Note: The data source for the graph is not the same as the data source for the table, although there is likely some overlap. The date ranges are also different. Neither source can provide the full picture of all COVID sequencing results in San Diego County.

†Confirmed cases are based on whole genome sequencing (WGS) results, which are not available until approximately 2-4 weeks after initial testing. These results do not represent all variant cases in San Diego County. Not all confirmed case samples are sequenced and not all sequencing results are immediately available to Public Health Services. Case counts will be updated as sequencing results become available.

See CDC variant website for more information about variants, including classifications and definitions.
