

PREDELIVERY	
BLS	ALS
<ul style="list-style-type: none">• Ensure patent airway• O₂ saturation PRN• O₂ and/or ventilate PRN• If no time for transport and delivery is imminent (crowning and pushing), proceed with delivery• If no delivery, transport on left side• Keep mother warm Third-trimester bleeding <ul style="list-style-type: none">• Transport immediately to facility with obstetrical services per BH direction Eclampsia (seizures) <ul style="list-style-type: none">• Protect airway• Protect from injury	<ul style="list-style-type: none">• Monitor/ECG• IV [®]• Capnography Direct to labor/delivery area BHO if ≥20 weeks gestation Eclampsia (seizures) <ul style="list-style-type: none">• Midazolam IN/IM/IV/IO to a max dose of 5 mg (d/c if seizure stops), MR x1 in 10 min. Max 10 mg total.
DELIVERY	
BLS and ALS	
Routine delivery <ul style="list-style-type: none">• If placenta delivered, massage fundus. Do not wait on scene.• Wait 60 sec after delivery, then clamp and cut cord between clamps• Document name of person cutting cord, time cut, and delivery location (address)• Place identification bands on mother and newborn(s)• Complete Out of Hospital Birth Report Form (S-166A) and provide to parent Difficult deliveries <ul style="list-style-type: none">• High-flow O₂• Keep mother warm Nuchal cord (cord wrapped around neck) <ul style="list-style-type: none">• Slip cord over the head and off neck• Clamp and cut cord, if wrapped too tightly Prolapsed cord <ul style="list-style-type: none">• Place mother with her hips elevated on pillows• Insert a gloved hand into vagina and gently push presenting part off cord• Transport immediately while retaining this position. Do not remove hand until relieved by hospital personnel.• Cover exposed cord with saline-soaked gauze Shoulder dystocia <ul style="list-style-type: none">• Hyperflex mother's knees to her chest Breech birth (arm or single foot visible) <ul style="list-style-type: none">• Rapid transport	

San Diego County Emergency Medical Services Office
Policy / Procedure / Protocol

Frank breech or double footling and imminent delivery with long transport <ul style="list-style-type: none"> • Allow newborn to deliver to the waist without active assistance (support only) • When legs and buttocks are delivered, assist head out keeping body parallel to the ground. If head does not deliver within 1-2 min, insert gloved hand into the vagina to create airway for newborn. • Transport immediately if head undelivered 	
Eclampsia (seizures) <ul style="list-style-type: none"> • Protect airway, and protect from injury • ALS: Midazolam IN/IM/IV/IO to a max dose of 5 mg (d/c if seizure stops), MR x1 in 10 min. Max 10 mg total. 	
MOTHER POST-DELIVERY	
BLS	ALS
Postpartum hemorrhage <ul style="list-style-type: none"> • Massage fundus vigorously • Baby to breast • High-flow O₂ • Keep mother warm Eclampsia (seizures) <ul style="list-style-type: none"> • Protect airway • Protect from injury 	Postpartum hemorrhage <ul style="list-style-type: none"> • Monitor/ECG • Capnography • 500 mL fluid bolus IV/IO, MR x2 q10 min to maintain SBP ≥90 mmHg ^A • If estimated blood loss ≥500 mL and within 3 hours of delivery, tranexamic acid 1 gm/ 10mL IV/IO, in 50-100 mL NS, over 10 min Eclampsia (seizures) <ul style="list-style-type: none"> • Midazolam IN/IM/IV/IO to a max dose of 5 mg (d/c if seizure stops), MR x1 in 10 min. Max 10 mg total.
NEONATAL POST-DELIVERY	
BLS and ALS	
Warm, dry, and stimulate newborn <ul style="list-style-type: none"> • Wrap newborn in warm, dry blanket. Keep head warm. • Assess breathing, tone, and HR. Palpate HR via umbilical cord. • If placing pulse oximeter, use newborn's right hand • APGAR at 1 and 5 min (do not delay resuscitation to obtain score) • Confirm identification bands placed on mother and newborn(s) • Bring mother and newborn(s) to same hospital • Complete Out of Hospital Birth Report Form (S-166A) and provide to parent 	
Full-term newborn with good tone and breathing <ul style="list-style-type: none"> • Keep newborn warm • Ensure patent airway • If excessive secretions, suction mouth then nose with bulb syringe • O₂ saturation on newborn's right hand PRN • Baby to breast • Ongoing assessment q30 sec 	
Newborn HR ≥100 with respiratory distress or central cyanosis <ul style="list-style-type: none"> • Blow-by O₂ 	
Newborn HR <100, poor respiratory effort or persistent central cyanosis <ul style="list-style-type: none"> • Ventilate with BVM on room air • Monitor/ECG • Recheck pulse q30 sec • For persistently poor respiratory rate/effort, or cyanosis despite correct BVM technique, add high- 	

San Diego County Emergency Medical Services Office
Policy / Procedure / Protocol

flow O₂ 15 L/min to BVM

- **Stop BVM when patient breathing well and HR \geq 100**
- **ALS:** IV/IO ^(A) (do not delay transport)
- **ALS:** NG tube PRN

Newborn HR <60

- Continue BVM with high-flow O₂
- Chest compressions at rate of 120/min
- 3:1 compression to ventilation ratio
- Check pulse q1 min
- Stop compressions when HR \geq 60
- **ALS:** Epinephrine 1:10,000 per drug chart IV/IO, MR q3-5 min
- **ALS:** Fluid bolus per drug chart IV/IO, MR x1 in 10 min ^(A)

Premature and/or low birth weight newborn

- If amniotic sac intact, remove neonate from sac after delivery
- Place neonate in plastic bag up to axilla to minimize heat loss
- Transport immediately
- CPR need **not** be initiated if there are no signs of life **and** gestational age <24 weeks
