

AIDS in the North Central HHSA Region

San Diego County

2007–2011

Total cases: 189

GENDER

Between the years 2007 and 2011, 189 individuals were diagnosed with AIDS while living in the North Central Region. The overall rate of AIDS for the North Central Region was 32.1 per 100,000 population. Rates were not calculated for groups with fewer than 25 cases in the five-year period (fewer than five cases per year). Of the 189 cases, 94% were male and 6% were female.

MODE OF TRANSMISSION

Rates cannot be calculated for mode of transmission due to a lack of population data. The predominant mode of transmission in San Diego county and the North Central Region was MSM. Heterosexual contact accounted for 64% of female cases, but only 10% of male cases.

RACIAL/ETHNIC GROUP

The rate of AIDS was highest among Hispanics, followed by whites. Of the 189 cases, 50% were white, 12% black, 27% Hispanic and 11% Asian/other (includes Asian, Native American, and Pacific Islander).

AGE AT DIAGNOSIS

Like the county overall, the rate of AIDS in the North Central Region was highest in the 40-49 age group, followed by 30-39. Of the 189 total cases, 1% were under 20, 19% were 20-29, 25% were 30-39, 37% were 40-49 and 19% were 50+.
