COVID-19 WATCH

March 16, 2021
Data through week ending 3/13/2021

Summary of Confirmed COVID-19 Cases, San Diego County Residents

Cases
265,471
Median Age
36
Range 0-108

Deaths
3,452
Median Age
77
Range 10-106

Outbreaks
1,929
Percentage in Congregate Settings
27%

COVID-19 Confirmed and Probable Cases by Onset* Week

Figure 1. COVID-19 Confirmed and Probable Cases by Week of Illness Onset*, San Diego County Residents, N=278,171

Confirmed N=265,471
Probable N=12,700

*When onset date is unavailable, specimen collection date, date of death, or date reported is used instead.

**Probable cases are antigen positive tests received since August 1, 2020.

Confirmed COVID-19 Cases by Geography

Figure 10. Cumulative COVID-19 Rates by Zip Code of Residence, San Diego County
(Countywide Rate = 7,920 per 100,000 Population)

Rates calculated using 2019 population estimates from the San Diego Association of Governments. Rates not calculated for counts under 5 cases or populations less than 10,000. Zip code is zip code of residence, which may not be location of exposure. Case counts and rates for each zip code are updated routinely on the County of San Diego COVID-19 website.
Confirmed COVID-19 Cases by Geography (continued)

Figure 11. COVID-19 Rates by Zip Code of Residence, 2/28/2021-3/13/2021, San Diego County
(Countywide Rate = 159 per 100,000 Population)

Rates calculated using 2019 population estimates from the San Diego Association of Governments. Rates not calculated for counts under 5 cases or populations less than 10,000. Zip code is zip code of residence, which may not be location of exposure. Case counts and rates for each zip code are updated routinely on the County of San Diego COVID-19 website.
Confirmed COVID-19 Hospitalizations by Age and Week

Figure 12. COVID-19 Hospitalizations by Age Group and Week of Hospital Admission, San Diego County Residents, N=13,342*

*Admit date and age are unknown for some hospitalizations. Hospitalization counts are likely underreported and may increase as additional information is obtained.

Summary of COVID-19-associated Deaths

Figure 13. COVID-19 Deaths by Week of Death
San Diego County Residents, N=3,452

Epidemiology and Immunization Services Branch
www.sdepi.org  (619) 692-8499
Summary of COVID-19-associated Deaths (continued)

Figure 14. Confirmed COVID-19 Cases and Case Fatality Rate
San Diego County Residents
(All Age Case Fatality Rate=1.3%)

Figure 15. Common Underlying Conditions, COVID-associated Deaths

Hypertension 43%
Diabetes 35%
Cardiac Disease 28%
Dementia/Alzheimer's 21%
Chronic Kidney Disease 16%
COPD/Asthma 11%
Obesity 9%
Immunocompromised 7%
No Underlying Condition 3%

Persons may have more than one underlying condition. These data are abstracted from death certificates and available medical records and may not reflect a complete list of underlying conditions for each person.
COVID-19 Potential Exposure Settings

The number of persons reporting potential exposures in community settings is an indication of movement of persons during the 2-14 days prior to their onset of symptoms (or specimen collection if asymptomatic).

- Persons may be exposed in multiple settings, including in community exposure settings, in the household, in educational settings, and during travel.
- Persons may have potential exposures in more than one community, household, or other setting.
- Potential exposure in any of these settings does not indicate a confirmed source of infection.

---

*a* Potential community exposure settings are defined as indoor or outdoor locations in which cases came within 6 feet of anyone who was not a household member for at least 15 minutes during the 2-14 days prior to symptom onset, even if the case wore a mask or facial covering. Potential exposure settings are places case-patients visited during their exposure period, not confirmed sources of infection. Persons may have visited more than one location.

*b* Effective 11/24/2020, travel exposures are excluded from community exposure settings.

*c* Workplaces may include other community settings (e.g., bar/restaurant, hair salon, retail).

*d* Persons with household exposures reported having close contact with someone in their household with laboratory-confirmed COVID-19, though this was not independently verified. Household exposures may have occurred outside the 2-14 days prior to symptom onset.
Figure 16. Percent of Emergency Department Visit Chief Complaints for ILI, Respiratory Symptoms, Fever, or COVID-like Illness* by Week, San Diego County

Figures show trends in the percent of emergency department visits with specific chief complaints over time. Data is presented for various categories such as Respiratory Symptoms, Influenza-like Illness, Fever, and COVID-like Illness.*

Figure 17. Percent of Emergency Department Visit Chief Complaints for ILI, Respiratory Symptoms, Fever, or COVID-like Illness* by Week, San Diego County Among Patients Age 60 Years or Older

Similar to Figure 16, this figure focuses on patients aged 60 years or older, highlighting the trends in chief complaints among this demographic.

*Categories are not mutually exclusive. COVID-like Illness includes fever and cough, shortness of breath, or difficulty breathing OR coronavirus diagnostic codes.
COVID-19 Laboratory Test Positivity Rate

Figure 18. COVID-19 Testing Volume and Positivity by Week of Specimen Collection, San Diego County

Includes PCR tests performed by COSD Public Health, hospital, and reference laboratories and reported via Electronic Laboratory Reporting (ELR) and line lists. Excludes invalid, indeterminate, and unsatisfactory results.

COVID-19 Vaccinations

Figure 19. Number of COVID-19 Vaccinations Administered and Cumulative Number of Persons Fully Vaccinated by Week

The bars show vaccines administered, not individuals vaccinated. The line shows the cumulative number of persons fully vaccinated per the dose and schedule regimen for the vaccine received. Only includes vaccines that have been recorded in the San Diego Immunization Registry (SDIR). Some healthcare providers, including Veteran’s Affairs, the Department of Defense, some tribal entities, and prisons do not report to SDIR. See this dashboard, updated daily, for more detailed vaccine status information for San Diego County.

COVID-19 Watch Data Sources

The following sources of data are used to produce this report:

- **COVID-19 case reports:** Medical providers and laboratories report individual cases of PCR-confirmed COVID-19 via fax or electronic laboratory reporting (ELR) to the County of San Diego Epidemiology Unit.

- **COVID-19 deaths:** The County of San Diego requests that all deaths related to COVID-19 be reported for surveillance purposes. Medical facilities may report these deaths directly to the Epidemiology Unit or they may be identified by the Office of Vital Records through death certificate registration. The Epidemiology Unit compiles the data, and only reports deaths that can be verified by a death certificate.

- **Emergency Department Chief Complaint Data:** Electronic emergency department data are reported to the Epidemiology Unit daily. The number of respiratory chief complaints and the number of total emergency department visits are used to calculate percentages for all respiratory-related visits and visits specific to influenza-like illness, fever, and COVID.

- **COVID-19 outbreaks:**
  - Skilled Nursing Facilities: at least one case of laboratory-confirmed COVID-19 in a resident.
  - Non-SNF Institution/Congregate Settings: at least one case of laboratory-confirmed COVID-19 in the setting of ≥2 cases of acute illness compatible with COVID-19 in residents or staff members of residential congregate settings with onset within a 14-day period.
  - Community settings: three or more laboratory-confirmed COVID-19 cases in different households in a cluster of 2 or more acute illnesses compatible with COVID-19 with onset within a 14-day period.

- **COVID-19 vaccinations:** Number of vaccinations registered in the San Diego Immunization Registry (SDIR) by participating providers. Some providers, including the VA, DoD, other military, some tribal, and prisons do not report to SDIR.

- **SANDAG population estimates, vintage 2019:** Rates are calculated using 2019 population estimates from the San Diego Association of Governments. Rates are not calculated for counts under five cases.

The purpose of the weekly **COVID-19 Watch** is to summarize current COVID-19 surveillance in San Diego County. **Data are preliminary and may change due to delayed reporting and additional information obtained during investigations.**
