USE RV DUMP STATIONS

To Protect Our Waterways!

RV USERS

If RV black or grey water is not disposed of at a dump station, it can harm our creeks, rivers, and the ocean. **You can keep pollutants, like bacteria, out of our waterways by using RV dump stations.** To help your experience at the RV dump station go smoothly and safely, consider these *key tips!*

- 1) **Secure both ends of the hose before opening the tank valve.**
- 2) **Keep an eye on the hose while dumping to make sure it stays connected.**
- 3) **Close valves when the tanks aren't being emptied.**
- 4) **Rinse any residue or spills toward the dump station inlet pipe (connected to the sewer/septic system).**
- 5) **Have spill response materials, like absorbent, ready to apply and sweep up — you never know what could happen!**
