

Preventing Dengue in Your Community

How Dengue Spreads:

1

A person travels to an area of the world where dengue is common.

2

An infected mosquito bites this person when they are traveling.

3

This person who got bit by the mosquito travels back home.

4

This person shows symptoms within 2 weeks after being bitten by the infected mosquito.

5

A new mosquito becomes infected after biting the person who is sick with the virus.

6

This new mosquito can then spread the virus to other people through bites.

Signs and Symptoms:

Fever with any of the following...

Aches and pains

Rash

Nausea/vomiting

Please contact your medical provider if you are experiencing any of these symptoms. If you do not have a medical provider, please call 2-1-1.

Protect Yourself:

Use insect repellent.

Wear loose-fitting, long sleeve shirts and pants.

Install or repair and use window and door screens.

Protect Your Community:

Remove standing water in and around your home.

Mosquito treatment may be scheduled for your area by the Vector Control Program.
