Agenda

01 Introduction

PRESENTER Jayne Janda-Timba, Rick Engineering Company

02 Summary of Changes & Miscellaneous Edits

PRESENTER René Vidales, County of San Diego

03 Site Design & Source Control Fact Sheets (New Appendix C)

PRESENTER Jeremy Fantaroni, County of San Diego

04 Tables 1 & 2 of Standard & PDP SWQMP Forms

PRESENTER Jeremy Fantaroni, County of San Diego

05 BMP Implementation, Source Control & Site Design BMP Requirements (Text Updates in Chapters 2 & 4)

PRESENTER René Vidales, County of San Diego

Q&A on Topics Above

MODERATOR Jayne Janda-Timba, Rick Engineering Company

PRESENTER René Vidales, County of San Diego

5 Minute Break

Agenda

06 Significant Site Design BMP (SSD-BMP) Sizing Methods & Calculations (New Appendix I)

PRESENTER Laura Henry, Rick Engineering Company

07 DCV Reduction, Self-Retaining DMAs, & Flow Control (Text Updates in Chapters 5, & 6, Appendices B & G)

PRESENTER Laura Henry, Rick Engineering Company

Q&A on Topics Above

MODERATOR Jayne Janda-Timba, Rick Engineering Company

PRESENTER René Vidales, County of San Diego & Laura Henry, Rick Engineering Company

5 Minute Break

Agenda

08 SSD-BMP Tool

PRESENTER René Vidales, County of San Diego

09 Example Project

PRESENTER Laura Henry, Rick Engineering Company

Q&A on Topics Above

MODERATOR Jayne Janda-Timba, Rick Engineering Company

PRESENTER René Vidales, County of San Diego & Laura Henry, Rick Engineering Company

10 Verification & Maintenance Requirements for SSD-BMPs

(PDP SWQMP Form Attachment 10)

PRESENTER Juli Hughes, County of San Diego

11 Recommended Best Practices

PRESENTER René Vidales, County of San Diego

Closing & Final Q&A

MODERATOR Jayne Janda-Timba, Rick Engineering Company

Poll / Survey

Summary of Changes & Miscellaneous Edits

Summary of Changes to County BMP Design Manual

Updates from Jan 2019
to September 2020 Edition

UPDATES FROM JANUARY 2019 TO SEPTEMBER 2020 EDITION		
DATE	CH./SEC.	REVISION
9-15-2020	Beginning of Manual	Miscellaneous updates for Cover Sheet, footer on all pages, List of Updates, Chronology Table, Approval Memo, Summary, and Glossary
9-15-2020	Ch. 1	Replaced "Grandfathering" with "Exception"
9-15-2020	Ch. 1, Sec. 1.4.1	Removed "Swimming pools and decorative ponds with adequate freeboard or an overflow structure that does not release overflow to the MS4"
9-15-2020	Ch. 2	Integrated Site Design and Source Control Fact Sheets from Appendix C
9-15-2020	Ch. 3, Sec. 3.4.3	At the end of Section 3.4.3, added the following text: "For projects that propose flood control detention in combination with pollutant control and/or hydromodification management requirements, please refer to the Conjunctive Use handout that is posted in the Development Resources web page under Calculators and Modeling Software".
9-15-2020	Ch. 4	Integrated Site Design and Source Control Fact Sheets from Appendix C
9-15-2020	Ch. 4, Sec. 4.1.5	Added Section 4.1.5 to read: "BMPs that provide for flood control detention in addition to water quality requirements and relationship to County Hydraulic Design Manual. BMPs that are serving flood control purposes in addition to pollutant control and/or hydromodification management may not operate appropriately to satisfy the requirements of the County Hydraulic Design Manual. How to comply: Consult the County Hydraulic Design Manual in addition to the Conjunctive Use handout that is posted in the Development Resources web page under Calculators and Modeling Software."
9-15-2020	Ch. 5	Integrated Significant Site Design BMPs from Appendix I
9-15-2020	Ch. 6	Integrated Significant Site Design BMPs from Appendix I
9-15-2020	Ch. 8	Changed name of Installation Verification Form to BMP Installation Verification form, and added content to the Verification process
9-15-2020	App. A, Standard SWQMP Form	Revised Tables 1 and 2 to be consistent with Appendix C Fact Sheets; added Project Information on cover sheet

Updates from Jan 2019
to September 2020 Edition

Feb 2016 to Jan 2019

February 2016

UPDATES FROM JANUARY 2019 TO SEPTEMBER 2020 EDITION		
DATE	CH./SEC.	REVISION
9-15-2020		Miscellaneous updates to Cover Sheet, Section on all pages, List of Updates, Glossary Table, Approved Means, Summary, and Glossary
9-15-2020	Ch. 1	Revised "Generalizing" with "Exemption"
9-15-2020	Ch. 1, Sec. 1.4.1	Revised "Intervening pools and desiccative pools with adequate fastflow or an overflow structure that does not allow overflow to the MFL"
9-15-2020	Ch. 2	Integrated Site Design and Source Control Fact Sheet from Appendix C
9-15-2020	Ch. 3, Sec. 3.4.3	At the end of Section 3.4.3, added the following text: "For projects that propose flood control detention in combination with pollutant control and/or hydromodification management requirements, please refer to the Countywide Use Handbook that is posted in the Development Resources web page under Calculators and Modeling Software."
9-15-2020	Ch. 4	Integrated Site Design and Source Control Fact Sheet from Appendix C
9-15-2020	Ch. 4, Sec. 4.1.5	Added Section 4.1.5 to read: "BMPs that provide for flood control detention in addition to water quality improvements and relationship to Countywide Design Manual, BMPs that are serving flood control purposes in addition to pollutant control and/or hydromodification management and not open appropriate to satisfy the requirements of the Countywide Design Manual. How to comply: Consult the Countywide Design Manual in addition to the Countywide Use Handbook that is posted in the Development Resources web page under Calculators and Modeling Software."
9-15-2020	Ch. 5	Integrated Significant Site Design BMPs from Appendix I
9-15-2020	Ch. 6	Integrated Significant Site Design BMPs from Appendix I
9-15-2020	Ch. 8	Changed name of Installation Verification Form to BMP Installation Verification form, and added content to the Verification process
9-15-2020	App. A, Standard P/Q/QP Form	Revised Tables 1 and 2 to be consistent with Appendix C Fact Sheet, added Project Information on cover sheet

UPDATES FROM FEBRUARY 2016 TO JANUARY 2019 EDITION		
Section #	Chapter and Section Name	Followed by Type of Change
Introductory Material		
-	Cover Page	
-	Updated title, date and content table	
-	Summary	
-	Updated date and location table (summary of changes and dates for update)	
-	List of Acronyms	
-	Additional resources added to list	
Chapter 1: Policies and Procedural Requirements		
1.2	Purpose and Use of the Manual	
In Section 1.2.1, the following was added to Table 1.1 to address more relevant topics:		
Note: Section 1.2.2 is added to address the applicability of construction BMP requirements.		
1.3	Defining a Project	
Update to Table 1.2, Project definitions based on footprint, storm watershed and Regional Board.		
Section 1.3.1 amended and moved to Section 1.2.2.		
1.4	In the Project's P/Q/QP	
Clarification language on defining a P/Q/QP in Section 1.4. Clarification language on the P/Q/QP categories defined by the MFL Permit in Section 1.4.1. Language added in Section 1.4.2 to indicate that the County has not categorically identified additional P/Q/QP types or expanded the definition outside of section 1.4.1. Language updated in Section 1.4.3.		
1.6	Applicability of Hydromodification Management Requirements	
Clarification language on discharge criteria for mitigation.		
1.5	Relationship Between this Manual and VQCPs	
Clarification language on Highest Feasible Water Quality Conditions.		
1.11	Project Review Procedures	
Main text update		
1.12	P/Q/QP Standard BMP Verification

Miscellaneous updates for Cover Sheet, footer on all pages, List of Updates, Chronology Table, Approval Memo, Summary, and Glossary

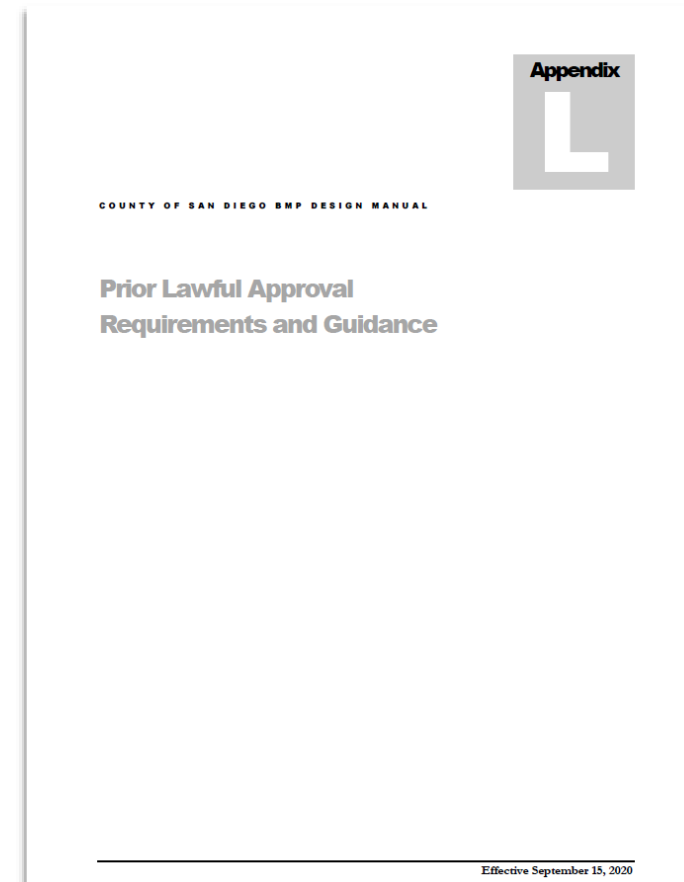

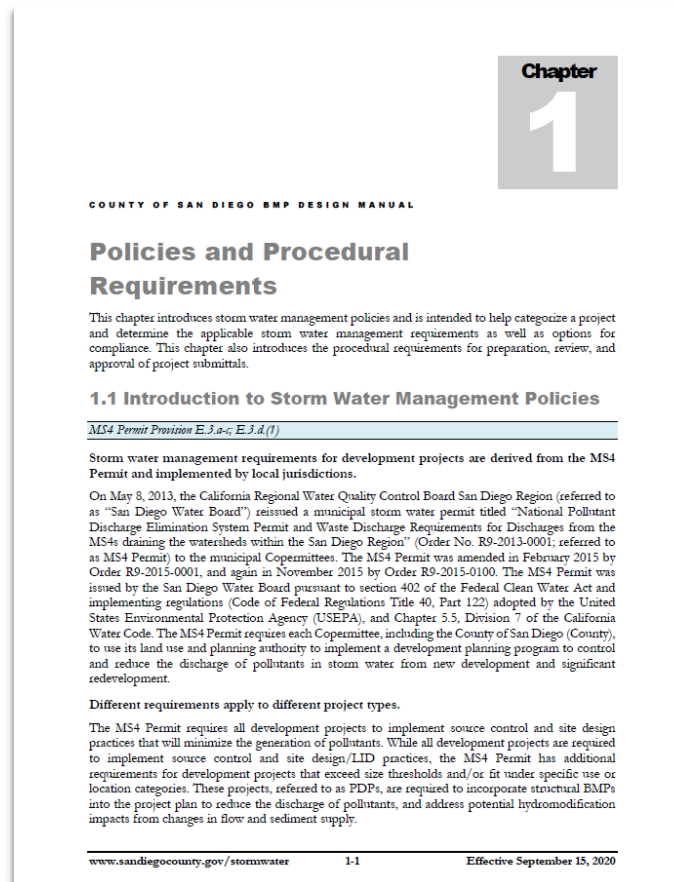

UPDATES FROM JANUARY 2019 TO SEPTEMBER 2020 EDITION		
DATE	CH./SEC.	REVISION
9-15-2020	Beginning of Manual	Miscellaneous updates for Cover Sheet, footer on all pages, List of Updates, Chronology Table, Approval Memo, Summary, and Glossary
9-15-2020	Ch. 1	Replaced "Grandfathering" with "Exception"
9-15-2020	Ch. 1, Sec. 1.4.1	Removed "Swimming pools and decorative ponds with adequate freeboard or an overflow structure that does not release overflow to the MS4"
9-15-2020	Ch. 2	Integrated Site Design and Source Control Fact Sheets from Appendix C
9-15-2020	Ch. 3, Sec. 3.4.3	At the end of Section 3.4.3, added the following text: "For projects that propose flood control detention in combination with pollutant control and/or hydromodification management requirements, please refer to the Coconstructive Use handout that is posted in the Development Resources web page under Calculators and Modeling Software."
9-15-2020	Ch. 4	Integrated Site Design and Source Control Fact Sheets from Appendix C
9-15-2020	Ch. 4, Sec. 4.1.5	Added Section 4.1.5 to read: "BMPs that provide for flood control detention in addition to water quality requirements and relationship to County Hydraulic Design Manual BMPs that are serving flood control purposes in addition to pollutant control and/or hydromodification management may not operate appropriately to satisfy the requirements of the County Hydraulic Design Manual. How to comply: Consult the County Hydraulic Design Manual in addition to the Coconstructive Use handout that is posted in the Development Resources web page under Calculators and Modeling Software."
9-15-2020	Ch. 5	Integrated Significant Site Design BMPs from Appendix I
9-15-2020	Ch. 6	Integrated Significant Site Design BMPs from Appendix I
9-15-2020	Ch. 8	Changed name of Installation Verification Form to BMP Installation Verification form, and added content to the Verification process
9-15-2020	App. A, Standard SWQMP Form	Revised Tables 1 and 2 to be consistent with Appendix C Fact Sheets; added Project Information on cover sheet

Glossary of Key Terms	
50% Rule	Refers to an MS4 Permit standard for redevelopment PDPs (PDPs on previously developed sites) that defines whether the redevelopment PDP must meet storm water management requirements for the entire development or only for the newly created or replaced impervious surface. Refers to Section 1.7.
Aggregate	Hard, durable material of mineral origin typically consisting of gravel, crushed stone, crushed quarry or mine rock. Gradation varies depending on application within a BMP as bedding, filter course, or storage.
Aggregate Storage Layer	Layer within a BMP that serves to provide a conduit for conveyance, detention, storage, infiltration storage, saturated storage, or a combination thereof.
Alternative Compliance Project (ACP)	An offsite mitigation project in lieu of implementing the onsite structural BMP performance requirements required under the MS4 Permit. Refers to Section 1.8 for more information on alternative compliance project requirements.
Baseline BMPs	Baseline BMP means any BMP that is required where applicable and feasible on all development projects. Baseline BMPs include both Site Design and Source Control BMPs. Some baseline BMPs can be used to qualify for Design Capture Volume (DCV) reductions on priority development projects. Baseline BMPs are not required to be used to qualify for DCV reductions and shall be implemented where applicable and feasible on all development projects even if they do not meet the criteria to qualify for DCV reductions.
Bed Sediment	The part of the sediment load in channel flow that moves along the bed by sliding or solution, and part of the suspended sediment load, that principally contributes the channel bed.
Bedding	Aggregate used to establish a foundation for structures such as pipes, manholes, and groutless.
Best Management Practice (BMP)	A procedure or device designed to minimize the quantity of runoff pollutants and / or volumes that flow to downstream receiving water bodies. Refers to Section 2.2.2.1.

Chapter 1 and Appendix L

Replaced “Grandfathering” with “Exception”

Chapter 1, Section 1.4.1

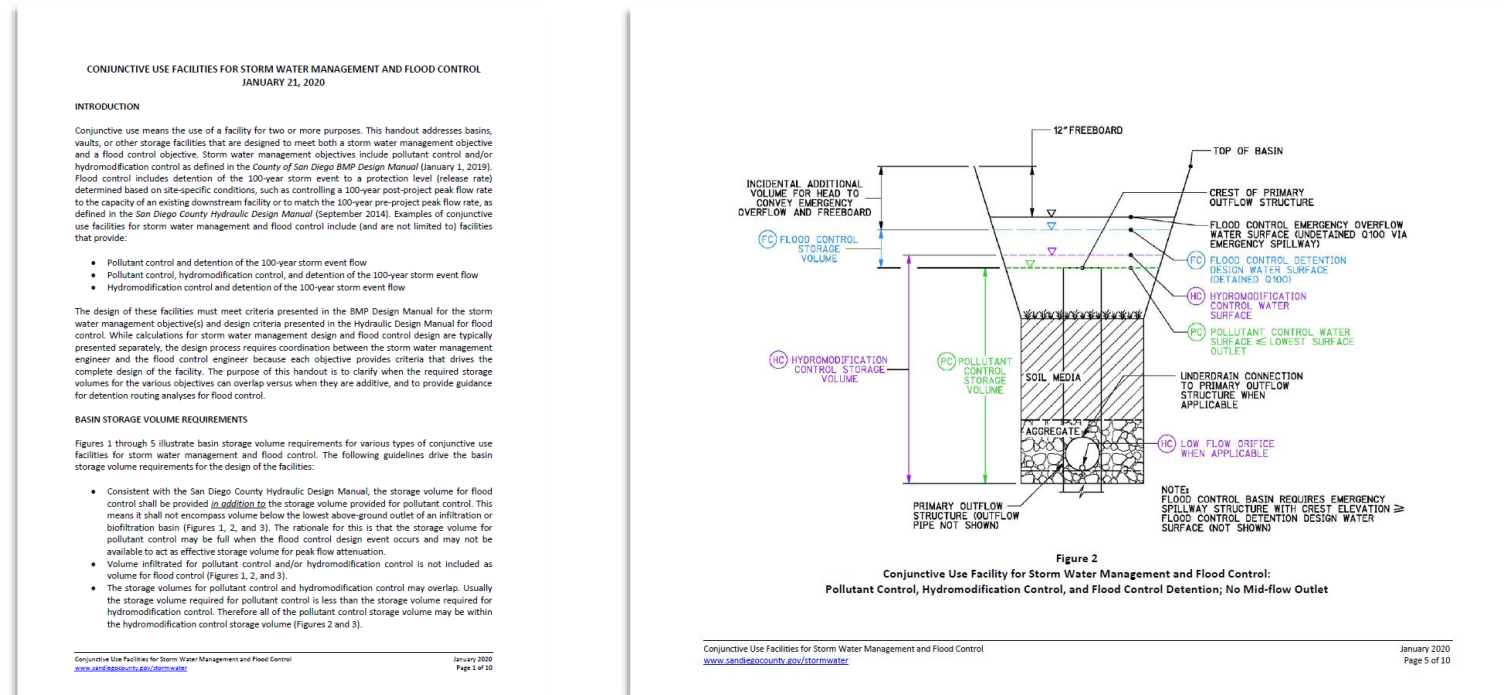

Removed “Swimming pools and decorative ponds with adequate freeboard or an overflow structure that does not release overflow to the MS4”

Area that may be excluded from impervious area calculations for determining if the project is a PDP:

- (a) Consistent with Table 1-2, areas of a project that are considered exempt from storm water requirements (e.g. routine maintenance activities, resurfacing, etc.) should not be included as part of “added or replaced” impervious surface in determining project classification.
- ~~(b) Swimming pools and decorative ponds with adequate freeboard or an overflow structure that does not release overflow to the MS4.~~

Chapter 3, Section 3.4.3

At the end of Section 3.4.3, added the following text: “For projects that propose flood control detention in combination with pollutant control and/or hydromodification management requirements, please refer to the Conjunctive Use handout that is posted in the Development Resources web page under Calculators and Modeling Software”.

Chapter 4, Section 4.1.5

Added Section 4.1.5 to read: “BMPs that provide for flood control detention in addition to water quality requirements and relationship to County Hydraulic Design Manual. BMPs that are serving flood control purposes in addition to pollutant control and/or hydromodification management may not operate appropriately to satisfy the requirements of the County Hydraulic Design Manual. How to comply: Consult the County Hydraulic Design Manual in addition to the Conjunctive Use handout that is posted in the Development Resources web page under Calculators and Modeling Software.”

Appendix B, Table B.1-1

Added INF-3 to Engineered Pervious Surfaces

Table B.1-1: Runoff factors for surfaces draining to BMPs – Pollutant Control BMPs

Category	Surface Type	Runoff Factor (C)
Impervious Surfaces	Roofs, Concrete, Asphalt, Unit Pavers (grouted)	0.90
Semi-Pervious Surfaces	Decomposed Granite, Cobbles, Crushed Aggregate, Compacted soil (unpaved parking)	0.30
Engineered Pervious Surfaces	Green Roofs per SD-C Permeable Pavement per SD-D, Amended Soils per SD-F, Landscaped/Mulched Soils, Permeable Pavement per INF-3	0.10
Natural Pervious Surfaces	Type A Soil	0.10
	Type B Soil	0.14
	Type C Soil	0.23
	Type D Soil	0.30
Impoundments	Swimming pools, fountains, ponds, etc.	0.00
Dispersion Areas	Areas <u>routed to</u> or <u>serving as</u> a dispersion area per SD-B	See Dispersion Area Text Below

Appendix E Removed all Source Control Fact Sheets

Fact Sheets for Enhanced Site Design, Structural and Flow-thru BMPs

The following fact sheets were developed to assist the project applicants with designing BMPs to meet the storm water obligations. The Fact Sheet Quick Guide on the next page summarizes the layout and type of information contained in each fact sheet.

	MS4 Category	Manual Category	Design Fact Sheet	Page
Enhanced Site Design BMPs	Source Control	Source Control	SC- Source Control BMP Requirements	E-4

Effective January 1, 2019 Effective July 1, 2020

SC-6D Source Control for Automotive Facilities

D.6-SC-6D Source Control for Automotive Facilities²

MS4 Permit Category
Source Control
Manual Category
Source Control
Applicable Performance Standard
Source Control
Primary Benefits
Source Control

Description

Storm water runoff from automotive facilities can pollute storm water runoff with oil and grease, metals, and other pollutants. Pollutants can enter via maintenance and repair activities, outside storage areas, liquid material storage, and others. Automotive facilities require additional measures because of the potential impact of pollutants. Automotive facilities include but are not limited to facilities that perform maintenance or repairs of vehicles, vehicle washing facilities, and retail gasoline outlets. County staff may designate additional facilities if they are likely sources of storm water pollutants.

Design Adaptations for Project Goals

Source control BMPs reduce the amount of pollutants that are generated. This fact sheet contains details on the additional measures required to prevent or reduce pollutants in storm water runoff associated with automotive facilities. The requirements presented here are in addition to the requirements of Sections 4.2.1 through 4.2.6, which require all development projects avoid and reduce pollutants in storm water runoff.

¹ Auto repair, maintenance activities, fueling, and vehicle washing must be conducted in covered areas. Activity areas must be protected from precipitation by permanent canopy or roof structure. Canopies for drive-in bays should have a minimum overhang of 3 feet on each side, cover higher than 10 feet should have a minimum

www.sandiegocounty.gov/stormwater
2020

E-28 Effective January 1, 2019 Effective July 1, 2020

Appendix E, BF-1, PR-1 and INF-2

Text Added to Fact Sheets in the Filter Course Layer section

Filter Course Layer

A filter course is used to prevent migration of fines through layers of the facility. Filter fabric is not used.

Migration of media can cause clogging of the aggregate storage layer void spaces or subgrade. Filter fabric is more likely to clog.

Filter course is a minimum of 6 inches thick provided in two separate 3 inch layers. The top layer shall be made of ASTM C33 choker sand and the bottom layer shall be of ASTM No. 8 aggregate. Marker stakes shall be used to ensure uniform lift thickness.

To prevent reduction of the available storage volume that would lead to clogging of the underdrain and native soil beneath the BMP.

Appendix E, BF-1

Removed the word "Optional" in Impermeable Liner Figure; added text for Impermeable Liner Thickness under Recommended Siting Criteria

Appendix E, BF-1

Recommended Siting Criteria

<i>Siting Criteria</i>	<i>Intent/Rationale</i>
<input type="checkbox"/> Placement observes geotechnical recommendations regarding potential hazards (e.g., slope stability, landslides, liquefaction zones) and setbacks (e.g., slopes, foundations, utilities).	Must not negatively impact existing site geotechnical concerns.
<input type="checkbox"/> An impermeable liner or other hydraulic restriction layer is included if site constraints indicate that infiltration or lateral flows should not be allowed.	Lining prevents storm water from impacting groundwater and/or sensitive environmental or geotechnical features. Incidental infiltration, when allowable, can aid in pollutant removal and groundwater recharge.
<input type="checkbox"/> <u>The thickness of the Impermeable Liner shall be 30 MIL per County Green Streets Design Standard Drawing GS-3.00 and County Green Streets Supplement to Caltrans Specifications 20-11.08B.</u>	<u>Considerations when choosing an Impermeable Liner may include placement methods, media and underlying soil characteristics, and intended design life among others.</u>

Appendix K, Page K-1

Design Criteria, Design Standard Drawings, and Specifications, ~~and Maintenance Schedules~~ for Green Streets and Green Parking Lots can be found on the County's Watershed Protection Program website under the Green Infrastructure Resources within the Development Resources tab:

<https://www.sandiegocounty.gov/stormwater>

20-11.02 BIORETENTION SOIL MEDIA

20-11.02A General

20-11.02A(1) Summary

Bioretention Soil Media (BSM) is intended to filter storm water and support plant growth while minimizing the leaching of potential pollutants. This specification includes requirements that apply to BSM used in stormwater treatment BMPs, including bioretention and biofiltration.

BSM shall conform to the provisions in Caltrans 2015 Standard Specifications Division III, Section 19 "Earthwork" and Section 20 "Landscape."

A summary of BSM specification requirements is included in Table 1.

Table 1. BSM Specification Requirement Summary

Component	Requirement
BSM Material Composition	Sand: 60-80% by volume Topsoil: 0-20% by volume Compost: 0-20% by volume
Alternative Blends	Acceptable but they must meet performance-based specifications
Sand Type	Washed sand conforming to particle size distribution
Topsoil Type	Sandy loam or loamy sand with clay < 15% and gravel < 25%
Compost Type	From a CalRecycle permitted facility. Biosolids derived materials are not acceptable
BSM Permeability	8 to 24-inches/hour for BMPs without outlet control; 20-80-inches/hour for BMPs with outlet control; testing is required to demonstrate
Agronomic Suitability Requirements	Limits for salts and potential toxins. C:N ratio between 15 and 40.
Water Quality Related Limits	Requirements related to specific pollutants when water quality of receiving waters is impaired for those pollutants.
Choker Course and Reservoir Layer	When used these under BSM they are Separate Bid Items

Blended BSM shall consist of 60% to 80% by volume sand, up to 20% by volume topsoil, and up to 20% by volume compost. Sand, Topsoil, and Compost used in BSM shall conform to requirements listed in 20-11.02B(2), 20-11.02B(3), and 20-11.02B(4), respectively. For bioretention/biofiltration with outlet-controlled designs, it is likely that topsoil will need to be omitted or reduced to achieve permeability targets.

Alternative mix components and proportions may be utilized, provided that the whole blended mix conforms to whole BSM criteria, detailed in 20-11.02A(4a) through 20-11.02A(4)(d). Alternative mix designs may include alternative proportions and/or alternative organic amendments. Alternative mixes are subject to approval by the Engineer. Alternative mixes that use an alternative organic component (rather than compost) may be necessary when BMPs are installed in areas with nitrogen or phosphorus impaired receiving waters in order to meet more stringent BSM quality requirements as detailed in 20-11.02A(4)(c).

20-11.02A(2) Definitions

- ADD:
202-4 PERMEABLE INTERLOCKING CONCRETE PAVERS.
- 202-4.1 General.
1. Permeable interlocking concrete pavers shall consist of the paving unit, joint fill and bedding aggregate, base aggregate, and subbase aggregate.
- 202-4.2 Materials.
- 202-4.2.1 Permeable Interlocking Concrete Paver.
1. All paver material shall comply with ASTM C 936. Paver color pigment material shall comply with ASTM C 979. For vehicular applications, the minimum allowable paver thickness shall be 3-1/8 inch (80 mm). For pedestrian applications the minimum allowable paver thickness shall be 2-3/8 inch (60 mm).
- 202-4.2.2 Crushed Stone Joint Filler and Bedding.
1. The joint filler and bedding material shall conform to 200-1. "Rock Products". The gradation shall conform to Table 200-1.2.1 (A). ASTM No. 8. When the joints are less than 1/4 inch, gradation permitted shall conform to Table 200-1.2.1 (A). ASTM No. 89 or ASTM No. 9. All substitutions shall be approved in writing by the Engineer.
- 202-4.2.3 Base Aggregate.
1. The base aggregate shall conform to 200-1. "Rock Products". The aggregate gradation shall conform to Table 200-1.2.1 (A). 1/4" Crushed Rock.
- 202-4.2.4 Subbase Aggregate.
1. The subbase aggregate shall conform to 200-1. "Rock Products". The aggregate gradation shall conform to Table 200-1.2.1 (A). ASTM No. 2.
- 202-4.3 Storage.
1. Store materials in protected areas such that they are kept free from mud, dirt, and other foreign materials.

Fact Sheets for Site Design and Source Control BMPs

If These Sources Will Be on the Project Site Then Your SWQMP Must Consider These Source Control BMPs	
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on Drawings	3 Permanent Controls—List in Table and Narrative	4 Operational BMPs—Include in Table and Narrative
<input type="checkbox"/> A. Onsite storm drain inlets <input type="checkbox"/> Not Applicable	<input type="checkbox"/> Locations of inlets.	<input type="checkbox"/> Mark all inlets with the words “No Dumping! Flows to Bay” or similar. See stencil template provided in Appendix I-4	<input type="checkbox"/> Maintain and periodically repaint or replace inlet markings. <input type="checkbox"/> Provide storm water pollution prevention information to new site owners, lessees, or operators. <input type="checkbox"/> See applicable operational BMPs in Fact Sheet SC-44, “Drainage System Maintenance,” in the CASQA Storm Water Quality Handbooks at https://www.casqa.org/resources/bmp-handbooks

SC-6A Source Control for Large Trash Generating Facilities

E.3 SC-6A Source Control for Large Trash Generating Facilities³

MS4 Permit Category
Source Control
Manual Category
Source Control
Applicable Performance Standard
Source Control
Primary Benefits
Source Control

Description

Storm water runoff from areas where trash is stored or disposed of can be polluted. In addition, loose trash and debris can be easily transported by water or wind to nearby storm drain inlets, channels, and/or creeks. Trash generating facilities that generate large amounts of trash require special attention to protect trash storage areas from rainfall, run-on, runoff, and wind dispersal. Large trash generating, or trash build-up areas, include but are not limited to restaurants, supermarkets, “big box” retail stores serving food, and pet stores. The County Engineer may designate additional facilities if they are likely to generate or accumulate large quantities of trash.

Example isometric view and plan view of an allowable trash enclosure facility is presented below. The project applicant may be allowed to use an alternative trash enclosure design that might be more appropriate for a project site if the alternative design is approved by the County.

Appendix C: Baseline BMP Fact Sheets for Site Design and Source Control

BL-5: Work and Storage Areas

MS4 Permit Category
Source Control (SC)
BMP IDs
SC-A: Overhead Covering
SC-B: Berms and Grade Breaks
SC-C: Wind Protection

Applicable Site Features

County Watershed Protection Ordinance (WPO) Section 67.811(a)(4) requires baseline BMPs for the following common types of outdoor work areas.

- Trash and refuse storage,
- Materials and equipment storage,
- Loading and unloading,
- Fueling,
- Maintenance and repair,
- Vehicle and equipment cleaning, and
- Other areas, not identified above, that have the potential to generate pollutants.

SWQMP Baseline BMP Requirements

The following baseline BMPs are required where applicable and feasible for the features described above. All three of these BMPs should be implemented together in all areas where storage of materials and trash will be located:

- SC-A: Overhead Covering
- SC-B: Berm and Grade Breaks
- SC-C: Wind Protection

Fact Sheets for Site Design and Source Control BMPs

DEFINITIONS

Baseline BMPs

Baseline BMP means any BMP that is required where applicable and feasible on all development projects. Baseline BMPs include both Site Design and Source Control BMPs. Some baseline BMPs can be sized to qualify for Design Capture Volume (DCV) reductions on priority development projects. Baseline BMPs are not required to be sized to qualify for DCV reductions and shall be implemented where applicable and feasible on all development projects even if they do not meet the criteria to qualify for DCV reduction.

Site Design BMPs

A storm water management and land development strategy that emphasizes conservation of natural features and the use of onsite natural features integrated with engineered, small-scale hydrologic controls to more closely reflect pre-development hydrologic functions. Site Design BMPs can be sized for Design Capture Volume (DCV) reductions using Worksheet B-1.1 of the BMP Design Manual for PDP projects (See Enhanced Site Design BMPs and Significant Site Design BMPs).

Fact Sheets for Site Design and Source Control BMPs

DEFINITIONS

Source Control BMPs

Land use or site planning practices, or structures that aim to prevent runoff pollution by reducing the potential for contamination at the source of pollution. Source control BMPs minimizes the contact between pollutants and storm water runoff. Examples include roof structures over trash or material storage areas, and berms around fuel dispensing areas. Source control BMPs are described within this manual.

Does Not Include:

Enhanced Site Design BMPs (*Appendix E*)

Structural BMPs (*Appendix E*)

Significant Site Design BMPs (*Appendix E*)

SD-K: Sustainable Landscaping

Applicable Site Features

County Watershed Protection Ordinance (WPO) Section 67.811(a)(5) requires baseline BMPs for landscaped areas. A landscape includes all planting areas, turf areas (artificial or natural), and water features in a landscape design. The landscape area does not include footprints of buildings or structures, sidewalks, driveways, parking lots, decks, patios, gravel or stone walks, other pervious or non-pervious hardscapes and other non-irrigated areas designated for non-development (e.g., open spaces and existing native vegetation).

Landscaped Areas includes SWQMP Baseline BMP Requirements

The following baseline BMPs are required where applicable and feasible for the features described above:

SD-K: Sustainable Landscaping

These baseline BMPs are documented in Table 1, Section D of the PDP and Standard SWQMP template as shown below:

D.	<input type="checkbox"/> BMPs for Landscaped Areas: Check this box if landscaping is proposed. Both BMPs are required where applicable. Explain inapplicability or infeasibility for BMPs not selected in Table 3.	(See Fact Sheet BL-4)
2. Sustainable Landscaping (SD-K)		
<input type="checkbox"/>		

Appendix C: Baseline BMP Fact Sheets for Site Design and Source Control

SD-K: SUSTAINABLE LANDSCAPING

Description

Sustainable landscaping uses native and drought tolerant plant species to limit the total water demand of landscaped areas and create a living sponge to soak up rainfall. Native and drought tolerant plants are well suited to the long-term climate in San Diego County; able to withstand extended dry periods and typically require less water to remain healthy compared to non-native alternatives. An additional benefit is reduced need for fertilizer and/or pesticides.

Sustainable landscaping must be evaluated for all landscaped areas of a project to meet Storm Water Quality Management Plan (SWQMP) requirements and should also be considered for any plantings associated with natural areas or areas identified for revegetation.

Design Considerations

The [San Diego Sustainable Landscape Guidelines](#) provide a detailed watershed friendly approach to landscaping. These guidelines will guide you through important principles such as:

- Selecting drought tolerant and native plants for San Diego County.
- Creating healthy soils to encourage moisture retention.
- Designing water efficient irrigation systems that reduce the likelihood of irrigation runoff.

The [County's Landscape Ordinance](#) generally applies to any new construction for which the County issues a building permit or a discretionary review where the aggregate landscaped area is 500 square feet or more to obtain outdoor water use authorization. The [Water Efficient Landscape Design Manual](#) explains how people can comply with the County's Landscape Ordinance by detailing water efficient irrigation systems, drought tolerant plant selection, fire-resistant designs, and other considerations.

Plan Requirements

For each required construction plan, provide the information indicated below for each applicable feature or BMP.

SC-E: CONTAINMENT AREAS

Description

Containment areas are specifically designed storage or activity areas that prevent spills, leaks, and other discharges, that would otherwise pollute storm water, from leaving the designated area. Spills leaks and other discharges from storage and activity areas can have high concentrations of pollutants that will contaminate storm water and impact receiving waterbodies if allowed to discharge from the site.

This BMP can be applied to any material or activity that will regularly be located in the same place on a site that could reasonably experience or result in spills, leaks, or other discharges.

I understand that the County of San Diego has adopted minimum requirements for managing urban runoff, including storm water, from land development activities, as described in the County of San Diego BMP Design Manual. The BMP Design Manual is a design manual for compliance with local County of San Diego Watershed Protection Ordinance (Sections 67.801 et seq.) and regional MS4 Permit (California Regional Water Quality Control Board San Diego Region Order No. R9-2013-0001, as amended by Order No. R9-2015-0001 and Order No. R9-2015-0100) requirements for storm water management.

This SWQMP is intended to comply with applicable requirements of the BMP Design Manual. I certify that it has been completed to the best of my ability and accurately reflects the project being proposed and the applicable BMPs proposed to minimize the potentially negative impacts of this project's land development activities on water quality. I understand and acknowledge that the plan check review of this SWQMP by County staff is confined to a review and does not relieve me as the person in charge of overseeing the selection and design of storm water BMPs for this project, of my responsibilities for project design.

BMP Implementation, Source Control & Site Design BMP Requirements (CHAPTERS 2 & 4)

René Vidales, PE, LEED GA, ENV SP, ISSP-SA, QSD

Baseline BMP Definition

Baseline BMP means any BMP that is required where applicable and feasible on all development projects. Baseline BMPs include both Site Design and Source Control BMPs. Some baseline BMPs can be sized to qualify for Design Capture Volume (DCV) reductions on priority development projects. Baseline BMPs are not required to be sized to qualify for DCV reductions and shall be implemented where applicable and feasible on all development projects even if they do not meet the criteria to qualify for DCV reduction.

Enhanced Site Design BMP Definition

Enhanced Site Design BMPs are Site Design BMPs that are sized for crediting toward reductions in the Design Capture Volume (DCV) for a Drainage Management Area (DMA). Enhanced Site Design BMPs are credited in Worksheet B-1.1 of the BMP Design Manual to *partially* satisfy the Design Capture Volume (DCV) reductions and/or HMP reductions in a DMA. Examples of Enhanced Site Design BMPs are tree wells and impervious area dispersion.

Chapter 2, Section 2.1.1.4

2.1.1.4 DCV Reduction through Enhanced Site Design BMPs (Sections 2.2.2.2 & Appendix B.1)

Enhanced site design BMPs reduce or eliminate the DCV within a DMA. Using them can decrease the number or size of other, more complex or costly BMPs needed to satisfy Structural Performance Standards.

Examples of Enhanced Site Design BMPs include Tree Wells (Fact Sheet ~~SD-SD-A~~), Impervious Area Dispersion (Fact Sheet SD-B), Green Roofs (Fact Sheet SD-C), Permeable Pavement (Fact Sheet SD-D), ~~Tree Wells (Fact Sheet SD-SD-A)~~, and Rain Barrels (Fact Sheet SD-E). Each BMP must be sized and constructed in accordance with applicable guidance provided in its respective Fact Sheet or as otherwise specified. DCV reductions are typically determined for larger projects using the DCV Worksheet B.1.1 in Appendix B and Worksheet I.1.1 in Appendix I. However, other worksheets, tables, calculators, or methods acceptable to the County may also be used. See section 2.2.2.2 for additional guidance on DCV calculation, and ~~Appendix~~ Appendices B.1 and I.1. for specific options and methodologies for achieving DCV reductions.

Chapter 4, Section 4.2

4.2 Source Control (SC) BMP Requirements

Source control BMPs avoid and reduce pollutants in storm water runoff. Everyday activities, such as recycling, trash disposal, and irrigation generate potential storm water pollutants. Source control BMPs are defined as activities or features that reduce the potential for storm water runoff to come into contact with pollutants. Per MS4 Permit Provision E.3.a.(2) and WPO Section 67.811(a)(4)), all development projects must implement source control BMPs where applicable and feasible.

How to comply: Projects must implement all source control BMPs that are applicable to their project. Applicability should be determined through a consideration of the development project's proposed features and the anticipated pollutant sources associated with them. Appendix ~~E-C~~ provides guidance for identifying source control BMPs applicable to a project. Table 2 "Baseline BMPs for Pollutant-Generating Sources" ~~The "Source Control BMP Checklist for All Development Projects"~~ located in Standard and PDP SWQMPs must be used to document compliance with these requirements. Table 2 applies to all projects except for Small Residential Projects. Small Residential Projects are those requiring either: a Building Permit, Minor Residential Grading Permit, or site Plan Permit for a single family home; or a Tentative Parcel Map Permit for up to 4 single family homes and a remainder parcel.

Chapter 4, Section 4.2.1

4.2.1 Prevent illicit discharges into the MS4

Per WPO Section 67.804, illicit discharges (i.e., discharges to the MS4 that are not composed entirely of storm water) are prohibited, except as exempted per WPO Section 67.805. Projects must effectively eliminate discharges of non-storm water into the MS4.

Added language to incorporate the following Fact Sheets:

- BL-5: Work and Storage Areas
- BL-6: Management of Stormwater Discharges
- BL-7: Management of Non-Stormwater Discharges

Chapter 4, Section 4.2.2

4.2.2 Identify the storm drain system using stenciling or signage

Storm drain signs and stencils are visible source controls typically placed adjacent to inlets. Posting notices regarding discharge prohibitions at storm drain inlets can prevent waste dumping. ~~Stenciling~~ Storm drain signage must be provided for all storm water conveyance system inlets and catch basins within the project area. ~~Inlet stenciling~~ Storm drain signage may include concrete stamping, concrete painting, placards, or other methods approved by the County. ~~Some A~~ stenciling templates used by the County ~~are~~ is attached in the “Storm Drain Signage” section of Fact Sheet BL-7 in Appendix I.4C. ~~This~~ these ~~template~~ may be modified and used as educational pieces promoting improved water quality.

Added language from Fact Sheet BL-7 Educational BMP Signage, which includes:

- Temporary BMP Signage
- Model Home BMP Signage
- Interpretive BMP Signage

Chapter 4, Section 4.3

4.3 Site Design (SD) BMP Requirements

Site design BMPs (also referred to as LID BMPs) are intended to reduce the rate and volume of storm water runoff and associated pollutant loads by minimizing surface soil compaction, reducing impervious surfaces, or providing flow pathways that are “disconnected” from the storm drain system, such as by routing flow over pervious surfaces. Site design BMPs may incorporate interception, storage, evaporation, evapotranspiration, infiltration, and/or filtration processes to retain and/or treat pollutants in storm water before it is discharged from a site.

Applicants are referred to the County of San Diego LID Handbook for additional guidance and information on the incorporation of low impact design features in the design of projects. Appendix K (Guidance for Green Infrastructure) provides additional guidance for implementing green street and other sustainable project features and types.

Appendix C also provides the following fact sheets to assist project applicants with designing BMPs to meet Site Design requirements:

- BL-1 – Existing Natural Site Features
- BL-2 – Outdoor Impervious Areas
- BL-3 – Rooftop Areas
- BL-4 – Landscaped Areas

Chapter 4, Section 4.3

4.3 Site Design (SD) BMP Requirements

In addition, Appendix E also provides the following fact sheets to assist applicants in Design Capture Volume (DCV) reduction using ~~with the proper design of Enhanced site Site design Design features~~ BMPs:

- SD-A – Tree Wells
- SD-B – Impervious Area Dispersion
- SD-C – Green Roofs
- SD-D – Permeable Pavement (Site Design BMP)
- SD-E – Rain Barrels; and
- SD-F – Amended Soil

Chapter 4, Section 4.3

4.3 Site Design (SD) BMP Requirements

~~In some cases, i~~Implementation of Enhanced Site Design BMPs may result in quantifiable reductions in the site's DCV (refer to Appendix B.1); however, failure to meet the minimum thresholds for DCV reductions does not eliminate requirements to implement applicable Site Design BMPs. All applicable and feasible Site Design BMPs must be implemented to the maximum extent practicable. Additionally, implementation of ~~some Significant site Site design Design~~ BMPs (SSD-BMPs) such as Tree Wells and Impervious Area Dispersion when designed to meet flow control per Fact Sheets SD-A and SD-B, respectfully may result in quantifiable hydromodification flow control benefits; refer to Section 6.1 and Appendix ~~E.8~~I.1.

Significant Site Design BMP (SSD-BMP) Sizing Methods & Calculations

(NEW APPENDIX I)

Laura Henry, PE

Appendix I: Significant Site Design BMP (SSD-BMP) Sizing Methods and Calculations

Table of Contents:

I.1 BL-1: Significant Site Design BMPs (SSD-BMPs)

I.2 Step 1: Determine DCV

I.3 Step 2: Dispersion Areas

I.4 Step 3: Tree Wells

What is a Significant Site Design BMP (SSD-BMP)?

- Significant site design BMPs (SSD-BMPs) are site design BMPs that are sized and constructed to satisfy structural performance standards for a drainage management area (DMA).
- SSD-BMPs fully satisfy the design capture volume (DCV) requirement for pollutant control
- SSD-BMPs can also be designed to satisfy hydromodification control requirements
- SSD-BMPs include:
 - Tree Wells
 - Impervious Area Dispersion
 - Permeable Pavement (limited use for pollutant control only)

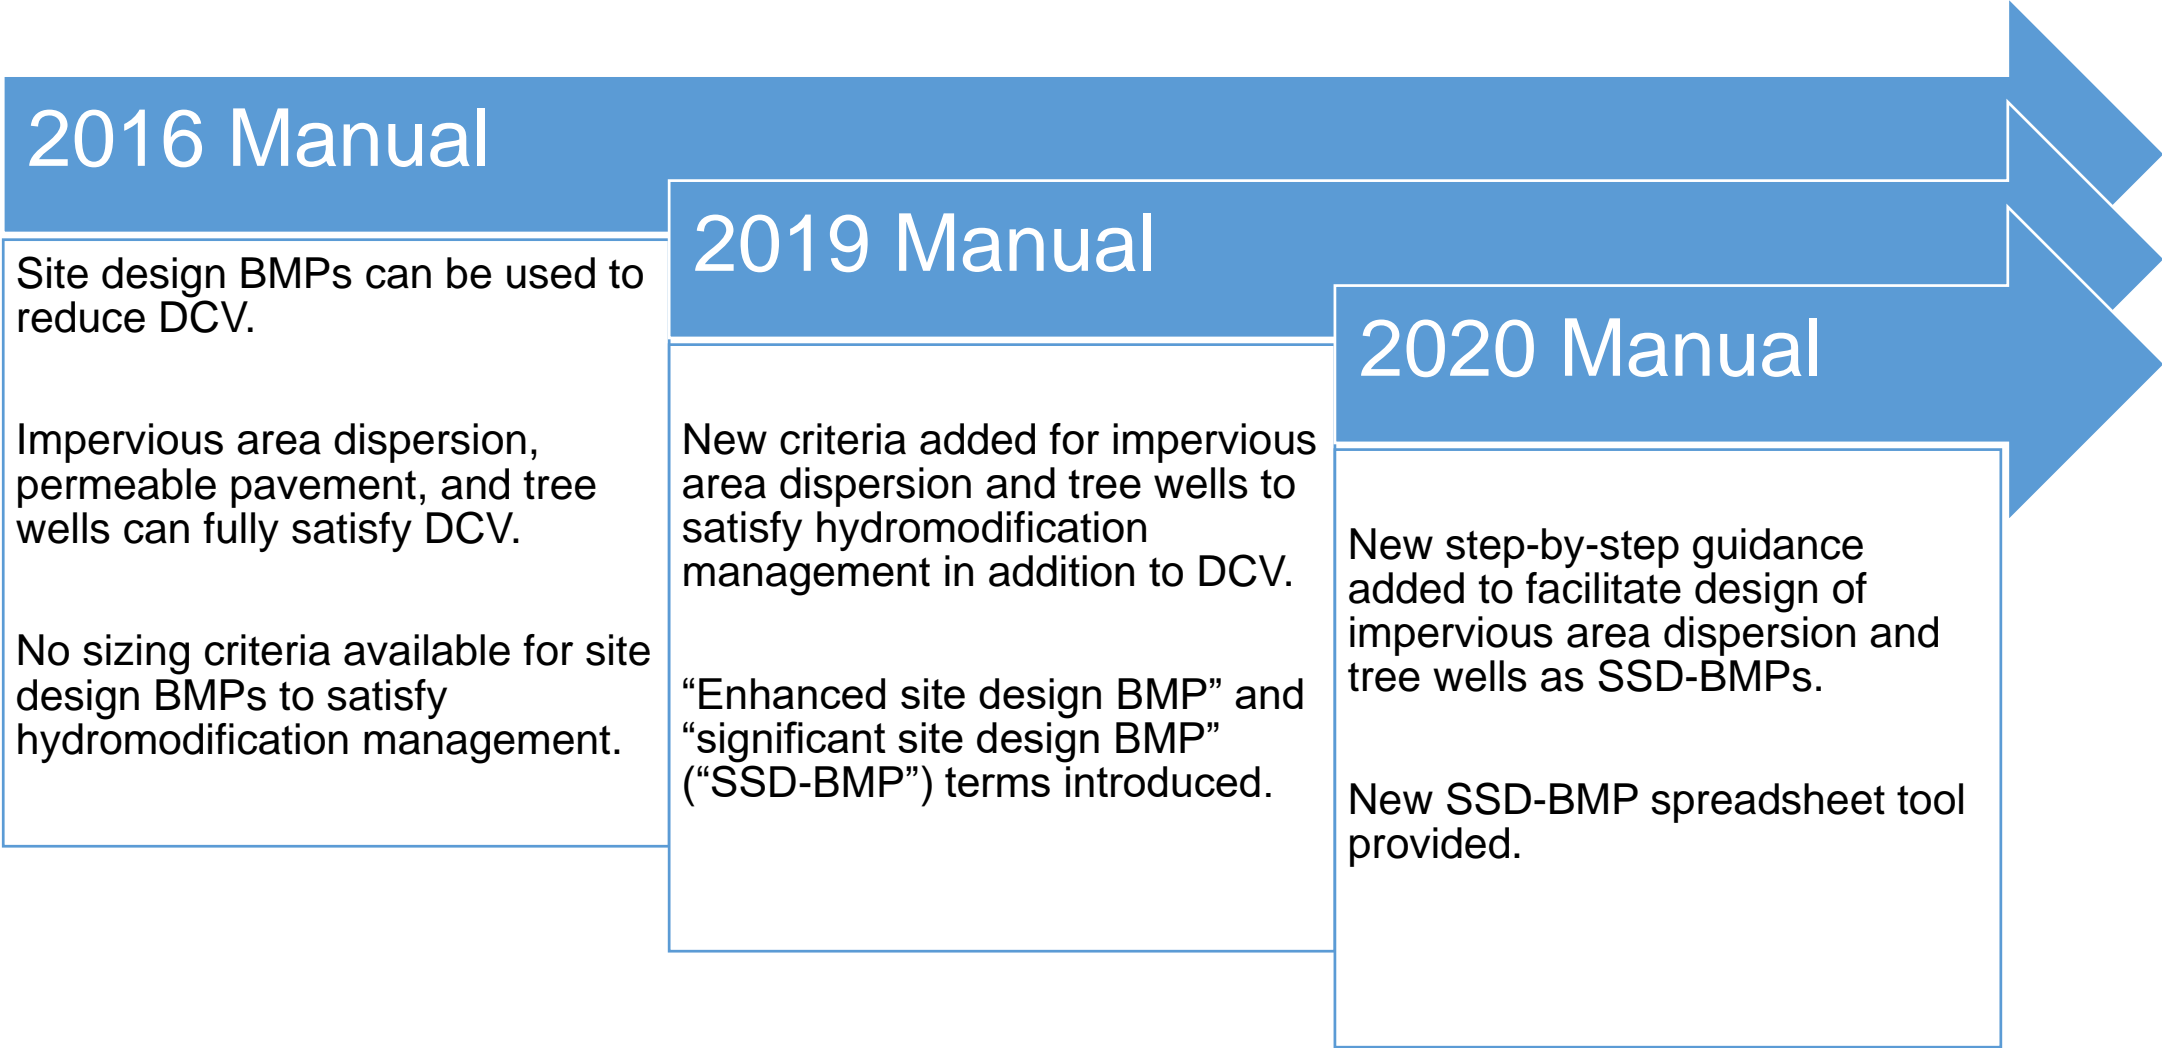

Site Design BMP Terms

Implementation Level	Sizing Requirements
Baseline BMP or Site Design BMP	<ul style="list-style-type: none">• No minimum size• Apply where applicable and feasible• No credit to DCV or hydromodification control
Enhanced Site Design BMP	<ul style="list-style-type: none">• Meet minimum sizing and design requirements• Reduce overall DCV
Significant Site Design BMP	<ul style="list-style-type: none">• Meet greater sizing and design requirements• Fully satisfy DCV and hydromodification control

SSD-BMPs vs. Enhanced Site Design BMPs

BMP	<i>The BMP may be used as:</i>		
	Enhanced Site Design BMP to Reduce DCV Draining to a Downstream BMP	SSD-BMP to Fully Satisfy DCV	SSD-BMP to Fully Satisfy DCV and Hydromodification Management

Flow Control

Conceptual Design and Sizing Approach for Pollutant Control

When trees are proposed as a storm water pollutant control BMP, the project proponent must submit detailed calculations for the DCV treated by trees. Document the proposed tree locations on the BMP Plan & DMA Map, and provide sizing calculations in the SWQMP Attachment following the steps in Appendix B.

Conceptual Design and Sizing Approach for Flow Control

When trees are proposed as a flow control BMP, the project proponent must submit detailed calculations for the Required Retention Volume (RRV) treated by trees. Document the proposed tree locations on the BMP Plan & DMA Map, and provide sizing calculations in the SWQMP Attachment. Tree Wells that are designed to meet flow control requirements are designated as SSD BMPs.

1. Determine how much volume you need. The Required Retention Volume (RRV) is the volume of rainfall that must be retained by the tree wells in the DMA to meet flow control requirements. It is calculated by multiplying the DCV by a DCV multiplier.

Tree Wells

Description

Trees planted as storm water management benefits associated with County Right of Way outlined criteria benefits associated with:

- Interception of rainfall
- Reduction of runoff
- Increased infiltration
- Tree canopy break

Volume Reduction
Peak Flow Attenuation

Conceptual Design and Sizing Approach for Storm Water Pollutant Treatment and Flow Control

DMA's using impervious area dispersion are considered to meet both pollutant control and hydromodification flow control requirements if ALL of the following criteria are met:

1. All impervious area within the DMA discharges to the pervious area before the runoff discharges from the DMA.
2. As a minimum, the top 11 inches of the pervious area uses amended soils in accordance with the SD-F fact sheet and the pervious area also meets the requirements for dispersion (e.g. slope, inflow velocities, etc.) in the SD-B fact sheet.
3. The impervious to pervious area ratio is 1:1 or less.

Impervious Area Dispersion designed to meet both pollutant control and flow control requirements are designated as SSD BMPs.

Impervious Area Dispersion

Description

Impervious area dispersion (dispersion) refers to the practice of effectively dispersing runoff from impervious areas onto pervious areas to reduce volume and means of infiltration.

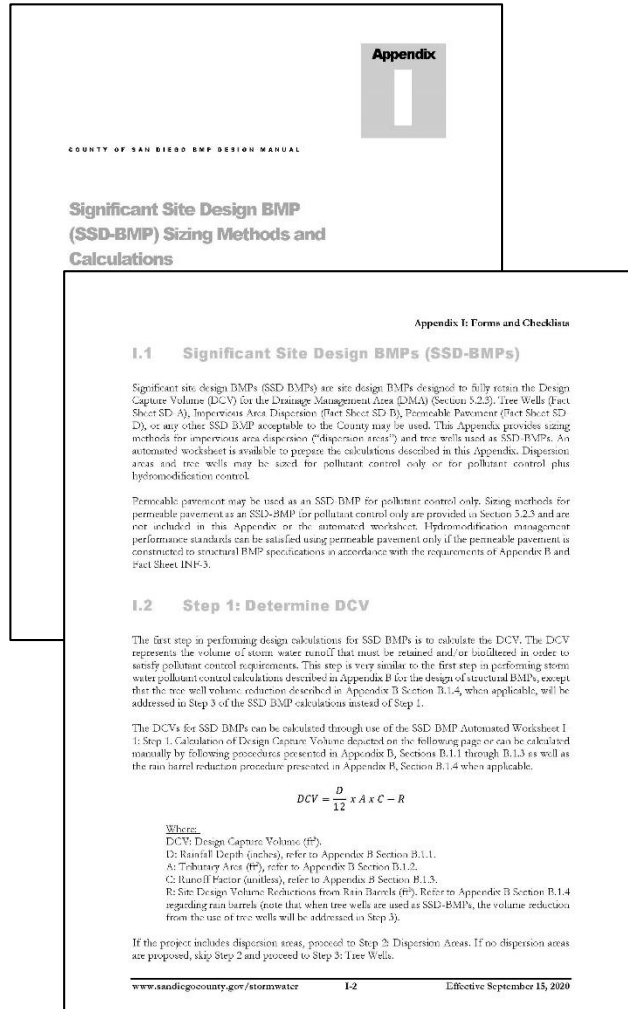

Typical dispersal methods include:

- An impervious area
- Splash energy
- Dedicated infiltration
- Optional enhancement
- Overflow

SSD-BMP Design Guidance 2020 BMP Design Manual

Fact Sheets in Appendix E *And* New Appendix I and Spreadsheet Tool

County of San Diego Automated Worksheets for Significant Site Design BMPs (SSD-BMPs) SD-A Tree Wells and SD-B Impervious Area Dispersion (Dispersion Areas) (Version 1.0)

WELCOME:

Welcome to the County of San Diego Automated Worksheets for Significant Site Design BMPs. These worksheets may be used to demonstrate compliance with stormwater pollutant control standards and hydromodification flow control standards set forth in the 2013 MS4 Permit for Priority Development Projects (PDPs).

This workbook is intended for use to demonstrate compliance when significant site design BMPs (SSD-BMPs) are proposed. SSD-BMPs are passive treatment systems that include SD-A Tree Wells and SD-B Dispersion Areas. This worksheet does not support the use of underdrains in SD-A or SD-B. If underdrains are proposed, then continuous simulation modeling should be performed.

When structural BMPs (INF-1, INF-2, INF-3, PR-1, BF-1, BF-2) are proposed, a different workbook, "County of San Diego Automated Stormwater Pollutant Control Worksheets" must be used.

INSTRUCTIONS:

General: To use this workbook, navigate to each of the worksheet tabs below and populate all light green cells with project specific information. Light green cells require user input, white cells are locked for editing and are automatically calculated, bright green cells are also locked for editing and are automatically populated based on results from previous worksheet tabs, grey cells are items that do not require user input because of previous user inputs, orange cells represent warnings where supplemental information and/or revisions may be required for compliance. The worksheets are formatted to accommodate calculations for up to 10 drainage areas and associated BMPs. Each drainage area and BMP is represented as a discrete column with corresponding user inputs and calculations appearing in the rows below. Please note that projects with more than 10 drainage areas may need to use more than one workbook to accommodate the entire project.

Step 1. DCV: Provide the required inputs to determine the design capture volume (DCV) for each PDP drainage management area (DMA). The calculations in this worksheet determine the initial design capture volume and also apply any applicable reductions associated with dispersion to pervious surfaces and incorporation of rain barrels. For DMAs intended to satisfy pollutant control and hydromodification control (when applicable) requirements using Dispersion Areas alone (i.e., not in combination with Tree Wells), the data entered in this tab must provide sufficient pervious area to reduce the remaining DCV in Line 37 to zero. Note that the use of semi-pervious surfaces as dispersion area will not reduce DCV to zero, but the use of engineered pervious surfaces and/or natural pervious surfaces can. For DMAs intended to incorporate Tree Wells, the remaining DCV in Line 37 is the amount to be managed by Tree Wells.

Step 2. Dispersion Areas: [Projects that do not use Dispersion Areas skip this step and go on to Step 3.] When the project includes Dispersion Areas per SD-B, provide required inputs to demonstrate that the requirements for Dispersion Areas are satisfied. If the DMA will also use SD-A Tree Wells downstream of the Dispersion Area to satisfy pollutant control and hydromodification control (when applicable), continue to Step 3. Tree Wells.

Step 3. Tree Wells: [Projects that do not use Tree Wells do not use this Step.] When the project includes Tree Wells per SD-A, provide required inputs to demonstrate that the requirements for Tree Wells are satisfied.

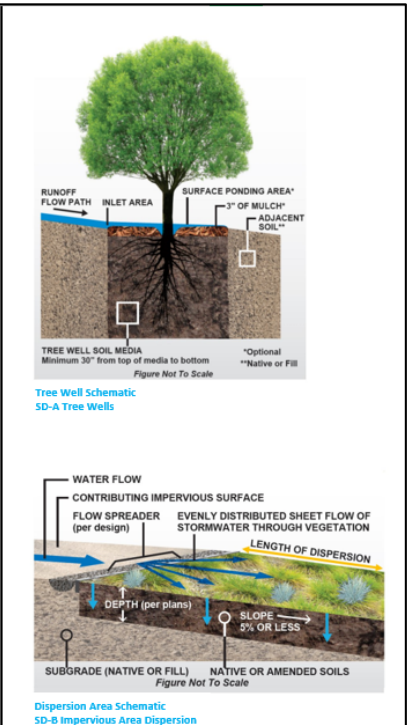

DISCLAIMER:

The County of San Diego has developed this tool in an effort to streamline traditionally complex efforts associated with planning, design, submittal, and review of PDPs. While the calculations performed herein are deemed to be in compliance with 2013 MS4 Permit requirements, applicants may elect to provide their own calculations. Use of this tool is optional and the County will not be held liable for any errors or other negative impacts associated with its use. In the event that the County performs updates to these worksheets, applicants that have not established reliance on previous versions of the worksheet via discretionary approval may be required to utilize the latest version of the worksheets. A summary of version releases is included below.

QUESTIONS:

-Questions relating to specific projects, submittal requirements, approval process, and/or policy-related issues should be directed your PDS Land Development Project Manager (link below).

[PDS Land Development Project Manager](#)

What is Impervious Area Dispersion?

- Impervious area dispersion refers to the practice of effectively disconnecting impervious areas from directly draining to the storm drain system by routing runoff from the impervious area onto an adjacent pervious dispersion area

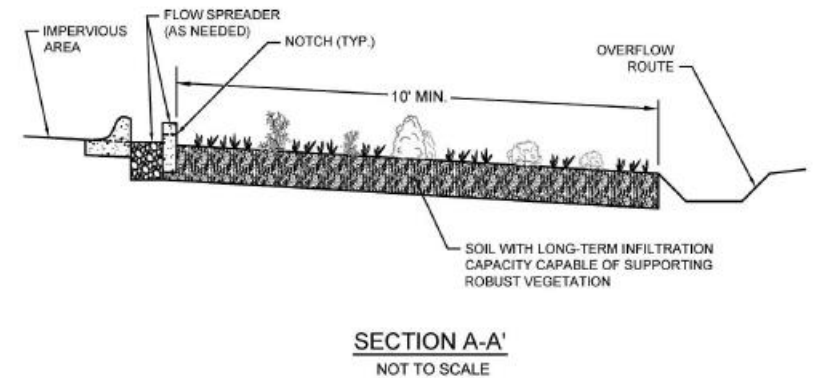

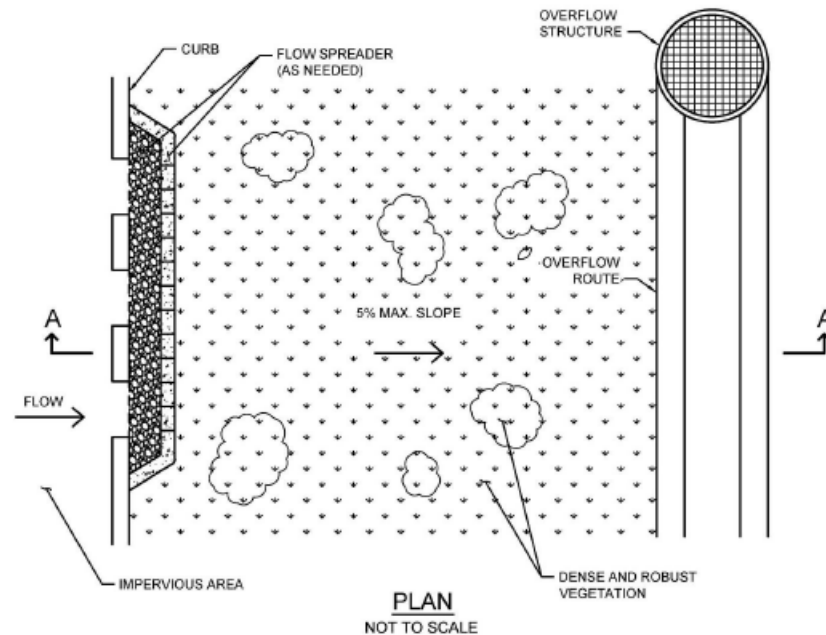

What is a Dispersion Area?

- Dispersion areas are dedicated pervious areas, typically vegetated, with in-situ soil infiltration capacity for partial or full infiltration

Dispersion Area Design Elements

- Ratio of impervious area to pervious area
- Dispersion area surface
- Sheet flow travel length across dispersion area
- Slope

Criteria for Dispersion Areas as SSD-BMPs

SSD-BMP	Criteria for Pollutant Control Only	Criteria for Pollutant Control Plus Hydromodification Control
Dispersion Area (SD-B)	<ul style="list-style-type: none"> Ratio of impervious area to engineered pervious surface and/or natural hydrologic soil group A soil area is 2:1 or less; OR ratio of impervious area to natural hydrologic soil group B soil area is 1:1 or less Sheet flow travel length across dispersion area is 10 feet or more* Slope is less than 5% 	<ul style="list-style-type: none"> Ratio of impervious area to engineered pervious surface area is 1:1 or less The top 11 inches of soil is amended in accordance with Fact Sheet SD-F Sheet flow travel length across dispersion area is 10 feet or more* Slope is less than 5%
<p>*Exemption to this minimum travel length criterion may be allowed when the contributing flow path length of the impervious area /pervious area travel length ≤ 2</p>		

Notes About Dispersion Area Surfaces

- Natural (Non-Amended) Soil
 - Hydrologic soil group A or B soils can serve as an SSD-BMP for pollutant control only
 - Hydrologic soil group C or D soils cannot serve as an SSD-BMP but can reduce DCV draining to a downstream BMP
- Engineered Pervious Surface
 - Soils that have been amended and mulched in accordance with Fact Sheet SD-F can serve as SSD-BMP for pollutant control
 - Soils with minimum 11-inch thickness amended and mulched in accordance with Fact Sheet SD-F can serve as SSD-BMP for pollutant control and hydromodification control
- Semi-Pervious Surface (e.g., cobbles, crushed aggregate)
 - Cannot serve as an SSD-BMP but can reduce DCV draining to a downstream BMP

Dispersion Areas Additional Notes

- Dispersion areas meeting the SSD-BMP criteria do not need an additional downstream BMP
- Dispersion areas not meeting the SSD-BMP criteria can be used as regular site design BMPs to reduce DCV draining to a downstream SSD-BMP or S-BMP
- Dispersion areas not meeting criteria to reduce DCV can still be included as baseline BMPs

What is a Tree Well?

- A tree well as a storm water management feature consists of a tree planted in an excavated area with a minimum designed volume of soil media to allow for storage, infiltration, and evapotranspiration of runoff

Tree Well Design Elements

- Tree type and size
- Volume of tree well soil

Schematic of Tree Well

Tree Palette Table

Criteria for Tree Wells as SSD-BMPs

SSD-BMP	Criteria for Pollutant Control Only	Criteria for Pollutant Control Plus Hydromodification Control
Tree Well (SD-A)	<ul style="list-style-type: none">• The total tree credit volume is greater than DCV• Provide tree well soil based on the mature tree canopy diameter in accordance with Fact Sheet SD-A	<ul style="list-style-type: none">• The total tree credit volume is greater than RRV, where RRV accounts for a multiplier applied to the DCV value• Provide tree well soil based on the mature tree canopy diameter in accordance with Fact Sheet SD-A

Tree Wells Design Process

- Coordinate with the project landscape architect to select a tree type and tree well depth
- Determine DCV
- If hydromodification control applies, determine DCV multiplier and calculate required retention volume (RRV)
- Determine number of trees required to satisfy DCV or RRV as applicable
- Determine the minimum soil volume required, area of each tree well, and spacing of trees

Tree Wells Design Process

- Select a tree species
- Tree palette table provided in Fact Sheet SD-A provides credit volume per tree
- Other tree species may be approved at the discretion of the County Landscape Architect.

	Botanical Name	Common Name	Mature Height (ft)	Mature Canopy Diameter (ft)	Credit Volume per Tree (ft ³)

18	<i>Quercus Suber</i>	Cork Oak	40		
19	<i>Sambucus Mexicana</i>	Blue Elderberry	30		

Tree Palette Table

Tree Wells Design Process

- Determine DCV

$$DCV = \frac{D}{12} \times A \times C - R$$

Where:

- DCV: Design Capture Volume
- D: Rainfall Depth (inches)
- A: Tributary Area (feet²)
- C: Runoff Factor (unitless)
- R: Site Design Volume Reductions from Rain Barrels

Tree Wells Design Process

- If hydromodification management applies, determine RRV
 - $RRV = DCV \times DCV \text{ Multiplier}$
 - DCV Multiplier Table provided in Fact Sheet SD-A and in Appendix I

Minimum Tree Well Soil Depth (inches)	Hydrologic Soil Group				
	A	B	C	D (Default)	
30"	1.60	2.20	2.50	2.90	DCV Multiplier
36"	1.80	2.47	2.83	3.17	
42"	2.00	2.73	3.17	3.43	
48"	2.20	3.00	3.50	3.70	

Tree Wells – Using the DCV Multiplier Table

Minimum Tree Well Soil Depth (inches)	Hydrologic Soil Group				
	A	B	C	D (Default)	
30"	1.60	2.20	2.50	2.90	DCV Multiplier
36"	1.80	2.47	2.83	3.17	
42"	2.00	2.73	3.17	3.43	
48"	2.20	3.00	3.50	3.70	

- Select from the standard tree well depths 30, 36, 42, or 48 inches
- Tree well soil depth shall be a minimum of 30 inches (Fact Sheet SD-A)
- If the actual depth of your tree well is not shown, select the next lower depth for the purpose of determining the DCV multiplier

Tree Wells Design Process

- Determine the number of trees required
- DCV or RRV divided by tree credit volume
- Tree credit volume provided in Tree Palette Table

	Botanical Name	Common Name	Mature Height (ft)	Mature Canopy Diameter (ft)	Credit Volume per Tree (ft3)
1	<i>Ceanothus 'Ray Hartman'</i>	California Mountain Lillac	30	10	40

Tree Palette Table

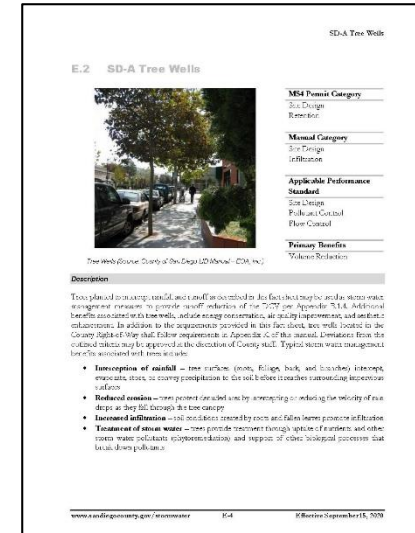

Tree Wells Design Process

- Determine the minimum soil volume per tree well
- Fact Sheet SD-A: Minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area

$$\bullet \text{ Minimum Tree Well Soil Volume (ft}^3\text{)} = 2 \times \pi \times \left(\frac{D}{2}\right)^2$$

Where:

- D = Mature canopy diameter (feet)

Shading and Design	Design Requirements
Underground utilities and overhead wires are considered in the design and installation of the tree well. The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area. The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area. The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area.	The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area. The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area. The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area.
Structural soil or soil substitute shall be used for the tree well. The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area. The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area. The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area.	Structural soil or soil substitute shall be used for the tree well. The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area. The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area. The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area.
The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area. The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area. The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area.	The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area. The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area. The tree well shall be designed to provide a minimum of 2 cubic feet of soil per square foot of mature tree canopy projection area.

☐

A minimum soil volume of 2 cubic feet per square foot of mature tree canopy projection area is provided for each tree. Canopy projection area is the ground area beneath the mature tree, measured at the drip line. Soil volume must be within 1.5 times the mature tree canopy radius. Soil depth shall be a minimum of 30 inches deep, preferably 36 inches deep. When placing tree well next to curb use Structural Soil as outlined in the section below titled "Confined Tree Well Soil Volume" and use Specifications in Appendix K Use Amended Soil per Fact Sheet SD-F in all other cases.

The minimum soil volume ensures that there is adequate storage volume to allow for unrestricted evapotranspiration and infiltration.

Tree Wells Design Process

- Determine the minimum tree well soil area

- $\text{Minimum Tree Well Soil Area (ft}^2\text{)} = \frac{\text{Minimum Tree Well Soil Volume (ft}^3\text{)}}{\text{Tree Well Soil Depth (ft)}}$

- Spacing considerations

- Tree well soil must be within 1.5 times the mature tree canopy radius
 - When multiple trees are used, the trees must be spaced so that the minimum tree well soil volume for each tree does not overlap
 - There may be other factors not related to storm water management that influence the spacing of trees – coordinate with the project landscape architect

Tree Wells Additional Notes

- Tree wells meeting the SSD-BMP criteria do not need an additional downstream BMP
- Tree wells not meeting the SSD-BMP criteria can be used as regular site design BMPs to reduce DCV draining to a downstream structural BMP
- Additional benefits associated with tree wells include habitat, energy conservation, air quality improvement, and aesthetic enhancement

DCV Reduction, Self-Retaining DMAs, & Flow Control

(CHAPTERS 5 & 6,
APPENDICES B & G)

Laura Henry, PE

BMP DM Chapter Updates Related to SSD-BMPs

- Chapter 5: Section 5.2.3 updated
 - Criteria for tree wells as SSD-BMPs added
 - References to Appendix I added
 - Text added stating that tree wells or dispersion areas meeting the SSD-BMP criteria do not need an additional downstream BMP
 - Clarification added about what must be included in the hydromodification analysis when a project includes some DMAs with SSD-BMPs

Site design BMPs used as part of a self-retaining DMA or as part of reducing ~~runoff coefficients from a DMA~~ DCV draining to a downstream BMP must be clearly called out on project plans and in the SWQMP.

For PDPs subject to hydromodification requirements and using structural BMPs to satisfy hydromodification flow control requirements, please note that Self-retaining DMAs not designed as SSD-BMPs must be included in the hydromodification analysis. When a project uses a combination of SSD-BMPs and structural BMPs to meet hydromodification requirements, the SSD-BMPs need not be included in the hydromodification analysis if the DMAs served by the SSD-BMPs are hydraulically separate from, not draining through, the structural BMPs.

BMP DM Chapter Updates Related to SSD-BMPs

- Chapter 6: Text added in Section 6.3 regarding use of SSD-BMPs for flow control
 - Page 6-4: An alternative to the use of structural measures is the use of dispersion areas or tree wells as SSD-BMPs.
 - Page 6-11: When SSD-BMPs are used to satisfy both storm water pollutant control and flow control for hydromodification management, sizing criteria developed for the SSD-BMP design account for both pollutant control and hydromodification control. When the appropriate criteria for pollutant control plus hydromodification control are applied in the SSD-BMP design, separate calculations are not necessary.

BMP DM Other Appendix Updates Related to SSD-BMPs

- Appendix B:
 - Text added stating that tree wells or dispersion areas may be used to eliminate the DCV requiring treatment and thereby fully satisfy pollutant control requirements when designed as significant site design BMPs (SSD-BMPs).
- Appendix G:
 - Text added: Alternatives to project-specific continuous simulation modeling include use of sizing factors described in Section G.2 for structural BMP design or use of dispersion areas or tree wells as SSD-BMPs in lieu of structural BMPs (see Section 5.2.3 and Appendix I).

SSD-BMP Tool

4 Separate Tabs

[illegible][illegible]

Notes:
 *If using more than one surface energy densities within the same DfAs, only the smallest surface energy densities should be entered. Alternatively, if more than one surface energy densities is proposed and/or the dimensions of single test wall assemblies will vary, separate DfAs may be delivered.
 **If the actual proposed installation depth is not available in the table of installed depths, select the next lower depth.
 ***Type Censor or Aspergillus Repensium may also indicate the Maximum Spacing of Tiles.

- Dark Green, White, Grey, and Light Green cells and up to 10 DMAs

County of San Diego Automated Worksheets for Significant Site Design BMPs (SSD-BMPs) SD-A Tree Wells and SD-B Impervious Area Dispersion (Dispersion Areas) (Version 1.0)

WELCOME:

Welcome to the County of San Diego Automated Worksheets for Significant Site Design BMPs. These worksheets may be used to demonstrate compliance with stormwater pollutant control standards and hydromodification flow control standards set forth in the 2013 MS4 Permit for Priority Development Projects (PDPs).

This workbook is intended for use to demonstrate compliance when significant site design BMPs (SSD-BMPs) are proposed. SSD-BMPs are passive treatment systems that include SD-A Tree Wells and SD-B Dispersion Areas. This worksheet does not support the use of underdrains in SD-A or SD-B. If underdrains are proposed, then continuous simulation modeling should be performed.

When structural BMPs (INF-1, INF-2, INF-3, PR-1, BF-1, BF-2) are proposed, a different workbook, "County of San Diego Automated Stormwater Pollutant Control Worksheets" must be used.

INSTRUCTIONS:

General: To use this workbook, navigate to each of the worksheet tabs below and populate all light green cells with project specific information. Light green cells require user input, white cells are locked for editing and are automatically calculated, bright green cells are also locked for editing and are automatically populated based on results from previous worksheet tabs, grey cells are items that do not require user input because of previous user inputs, orange cells represent warnings where supplemental information and/or revisions may be required for compliance. The worksheets are formatted to accommodate calculations for up to 10 drainage areas and associated BMPs. Each drainage area and BMP is represented as a discrete column with corresponding user inputs and calculations appearing in the rows below. Please note that projects with more than 10 drainage areas may need to use more than one workbook to accommodate the entire project.

Introduction Tab

Steps 1, 2 and 3

- Step 1: Inputs to determine DCV
- Step 2: Inputs for Dispersion Areas
- Step 3: Inputs for Tree Wells

Step 1. DCV: Provide the required inputs to determine the design capture volume (DCV) for each PDP drainage management area (DMA). The calculations in this worksheet determine the initial design capture volume and also apply any applicable reductions associated with dispersion to pervious surfaces and incorporation of rain barrels. For DMAs intended to satisfy pollutant control and hydromodification control (when applicable) requirements using Dispersion Areas alone (i.e., not in combination with Tree Wells), the data entered in this tab must provide sufficient pervious area to reduce the remaining DCV in Line 37 to zero. Note that the use of semi-pervious surfaces as dispersion area will not reduce DCV to zero, but the use of engineered pervious surfaces and/or natural pervious surfaces can. For DMAs intended to incorporate Tree Wells, the remaining DCV in Line 37 is the amount to be managed by Tree Wells.

Step 2. Dispersion Areas: [Projects that do not use Dispersion Areas skip this step and go on to Step 3.] When the project includes Dispersion Areas per SD-B, provide required inputs to demonstrate that the requirements for Dispersion Areas are satisfied. If the DMA will also use SD-A Tree Wells downstream of the Dispersion Area to satisfy pollutant control and hydromodification control (when applicable), continue to Step 3. Tree Wells.

Step 3. Tree Wells: [Projects that do not use Tree Wells do not use this Step.] When the project includes Tree Wells per SD-A, provide required inputs to demonstrate that the requirements for Tree Wells are satisfied.

Disclaimer and Questions

- Use of tool optional
- Updates
- Questions to PDS Project Manager and BMP Program email

DISCLAIMER:

The County of San Diego has developed this tool in an effort to streamline traditionally complex efforts associated with planning, design, submittal, and review of PDPs. While the calculations performed herein are deemed to be in compliance with 2013 MS4 Permit requirements, applicants may elect to provide their own calculations. Use of this tool is optional and the County will not be held liable for any errors or other negative impacts associated with its use. In the event that the County performs updates to these worksheets, applicants that have not established reliance on previous versions of the worksheet via discretionary approval may be required to utilize the latest version of the worksheets. A summary of version releases is included below.

QUESTIONS:

-Questions relating to specific projects, submittal requirements, approval process, and/or policy-related issues should be directed your PDS Land Development Project Manager (link below).

[PDS Land Development Project Manager](#)

-General questions/comments on this worksheet may be directed via email to BMP.Program@sdcounty.ca.gov with the subject line "SSD-BMP assistance."

	9	Thickness of Amended Soil	11	-	-	-	-	-	-	-	-	-	inches
	10	How is Flow Dispersed Across Width of Dispersion Area (definitions below)?	Roof Drains	-	-	-	-	-	-	-	-	-	unitless
Results	11	Is DCV Requirement Fully Satisfied by Dispersion Area?	Yes	-	-	-	-	-	-	-	-	-	yes/no
	12	Is Hydromodification Control Requirement Satisfied by Dispersion Area?	Yes	-	-	-	-	-	-	-	-	-	yes/no
	13	Are Dispersion Area Length, Slope, and Thickness of Amended Soil (when applicable) Adequate?	Yes	-	-	-	-	-	-	-	-	-	yes/no
No Warning Messages													

Notes:

***How is Flow Dispersed Across Width of Pervious Dispersion Area?**

Sheet Flow: Flow arrives as sheet flow across the width of the adjacent impervious area

Spreader(s): Flow is discharged from flow spreader(s) across the width of the pervious area

Roof Drains: Discharge from roof drains distributed across the width of the pervious area

Curb Cuts: Discharge from curb cuts distributed across the width of the pervious area

Other: Other (Describe in PDP SWQMP)

SSD-BMP Tool Design Process

EXAMPLE PROJECT

DISPERSION AREA EXAMPLE

Dispersion Area Example Data:

- 85th Percentile rainfall depth is 0.52"
- Hydromodification control applies
- 1,840 sf of impervious surface directed to pervious area
- 3,360 sf of engineered pervious surface serving as dispersion area
- 36' length of sheet flow across dispersion area
- 2% maximum slope
- 12" of amended soil
- Flow dispersed across width of dispersion area through sheet flow

DISPERSION AREA EXAMPLE – Step 1. DCV

SSD-BMP Automated Worksheet I-1: Step 1. Calculation of Design Capture Volume (V1.0)					
Category	#	Description	iii	iv	Units
Standard Drainage Basin Inputs	1	Drainage Basin ID or Name	DMA-3		unitless
	2	85th Percentile 24-hr Storm Depth	0.52		inches
	3	Is Hydromodification Control Applicable?	Yes		yes/no
	4	Impervious Surfaces <u>Not Directed to Dispersion Area</u> (C=0.90)			sq-ft
	5	Semi-Pervious Surfaces <u>Not Serving as Dispersion Area</u> (C=0.30)			sq-ft
	6	Engineered Pervious Surfaces <u>Not Serving as Dispersion Area</u> (C=0.10)			sq-ft

	17	Natural Type B Soil <u>Serving as Dispersion Area</u> per SD-B (Ci=0.14)			sq-ft
	18	Natural Type C Soil <u>Serving as Dispersion Area</u> per SD-B (Ci=0.23)			sq-ft
	19	Natural Type D Soil <u>Serving as Dispersion Area</u> per SD-B (Ci=0.30)			sq-ft
	20	Number of Rain Barrels Proposed per SD-E			#
	21	Average Rain Barrel Size			gal

Enter the DMA ID, 85th percentile rainfall, and hydromodification control applicability.

Data for this example: 85th percentile rainfall is 0.52 inches, hydromodification control applies.

DISPERSION AREA EXAMPLE – Step 1. DCV

SSD-BMP Automated Worksheet I-1: Step 1. Calculation of Design Capture Volume (V1.0)					
Category	#	Description	iii	iv	Units
Standard Drainage Basin Inputs	1	Drainage Basin ID or Name	DMA-3		unitless
	2	85th Percentile 24-hr Storm Depth	0.52		inches
	3	Is Hydromodification Control Applicable?	Yes		yes/no
	4	Impervious Surfaces <u>Not Directed to Dispersion Area</u> (C=0.90)			sq-ft
	5	Semi-Pervious Surfaces <u>Not Serving as Dispersion Area</u> (C=0.30)			sq-ft
	6	Engineered Pervious Surfaces <u>Not Serving as Dispersion Area</u> (C=0.10)			sq-ft
	7	Natural Type A Soil <u>Not Serving as Dispersion Area</u> (C=0.10)			sq-ft
	8	Natural Type B Soil <u>Not Serving as Dispersion Area</u> (C=0.14)			sq-ft
	9	Natural Type C Soil <u>Not Serving as Dispersion Area</u> (C=0.23)			sq-ft
	10	Natural Type D Soil <u>Not Serving as Dispersion Area</u> (C=0.30)			sq-ft
SSD-BMPs Proposed	11	Does Tributary Incorporate Dispersion and/or Rain Barrels?	Yes		yes/no
	12	Does Tributary Incorporate Tree Wells?	No		yes/no
Dispersion Area & Rain Barrel Inputs (Optional)	13	Impervious Surfaces Directed to Dispersion Area per SD-B (Ci=0.90)	1,840		sq-ft
	14	Semi-Pervious Surfaces Serving as Dispersion Area per SD-B (Ci=0.30)			sq-ft
	15	Engineered Pervious Surfaces Serving as Dispersion Area per SD-B (Ci=0.10)	3,360		sq-ft
	16	Natural Type A Soil Serving as Dispersion Area per SD-B (Ci=0.10)			sq-ft
	17	Natural Type B Soil Serving as Dispersion Area per SD-B (Ci=0.14)			sq-ft
	18	Natural Type C Soil Serving as Dispersion Area per SD-B (Ci=0.23)			sq-ft
	19	Natural Type D Soil Serving as Dispersion Area per SD-B (Ci=0.30)			sq-ft
	20	Number of Rain Barrels Proposed per SD-E			#
	21	Average Rain Barrel Size			gal

Select the SSD-BMPs proposed. *Data for this example: tributary incorporates dispersion and/or rain barrels.*

When Dispersion is selected in Line 11, Lines 13 through 21 become available for data entry.

Enter the DMA surface data in Lines 13 and 15. *Data for this example: 1,840 square feet impervious area drains to 3,360 square feet pervious area.*

DISPERSION AREA EXAMPLE – Step 1. DCV

SSD-BMP Automated Worksheet I-1: Step 1. Calculation of Design Capture Volume (V1.0)					
Category	#	Description	#	N	Units
Standard Drainage Basin Inputs	1	Drainage Basin ID or Name	DMA-3		unitless
	2	85th Percentile 24-hr Storm Depth	0.52		inches
	3	Is Hydromodification Control Applicable?	Yes		yes/no
	4	Impervious Surfaces Not Directed to Dispersion Area (C=0.90)			sq-ft
	5	Semi-Pervious Surfaces Not Serving as Dispersion Area (C=0.30)			sq-ft

	6	Ratio of Dispersed Impervious Area to Total Engineered Pervious Surface and/or Natural Soil Dispersion Area	-	-	0.55	-	-	-	-	-	-	-	unitless
	7	Dispersion Area Length (Length of Sheet Flow Across Dispersion Area)											feet
	8	Dispersion Area Slope											%
	9	Thickness of Amended Soil											inches
	10	How is Flow Dispersed Across Width of Dispersion Area (definitions below*)?											unitless
Results	11	Is DCV Requirement Fully Satisfied by Dispersion Area?	-	-	Incomplete	-	-	-	-	-	-	-	yes/no
	12	Is Hydromodification Control Requirement Satisfied by Dispersion Area?	-	-	Incomplete	-	-	-	-	-	-	-	yes/no
	13	Are Dispersion Area Length, Slope, and Thickness of Amended Soil (when applicable) Adequate?	-	-	Incomplete	-	-	-	-	-	-	-	yes/no
No Warning Messages													
Notes:													
*How is Flow Dispersed Across Width of Pervious Dispersion Area?													
Sheet Flow: Flow arrives as sheet flow across the width of the adjacent impervious area													
Spreader(s): Flow is discharged from flow spreader(s) across the width of the pervious area													
Roof Drains: Discharge from roof drains distributed across the width of the pervious area													
Curb Cuts: Discharge from curb cuts distributed across the width of the pervious area													
Other: Other (Describe in PDP SWQMP)													

DISPERSION AREA EXAMPLE – Step 2. Dispersion Area Validation

SSD-BMP Automated Worksheet I-2: Step 2. Dispersion Area Validation (V1.0)					
Category	#	Description	iii	iv	Units
Standard Dispersion Area Inputs	1	Drainage Basin ID or Name	DMA-3	←	unitless
	2	Final Design Capture Volume (DCV)	0	←	cubic-feet
	3	Is Hydromodification Control Applicable?	Yes	←	yes/no
	4	Total Impervious Area Dispersed to Pervious Surface	1,840	←	sq-ft
	5	Total Engineered Pervious Surface and/or Natural Soil Dispersion Area (Does Not Include Semi-Pervious Surfaces Serving as Dispersion Area)	3,360	←	sq-ft
	6	Ratio of Dispersed Impervious Area to Total Engineered Pervious Surface and/or Natural Soil Dispersion Area	0.55	←	unitless
	7	Dispersion Area Length (Length of Sheet Flow Across Dispersion Area)			feet
	8	Dispersion Area Slope			%
	9	Thickness of Amended Soil			inches
	10	How is Flow Dispersed Across Width of Dispersion Area (definitions below*)?			unitless

Data that was provided or calculated in the DCV tab is already populated in the Dispersion Areas tab.

DISPERSION AREA EXAMPLE – Step 2. Dispersion Area Validation

SSD-BMP Automated Worksheet I-2: Step 2. Dispersion Area Validation (V1.0)					
Category	#	Description	iii	iv	Units
Standard Dispersion Area Inputs	1	Drainage Basin ID or Name	DMA-3	-	unitless
	2	Final Design Capture Volume (DCV)	0	-	cubic-feet
	3	Is Hydromodification Control Applicable?	Yes	-	yes/no
	4	Total Impervious Area Dispersed to Pervious Surface	1,840	-	sq-ft
	5	Total Engineered Pervious Surface and/or Natural Soil Dispersion Area (Does Not Include Semi-Pervious Surfaces Serving as Dispersion Area)	3,360	-	sq-ft
	6	Ratio of Dispersed Impervious Area to Total Engineered Pervious Surface and/or Natural Soil Dispersion Area	0.55	-	unitless
	7	Dispersion Area Length (Length of Sheet Flow Across Dispersion Area)	36	←	feet
	8	Dispersion Area Slope	2.0	←	%
	9	Thickness of Amended Soil	12	←	inches
	10	How is Flow Dispersed Across Width of Dispersion Area (definitions below*)?	Sheet Flow	←	unitless

Enter the length, slope, and thickness of the amended soil.

Data for this example: 36 feet of travel length, 2% slope, 12-inch thickness of amended soil, flow is dispersed as sheet flow off the impervious area.

DISPERSION AREA EXAMPLE – Step 2. Dispersion Area Validation

SSD-BMP Automated Worksheet I-2: Step 2. Dispersion Area Validation (V1.0)					
Category	#	Description	iii	iv	Units
Standard Dispersion Area Inputs	1	Drainage Basin ID or Name	DMA-3	-	unitless
	2	Final Design Capture Volume (DCV)	0	-	cubic-feet
	3	Is Hydromodification Control Applicable?	Yes	-	yes/no
	4	Total Impervious Area Dispersed to Pervious Surface	1,840	-	sq-ft
	5	Total Engineered Pervious Surface and/or Natural Soil Dispersion Area (Does Not Include Semi-Pervious Surfaces Serving as Dispersion Area)	3,360	-	sq-ft
	6	Ratio of Dispersed Impervious Area to Total Engineered Pervious Surface and/or Natural Soil Dispersion Area	0.55	-	unitless
	7	Dispersion Area Length (Length of Sheet Flow Across Dispersion Area)	36	←	feet
	8	Dispersion Area Slope	2.0	←	%
	9	Thickness of Amended Soil	12	←	inches
	10	How is Flow Dispersed Across Width of Dispersion Area (definitions below*)?	Sheet Flow		unitless
Results	11	Is DCV Requirement Fully Satisfied by Dispersion Area?	Yes	←	yes/no
	12	Is Hydromodification Control Requirement Satisfied by Dispersion Area?	Yes	←	yes/no
	13	Are Dispersion Area Length, Slope, and Thickness of Amended Soil (when applicable) Adequate?	Yes	←	yes/no
No Warning Messages					

When lines 7, 8, and 9 are completed, Lines 11, 12, and 13 will be updated.

DISPERSION AREA EXAMPLE – DMA Exhibit and Plans

Show on the plans and DMA Exhibit:

- Impervious surfaces directed to pervious surfaces
- Impervious to pervious ratio 1:1 or less
- Pervious surfaces have amended soil per SD-F

TREE WELL EXAMPLE

Tree Well Example Data

- 85th Percentile rainfall depth is 0.52"
- Hydromodification control applies
- Hydrologic soil group C
- 1,524 sf of impervious surfaces not serving as dispersion area
- 1,784 sf of engineered pervious surfaces not serving as dispersion areas
- Tributary does not incorporate dispersion areas or rain barrels
- Tributary incorporates tree wells

TREE WELL EXAMPLE – Step 1. DCV

SSD-BMP Automated Worksheet I-1: Step 1. Calculation of Design Capture Volume (V1.0)					
Category	#	Description	i	∞	Units
Standard Drainage Basin Inputs	1	Drainage Basin ID or Name	DMA-1		unitless
	2	85th Percentile 24-hr Storm Depth	0.52		inches
	3	Is Hydromodification Control Applicable?	Yes		yes/no
	4	Impervious Surfaces <u>Not</u> Directed to Dispersion Area (C=0.90)			sq-ft
	5	Semi-Pervious Surfaces <u>Not</u> Serving as Dispersion Area (C=0.30)			sq-ft
	6	Engineered Pervious Surfaces <u>Not</u> Serving as Dispersion Area (C=0.10)			sq-ft
	7	Natural Type A Soil <u>Not</u> Serving as Dispersion Area (C=0.10)			sq-ft
	8	Natural Type B Soil <u>Not</u> Serving as Dispersion Area (C=0.14)			sq-ft
	9	Natural Type C Soil <u>Not</u> Serving as Dispersion Area (C=0.23)			sq-ft
	10	Natural Type D Soil <u>Not</u> Serving as Dispersion Area (C=0.30)			sq-ft
SSD-BMPs Proposed	11	Does Tributary Incorporate Dispersion and/or Rain Barrels?			yes/no
	12	Does Tributary Incorporate Tree Wells?			yes/no
Dispersion Area & Rain Barrel Inputs (Optional)	13	Impervious Surfaces <u>Directed</u> to Dispersion Area per SD-B (Ci=0.90)			sq-ft
	14	Semi-Pervious Surfaces <u>Serving</u> as Dispersion Area per SD-B (Ci=0.30)			sq-ft
	15	Engineered Pervious Surfaces <u>Serving</u> as Dispersion Area per SD-B (Ci=0.10)			sq-ft
	16	Natural Type A Soil <u>Serving</u> as Dispersion Area per SD-B (Ci=0.10)			sq-ft
	17	Natural Type B Soil <u>Serving</u> as Dispersion Area per SD-B (Ci=0.14)			sq-ft
	18	Natural Type C Soil <u>Serving</u> as Dispersion Area per SD-B (Ci=0.23)			sq-ft
	19	Natural Type D Soil <u>Serving</u> as Dispersion Area per SD-B (Ci=0.30)			sq-ft
	20	Number of Rain Barrels Proposed per SD-E			#
	21	Average Rain Barrel Size			gal

Enter the DMA ID, 85th percentile rainfall depth, and hydromodification control applicability.

Data for this example: 85th percentile rainfall is 0.52 inches, hydromodification control applies.

TREE WELL EXAMPLE – Step 1. DCV

SSD-BMP Automated Worksheet I-1: Step 1. Calculation of Design Capture Volume (V1.0)					
Category	#	Description	i	n	Units
Standard Drainage Basin Inputs	1	Drainage Basin ID or Name	DMA-1		unitless
	2	85th Percentile 24-hr Storm Depth	0.52		inches
	3	Is Hydromodification Control Applicable?	Yes		yes/no
	4	Impervious Surfaces <u>Not Directed to Dispersion Area</u> (C=0.90)	1,524		sq-ft
	5	Semi-Pervious Surfaces <u>Not Serving as Dispersion Area</u> (C=0.30)			sq-ft
	6	Engineered Pervious Surfaces <u>Not Serving as Dispersion Area</u> (C=0.10)	1,784		sq-ft
	7	Natural Type A Soil <u>Not Serving as Dispersion Area</u> (C=0.10)			sq-ft
	8	Natural Type B Soil <u>Not Serving as Dispersion Area</u> (C=0.14)			sq-ft
	9	Natural Type C Soil <u>Not Serving as Dispersion Area</u> (C=0.23)			sq-ft
	10	Natural Type D Soil <u>Not Serving as Dispersion Area</u> (C=0.30)			sq-ft
SSD-BMPs Proposed	11	Does Tributary Incorporate Dispersion and/or Rain Barrels?	No		yes/no
	12	Does Tributary Incorporate Tree Wells?	Yes		yes/no
Dispersion Area & Rain Barrel Inputs (Optional)	13	Impervious Surfaces <u>Directed to Dispersion Area</u> per SD-B (Ci=0.90)			sq-ft
	14	Semi-Pervious Surfaces <u>Serving as Dispersion Area</u> per SD-B (Ci=0.30)			sq-ft
	15	Engineered Pervious Surfaces <u>Serving as Dispersion Area</u> per SD-B (Ci=0.10)			sq-ft
	16	Natural Type A Soil <u>Serving as Dispersion Area</u> per SD-B (Ci=0.10)			sq-ft
	17	Natural Type B Soil <u>Serving as Dispersion Area</u> per SD-B (Ci=0.14)			sq-ft
	18	Natural Type C Soil <u>Serving as Dispersion Area</u> per SD-B (Ci=0.23)			sq-ft
	19	Natural Type D Soil <u>Serving as Dispersion Area</u> per SD-B (Ci=0.30)			sq-ft
	20	Number of Rain Barrels Proposed per SD-E			#
	21	Average Rain Barrel Size			gal

Enter the DMA surface data and SSD-BMPs proposed.

Data for this example: 1,524 square feet impervious area; 1,784 square feet pervious area; no rain barrels; dispersion will not be quantified for DCV reduction; tree wells will be used.

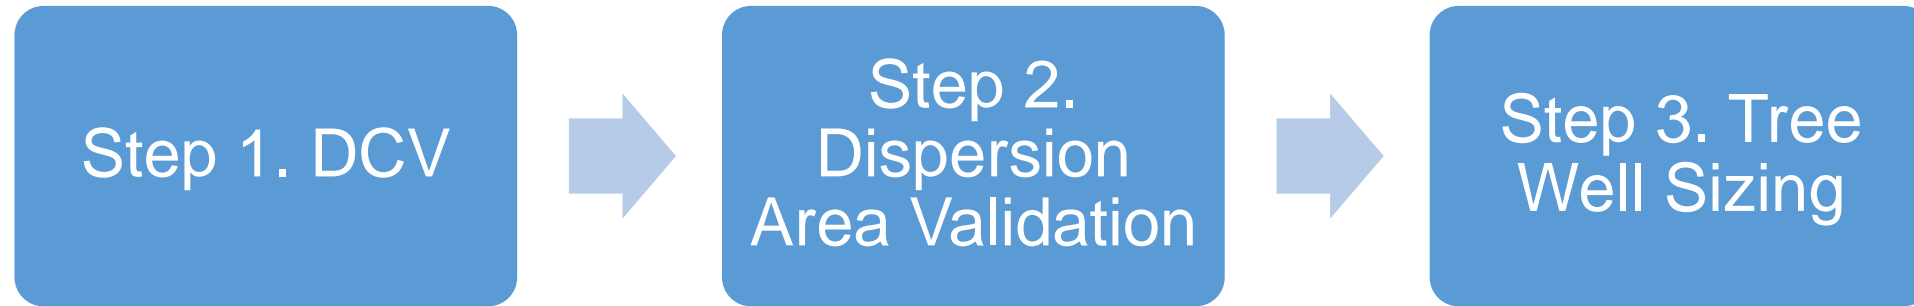

TREE WELL EXAMPLE – Step 1. DCV

SSD-BMP Automated Worksheet I-1: Step 1. Calculation of Design Capture Volume (V1.0)					
Category	#	Description	I	N	Units
Standard Drainage Basin Inputs	1	Drainage Basin ID or Name	DMA-1		unitless
	2	85th Percentile 24-hr Storm Depth	0.52		inches
	3	Is Hydromodification Control Applicable?	Yes		yes/no

Results	24	Are Tree Well Soil Installation Requirements Met?	Incomplete	-	-	-	-	-	-	-	-	-	yes/no
	25	Is Remaining DCV Requirement Fully Satisfied by Tree Well(s)?	Incomplete	-	-	-	-	-	-	-	-	-	yes/no
	26	Is Hydromodification Control Requirement Satisfied by Tree Well(s)?	Incomplete	-	-	-	-	-	-	-	-	-	yes/no
No Warning Messages													
Notes: *If using more than one mature canopy diameter within the same DMA, only the smallest mature canopy diameter should be entered. Alternatively, if more than one mature canopy diameter is proposed and/or the dimensions of multiple tree well installations will vary, separate DMAs may be delineated. **If the actual proposed installation depth is not available in the table of standard depths, select the next lower depth. ***Tree Canopy or Agency Requirements May Also Influence the Minimum Spacing of Trees.													

TREE WELL EXAMPLE – Step 3. Tree Well Sizing

SSD-BMP Automated Worksheet I-3: Step 3. Tree Well Sizing (V1.0)					
Category	#	Description	i	N	Units
Standard Tree Well Inputs	1	Drainage Basin ID or Name	DMA-1	-	unitless
	2	Design Capture Volume Tributary to BMP	67	-	cubic-feet
	3	Is Hydromodification Control Applicable?	Yes	-	yes/no
	4	Predominant NRCS Soil Type Within Tree Well(s) Location			unitless
	5	Select a Tree Species for the Tree Well(s) Consistent with SD-A Tree Palette Table Note: Numbers shown in list are Tree Species Mature Canopy Diameters			unitless
	6	Tree Well(s) Soil Depth (Installation Depth) Must be 30, 36, 42, or 48 Inches; Select from Standard Depths**			inches
	7	Number of Identical* Tree Wells Proposed for this DMA			trees
	8	Proposed Width of Tree Well(s) Soil Installation for One (1) Tree			feet
	9	Proposed Length of Tree Well(s) Soil Installation for One (1) Tree			feet

Data that was provided or calculated in the DCV tab is already populated in the Tree Well Sizing tab.

TREE WELL EXAMPLE – Step 3. Tree Well Sizing

SSD-BMP Automated Worksheet I-3: Step 3. Tree Well Sizing (V1.0)					
Category	#	Description	i	N	Units
Standard Tree Well Inputs	1	Drainage Basin ID or Name	DMA-1	-	unitless
	2	Design Capture Volume Tributary to BMP	67	-	cubic-feet
	3	Is Hydromodification Control Applicable?	Yes	-	yes/no
	4	Predominant NRCS Soil Type Within Tree Well(s) Location	C		unitless
	5	Select a Tree Species for the Tree Well(s) Consistent with SD-A Tree Palette Table Note: Numbers shown in list are Tree Species Mature Canopy Diameters	20' - Strawberry Tree		unitless
	6	Tree Well(s) Soil Depth (Installation Depth) Must be 30, 36, 42, or 48 Inches; Select from Standard Depths**	30		inches
	7	Number of Identical* Tree Wells Proposed for this DMA			trees
	8	Proposed Width of Tree Well(s) Soil Installation for One (1) Tree			feet
	9	Proposed Length of Tree Well(s) Soil Installation for One (1) Tree			feet

Enter the soil type (hydrologic soil group), tree species, and installation depth.

Data for this example: Hydrologic soil group C, strawberry tree, 30-inch installation depth.

TREE WELL EXAMPLE – Step 3. Tree Well Sizing

No Warning Messages					

Completion of lines 1 through 6 causes lines 10 through 23 to be automatically calculated.

Lines 7, 8, and 9 must be completed by the user to confirm the number of trees and installation dimensions proposed before Lines 24, 25, and 26 will update.

Lines 17 through 20 provide minimum requirements for the number of trees and tree well dimensions.

Lines 17 through 20 assist the user to complete the design and complete Lines 7, 8, and 9, as well as assisting the plan reviewer.

Q&A

Permanent BMP Verification Requirements (PDP SWQMP FORM ATTACHMENT 10)

Juli Hughes, EIT, QSP, CESSWI

PDP SWQMP Attachment 10: BMP Installation Verification

County of San Diego
Stormwater Quality Management Plan (SWQMP)
Attachment 10: BMP Installation Verification for Priority Development Projects

This form must be accepted by the County prior to the release of construction permits or granting of occupancy for applicable portions of a Priority Development Project (PDP). Its purpose is to provide documentation of the final installation of permanent Best Management Practices (BMPs) used to satisfy Structural Performance Standards for the development project. Compliance with these standards reduces the discharge of pollutants and flows from the completed project site. Applicable standards may be satisfied using Structural BMPs (S-BMPs), Significant Site Design BMPs (SSD-BMPs), or both. Applicants are responsible for providing all requested information.

PART 1 PROJECT INFORMATION

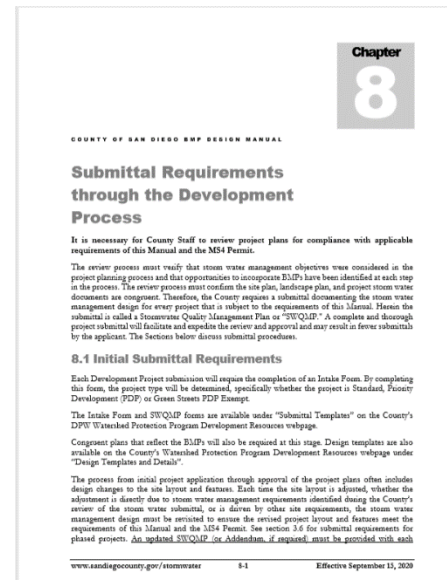

A. Project Summary Information	
Project Name	I
Record ID (e.g. grading/improvement plan number, building permit)	I
Project Address	I
Assessor's Parcel Number(s) APN(s)	I
Project Watershed (Hydrologic Unit, Area, and Subarea Name with Numeric Identifier)	I
B. Owner Information	
Name	I
Address	I
Email Address	I
Phone Number	I

COUNTY – OFFICIAL USE ONLY	
INTAKE ID#	
ACCEPTANCE ID#	

- Attachment 10 to the PDP SWQMP is a 6-page fillable form located on WPP's Development Resources website under Submittal Templates
- This form is submitted to your County inspector after the construction of your permanent BMPs is complete.

What is the Verification Process for BMPs?

- Permanent BMPs for all private Priority Development Projects (PDPs) *must* be accepted into the County's inventory prior to release of construction permits or granting of occupancy.
- The Verification Process for permanent BMPs has *not* changed with the 2020 update to the BMP Design Manual.
- Guidance for the BMP Verification Process can be found in Chapter 8 of the BMP Design Manual.

What is the Verification Process for BMPs?

- At the final stage of a PDP project, the County requires SWQMP Attachment 10, the BMP Installation Verification form, to be submitted to the applicable inspector (either Private Development Construction Inspection (PDCI) or PDS Building Department).
- The applicable inspector will verify in the field that the permanent BMP has been constructed in accordance with the plan details.
- The inspector will sign page 6 of the form and submit it to WPP as a package, along with the approved SWQMP for the project.
- The package is then routed to WPP for review.
- The BMP Installation Verification form *must* be signed and accepted by WPP prior to granting of occupancy and prior to record plan.

Example of an acceptable BMP Installation Verification Submittal

An example of a completed Attachment 10 BMP Installation form can be found at the end of the PDP SWQMP Example for the SSD-BMP Tool on the Development Resources webpage under CALCULATORS AND MODELING SOFTWARE

Example of an acceptable BMP Installation Verification Submittal: Page 2, a note about Partialals

County of San Diego
Stormwater Quality Management Plan (SWQMP)
Attachment 10: BMP Installation Verification for Priority Development Projects

****THIS PAGE IS FOR PARTIAL VERIFICATIONS ONLY ****

If final grade release or granting of occupancy is being requested for only a portion of the Priority Development Project (PDP) please fill out the table below. Include ALL of the Structural BMPs and/or Significant Site Design BMPs for the entire project in the table. Include a mark-up of the DMA map from the approved SWQMP with this Verification package that clearly shows which DMAs you are submitting for approval and which DMAs have already been accepted (if any).

DMA #	APN or Lot #	BMP ID #	WPP Acceptance Date (If applicable)	WPP Acceptance ID# (If applicable, e.g. 20/21-001)
		N/A		

- Page 2 of the form is *Not Applicable* for most projects and can be left blank.
- If you have a larger project that is being completed in phases, this table should be COMPLETELY filled out with the very first Verification Submittal. All of the permanent BMPs for the entire project should be listed.

Example of an acceptable BMP Installation Verification Submittal: Part 2 BMP INVENTORY INFORMATION

The Table in Part 2 should list all of the BMPs that are being submitted for Verification. In this example only Significant Site Design BMPs are being submitted.

County of San Diego
Stormwater Quality Management Plan (SWQMP)
Attachment 10: BMP Installation Verification for Priority Development Projects

Page 3
Preparation Date: 9/15/2020

PART 2 BMP INVENTORY INFORMATION

Use this table to document Structural BMPs (S-BMPs) and Significant Site Design BMPs (SSD-BMPs) for the PDP. All DMAs that are not self-mitigating or de minimis must have at least one Structural BMP or Significant Site Design BMP.

- In Part A list all Structural BMPs (including both Pollutant Control and/or Hydromodification as applicable) by DMA.
- Complete Part B for all DMAs that contain only Significant Site Design BMPs. SSD-BMPs are Site Design BMPs (SSD-BMPs) that are sized and constructed to satisfy Structural Performance Standards for a DMA.
- The information provided for each BMP in the table must match that provided in the Stormwater Quality Management Plan (SWQMP), construction plans, maintenance agreements, and other relevant project documentation.

Example of an acceptable BMP Installation Verification Submittal: Part 3 REQUIRED ATTACHMENTS

PHOTOGRAPHS

Photos of each completed BMP are required. Construction photos are recommended and may be requested.

MAINTENANCE AGREEMENT

Private Category 1 and Category 2 Structural BMPs require recorded maintenance agreements.

Significant Site Design (SSD) BMPs such as Tree Wells do *not* require a maintenance agreement to be recorded.

CONSTRUCTION PLANS

Include all related construction plans.

LANDSCAPE PLANS

If your BMP is required to be vegetated AND there is a Landscape Permit, include the Final Landscape Plans and the Water Use Authorization from the County Landscape Architect.

County of San Diego
Stormwater Quality Management Plan (SWQMP)
Attachment 10: BMP Installation Verification for Priority Development Projects

PART 3 REQUIRED ATTACHMENTS

For the permanent BMPs listed in Part 2, submit the following to the County inspector along with this Verification form as a package (check all that are attached):

- ☒ **PHOTOGRAPHS:** Final construction photos of every permanent BMP listed in Part 2 are required. Final photos must be recent and be labeled with the date and a BMP Identifier. Additional photographs illustrating proper construction of the BMPs are recommended to be included and may be requested by WPP prior to acceptance of this Verification (e.g. excavation depths, liners, hydromodification orifices, Biofiltration Soil Media (BSM), vegetation, mulch).
- ☐ **MAINTENANCE AGREEMENTS:** Copies of approved and recorded Storm Water Maintenance Agreements (SWMA), Category 1 Maintenance Notification Agreements (MN), or Encroachment Maintenance and Removal Agreements (EMRA) for all S-BMPs.
Note: Significant Site Design (SSD) BMPs and most Category 4 BMPs do not require recorded maintenance agreements.
- ☒ **CONSTRUCTION PLANS:** Submit electronic and/or 11" X 17" hard copies of the current approved Construction Plan sheets for the Record ID(s) listed on Page 1:
 - ☒ Grading Plans
 - ☒ Improvement Plans
 - ☐ Precise Grading Plan
 - ☐ Building Plan (Applicable BMP Sheets only)
 - ☐ Other (Please specify) _____

For each Construction Plan, the sheets submitted must incorporate all of the following:

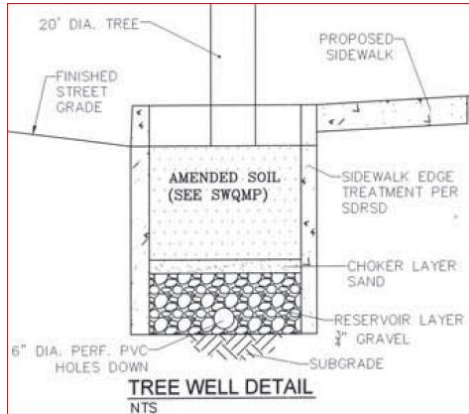

- A BMP Table on Sheet 1, AND
- A plan detail cross-section of each verified as-built BMP, AND
- The location of each verified as-built BMP

- ☒ **LANDSCAPE PLANS:** If the PDP includes vegetated BMPs and has a Landscape Plan, submit the following:
- ☒ Final Landscape Plans
- ☒ Water Use Authorization from PDS Landscape Architect

County of San Diego SWQMP Attachment 10
Template Date: September 15, 2020

Preparation Date: 9/15/2020

Example of an acceptable BMP Installation Verification Submittal: Part 3 REQUIRED ATTACHMENTS Photos

BMP 1
10-27-2020

Example of an acceptable BMP Installation Verification Submittal: Part 4 PREPARER'S CERTIFICATION

Structural BMPs must be certified by a licensed professional engineer.

The engineer who prepared the BMP Installation Verification form should sign and stamp Part 4.

Significant Site Design BMPs do not require an engineer's certification.

If your project *only* has Significant Site Design BMPs then the Verification form should be signed by the preparer.

PART 4 PREPARER'S CERTIFICATION

By signing below, I certify that the BMP(s) listed in Part 2 of this Verification Form have been constructed and are in substantial conformance with the approved plans and applicable regulations. I understand the County reserves the right to inspect the above BMPs to verify compliance with the approved plans and Watershed Protection Ordinance (WPO). Should it be determined that the BMPs were not constructed to plan or code, corrective actions may be necessary before permits can be closed.

Note: Structural BMPs must be certified by a licensed professional engineer.

Please sign and, if applicable, provide your seal below.

Preparer's Name:	Not An Engineer
Email Address:	Not_An_Engineer@gmail.com
Phone Number:	555-867-5309
Preparer's Signature:	
Date:	9-15-2020

[SEAL]

BMP Installation Verification: WPP Acceptance

What happens next?

- Once Watershed Protection has accepted the BMPs the County inspector can continue the process of closing out the project.
- Watershed Protection will inventory the BMPs in an asset management system in order to track their maintenance in perpetuity, as required by the MS4 permit.
- Each year the County of San Diego is required to verify that Structural BMPs located on properties in its jurisdiction are maintained and operating effectively.

Annual Structural BMP Maintenance Verification

 Department of Public Works

 MENU ▾ I WANT TO ... ROADS ENGINEERING ENVIRONMENT DEVELOPMENT

Home

Maintaining My Structural BMP

Welcome to the County of San Diego's webpage for stormwater structural BMPs. You can use this website to do the following:

- **Learn about structural BMPs** by viewing our [BMP Fact Sheets](#).
- **Submit your annual structural BMP maintenance verification.** Did you receive a letter from the County about your structural BMP? If so, continue to our [Structural BMP verification page](#) to submit your BMP verification online.

Every summer, the County notifies property owners (by mail) of their responsibility to verify that their structural BMPs are maintained and operating properly.

Property owners must submit this verification to the County **by October 1st** (the official start of the rainy season).

In accordance with Section 67.812(b) of the County Code of Regulations, if property owners do not respond to the notification to verify, the County may initiate an enforcement investigation or follow-up inspection.

[Watershed Protection Home Page](#)

Structural BMP Verification

Stormwater **structural BMPs** require regular maintenance to effectively remove pollutants from stormwater runoff. To verify that your structural BMPs are properly maintained, you will need to do the following:

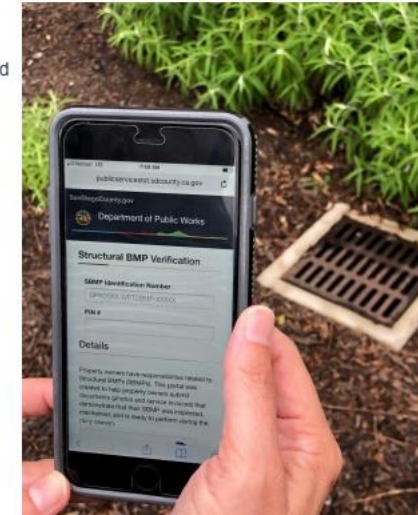

Step 1: Inspect your BMPs

The envelope you receive from the County will include general guidance on how to inspect and maintain your BMPs. If you need help locating your BMPs, you can visit the County's [Structural BMP Verification Portal](#) to view a map with the location of your structural BMPs.

Step 2: Maintain your BMPs

Typically, maintenance will include removing trash and accumulated sediment, repairing eroded areas, trimming overgrown vegetation, and replacing any damaged components. View our [Structural BMP Fact Sheets](#) for more information about maintaining specific BMP types.

Step 3: Take photos of your BMPs

county of san diego

tree wells

Tree Wells are a type of Significant Site Design Best Management Practice (SSD-BMP) used for managing stormwater runoff. Tree Wells are installed on certain properties across the County to help **prevent pollutants** such as trash, fertilizers, pesticides, and sediment from making their way into storm drains and ultimately to our local creeks, rivers, and ocean. Your property is one of several across the County with at least one Tree Well.

FIGURE 1 Tree Well (Cross-Section View)

Tree Wells Keep Our Waterways Clean

Your Tree Wells are designed to remove pollutants from stormwater runoff generated by your property to the maximum extent practicable. As an owner of one of these properties, the County requests your participation by performing **routine inspections and maintenance actions** to ensure that your Tree Wells are operating effectively.

Our records indicate that you have at least one Tree Well on your property. To help you maintain this Tree Well, the **County of San Diego Watershed Protection Program** is providing you with this informational flyer to answer questions you may have about Tree Wells and how to maintain them.

How Your Tree Well Works

Tree Wells divert stormwater runoff to the soil immediately surrounding a planted tree (see figure 1). Generally, the areas around the Tree Well are sloped to allow water to naturally flow into the Tree Well. Typically after heavy rainfall, runoff collected in the Tree Well filters through the soil removing pollutants from

OSLANE2019

more info >>>

county of san diego

tree wells

stormwater runoff. Tree Wells also reduce the volume of runoff entering the storm drain system and can prevent surface floods. Tree Wells are often found adjacent to walkways, driveways, and parking areas to capture and treat stormwater runoff flowing from these surfaces.

Find And Maintain Your Tree Well

To find your Tree Well, look for trees where water flows to and accumulates around the base of the tree after rainfall. Tree Wells may be planted in the ground or in planter boxes and positioned along walkways, driveways, and other landscaped areas of your property.

Once you have found your Tree Well, it is important to maintain it. Keeping the Tree Well in working condition helps keep our local waterways clean. Below are a few of the maintenance tasks that may need to be performed:

- Remove and replace any dead trees.
- If you see standing water for longer than 24 hours after rainfall, loosen or replace soil to promote infiltration into the soil.
- Remove any accumulated litter or debris obstructing the flow to the tree well and dispose of it properly.
- At the entrance of the tree well, or inlet area, maintain the surface depression or slope to ensure water flows into the tree well.
- For tree wells with mulch around the base of the tree, keep the mulch from direct contact with the tree trunk to prevent bark rot.

For a list of other tasks, refer to the maintenance verification form or maintenance plans from your housing developer.

The Watershed Protection Program performs visual inspections of Tree Wells periodically. Failure to conduct the recommended maintenance tasks of your Tree Well may lead to a poorly operating Tree Well and may initiate a follow up inspection.

Flow spreader

Downspout and splash block

dispersion areas

Dispersion Areas are a type of Significant Site Design Best Management Practice (SSD-BMP) used for managing stormwater runoff. Dispersion Areas are installed on certain properties across the County to help **reduce stormwater volume and prevent pollutants** such as trash, fertilizers, pesticides, and sediment from making their way into storm drains and ultimately to our local creeks, rivers, and ocean. Your property is one of several across the County that has at least one Dispersion Area.

Dispersion Areas Keep Our Waterways Clean

The Dispersion Areas on your property are designed to slow and reduce the volume of stormwater runoff entering the storm drain system. Dispersion Areas also help remove pollutants generated on your property before water reaches the storm drain system. As an owner of one of these properties with a Dispersion Area, the County requests your participation by **performing routine inspections and maintenance actions** to ensure that your Dispersion Areas are operating effectively.

Our records indicate that you have at least one Dispersion Area on your property. To help you maintain this Dispersion Area, the **County of San Diego Watershed Protection Program** is providing you with this informational flyer to answer questions you may have about Dispersion Areas and how to maintain them.

How Your Dispersion Areas Work

Dispersion Areas are vegetated areas designated to receive stormwater runoff from impervious surfaces such as rooftops, walkways, and driveways. Stormwater runoff is directed from these surfaces by a downspout with a splash block, or a flow spreader (see figure 1 on back), which distributes the stormwater runoff into a Dispersion Area. In the Dispersion Area, the runoff flows through the vegetation and soil which is known as infiltration. During infiltration, the runoff is

more info >>>

county of san diego

dispersion areas

filtered preventing pollutants from entering the storm drain. Infiltration also reduces the volume of runoff entering the storm drain system preventing surface flooding.

Find And Maintain Your Dispersion Areas

To find your Dispersion Area, look for a vegetated area (e.g. grass or plants) that is generally flat that may have a slight slope.

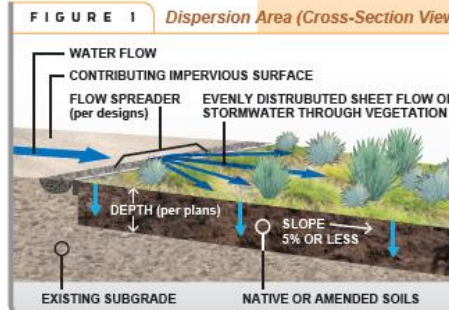

FIGURE 1 Dispersion Area (Cross-Section View)

The Dispersion Area may be located adjacent to a paved driveway, walkway, or your home's structure. Look for the entrance to the Dispersion Area where stormwater is dispersed from a rooftop downspout with a splash block or from a level spreader.

Once you have found your Dispersion Area, it is important to maintain it. Keeping the Dispersion Area in working condition helps keep our local waterways clean. Below are a few of the maintenance tasks that may need to be performed:

Failure to conduct the recommended maintenance tasks may lead to a poorly operating Dispersion Area and may initiate a follow-up inspection.

- Mow or trim as appropriate to prevent overgrown vegetation.
- Remove dead vegetation and reseed or replant vegetation.
- If standing water remains for longer than 24 hours after a rain event, spread out standing water to nearby landscaped areas.
- Ensure the dispersion area is getting the proper amount of water to maintain healthy vegetation.
- Loosen or replace compacted soil to promote healthy vegetation and infiltration.
- Ensure downspouts and splash blocks are directed toward the vegetated areas.
- Ensure splash blocks, flow spreaders, or rip rap are not removed or obstructed.

For a list of other tasks, refer to the maintenance plans from your housing developer.
