San Diego Blood Bank

HAVE YOU RECOVERED FROM CORONAVIRUS DISEASE 2019 (COVID-19)?

Your plasma donation could help as many as 3-4 other people who are sick with the disease.

Plasma donations from people who have recovered from COVID-19 may help others who are currently fighting the virus. The donation process is similar to blood donation but takes longer to complete – approximately 75 minutes. Blood is collected and cycled through a machine to separate the plasma from the rest of the blood. Plasma donations have been previously used to successfully help treat infectious diseases similar to COVID-19, including the Spanish Flu, SARS, and H1N1.

San Diego Blood Bank has locations throughout San Diego County. Donors must meet specific requirements and will be screened at the time of appointment.

To see if you qualify to donate, submit an interest form online today:
sandiegobloodbank.org/donateplasma
