**California Department of Public Health Issues Public Health Advisory  
Urging Everyone to Refrain from Vaping**

*Health Advisory Warns About Imminent Public Health Risks*

SACRAMENTO – The California Department of Public Health (CDPH) issued a health advisory today urging everyone to refrain from vaping, no matter the substance or source, until current investigations are complete. The health advisory follows an [executive order](#) signed by Governor Gavin Newsom last week to confront the growing youth epidemic and health risks linked to vaping.

As of September 24, 2019, CDPH has received reports that 90 people in California who have a history of vaping were hospitalized for severe breathing problems and lung damage, and two people have died. Across the U.S., there are more than 500 reports of lung damage associated with vaping across 38 states and 1 U.S. territory, and more reports are coming in nearly every day.

“We are seeing something that we have not seen before,” said Dr. Charity Dean, Acting State Public Health Officer. “There are numerous unknown factors at this time, and due to the uncertainty of the exact cause, it is our recommendation that consumers refrain from vaping until the investigation has concluded.”

CDPH, along with other states, the Centers for Disease Control and Prevention (CDC), the U.S. Food and Drug Administration (FDA), local health departments, and healthcare providers are working hard to investigate what is in the vape materials that is making people sick.

Although CDPH regulates manufacturers of cannabis vaping products to ensure they are as safe as possible for those who choose to vape, CDPH warns that all individuals put themselves at risk any time they inhale a foreign substance into their lungs. The risk of vaping for any individual may include serious illness and death. “Vaping is not just a concern for youth; the vaping cases under investigation affect youth and adults alike,” said Dr. Dean.

If you experience difficulty breathing after vaping, contact your doctor immediately. You may also experience other symptoms including: cough, shortness of breath, chest pain, nausea, vomiting, diarrhea, fatigue, fever, and weight loss. If this happens to you, do not

discard any used vaping cartridges you might have, as CDPH is interested in testing the remaining substance in used cartridges. Those cartridges are being collected by local health departments and sent to CDPH labs for analysis.

In California, [licensed cannabis retailers](#) are required to sell products obtained from a licensed cannabis manufacturer that have been [tested](#) by a licensed laboratory. Cannabis products sold by licensed sources are tested for a variety of chemicals, pesticides, microbial impurities, and heavy metals. Illegal cannabis dispensaries sell unregulated and untested cannabis products and absolutely should not be used.

CDC continues to warn that any tobacco product use, including e-cigarettes, is unsafe. Furthermore, use of cannabis and tobacco products remains especially unsafe for youth, and for pregnant or breastfeeding women.

The Governor's executive order directed CDPH to launch a \$20 million statewide digital and social media public awareness campaign to educate youth, young adults and parents about the health risks associated with vaping nicotine and cannabis products. CDPH is also tasked with developing recommendations to reduce smoking among young adults and teens by establishing warning signs with health risks where vaping products are sold and on product advertisements.
