.3 -- Section 6.8	Month	Fixed Monthly Fee Per Unit		$ 335,063.58		
				Service Desk Services		$ -	N/A
				End User Services		$ 87,381.67	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Infrastructure Services in support of End User Services.
				Network Services		$ 170,804.16	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Infrastructure Services in support of Network Services.
				Data Center Services		$ 76,877.75	Represents the portion of Labor, Hardware, Software and Other Direct Costs to provide Infrastructure Services in support of Data Center Services.
				Application Maintenance & Operations Services		$ -	N/A
				Application Development Services		$ -	N/A
				Hardware			Represents the hardware cost of the Routers, Switches and circuit costs, Servers. Refresh has been included based on depreciation period shown on Exhibit 16.1-1.
				Software			Represents the software costs associated with Infrastructure hardware and Software to run the environment.
				Labor			Represents the Labor to support Infrastructure Services as defined in Section 2.8 of the Technical Proposal.
Development & Test Services	Schedule 4.3 - Section 6.9	Month	Fixed Monthly Fee Per Unit		$ 235,207.11		
				Service Desk Services		$ -	N/A
				End User Services		$ -	N/A
				Network Services		$ -	N/A
				Data Center Services		$ -	N/A
				Application Maintenance & Operations Services		$ 83,171.22	Represents the portion of Dev and Test services attributable to providing Application Maintenance & Operations Services.
				Application Development Services		$ 152,035.89	Represents the portion of Dev and Test services attributable to providing Application Development Services.
				Hardware			Represents the hardware cost of the Routers, Switches and circuit costs, Servers to support the Development and Test environment. Refresh has been included based on depreciation period shown on Exhibit 16.1-1.
				Software			Represents the software costs associated with Development and Test Services Software.
				Labor			Represents the Labor to support Development and Test Environment as defined in Section 2.8 of the Technical Proposal.
Virtual Fax	Schedule 4.3 - Section 6.10	Account	Fixed Monthly Fee Per Unit		$ 38.28		
				Hardware		$ -	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System License		$ -	Represents the cost of software license upgrades/refresh.
				Other Software License		$ 27.05	Represents the estimate of the Non-OS License Software.
				Hardware Maintenance		$ -	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 7.03	Represents costs associated with software maintenance along with the labor and resources for support by vendor and Contractor.
				IMAR		$ 4.20	Represents the labor costs for IMAR activities.
Attached Storage – AS/400	Schedule 4.3 -- Section 6.12	Used Gigabyte	Fixed Monthly Fee Per Unit		$ 0.70		
				Hardware		$ -	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System license		$ -	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ -	Represents the estimate of the Non-OS License Software

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Hardware maintenance		$ 0.185	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software maintenance		$ 0.510	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Attached Storage – Mainframe	Schedule 4.3 -- Section 6.12	Used Gigabyte	Fixed Monthly Fee Per Unit		$ 6.73		
				Hardware		$ -	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System license		$ -	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ -	Represents the estimate of the Non-OS License Software
				Hardware maintenance		$ 2.09	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software maintenance		$ 4.64	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Attached Storage - Unix	Schedule 4.3 - Section 6.12	Used Gigabyte	Fixed Monthly Fee Per Unit		$ 0.73		
				Hardware		$ 0.23	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System License		$ -	N/A
				Other Software License		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 0.50	Represents costs associated with storage management software, and the labor and resources for Level 2 support.
Attached Storage - WINTEL	Schedule 4.3 - Section 6.12	Used Gigabyte	Fixed Monthly Fee Per Unit		$ 0.52		
				Hardware		$ 0.19	Represents the hardware costs, installation and monthly lease payments for a leasing term of 4 years.
				Operating System License		$ -	N/A
				Other Software License		$ -	N/A
				Hardware Maintenance		$ -	N/A
				Software Maintenance		$ 0.33	Represents costs associated with storage management software, and the labor and resources for Level 2 support.
Storage - Archive Tier	Schedule 4.3 - Section 6.12	Used Gigabyte	Fixed Monthly Fee Per Unit		$ 0.20		
				Hardware		$ 0.11	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System License		$ 0.01	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 0.02	Represents the estimate of the Non-OS License Software in support of the DPC.
				Hardware Maintenance		$ 0.05	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 0.02	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Storage - Primary Tier	Schedule 4.3 - Section 6.12	Used Gigabyte	Fixed Monthly Fee Per Unit		$ 0.47		
				Hardware		$ 0.12	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System License		$ 0.01	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 0.04	Represents the estimate of the Non-OS License Software in support of the DPC.
				Hardware Maintenance		$ 0.04	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 0.26	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Storage - Secondary Tier	Schedule 4.3 - Section 6.12	Used Gigabyte	Fixed Monthly Fee Per Unit		$ 0.32		
				Hardware		$ 0.08	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Operating System License		$ 0.01	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 0.03	Represents the estimate of the Non-OS License Software in support of the DPC.
				Hardware Maintenance		$ 0.03	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 0.17	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Storage - Document Processing Center 1	Schedule 4.3 - Section 6.12	Unit	Fixed Monthly Fee Per Unit		$ 17,408.16		
				Hardware		$ 9,032.90	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years
				Operating System License		$ 1,733.08	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 974.86	Represents the estimate of the Non-OS License Software in support of the DPC.
				Hardware Maintenance		$ 3,617.03	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 2,050.29	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Storage - Document Processing Center 2	Schedule 4.3 - Section 6.12	Unit	Fixed Monthly Fee Per Unit		$ 10,319.40		
				Hardware		$ 5,354.62	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years
				Operating System License		$ 1,027.35	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 577.89	Represents the estimate of the Non-OS License Software in support of the DPC.
				Hardware Maintenance		$ 2,144.14	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 1,215.40	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Storage - Immutable Tier (1TB)	Schedule 4.3 - Section 6.12	1 Terabyte	Fixed Monthly Fee Per Unit		$ 355.57		
				Hardware		$ 177.43	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System License		$ 100.63	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ -	N/A
				Hardware Maintenance		$ 27.38	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 50.14	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
Storage - Immutable Tier (500GB)	Schedule 4.3 - Section 6.12	512 Gigabyte	Fixed Monthly Fee Per Unit		$ 177.79		
				Hardware		$ 88.54	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System License		$ 50.14	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ -	N/A
				Hardware Maintenance		$ 13.69	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 25.42	Represents costs associated with software maintenance along with the labor and resources for Level 2 support.
NetBackup Solution Amazon Web Services	Schedule 4.3 - Section 6.13	TB	Fixed Monthly		$ 86.31		
				Hardware		$ -	NA
				Hardware Maintenance		$ -	NA
				Software License		$ 53.82	Represents the costs related to the third party software subscription services

Exhibit 16.1-6a Resource Unit Price Decomposition Option Term

				Solution Support		$ 32.49	Represents costs associated with labor activities to support the solution.
Enterprise Application Access	Schedule 4.3 - Section 2.6	Month	Fixed Monthly Fee Per Unit		$ 78,203.57		
				Hardware		$ -	Represents the hardware costs, installation and monthly lease payments for a leasing term of 5 years.
				Operating System License		$ -	Represents the cost of software license upgrades/refresh. Based on the refresh cycle of 5 years, the aggregated cost is apportioned over the assumed baseline volumes.
				Other Software License		$ 56,218.59	Represents the estimate of the Non-OS License Software.
				Hardware Maintenance		$ -	Represents the cost of the Maintenance Agreement for hardware support and break-fix services, for the hardware noted above.
				Software Maintenance		$ 21,984.98	Represents costs associated with software maintenance along with the labor and resources for support by vendor and Contractor.
Optional Item Catalog (OIC) - Software Addition	Exhibit 16.1 - Section 10.2	Add	Fixed Fee Per Unit		$ 2,450.00		
				Hardware		$ 221.32	Represents the lab workstations used to test MSI packing.
				Operating System License		$ -	
				Other Software License		$ 48.28	Represents desktop software packaging and installation kit software.
				Hardware Maintenance		$ -	
				Software Maintenance		$ 2,180.40	Represents the labor costs for adding software to the catalog of available software.
Optional Item Catalog (OIC) - Update	Exhibit 16.1 - Section 10.2	Update	Fixed Fee Per Unit		$ 1,470.00		
				Hardware		$ 118.19	Represents the lab workstations used to test MSI packing.
				Operating System License		$ -	
				Other Software License		$ 27.46	Represents desktop software packaging and installation kit software.
				Hardware Maintenance		$ -	
				Software Maintenance		$ 1,324.35	Represents the labor costs for updating software to the catalog of available software.

*Schedule 4.3 Reference includes the Section reference for the specific requirements for this particular Resource Unit but it still includes all general requirements applicable to such Resource Unit in the higher levels of the obligations hierarchy as described in Schedule 4.3. For example, the Resource Unit for Desktop - Standard Workstation includes not only the responsibilities as stated in Section 4.5 of the End-User Services Section of Schedule 4.3, but also the responsibilities in Sections 4.1 through 4.3 of the End-User Services Section, as well as the responsibilities and requirements in Section 1 of Schedule 4.3.

**The mainframe RU unit volumes are based on the R24 CPUs

***With the exception of 2.3.1.4 and 2.3.1.5 and their respective requirements

Exhibit 16.1-7 – ELA Pricing Adjustments

1. OVERVIEW

County licenses various software and services from Microsoft Corporation through an Enterprise Agreement ("MSEA"), including but not limited to, Microsoft Office. Contractor, as County's IT outsourcing provider, uses the license to provide Microsoft Office and other software services to County. Contractor is obligated to pay for a portion of the MSEA as part of its right to use the MSEA to provide services to the County and receives remuneration for that cost through various resource units. The MSEA also entitles County, and Contractor as County's outsourcer, to use Microsoft OneDrive and Microsoft 365. The MSEA provides that Microsoft OneDrive and Microsoft 365 are provided at no additional charge. Microsoft OneDrive is provided with no limitation on the amount of storage available to County. County and Contractor anticipate moving a portion of the County storage and Microsoft Office services to Microsoft OneDrive and Microsoft 365 during the Term. County and Contractor acknowledge that Microsoft may, at some point, change the terms of the MSEA to add a charge for Microsoft OneDrive and Microsoft 365, or to limit the storage provided at no charge for Microsoft OneDrive. Similarly, County and Contractor acknowledge that Contractor has provided County with a fixed-price resource unit fee during the Term that includes a projected pricing increase in the MSEA. Based upon the foregoing, County and Contractor agree that, at the beginning of Contract Year 5, County and Contractor will jointly review the cost of the MSEA for the portion of the MSEA Contractor uses to provide the Services to County. If, at that time, Microsoft has added a fee for Microsoft OneDrive or Microsoft 365 or both, or added a charge to meet the County's requirements for OneDrive storage, then based on the new MSEA fees paid for by Contractor (i.e., "Revised Price"), County and Contractor shall adjust the Exhibit 16.1-1 resource units identified in bundle B1 as follows:

1.1 If the Revised Price exceeds the Office 365 Plan "G3" subscription per user per year price of $142.80 plus the Enterprise CAL Office 365 Bridge CAL per user per year price of $24.55 ("Base Price"), Contractor shall be entitled to increase the Exhibit 16.1-1 resource units identified in bundle B1 in an amount equal to the difference between the Base Price and the Revised Price.

1.2 If the Revised Price is less than the Base Price, Contractor shall reduce the Exhibit 16.1-1 resource units identified in bundle B1 in an amount equal to the difference between the Base Price and the Revised Price.

END OF EXHIBIT

Schedule 16.7 — Benchmarking Methodology

Table of Contents

1. Benchmarking Company 3
2. Definition of Benchmark 3
3. Benchmarking Costs 4
4. Benchmarking Procedures 4
5. General Agreement of Cooperation 5
6. Benchmarking Metrics 5
7. Peer Comparison and Benchmark Performance Requirements 6

1. BENCHMARKING COMPANY

The benchmarking program will be conducted by an independent industry-recognized benchmarking service ("Benchmarking Company") designated by County and the parties will jointly validate the proposed firm's capabilities and fit with the requirements of this Schedule 16.7 Contractor shall not unreasonably withhold approval of the proposed firm. The following firms shall be pre-approved as candidates to carry out the benchmarking program: PricewaterhouseCoopers, LLP, Alsbridge, Inc., and any other Benchmarking Company agreed to in writing by the CIO and Account Executive. The Benchmarking Company shall: (i) be independent, (ii) have demonstrable experience in performing information technology benchmarks ("Benchmark"), and (iii) agree to maintain the confidentiality of all data. Neither Party shall unreasonably delay the signing of such an agreement.

2. DEFINITION OF BENCHMARK

With County's direction, and as a part of the Services, the Benchmarking Company shall conduct a benchmarking program that shall enable County to compare the Fees and Service Levels (SLs) set forth in this Agreement with, and to ensure that said Fees and SLs are among, the industry's competitive rates and SLs for such Services, Frameworks or Framework Components.

The Benchmarking Company will "normalize" all data to obtain relevant comparisons for purposes of the Benchmark. Factors related to general normalization to be taken into consideration by the Benchmarking Company may include, but shall not be limited to: (i) geographic location of the peer companies; (ii) industry differences affecting information technology costs; (iii) economies of scale; (iv) workload and complexity factors (including operating environment).

In addition, factors related to normalization for outsourced services may include, but shall not be limited to: (i) the SLs offered; (ii) duration and nature of the contractual commitment; (iii) volume of services being provided; (iv) contractual terms, conditions and allocation of risk; (v) amount of investment made by Contractor in the customer's equipment and personnel; (vi) appropriate overhead; and (vii) provisions to ensure the unique factors of each deal are taken into account by the Benchmarking Company and appropriate adjustments will be made for out-of-scope deliverables, however method of delivery is not a unique factor unless Contractor is contractually obligated to County for a unique delivery requirement.

3. BENCHMARKING COSTS

The Parties will (i) share equally the costs and expenses of conducting the Benchmarking and (ii) jointly enter into a written agreement with the Benchmarking Company.

4. BENCHMARKING PROCEDURES

County may request a benchmark for (i) Services, (ii) Frameworks, (iii) a part of any individual Framework to be comprised of at least thirty percent (30%) of the number of Framework Components (two-thirds of which will be selected by County one-third of which will be selected by Contractor) comprising any Framework, or (iv) Service Level at any time after the first year of the Term, provided that a benchmark cannot be undertaken more than one time in any 12-month period. Upon designation of the benchmark timing, a non-retroactive date will be set by both parties that any necessary pricing changes will be in effect; provided that such date shall not be later than 60 days after the start of the benchmarking process, unless otherwise agreed by the parties. In addition, the Parties shall meet with the Benchmarking Company for the purpose of agreeing upon a detailed plan (including time deadlines for provision of data by Contractor) for implementing the Benchmark.

Contractor agrees that should it fail to provide data or otherwise comply in a timely manner in accordance with the agreed plan, Contractor shall have a grace period of fourteen (14) days in which to provide such data or compliance, after which County's monthly invoice from Contractor for Services shall be reduced by 1%, of the average of the previous 12 monthly invoices, for each day of such failure by Contractor. If the failure exceeds 90 days, such failure shall be deemed an Event of Default at the County's sole discretion, and County may terminate the Agreement or relevant Framework(s).

Within fifteen (15) days of the Benchmark Notice Date County and Contractor will meet to jointly review the Benchmark results. If the report of the Benchmarking Company concludes that the then-current Contractor's aggregate Fees for an IT Framework(s) or selected part of any individual Framework selected by County is greater than 110% of the Benchmarking Company's market-based aggregate fees for such Framework(s) or selected part of any individual Framework selected by County, then either: Option 1 (i) Within 30 days after the Benchmarking Company provides its report to the Parties, Contractor shall notify County in writing if Contractor has elected to accept the determination of the Benchmarking Company, and, if Contractor so elects to accept such determination, Contractor shall promptly reduce the applicable Fees to not more than 105% of such market-based aggregate fees; or Option 2 (ii) If benchmarking (a) discloses material variations between Contractor's charges and/or quality standards, and prevailing market standards, within 30 days after the Benchmarking Company provides its report to

the Parties, Contractor shall notify County in writing if Contractor intends to dispute the determination of the Benchmarking Company, (b) Contractor shall promptly reduce the applicable Fees to not more than 105% of such market-based aggregate, and (c) the parties shall engage in good-faith negotiations to determine an appropriate rate, and (d) if the parties are unable to negotiate an appropriate rate, Contractor may utilize the Dispute Resolution process set forth in Section 23 of the Agreement to dispute the benchmarking process and/or benchmarking results.

In addition, if any SLs are lower than the applicable service levels contained in the Benchmark results, with respect to the corresponding Fees, then at County's option, Contractor shall either increase the SLs to match the applicable service levels contained in the Benchmark results, or reduce its Fees proportionately as set forth above to adjust for the difference between the SLs and the applicable service levels contained in the Benchmark results.

5. GENERAL AGREEMENT OF COOPERATION

The Parties acknowledge that the Benchmark definition and procedure described in this Schedule will require further definition and clarification as the Parties begin actual implementation of the Benchmark. The Parties shall cooperate with the utmost good faith to reach reasonable and timely agreements on such further definition and clarification. To the extent that the Benchmarking Company reasonably establishes that certain definitions, procedures and methodologies are widely used in information technology benchmarking, the Parties agree to generally rely on the Benchmarking Company's definitions, procedures and methodologies for guidance in reaching agreement. Furthermore, the Parties acknowledge that in reaching the final results of the Benchmark, the Benchmarking Company will be required to exercise its professional judgment and discretion in certain matters and, assuming such judgments are within established industry practices for information technology benchmarking, the Parties will defer to the conclusions of the Benchmarking Company.

Contractor acknowledges that County views the Benchmark procedure described in this Schedule as a critical inducement to County's agreement to many of the terms of this Agreement, including the Term and termination rights provided for in the Agreement, and therefore Contractor agrees that it will cooperate in good faith to accomplish the objectives of the Benchmark procedure for the benefit of County.

6. BENCHMARKING METRICS

Prior to the commencement of all benchmarking studies, County and Contractor will agree on the specific Services, Frameworks or Framework Components (metrics) to be included within the scope of the study. Also, Contractor will be apprised of the metrics sufficiently in advance of the benchmarking study to establish administrative

processes to capture the necessary metric data. The exact metrics to be included in the benchmark study will be contingent upon: (1) the detail in which the Benchmark Company maintains cost and pricing data within its database; and, (2) Contractor's ability to capture pricing information at the desired level of detail.

7. PEER COMPARISON AND BENCHMARK PERFORMANCE REQUIREMENTS

The Contractor must perform to a level as depicted in the outcome of the Benchmark. The level is the average price point of the peer group.

END OF SCHEDULE

Schedule 16.8 — Fee Reductions

Table of Contents

1. Critical Milestones....3
1.1. Creation and Funding of Critical Milestone Fund....3
1.2. Critical Milestone Process....3
2. Fee Reductions For Service Levels....4
2.1. Service Levels....4
2.2. Calculating Fee Reductions....4
2.3. Several Failures....4
2.4. Cap....5
2.5. Credit of Fee Reductions....5
2.6. Multiple SL Failures....5
2.7. Potential for Earnback....5
2.8. Earnback of SL Related Fee Reductions....6
2.9. Changes to Weighting Factors....8
2.10. Low Volume Condition....8

1. CRITICAL MILESTONES

1.1. Creation and Funding of Critical Milestone Fund

Commencing on the Effective Date, each month during the Term and any period of Disentanglement, the Contractor may only invoice the County ninety percent (90%) of the Monthly Services Charges otherwise payable. The portion of such Monthly Services Charges not invoiced for each six-month period following the Effective Date is referred to herein as the "Six-Month Milestone Fund" and shall be used for the Critical Milestones described in Section 1.2. Fee Reductions for Failure to meet Transition Critical Milestones are not subject to this Section 1.

1.2. Critical Milestone Process

The County in its sole discretion may designate (in accordance with Section 4.12 of the Agreement) one or more milestones as "Critical Milestones," each of which shall consist of certain Services that the County reasonably deems important for Contractor to perform within a six-month period. The County will designate these milestones no later than May 15th each Contract Year for a performance period from July 1 through December 31st, and November 15th of each Contract Year for a performance period from January 1 through June 30th. The County will assign a certain percentage of the Milestone Account to each such Critical Milestone. If the total percentages of the assignments do not total one hundred (100%) of the Six-Month Milestone Fund for a particular period, the County will release the unassigned portions to the Contractor upon Contractor's submission of a proper invoice to County.

Critical Milestones serve as a quality assurance function for the County. The purpose of Critical Milestones is to provide a means to incentivize Contractor performance on Services that are already being performed, or are already committed, for the upcoming 6-month period, including operational services and/or projects. Critical Milestones will not require performance at Service Levels above and beyond what is currently in the Agreement, and will not require performance beyond what is already covered by the Fees, including Resource Units. The County anticipates that Critical Milestones in the initial Contract Years will be focused on Transformation Services; and in the latter Contract Years of the Agreement, on preparation for Transition Services. Prior to establishing any Critical Milestones, the County agrees to discuss with Contractor any potential Critical Milestones and related questions. This obligation does not in any way limit the County's ability to establish Critical Milestones in its sole discretion.

2. FEE REDUCTIONS FOR SERVICE LEVELS

This section describes the methodologies associated with measurement of and reporting on the results achieved in respect to the Service Levels (SL).

2.1. Service Levels

Each SL set forth in this document identifies key performance measures that will be used to evaluate Contractor's delivery of the requested Services. The objective of SLs is to monitor and measure the Contractor's performance on the County's most-important business requirements and; continuous improvement in the Contractor's provision of the Service. New SLs may be added to reflect changing or new business requirements. SLs may be reviewed no less than annually, where appropriate, to adjust the SLs to reflect such continuous improvement in Contractor's provision of the Service. In no event, unless mutually agreed, will the Service Levels or the Fee Reductions set forth herein be reduced below the levels at which they are set on the Effective Date.

2.2. Calculating Fee Reductions

For each Failure relating to a SL, Contractor shall pay or credit to the County a Fee Reduction that will be computed by multiplying (a) Weighting Factor for such SL by (b) SL At Risk Amount. For example, assume for purposes of illustration only, that Contractor has a Failure with respect to a SL with a Weighting Factor of 8% and that the Monthly Service Fees equal $100,000 and the SL At Risk Amount is 10%. The Fee Reduction due to the County for such Failure would be: 8% * (10% * $100,000) = $800.

The "SL At Risk Amount" for any month during the Term is ten percent (10%) of the Monthly Service Fees excluding any fees for Transition as set forth in Schedule 16.1.

The "SL At Risk Pool" is two hundred percent (200%) and is the total percentage points that is be allocated across SLs.

The "Weighting Factor" for any particular SL is the portion of the SL At Risk Pool used to calculate the Fee Reduction payable to the County in the event of a Failure with respect to that SL.

2.3. Several Failures

If more than one Failure with respect to SLs has occurred in a single month, the sum of the corresponding Fee Reductions shall be credited or paid to the County.

2.4. Cap

In no event shall the aggregate amount of Fee Reductions credited or paid to the County with respect to all Failures with respect to SLs occurring in a single month exceed the SL At Risk Amount.

2.5. Credit of Fee Reductions

Contractor shall itemize the total amount of Fee Reductions it is obligated to pay or credit to the County with respect to SL Failures occurring in a given month on the invoice that contains charges for such month. Contractor shall credit the total amount of such Fee Reductions related to a given month on the invoice that contains charges for such month. Upon termination or expiration of the Term, Contractor shall pay to the County the amount of any Fee Reductions not so credited to the County's account or any unused portion of such Fee Reductions.

2.6. Multiple SL Failures

If a Failure with respect to a given SL recurs in consecutive Measurement Periods, the amount of the applicable Fee Reduction payable to the County shall be multiplied by the following factors for subsequent Measurement Periods: (i) SL Failure in two consecutive Measurement Periods, then 1.5 times the amount of the Fee Reduction as originally calculated; and (ii) SL Failure in three or more consecutive Measurement Periods, then twice the amount of the Fee Reduction as originally calculated. The Fee Reduction for any given SL shall only be increased as described above, and such increase shall be payable for all successive consecutive Failures with respect to such SL.

2.7. Potential for Earnback

Following any Failure to meet certain SLs, the Contractor will have an opportunity in future periods of performance of such SL to earn back portions of Fee Reductions provided to the County as a result of such Failure(s) in accordance with the procedures set forth below. During Transition, the County and Contractor shall collaborate in good faith to assign earn back performance levels ("Earn Back Performance Levels") for certain SLs that the County identifies as desirable to receive improvements in performance above and beyond the minimum acceptable level, and to establish for each such SL a number of months that such Earn Back Performance Levels must be met immediately following such Failure to earn back a percentage of a Fee Reduction assessed for such Failure, which percentage shall also be mutually agreed to by the Parties. In the event the County and Contractor are unable to reach written agreement by a date not later than thirty (30) days before the Cutover of each of the Service Frameworks on (i) the SLs for that Service Framework that will be subject to Earn Back Performance Levels, (ii) the actual establishment of such Earn Back Performance Levels, or (iii) the percentage of the

previously assessed Fee Reduction that can be earned back for each such SL, then such implementing details may be established by the County in writing. The Parties acknowledge and agree that not all SLs shall be subject to earn back.

2.8. Earnback of SL Related Fee Reductions

Contractor may earn back a portion of a SL-related Fee Reduction for overachievement of a previously failed SL in the following and successive months. Contractor's earnback of SL-related Fee Reductions shall be subject to the following conditions:

2.8.1. During the time until the Transaction Response Time SL has been implemented, Contractor's SL-related Fee Reduction earn back amount shall be no greater than fifty percent (50%) of the applicable SL-related Fee Reduction.

2.8.2. With the implementation of the Transaction Response Time SL, Contractor's SL-related Fee Reduction earn back amount shall be no greater than seventy five percent (75%) of the applicable SL-related Fee Reduction. Should the County determine not to implement the Transaction Response Time SL, starting the month following that determination, the earn back shall increase from the 50% level to the 75% level.

2.8.3. Earn back will apply on a SL-by-SL basis. Fee Reductions for an earlier failed SL cannot be earned back by overachievement on a different SL.

2.8.4. Contractor shall earn back the allowed portion of a SL-related Fee Reduction by achieving in the immediately successive month(s), a higher SL level than the SL level required for that SL in the Agreement. At the 75% earn back level upon successful completion of the heightened SL requirement as set forth below, Contractor will earn back twenty-five percent (25%) of the appropriate SL-related Fee Reduction for each month within a three month window that Contractor achieves the overachievement threshold for the SL. At the 50% earn back level upon successful completion of the heightened SL requirement as set forth below, Contractor will earn back twenty-five percent (25%) of the appropriate SL-related Fee Reduction for each month within a two month window that Contractor achieves the overachievement threshold for the SL. Contractor may earn back no greater than seventy-five percent (75%) of the applicable SL-related Fee Reduction.

2.8.5. If a month, or months, occurs during the earn back period after a SL failure in which there is no data to calculate SL performance, for the previously failed SL, due to lack of data, then the earn back window for the over-achievement earn back will be extended by the number of months without a SL calculation (i.e., provided that there are no subsequent SL failures, for the SL in question, during the period).

2.8.6. The SL level required for earn back shall be the midpoint between the then-applicable SL level and one hundred percent (100%), or zero percent (0%) for those SLs where the lowest percentage would define perfection. For purposes of clarity and as an example, if Contractor fails to achieve a SL for which the minimum SL level is ninety percent (90%), then to earn back a Fee Reduction for that SL, Contractor's earn back SL level would be ninety-five percent (95%).

2.8.7. Contractor may only earn back SL-related Fee Reductions for applicable SLs within the earn back period following a SL Fee Reduction. For purposes of clarity and as an example, at the 75% earn back level if Contractor incurs a SL-related Fee Reduction in October, Contractor may earn back 25% for each month during the period November, December, and January for which the applicable over achievement SL level was achieved. Each of the three months is considered an independent event. If there is no data to calculate an SL for December, the time period would be extended to February. If Contractor fails to achieve the heightened SL in any month during the earn back period, then Contractor would not receive the 25% earn back for the months in which the heightened performance was not achieved. Therefore, continuing with the foregoing example, if Contractor achieves the heightened SL level in November but fails to achieve the heightened SL level in December, Contractor would receive twenty-five percent (25%) of the SL-related Fee Reduction for the November SL achievement, but would not receive the twenty-five percent (25%) available for December. However, if the Contractor achieved the heightened earn back again in January, the 25% earnback would apply. The Contactor would have realized 50% of the related Fee Reduction over the three-month period in the above example. The Contractor may earn 25% of the related Fee Reduction for each of the next three months after a SL failure for all months the Contractor meets or exceeds the over achievement threshold up to a total of 75% of the related Fee Reduction . If the base SL threshold is missed again during the earn back period, then the earn back period for the base SL is terminated, and the cycle of earnbacks starts again in the next month.

2.8.8. Contractor's earn back of SL-related Fee Reductions is conditioned upon Contractor providing to County timely and auditable data supporting Contractor's achievement of the heightened SL level.

2.9. Changes to Weighting Factors

No more than once every three (3) months during the Term, the County may make changes to the Weighting Factor for any SL by sending written notice (which notice may contain changes to multiple SLs) to Contractor at least thirty (30) days prior to the date that such new percentages are to be effective. With respect to the addition of SLs the County shall modify the Weighting Factors for the SLs such that the sum of the Weighting Factors for all SLs does not exceed the SL At Risk Pool.

2.10. Low Volume Condition

2.10.1. Single Failure Results in Measurement Failing

A low volume condition exists where a single failure of an event-based measurement results in the measurement failing. The intent is to address the inadvertent creation of a perfection measurement when perfection is not the committed target.

For those SLs where there is insufficient volume in one Measurement Period such that a single Performance Target miss would cause SL Failure, that volume will be carried forward and accumulated for the next Measurement Period(s) volume on a rolling basis for that SL, until sufficient volume exists to allow for at least a single Performance Target miss without triggering SL Failure. Once that volume is reached, the SL is measured based on the accumulated volume and reported in the Measurement Period in which sufficient volume was reached. As assurance that low volume does not sacrifice SL performance, more than one failed Performance Target miss in the same Measurement Period, or in multiple Periods before the sufficient volume is reached, triggers SL Failure.

Example 1: Seven (7) out of the eight (8) incidents resolved in January resulted in an SL performance of 87.5% (7 ÷ 8) against a target of 90%. However, since the single missed incident would cause the SL Failure, the volume rolls to February and there is no Fee Reduction in January. The two (2) incidents resolved in February met the target. The accumulated volume for February is 10 (8 from January + 2 from February) which is sufficient volume to allow for a single missed incident without triggering SL Failure (9 ÷ 10 = 90%). The SL performance for February is 90% (9 ÷ 10), which meets the target. The accumulated volume resets for March.

Example 2: Six (6) out of the eight (8) incidents resolved in January resulted in a SL performance of 75% (6 ÷ 8) against a target of 90%. Since there are two failed incidents prior to reaching sufficient volume, SL Failure applies in January and Fee Reduction is applied. The accumulated volume is reset for February.

Example 3: Seven (7) out of the eight (8) incidents resolved in January resulted in an SL performance of 87.5% (7 ÷ 8) against a target of 90%. However, since a single missed incident would cause the SL Failure, the volume rolls to February and there is no Fee Reduction in January. The one (1) incident resolved February did not meet the target. The accumulated volume for February is 9 (8 from January + 1 February), which is still insufficient volume to allow for a single missed incident without triggering SL Failure (8 ÷ 9 = 89%). However, since there are two failed incidents prior to reaching sufficient volume, SL Failure applies in February and a Fee Reduction is applied. The accumulated volume resets for March.

2.10.2. Volume Insufficient to Meet Threshold to Measure SL Performance

A low volume condition exists where the volume doesn't meet the defined threshold to calculate SL performance. The intent is to address the inadvertent creation of an unmeasurable SL due to low volume.

For those SLs where there is insufficient volume in one Measurement Period such that the SL performance cannot be calculated, that volume will be carried forward and accumulated for the next Measurement Period(s) volume on a rolling basis for that SL, until sufficient volume exists to allow for calculation. Once that volume is reached, SL performance is measured based on the accumulated volume and reported in the Measurement Period in which sufficient volume was reached.

Example 1: 200 customer satisfaction survey responses were returned in January, which is less than the defined threshold is 378 for calculation of SL performance. The January volume rolls to February and there is no Fee Reduction. 200 customer satisfaction survey responses were returned in February for an accumulated total of 400 (200 from January + 200 from February), which is sufficient to calculate SL performance. The SL performance for February is 90% (360 survey responses with rating of 3 or 4 ÷ 400 survey responses), which meets the target. The accumulated volume is reset the subsequent month.

Example 2: 200 customer satisfaction survey responses were returned in January, which is less than the defined threshold is 378 for calculation of SL performance. The January volume rolls to February and there is no Fee Reduction. 200 customer satisfaction survey responses were returned in February for an accumulated total of 400 (200 from January + 200 from February), which is sufficient to calculate SL performance The SL performance for February is 80% (320 survey responses with rating of 3 or 4 ÷ 400 survey responses), which fails to meet the target of 90%. SL Failure applies in February and a Fee Reduction is applied. The accumulated volume is reset the subsequent month.

2.10.3. With regard to Multiple SL Failures, only those Measurement Periods in which sufficient volumes are reached will be considered as Consecutive Month(s). For example, if previous month resulted in SL Failure the current month results in a roll over due to low volume, and then the next month results in SL Failure, the next month is considered the Consecutive Month for Multiple SL Failures.

2.10.4. With regard to Earnback of SL Related Fee Reduction, the earn back window for the over-achievement earn back will be extended by the number of months without an SL calculation due to low volume.

END OF SCHEDULE

Schedule 18.2 — Third-Party Contracts

Table of Contents

1. Overview 3

2. List of Third-Party Contracts.....5

1. OVERVIEW

This Schedule 18.2 lists Third-Party contracts into which Contractor enters or of which Contractor accepts assignment and that are subject to the limitation of liability set forth in Section 18.2(e) of the Agreement. This list may be updated from time-to-time by written agreement of County and Contractor, which must be signed by the County CIO and the Contractor's Account Executive. For purposes of clarity, any Third-Party contract not listed on this Schedule 18.2 shall be subject to the terms of the Agreement, including Section 18.2 and shall not be subject to the limitation of liability table set forth in Section 18.2(e).

Only those agreements between Contractor and Third-Parties satisfying one of the following requirements may be added to this Schedule 18.2.

1. Agreements entered into by the County and assigned to Contractor and for which Contractor does not receive remuneration from the County through a resource unit set forth in Schedule 16.1, except that payment of the Third Party Negotiation – Large or Third Party Negotiation – Small Resource Unit shall not independently prevent the inclusion of the Third-Party Contract in this Schedule 18.2.

2. Agreements entered into by Contractor at County's direction, that are not part of a master agreement maintained by Contractor, and for which Contractor does not receive remuneration from the County through a resource unit set forth in Schedule 16.1, except that payment of the Third Party Negotiation - Large or Third Party Negotiation – Small Resource Unit shall not independently prevent the inclusion of the Third-Party Contract in this Schedule 18.2.

The following examples are illustrative of the foregoing:

Example 1 – County Assigned Contract

County enters into an agreement for automobile parts tracking and inventory software for its auto mechanics. That software is loaded into the Contractor data center and the license is assigned by County to Contractor. That license would be added to this Schedule 18.2 and would be subject to the liability limitations set forth in Section 18.2(e).

Example 2 – Contractor Acquired Contract

County requests that Contractor obtain specific software for County for automobile parts tracking and inventory for County's auto mechanics. Contractor obtains that software and loads it into Contractor's data

center. That license would be added to this Schedule 18.2 and would be subject to the liability limitations set forth in Section 18.2(e).

Example 3 – Contractor Acquired Contract

Contractor purchases additional Hardware or Software to support Third-Party Software assigned by County or Third-Party Software acquired by Contractor at County direction (e.g. additional servers or OS licenses). The additional Hardware and Software contracts would not be added to this Schedule 18.2 and would be subject to the general liability provisions of Section 18.2.

Example 4 – Contractor Acquired Contract

Contractor contracts for additional Help Desk Services to comply with the Help Desk requirements of Schedule 4.3. That contract would not be added to this Schedule 18.2 and would be subject to the general liability provisions of Section 18.2.

Example 5 – Contractor Acquired Contract

County requests a new service – virtualized desktops – which require a new resource unit. Contractor obtains Contractor selected and County approved Hardware, Software and other Services required to provide that service. Those contracts would not be added to this Schedule 18.2 and would be subject to the general liability provisions of Section 18.2.

Example 6 – Contractor Acquired Contracts

Contractor contracts for application development services using the application development procedures in Schedule 4.3 or through the application development process set for the Section 7.3 of Appendix 4.3 – Application Development Services. That contract would not be added to this Schedule 4.3 and would be subject to the general liability provisions of Section 18.2.

Example 7 – Enterprise Agreements

County obtains a license from Microsoft for the use of Microsoft products. That license provides that Contractor may use the Microsoft products on Contractor's Hardware and to provide Services to County. That license would not be added to Schedule 18.2 and would be subject to the general liability provisions of Section 18.2.

2. LIST OF THIRD-PARTY CONTRACTS

The list of Third-Party Contracts is published as Schedule 5 Report 167 - Third-Party Contracts for Schedule 18.2.

END OF SCHEDULE

Schedule 19 — Insurance

Table of Contents

1. Insurance 3

1.1. Minimum Scope of Insurance 3

1.2. Minimum Limits of Insurance 3

1.3. Other Insurance Provisions 5

1.4. General Insurance Provisions 5

1. INSURANCE

Without limiting Contractor's indemnification obligations to County, Contractor shall provide at its sole expense and maintain for the duration of this Agreement, or as may be further required herein, insurance against claims for injuries to persons or damages to property which may arise from or in connection with the performance of the Services or Work hereunder and the results of the Services or Work by the Contractor, his agents, representatives, employees or Subcontractors.

1.1. Minimum Scope of Insurance

Coverage shall be at least as broad as:

1.1.1. Commercial General Liability, Occurrence form, Insurance Services Office form CG0001.

1.1.2. Automobile Liability covering all owned, non-owned, hired auto Insurance Services Office form CA0001.

1.1.3. Workers' Compensation, as required by State of California and Employer's Liability Insurance.

1.1.4. Technology Errors and Omissions Liability (including Cyber Security Liability)

1.1.5. Fidelity coverage providing Employee Dishonesty, Forgery or Alteration, Theft, Disappearance, Destruction and Computer Fraud coverage covering all Contractor's employees.

1.1.6. Property Insurance.

1.2. Minimum Limits of Insurance

Contractor shall maintain the following limits:

1.2.1. Commercial General Liability including Premises, Operations, Products and Completed Operations, Contractual Liability, and Independent Contractors Liability: $5,000,000 per occurrence for bodily injury, personal injury and property damage. The Project Specific Aggregate limit shall be $10,000,000.

1.2.2. Automobile Liability: $1,000,000 each accident for bodily injury and property damage.

1.2.3. Workers' Compensation as required by any applicable law or regulation having jurisdiction over Contractor's employees. Employer's Liability: $1,000,000 each accident for bodily injury or disease. Coverage shall include a waiver of subrogation endorsement in favor of County of San Diego.

1.2.4. Technology Errors and Omissions Liability (including Cyber Security Liability): $10,000,000 per claim with an aggregate limit of not less than $20,000,000. The County may request annually that Contractor confirm if any self-retained limit is greater than $500,000 and if it is greater, shall disclose that amount to the County. The coverage will not contain specific, express exclusions for design errors, destruction of data or failure to designing an adequate system arising out of Contractor's wrongful acts in the rendering of, or failure to render, professional technical services to the County. This coverage shall be maintained for a minimum of two years following termination or completion of Contractor's Services pursuant to the Agreement. Cyber Security Liability under this policy includes Privacy Liability (unauthorized disclosure by the Contractor of private information or failure to protect private information that results in identity theft) and Failure of Security (inability of the security of the Contractor's computer system to mitigate loss from or prevent a computer attack or physical theft of hardware, theft of password or access code).

1.2.5. Comprehensive Crime Insurance, Employee Dishonesty and Computer Fraud: $10,000,000 per occurrence. Such insurance shall cover all of Contractor's employees. Coverage shall include a loss payee endorsement to the County. Any deductible or self-insured retention shall be the responsibility of Contractor.

1.2.6. Property Insurance: Contractor shall provide insurance on all property owned by Contractor and provided under this Agreement. Such policy shall provide "all risk" perils, and shall be written on a basis of one hundred percent (100%) replacement value of the property. Coverage shall include business personal property, tenant improvements, business interruption, property of others, in the care, custody, and control of the insured, and transit. Any deductible or self-insured retention shall be the responsibility of Contractor.

1.3. Other Insurance Provisions

The general liability and automobile liability are to contain, or be endorsed to contain the following provisions:

1.3.1. Additional Insured Endorsement (Does not apply to Technology Errors and Omissions Liability 1.2.4.)

Any general and automobile liability policy provided by Contractor shall contain an additional insured endorsement applying coverage to the County of San Diego, the members of the Board of Supervisors of the County and the officers, agents, employees and volunteers of the County, individually and collectively. This requirement may be met through the use of a blanket additional insured endorsement.

1.3.2. Primary Insurance Endorsement

For any claims related to this Agreement, the Contractor's insurance coverage shall be primary insurance as respects the County, the members of the Board of Supervisors of the County and the officers, agents, employees and volunteers of the County, individually and collectively. Any insurance or self-insurance maintained by the County, its officers, officials, employees, or volunteers shall be excess of the Contractor's insurance and shall not contribute with it.

1.3.3. Notice of Cancellation.

Notice of Cancellation shall be in accordance with policy provisions.

1.3.4. Severability of Interest Clause.

Coverage applies separately to each insured, except with respect to the limits of liability, and that an act or omission by one of the named insureds shall not reduce or avoid coverage to the other named insureds.

1.4. General Insurance Provisions

1.4.1. Qualifying Insurers

With the exception of any wholly owned captive all required policies of insurance shall be issued by companies which have been approved to do business in the State of California by the State Department of Insurance, and which hold a current policy holder's alphabetic and financial size category rating of not less than A-, VII according to the current Best's Key Rating guide, or a company of equal financial

stability that is approved in writing by County Risk Management. Such approval shall not be unreasonably withheld.

1.4.2. Evidence of Insurance

Prior to commencement of this Agreement, but in no event later than the Effective Date of the Agreement, Contractor shall furnish the County with certificates of insurance and amendatory endorsements effecting coverage required by this clause. Renewal certificates and required amendatory endorsements effecting coverage shall be furnished to County within thirty (30) days of the expiration of the term of any required policy. Contractor shall, upon request, provide the County with a summary of its insurance policies.

1.4.3. Failure to Obtain or Maintain Insurance; County's Remedies

Contractor's failure to provide insurance specified or failure to furnish certificates of insurance and amendatory endorsements or failure to make premium payments required by such insurance, shall constitute a material breach of the Agreement, and County may, at its option, terminate the Agreement for any such default by Contractor provided that the same is not cured within thirty (30) days of Contractor's receipt of notice from the County specifying the nature of the claimed default.

1.4.4. No Limitation of Obligations

The foregoing insurance requirements as to the types and limits of insurance coverage to be maintained by Contractor, and any approval of said insurance by the County are not intended to and shall not in any manner limit or qualify the liabilities and obligations otherwise assumed by Contractor pursuant to the Agreement, including, but not limited to, the provisions concerning indemnification.

1.4.5. Review of Coverage

County retains the right at any time to review the coverage, form and amount of insurance required herein and may request Contractor to obtain insurance reasonably sufficient in coverage, form and amount to provide adequate protection against the kind and extent of risk which exists at the time a change in insurance is required.

1.4.6. Self-Insurance

With the exception of Workers' Compensation, Contractor may, with the prior written consent of County Risk Management, fulfill some or all of the insurance requirements

contained in this Contract under a plan of self-insurance. Contractor shall only be permitted to utilize such self-insurance if in the opinion of County Risk Management, Contractor's (i) net worth, and (ii) reserves for payment of claims of liability against Contractor, are sufficient to adequately compensate for the lack of other insurance coverage required by this Contract. Contractor's utilization of self-insurance shall not in any way limit liabilities assumed by Contractor under the Contract.

1.4.7. Claims Made Coverage

If coverage is written on a "claims made" basis, the Certificate of Insurance shall clearly so state. In addition to the coverage requirements specified above, such policy shall provide that:

(i) The policy retroactive date coincides with or precedes Contractor's commencement of Services under the Agreement (including subsequent policies purchased as renewals or replacements);

(ii) Contractor will make every effort to maintain similar insurance during the required extended period of coverage following expiration of the Agreement, including the requirement of adding all additional insureds;

(iii) If insurance is terminated for any reason, Contractor shall purchase an extended reporting provision of at least two years to report claims arising in connection with the Agreement; and

(iv) The policy allows for reporting of circumstances or incidents that might give rise to future claims.

1.4.8. Subcontractors' Insurance

Contractor shall require that any and all Subcontractors hired by Contractor are insured in accordance with this Contract. If any Subcontractors coverage does not comply with the foregoing provisions, Contractor shall defend and indemnify the County from any damage, loss, cost or expense, including attorney fees, incurred by County as a result of Subcontractors' failure to maintain required coverage.

1.4.9. Waiver of Subrogation

Contractor and County release each other, and their respective authorized representatives, from any Losses (as defined in Section 22.1 of the Agreement), but only to the extent that the proceeds received from any policy of insurance carried by County or Contractor, other than any self-insurance, covers any such Losses. With the exception of Technology Errors and Omissions Liability insurance and Crime Insurance, included in any policy or policies of insurance provided by Contractor hereunder shall be a standard waiver of rights of subrogation against County by the insurance company issuing said policy or policies.
