Director's Report

County Budget

FAA Roundtable

Part 150 Study

The 65-decibel contour is the FAA-defined threshold for determining a noise impact.

Part 150 mitigation is focused within the 65-decibel noise contour of an airport only.

No residential uses within the 65 CNEL. (2021 Master Plan)

A new Part 150 study would not be supported by the FAA because there is no basis.

Leverage sub-committee to evaluate additional, viable options.
