## *Live Well, San Diego!* Healthy, Safe and Thriving Communities

*Live Well, San Diego!* is an initiative that embodies a countywide effort to achieve the County vision for healthy, safe and thriving communities. This is a 10-year plan to advance the health and overall well-being of the entire region. *Live Well, San Diego!* is being built with community involvement in a phased approach. The first phase – Building Better Health – was adopted by the Board of Supervisors on July 13, 2010, and implementation is ongoing and continuous. The second phase is in the design stages, and the third phase will be initiated following its adoption.

The three phases that encompass the pillars of *Live Well, San Diego!*:

- ***Building Better Health*** – focuses on improving the health of residents and supporting healthy choices.
- ***Living Safely*** – focuses on the Agency's role in ensuring families are connected to services and vulnerable residents are protected from further harm.
- ***Promoting Thriving Families*** – focuses on the Agency's role in helping families become stable and independent.

### Key Strategies for *Live Well, San Diego!*

Each pillar has four strategies upon which our goals and objectives will be built. These strategies are:

- ***Building a Better Service Delivery System*** – maximizing quality and eliminating waste in our services.
- ***Supporting Positive Choices*** – providing information and tools so that residents can take charge of their well-being.
- ***Pursuing Policy and Environmental Changes*** – making it easier for people to engage in and adopt positive behaviors.
- ***Improving the Culture from Within*** – recognizing the importance of the workforce in making and promoting positive choices.

The entire initiative is built on a foundation of operational excellence. The County serves the entire San Diego population, with a focus on at-risk and high-need populations. These are defined as:

**General Population:** The 3.1 million San Diego County residents who may benefit from a more coordinated and comprehensive prevention approach.

**At-Risk Population:** Those we will engage with early, proven interventions to stop problems from developing or escalating.

**High-Need Population:** Those already in the County system who will benefit from assistance to stabilize and achieve self-reliance.

# Executive Summary

The North Inland Region of San Diego County is the largest geographical Region in the county, with a high proportion of white and Hispanic residents. The Region covers 2,373 square miles of urban, suburban, rural, and remote areas. The Region includes the communities of Anza-Borrego Springs, Escondido, Fallbrook, North San Diego, Palomar, Julian, Pauma, Ramona, San Marcos, Poway, and Valley Center.

### Population Characteristics

In 2009, the North Inland Region was home to an estimated 579,000 residents, representing 18.2% of San Diego County population. The majority of North Inland residents were white, and more than one out of four was Hispanic. Two-thirds of all residents spoke English only, while 17% were bilingual.

Compared to the other Regions, residents in North Inland generally had higher incomes than the rest of San Diego County residents. About 20% of all household earned more than \$100,000 per year, and less than 9% of residents were living in poverty. Among adults with incomes below 200% of the Federal Poverty Level (FPL), only seven out of ten had a consistent ability to afford enough food. Half of women earning incomes at or below 300% FPL, who were pregnant or had young children, received assistance through the Women, Infants, and Children (WIC) program.

### Insurance, Access, Utilization

North Inland Region residents reported that they had health insurance coverage, access to healthcare, and utilized health services at rates comparable to the rest of the county. Eighty-six percent of all adults were insured through private or public programs. However, this percentage differed with age. Of adults aged 18-64 years old, nearly one in five did not have any insurance coverage.

### 3-4-50 Diseases

In the North Inland Region, non-communicable (chronic) disease deaths and medical encounter rates were generally comparable to that of the county overall.

Within the North Inland Region the overall cancer death rate was comparable to the county overall. Anza-Borrego Springs and Fallbrook had the highest rates of overall cancer death among the North Inland communities. Among the North Inland Region, prostate, colorectal, and female breast cancer death rates were highest in Fallbrook, and the lung cancer death rate was highest in Ramona.

The rates of coronary heart disease (CHD) and stroke death, hospitalization, and emergency department (ED) discharge were generally lower or comparable to the county overall. Further, the CHD and stroke death and hospitalization rates have declined since 2000. Among the North Inland Region communities, CHD death and hospitalization rates were highest in Anza-Borrego Springs, while the CHD ED discharge rate was highest in North San Diego. Anza-Borrego Springs had the highest stroke death rate and highest hospitalization rate, while North San Diego had the highest ED discharge rate.

In the North Inland Region, the death rate due to diabetes was comparable to that of the county. The rate of hospitalization due to diabetes was 25.5% lower and the rate of ED discharge due to diabetes was 23.2% lower in the North Inland Region compared to the county overall. Among the North Inland Region communities, Ramona had the highest rate of death, Valley Center had the highest rate of hospitalization, and Pauma had the highest rate of ED discharge due to diabetes.

Asthma and chronic obstructive pulmonary disease (COPD) medical encounter rates in the North Inland Region were generally comparable to, or lower than, the county overall. The rate of asthma hospitalization was 31.0% lower and the rate of asthma ED discharge was 37.6% lower than the county overall. Anza-Borrego Springs had the highest rate of asthma hospitalization and Escondido had the highest rate of asthma ED discharge among the North Inland communities.

## Communicable (Infectious) Diseases

The incidence rate of communicable disease was significantly lower in the North Inland Region than in the county overall. The tuberculosis (TB) incidence rate was 62.9% lower than the county overall, while the syphilis incidence rate was 88.0% lower, the gonorrhea incidence rate was 39.0% lower, the chronic hepatitis C incidence was 57.8% lower, and the chlamydia incidence rate was 25.2% lower. Among the North Inland communities, Escondido had the highest chlamydia and gonorrhea incidence rates, and Anza-Borrego Springs had the highest chronic hepatitis C incidence rate.

## Maternal and Child Health

Overall, maternal and child health indicators for the North Inland Region were either comparable to or lower than that of the county. However, within the North Inland communities, North San Diego had the highest fetal mortality rate and Poway had the highest infant mortality rate. Further, the percentage of preterm births were highest in Palomar-Julian, while Anza-Borrego Springs had the lowest percentage of mothers receiving early prenatal care.

## Injury

The North Inland Region had comparable rates of death and medical encounter due to unintentional injury to the county overall. Within the Region, the rate of unintentional injury ED discharge was 14.8% lower among North Inland residents than in the county overall.

Within the North Inland communities, the death and hospitalization rates due to unintentional injury was highest in Anza-Borrego Springs, while ED discharge was highest in Ramona.

Fall-related injury death and hospitalization rates in the North Inland Region were comparable to the county overall, whereas the fall-related ED discharge rate was 12.6% lower than the county. Among the North Inland Region communities, death and hospitalization rates due to fall-related injury were highest in Fallbrook, while the fall-related injury ED discharge rate was highest in Escondido.

Compared to the county overall, overdose/poisoning death and hospitalization rates were not significantly different in the North Inland Region. However, the rate of ED discharge due to overdose/poisoning was 10.6% lower among North Inland residents than the county overall. Fallbrook had the highest overdose/poisoning death rate among the North Inland communities, while Pauma had the highest overdose/poisoning hospitalization rate and Ramona had the highest overdose/poisoning ED discharge rate.

North Inland residents had comparable rates of death, hospitalization, and ED discharge due to motor vehicle injuries compared to the county overall. However, the rate of total injuries due to motor vehicle crashes were 11.5% higher than the county overall. Among the North Inland communities, Ramona had the highest rate of death due to motor vehicle crash injuries, while Anza-Borrego Springs had the highest rates of hospitalization, and Pauma had the highest rates of ED discharge due to motor vehicle crash injuries.

Comparatively, the rate of assault hospitalization was 46.7% lower, and the rate of assault ED discharge was 44.7% lower in the North Inland Region than in the county overall. Among the North Inland communities, Escondido had the highest assault hospitalization rate, while Pauma had the highest assault ED discharge rate.

## Other Health Conditions

Compared to the county overall, the North Inland Region had higher rates of hospitalization due to arthritis and dorsopathies (diseases and/or disorders of the back). However, rates of arthritis emergency department discharge and dorsopathy emergency department discharge were lower than the county overall.

## 2009 Regional Public Health Indicators<sup>‡</sup>

Region rates are statistically significantly HIGHER than the county overall for the following indicators:			
Indicator <sup>†</sup>	North Inland Region Rate*	San Diego County Rate*	Percent Difference
Dorsopathy Hospitalization	198.4	157.0	26.4%
Arthritis Hospitalization	355.3	282.4	25.8%
Total Injuries Due to Motor Vehicle Crashes <sup>§</sup>	646.3	579.5	11.5%
Region rates are statistically significantly LOWER than the county overall for the following indicators:			
Indicator <sup>†</sup>	North Inland Region Rate*	San Diego County Rate*	Percent Difference
Primary and Secondary Syphilis	1.0	8.3	-88.0%
Tuberculosis (TB) Incidence	2.6	7.0	-62.9%
Chronic Hepatitis C Incidence	60.1	142.5	-57.8%
Assault Hospitalization	27.5	51.6	-46.7%
Assault Emergency Department (ED) Discharge	142.1	257.0	-44.7%
Gonorrhea Incidence (Estimated)	35.2	57.7	-39.0%
Arthritis Emergency Department (ED) Discharge	251.7	405.5	-37.9%
Asthma Emergency Department (ED) Discharge	191.5	307.0	-37.6%
Dental-related Emergency Department (ED) Discharge	90.6	142.4	-36.4%
Asthma Hospitalization	52.7	76.4	-31.0%
Coronary Heart Disease (CHD) Emergency Department (ED) Discharge	17.3	24.6	-29.7%
Pedestrian Injury Emergency Department (ED) Discharge	21.4	30.2	-29.1%
COPD Emergency Department (ED) Discharge	180.4	251.4	-28.2%
Pedestrian Injury Due to Motor Vehicle Crashes	24.0	33.1	-27.5%
Diabetes Hospitalization	94.3	126.5	-25.5%
Chlamydia Incidence (Estimated)	334.3	446.8	-25.2%
Dorsopathy Emergency Department (ED) Discharge	443.8	582.4	-23.8%
Diabetes Emergency Department (ED) Discharge	101.9	132.7	-23.2%
Self-Inflicted Injury Emergency Department (ED) Discharge	62.5	76.4	-18.2%
Self-Inflicted Injury Hospitalization	41.4	49.9	-17.0%
Unintentional Injury Emergency Department (ED) Discharge	3996.5	4691.2	-14.8%
COPD Hospitalization	90.1	104.9	-14.1%
Fall-related Injury Emergency Department (ED) Discharge	1442.3	1650.7	-12.6%
Overdose/Poisoning Emergency Department (ED) Discharge	131.2	146.8	-10.6%
Motor Vehicle Crash Injury Emergency Department (ED) Discharge	469.0	502.6	-6.7%

<sup>‡</sup> Indicators presented are statistically significant difference from County. Some high rates not listed due to County overall rate also high.

\*Rates per 100,000 population.

<sup>†</sup> For disease definitions see Glossary in Data Guide.

<sup>§</sup>By Location of Occurrence.

\*\*Estimated incidence refers to new cases reported to County Public Health Services, including cases with unknown residence.

Color bars indicate the database or medical encounter level for each indicator. For example, red indicates death data, and bright pink indicates hospitalization data. See the online community profile for the unique colors associated with each database.

Year: 2009.

Prepared by County of San Diego (CoSD), Health & Human Services Agency (HHSA), Community Health Statistics, 02/27/2012.

## Introduction

### Purpose

This profile is a compilation of information made available to the public health community and public policy-makers to better understand and manage the health and well-being of the residents of our county.

The purpose of this report is to provide detailed information about the health and characteristics of the people living in San Diego County. It is designed to help the Health and Human Services Agency (HHSA) staff in each of the Health Service Area Regions (HHSARs) identify problems and priority needs within their communities.

### Regional Data

Starting on page 173, there is detailed information at the community level including comparisons of public health indicators, entitled SRA Comparison Tables, as well as demographic and health information.

Please see Important Information in the Data Guide section for explanation of geographic boundaries as well as information on methods used here, age adjusted rates, and notes on comparing data.

### Navigating the Document

This report is formatted for print, published once yearly. Updated data may be available online in the County Profile, which is updated more frequently but intended for electronic viewing due to navigation ability to jump through the document.

### Community Health Statistics

The Community Health Statistics unit was created to provide a means of sharing information about the health behaviors, diseases, injuries, and demographic characteristics of specific populations in San Diego County. This unit aims to supply community level data describing the health trends and needs of the residents of our county. Community Health Statistics also provides or refers persons to available local, state and national statistics.

## North Inland Communities

The North Inland Region data are provided for ten communities or Subregional Areas (SRAs), and represented by the zip codes in the table below. The maps show the relative boundaries: Community or Subregional Areas (SRAs), Regions, HHSA Regions.

SRA	Zip Codes
Anza-Borrego	92004 92036 92259
Escondido	92025 92026 92027 92029 92096
Fallbrook	92003 92028
North San Diego	92091 92127 92128 92129
Palomar-Julian	92060 92066 92070 92086 92536
Pauma	92059 92061
Poway	92064 92131
Ramona	92065
San Marcos	92069 92078
Valley Center	92082

## North Inland Region

### Snapshot

The North Inland Region is the largest geographical Region in San Diego County, most of which covers rural and remote areas. The diverse geographical landscape impacts the health of the Region, with varying degrees of access to health services and information. The Region overall is wealthier than the county, and has lower levels of poverty, however, pockets of extreme economic disadvantage exist. Generally, North Inland Region residents were in good health; while non-communicable (chronic) disease rates were lower than or comparable to the county overall, some unhealthy behaviors, such as physical inactivity, were higher than most other Regions in the county. The rates of most reported communicable (infectious) diseases were among the lowest in the county. North Inland Region mothers were less likely to receive early prenatal care than most other Regions and the rate of infant mortality was higher than the county overall. Unintentional injury rates were generally similar to the county overall.

Maps Prepared by County of San Diego, HHSA,

This map shows relative boundaries: Community or Subregional Areas (SRAs), Regions, HHSA Regions.

## Overview

The North Inland Region in San Diego County covers 2,373 square miles of urban, suburban, rural and remote areas. The Region is bounded to the north by Riverside County and to the east by Imperial County, and includes the communities of Borrego Springs, Escondido, Fallbrook, Palomar, Julian, Pauma, Poway, Ramona, San Marcos, and Valley Center. As of 2009, 579,151 people resided in the North Inland Region, representing 18.2% of the San Diego County population. Despite its large population, the North Inland Region had a low population density at 244 persons per square mile.

## Population Characteristics

While the majority of North Inland residents were white, more than one out of every four residents was Hispanic. The North Inland Region also has pockets of Asian communities, most of which were Filipino or Chinese. Two-thirds of all residents spoke English only, and another 17% were bilingual. Eleven percent of residents spoke Spanish only. Residents of the North Inland Region were generally wealthier than San Diego County residents overall; one out of every five households earned more than \$100,000 per year, and fewer than one in ten residents had incomes under the poverty level. Other characteristics of the population included:

- On average, there were 2.8 persons per household.

- More than two in five of employed residents worked in management or professional and related occupations, a quarter worked in sales and office, and another 17% worked in service jobs. The primary industries were educational, social, and health services, followed by professional, scientific, and management jobs.
- North Inland Region families were less likely to live in poverty than in San Diego County overall. Eight percent of families with children had incomes less than the poverty level, compared to 12% in the county. They were also less likely than all other Regions to have been single parent homes.
- Residents of the North Inland Region were only slightly more educated than San Diego County residents overall; more than one-third held a bachelor's degree or higher, and 14% had less than a high school education.
- One out of every twenty households had no vehicle available, which contributes to limited access to care in the more rural or remote areas of the North Inland Region.

- Only seven out of every ten adult residents of the North Inland Region with incomes below 200% of the FPL had a consistent ability to afford enough food.
- Half of women earning incomes at or below 300% of the FPL, who were pregnant or had young children, were on WIC.

### Insurance, Access, Utilization, and General Health Status

Insurance coverage, access, and utilization of health services have been shown to directly impact a population's general health status. North Inland Region adults were comparable to San Diego County overall in their current insurance status, access to a usual source of care, utilization of healthcare services, and visits to a doctor in the past 12 months. Their general health status was also comparable to the county overall, with two out of three North Inland Region residents reporting very good or excellent general health.

- Eighty-six percent of residents were currently insured.
- Of the North Inland Region adults aged 18-64 who were not insured (20%), 24% were eligible for Medi-Cal or Healthy Families.
- Nine out of ten North Inland Region residents had a usual place to go when sick or needing health advice, and 87% visited a doctor during the past year.

- Nearly three out of ten adults were disabled due to a physical, mental, or emotional problem.
- One out of every ten North Inland Region adults saw a professional or needed help for emotional or mental problems in the past year.

### 3-4-50

Three risk factors – poor diet, lack of exercise, and tobacco use – contribute to four major chronic diseases – cancer, heart disease and stroke, type 2 diabetes, and lung disease – which are responsible for more than 50% of deaths worldwide. In San Diego County, these diseases were responsible for 56% of all deaths.

#### 3-4-50 Behaviors

The three behaviors that lead to the four major chronic diseases are tobacco use, poor diet, and physical inactivity. North Inland Region adults were comparable to adults throughout the county in their level of engagement in both healthy and unhealthy behaviors.

- One out of nine North Inland residents were current smokers, with more than a quarter of residents being former smokers.
- North Inland Region adults were less likely to smoke indoors than adults in most other Regions.

- Three-quarters of North Inland Region adults walked for transport, fun, or exercise, similar to the county overall.
- One-third of North Inland residents ate fast food 2 or more times per week.
- Half of all North Inland Region adults were obese or overweight.
- One-thirds of adults engaged in binge drinking in the past year.

## 3-4-50 Behaviors

In the North Inland Region, non-communicable (chronic) disease death and medical encounter rates were generally lower than, or comparable to, San Diego County.

## Cancer

Cancer was the leading cause of death in the North Inland Region in 2009, the rate of which was higher than nearly every other Region, and higher than the county overall.

- Overall cancer death rates were higher for white residents than other racial/ethnic groups in the Region.
- Nearly two-thirds of women over age 30 had a mammogram within the previous 2 years.
- Four out of every five adults over age 50 years have ever had a sigmoidoscopy, colonoscopy, or fecal occult blood test (FOBT), as reported in 2009.
- As of 2009, 60% of males over age 40 in the North Inland Region have never had a prostate-specific antigen (PSA) screening.

## Coronary Heart Disease (CHD) and Stroke

Diseases of the heart and cerebrovascular diseases (stroke) were the second and fourth leading cause of death in the North Inland Region in 2009. CHD and stroke death and hospitalization rates have declined since 2000, as seen throughout the county. Nearly nine percent of adults living in the North Inland Region were ever diagnosed with a disease of the heart.

- North Inland Region adults were more likely than adults in most other Regions to have ever been diagnosed with high blood pressure. Two out of every three adults with high blood pressure were currently taking medication to control their blood pressure.
- The rate of stroke death among whites living in the North Inland Region was disproportionately high compared to other racial/ethnic groups in the North Inland Region.

## Diabetes

Diabetes death and hospitalization rates in the North Inland Region have remained relatively stable since 2000. Diabetes medical encounter rates were statistically significantly lower than the county overall. The percentage of North Inland Region residents ever diagnosed with diabetes (8.6%) was slightly higher than the county overall.

- Diabetes hospitalization and ED discharge rates were disproportionately high for blacks living in the North Inland Region compared to other racial/ethnic groups in the Region.

### Asthma and Chronic Obstructive Pulmonary Disease (COPD)

Asthma and COPD death and hospitalization rates have fluctuated since 2000, but appear to be decreasing overall. North Inland Region asthma and COPD hospitalization and ED discharge rates were among the lowest in the county. The proportion of North Inland Region adults who were ever diagnosed with asthma was lower than in any other Region. However, 61% of those who were ever diagnosed with asthma were current asthmatics at the time of the survey.

- Among current asthmatics, 95% had asthma symptoms during the previous year. However, one out of three current asthmatics took daily medication to control their asthma.
- Less than half of current asthmatics had ever received an asthma management plan from a health professional.
- Black residents of the North Inland Region had higher rates of asthma hospitalization and ED discharge than other racial/ethnic groups in the Region.

### Communicable (Infectious) Diseases

Communicable disease incidence was significantly lower in the North Inland Region than in the county overall. North Inland Region residents were less likely to have chronic hepatitis C, AIDS, TB, chlamydia, gonorrhea, or syphilis than residents of any other Region.

- The TB incidence rate has generally decreased since 2000, and was lower in 2009 than in any of the previous 9 years.
- In 2009, 21 new AIDS cases were reported in the North Inland Region, lower than any other Region.
- Though significantly lower than the county overall, chlamydia was the most commonly diagnosed STD, the rate of which has increased notably since 2000.

- In the North Inland Region, the rate of chlamydia incidence was highest among blacks and 15-24 year-old residents.
- More than one out of three adults had a flu shot in the past year.

### Maternal and Child Health

The overall health of a community is often measured by the health of its mothers and infants. Infant mortality in the North Inland Region was 5.1 deaths per 1,000 live births, higher than the county average of 4.4 deaths per 1,000 live births, and higher than most other Regions in the county. North Inland Region mothers were less likely to have given birth to a preterm or low birth weight baby than in the county overall. They were also less likely to have received early prenatal care.

- As a percent of total county births, more births occurred in the North Inland Region than in all but the South Region in the county; nearly one out of every five births in San Diego County occurred among residents of the North Inland Region.

- North Inland Region mothers were generally older than mothers in the county overall. More than two in three mothers were over the age of 20 years when their first child was born. In 2009, 2.2% of all live births in the North Inland Region were to girls aged 15-17 years.
- A lower percent of North Inland Region mothers received early prenatal care than in the county overall. However, they were slightly less likely to have a preterm or low birth weight baby than the county overall.

### Injuries

Injuries are an important public health problem, especially given that so many are predictable and preventable. Injuries are among the leading causes of death in San Diego County for all ages, and are the leading cause of death for children and young adults. In the North Inland Region, unintentional injuries were the sixth leading cause of death, and suicide was the ninth cause of death for all ages.

- North Inland Region residents had comparable, or lower, rates of death and hospitalization for unintentional injury than in the county overall. Rates were especially high among whites compared to other racial/ethnic groups living in the Region.

- The overdose/poisoning ED discharge rate was lower for North Inland Region residents than in the county overall, but higher among blacks living in the North Inland Region than blacks living in most other Regions.
- North Inland Region residents had similar rates of death and hospitalization due to motor vehicle injuries, but lower rates of ED discharge compared to the county.
- There was a significantly higher rate of total injury due to motor vehicle accidents in the North Inland Region than in the county overall.
- There was a higher rate of alcohol-involved accidents in the North Inland Region than in the county overall.
- Four out of five children under 6 years of age injured in a motor vehicle accident were restrained.
- Pedestrian injury rates due to motor vehicle accidents were lower in the North Inland Region than in any other Region.
- North Inland Region residents had one of the lowest rates of medical encounter due to assault injury in the county. The rate of death due to homicide was lower than the county overall.
- Suicide rates were the third lowest of all Regions in the county, while self-inflicted injury hospitalizations were lower than nearly all other Regions.

# North Inland Region Profile

Demographic Data

## Demographic Profile (2009 SANDAG Estimates)

	Number	Percent
<b>Total Population</b>	579,151	100.00%
<b>Age Distribution</b>		
0 to 4 Years	41,047	7.09%
5 to 14 Years	76,341	13.18%
15 to 24 Years	88,337	15.25%
25 to 44 Years	147,256	25.43%
45 to 64 Years	151,334	26.13%
65+ Years	74,836	12.92%
<b>Gender Distribution</b>		
Male	283,858	49.01%
Female	295,293	50.99%
<b>Race/Ethnicity</b>		
White	333,601	57.60%
Hispanic	161,916	27.96%
Black	11,769	2.03%
Asian	49,800	8.60%
Other	22,065	3.81%

## Household (HH) Income (2009 SANDAG Estimates)

	Number	Percent
<b>Total Households</b>	191,279	100.00%
<b>Household Income</b>		
< \$45,000	79,782	41.71%
\$45,000 to \$75,000	49,258	25.75%
\$75,000 to \$100,000	25,340	13.25%
\$100,000 to \$125,000	15,973	8.35%

\* % is proportion of births where mother received early prenatal care out of the total births where prenatal care start time was known, by region per year. Births with unknown start of care are not included.

† Early prenatal care is defined here as care beginning during 1st trimester of pregnancy. This does not account for frequency of care.

\*\* Beginning in 2007, "Date of first prenatal visit" was collected in addition to the "Month prenatal care began" on birth certificates. This affects comparability of statistics before and after 2007.

\* % is proportion of births where mother received early prenatal care out of the total births where prenatal care start time was known, by region (or county for total). Births with unknown start of care are not included.

† Early prenatal care is defined here as care beginning during 1st trimester of pregnancy. This does not account for frequency of care.

‡ Beginning in 2007, "Date of first prenatal visit" was collected in addition to the "Month prenatal care began" on birth certificates. This affects comparability of statistics before and after 2007.

\*\* Numbers may not add up to totals due to unknown or missing details.

† API includes Asian, Pacific Islanders, Native Hawaiian. Other includes 2 or more races, Native American/Alaskan Native, American Indian, or other. Unknown not included.

§ Percents not calculated for fewer than 5 events.

## North Inland Communities

The North Inland Region data are provided for ten communities or Subregional Areas (SRAs), and represented by the zip codes in the table below. The maps show the relative boundaries: Community or Subregional Areas (SRAs), Regions, HHSA Regions.

SRA	Zip Codes
Anza-Borrego	92004 92036 92259
Escondido	92025 92026 92027 92029 92096
Fallbrook	92003 92028
North San Diego	92091 92127 92128 92129
Palomar-Julian	92060 92066 92070 92086 92536
Pauma	92059 92061
Poway	92064 92131
Ramona	92065
San Marcos	92069 92078
Valley Center	92082

## SRA Comparison Tables

The Community, or Subregional Area (SRA) Comparison Tables provide an “at-a-glance” look at public health indicators for each community within the Region. For each disease and health topic, the most recent data available for each indicator are listed by community. Colored font shows relative rates compared to other communities in this Region. Indicators listed in **red** and **orange** font identify the community with the worst and second worst rate, respectively, compared to other communities in this Region. Indicators listed in **green** and **blue** font identify the community with the best and second best rate, respectively, compared to other communities in this Region. For more information about the health topics, data sources, and indicators described in these tables, see the Data Guide and other appendices at the end of this report.

### How to Read Comparison Tables

Look down the column for “Sample Disease”, comparing death rates among the towns, Town 2 has the best rate (**green**); Town 6 has the worst rate (**red**). For hospitalizations, Town 3 has worst rate (**red**), Town 5 has the best rate (**green**). Look at Town 1. Comparing this town to the others, this community has the worst rate for ED discharges (**red**), the second best rate for hospitalizations (**blue**), and its death rate is in the middle (**black**).

Note: these comparisons are made of the rates, regardless of the number of events. For example, Town 6 had more hospitalizations than Town 3; however, after taking into account the population size, the Town 3’s rate is greater (worse) than Town 6’s rate.

Best/Worst: In this example, the best (**green**) rates are the lowest. In some cases the best rates may be the highest values (eg, restraint use or early prenatal care).

**\*Data are from 2009.**

Any Region	Disease Death: number, rate* Hosp: number, rate* ED: number, rate*
Town 1	Death: 159, 30.7 <b>Hosp: 3545, 586.7</b> <b>ED: 243, 46.0</b>
Town 2	<b>Death: 154, 25.8</b> Hosp: 3421, 623.7 <b>ED: 213, 45.9</b>
Town 3	Death: 148, 29.4 <b>Hosp: 3947, 850.2</b> <b>ED: 159, 31.0</b>
Town 4	<b>Death: 121, 26.5</b> Hosp: 3134, 652.9 ED: 189, 40.9
Town 5	<b>Death: 155, 33.7</b> <b>Hosp: 2839, 537.6</b> ED: 227, 39.4
Town 6	<b>Death: 194, 34.2</b> <b>Hosp: 3964, 688.5</b> <b>ED: 231, 38.2</b>

## Anza-Borrego

# Anza-Borrego

The community of Anza-Borrego Springs is located in the North Inland Region of San Diego County, and identified by zip codes 92004, 92036, and 92259. To the west are the communities of Laguna-Pine Valley and Palomar-Julian, and to the south is Mountain Empire. The eastern and northern boundaries of Anza-Borrego Springs border Riverside and Imperial Counties. Geographically, this community is the largest in all of San Diego County, covering 1,071 square miles. However, it is the smallest in population; as of 2009, there were 4,971 residents of Anza-Borrego Springs.

### Population Characteristics

Anza-Borrego Springs has the highest proportion of older adults of all the North Inland communities, with more than one in four residents aged 65 years or older. Another 23% were between the ages of 45 and 64 years old. Forty percent of the population was white, 52% were Hispanic, and with another 5% were black. While 67% of the population spoke English only, more than 8% were bilingual.

Nearly one in five Anza-Borrego Springs residents had less than a high school education, and more than one in four also had at least a bachelor degree. However, residents earned lower incomes than nearly all other North Inland communities; on average, residents earned \$18,707 in 2009. Over 11% of Anza-Borrego Springs residents earned incomes below the Federal Poverty Level.

### Health Characteristics

Compared to other North Inland communities, 3-4-50 non-communicable (chronic) disease death and medical encounter rates were relatively high in Anza-Borrego Springs. This was especially apparent for coronary heart disease (CHD), stroke, asthma, chronic obstructive pulmonary disease (COPD), and cancer, with the highest hospitalization and/or death rates in all of the North Inland Region.

Residents of Anza-Borrego Springs also had the highest rates of hospitalization for arthritis and dorsopathies, compared to other communities in the Region. They also had the highest rate of chronic hepatitis C in the Region.

In 2009, there were 57 live births in Anza-Borrego Springs, representing less than 1% of all live births in the North Inland Region. Of these, only 67.9% received prenatal care beginning in the first trimester.

Unintentional injury medical encounter rates in Anza-Borrego Springs were higher than any other North Inland community. Death and hospitalization rates for unintentional injury were the highest in the Region, and the rate of total injuries due to motor vehicle crashes were also highest. The drinking driver and alcohol involved motor vehicle injury rates for crashes occurring in Anza-Borrego Springs were second highest in the Region.

## Escondido

# Escondido

Escondido is located in the North Inland Region of San Diego County, and identified by zip codes 92025, 92026, 92027, 92029, and 92096. It is surrounded by the communities of Valley Center, Palomar-Julian, Ramona, Poway, North San Diego, San Dieguito, and San Marcos. Escondido was the largest of the North Inland Region communities in population; in 2009, there were 163,647 residents of Escondido.

## Population Characteristics

Escondido was one of the younger communities in the North Inland Region, with nearly one out of every four residents less than 15 years of age; only 11% were 65 years and older. The residents of Escondido were racially and ethnically diverse; about half the population was white, 42% were Hispanic, and 5% were Asian. While most residents spoke English only or were bilingual, one out of five spoke Spanish only.

Escondido residents were less educated and earned lower incomes than most other communities in the North Inland Region. Nearly one-quarter of all adults aged 25 years and older had less than a high school education, and one out of four earned a bachelor degree or higher. More than half of all households earned less than \$45,000 in 2009, and 13% of the population earned incomes below the Federal Poverty Level.

## Health Characteristics

Compared to other North Inland Region communities, Escondido 3-4-50 non-communicable (chronic) disease death and medical encounter rates were among the highest. In particular, asthma and chronic obstructive pulmonary disease (COPD) emergency department (ED) discharge rates were higher than any other community in the North Inland Region. Escondido residents also had the highest rates of ED discharge for arthritis and dorsopathies than any other community, and the highest rates of reported chlamydia and gonorrhea.

In 2009, there were 2,773 live births in Escondido, representing one-third of all births in the North Inland Region. Of these, only 71.5% received prenatal care beginning in the first trimester of pregnancy. The proportions of live births in Escondido that were low birth weight were lower than the Region, as well as the fetal and infant mortality rates.

The rates of death, hospitalization, and ED discharge due to unintentional injury in Escondido were comparable to other communities in the Region. However, unintentional fall-related death and ED discharge rates were higher than most other communities

in the Region. Also, pedestrian injury rates were among the highest in the Region. Only 68.9% of all 0-5 year old children injured in a motor vehicle crash in Escondido were using active restraints, lower than any other North Inland community.

Intentional injury rates were also high in Escondido. The rates of hospitalization and ED discharge due to assault injury were among the highest compared to other communities, and the rates of hospitalization and ED discharge due to self-inflicted injury were higher than most other communities.

## Demographic Profile (2009 SANDAG Estimates)

	Number	Percent

## Fallbrook

# Fallbrook

The community of Fallbrook is located in the North Inland Region of San Diego County, and identified by zip codes 92003 and 92028. Its northern boundary serves as part of the northern border of San Diego County. To the east is Pauma, to the south are Valley Center and Vista, and to the west are Oceanside and Pendleton. Fallbrook was the fifth largest North Inland Region community in population; in 2009, there were 49,939 residents of Pauma.

## Population Characteristics

Residents of Fallbrook were distributed relatively evenly by age, compared to other North Inland communities. One out of five residents of Fallbrook was under 15 years of age, and one out of six was aged 65 years or older. While the majority of Fallbrook residents were white (57%), more than one-third was Hispanic. Most residents spoke English only or were bilingual, but 14% spoke Spanish only.

Fallbrook was one of the more educated communities in the North Inland Region, with more than one out of every four having earned at least a Bachelor degree. While more than 16% of households earned more than \$100,000 in 2009, more than 46% earned less than \$45,000. Nearly 10% of the population earned incomes below the Federal Poverty Level.

## Health Characteristics

Compared to other North Inland Region communities, Fallbrook 3-4-50 non-communicable (chronic) disease hospitalization rates for coronary heart disease (CHD), stroke, chronic obstructive pulmonary disease (COPD), and arthritis were among the highest in the Region. Fallbrook had one of the highest overall cancer death rates. Additionally, specific cancers including prostate, female breast, and colorectal death rates were the highest in the Region.

In 2009, there were 690 live births in Fallbrook, representing 8.3% of all births in the North Inland Region. Of these, 78.1% received prenatal care beginning in the first trimester of pregnancy, comparable to the rest of the Region. The rate of infant mortality in Fallbrook was 7.2 deaths per 1,000 live births—second highest in the Region.

Unintentional injury death and medical encounter rates in Fallbrook were comparable to the rest of the North Inland Region, as were the rates of intentional injury. The fall-related injury death and hospitalization rates however, were the highest in the Region. The rate of motor vehicle crash injury ED discharge among Fallbrook residents was the lowest in the Region. The rate of hospitalization due to pedestrian injury was the highest among all of the North Inland communities.

## Demographic Profile (2009 SANDAG Estimates)

	Number	Percent

# North San Diego

# North San Diego

North San Diego is a community located in the North Inland Region of San Diego County, and identified by zip codes 92091, 92127, 92128, and 92129. Surrounding communities include San Diego, Escondido, Poway, and Del Mar/Mira Mesa. As one of the larger communities in the Region, the population of North San Diego was 109,912 in 2009.

### Population Characteristics

The ages of North San Diego residents were similar to the North Inland Region overall; more than half of all residents were of working age, 25 to 64 years old. While almost two-thirds of residents were White, another 21% were Asian; the 23,000+ Asian residents of North San Diego made up the one of the largest number and proportions of Asian residents compared to other communities in the Region. The majority of residents either spoke English only or were bilingual. North San Diego was one of the most educated communities in the North Inland Region, and households subsequently earned among the highest incomes in the Region. More than half of all adults aged 25 years and older earned at least their bachelors degree, and one-fourth of all households earned at least \$100,000 in 2009.

### Health Characteristics

Compared to other North Inland Region communities, 3-4-50 non-communicable (chronic) disease death and medical encounter rates in North San Diego were comparable. However, the rates of death and emergency department (ED) discharge due to coronary heart disease (CHD) was among the highest in the Region. Additionally, rates of prostate, colorectal, and lung cancer were second highest in the Region.

For reported communicable diseases, the rates of chronic hepatitis C and gonorrhea were lower than most other communities in the Region.

In 2009, there were 1,744 live births in North San Diego, representing 21% of all live births in the North Inland Region. Nearly 92% of all live births received prenatal care beginning in the first trimester, which was higher than most other communities in the North Inland Region. However, the percentage of low birth weight births and the fetal mortality rate were among the highest compared to all other North Inland communities.

Unintentional injury death rates in North San Diego were among the lowest in the Region. However, the rate of unintentional fall-related hospitalization was among the highest. For motor vehicle crashes occurring in North San Diego, 96% of persons aged 6+ years were actively restrained. Intentional injury rates were comparable to the rest of the Region.

## Demographic Profile (2009 SANDAG Estimates)

## Palomar-Julian

# Palomar-Julian

Palomar-Julian, identified by zip codes 92060, 92066, 92070, and 92085, is a large, remote community located in the center of the North Inland Region. To the north of Palomar-Julian is Riverside County, and to the east is Anza Borrego Springs. Laguna-Pine Valley and Ramona are found to the south, and Escondido, Valley Center, and Pauma are found to the west. In 2009, there were 6,681 residents of Palomar-Julian, which covers 572.3 square miles.

### Population Characteristics

Palomar-Julian has one of the highest proportion of older adults in the North Inland Region; over 23% of residents were 65 years or older. The community was not as racially or ethnically diverse as many other communities. Nearly 63% of the population was white, and 23% was Hispanic. Consequently, almost all residents spoke either English only (93%) or were bilingual (5%).

The education level of Palomar-Julian residents was similar to the North Inland Region overall. More than one in four adults earned at least a Bachelor degree, and just 9% had less than a high school education. Household incomes were generally middle class, with 34% of households earning between \$45,000 and \$100,000 in 2009. Eight percent of the population earned incomes below the Federal Poverty Level.

### Health Characteristics

Due to the small population, 3-4-50 non-communicable (chronic) disease death and medical encounter rates were often not able to be calculated because there were too few cases. However, the hospitalization rate for coronary heart disease was the lowest in the North Inland Region. Hospitalization and emergency department discharge rates for arthritis and dorsopathies were also among the lowest in the Region. The rate of chronic hepatitis C, however, was higher than most other North Inland Region communities.

In 2009, there were 33 live births in Palomar-Julian, representing less than 1% of all live births in the North Inland Region. Of these, 87.9% received prenatal care beginning in the first trimester, and 21.2% were born preterm, higher than any other community in the Region.

Unintentional injury medical encounter rates among Palomar-Julian residents were generally comparable to or lower than in other North Inland communities. However, several indicators could not be calculated due to the small population size of Palomar-Julian.

## Pauma

# Pauma

The community of Pauma is located in the North Inland Region of San Diego County, and identified by zip codes 92059 and 92061. Pauma borders Riverside County to the North, Palomar-Julian to the east, Valley Center to the south, and Fallbrook to the west. Pauma is a rural community with the third smallest population of all North Inland Region communities. As of 2009, there were 5,812 residents of Pauma, covering 96.3 square miles.

### Population Characteristics

Pauma residents were generally younger than other North Inland communities, and highly racially and ethnically diverse. More than two-thirds of all residents were between the ages of 15 and 64 years. More than half of Pauma residents were Hispanic (55%) and less than one-third (19%) were white. Another 20% were "other," which includes Native American. While the majority of residents either spoke English only (62%) or were bilingual (14%), one out of five (19%) spoke Spanish only.

Pauma was one of the least educated communities in the Region, with nearly one-quarter (24%) of adults aged 25 years and older having less than a high school education.

Residents were also more likely to live in poverty than the Region overall; 10% of the population earned incomes below the Federal Poverty Level. More than half of all households earned less than \$45,000 in 2009.

### Health Characteristics

Compared to other North Inland Region communities, the Pauma 3-4-50 non-communicable (chronic) disease death and medical encounter rates were relatively low or comparable, which is to be expected given the younger age of the population. However, diabetes and asthma hospitalization rates were among the highest in the Region. Hospitalization and emergency department (ED) discharge rates for arthritis and dorsopathies were also comparable to the Region, as were rates of communicable disease.

In 2009, there were 93 live births in Pauma, representing 1% of all live births in the North Inland Region. Of these, 72.5% received prenatal care beginning in the first trimester. Notably, the percentage of preterm births among Pauma residents was higher than most other North Inland communities.

Unintentional injury rates were relatively high in Pauma compared to other North Inland Region communities, especially for unintentional injury hospitalizations and hospitalizations for motor vehicle crash injuries among residents of Pauma. For motor vehicle crashes occurring in Pauma, the total injury rate was higher than many other communities, as was the rate of alcohol involved and drinking driver crashes.

## Poway

# Poway

Poway, identified by zip codes 92064 and 92131, is located in the North Inland Region of San Diego County. The community of Escondido borders to the north, Ramona to the east, Lakeside and Elliott-Navajo are to the south, and Del Mar/Mira Mesa and North San Diego are to the west. In 2009, the population was 90,668.

### Population Characteristics

Poway residents were comparable in age to the rest of the North Inland Region; approximately 18% were under 15 years of age, and more than 12% were 65 years and older. While Poway was not as racially and ethnically diverse as other communities, one of the largest Asian populations in the North Inland Region was located in Poway. More than 71% of the residents of Poway were white, while another 12% were Asian. Poway residents were the most educated of all North Inland Region communities, and households earned the highest incomes. More than half of all adults aged 25 years and older earned at least a bachelor degree, and a third of households earned at least \$100,000 in 2009. Less than 4% of the population earned incomes below the Federal Poverty Level; lower than any other community in the Region.

### Health Characteristics

Compared to other North Inland Region communities, 3-4-50 non-communicable (chronic) disease death and medical encounter rates in Poway were low. Poway residents had the lowest rates of death due to coronary heart disease (CHD), diabetes, and cancer, and the second lowest rate of death due to stroke. Hospitalization rates for stroke and diabetes were lower than any other community in the North Inland Region; the rate of COPD hospitalization was second lowest in the Region.

The emergency department (ED) discharge rate for diabetes was also low compared to other communities. The rates of reported infectious diseases, including chronic hepatitis C and chlamydia, were lower than nearly any other community in the Region.

In 2009, there were 900 live births in Poway, representing nearly 11% of all live births in the North Inland Region. Of these, more than 88% received prenatal care beginning in the first trimester; the second highest percentage in the Region. However, the percentage of low birth weight births and the rate of infant mortality were the highest in the Region.

The rates of unintentional injury death and medical encounter overall in Poway were comparable to or lower than the rest of the Region. In particular, motor vehicle injury death and hospitalization rates among residents of Poway were among the lowest in the Region. Additionally, the rate of total injury for motor vehicle accidents occurring in Poway was lower than any other community in the Region, as were the rates of alcohol involved and drinking driver crashes. Intentional death and injury rates were also among the lowest in the Region.

## Demographic Profile (2009 SANDAG Estimates)

	Number	Percent

## Ramona

# Ramona

Ramona is a rural community located in the North Inland Region of San Diego County, and identified by zip code 92065. It is surrounded by Escondido, Palomar-Julian, Laguna-Pine Valley, Lakeside, and Poway. In 2009, there were 35,010 residents of Ramona.

### Population Health Characteristics

Ramona residents are generally younger than many other North Inland Region communities, with 19% of the population under the age of 15 years, and only 11% aged 65 years and older. Nearly 72% of the residents of Ramona were white, while another 22% were Hispanic. While nearly all Ramona residents spoke English only (83%) or were bilingual (10%), 5% spoke Spanish only.

Education levels among Ramona adults were comparable to other North Inland Region communities, although the median household income was among the highest. More than one out of five Ramona adults held at least a Bachelor degree, while 12% had less than a high school education. Nearly than one out of five households earned more than \$100,000 per year, and the median household income of all households in Ramona was \$58,663. Six percent of the Ramona population earned incomes below the Federal Poverty Level. Approximately 37% of the employed residents of Ramona were employed in management, professional, and related occupations, and another 25% were in sales and office jobs.

### Health Characteristics

Compared to other North Inland Region communities, 3-4-50 non-communicable (chronic) disease death and medical encounter rates were comparable, if not lower, in Ramona. In particular, the coronary heart disease (CHD) death rate was second lowest in the Region but the CHD ED discharge rate was the second highest. Additionally, diabetes and chronic obstructive pulmonary disease (COPD) death rates were highest among Ramona residents. Further, medical encounter rates for dorsopathies were among the highest in the North Inland Region.

In 2009, there were 447 live births in Ramona, representing 5.4% of all live births in the North Inland Region. Of these, 2.9% were to girls aged 15 to 17, a higher percentage than any other North Inland community. Of the live births, 79.9% received prenatal care beginning in the first trimester. However, the percentage of very low birth weight births was second highest in the Region.

Unintentional injury rates were generally higher than in other communities in the North Inland Region. In particular, fall-related injury, and overdose/poisoning ED discharges were among the highest in the Region. Further, the rate of motor vehicle crash deaths occurring among residents of Ramona were higher than any other community in the Region. Additionally, rates of pedestrian injury and ED discharge were second highest in the Region. Rates of suicide and firearm-related death were the highest among Ramona residents as well.

## San Marcos

# San Marcos

San Marcos is located within the North Inland Region of San Diego County, and identified by zip codes 92069 and 92078. It is surrounded by the communities of Vista, Escondido, San Diegoito, and Carlsbad. As of 2009, the population was 90,007.

### Population Characteristics

San Marcos residents were comparable in age to the North Inland Region overall; about half were of working age, between 25 and 64 years of age. San Marcos residents were slightly more diverse than the Region overall. While more than half of residents were white, more than one-third were Hispanic. Most of the population either spoke English only or were bilingual, however, sixteen percent spoke Spanish only. San Marcos adults were less educated than other communities in the North Inland Region and subsequently earned lower incomes. Nearly one out of every five adults had less than a high school education, and nearly half of households earned less than \$45,000 in 2009.

### Health Characteristics

Compared to other North Inland Region communities, 3-4-50 non-communicable (chronic) disease death and medical encounter rates in San Marcos were comparable, if not relatively low. In particular, the rate of coronary heart disease (CHD) emergency department (ED) discharge was second lowest in the Region, as was the rate of asthma hospitalization. Additionally, the rate of gonorrhea was among the lowest in the Region..

In 2009, there were 1,354 live births in San Marcos, representing 16.3% of all live births in the North Inland Region. Of these, 81.8% received prenatal care beginning in the first trimester, which was comparable to the other communities in the Region.

The percentage of live births that was very low birth weight was similar to other North Inland Region communities, while the percentages of preterm and low birth weight births were the lowest among all North Inland communities.

Unintentional injury and intentional injury rates in San Marcos were generally lower than, or comparable to, the Region. Notably, medical encounter rates due to fall-related injuries were similar to the Region as a whole. The rate of total injury for motor vehicle crashes occurring in San Marcos was comparable to other communities, as was the rate of alcohol involved crashes. Intentional injury rates were comparable to the rest of the Region.

**Demographic Profile (2009 SANDAG Estimates)**

	Number	Percent

# Valley Center

# Valley Center

Valley Center is rural community located in the North Inland Region of San Diego County, and identified by zip code 92082. It is surrounded by the communities of Pauma, Palomar-Julian, Escondido, Vista, and Fallbrook. Geographically, Valley Center covers 116 square miles, and as of 2009, the population was 22,504.

### Population Characteristics

Valley Center residents were older than many other North Inland Region communities; approximately 30% were 45 to 64 years of age, and another 20% were 65 years or older. Residents were less racially and ethnically diverse than other communities. Two-thirds of residents were white, and a quarter were Hispanic. Most of the population either spoke English only or were bilingual; however, 8% spoke Spanish only.

Valley Center residents were more educated, and earned higher incomes than many other North Inland Region communities in San Diego County. Nearly 37% of residents aged 25 years and older earned at least a Bachelor's degree, and 23% of households earned at least \$100,000 in 2009. Of the employed residents of Valley Center, more than one-third worked in management, professional, educational, and related occupations. Fewer than one out of ten residents earned incomes below the Federal Poverty Level.

### Health Characteristics

Compared to other North Inland Region communities, 3-4-50 non-communicable (chronic) disease death and medical encounter rates in Valley Center were comparable. Valley Center residents had the lowest rates of asthma and chronic obstructive pulmonary disease (COPD) hospitalization in the Region, as well as the second lowest rate of COPD death. However, the diabetes death and hospitalization rates were among the highest.

Communicable (infectious) diseases, including chronic hepatitis C and chlamydia were comparable to most other North Inland Region communities.

In 2009, there were 212 live births in Valley Center, representing 2.6% of all live births in the North Inland Region. Of these, less than 70% received prenatal care beginning in the first trimester. The percentages of preterm and low birth weight births were similar to other communities, but the percentage of very low birth weight births was highest in the Region (2.4%).

Unintentional injury rates in Valley Center were also comparable to the Region overall. However, rates of motor vehicle crash death and emergency department (ED) discharge were among the highest in the North Inland Region. Additionally, the rate of ED discharge due to self-inflicted injury was the highest among all North Inland communities.

## Demographic Profile (2009 SANDAG Estimates)

## Appendix A - Data Guide

### Important Information for Data Users

#### **Please Review This Section Before Using the Following Public Health Data**

**For abbreviations used in data sources, see [Data Sources](#).**

#### **Diagnoses:**

Disease definitions for most indicators are based on ICD-CM coding. Two versions of ICD coding are used in this document depending upon the data source, ICD-9 or ICD-10. ICD-CM based data for San Diego are comparable whether obtained using the 9<sup>th</sup> or 10<sup>th</sup> revision. The codes used are listed in footnotes for appropriate tables. Healthy People 2010 targets, and national and California data are shown if available and comparable to local data. Definitions for the targets can be found via [Healthy People 2010 Operational Definitions](#).

The death data used in this document only include underlying cause of death. This means that deaths are categorized only by the disease or injury that initiated the chain of events leading to death. The immediate cause of death or any other contributing causes are not included. For example, a diabetic who died of heart disease resulting from complications of diabetes would only be included among diabetes-related deaths. Similarly, Hospital Discharge and Emergency Department Discharge data are reported by the primary diagnosis at time of discharge for which the medical encounter occurred. In some cases, indicators are based not on ICD-CM coding, but rather on case definitions— meeting specified clinical and/or laboratory criteria.

#### **Comparing Data:**

Caution must be used when exploring data from multiple sources or even the same data prepared by different analysts. Comparisons may not be appropriate. Information accompanying data presentations is important to read to identify any possible differences in sources, preparation, diagnosis/case definitions, rate constant (i.e. per 100,000 or 1,000), geographic units, persons included in the data (i.e. location of occurrence vs. location of residence, or among live births not total pregnancies) and other data characteristics.

Data from different tables must not be aggregated, subtracted, or modified in any way. For example, pedestrian deaths can not be added to nonfatal pedestrian injuries to determine total injuries. In this case, one database is recorded by location of residence, while the other is by location of occurrence. If you need assistance or additional data not contained here, please contact the Community Health Statistics Unit.

#### **Rates, Age-adjusted Rates: Understanding Rates and Age-Adjusted Rates**

The public health data in the Community Profiles includes crude rates (from this point forward referred to as rates) at the for Regional and Subregional (SRA) levels. Additionally, age-adjusted rates are provided for county level data in many cases.

For comparison, Healthy People 2010 Targets are included, along with comparable USA and California rates. Many Healthy People 2010 Targets are based on age-adjusted rates; these are indicated by “age-adjusted population.” When a Healthy People target listed is based on an age-adjusted rate, the comparable rates for USA and California are also age-adjusted.

A rate is the number of cases divided by the population, usually multiplied by a constant. For example 987 cases, divided by population of 654,321 would be a rate of 150.8 per 100,000 population. This means for every 100,000 people, between 150 and 151 cases would be expected.

Calculations of age-adjusted rates are slightly more complex. They take into account the age of each case relative to a standard age distribution of a reference population. The reference population used in this document is the “2000 US standard population.” The standard previously used was a reference population from 1940. The 2000 US standard population proportions more closely reflect the current age distribution of the entire US population.

Age-adjusted rates represent the rates that would be expected if a population of interest had the same age distribution as the standard population. This removes the effect of age when comparing rates to identify risk in a population. This is important in many cases when comparing risk “across populations with different underlying age structures.”<sup>1</sup> Since many causes of mortality disproportionately affect older persons, disease mortality is often reported as an age-adjusted rate. This is the case with many Healthy People 2010 Targets, particularly death rates.

Age-adjusted rates are used to compare relative risk (over time or between populations), while removing the effect of differences in the age of a population. Age-adjusting shows differences between groups that are not due to differences in age distribution. “Age-adjusted rates should be viewed as relative indexes rather than as direct or actual measures” of risk.<sup>1</sup>

For many users of this data the magnitude of an issue is important beyond the adjustments made for age. Often planning and resource decisions are based on data. In this case, knowing that a group contains an older population is valid and important for planning for those diseases which affect different aged population sectors.

Differences in rates may be due to other reasons besides age, such as gender or race/ethnicity. One may want to consider several of these demographic factors when examining a health issue. Each profile contains demographic data for each Region and SRA, including: age, gender, race/ethnicity distributions, income, occupation, housing and education data. Many of these factors have been implicated at the roots of health disparities.

### Geography: Understanding Geographic Units used in Health Data

Many different geographic units are used throughout San Diego County. In this document, the boundaries for Regions and Subregional Areas (SRA) are based on census tracts and approximate Health and Human Service Agency Region (HHSA Region) boundaries. The exception to this is California Health Interview Survey (CHIS) data, which use zip-code based HHSA Regions.

Many data users have expressed the desire for community data at a level more specific than the HHSA Regions. Several levels of geography may be considered, such as, SRA, census tract, zip code, or city. In order to provide community level health data and compare populations, it is important to have stable geographic units and units that are compatible with population data estimates.

1: <http://www.cdc.gov/nchs/data/statnt/statnt20.pdf>

While most health data are reported by zip code, zip codes may change at any time throughout the year – making annual aggregated estimates difficult. Additionally, since zip codes may change from one year to the next, comparing zip code data over time may introduce a level of imprecision. SRAs are small, community level geographic units based on census tracts which are stable between census years (i.e. change only every 10 years, if at all). Population estimates are available at this level with high level of accuracy. However, health data for an SRA must be estimated based on reported zip code data.

## Types of data available for Geographic Boundaries

Zip Codes:	Census Tracts:
HHSA Region	Subregional Area (SRA)
Health Services	Major Statistical Area (MSA)
	Region (approximated HHSA Region)

In this document, community level (SRA) data are aggregated to larger regional levels. Currently, Region aggregations based on SRAs closely approximate, but do not directly correspond to HHSA Regions. In order to have more accurate community level data and enable reliable comparisons over time and place, SRA Region aggregations are used in lieu of HHSA Regions. Therefore, data on the HHSA Regional level presented by other analysis may differ lightly from the data presented in this document. Any differences are likely to be minor and would not be expected to impact any decisions related to policy, planning, or resources for any particular area. There are 3 zip codes which are primarily affected by the different methods of aggregation to Region or HHSA Region (see table below). A list of zip codes representing each Region is included at the beginning of the Region section within each Profile, as well as a complete listing in the County Profile.

HHSA REGION	Zip Code	Community Profiles	
		Subregional Area (SRA)	Region
North Coastal	92014	Del Mar-Mira Mesa	North Central
North Coastal	92091	North San Diego	North Inland
North Central	92131	Poway	North Inland

The only data in this document to which the above information *does not* apply are California Health Interview Survey (CHIS) data in the Public Health Data Section. Data in this survey are collected by HHSA Region and cannot be estimated for SRA based Regions.

## Harbison Crest/El Cajon

Due to data aggregation methods, health data for the Harbison Crest SRA may be misleading. Demographic data are presented for Harbison Crest alone, as well as in combination with El Cajon. Health data are presented as an aggregate of the two SRAs, Harbison Crest/El Cajon for better data stability and representation of the area.

## Appendix B - Data Sources

Health and demographic data are available from a variety of sources. There are three general categories of data: population, survey (or sample), and administrative. Population data, such as census information, are collected from the entire population. Survey (or sample) data are collected from a portion of the population, and extrapolated to represent the entire population. Administrative data are collected based on an organization's day-to-day operations, such as the prehospital database. The following data sources, presented in alphabetical order, were used in the preparation of this report:

**California Health Interview Survey (CHIS):** CHIS is an important survey data source of information on health and access to health care services. CHIS is a telephone survey of adults, adolescents, and children from all parts of the state. The survey is conducted every two years. CHIS is the largest state health survey and one of the largest health surveys in the United States. The survey provides state and county level information for health planning and comparison. Region level information is available for many variables for the 2005 and 2007 surveys. A list of CHIS questionnaire topics is included. To review the actual survey questions, go to <http://www.chis.ucla.edu/topics.html>. Data can also be accessed from the [askCHIS website](#).

**Emergency Department Discharge Data (ED Data):** ED data are administratively collected and maintained for most emergency hospitals in San Diego County. ED data elements include patient's home zip code, demographic information, source of payment, disposition, diagnoses and procedures performed for all patients treated and discharged from the ED.

**HIV/AIDS Reporting System (HARS):** HARS is an administrative system used to report HIV and AIDS cases in San Diego County. HIV reporting began in 2002 and is not available for zip code level analysis. The number of AIDS cases has been reported since 1983 and is available by zip code if the total is 5 or more.

**Patient (Hospital) Discharge Data:** Discharge data are administratively collected and maintained for most inpatient facilities in San Diego County. Discharge data elements include patient's home zip code, demographic information, source of payment, disposition, diagnoses and procedures performed for all patients admitted to the hospital for any condition.

**Prehospital Database:** Emergency Medical Services (EMS) receives a prehospital patient record (PPR) for every patient seen by a paramedic or emergency medical technician from a 911 call. The PPR contains information including demographics, incident zip code location, chief complaint, patient status, injury event information, restraint use, contributing factors, times and outcomes. At this time, only those calls in which a paramedic or EMT made contact with a Mobile Intensive Care Nurse (MICN) at a base hospital are included in this data.

**San Diego Association of Governments (SANDAG):** SANDAG creates and maintains a tremendous quantity of demographic, economic, land use, transportation and criminal justice information about the San Diego region. Demographic data includes population characteristics like age, education, and employment. SANDAG develops annual demographic estimates and long range forecasts in addition to maintaining census data files. Data is available by county, SRA, zip code, and census tract.

**Sexually Transmitter Disease (STD) Morbidity Surveillance Data:** Data are available for three STDs: Chlamydia, gonorrhea and syphilis (primary and secondary). Information on age, gender, race/ethnicity are available for all 3 diseases. Data are also available at the zip code level, although this data are incomplete.

**Statewide Integrated Traffic Record System (SWITRS):** SWITRS is a traffic collision database administratively collected by the California Highway Patrol. Collisions with personal injury on public roads are included. Detailed information on the circumstances of the crash, drivers, passengers, and other victims are available by incident zip code.

**Vital Records Data:** A birth certificate is required for every live birth in San Diego County. A death certificate is completed for every person who dies in San Diego County. Vital records data includes information on birth (e.g. weight) or death (e.g. underlying and contributing causes of death) and basic demographic information by zip code.

**Additional abbreviations used in sources:**

CDPH – State of California, Department of Public Health

CDC – Centers for Disease Control and Prevention

CHIP – Community Health Improvement Partners

HASDIC – Hospital Association of San Diego & Imperial Counties

NCHS – National Center for Health Statistics

NVSS- National Vital Statistics System

OSHPD – California Office of Statewide Health Planning and Development

## Appendix C - Glossary Demographic Terms

The following terms are defined by SANDAG.

### Demographic Profile

**Total Population:** Total number of persons (residents) in an area.

**Age Distribution:** Total number of persons (residents) in an area by age group.

**Median Age:** Divides the age distribution into two equal parts; half of all persons are older than the median and half are younger.

**Gender Distribution:** Total number of persons (residents) in an area by gender.

**Race/Ethnicity:** Self-identification by people according to the race(s) and ethnicity with which they most closely identify. "Other" includes American Indian or Alaska Native, those who identified two or more races, and other.

### Education

**Completed Education:** The highest level of education completed in terms of the highest degree or the highest level of schooling completed.

### Household Income

**Household:** A person or group of people living in a housing unit that serves as a primary place of residence.

**Household Income:** Total pre-tax annual income of all members of a household.

**Income:** Sum of wages, salary, commissions, bonuses, tips, self-employment income, interest, dividends, net rental income, royalty income, income from estates and trusts, Social Security or Railroad Retirement income, Supplemental Security Income (SSI), any public assistance or welfare payments from the state or local welfare office, retirement, survivor, or disability pensions, and any other sources of income received regularly.

**Median Household Income:** Divides the household income distribution into two equal parts; half of all households have incomes above the median and half have incomes below the median.

**Persons per Household:** The average number of persons living in a housing unit, calculated by dividing the household population by the number of occupied housing units.

**Income per Person in HH:** The average income per person living in a housing unit, calculated by dividing the Median Household Income by the Persons per Household.

**Change from County:** The percentage above or below the County of San Diego average income per person (i.e. \$16,193 for 2009 estimate).

### Housing

**Owner Occupied:** Housing units that are occupied as a primary residence by the owner of the unit.

**Renter Occupied:** Housing units that are occupied as a primary residence by an individual other than the owner of the unit.

**Residential Density:** The total number of housing units per developed residential acre.

## Industry

**Industry of Civilian Employees:** The kind of business conducted by a person's employing organization.

**Professional, Scientific, Management, Admin:** Category of industry that includes professional, scientific, management, and administrative.

**Entertainment and Hospitality Industry:** Category of industry that includes arts, entertainment, recreation, accommodations and food services.

## Language

**Primary Language Spoken at Home:** The language currently used at home, either "English only" or a non-English language that is used in addition to English (bilingual) or in place of English.

## Occupation

**Employed Civilian Occupation Category (16+ Years):** Category of occupation for those who are employed in the civilian work force. Does not include Armed Forces or unemployed. This category refers to the type of work one does on the job, not the industry by which they are employed.

**Construction, Extraction, and Maintenance:** Category of occupation including construction, extraction (such as mining) and maintenance or repair jobs.

**Farming, Fishing, and Forestry:** Category of occupation including farming, fishing and forestry jobs.

**Labor Force 16+ Years:** Includes all residents 16 years old and over who are currently in the civilian labor force, plus members of the U.S. Armed Forces (those residing in the county for two or more months) and those who are unemployed. This includes those who are either "at work" or "with a job but not at work".

**Management, Professional, and Related:** Category of occupation including management (including farm managers), business and financial, computer and mathematical architecture and engineering, science (life, physical, and social), community and social service, legal, education and training and library, arts, design, entertainments, sports, and media, healthcare practitioners.

**Production, Transportation and Material:** Category of occupation including production, transportation and material moving jobs.

**Sales and Office:** Category of occupation including sales and office jobs.

**Service:** Category of occupation including healthcare support, protective service, food preparation and serving, building and grounds cleaning and maintenance, personal care and service.

**Unemployed:** Civilians 16 years old and over who are neither "at work" nor "with a job but not at work" during the reference period, and were actively looking for work during the last four weeks and were available to accept a job.

## Personal Vehicles

**Vehicle Availability:** Passenger cars, vans, and pickup or panel trucks of 1-ton capacity or less kept at home and available for use by household members. Excludes vehicles kept at home but used only for business purposes.

## Poverty

**Income Percent of Poverty Level:** The percentage of the poverty threshold that the family's household income is at.

**Family:** Householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption.

**Population:** Families or individuals whose total income falls below the poverty threshold set by the Census Bureau, according to family size and composition.

**Poverty Level:** Minimum annual income below which is considered poverty. Poverty level information for 2009 by family size may be found at <http://www.census.gov/hhes/www/poverty/data/threshld/thresh09.html>.

## School Enrollment

**Percent Enrolled:** The percentage of children ages 4 to 18 years who were enrolled in grades K – 12. Found by dividing the number of enrolled students (K-12) by the total population ages 4 to 18 years.

**Percent Private:** The percentage of all students enrolled in grades K – 12 who attend a private school. A private school is one that is supported and controlled primarily by religious organizations or other private groups.

**Percent Public:** The percentage of all students enrolled in grades K – 12 who attend a public school. A public school is one that is supported and controlled primarily by a federal, state, or local government (including tribal schools).

## Single Parent Homes

**Single Parent Household:** The percentage of all families with "own children" under age 18 living in the household, who are headed by a person, male or female, without a spouse present in the home. "Own children" are never-married children under 18 who are related to the householder by birth, marriage, or adoption.

## Unemployment

**Unemployed:** Percentage of civilians 16 years old and over who are neither "at work" nor "with a job but not at work" during the reference period, and were actively looking for work during the last four weeks and were available to accept a job.

## Appendix D - Glossary Health Indicator Terms

The following are definitions of health indicator terms for population and service data used in this document, including which databases data comes from (noted in *italics*). For more information, see **Data Sources**.

Disease data here represent only principal diagnoses (or underlying cause of death) and do not include secondary diagnoses. Injury data using ICD10 coding (death) only uses underlying cause of death; injury data using Ecodes from Emergency Department and Hospital discharges include only primary Ecode (mechanism of injury).

The majority of the data here is reported by location of residence of the subject. Non-fatal motor vehicle injury data from SWITRS are reported by location of occurrence; while motor vehicle death data (from Death Statistical Master Files) are reported by location of residence.

**California Health Interview Survey (CHIS) Definitions:** see individual table footnotes or askCHIS website at [www.chis.ucla.edu](http://www.chis.ucla.edu).

### Population and Service Data Definitions:

#### Non-Communicable (Chronic) Disease

**Coronary Heart Disease:** ischemic and hypertensive heart disease, ICD9 codes 402, 410-414, 429.2; ICD10 codes I11, I20-I25. *Death, Hospital, Emergency Department.*

**Cardiac Chief Complaint:** cardiac chest pain, congestive heart failure, palpitations and STEMI (st-elevation myocardial infarction). *Prehospital (911).*

**Stroke:** cerebrovascular disease, ICD9 codes 430-438; ICD10 codes I60-I69. *Death, Hospital, Emergency Department.*

**Stroke Chief Complaint:** cerebrovascular accident (cva). *Prehospital (911).*

**Diabetes:** Diabetes Mellitus, includes insulin-dependent and non insulin-dependent diabetes, ICD9 code 250; ICD10 codes E10-E14. *Death, Hospital, Emergency Department.*

**Asthma:** ICD9 code 493; ICD10 codes J45-J46. *Death, Hospital, Emergency Department.*

**Chronic Obstructive Pulmonary Disease (COPD):** ICD9 codes 490-492, 496; ICD10 codes J40-J44. *Death, Hospital, Emergency Department.*

**Respiratory-related Chief Complaint:** asthma, chronic obstructive pulmonary disease (COPD) and respiratory distress. *Prehospital (911).*

**Female Breast Cancer:** ICD10 code C50. *Death.*

**Prostate Cancer:** ICD10 code C61. *Death.*

**Cervical Cancer:** ICD10 code C53. *Death.*

**Colorectal Cancer:** cancer of the colon, rectum or anus, ICD10 codes C18-C21. *Death.*

**Lung Cancer:** cancer of the trachea, bronchus or lung, ICD10 codes C33-C34. *Death.*

**Arthritis:** ICD9 codes 95.6, 95.7, 98.5, 99.3, 136.1, 274, 277.2, 287.0, 344.6, 353.0, 354.0, 355.5, 357.1, 390, 391, 437.4, 443.0, 446, 447.6, 696.0, 710-716, 719.0, 719.2-719.9, 720-721, 725-727, 728.0-728.3, 728.6-728.9, 729.0-729.1, 729.4. *Hospital, Emergency Department.*

**Dorsopathies:** ICD9 codes 720-724. *Hospital, Emergency Department.*

## Communicable Disease

**Tuberculosis (TB):** new active cases reported to and confirmed by County Public Health Services, see [CDC clinical case definition](#).\*\* TB Registry.

**Chronic Hepatitis C:** cases reported by providers\* to County Public Health Services, see [CDC case definition](#).\*\* Hepatitis Reporting.

**AIDS:** new cases reported by providers\* to County Public Health Services, cases need not be investigated and confirmed, see [CDC clinical case definition](#).\*\* HIV/AIDS Reporting System.

**Chlamydia:** new cases reported by providers\* to County Public Health Services, cases need not be investigated and confirmed, see [CDC clinical case definition](#).\*\* For estimated Chlamydia (Regional Tables), cases with unknown residence are statistically distributed to Regions to better estimate Regional needs. SRA Tables do not include a substantial number of cases reported in San Diego County, due to cases with unknown residence. Approximately 30%, or 2500 Chlamydia cases per year, are missing residence data. Chlamydia numbers are underestimated at the SRA level. STD Reporting.

**Gonorrhea:** new cases reported by providers\* to County Public Health Services, cases need not be investigated and confirmed, see [CDC clinical case definition](#).\*\* For estimated Gonorrhea, cases with unknown residence are statistically distributed to Regions to better estimate Regional needs. SRA Tables do not include a substantial number of cases reported in San Diego County, due to cases with unknown residence. Approximately 30%, or 600 gonorrhea cases per year, are missing residence data. Gonorrhea numbers are underestimated at the SRA level. STD Reporting.

**Primary and secondary syphilis:** new cases reported to and confirmed by County Public Health Services, see [CDC clinical case definition](#).\*\* STD Reporting.

## Maternal and Child Health

**Live Birth:** a product of conception, which after complete expulsion or extraction from the mother, breathes or shows any other evidence of life. This is not synonymous with the term "pregnancy", which can result in a miscarriage, fetal death, induced abortion or live birth. MCFHS.

**Early prenatal care:** care beginning during the 1<sup>st</sup> trimester of pregnancy. Percentages of those receiving prenatal care are calculated amongst those births whose start of prenatal care is known (i.e. those whose start of care is unknown or missing are excluded from the denominator). MCFHS.

**Preterm birth:** birth prior to 37 completed weeks of gestation. MCFHS.

**Low birth weight:** birth weight less than 2,500 g (approximately 5lbs, 8oz). MCFHS.

**Very low birth weight:** birth weight less than 1,500 g (approximately 3lbs, 5oz). MCFHS.

**Fetal mortality:** number of deaths of fetuses more than 20 weeks gestation per 1,000 live births and fetal deaths. MCFHS.

**Infant mortality:** number of deaths of infants under one year of age per 1,000 live births. MCFHS.

## Injury

**Unintentional injury:** ICD9 Ecodes E800-E869, E880-E929; ICD10 codes V01-X59, Y85-Y86. This generalized unintentional injury may overlap with specific indicators below, such as drowning, smoke/fire, suffocation, falls, motor vehicle or pedestrian deaths, as well as the unintentional portion of overdose/poisoning and firearm injuries. Death, Hospital, Emergency Department.

**Drowning:** unintentional drowning and submersion, including those caused by accident due to watercraft or related to water-transport, ICD10 codes W65-W74, V90, V92. Death.

**Accidental exposure to smoke, fire or flame:** ICD10 codes X00-X09. Death.

**Unintentional suffocation:** ICD10 codes W75-W84. Death.

# North Inland Region Health Status Report

**Fall-related:** unintentional falls, ICD9 Ecodes E800-E886, E888; ICD10 codes W00-W19. *Death, Hospital, Emergency Department.*

**Overdose/Poisoning:** all intents, ICD-9 Ecodes E850-E869, E950-E952, E962; ICD10 codes X40-X49, X60-X69, X85-X90, Y10-Y19, Y35.2, U01.6-U01.7. *Death, Hospital, Emergency Department.*

**Motor vehicle injury:** unintentional injury of anyone involved in a motor vehicle accident (collision or non-collision) on a public road, including occupants, pedestrians, and cyclists, ICD9 codes E810-819; ICD10 codes V30-V39 (.4-.9), V40-V49 (.4-.9), V50-V59 (.4-.9), V60-V69 (.4-.9), V70-V79 (.4-.9), V81.1, V82.1, V83-V86 (.0-.3), V20-V28 (.3-.9), V29 (.4-.9), V12-V14 (.3-.9), V19 (.4-.6), V02-V04 (.1, .9), V09.2, V80 (.3-.5), V87 (.0-.8), V89.2. *Death, Hospital.*

**Total injuries due to motor vehicle accident:** those injured in motor vehicle accidents occurring on public roads. The injured may be cyclists, pedestrians or occupants of motor vehicles (such as cars, trucks, or buses). Data here are based on injuries involving a motor vehicle in transport (in motion or readiness for motion) and are not defined by ICD codes of collision or non-collision. Data are by location of occurrence. *SWITRS.*

**Alcohol-related:** those injured in motor vehicle accidents occurring on public roads where alcohol was involved. The drinking driver need not be injured and need not be declared at fault, nor tested for being under the influence of alcohol. Data are collected by location of occurrence. *SWITRS.*

**Drinking drivers:** drivers noted as drinking, involved in motor vehicle accidents occurring on public roads with injury to any party. The drinking drivers need not be injured and need not be determined to be at fault nor impaired. Data are collected by location of occurrence. *SWITRS.*

**Active restraint use:** those injured in motor vehicle accidents occurring on public roads where active restraints were used. Rates are calculated amongst those whose status of restraint use/non use was known. Data applies to those ages 6 years and older. Data are collected by location of occurrence. *SWITRS.*

**Child restraint use:** those injured in motor vehicle accidents occurring on public roads where child restraints were used. Rates are calculated amongst those whose status of restraint use/non use was known. Data applies to those ages 0-5 years. Data are collected by location of occurrence. *SWITRS.*

**Pedestrian injury attributed to motor vehicle accidents:** unintentional injury of pedestrians involved in motor vehicle accidents on a public road, ICD9 codes E810-819(.7); ICD10 codes V02-V04 (.1, .9), V09.2. *Death, Hospital.*

**Homicide:** deaths that are intentionally inflicted by another, ICD10 codes U01-U02, X85-Y09, Y87.1. *Death.*

**Assault injury:** injuries that are intentionally inflicted by another, ICD9 codes E960-E969. *Hospital, Emergency Department.*

**Suicide:** deaths that are intentionally inflicted by self, ICD10 codes U03, X60-X84, Y87.0. *Death.*

**Self-inflicted injury:** injuries that are intentionally inflicted by self, ICD9 codes E950-E959. *Hospital, Emergency Department.*

**Firearm-related:** all intents, ICD9 Ecodes E922, E955.0-E955.4, E965.0-E965.4, E970, E985.0-E985.4; ICD10 codes W32-W34, X72-X74, U01.4, X93-X95, Y22-Y24, Y35.0. *Death, Hospital, Emergency Department.*

**Dental-related:** injury as well as non-injury medical/dental primary diagnoses, ICD9 codes 521-523, 525.3, 525.9, 873.63, 873.73. *Emergency Department.*

\* Providers may refer to health care providers (e.g. physicians, nurses, or hospital administrators), laboratories, or school administrators who are legally mandated to report diseases indicated in CCR, Title 17, sections 2500, 2508, and 2505.

\*\* [CDC clinical case definition](http://www.cdc.gov/osels/ph_surveillance/nndss/casedef/case_definitions.htm), these may be found online at [http://www.cdc.gov/osels/ph\\_surveillance/nndss/casedef/case\\_definitions.htm](http://www.cdc.gov/osels/ph_surveillance/nndss/casedef/case_definitions.htm).
