Notes:

- This is a measure of prenatal care initiation and does not account for the frequency of care.
  - Births with unknown time of prenatal care start are excluded from the total (denominator in rate calculations).
  - Beginning in 2007, "Date of first prenatal visit" was collected in addition to the "Month prenatal care began" on birth certificates. Therefore, statistics before and after 2007 are not comparable.
  - Gestation length is based on the obstetric (OB) estimate (last menstrual period (LMP), ultrasound, all perinatal factors). Births with unknown or improbable gestation lengths were classified as unknown (improbable lengths are those that likely reflect inaccuracies rather than actual gestation periods (under 17 complete weeks or 48 or more complete weeks)).
  - Starting in 2017, births that occurred outside California are excluded.
  - Prior to 2017, for Nativity of Mother, the foreign-born category includes U.S. territories.
  - The large proportion of births with unknown race/ethnicity affects the accuracy of statistics by race/ethnicity.
  - The large proportion of births with unknown educational attainment affects the accuracy of statistics by educational attainment.
- \*Numbers are censored and rates are not calculated when the number of events is fewer than 5 (indicated by "<5"). Interpret with caution rates calculated for fewer than 20 events since they are considered statistically unreliable.
