Data are preliminary and may change due to delayed reporting and additional information obtained during investigations.

Most data in this report are presented by fiscal year, which runs July 1-June 30. Because data are also presented by CDC disease week, which runs Sunday-Saturday, we start the data for 2023-24 on July 2, 2023.

The purpose of the weekly Respiratory Virus Surveillance Report is to summarize current COVID-19, RSV, and influenza surveillance in San Diego County. Additional information on COVID-19, RSV, and influenza reporting, resources, data sources, and definitions can be found in the Supplemental Information document. A link to subscribe to this report are available via the Epidemiology Unit website.

Please visit the COVID-19 data dashboards on the County of San Diego COVID-19 website. Additional COVID-19 data are available there in a more interactive format.

FY 2023-24 is 7/2/2023-6/29/2024, Weeks 27-26. Previous weeks' case counts or percentages may change due to delayed processing or reporting.

^{††} Influenza-like illness (ILI) includes fever plus cough and/or sore throat.

^{*}Includes FYs 2018-19, 2019-20, 2020-21, 2021-22, and 2022-23 for influenza and 2020-21, 2021-22, and 2022-23 for COVID-19 and RSV.

[†]The percentage of deaths registered with pneumonia or influenza listed as a cause of death.

[‡]Confirmed and probable COVID-19 cases.

[§]Current FY deaths are shown by week of report; prior FY deaths are shown by week of death.

The number of patients admitted to an inpatient bed who had laboratory-confirmed COVID-19 or laboratory-confirmed influenza virus infection at the time of admission. COVID-19 admissions data are available starting August 2020, while influenza admissions data are available starting November 2020. As a result, totals to date and FY totals for prior years average are unavailable. Starting 11/2/2023, these data are based on new hospital admissions and reflect a change from the census data shown in previous reports. Census data can be found on page 5 of this report and on our COVID Highlights

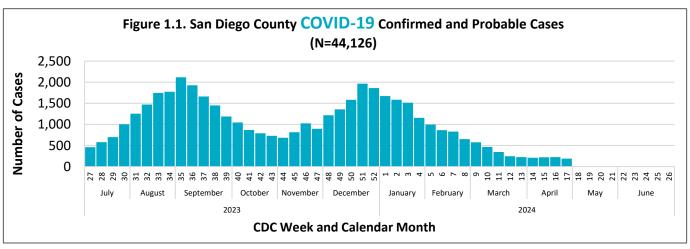

[&]quot;See the Supplemental Information document for outbreak definitions. Includes only outbreaks occurring in skilled nursing facilities and other residential congregate settings.

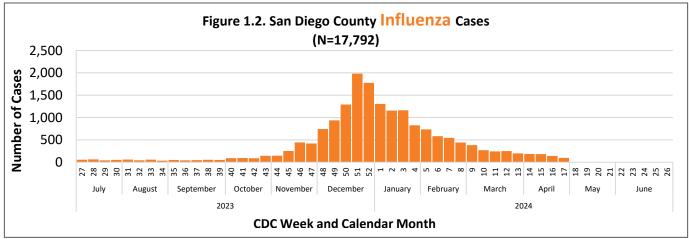

^{**}COVID-like Illness (CLI) includes fever and cough, shortness of breath, or difficulty breathing OR coronavirus diagnostic codes.

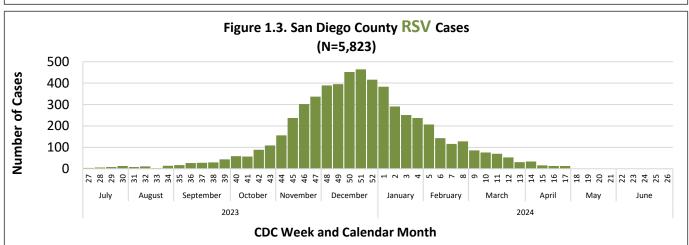

COVID-19, Influenza, and RSV Cases by CDC Episode Week,* 2023-24 Fiscal Year-to-Date

^{*}Episode date is the earliest available of symptom onset date, specimen collection date, date of death, date reported. Data for the most recent week may be incomplete.

Vaccinations Administered

The line shows the percent of persons vaccinated as Up-to-Date (UTD) per the 2023/2024 guidelines. The bars show the number of UTD doses administered to San Diego County Residents. The 2023/2024 UTD guidelines per the CDC are that individuals who are at least 5 years of age and older should receive one dose of an updated COVID-19 vaccine and individuals 6 months to 4 years of age should receive multiple COVID-19 vaccines in addition to at least one dose of the updated COVID-19 vaccine. Wastewater Surveillance

Moving Average*

Normalized daily level†

Data provided by Wastewater SCAN: https://wastewaterscan.org/.

Data through

4/27/2024

^{*}Calculated by taking the average of the 5 samples centered around a date after excluding the highest and lowest values.

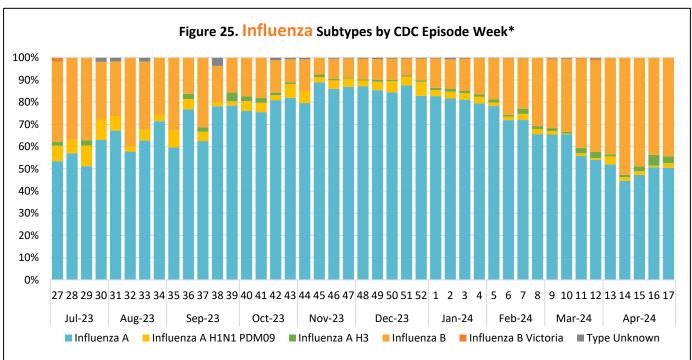

[†] Data are normalized to a common, harmless plant virus that is consumed when people eat called pepper mild mottle virus (PMMoV).

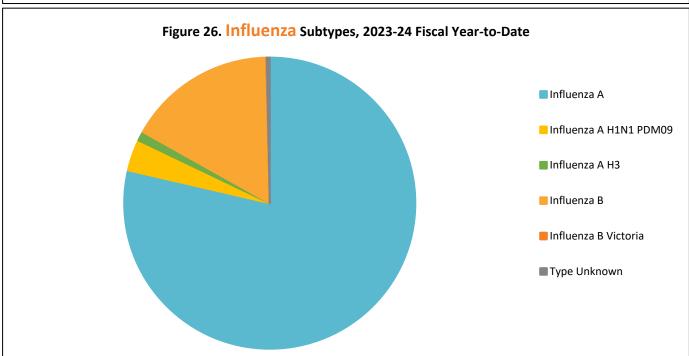

[‡] Detection of influenza in wastewater is specific to influenza A.

Influenza Subtypes

^{*}Episode date is the earliest available of symptom onset date, specimen collection date, date of death, date reported. Data for the most recent week may be incomplete.

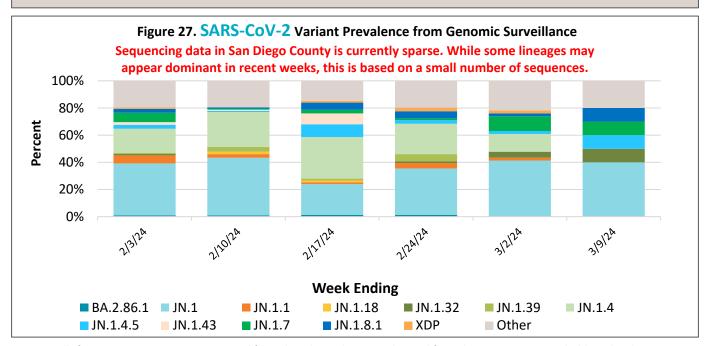

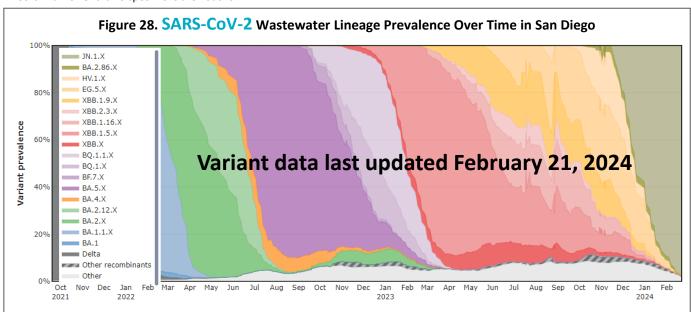

COVID-19 Surveillance on Variants

Variant calls for SARS-CoV-2 genomes generated from clinical samples were obtained from the CDPH COVIDNET dashboard and GISAID. Data was then filtered to only include samples from San Diego county within the past 3-months (https://testing.covid19.ca.gov/covidnet/, https://gisaid.org/).

For some weeks, very limited specimens may have been tested and findings should be interpreted with caution. Weeks with fewer than 5 specimens are not shown.

Source: SARS-CoV-2 variant prevalence in wastewater was generated by the SEARCH consortia (https://searchcovid.info/dashboards/wastewater-surveillance/).
