1 INTRODUCTION

California Public Resources Code (PRC), Sections 41730 *et seq.* require every California city and county to prepare and adopt a Non-Disposal Facility Element (NDFE) for all new non-disposal facilities, and any expansions of existing non-disposal facilities, that will be needed to implement local Source Reduction and Recycling Elements (SRREs). A non-disposal facility is defined as any solid waste facility required to obtain a state solid waste facility permit, except a disposal facility or a transformation facility (PRC Section 40151).

This 2012 NDFE Amendment describes the current non-disposal facility system of the unincorporated San Diego County consisting of several materials recovery facilities (MRF's), transfer stations, rural transfer stations, organic processors and construction and demolition (C&D) recycling facilities. The facilities in this NDFE include those with CalRecycle SWIS numbers, proposed facilities, and facilities that do not require a CalRecycle permit. These non-disposal facilities will serve as the County's core facilities to achieve its waste diversion goals of PRC Section 41780 and implement its SRRE.

Due to a change in the process to amend the NDFE pursuant to AB 341 (Chapter 4.5, Statutes of 2011, Chesbro, AB 341) there are no longer specific regulatory requirements for public noticing or approval that a jurisdiction must follow, such as adopting the facility update by resolution at a public hearing or publicly noticing the change.

The County of San Diego provided a copy of the updated NDFE information to the local task force on May 8th, 2012. Note: Pursuant to AB 341 (Chapter 4.5, Statutes of 2011, Chesbro, AB 341) the update is not subject to review or comment by neither the local task force nor CalRecycle.

Therefore, the County of San Diego has updated and hereby transmits to CalRecycle the County's fourth NDFE amendment.

1.1 Changes to the NDFE

Since the County of San Diego's previous NDFE amendment in 2008, there have been several changes. The most notable change from the 2008 amendment is that three (3) rural bin sites and one large volume transfer station were closed by the private operator in April of 2009. Those four facilities include Viejas Large Volume Transfer Station, Boulevard Rural Container Station, Julian Rural Container Station, and the Campo Rural Container Station.

Additional changes from the 2008 Amendment include the following: A CDI (Construction, Demolition and Inert) medium volume processing facility was permitted at the Otay Landfill (proposed in the 2008 document); Ramona Landfill was removed as a possible location for future CDI operations; Allan Company Materials Recovery Facility (MRF) and Transfer Station was added to the transfer stations as it was not included in past documents; Evergreen Nursery has proposed a new composting facility in Lakeside; AgriService is combining their composting and chip and grind operation and changing locations; Amswede Recycling was permitted as a small volume CDI processing operation; Lakeside Land Company, Hanson Carroll Canyon and Inland Valley Materials were added as inert processing facilities; Otay Landfill Chipping/Grinding and Plant's Choice at the Otay Landfill were permitted to compost; Amswede Organics and San Pasqual Valley Soils were added as organics processing facilities.

Lastly, several sites have been deleted because they are no longer operating in the county.

2 OVERVIEW OF SOLID WASTE MANAGEMENT IN THE UNINCORPORATED AREAS OF THE COUNTY OF SAN DIEGO

Unincorporated San Diego County has a complex network of solid waste and non-disposal facilities and 29 franchised haulers and private residential and commercial self-haulers. County Ordinance 68.571 requires mandatory recycling for businesses and residents, and an extensive program is in place for compliance. AB 341, effective July 1, 2012, will add additional recycling requirements for commercial businesses and public entities.

Franchised haulers transport a range of materials and provide regular residential, commercial and industrial services in unincorporated areas of the county. The remaining solid waste is picked up by various self-haulers and contractors who directly divert materials, deliver recyclables to recycling facilities, and dispose residuals in landfills or transfer stations.

Solid waste that is not directly disposed in a landfill is deposited temporarily in several transfer and processing stations. Materials are also sent to non-disposal sites, including recycling centers, organics and inert processing facilities, salvage, reuse and repair facilities.

Recyclable materials are collected either source separated or commingled. Source separated material facilities generally provide the most economical method to recycle and are located at various sites throughout the county. A large portion of the region's commingled recyclables are processed at the material recovery facilities located at EDCO San Marcos and Lemon Grove, SANCO Recycling in Escondido and Universal Refuse Removal Recycling and Transfer Station in El Cajon. The recycling rate of facilities in the unincorporated county is determined from the countywide data provided to the County by transfer stations in their quarterly reports.

The network of non-disposal facilities is integral to the collection and processing of diversion materials. Some of the facilities act only as waste collection centers for transfer to landfills, and others are also recycling centers. Some have recycling operations *en situ*, and several have recycling centers nearby. The facilities vary as to quality and quantity of materials for diversion and recycling, but manage a significant portion of the unincorporated County's solid waste stream.

A brief synopsis of all five facility types is given below. Following this synopsis are the tables which include the facility details. Lastly, this document includes other facilities and facilities deleted from the NDFE.

3 FACILITIES DIVERTING MORE OR CAPABLE OF DIVERTING MORE THAN FIVE PERCENT OF UNINCORPORATED COUNTY THROUGHPUT

3.1 Transfer Stations and Materials Recovery Facilities (MRF's)

This section includes information on existing transfer stations and materials recovery facilities (MRF's). Transfer stations in this section hand sort recyclables from the transfer station floor and/or operate material recovery sorting lines, commonly referred to as MRF's. MRF's receive commingled as well as source separated traditional recyclables such as paper, glass, plastics and metals. The materials are processed and recovered for sale in the secondary materials markets. There are currently ten (10) transfer stations and MRF's servicing the unincorporated areas. These facilities are listed in **Table 1** and **Table 2** in alphabetical order.

3.2 Materials Recovery Facilities Located on Landfills

In recent years, there has been an increasing amount of diversion activities occurring at landfills. Now, construction and demolition and inert processing (CDI), chip and grind, and composting operations are permitted on Otay Landfill and a green material chip and grind operation is permitted on Sycamore Landfill. CDI facilities are being considered by Republic Services for Ramona and Borrego Landfills as well as the County-owned closed landfills, although no action has been determined at this time. These facilities are listed in **Table 3** in alphabetical order.

3.3 County of San Diego Closed Landfill Resource Recovery Parks

The County of San Diego owns a number of closed landfills. The County proposes to use the closed landfill sites and/or closed rural transfer stations as resource recovery parks. Under this proposal, organics, CDI and/or other source separated materials would be trucked to the following sites for processing and recycling. Resource recovery activities may include, but would not be limited to: chipping and grinding, C&D processing, composting, and other recycling or reuse activities for unincorporated areas of the County and some incorporated cities. These facilities are listed in **Table 4** in alphabetical order.

3.4 Organic Processing Facilities

Yard and wood waste comprised approximately 31% of the total waste stream disposed in California landfills in 2008 (California 2008 Statewide Waste Characterization Study). As identified in CalRecycle's Organics Policy Road Map, the State has a goal to reduce the amount of organic materials being landfilled by 50% by the year 2020. If the State goal is to be achieved, expansions and/or additional facilities will be needed in the region. This feedstock is in demand from agricultural, chip and grind and compost facilities in the county. Anaerobic digestion facilities are also being considered. The County of San Diego provides assistance to facilities in order to divert more organic materials from the landfill. Although the amount of disposal by jurisdiction is not tracked, franchised haulers report that materials from the unincorporated areas are processed at these facilities. These facilities are listed in **Table 5** and **Table 6** in alphabetical order.

3.5 Construction and Demolition Recovery Facilities

Construction and Demolition debris makes up approximately 29% of California's waste stream (California 2008 Statewide Waste Characterization Study). In order to increase recycling of this waste stream, the County Board of Supervisors passed a Construction and Demolition Recycling Ordinance in April of 2007. This ordinance requires buildings 40,000 square feet and greater to recycle 90% of the inert materials and 70% of the remaining debris. The Construction and Demolition (C&D) recycling facilities in San Diego County divert a large, but presently undetermined amount of tonnage from local landfills. This section contains the wide variety of C&D recycling businesses proposed or conducting business in the County of San Diego. There are nineteen (19) C&D recovery facilities serving the unincorporated county. These facilities are listed in **Table 7**, **Table 8**, and **Table 9** in alphabetical order.

** As noted in Tables 1 through 9, Permitted Daily Capacity is referred to in tons, unless otherwise stated.*

Table 1: Transfer Stations and MRF's (Facilities A – E)

Facility Name	Location	Facility Details	Materials Accepted	Permit #	Permitted Daily Capacity*	Participating Jurisdictions	Estimated Diversion Rates
Allan Company MRF and Transfer Station	6733 Consolidated Way, San Diego, CA 92121	Large volume transfer and processing facility.	Source separated and commingled recyclable materials.	37-AB-0016	1,500	Countywide.	90%
EDCO Transfer Station	3660 Dalbergia Street, San Diego, CA 92113	Large volume transfer and processing facility. Traditional and C&D loads are floor sorted to observe high recyclable content for transport to SANCO Lemon Grove C&D Facility. C&D materials and commingled recyclables.	37-AA-0929	See listing under Transfer Stations and MRF's for total daily capacity which includes C&D material.	Carlsbad, Chula Vista, El Cajon, Indian Nations, National City, San Diego, Santee, and the unincorporated County of San Diego.	51%

4 OTHER FACILITIES

The County of San Diego promotes many recycling facilities by listing them in the County recycling guides. Through an educational program, guides and flyers are periodically distributed by the County and franchised haulers. The County's hotline and website (toll free 1-877-R-1-EARTH or www.wastefreesd.org) offer recycling referrals to facilities throughout the region. Large recycling facilities are run by the following companies: Regan Recycling, Allan Company, California Metals, Cactus Recycling, Fibre Resources Unlimited, Inc., Pacific Steel, Inc., San Diego Fibers, San Diego Pallet, EDCO Recycling, and Waste Management, Inc.

Many of the facilities listed in the County's guides are small operations that collect primarily CRV materials, metals, cardboard, and inerts. Several companies, such as 20/20 Recycling Co. and Tomra Pacific Recycling, operate many small recycling centers throughout the region. These small companies sell the recyclable materials to larger companies, which process and ship the materials to end-users. Facilities are listed in alphabetical order.

A-1 Alloys	Pick Up Old Appliances
All American Recycling	Quality Recycling (Poway)
All Ways Recycling	Quality Recycling (Vista)
American Recycling	Reclaimed Aggregates
AMS	Reconstruction Warehouse
AMR Environmental	Recycle San Diego
