

**Aging & Independence Services (AIS)
Long Term Care Integration Project (LTCIP)
Update for the Health Services Advisory Board (HSAB)
January 19, 2017**

The goal of the Long Term Care Integration Project (LTCIP) is to improve the delivery of health care and long term services and supports for older adults and persons with disabilities. This report includes updates on some key LTCIP activities.

Aging and Disability Resource Connection (ADRC):

Background: The Aging and Disability Resource Connection (ADRC) is a partnership between AIS and Access to Independence. Between the two agencies, the ADRC provides persons of all ages, abilities, and incomes, their caregivers, and service providers with free, comprehensive information about long term services and supports (e.g., personal care, household chores, meals, transportation, home modification, etc.) in San Diego County and delivers care transition support, care management, and options counseling. The ADRC Advisory Committee gives input on community needs and how the ADRC agencies can improve these services.

Update: The next meeting will be held on February 13, 2017. Contact Kristen Smith if you are interested in attending (kristen.smith@sdcounty.ca.gov).

Community-based Care Transitions Program (CCTP):

Background: CCTP was established under Section 3026 of the Affordable Care Act (ACA) in 2011 as a 5-year demonstration to link community based organizations with hospitals to improve care that high-risk Medicare patients receive as they transition across different care settings, reduce the readmission rate for high risk patients and reduce Medicare spending. The San Diego Care Transitions Partnership (SDCTP), a partnership between AIS and Palomar Health, Scripps Health, Sharp HealthCare and the UCSD Health System (13 hospitals) has provided comprehensive, person-centered, health care and social services to over 52,000 high-risk, fee-for-service (FFS) Medicare patients across thirteen participating hospitals since its inception in January 2013. Over the past three years SDCTP has reduced the 30 day, all-cause readmission rate from 21.2% to 10.5% resulting in an estimated \$13,793,462 in Medicare savings. The SDCTP's success has resulted in several extensions.

For the final extension period from July 1, 2016 – January 31, 2017, AIS has worked with Palomar Health, Scripps Health, and Sharp HealthCare. The SDCTP continues to work collaboratively to identify ways in which person-centered, coordinated, acute and post-acute care transition services may continue to be delivered to high-risk FFS Medicare patients as well as to other high-risk patient populations across the county after the demonstration project concludes. In the extension period, the program serves approximately 980 patients per month across the three hospitals. The program will enroll patients until January 31, 2017, serving each patient through their 30 day transition period. AIS and Palomar Health have executed a contract for AIS to serve Palomar patients beyond the CCTP, and has begun to provide services for some patients via this contract.

Update: AIS and the hospitals will continue to meet twice a year after the conclusion of CCTP to share best practices regarding Care Transitions.

Coordinated Care Initiative (CCI):

Background: San Diego County is one of seven counties in California selected to implement the Coordinated Care Initiative (CCI), an improved delivery system that provides coordinated health care and long term services and supports (LTSS) to dual eligible and Medi-Cal only beneficiaries in the county. Begun in 2014, CCI consists of two components: 1) mandatory enrollment of dual eligible beneficiaries into managed care for all of their Medi-Cal benefits, including LTSS, and 2) the dual demonstration project, Cal MediConnect (CMC), which provides dual

eligible beneficiaries the option of s nister and coordinate both their Medicare (acute medical care and hospitalizations) and Medi-Cal benefits. Those duals who do not choose this option continue to receive fee-for-service Medicare. CCI health plans are required to offer four types of LTSS: MSSP, IHSS, adult day healthcare and skilled nursing care. In San Diego County, health plans must partner with AIS for the administration of MSSP and IHSS. CMC health plans may offer other discretionary LTSS known as Care Plan Options (CPO), which include a wide array of a la carte services and support, and also offer transportation and vision benefits. According to the recent enrollment figures published by the Department of Health Care Services (DHCS), there were 14,339 San Diego County duals actively enrolled in Cal MediConnect (CMC) as of December 1, 2016. However, CMC enrollment in San Diego County continues to hold at 33%, meaning that 67% of have either opted-out or have disenrolled from CMC. That said, the opt-out/disenrollment rate from CMC has been slowing over the second half of 2016 and with DHCS' recent implementation a new comprehensive strategy to improve CCI, there may be an avenue to increased, sustainable enrollment.

Update: The Governor's proposed budget plan was released on 1/10/2017 and changes to CCI were announced. While the CCI has been technically "discontinued" as of July 1, 2017, most components remain the same and beneficiaries will not experience changes in service. The main changes are the following:

- The cost of the In-Home Supportive Services program will be removed from the Health Plans' bundled, capitation rates and will be reverted back to prior state-county share of cost arrangements and IHSS will also return to being a fee-for service benefit
- Although the funding for IHSS will no longer be included in the Medi-Cal managed care capitation rates, the Governor's proposed budget "encourages" Medi-Cal managed care plans and counties to continue "collaborating" on care coordination
- The seven CCI counties will also regain collective bargaining responsibilities for IHSS workers' wages and benefits
- The transition of MSSP from community based providers (i.e., AIS for San Diego County) to the Health Plans that was to be effective as of January 1, 2018, is now being postponed to January 1, 2020.

The next quarterly CCI Advisory Committee meeting will be held on Wednesday, February 1, 2017.

National Committee on Quality Assurance:

Background: In November 2015, AIS was one of ten organizations chosen from across the United States to participate in the National Committee on Quality Assurance's (NCQA) 18-month long program: *Piloting Standards to Support Coordination of Long Term Services and Supports (LTSS) Learning Collaborative*. NCQA's new Case Management Accreditation for LTSS is a comprehensive accreditation program dedicated to quality improvement. To prepare for accreditation, AIS has created a standardized training academy for our social workers, and we are developing a data collection tool that is reflective of person-centered care (PCC) work, and we are establishing a Policies and Procedures manual that focuses on person-centered care and NCQA case management standards for LTSS. The timeline for the accreditation process is over 1 year, so we hope to gain accreditation in early 2018. NCQA staff conducted a site visit in October. The purpose of the site visit was for NCQA to evaluate their own process of developing the new standards. Although the NCQA visitors were not the same staff as the future accreditation survey evaluators, they provided very helpful feedback.

Update: No significant updates for January. AIS staff continue to develop program operations and policies to meet the NCQA standards.
