Zika Virus Infection C,P	9	0	0	1	0

Note: Counts are current as of September 17, 2025, and may differ from previously or subsequently reported counts due to differences in inclusion or grouping criteria, late reporting, or updated case information. Annual case counts are grouped by Centers for Disease Control and Prevention (CDC) disease year (with the exception of chlamydia, gonorrhea, HIV disease, syphilis, tuberculosis, and elevated blood lead levels, which are grouped by calendar year), following the schema of [CDC disease weeks](#), which do not necessarily reflect the calendar year. Cases are grouped into year on the basis of the earliest of the following dates: onset date, laboratory specimen collection date, diagnosis date, death date, date report was received.

¹ Confirmed, probable, or suspect cases as defined by [Council of State and Territorial Epidemiologists/Centers for Disease Control and Prevention \(CSTE/CDC\) surveillance case criteria](#) when available; for some diseases/conditions, California Department of Public Health (CDPH) or locally defined criteria are used. When possible, inclusion criteria match that used by CDC or CDPH in published data to allow for comparisons.

² Required reporting of amebiasis ended on September 30, 2019.

³ *Candida auris* was made locally reportable in San Diego County in 2019. It was made reportable in California in September 2022.

⁴ Only cases in persons <5 years of age are reportable and included in case counts.

⁵ Many cases of Hemolytic Uremic Syndrome (HUS) are preceded by diarrheal illness, particularly Shiga toxin-producing *E. coli* (STEC). Cases of post-STEC HUS are counted as both HUS and STEC.

⁶ Starting in 2022, increased efforts have been made to follow up with additional records and test results, particularly negative test results, allowing for more refined application of the case criteria. However, because not all reports are fully evaluated or investigated, numbers should be interpreted with caution. Counts include cases incarcerated at Robert J Donovan Correctional Facility (state prison).

⁷ Human Immunodeficiency Virus (HIV) Disease is reported by year of diagnosis and includes newly diagnosed cases regardless of disease progression (i.e., counts include cases of Stage III HIV Infection, also referred to as AIDS).

⁸ Includes children with a newly-identified venous blood lead level ≥ 9.5 $\mu\text{g/dL}$.

⁹ Listeriosis counts include neonatal and non-neonatal cases.

¹⁰ Mpox, formerly known as Monkeypox, became a nationally notifiable disease on June 23, 2022.

¹¹ Case definition changed in 2020 to limit counts to confirmed and probable cases. Previous counts include confirmed, probable and suspect cases of pertussis.

¹² Non-Rocky Mountain Spotted Fever

¹³ Includes all species of the family Vibrionaceae other than toxigenic *Vibrio cholera* O1 or O139.

¹⁴ West Nile Virus Infection counts includes asymptomatic blood donors as well as cases of West Nile Virus fever, meningitis, encephalitis, and acute flaccid paralysis.

Prepared by Epidemiology and Immunizations Services Branch, November 3, 2025
