Live Well, San Diego!

Healthy, Safe and Thriving Communities

Live Well, San Diego! is an initiative that embodies a countywide effort to achieve the County vision for healthy, safe and thriving communities. This is a 10-year plan to advance the health and overall well-being of the entire region. *Live Well, San Diego!* is being built with community involvement in a phased approach. The first phase – Building Better Health – was adopted by the Board of Supervisors on July 13, 2010, and implementation is ongoing and continuous. The second phase is in the design stages, and the third phase will be initiated following its adoption.

The three phases that encompass the pillars of *Live Well, San Diego!*:

- ***Building Better Health*** – focuses on improving the health of residents and supporting healthy choices.
- ***Living Safely*** – focuses on the Agency's role in ensuring families are connected to services and vulnerable residents are protected from further harm.
- ***Promoting Thriving Families*** – focuses on the Agency's role in helping families become stable and independent.

Key Strategies for *Live Well, San Diego!*

Each pillar has four strategies upon which our goals and objectives will be built. These strategies are:

- ***Building a Better Service Delivery System*** – maximizing quality and eliminating waste in our services.
- ***Supporting Positive Choices*** – providing information and tools so that residents can take charge of their well-being.
- ***Pursuing Policy and Environmental Changes*** – making it easier for people to engage in and adopt positive behaviors.
- ***Improving the Culture from Within*** – recognizing the importance of the workforce in making and promoting positive choices.

The entire initiative is built on a foundation of operational excellence. The County serves the entire San Diego population, with a focus on at-risk and high-need populations. These are defined as:

General Population: The 3.1 million San Diego County residents who may benefit from a more coordinated and comprehensive prevention approach.

At-Risk Population: Those we will engage with early, proven interventions to stop problems from developing or escalating.

High-Need Population: Those already in the County system who will benefit from assistance to stabilize and achieve self-reliance.

Executive Summary

The East Region of San Diego County is a large, diverse, mostly lower and middle income Region with a high proportion of older, white adult residents. The East Region is the second largest, geographically, covering 1,104 square miles of urban, suburban and rural areas. The Region includes the communities of Alpine, El Cajon, Harbison Crest, Jamul, La Mesa, Laguna-Pine Valley, Lakeside, Lemon Grove, Mountain Empire, Santee and Spring Valley. Several Indian Reservations are also found in the East Region.

Population Characteristics

In 2009, the East Region was home to over 470,000 people, representing 15% of the county population. Nearly two-thirds of the population was white and one in five residents was Hispanic. English was the primary language spoken, with 9% speaking a language other than English exclusively.

Household income levels were generally lower than the county overall; however, slightly fewer residents lived in poverty. Among adults with incomes below 200% of the Federal Poverty Level (FPL), just two out of three had a consistent ability to afford enough food; this was lower than most other Regions. Eight percent of households with incomes at or below 300% FPL received assistance through the Supplemental Nutritional Assistance Program. About two-thirds of women with incomes at or below 300% FPL, who were pregnant or had young children, received assistance through the Women, Infants and Children (WIC) program; this was higher than any other Region.

Insurance, Access, Utilization

East Region residents reported that they had health insurance coverage, access to healthcare and utilized health services at rates comparable to the rest of the county, with 89% of all residents insured through private or public programs. However, this rate differed by age, with 16% of adults aged 18-64 years not having any insurance coverage in 2009.

3-4-50 Diseases

East Region had some of the highest rates of non-communicable (chronic) disease death and hospitalization in the county, many of which were statistically significantly higher than the overall county rates.

The rate of overall cancer death was 18.4% higher in East Region than in the county. Mountain Empire had the highest rate of death due to cancer overall among East Region communities. Mountain Empire also had the highest rates of death from lung cancer in the Region. La Mesa had the highest rates of death from prostate cancer, female breast cancer, and colorectal cancer.

The rate of coronary heart disease (CHD) death was 26.6% higher, CHD hospitalization was 32.8% higher and CHD emergency department (ED) discharge was 37.4% higher than the county rates overall. The rate of hospitalization for stroke was also significantly higher than the county rate. Among the communities in the East Region, La Mesa had the highest rates of CHD death, while Mountain Empire had the highest rate of hospitalization and emergency department (ED) discharge for CHD. La Mesa also had the highest rate of ED discharge for stroke, while Harbison Crest/El Cajon had the highest rate of death due to stroke, and Mountain Empire had the highest rate of hospitalization for stroke.

The rate of diabetes hospitalization in the East Region was 38.0% higher and the rate of diabetes ED discharge was 13.5% higher than the county rates. Among the communities of East Region, Harbison Crest/El Cajon had the highest rate of death due to diabetes, while Alpine had the highest rate of hospitalization for diabetes. Mountain Empire had the highest rate of emergency department discharge for diabetes.

East Region residents also suffered higher rates of pulmonary disease, including asthma and chronic obstructive pulmonary disease (COPD). The rate of COPD death was 43.1% higher, and of COPD hospitalization was 60.7% higher than the county rates.

Further, the COPD ED discharge rate was 15.7% higher than the county. The asthma hospitalization rate was 51.4% higher than the county rate. Among East Region communities, Harbison Crest/El Cajon had the highest rate of asthma hospitalization, while Mountain Empire had the highest rate of asthma ED discharge. Also, Mountain Empire had the highest rates of COPD death and hospitalization, while Harbison Crest had the highest rate of COPD ED discharge.

Communicable (Infectious) Diseases

Compared to the county overall, East Region residents had lower or comparable rates of communicable diseases. The rate of syphilis was 63.9% lower than the county overall, while chronic hepatitis C was 37.7% lower than the county. Within the Region, Spring Valley had the highest rate of syphilis, while Mountain Empire had the highest rate of chronic hepatitis C. Additionally, the East Region had a significantly lower rate of TB compared to the county.

Maternal and Child Health

Maternal and child health indicators for East Region were not statistically significantly different from the county. Among the communities in East Region, the fetal mortality rate was highest in La Mesa, the percent of mothers receiving early prenatal care was lowest in Mountain Empire, and the percent of live births to girls ages 15-17 years was highest in Spring Valley.

Injury

East Region had statistically significantly higher rates of death, hospitalization, and ED discharge for unintentional injuries compared to the county overall. Among East Region communities, Mountain Empire had the highest rates of death, hospitalization, and ED discharge due to unintentional injuries.

The rates of unintentional fall-related injury hospitalization and emergency department discharge in the East Region were higher than the county by 27.1% and 11.2%, respectively. Santee had the highest rate of unintentional fall-related injury death, while Mountain Empire had the highest rates of hospitalization and ED discharge for fall-related injury.

East Region had significantly higher rates of hospitalization and emergency department discharge due to overdose/poisoning than the county; the rate of emergency department discharge was 28.7% higher and the rate of hospitalization was 39.1% higher. Among the East Region communities, Alpine had the highest rate of overdose/poisoning death, while Mountain Empire had the highest rates of hospitalization and ED discharge.

East Region residents were hospitalized for injuries from motor vehicle crashes at a rate 27.1% higher than the county. Hospitalization and emergency department discharge rates for motor vehicle related injuries were highest among Mountain Empire residents, and deaths due to motor vehicle injuries were highest among Santee residents.

East Region residents were discharged from emergency departments for assault injuries at a rate 17.4% higher than the county rate. Among East Region communities, Mountain Empire had the highest rates of ED and hospital discharge for assault.

East Region residents were discharged from emergency departments for self-inflicted injuries at a rate 61.8% higher than the county. Although not significantly higher, the rate of suicide in the East Region was slightly higher than the county overall. Among the East Region communities, Alpine had the highest rates of suicide and self-inflicted injury hospitalization, while Mountain Empire had the highest rate of self-inflicted injury ED discharges.

Other Health Conditions

The rates of hospitalization and ED discharge for both arthritis and dorsopathies (diseases and/or disorders of the back) were statistically significantly higher in East Region compared to the county. The rates of hospitalization and emergency department discharge for arthritis were 29.8% and 17.4% higher than the county rates, respectively. The rates of hospitalization and emergency department discharge for dorsopathies were 53.1% and 20.7% higher than the county rates. Among East Region communities, Mountain Empire had the highest rates of arthritis hospitalization and ED discharge, as well as for dorsopathy hospitalization and ED discharge.

2009 Regional Public Health Indicators[‡]

Region rates are statistically significantly HIGHER than the county overall for the following indicators:			
Indicator [†]	East Region Rate*	San Diego County Rate*	Percent Difference
Self-Inflicted Injury Emergency Department (ED) Discharge	123.6	76.4	61.8%
COPD Hospitalization	168.6	104.9	60.7%
Dorsopathy Hospitalization	240.4	157.0	53.1%
Asthma Hospitalization	115.7	76.4	51.4%
Lung Cancer Death	50.1	34.7	44.4%
COPD Death	41.2	28.8	43.1%
Overdose/Poisoning Hospitalization	103.2	74.2	39.1%
Diabetes Hospitalization	174.6	126.5	38.0%
Coronary Heart Disease (CHD) Emergency Department (ED) Discharge	33.8	24.6	37.4%
Coronary Heart Disease (CHD) Hospitalization	422.2	318.0	32.8%
Unintentional Injury Hospitalization	876.8	663.9	32.1%
Self-Inflicted Injury Hospitalization	65.0	49.9	30.3%
Arthritis Hospitalization	366.5	282.4	29.8%
Stroke Hospitalization	273.7	211.4	29.5%
Overdose/Poisoning Emergency Department (ED) Discharge	189.0	146.8	28.7%
Dental-related Injury Emergency Department (ED) Discharge	181.8	142.4	27.7%
Unintentional Injury Death	38.0	29.8	27.5%
Motor Vehicle Crash Injury Hospitalization	106.8	84.0	27.1%
Fall-related Injury Hospitalization	428.3	337.0	27.1%
Coronary Heart Disease (CHD) Death	135.7	107.2	26.6%
Stroke Emergency Department (ED) Discharge	50.1	41.0	22.2%
Dorsopathy Emergency Department (ED) Discharge	702.7	582.4	20.7%
Overall Cancer Death	176.0	148.6	18.4%
Arthritis Emergency Department (ED) Discharge	475.9	405.5	17.4%
Assault Emergency Department (ED) Discharge	301.6	257.0	17.4%
COPD Emergency Department (ED) Discharge	290.9	251.4	15.7%
Unintentional Injury Emergency Department (ED) Discharge	5361.0	4691.2	14.3%
Diabetes Emergency Department (ED) Discharge	150.6	132.7	13.5%
Motor Vehicle Crash Injury Emergency Department (ED) Discharge	561.7	502.6	11.8%
Fall-related Injury Emergency Department (ED) Discharge	1835.2	1650.7	11.2%
Asthma Emergency Department (ED) Discharge	334.0	307.0	8.8%
Region rates are statistically significantly LOWER than the county overall for the following indicators:			
Indicator [†]	East Region Rate*	San Diego County Rate*	Percent Difference
Primary and Secondary Syphilis	3.0	8.3	-63.9%
Chronic Hepatitis C	88.8	142.5	-37.7%
Tuberculosis (TB) Incidence	4.5	7.0	-35.7%

[‡] Indicators presented are statistically significant difference from County. Some high rates not listed due to County overall rate also high.

*Rates per 100,000 population.

[†] For disease definitions see Glossary in Data Guide.

[§]By Location of Occurrence.

^{**}Estimated incidence refers to new cases reported to County Public Health Services, including cases with unknown residence.

Color bars indicate the database or medical encounter level for each indicator. For example, red indicates death data, and bright pink indicates hospitalization data. See the online community profile for the unique colors associated with each database.

Year: 2009.

Prepared by County of San Diego (CoSD), Health & Human Services Agency (HHSA), Community Health Statistics, 02/27/2012.

Introduction

Purpose

This profile is a compilation of information made available to the public health community and public policy-makers to better understand and manage the health and well-being of the residents of our county.

The purpose of this report is to provide detailed information about the health and characteristics of the people living in San Diego County. It is designed to help the Health and Human Services Agency (HHSA) staff in each of the Health Service Area Regions (HHSA Regions) identify problems and priority needs within their communities.

Regional Data

Starting on page 174, there is detailed information at the community level including comparisons of public health indicators, entitled *SRA Comparison Tables*, as well as demographic and health information.

Please see Important Information in the Data Guide section for explanation of geographic boundaries as well as information on methods used here, age adjusted rates, and notes on comparing data.

Navigating the Document

This report is formatted for print, published once yearly. Updated data may be available online in the County Profile, which is updated more frequently but intended for electronic viewing due to navigation ability to jump through the document.

Community Health Statistics

The Community Health Statistics unit was created to provide a means of sharing information about the health behaviors, diseases, injuries, and demographic characteristics of specific populations in San Diego County. This unit aims to supply community level data describing the health trends and needs of the residents of our county. Community Health Statistics also provides or refers persons to available local, state and national statistics.

Lemon Grove	91945
Mountain Empire	91905 91906 91934 91962 91963 91980
Santee	92071
Spring Valley	91977

East Region

Snapshot

The East Region is a large, diverse, mostly low and middle income Region with a high proportion of older, white adult residents. Due to the rural nature of most of the Region, access to care is often difficult. In spite of transportation barriers, East Region residents participate in public programs as often as, or more often, than residents of many other Regions. East Region residents are in good general health compared to most other Regions, and have higher rates of non-communicable (chronic) disease medical encounter and death than nearly all other Regions for most major chronic diseases. They also engage in unhealthy behaviors such as smoking, physical inactivity, and poor nutrition more often than residents of most other Regions. Sexually transmitted disease (STD) rates have increased since 2000; however, these rates are low when compared to the county overall. Mothers were less likely to receive early prenatal care, and as likely to give birth to low birth weight infants. Injury rates, particularly for unintentional falls, motor vehicle accidents, suicide, and assault, were especially high in the East Region compared to other Regions. For more data and statistics, visit www.SDHealthStatistics.com.

Overview

The East Region is the second largest Region in San Diego County geographically, covering 1,104 square miles of urban, suburban, and remote areas. The Region is bound to the East by Mount Laguna and to the South by the Mexican border. The communities of the East Region are largely diverse demographically, geographically, economically, and socially, and include Alpine, El Cajon, Harbison Crest, Jamul, La Mesa, Laguna-Pine Valley, Lakeside, Lemon Grove, Mountain Empire, Santee, and Spring Valley. Several Indian reservations are also found in the East Region. In 2009, 470,898 people resided in the East Region, representing 15% of the San Diego County population. On average, the population density was 427 persons per square mile of land area, however, this varied largely by community.

Population Characteristics

The East Region of the county had a large proportion of older, white adults compared to other Regions of the county in 2009. About two-thirds of the entire population was white, and one in five was Hispanic. English was the primary language spoken, with 9% speaking a language other than English exclusively. While household income levels were slightly lower than San Diego County overall, slightly fewer East Region residents lived in poverty, indicating perhaps a higher percent of middle income households. However, pockets of poverty existed throughout the diverse Region. Other characteristics of the population included:

- On average, there were 2.9 persons per household.
- Nearly two-thirds of employed residents worked in either management and professional or sales and office occupations.
- The primary industry was educational, social, and health services, followed by retail trade, and professional, scientific, management, or administrative industries.
- A comparable percent of families with children lived in poverty than in the county overall, but they were more likely to be single parent homes.
- East Region residents were more likely to have completed high school than the county, but less likely to have earned a college degree.

- 6% of homes had no vehicle available.
- Poorer residents of the East Region did not have food security. Among adults with income below 200% of the Federal Poverty Level (FPL), about two-thirds had a consistent ability to afford enough food, lower than most other Regions.
- 8% of households with income at or below 300% of the FPL received food stamps.
- Among women earning incomes at or below 300% of the FPL who were pregnant or had young children, nearly two out of three were on WIC; higher than any other Region.

Insurance, Access, Utilization, and General Health Status

Insurance coverage, access, and utilization of health services have been shown to directly impact a population's general health status. In the East Region these were comparable to the county overall, as was self-reported general health status.

- 89% of East Region residents were currently insured, and 96% of those had prescription drug coverage.
- Among those aged 18-64 years, nearly one in seven did not have any insurance coverage, 3% of whom were eligible for either Medi-Cal or Healthy Families.
- One in twenty-five older adults aged 65+ years did not have Medicare coverage.
- Similar to the county, nearly nine out of ten East Region residents had a usual place to go when sick or needing health advice, regardless of insurance status.
- East Region residents were more likely to go to a doctor's office and less likely to go to a community clinic, when compared to the county overall.
- East Region residents were as likely to be disabled due to a physical, mental, or emotional condition compared to residents of the county overall.

- 6% of working aged adults couldn't work for at least a year due to a physical or mental impairment.
- One out of five East Region adults saw a professional or needed help for emotional or mental problems in the past year.

3-4-50

Three behaviors – poor diet, lack of exercise, and tobacco use – contribute to four major non-communicable (chronic) diseases – cancer, heart disease and stroke, type 2 diabetes, and lung disease – which are responsible for more than 50% of deaths worldwide. In San Diego County, these four diseases were responsible for 56% of all deaths.

3-4-50 Behaviors

The three behaviors that lead to the four major chronic diseases are tobacco use, poor diet, and physical inactivity. East Region adults were generally more likely than adults from other Regions to engage in these risky behaviors.

- Adults in the East Region were more likely to have ever smoked than any other Region, and more likely to be current smokers than any other Region. East Region adults were more likely to smoke indoors than the county overall.
- Three out of four East Region residents reported walking for fun, exercise or transportation.

- More than one-third of East Region residents ate fast food two or more times per week.
- East Region adults were more likely to be obese or overweight than adults in most other Regions in the county. More than three out of every five adults was overweight or obese.
- East Region adults were as likely to have binge drank in the past year compared to the county overall.

3-4-50 Diseases

In the East Region, death rates due to overall cancer, lung cancer, coronary heart disease (CHD), and chronic obstructive pulmonary disease (COPD), were notably higher than in the rest of the county, likely due to the older age of the population. Additionally, East Region residents were hospitalized for these non-communicable diseases at higher rates than the rest of the county, also due in part to the rural nature of the Region, which results in less easily accessible preventive and follow-up care.

Cancer

Overall cancer death rates in the East Region have remained steady since 2000, but were higher than any other Region, as expected due to the older age of the population.

- Cancer death rates were especially high among adults ages 65+ years and older, compared to other Regions.
- Women over 30 were more likely to have had a mammogram within the past two years than any other Region.
- Only one-third of males over age 40 in the East Region had a Prostate-Specific Antigen (PSA) screening the past year.
- Nearly three-fourths of adults over age 50 years have complied with colorectal cancer screening recommendations.

Coronary Heart Disease (CHD) and Stroke

While CHD and stroke death and hospitalization rates have declined since 2000, one in twenty was ever diagnosed with heart disease, and one in four was ever diagnosed with high blood pressure. This is possibly due to the high proportion of older, white adults living in the East Region, who are at greater risk of heart-related conditions than younger adults or other racial/ethnic groups.

- Of those with high blood pressure, three-fourths were taking blood pressure medication.
- Older adults aged 65+ years died, were hospitalized, or discharged from the emergency department (ED) for CHD at higher rates than older adults throughout the county.

Diabetes

Since 2000, diabetes death and hospitalization rates in the East Region have increased. However, one in twenty residents was ever diagnosed with diabetes.

- Among East Region adults ever diagnosed with diabetes, 85% were diagnosed with Type II diabetes—a preventable disease.
- Diabetes death and hospitalization rates were disproportionately high for adults aged 25-64 in the East Region compared to adults of the same age in other Regions.

- Diabetes death rates were especially high for Asian/Pacific Islanders compared to Asian/Pacific Islanders in other Regions.
- Black residents of the East Region were hospitalized for diabetes at noticeably higher rate compared to blacks living in other Regions.

Asthma and Chronic Obstructive Pulmonary Disease (COPD)

Asthma and COPD death and medical encounter rates in the East Region have remained fairly steady since 2000, but were higher than most other Regions. More adults in the East Region have ever been diagnosed or currently have asthma than any other Regions.

- A little more than one-third took daily medication to control their asthma.
- More than half of asthmatics ever received an asthma management plan from a health professional.
- Asthma hospitalization rates were disproportionately high among females, and residents aged 25-64, compared to the same groups in other Regions.
- ED discharge for asthma was higher among blacks living in the East Region than for blacks in any other Region.

- The COPD hospitalization rate for adults aged 25-64 in the East Region was nearly double the rate for the County overall.

Communicable (Infectious) Diseases

Communicable disease incidence in the East Region was comparable or lower than the county overall. However, within the Region, some age and race/ethnic groups were at higher risk for these diseases than others.

- Four out of ten residents had a flu shot in the past year.
- The TB rate was significantly lower in the East Region than in the county overall.
- There were 37 new cases of AIDS reported in 2009, the rate of which was lower than in the county.
- Chlamydia was the most commonly reported STD, the rate of which has increased notably since 2000. The rate of chlamydia incidence for females was more than double that of males, and disproportionately high among 15-24 year-old residents compared to other age groups.

- The rate of syphilis, while relatively uncommon, has fluctuated each year since 2000.
- The rate of chronic hepatitis C reported by East Region residents increased significantly between 2000-2008, and decreased in 2009. Compared to the county, the rate of chronic hepatitis C was lower in the East Region.

Maternal and Child Health

The overall health of a community is often measured by the health of its mothers and infants. Infant mortality in the East Region was 4.7 deaths per 1,000 live births, slightly higher than the county average of 4.4 deaths per 1,000 live births, but lower than the United States average of 5.7 deaths per live births.

- 1 out of every 7 births in San Diego County occurred among residents of the East Region.
- Three out of four adult women in the East Region have ever given birth to a live infant.
- East Region mothers were less likely to receive prenatal care and as likely to have a low birth weight or very low birth weight baby than most other Regions in the county.
- Nearly one out of every five adult women were under 20 years of age when their first child was born.
- A lower percent of total births in the Region were to teenagers aged 15-17 years than in the county overall.

Injuries

Injuries are an important public health problem, especially given that so many are predictable and preventable, and include both unintentional and intentional injuries. Unintentional injuries, often called accidents, are those which were unplanned, or not intended to occur. Examples of unintentional injuries include motor vehicle crashes, unintentional falls, and drowning. Intentional injuries, also known as violence, are those which were purposely inflicted with intent to cause harm. Intentional injuries include both homicide or assault, and suicide or self-inflicted injury.

Injuries are among the leading causes of death in San Diego County for all ages, and are the leading cause of death for children and young adults. In the East Region, unintentional injuries were the sixth leading cause of death for all ages, and suicide was the eighth.

- East Region residents had among the highest rates of assault injury in the county, and the highest rate of suicide and ED discharge for self-inflicted injury compared to other Regions.
- The rate of suicide was disproportionately high among males and 25-64 year old residents of the East Region compared to other Regions.
- The East Region also had higher rates of death and medical encounter for unintentional injury than nearly all other Regions in the county, particularly among older adults aged 65+ years.
- Unintentional fall-related hospitalizations and ED discharges and deaths were notably high in the East Region, especially among older adults. The rate of fall-related ED discharge among East Region adults aged 65+ was second highest in all of the county.
- Overdose and poisoning injuries and death were high in the East Region, especially among females. Hospitalization rates were highest among adults aged 65 and over; however, ED discharge rates were highest among residents aged 15-24 years, significantly higher than in any other Region.

- East Region residents experienced high rates of motor vehicle injury hospitalization, ED discharge, and death, compared to other Regions. Total injury rates due to motor vehicle accidents, however, have decreased since 2000.
- Blacks, in particular, had high rates of death, hospitalization, and ED discharge for motor vehicle injury.
- Residents and visitors to the East Region aged 15-24 were at greatest risk for motor vehicle injury. The rate of alcohol-involved accidents and drinking drivers for this age group was nearly double that of all other ages.
- Three in ten children aged 0-5 years injured in a motor vehicle accident were not properly restrained in a car/booster seat.

Other Health Conditions

- East Region residents were more likely to have been hospitalized or treated in the ED for arthritis or dorsopathies than the county overall. Females in particular were disproportionately affected by arthritis and dorsopathies.

East Region Profile

* % is proportion of births where mother received early prenatal care out of the total births where prenatal care start time was known, by region per year. Births with unknown start of care are not included.

† Early prenatal care is defined here as care beginning during 1st trimester of pregnancy. This does not account for frequency of care.

** Beginning in 2007, "Date of first prenatal visit" was collected in addition to the "Month prenatal care began" on birth certificates. This affects comparability of statistics before and after 2007.

* % is proportion of births where mother received early prenatal care out of the total births where prenatal care start time was known, by region (or county for total). Births with unknown start of care are not included.

† Early prenatal care is defined here as care beginning during 1st trimester of pregnancy. This does not account for frequency of care.

‡ Beginning in 2007, "Date of first prenatal visit" was collected in addition to the "Month prenatal care began" on birth certificates. This affects comparability of statistics before and after 2007.

** Numbers may not add up to totals due to unknown or missing details.

† API includes Asian, Pacific Islanders, Native Hawaiian. Other includes 2 or more races, Native American/Alaskan Native, American Indian, or other. Unknown not included.

§ Percents not calculated for fewer than 5 events.

*% is calculated as proportion of occupant victims using active restraint (safety belt), among those whose restraint use was known.

Bold rates indicate that the Region's rate is statistically significantly different (higher or lower) from the County rate for that year. Confidence interval testing could not be performed for rates with § symbols.

† Motor vehicle accidents here refer to those occurring on public roads where injury has occurred; occupants are drivers or passengers of motor vehicles such as cars, trucks, or buses.

§ Percents not calculated for fewer than 5 events. Percent not calculated in cases where zip code is outside San Diego County.

* Rates per 100,000 population. County age-adjusted rates per 100,000 2000 US standard population.

Bold rates indicate that the Region's rate is statistically significantly different (higher or lower) from the County rate for that year. Confidence interval testing could not be performed for rates with § symbols.

† Self-inflicted injury emergency department discharge refers to (principal diagnosis) ICD-9 Ecodes E950-E959.

** New database; 2006 is first calendar year regional data is available

§ Rates not calculated for fewer than 5 events. Rates not calculated in cases where zip code is unknown or outside San Diego County.

East Region Communities

The East Region data are provided for eleven communities or Subregional Areas (SRAs), and represented by the zip codes in the table below. The maps show the relative boundaries: Community or Subregional Areas (SRAs), Regions, HHSA Regions.

SRA	Zip Codes
Alpine	91901
El Cajon	92019 92020
Harbison Crest	92021
Jamul	91917 91935 91978
La Mesa	91941 91942
Laguna-Pine Valley	91916 91931 91948
Lakeside	92040
Lemon Grove	91945
Mountain Empire	91905 91906 91934 91962 91963 91980
Santee	92071
Spring Valley	91977

SRA Comparison Tables

The Community, or Subregional Area (SRA) Comparison Tables provide an “at-a-glance” look at public health indicators for each community within the Region. For each disease and health topic, the most recent data available for each indicator are listed by community. Colored font shows relative rates compared to other communities in this Region. Indicators listed in **red** and **orange** font identify the community with the worst and second worst rate, respectively, compared to other communities in this Region. Indicators listed in **green** and **blue** font identify the community with the best and second best rate, respectively, compared to other communities in this Region. For more information about the health topics, data sources, and indicators described in these tables, see the Data Guide and other appendices at the end of this report.

How to Read Comparison Tables

Look down the column for “Sample Disease”, comparing death rates among the towns, Town 2 has the best rate (**green**); Town 6 has the worst rate (**red**). For hospitalizations, Town 3 has worst rate (**red**), Town 5 has the best rate (**green**). Look at Town 1. Comparing this town to the others, this community has the worst rate for ED discharges (**red**), the second best rate for hospitalizations (**blue**), and its death rate is in the middle (**black**).

Note: these comparisons are made of the rates, regardless of the number of events. For example, Town 6 had more hospitalizations than Town 3; however, after taking into account the population size, the Town 3’s rate is greater (worse) than Town 6’s rate.

Best/Worst: In this example, the best (**green**) rates are the lowest. In some cases the best rates may be the highest values (eg, restraint use or early prenatal care).

***Data are from 2009.**

Alpine

Alpine

Alpine is one of the least populous communities, located in the middle of the East Region, and identified by the zip code 91901. Alpine is east of Harbison Crest, southwest of Laguna-Pine Valley, and north of Jamul. As of 2009, the population was 15,606, representing 3.3% of the East Region population.

Population Characteristics

Alpine residents are slightly older than the rest of the East Region, with more than 45% of the population ages 45 years and older. The majority of the population of Alpine was white (76%), and 16% were Hispanic. Nearly all Alpine residents were English only speakers or bilingual.

Alpine was one of the most educated communities in the East Region, with nearly one-quarter of adults aged 25 years and older having earned at least a Bachelor's degree. Alpine household incomes were also among the highest in the Region, with more than 20% earning \$100,000 or more. Additionally, residents were least likely to live in poverty, with less than 6% earning incomes below the Federal poverty level.

Health Characteristics

Compared to other communities in the East Region, 3-4-50 non-communicable (chronic) disease death and medical encounter rates were generally lower or comparable in Alpine. However, rates of coronary heart disease hospitalization and emergency department (ED) discharge were among the highest in the Region. Diabetes hospitalization and ED discharge rates were among the highest in the Region, as well.

In 2009, there were 160 live births in Alpine, representing 2.5% of all live births in the East Region. Of these, 80.0% received prenatal care beginning in the first trimester of

pregnancy, comparable to other communities in the Region, and 5.0% were low birth weight births, better than most other communities.

Unintentional injury rates in Alpine were comparable to the rest of the Region. However, death due to unintentional injury, overdose/poisonings, and motor vehicle injury hospitalization rates were higher than many other communities. While homicide, and assault injury hospitalization and ED discharge rates were comparable to the Region, rates of suicide and self-inflicted injury medical encounter were among the highest.

El Cajon

El Cajon

El Cajon is the most populous community in the East Region, and is identified by zip codes 92019 and 92020. The communities of Santee, Lakeside, Harbison Crest, Jamul, Spring Valley, and La Mesa share borders with El Cajon. In 2009, the population was 124,034, representing more than one-quarter of the entire East Region population.

Population Characteristics

El Cajon is one of the youngest East Region communities, with nearly 1 in every 5 residents under the age of 15 years. In 2009, nearly 2 out of every 3 residents were white, while almost one-quarter was Hispanic. While 16% were bilingual, more than 13% spoke either Spanish or some other language exclusively.

Compared to the other communities in the East Region, El Cajon had lower education and lower household income. One in five residents had less than a high school education and more than half (60%) of households earned less than \$45,000 in 2009. Seventeen percent of El Cajon residents earned income below the Federal poverty level, higher than nearly every other community in the Region. Close to 20% of the industry in El Cajon was educational, social and health services and almost 13% was retail trade.

Health Characteristics

Compared to other communities in the East Region, 3-4-50 non-communicable (chronic) disease death and medical encounter rates were generally lower in El Cajon, as were the rates of medical encounter due to arthritis or dorsopathies. The syphilis rate in El Cajon was the lowest in the Region.

In 2009, there were 1,404 live births in El Cajon, representing 21.9% of all live births in the East Region; 1.4% of El Cajon births were to girls aged 15 to 17 years. The rate of very low birth weight births was lower than in most other East Region communities. However, just under 77% of live births received early prenatal care.

Both unintentional and intentional injury rates in El Cajon were among the lowest in the Region. Overdose or poisoning and motor vehicle injuries were particularly low compared to other communities. Homicide/assault and suicide/self inflicted injuries were also among the lowest or comparable to the Region. In 2009, there were 16 suicides.

Harbison Crest

Harbison Crest

Harbison Crest is one of the least populous communities in the East Region, identified by zip code 92021. Harbison Crest shares borders with Alpine, Jamul, El Cajon, and Lakeside. The population, as of 2009, was 15,556, representing 3.3% of the East Region population.

Population Characteristics

Harbison Crest is one of the older communities in the East Region, with more than 16% of the population aged 65+ years. The community is less racially and ethnically diverse than others in the East Region; nearly 76% of the population was white and 17% were Hispanic. Nearly 96% of all residents spoke English only, or were bilingual.

Eleven percent of Harbison Crest adults aged 25 years and older had less than a high school education, and 21% had a Bachelor's degree or higher. Harbison Crest households, however, earned higher incomes than most other communities in the East Region, with one in five earning at least \$100,000 per year. Only 4.9% of the population earned incomes below the Federal poverty level, lower than any other East Region community.

Health Characteristics

(Reported for Harbison Crest/El Cajon, in aggregate) *See Data Guide for explanation.

Compared to other communities in the East Region, 3-4-50 non-communicable (chronic) disease death and medical encounter rates were higher in Harbison Crest/El Cajon. The coronary heart disease (CHD), stroke, and diabetes death rates were among the highest in the Region. Hospitalization rates for CHD, asthma, and COPD were among the highest in the Region, as well. In particular, the asthma

hospitalization rate was higher in Harbison Crest/El Cajon than in any other community in the East Region. Additionally, rates of death due to prostate and female breast cancer were second highest in the Region. ED discharge rates for arthritis and dorsopathies were higher for residents of Harbison Crest/El Cajon than in most other communities.

In 2009, there were 2,352 live births in Harbison Crest/El Cajon, representing 36.6% of all births in the East Region. Of these, only 75.2% received prenatal care beginning in the first semester. In 2009, the infant mortality rate was 5.1 deaths per 1,000 live births.

ED discharge rates for unintentional injury were higher for Harbison Crest/El Cajon than for most other communities, especially for overdoses or poisonings. While the total injury rate for motor vehicle accidents occurring in Harbison Crest/El Cajon was comparable to the rest of the region, only 87.5% of children aged 0-5 years were actively restrained, compared to 92.8% of people aged 6 years and over. The pedestrian injury death, hospitalization, and ED discharge rates were higher than in any other community in the East Region.

Intentional injury rates were also high; Harbison/El Cajon had the second highest ED discharge rate for assault injury. Additionally, suicide and dental related injury ED discharge was second highest, while death due to firearm-related injury was highest in the Region.

Jamul

Jamul

Jamul is a rural community located in the southern half of the East Region, identified by zip codes 91917, 91935, and 91978, sharing a border with Mexico. Jamul is large geographically, but small in population. As of 2009, the population was 15,200, representing 3.2% of the East Region population.

Population Characteristics

Residents of Jamul were older than most East Region communities, with one in three residents between the ages of 45 and 64 years, and one in seven over the age of 65 years. Almost 66% of the population was white, and 24% were Hispanic. The majority of residents either spoke English only, or were bilingual.

Jamul households, on average, earned higher incomes than any other community in the East Region, with more than 35% earning \$100,000 or more in 2009. Jamul residents were also more educated than in other communities. One in every three earned at least a Bachelor's degree.

Health Characteristics

Compared to other communities in the East Region, 3-4-50 non-communicable (chronic) disease death and medical encounter rates were generally lower or comparable in Jamul. However, the rate of stroke emergency department (ED) discharge was second highest among the East Region communities, as were overall cancer deaths, and arthritis hospitalization.

Additionally, the rate of chronic hepatitis C was second highest in the Region.

In 2009, there were 213 live births in Jamul, representing 3.3% of all live births in the East Region. Of these, 82.6% received prenatal care beginning in the first trimester, which was higher than many other communities in the Region. However, the percent of live births that were preterm (15.9%), low birth weight births (10.3%), and very low birth weight births (3.8%) were higher than every other community.

Rates of unintentional injury and intentional injury were comparable or lower than other East Region communities. However, motor vehicle crash injury ED discharge, total injuries due to motor vehicle crashes, and alcohol related and drinking driver motor vehicle crash rates were second highest in the Region.

La Mesa

La Mesa

La Mesa is a small, but more densely populated community in the East Region of San Diego County, and identified by zip codes 91941 and 91942. It is surrounded by the communities of Mid City and Elliott-Navajo to the west, El Cajon to the north and east, and Spring Valley and Lemon Grove to the south. As of 2009, the population was 59,179, representing 12.6% of the entire East Region population.

Population Health Characteristics

La Mesa residents were older than in most communities in the East Region, with more than 15% of the population aged 65 years or older. La Mesa residents were less diverse than other communities; approximately 68% were white, 17% Hispanic, 5% black, and 5% Asian. Over 80% of the population spoke English only, while about 12% were bilingual.

Compared to the communities in the East Region, La Mesa residents were more educated, with nearly one out of every three earning a Bachelor's degree or higher, and just one out of ten having less than a high school diploma. However, La Mesa households had generally lower income, with more than half earning less than \$45,000 in 2009; eleven percent of the population earned incomes less than the Federal poverty level. About 40% of workers worked in professional, finance, and educational related occupations.

Health Characteristics

Compared to other communities in the East Region, 3-4-50 non-communicable (chronic) disease death and medical encounter rates were generally higher in La Mesa, possibly due to the older age of the population. Death rates for coronary heart disease (CHD), stroke, and COPD were higher than most other communities in the East Region.

Although the overall cancer death rate was comparable to the Region, specific cancers death rates—prostate, colorectal, and female breast cancer—were higher than any other East Region community.

The rate of reported new cases of gonorrhea in La Mesa was highest in the East Region.

In 2009, there were 880 live births in La Mesa, representing 13.7% of the births in the East Region. Of these, 83.4% received prenatal care beginning in the first trimester; higher than nearly every other community, and subsequently, a lower percentage of live births were born preterm (10.7%). However, the rate of fetal mortality was highest in the Region. Less than one percent of all live births were to girls between the ages of 15 and 17 years.

The rate of unintentional injury death was the second lowest in the Region; however, the rate of unintentional injury hospitalizations were second highest. The unintentional fall hospitalization rate in La Mesa was higher than in most other East Region communities. Additionally, the rate of death due to motor vehicle crash injuries was among the highest in the Region, as was pedestrian injuries and firearm-related injury ED discharges.

Laguna-Pine Valley

Laguna-Pine Valley

Laguna-Pine Valley, identified by zip codes 91916, 91931, and 91948, is a large, remote community located in the northern section of the East Region. This community, while large in geography, is very small in population size. The population, as of 2009, was 5,656, representing only 1% of the East Region population.

Population Characteristics

Laguna Pine-Valley residents were generally older than other communities in the East Region, with nearly half the population aged 45 years and older. The racial and ethnic distribution was slightly less diverse than the rest of the Region; 64% of Laguna-Pine Valley residents were white, 24% were Hispanic, and 6% were black. About 90% of the residents spoke English only, while 7% were bilingual.

Laguna Pine-Valley residents were slightly less educated, and households earned comparable incomes to the East Region overall. More than 14% of adults aged 25+ years earned less than a high school diploma, and nearly half (49%) of households earned less than \$45,000 per year.

Health Characteristics

Compared to other communities in the East Region, 3-4-50 non-communicable (chronic) disease medical encounter rates were generally lower in Laguna Pine-Valley. However, due to the small population, these rates were often unable to be calculated. Other non-communicable conditions rates, including arthritis and dorsopathies, were also lower in Laguna Pine-Valley than nearly all other communities.

In 2009, there were 22 live births in Laguna-Pine Valley, representing less than 1% of the East Region's births. Of these births, only 72.7% received prenatal care beginning in the first trimester.

Unintentional injury rates were lower in Laguna-Pine Valley than in any other community in the East Region, particularly for unintentional fall-related hospitalizations and ED discharges. However, the percentage of residents aged 6 and over who were wearing a seat belt when in a motor vehicle crash was the lowest of all East Region communities. The number of intentional injuries occurring among Laguna-Pine Valley residents was too small to calculate a rate.

Lakeside

Lakeside

Lakeside is identified by zip code 92040, and located south of Ramona and west of Laguna-Pine Valley and Alpine. As of 2009, the population of Lakeside was 58,036, representing 12.3% of the East Region population.

Population Characteristics

The population of Lakeside was generally younger than in the East Region overall in 2009, with one in five residents under the age of 15 years. Lakeside residents were not as diverse as other East Region communities; 77% were white, and 15% were Hispanic. Nearly 88% of the population spoke English only and about 9% were bilingual.

Lakeside households earned comparable incomes to the East Region overall, with a median household income of approximately \$48,500 in 2009. Forty-six percent of Lakeside households earned less than \$45,000, and 12% earned more than \$100,000. While a higher percentage of Lakeside adults aged 25 years and older earned at least a high school diploma, a lower percentage earned at least a Bachelor's degree than the Region overall. Approximately one out of four workers worked in either construction or retail trade occupations.

Health Characteristics

Compared to other communities in the East Region, 3-4-50 non-communicable (chronic) disease death and medical encounter rates were generally lower in Lakeside. Hospitalization rates in Lakeside for CHD, stroke, asthma, and COPD were lower than nearly every other community in the East Region. The rate of overall cancer death was also second lowest in the Region. Other chronic condition rates, such as arthritis, as well as rates of reported sexually transmitted diseases, were also among the lowest in the Region.

In 2009, there were 535 live births in Lakeside, representing 8.3% of all live births in the East Region. Of these, 78.1% received prenatal care beginning in the first trimester. The percentages of preterm, low birth weight births, and very low birth weight births were among the lowest in the Region.

Unintentional and intentional injury rates in Lakeside were comparable to other communities in the Region. However, the rate of total injuries due to motor vehicle crashes was second highest in the Region, as was the rate of hospitalization due to pedestrian injury.

Lemon Grove

Lemon Grove

Lemon Grove is a small community identified by zip code 91945, and located on the western edge of the East Region. The communities of La Mesa and Spring Valley border Lemon Grove to the east, and the Central Region borders to the south and west. As of 2009, the population of Lemon Grove was 30,339, representing 6.4% of the entire East Region population.

Population Characteristics

The population of Lemon Grove is slightly younger than the rest of the East Region, and the most racially and ethnically diverse of all communities in the Region. In 2009, 37% of residents were white, 35% were Hispanic, 14% were black and 8% were Asian. The Asian community was more than half Filipino, while 15% were Vietnamese and 13% were Japanese. While 64% of Lemon Grove residents spoke English only, nearly one-fifth were bilingual.

Lemon Grove residents were less educated and earned lower incomes than most other communities in the East Region. One out of every six adults aged 25 years and older had less than a high school education, and 59% of households earned less than \$45,000 in 2009. Approximately 14% of the population earned incomes below the Federal Poverty Level.

Health Characteristics

Compared to other communities in the East Region, 3-4-50 non-communicable (chronic) disease death and medical encounter rates were generally higher in Lemon Grove. In particular, the rate of diabetes death was second highest in the Region. Additionally, the rate of asthma hospitalization was second highest in the Region, as was asthma and COPD emergency department (ED) discharge.

This might indicate lower access to and/or utilization of appropriate services among Lemon Grove residents to control conditions such as asthma and COPD.

The rate of reported chlamydia was among the highest in the Region, while the rates of chronic hepatitis C and gonorrhea were comparable to the Region.

In 2009, there were 423 live births in Lemon Grove, representing 6.6% of all live births in the East Region. Of these, only three out of four received prenatal care beginning in the first trimester of pregnancy. About 7.6% were low birth weight births—second highest of all communities in the East Region. Over 3% of the live births were to girls aged 15 to 17 years.

Mountain Empire

Mountain Empire

Mountain Empire is the southeastern-most community of the East Region of San Diego County, sharing borders with both Mexico and Imperial County. While geographically the largest community in the East Region, Mountain Empire is the second smallest in population. The six zip codes that represent Mountain Empire are 91905, 91906, 91934, 91962, 91963, and 91980. As of 2009, the population was 5,991; representing only 1.3% of the entire East Region population.

Population Characteristics

Mountain Empire residents were generally older than residents of other communities in the East Region. About one-quarter of the population was between the ages of 45 and 64 years, while another 16% were 65 years and older. While small in population, Mountain Empire residents were racially and ethnically diverse; approximately 40% were white and more than 42% were Hispanic. About 65% of all residents spoke English only, and 22% were bilingual.

Of all communities in the East Region, Mountain Empire residents had both the lowest income and the lowest education. About 22% of adults aged 25 years and older had less than a high school education, and another 26% had only a high school education. More than 62% of households in Mountain Empire earned less than \$45,000 in 2009. One in five workers in Mountain Empire worked in educational, social and health services occupations, and another 13% worked in professional occupations. More residents of the Mountain Empire community lived in poverty (27%) than in any other community in the East Region.

Health Characteristics

Compared to other communities in the East Region, 3-4-50 non-communicable (chronic) disease death and medical encounter rates were generally higher among Mountain Empire residents. The rates of hospitalization for coronary heart disease (CHD), stroke, diabetes, and chronic obstructive pulmonary disease (COPD) were either the highest or second highest compared to all other communities in the East Region. Similarly, emergency department (ED) discharge rates were higher for CHD, diabetes, and asthma in Mountain Empire than in any other community. Rates of hospitalization and ED discharge for arthritis and for dorsopathies were the highest in the East Region. The rate of overall cancer death was the highest in the East Region as well.

Of the reported sexually transmitted diseases, rates of chronic hepatitis C and chlamydia were the highest in all of the East Region.

In 2009, there were 118 live births in Mountain Empire, representing 1.8% of all live births in the East Region. Only 71.2% of these births received prenatal care beginning in the first trimester. However, births among Mountain Empire residents were less likely to be preterm than any other community in the Region.

Unintentional injury death and medical encounter rates were significantly higher in Mountain Empire than in any other community in the East Region, as were intentional injury rates (homicide/assault and suicide/self-inflicted injury).

Notably, rates of unintentional injury death, hospitalization, and ED discharge were the highest in the Region. Fall-related and overdose/poisoning hospitalization and ED discharge were the highest as well. Additionally, rates of motor vehicle crash injury hospitalization and ED discharge, total injuries, and alcohol-related motor vehicle injuries were the highest in Mountain Empire than in any other East Region community.

Further, assault hospitalization and ED discharge rates were the highest among Mountain Empire residents, as were self-inflicted injury medical encounters.

Santee

Santee

Santee is a geographically small community, identified by the zip code 92071, found in the East Region of San Diego County. Santee is located east of Elliott-Navajo, southwest of Lakeside, and north of El Cajon. In 2009, the population of Santee was 55,405, representing 11.8% of the entire East Region population.

Population Characteristics

Comparable to the East Region overall, 45% of Santee residents were between the ages of 25 and 64 years, and one in six was under 15 years of age. The community is less racially and ethnically diverse than the rest of the Region; almost 77% of the population was white, while only 14% were Hispanic. Nearly nine out of ten residents spoke English only and one out of ten were bilingual.

Santee residents were generally middle income earners, with nearly half of households earning between \$45,000 and \$100,000 in 2009. For working residents aged 16 years and older, 20% worked in educational, social, and health services related jobs, 12% worked in retail, and 11% were in professional, scientific, or management related jobs. Only 19% of Santee adults aged 25 years and older earned at least a bachelor degree, compared to 22% of the East Region overall. However, a lower percent (11%) earned less than a high school degree compared to the East Region overall (14%). Only 8% of Santee residents earned less than the Federal Poverty Level, which was lower than the Region overall.

Health Characteristics

Compared to other communities in the East Region, 3-4-50 non-communicable (chronic) disease death and medical encounter rates were generally lower in Santee. Notably, coronary heart disease (CHD), stroke, and diabetes death rates were among the lowest in the Region.

In 2009, there were 742 live births in Santee, representing 11.6% of all live births in the East Region. Of these, 84% received prenatal care beginning in the first trimester of pregnancy. While the rates of low birth weight births in Santee were comparable to the East Region overall, Santee had the second highest percentage of preterm births (12.2%) compared to other communities in the East Region. Only 0.8% of live births in Santee were to girls between the ages of 15 and 17 years.

Unintentional injury death and medical encounter rates were lower or similar to the East Region overall. However, the unintentional fall death rate was the highest in the Region. The rate of medical encounter due to motor vehicle injury among Santee residents was comparable to the rest of the Region. However, Santee had the highest rate of motor vehicle crash deaths in the Region. Motor vehicle crashes occurring in Santee that involved alcohol or drinking drivers were also lower than nearly every other community in the East Region. More than 95% of all people aged 6 and older who were injured in motor vehicle crash in Santee were actively restrained.

Intentional injury rates among Santee residents were generally lower than other communities in the East Region. Santee had the lowest rate of assault hospitalizations compared to other communities, and second lowest rate of firearm-related injury ED discharge.

Spring Valley

Spring Valley

Spring Valley, identified by zip code 91977, is located in the southwest corner of the East Region of San Diego County; east of Lemon Grove, south of El Cajon and La Mesa, and west of Jamul. In 2009, the population of Spring Valley was 85,896, representing 18.2% of the East Region population.

Population Characteristics

Spring Valley is one of the youngest communities in the East Region, with 21% of all residents less than 15 years of age. Spring Valley is also racially and ethnically diverse; a higher percentage of residents were Hispanic (26%) than in any other East Region community. Nearly three out of four residents spoke English only, and nearly one out of five were bilingual.

Spring Valley was the one of the most educated communities in the East Region; 26% earned at least a bachelor degree, and more than one-third had some college course work or had received their associate of arts degree. Income levels were slightly higher than the East Region overall, with 14% of the population earning \$100,000 or above. Nearly 9% of the population earned incomes below the Federal poverty level.

Health Characteristics

Compared to other communities in the East Region, 3-4-50 non-communicable (chronic) disease death and medical encounter rates were generally lower in Spring Valley. In particular, coronary heart disease (CHD), stroke, cancer and COPD death rates were lower in Spring Valley than in any other community in the East Region. Medical encounter rates for these diseases were among the lowest as well.

Spring Valley had the highest rate of reported new cases of primary and secondary syphilis compared to all other communities in the Region, however the number of cases was low.

In 2009, there were 975 live births in Spring Valley, representing 15.2% of all live births in the East Region. Of these, only 77.6% received prenatal care beginning in the first trimester. More than 3% of the births were to girls between the ages of 15 and 17 years old.

Spring Valley had among the lowest unintentional and intentional injury rates in the East Region. In particular, the hospitalization and ED discharge rates due to unintentional injuries in Spring Valley were second lowest in the Region. The suicide and self-inflicted ED discharge rates were second lowest among all communities in the East Region.

The rate of death due to motor vehicle injury among Spring Valley residents was lower than most other communities in the East Region. Spring Valley also had the lowest rate of motor vehicle crash injuries by occurrence in all of the East Region. Motor vehicle crashes occurring in Spring Valley that involved alcohol or drinking drivers were also lower than every other community in the East Region. Nearly 94% of all people aged 6 and older who were injured in motor vehicle crash in Spring Valley were actively restrained.

Appendix A - Data Guide

Important Information for Data Users

Please Review This Section Before Using the Following Public Health Data

For abbreviations used in data sources, see [Data Sources](#).

Diagnoses:

Disease definitions for most indicators are based on ICD-CM coding. Two versions of ICD coding are used in this document depending upon the data source, ICD-9 or ICD-10. ICD-CM based data for San Diego are comparable whether obtained using the 9th or 10th revision. The codes used are listed in footnotes for appropriate tables. Healthy People 2010 targets, and national and California data are shown if available and comparable to local data. Definitions for the targets can be found via [Healthy People 2010 Operational Definitions](#).

The death data used in this document only include underlying cause of death. This means that deaths are categorized only by the disease or injury that initiated the chain of events leading to death. The immediate cause of death or any other contributing causes are not included. For example, a diabetic who died of heart disease resulting from complications of diabetes would only be included among diabetes-related deaths. Similarly, Hospital Discharge and Emergency Department Discharge data are reported by the primary diagnosis at time of discharge for which the medical encounter occurred. In some cases, indicators are based not on ICD-CM coding, but rather on case definitions— meeting specified clinical and/or laboratory criteria.

Comparing Data:

Caution must be used when exploring data from multiple sources or even the same data prepared by different analysts. Comparisons may not be appropriate. Information accompanying data presentations is important to read to identify any possible differences in sources, preparation, diagnosis/case definitions, rate constant (i.e. per 100,000 or 1,000), geographic units, persons included in the data (i.e. location of occurrence vs. location of residence, or among live births not total pregnancies) and other data characteristics.

Data from different tables must not be aggregated, subtracted, or modified in any way. For example, pedestrian deaths can not be added to nonfatal pedestrian injuries to determine total injuries. In this case, one database is recorded by location of residence, while the other is by location of occurrence. If you need assistance or additional data not contained here, please contact the Community Health Statistics Unit.

Rates, Age-adjusted Rates: Understanding Rates and Age-Adjusted Rates

The public health data in the Community Profiles includes crude rates (from this point forward referred to as rates) at the for Regional and Subregional (SRA) levels. Additionally, age-adjusted rates are provided for county level data in many cases.

For comparison, Healthy People 2010 Targets are included, along with comparable USA and California rates. Many Healthy People 2010 Targets are based on age-adjusted rates; these are indicated by “age-adjusted population.” When a Healthy People target listed is based on an age-adjusted rate, the comparable rates for USA and California are also age-adjusted.

A rate is the number of cases divided by the population, usually multiplied by a constant. For example 987 cases, divided by population of 654,321 would be a rate of 150.8 per 100,000 population. This means for every 100,000 people, between 150 and 151 cases would be expected.

Calculations of age-adjusted rates are slightly more complex. They take into account the age of each case relative to a standard age distribution of a reference population. The reference population used in this document is the “2000 US standard population.” The standard previously used was a reference population from 1940. The 2000 US standard population proportions more closely reflect the current age distribution of the entire US population.

Age-adjusted rates represent the rates that would be expected if a population of interest had the same age distribution as the standard population. This removes the effect of age when comparing rates to identify risk in a population. This is important in many cases when comparing risk “across populations with different underlying age structures.”¹ Since many causes of mortality disproportionately affect older persons, disease mortality is often reported as an age-adjusted rate. This is the case with many Healthy People 2010 Targets, particularly death rates.

Age-adjusted rates are used to compare relative risk (over time or between populations), while removing the effect of differences in the age of a population. Age-adjusting shows differences between groups that are not due to differences in age distribution. “Age-adjusted rates should be viewed as relative indexes rather than as direct or actual measures” of risk.¹

For many users of this data the magnitude of an issue is important beyond the adjustments made for age. Often planning and resource decisions are based on data. In this case, knowing that a group contains an older population is valid and important for planning for those diseases which affect different aged population sectors.

Differences in rates may be due to other reasons besides age, such as gender or race/ethnicity. One may want to consider several of these demographic factors when examining a health issue. Each profile contains demographic data for each Region and SRA, including: age, gender, race/ethnicity distributions, income, occupation, housing and education data. Many of these factors have been implicated at the roots of health disparities.

Geography: Understanding Geographic Units used in Health Data

Many different geographic units are used throughout San Diego County. In this document, the boundaries for Regions and Subregional Areas (SRA) are based on census tracts and approximate Health and Human Service Agency Region (HHSA Region) boundaries. The exception to this is California Health Interview Survey (CHIS) data, which use zip-code based HHSA Regions.

Many data users have expressed the desire for community data at a level more specific than the HHSA Regions. Several levels of geography may be considered, such as, SRA, census tract, zip code, or city. In order to provide community level health data and compare populations, it is important to have stable geographic units and units that are compatible with population data estimates.

1: <http://www.cdc.gov/nchs/data/statnt/statnt20.pdf>

While most health data are reported by zip code, zip codes may change at any time throughout the year – making annual aggregated estimates difficult. Additionally, since zip codes may change from one year to the next, comparing zip code data over time may introduce a level of imprecision. SRAs are small, community level geographic units based on census tracts which are stable between census years (i.e. change only every 10 years, if at all). Population estimates are available at this level with high level of accuracy. However, health data for an SRA must be estimated based on reported zip code data.

Types of data available for Geographic Boundaries

Zip Codes:	Census Tracts:
HHSA Region	Subregional Area (SRA)
Health Services	Major Statistical Area (MSA)
	Region (approximated HHSA Region)

In this document, community level (SRA) data are aggregated to larger regional levels. Currently, Region aggregations based on SRAs closely approximate, but do not directly correspond to HHSA Regions. In order to have more accurate community level data and enable reliable comparisons over time and place, SRA Region aggregations are used in lieu of HHSA Regions. Therefore, data on the HHSA Regional level presented by other analysis may differ lightly from the data presented in this document. Any differences are likely to be minor and would not be expected to impact any decisions related to policy, planning, or resources for any particular area. There are 3 zip codes which are primarily affected by the different methods of aggregation to Region or HHSA Region (see table below). A list of zip codes representing each Region is included at the beginning of the Region section within each Profile, as well as a complete listing in the County Profile.

HHSA REGION	Zip Code	Community Profiles	
		Subregional Area (SRA)	Region
North Coastal	92014	Del Mar-Mira Mesa	North Central
North Coastal	92091	North San Diego	North Inland
North Central	92131	Poway	North Inland

The only data in this document to which the above information *does not* apply are California Health Interview Survey (CHIS) data in the Public Health Data Section. Data in this survey are collected by HHSA Region and cannot be estimated for SRA based Regions.

Harbison Crest/El Cajon

Due to data aggregation methods, health data for the Harbison Crest SRA may be misleading. Demographic data are presented for Harbison Crest alone, as well as in combination with El Cajon. Health data are presented as an aggregate of the two SRAs, Harbison Crest/El Cajon for better data stability and representation of the area.

Appendix B - Data Sources

Health and demographic data are available from a variety of sources. There are three general categories of data: population, survey (or sample), and administrative. Population data, such as census information, are collected from the entire population. Survey (or sample) data are collected from a portion of the population, and extrapolated to represent the entire population. Administrative data are collected based on an organization's day-to-day operations, such as the prehospital database. The following data sources, presented in alphabetical order, were used in the preparation of this report:

California Health Interview Survey (CHIS): CHIS is an important survey data source of information on health and access to health care services. CHIS is a telephone survey of adults, adolescents, and children from all parts of the state. The survey is conducted every two years. CHIS is the largest state health survey and one of the largest health surveys in the United States. The survey provides state and county level information for health planning and comparison. Region level information is available for many variables for the 2005 and 2007 surveys. A list of CHIS questionnaire topics is included. To review the actual survey questions, go to <http://www.chis.ucla.edu/topics.html>. Data can also be accessed from the [askCHIS website](#).

Emergency Department Discharge Data (ED Data): ED data are administratively collected and maintained for most emergency hospitals in San Diego County. ED data elements include patient's home zip code, demographic information, source of payment, disposition, diagnoses and procedures performed for all patients treated and discharged from the ED.

HIV/AIDS Reporting System (HARS): HARS is an administrative system used to report HIV and AIDS cases in San Diego County. HIV reporting began in 2002 and is not available for zip code level analysis. The number of AIDS cases has been reported since 1983 and is available by zip code if the total is 5 or more.

Patient (Hospital) Discharge Data: Discharge data are administratively collected and maintained for most inpatient facilities in San Diego County. Discharge data elements include patient's home zip code, demographic information, source of payment, disposition, diagnoses and procedures performed for all patients admitted to the hospital for any condition.

Prehospital Database: Emergency Medical Services (EMS) receives a prehospital patient record (PPR) for every patient seen by a paramedic or emergency medical technician from a 911 call. The PPR contains information including demographics, incident zip code location, chief complaint, patient status, injury event information, restraint use, contributing factors, times and outcomes. At this time, only those calls in which a paramedic or EMT made contact with a Mobile Intensive Care Nurse (MICN) at a base hospital are included in this data.

San Diego Association of Governments (SANDAG): SANDAG creates and maintains a tremendous quantity of demographic, economic, land use, transportation and criminal justice information about the San Diego region. Demographic data includes population characteristics like age, education, and employment. SANDAG develops annual demographic estimates and long range forecasts in addition to maintaining census data files. Data is available by county, SRA, zip code, and census tract.

Sexually Transmitter Disease (STD) Morbidity Surveillance Data: Data are available for three STDs: Chlamydia, gonorrhea and syphilis (primary and secondary). Information on age, gender, race/ethnicity are available for all 3 diseases. Data are also available at the zip code level, although this data are incomplete.

Statewide Integrated Traffic Record System (SWITRS): SWITRS is a traffic collision database administratively collected by the California Highway Patrol. Collisions with personal injury on public roads are included. Detailed information on the circumstances of the crash, drivers, passengers, and other victims are available by incident zip code.

Vital Records Data: A birth certificate is required for every live birth in San Diego County. A death certificate is completed for every person who dies in San Diego County. Vital records data includes information on birth (e.g. weight) or death (e.g. underlying and contributing causes of death) and basic demographic information by zip code.

Additional abbreviations used in sources:

CDPH – State of California, Department of Public Health

CDC – Centers for Disease Control and Prevention

CHIP – Community Health Improvement Partners

HASDIC – Hospital Association of San Diego & Imperial Counties

NCHS – National Center for Health Statistics

NVSS- National Vital Statistics System

OSHPD – California Office of Statewide Health Planning and Development

Appendix C - Glossary Demographic Terms

The following terms are defined by SANDAG.

Demographic Profile

Total Population: Total number of persons (residents) in an area.

Age Distribution: Total number of persons (residents) in an area by age group.

Median Age: Divides the age distribution into two equal parts; half of all persons are older than the median and half are younger.

Gender Distribution: Total number of persons (residents) in an area by gender.

Race/Ethnicity: Self-identification by people according to the race(s) and ethnicity with which they most closely identify. "Other" includes American Indian or Alaska Native, those who identified two or more races, and other.

Education

Completed Education: The highest level of education completed in terms of the highest degree or the highest level of schooling completed.

Household Income

Household: A person or group of people living in a housing unit that serves as a primary place of residence.

Household Income: Total pre-tax annual income of all members of a household.

Income: Sum of wages, salary, commissions, bonuses, tips, self-employment income, interest, dividends, net rental income, royalty income, income from estates and trusts, Social Security or Railroad Retirement income, Supplemental Security Income (SSI), any public assistance or welfare payments from the state or local welfare office, retirement, survivor, or disability pensions, and any other sources of income received regularly.

Median Household Income: Divides the household income distribution into two equal parts; half of all households have incomes above the median and half have incomes below the median.

Persons per Household: The average number of persons living in a housing unit, calculated by dividing the household population by the number of occupied housing units.

Income per Person in HH: The average income per person living in a housing unit, calculated by dividing the Median Household Income by the Persons per Household.

Change from County: The percentage above or below the County of San Diego average income per person (i.e. \$16,193 for 2009 estimate).

Housing

Owner Occupied: Housing units that are occupied as a primary residence by the owner of the unit.

Renter Occupied: Housing units that are occupied as a primary residence by an individual other than the owner of the unit.

Residential Density: The total number of housing units per developed residential acre.

Industry

Industry of Civilian Employees: The kind of business conducted by a person's employing organization.

Professional, Scientific, Management, Admin: Category of industry that includes professional, scientific, management, and administrative.

Entertainment and Hospitality Industry: Category of industry that includes arts, entertainment, recreation, accommodations and food services.

Language

Primary Language Spoken at Home: The language currently used at home, either "English only" or a non-English language that is used in addition to English (bilingual) or in place of English.

Occupation

Employed Civilian Occupation Category (16+ Years): Category of occupation for those who are employed in the civilian work force. Does not include Armed Forces or unemployed. This category refers to the type of work one does on the job, not the industry by which they are employed.

Construction, Extraction, and Maintenance: Category of occupation including construction, extraction (such as mining) and maintenance or repair jobs.

Farming, Fishing, and Forestry: Category of occupation including farming, fishing and forestry jobs.

Labor Force 16+ Years: Includes all residents 16 years old and over who are currently in the civilian labor force, plus members of the U.S. Armed Forces (those residing in the county for two or more months) and those who are unemployed. This includes those who are either "at work" or "with a job but not at work".

Management, Professional, and Related: Category of occupation including management (including farm managers), business and financial, computer and mathematical architecture and engineering, science (life, physical, and social), community and social service, legal, education and training and library, arts, design, entertainments, sports, and media, healthcare practitioners.

Production, Transportation and Material: Category of occupation including production, transportation and material moving jobs.

Sales and Office: Category of occupation including sales and office jobs.

Service: Category of occupation including healthcare support, protective service, food preparation and serving, building and grounds cleaning and maintenance, personal care and service.

Unemployed: Civilians 16 years old and over who are neither "at work" nor "with a job but not at work" during the reference period, and were actively looking for work during the last four weeks and were available to accept a job.

Personal Vehicles

Vehicle Availability: Passenger cars, vans, and pickup or panel trucks of 1-ton capacity or less kept at home and available for use by household members. Excludes vehicles kept at home but used only for business purposes.

Poverty

Income Percent of Poverty Level: The percentage of the poverty threshold that the family's household income is at.

Family: Householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption.

Population: Families or individuals whose total income falls below the poverty threshold set by the Census Bureau, according to family size and composition.

Poverty Level: Minimum annual income below which is considered poverty. Poverty level information for 2009 by family size may be found at <http://www.census.gov/hhes/www/poverty/data/threshld/thresh09.html>.

School Enrollment

Percent Enrolled: The percentage of children ages 4 to 18 years who were enrolled in grades K – 12. Found by dividing the number of enrolled students (K-12) by the total population ages 4 to 18 years.

Percent Private: The percentage of all students enrolled in grades K – 12 who attend a private school. A private school is one that is supported and controlled primarily by religious organizations or other private groups.

Percent Public: The percentage of all students enrolled in grades K – 12 who attend a public school. A public school is one that is supported and controlled primarily by a federal, state, or local government (including tribal schools).

Single Parent Homes

Single Parent Household: The percentage of all families with "own children" under age 18 living in the household, who are headed by a person, male or female, without a spouse present in the home. "Own children" are never-married children under 18 who are related to the householder by birth, marriage, or adoption.

Unemployment

Unemployed: Percentage of civilians 16 years old and over who are neither "at work" nor "with a job but not at work" during the reference period, and were actively looking for work during the last four weeks and were available to accept a job.

Appendix D - Glossary Health Indicator Terms

The following are definitions of health indicator terms for population and service data used in this document, including which databases data comes from (noted in *italics*). For more information, see **Data Sources**.

Disease data here represent only principal diagnoses (or underlying cause of death) and do not include secondary diagnoses. Injury data using ICD10 coding (death) only uses underlying cause of death; injury data using Ecodes from Emergency Department and Hospital discharges include only primary Ecode (mechanism of injury).

The majority of the data here is reported by location of residence of the subject. Non-fatal motor vehicle injury data from SWITRS are reported by location of occurrence; while motor vehicle death data (from Death Statistical Master Files) are reported by location of residence.

California Health Interview Survey (CHIS) Definitions: see individual table footnotes or askCHIS website at www.chis.ucla.edu.

Population and Service Data Definitions:

Non-Communicable (Chronic) Disease

Coronary Heart Disease: ischemic and hypertensive heart disease, ICD9 codes 402, 410-414, 429.2; ICD10 codes I11, I20-I25. *Death, Hospital, Emergency Department.*

Cardiac Chief Complaint: cardiac chest pain, congestive heart failure, palpitations and STEMI (st-elevation myocardial infarction). *Prehospital (911).*

Stroke: cerebrovascular disease, ICD9 codes 430-438; ICD10 codes I60-I69. *Death, Hospital, Emergency Department.*

Stroke Chief Complaint: cerebrovascular accident (cva). *Prehospital (911).*

Diabetes: Diabetes Mellitus, includes insulin-dependent and non insulin-dependent diabetes, ICD9 code 250; ICD10 codes E10-E14. *Death, Hospital, Emergency Department.*

Asthma: ICD9 code 493; ICD10 codes J45-J46. *Death, Hospital, Emergency Department.*

Chronic Obstructive Pulmonary Disease (COPD): ICD9 codes 490-492, 496; ICD10 codes J40-J44. *Death, Hospital, Emergency Department.*

Respiratory-related Chief Complaint: asthma, chronic obstructive pulmonary disease (COPD) and respiratory distress. *Prehospital (911).*

Female Breast Cancer: ICD10 code C50. *Death.*

Prostate Cancer: ICD10 code C61. *Death.*

Cervical Cancer: ICD10 code C53. *Death.*

Colorectal Cancer: cancer of the colon, rectum or anus, ICD10 codes C18-C21. *Death.*

Lung Cancer: cancer of the trachea, bronchus or lung, ICD10 codes C33-C34. *Death.*

Arthritis: ICD9 codes 95.6, 95.7, 98.5, 99.3, 136.1, 274, 277.2, 287.0, 344.6, 353.0, 354.0, 355.5, 357.1, 390, 391, 437.4, 443.0, 446, 447.6, 696.0, 710-716, 719.0, 719.2-719.9, 720-721, 725-727, 728.0-728.3, 728.6-728.9, 729.0-729.1, 729.4. *Hospital, Emergency Department.*

Dorsopathies: ICD9 codes 720-724. *Hospital, Emergency Department.*

Communicable Disease

Tuberculosis (TB): new active cases reported to and confirmed by County Public Health Services, see [CDC clinical case definition](#).** TB Registry.

Chronic Hepatitis C: cases reported by providers* to County Public Health Services, see [CDC case definition](#).** Hepatitis Reporting.

AIDS: new cases reported by providers* to County Public Health Services, cases need not be investigated and confirmed, see [CDC clinical case definition](#).** HIV/AIDS Reporting System.

Chlamydia: new cases reported by providers* to County Public Health Services, cases need not be investigated and confirmed, see [CDC clinical case definition](#).** For estimated Chlamydia (Regional Tables), cases with unknown residence are statistically distributed to Regions to better estimate Regional needs. SRA Tables do not include a substantial number of cases reported in San Diego County, due to cases with unknown residence. Approximately 30%, or 2500 Chlamydia cases per year, are missing residence data. Chlamydia numbers are underestimated at the SRA level. STD Reporting.

Gonorrhea: new cases reported by providers* to County Public Health Services, cases need not be investigated and confirmed, see [CDC clinical case definition](#).** For estimated Gonorrhea, cases with unknown residence are statistically distributed to Regions to better estimate Regional needs. SRA Tables do not include a substantial number of cases reported in San Diego County, due to cases with unknown residence. Approximately 30%, or 600 gonorrhea cases per year, are missing residence data. Gonorrhea numbers are underestimated at the SRA level. STD Reporting.

Primary and secondary syphilis: new cases reported to and confirmed by County Public Health Services, see [CDC clinical case definition](#).** STD Reporting.

Maternal and Child Health

Live Birth: a product of conception, which after complete expulsion or extraction from the mother, breathes or shows any other evidence of life. This is not synonymous with the term "pregnancy", which can result in a miscarriage, fetal death, induced abortion or live birth. MCFHS.

Early prenatal care: care beginning during the 1st trimester of pregnancy. Percentages of those receiving prenatal care are calculated amongst those births whose start of prenatal care is known (i.e. those whose start of care is unknown or missing are excluded from the denominator). MCFHS.

Preterm birth: birth prior to 37 completed weeks of gestation. MCFHS.

Low birth weight: birth weight less than 2,500 g (approximately 5lbs, 8oz). MCFHS.

Very low birth weight: birth weight less than 1,500 g (approximately 3lbs, 5oz). MCFHS.

Fetal mortality: number of deaths of fetuses more than 20 weeks gestation per 1,000 live births and fetal deaths. MCFHS.

Infant mortality: number of deaths of infants under one year of age per 1,000 live births. MCFHS.

Injury

Unintentional injury: ICD9 Ecodes E800-E869, E880-E929; ICD10 codes V01-X59, Y85-Y86. This generalized unintentional injury may overlap with specific indicators below, such as drowning, smoke/fire, suffocation, falls, motor vehicle or pedestrian deaths, as well as the unintentional portion of overdose/poisoning and firearm injuries. Death, Hospital, Emergency Department.

Drowning: unintentional drowning and submersion, including those caused by accident due to watercraft or related to water-transport, ICD10 codes W65-W74, V90, V92. Death.

Accidental exposure to smoke, fire or flame: ICD10 codes X00-X09. Death.

Unintentional suffocation: ICD10 codes W75-W84. Death.

Fall-related: unintentional falls, ICD9 Ecodes E800-E886, E888; ICD10 codes W00-W19. *Death, Hospital, Emergency Department.*

Overdose/Poisoning: all intents, ICD-9 Ecodes E850-E869, E950-E952, E962; ICD10 codes X40-X49, X60-X69, X85-X90, Y10-Y19, Y35.2, U01.6-U01.7. *Death, Hospital, Emergency Department.*

Motor vehicle injury: unintentional injury of anyone involved in a motor vehicle accident (collision or non-collision) on a public road, including occupants, pedestrians, and cyclists, ICD9 codes E810-819; ICD10 codes V30-V39 (.4-.9), V40-V49 (.4-.9), V50-V59 (.4-.9), V60-V69 (.4-.9), V70-V79 (.4-.9), V81.1, V82.1, V83-V86 (.0-.3), V20-V28 (.3-.9), V29 (.4-.9), V12-V14 (.3-.9), V19 (.4-.6), V02-V04 (.1, .9), V09.2, V80 (.3-.5), V87 (.0-.8), V89.2. *Death, Hospital.*

Total injuries due to motor vehicle accident: those injured in motor vehicle accidents occurring on public roads. The injured may be cyclists, pedestrians or occupants of motor vehicles (such as cars, trucks, or buses). Data here are based on injuries involving a motor vehicle in transport (in motion or readiness for motion) and are not defined by ICD codes of collision or non-collision. Data are by location of occurrence. *SWITRS.*

Alcohol-related: those injured in motor vehicle accidents occurring on public roads where alcohol was involved. The drinking driver need not be injured and need not be declared at fault, nor tested for being under the influence of alcohol. Data are collected by location of occurrence. *SWITRS.*

Drinking drivers: drivers noted as drinking, involved in motor vehicle accidents occurring on public roads with injury to any party. The drinking drivers need not be injured and need not be determined to be at fault nor impaired. Data are collected by location of occurrence. *SWITRS.*

Active restraint use: those injured in motor vehicle accidents occurring on public roads where active restraints were used. Rates are calculated amongst those whose status of restraint use/non use was known. Data applies to those ages 6 years and older. Data are collected by location of occurrence. *SWITRS.*

Child restraint use: those injured in motor vehicle accidents occurring on public roads where child restraints were used. Rates are calculated amongst those whose status of restraint use/non use was known. Data applies to those ages 0-5 years. Data are collected by location of occurrence. *SWITRS.*

Pedestrian injury attributed to motor vehicle accidents: unintentional injury of pedestrians involved in motor vehicle accidents on a public road, ICD9 codes E810-819(.7); ICD10 codes V02-V04 (.1, .9), V09.2. *Death, Hospital.*

Homicide: deaths that are intentionally inflicted by another, ICD10 codes U01-U02, X85-Y09, Y87.1. *Death.*

Assault injury: injuries that are intentionally inflicted by another, ICD9 codes E960-E969. *Hospital, Emergency Department.*

Suicide: deaths that are intentionally inflicted by self, ICD10 codes U03, X60-X84, Y87.0. *Death.*

Self-inflicted injury: injuries that are intentionally inflicted by self, ICD9 codes E950-E959. *Hospital, Emergency Department.*

Firearm-related: all intents, ICD9 Ecodes E922, E955.0-E955.4, E965.0-E965.4, E970, E985.0-E985.4; ICD10 codes W32-W34, X72-X74, U01.4, X93-X95, Y22-Y24, Y35.0. *Death, Hospital, Emergency Department.*

Dental-related: injury as well as non-injury medical/dental primary diagnoses, ICD9 codes 521-523, 525.3, 525.9, 873.63, 873.73. *Emergency Department.*

* Providers may refer to health care providers (e.g. physicians, nurses, or hospital administrators), laboratories, or school administrators who are legally mandated to report diseases indicated in CCR, Title 17, sections 2500, 2508, and 2505.
