**SITE MAP**

**All well applications must be accompanied by a Site Map.** The Site Map must be to scale and include a north arrow. Within a 250-foot radius of the proposed water well location, the Site Map must include: parcel boundaries, easements, existing and/or proposed septic systems, existing structures, names of nearby streets/roads, transmission lines, water bodies/courses (ponds, lakes, and streams), drainage patterns, existing wells, sewer laterals, livestock/fowl enclosures, and other potential contamination sources.

**On properties served by public water, contact the local water agency for meter protection requirements. A copy of this permit application will be provided to the water district, if applicable.**

*I have obtained all required permits related to the installation of the proposed water well from other agencies (if applicable). I hereby agree to comply with all regulations of the Department of Environmental Health & Quality (DEHQ), and with all ordinances and laws of the County of San Diego and the State of California pertaining to well construction, repair, modification, and destruction. Immediately upon completion of work, I will furnish the DEHQ with a complete and accurate log of the well (Well Driller's Report). I accept responsibility for all work done as part of this permit and all work will be performed under my direct supervision.*

**STORMWATER & DISCHARGE MANAGEMENT PLAN FOR WATER WELLS**

<b>Well Permit Number:</b> <b>LWELL-</b>	<b>Assessor's Parcel Number:</b>
---------------------------------------------	----------------------------------

GPS Coordinates: (map datum: WGS84, units: HDD) N: \_\_\_\_\_ W: \_\_\_\_\_

**Section 1: Required Information from the Well Driller:**

1. Are there any watercourses or water bodies within 50 feet of the limits of soil disturbance? YES  NO
2. Does the plat show the project boundaries? (a "detail inset" is acceptable for a large parcel) YES  NO
3. Does the plat show footprints of any existing structures and facilities within 100 feet of the wellhead position? YES  NO
4. Does the plat show locations where run-off may enter storm drains, drainage courses and/or receiving waters? YES  NO
5. Is grading required to access site or install well? YES  NO
6. Does the project conform to the local grading ordinance? YES  NO
7. Will drilling additives be used to drill the well? YES  NO
8. Are the Best Management Practices attached to this permit application? YES  NO

**Section 2: Best Management Practices**

The goal of stormwater and discharge control management planning while drilling and installing wells is to reduce pollution to the maximum extent practicable using Best Management Practices (BMPs). Construction related materials, sediments, chemical residues such as drilling foam, wastes, and spills must be retained within the property boundaries to eliminate transport from the site to nearby streets, drainage courses, receiving waters and adjacent properties. It is the responsibility of the property owner and the contractor to determine which BMPs will be used in order to ensure that all contaminants are retained on-site.

Examples of Best Management Practices to contain well installation run-off include, but are not limited to, installation of a sediment basin to contain run-off, using geotextile fabric to contain sediments and drilling mud, or eliminating the use of drilling foam. (Website information is available at [www.projectcleanwater.org](http://www.projectcleanwater.org))

**Section 3: Certification-** I have read and understand the following: (Please check each box after concurrence.)

- Selected BMP's will be implemented so that water quality is not negatively impacted by well construction activities.
- I am aware the selected BMP's must be installed, maintained, monitored and revised as necessary so they are effective.
- I understand that non-compliance with the San Diego County Watershed Protection Ordinance may result in enforcement actions by the County. These may include fines, citations, stop-work orders, or other actions.
- DEHQ inspectors and personnel from other regulatory agencies are authorized to enter my property at any time for purposes associated with this well permit until such time the well is completed to the satisfaction of the DEHQ.
- Should the DEHQ determine during the field review that the well installation procedures contradict this Discharge Management Plan or the well permit application, the well drilling permit may be suspended or revoked. Further activity will require a new permit fee and amendment to the existing permit.
