P-405 Communications Failure Report		
DATE	NAME	PUBLIC COMMENT
2/4/2024	Christopher Kahn	" This is a significant improvement over the prior form. Thank you. While not a top priority, please consider providing an API to the online form that would allow submission directly from the ePCR as it is being completed. This would improve compliance with form submission. Also, please modify the first sentence under "Communication Information" to read, "What was your approximate location when you first attempted to make contact?" As multiple contact attempts are required, there will be multiple locations involved, but requiring an EMS provider to remember each specific location and report each one accurately will degrade form submission compliance. "

P-405A Communications Failure Report		
DATE	NAME	PUBLIC COMMENT
12/19/2023	Don Sullivan	if the agency is on LEMSIS there is no need for 405A form to be filled out. PCR is available for to both Base and Receiving ED.
12/19/2023	Andrew Pederson	Drafting an extra form and requiring crews to document communication failure via this form is an unnecessary step and will likely get poor compliance from already overworked overstressed personnel. The EPCRs are already accessible to the county and comms failure can be tracked from there by adding or utilizing a few click options on the chart. Additionally, submitting electronically seems like vague instructions and burdens the crews with the additional task.
12/20/2023	Christopher Kahn	This is a significant improvement over the prior form. Thank you. However, it seems mostly duplicative to the existing ePCR requirements. Would it be possible to only require separate submission of information not already included in the ePCR, then attach/submit the ePCR?
