Re: Newland Sierra (Log No. PDS2015-ER-15-08-001; SCH No. 2015021036, Project Numbers: PDS2015-GPA-15-001, PDS2015-SP-15-001, PDS2015-REZ-15-001, PDS2015-TM-5597, PDSXXXX-HLP-XXX) – Transmittal of Report by Camille Sears Discussing Flaws in the Air Quality Analysis for the Newland Sierra Project

Dear Ms. Smith:

As you know, we represent Golden Door Properties, LLC (“Golden Door”), a world-class resort and agricultural operation in rural Twin Oaks Valley. The Golden Door has restored farming and beekeeping on its property, including the replanting of many new trees on the property—sharing its bounty at a community Farm Stand and through retail operations. The Golden Door has raised many concerns with the County about the proposed Newland Sierra Project and the impacts of adding urban density the size of the City of Del Mar in our rural community.

We write today with particular respect to the Project’s air quality and health impacts. Newland proposes ten years of construction that would involve at least 10,700,000 cubic yards of cut and fill. Air emissions are a significant concern for nearby residents and businesses. Attached is a report from Camille Sears—an expert air quality consultant and modeler with over 35 years of experience—which describes significant flaws in the air quality analysis and health risk assessment for the Newland Sierra Project’s Draft Environmental Impact Report (“DEIR”).

Ms. Sears’ report concludes that the Newland Sierra DEIR improperly omits modeling analysis of significant construction emissions, underestimates constructions emissions, fails to include wind erosion in its analysis, fails to disclose the crystalline silica content of on-site soil, and incorrectly models construction and operational emissions of diesel particulate matter. Her report describes flaws in methodology and significant impacts that were not previously

identified. Ms. Sears' modeling runs show significant impacts to several residences and businesses in the area, including the Golden Door and the Deer Springs Oaks Mobile Home Park. The report demonstrates substantially worse impacts than what were identified in the DEIR.

These omissions and flawed analyses are significant legal errors that must be fixed. The County must provide adequate analysis of air emissions before the public and decisionmakers can understand the project's impacts. In this case, the DEIR must be recirculated for an additional comment period before publication of the final EIR so that the public has a chance to propose potential mitigation or alternatives for these impacts. (See *Communities for a Better Environment v. City of Richmond* (2010) 184 Cal.App.4th 70, 95 [recirculation required when important information omitted]; see also *Laurel Heights Improvement Assn. v. Regents of University of California* (1993) 6 Cal.4th 1112, 1120; *Save Our Peninsula Committee v. Monterey Cty. Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 130.)

Ms. Sears report is based on her review of the DEIR, including technical documents that were just recently provided to the Golden Door for review and analysis. In July 2017, during the public comment period for the Newland Sierra DEIR, Golden Door requested technical reports on air quality and greenhouse gas emissions under the Public Records Act. These technical reports provided the basis for the County's consultants' analysis in the DEIR; however, the files were not provided to the public as part of the DEIR. The County refused to provide the requested files. After several rounds of communications, the Golden Door was forced to file a lawsuit under the Public Records Act to obtain the documents, which the County eventually provided as part of a settlement agreement. Because the County did not provide these technical files as part of the DEIR, Ms. Sears' report is provided now at the earliest time possible and should be made part of the record in this matter and considered as part of the County's responses on the DEIR.

Thank you for your time and attention to our comments. Please do not hesitate to contact us should you have any questions or comments.

Best regards,

*Andrew D. Yancey*

## 1. Introduction

I reviewed the air quality and health risk assessment sections of the June 2017 Draft Environmental Impact Report (DEIR) for the proposed Newland Sierra Project (NSP), near Escondido, California. NSP is a planned community of residential, commercial, educational, and other uses on 1,985 acres (DEIR, p. S.0-1). In conjunction with the DEIR, I reviewed electronic CALEEMOD and Excel emission calculation files prepared by the DEIR-preparer, Dudek. I also reviewed AERMOD and HARP2 risk assessment input and output files prepared by Dudek.

The NSP DEIR addresses two general air quality aspects of the proposed project: construction activities and vehicle traffic occurring adjacent to the project site. The DEIR refers to the offsite vehicular traffic component as “operational emissions.”

The DEIR is tasked with determining whether NSP will cause significant environmental impacts, including effects on ambient air quality and health risks due to exposure of toxic air contaminants. The DEIR concludes that mitigated PM10 and PM2.5 emissions during construction activities will greatly exceed the significance thresholds established by the San Diego County Air Pollution Control District (SDAPCD) for these pollutants (DEIR, Air Quality Technical Appendix, p. 80). The DEIR also acknowledges that these significant PM10 and PM2.5 emissions will require air dispersion modeling to determine the magnitude and extent of air concentrations caused by these emissions:

In the event that emissions exceed these thresholds, modeling would be required to demonstrate that the project's total air quality impacts result in ground-level concentrations that are below the CAAQS and NAAQS, including appropriate background levels (DEIR, Air Quality Technical Appendix, p. 56).

The DEIR, however, fails to include any modeling analysis of these significant emissions. As such, the DEIR failed to prepare any ambient air quality modeling to determine whether NSP’s construction emissions would violate National Ambient Air Quality Standard (NAAQS) or California Air Quality Standard (CAAQS). Moreover, the DEIR incorrectly calculates construction fugitive PM10 and PM2.5 emissions, under-estimating the likely daily quantities of these pollutants.

The NSP DEIR is extremely limited in its scope of air quality impact and health risk assessment. The DEIR includes only two air dispersion modeling analyses and subsequent health risk assessment: an assessment of health risks from construction diesel particulate matter (DPM) emissions, and an analysis of vehicle traffic DPM exposures to future residents of the NSP.

The construction DPM health risk assessment is limited to a small portion of the proposed project site, and includes only a fraction of the total construction DPM emissions. Furthermore, the health risk analysis is limited to assessing exposures in a relatively small area near the intersection of I-15 and Deer Springs Road.

The operational DPM health risk assessment focuses on future vehicle traffic emissions and the health risks to NSP residents. From the DEIR:

The purpose of this health risk assessment (HRA) is to determine the impact to the future residents and the school site of the proposed project due to toxic air contaminant (TAC) emissions resulting from diesel and gasoline vehicle traffic along I-15 and Deer Springs Road as well as from a nearby gas station (DEIR, Air Quality Technical Appendix, Appendix C, p. iii).

The DEIR does not assess operational excess cancer risks to areas outside the NSP site.

My analyses and comments address a number of shortcomings and omissions in the NSP DEIR. In summary, my comments address the following DEIR deficiencies:

- The DEIR incorrectly calculates fugitive dust PM10 and PM2.5 emissions from construction activities. I corrected these emissions using USEPA's AP-42 emission factors with appropriate inputs.
- The DEIR fails to assess fugitive dust PM10 and PM2.5 emissions from wind erosion. I calculated wind erosion emissions for the NSP site.
- The DEIR fails to include any air dispersion modeling of construction emissions for verifying compliance with the PM10 CAAQS and the PM2.5 NAAQS. I prepared air dispersion modeling of construction PM10 and PM2.5 emissions, including a modeling analysis of wind erosion emissions.
- The DEIR incorrectly models construction DPM emissions, which only covers a small portion of the project site. I prepared an air dispersion modeling analysis of construction DPM emissions for the entire project site, including a 9-year exposure DPM health risk assessment.
- The DEIR incorrectly models operational DPM emissions, which only assesses future exposures to areas within the project site. I prepared an air dispersion modeling analysis of operational DPM emissions for a grid of receptors covering areas within the project site, extending to adjacent offsite residential areas. I prepared a DPM health risk assessment for 9-year exposures at these receptors.

When construction fugitive dust emissions are corrected, NSP is projected to cause or contribute to exceedances of the 24-hour PM2.5 NAAQS and the 24-hour PM10 CAAQS. In addition, a proper assessment of construction and operational DPM emissions from NSP reveals significant excess cancer risks to areas not identified in the DEIR. Many of my assumptions took a non-conservative approach, resulting in likely under-reporting of emissions. Impacts are likely even more significant than shown in my analysis. The DEIR is clearly deficient and inadequate, and should be revised to address emission rate, air dispersion modeling, and health risk assessment shortcomings.

## **2. Corrected NSP Construction Fugitive Dust Emissions**

As discussed above, the NSP DEIR includes PM10 and PM2.5 emission calculations from construction activities, but neglects to prepare any air dispersion modeling analyses of these emissions. My analyses address two deficiencies in the NSP DEIR: correcting the inappropriately-low PM10 and PM2.5 construction emissions presented in the DEIR and the complete lack of any air quality impact analyses of these emissions.

This section focuses on Phase 1 construction emissions for year 2018, which includes two broad categories, termed in the DEIR as site preparation and grading activities. The DEIR and appendices are silent on the detailed construction schedule by location within the NSP. For example, the DEIR includes construction scheduling for Phase 1 and Phase 2 activities, but provides no information on whether construction for all residential areas will occur at the same time (in parallel), or whether the construction of residential areas will occur sequentially.

Since the DEIR lacks any detailed information on the sequence of residential area construction, I had little choice but to distribute the daily construction emissions evenly over the entire Phase 1 construction area (See DEIR, Figure 1-32, Phasing Plan). This is a non-conservative approach (likely to under-predict air quality impacts), since the daily emissions are diluted over the maximum possible area of Phase 1 construction activities. The area of Phase 1 construction activities used in my air dispersion modeling analysis is shown in Exhibit A.

### **2.1 CalEEMod is Inappropriate for Calculating NSP's Construction Emissions**

The DEIR relies on the CalEEMod program to calculate the majority of NSP's construction and operational emission rates. CalEEMod is a database program distributed by the California Air Pollution Control Officer's Association (CAPCOA) for use in preparing many emission inventory types. CalEEMod, however, is not reliable for calculating fugitive dust emissions from NSP's construction activities.

First, CalEEMod is in many ways a "black box," where the actual emission calculations and coding are not available to the user or reviewer. As used in the NSP DEIR, CalEEMod does not display individual calculations from construction fugitive dust activities, but rather groups the output by site location, activity, and year.

Second, CalEEMod does not include the correct emission calculation methodologies for many of the most significant construction activities. This is evidenced in the DEIR, where the DEIR-preparer relied on AP-42 emission factors to calculate rock crushing and blasting emissions (DEIR, Air Quality Technical Appendix, Appendix D). CalEEMod also lacks the ability to calculate fugitive dust emissions from wind erosion.

Furthermore, and more importantly, CalEEMod uses an inappropriate unpaved road emission factor in calculating fugitive dust emissions from onsite hauling activities, which are the most significant source of PM10 and PM2.5 emissions during NSP's construction activities. CalEEMod uses the AP-

42 emission factor for unpaved public roads when calculating construction fugitive dust emissions.<sup>1</sup> As specified in the AP-42 emission factor for unpaved roads, there are two emission calculation equations: one for industrial roads, and another for public roads. The unpaved public road emission factor is limited to vehicles weighing between 1.5 and 3.0 tons.<sup>2</sup> NSPs' haul truck weigh approximately 35 tons, on average, as detailed below. The industrial unpaved emission factor in AP-42, which is designed for vehicles weighing from 2 to 290 tons, is the appropriate equation to use in calculating NSP's haul truck trips on unpaved roads. Using the inappropriate unpaved road emission factor in the NSP DEIR results in substantial under-predictions of fugitive PM10 and PM2.5 emissions from NSP's haul trucks.

## 2.2 Summary of Corrected Emissions

Table 1 shows the DEIR-calculated peak daily mitigated construction fugitive dust emissions. The DEIR uses CalEEMod for calculating construction activity emissions, and USEPA AP-42 factors for calculating emissions from blasting and rock crushing.

Table 1: DEIR-calculated construction fugitive PM emissions

| Activity                          | PM10<br>(lb/day) | PM2.5<br>(lb/day) |
|-----------------------------------|------------------|-------------------|
| Construction Activities (Phase 1) | 385.31           | 43.03             |
| Blasting (Phase 1)                | 55.89            | 3.22              |
| Rock Crushing (Phase 1)           | 71.03            | 12.70             |
| Total maximum daily emissions:    | 512.23           | 58.95             |

Table 2 shows corrected mitigated construction fugitive dust emissions, using USEPA AP-42 factors for calculating emissions haul trucks on unpaved roads, grading, and rock crushing. I did not revise the DEIR's blasting emission rate calculations, because the DEIR did not provide sufficient information for me to verify the blasting schedule.

Table 2: Corrected AP-42 construction fugitive PM emissions

| Activity                          | PM10<br>(lb/day) | PM2.5<br>(lb/day) |
|-----------------------------------|------------------|-------------------|
| Construction Activities (Phase 1) | 786.53           | 95.89             |
| Blasting (Phase 1)                | 55.89            | 3.22              |
| Rock Crushing (Phase 1)           | 138.41           | 19.74             |
| Maximum daily emissions:          | 980.84           | 118.85            |

The corrected emission rates shown in Table 2 do not include combustion DPM sources, or fugitive dust from wind erosion. A complete listing of PM10 and PM2.5 emissions I included in air

<sup>1</sup> CAPCOA, CalEEMod User's Guide, Appendix A: Calculation Details for CalEEMod, October 2017, p. 30). Available at: [http://www.aqmd.gov/docs/default-source/caleemod/02\\_appendix-a2016-3-2.pdf](http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf)

<sup>2</sup> EPA, AP-42, Section 13.2.2 – Unpaved Roads, November 2006, Table 13.2.2-3. Available at: <http://www.epa.gov/ttn/chief/ap42/ch13/final/c13s0202.pdf>

dispersion modeling analyses are shown in Exhibit B, and it should be noted that I did not amend the DEIR's DPM emission rate calculations. The following sections discuss the corrected fugitive dust emission rate calculations I performed for unpaved haul roads, dozing, grading, rock crushing, and wind erosion.

### 2.3 Unpaved Road Fugitive Dust Emissions

NSP's haul truck activities will generate fugitive PM<sub>2.5</sub> and PM<sub>10</sub> emissions when traveling on unpaved roads within the project site. As discussed above, the industrial unpaved road emission factor is the most appropriate equation for the weight and use of NSP's haul trucks. The emissions generated from this activity are mitigated by limiting the truck travel speed to 15 miles per hour (DEIR CalEEMod input and output files).

The equation used to calculate particulate matter (PM, or fugitive dust) emissions from NSP's haul truck traffic is obtained from EPA's air pollution emission factor equation for industrial unpaved roads.<sup>3</sup> This equation is as follows:

$$E = [k(s/12)^a * (W/3)^b] * [(365-P)/365]$$

Where: E = emission factor in the same units as k

k = particle size multiplier:  
0.15 lb/vehicle mile traveled (VMT) for PM<sub>2.5</sub>  
1.50 lb/VMT for PM<sub>10</sub><sup>4</sup>

s = road surface silt percentage (%)

W = average weight of vehicles (tons)

a = constant (0.9 for both PM<sub>2.5</sub> and PM<sub>10</sub>)

b = constant (0.45 for both PM<sub>2.5</sub> and PM<sub>10</sub>)

P = number of "wet" days with at least 0.254 mm (0.01 in) of precipitation during the averaging period

The values used for any of the variables in the above equation, s, W, and P, will have an impact on the final result, *i.e.*, the calculated particulate matter emission rates. Each of these inputs are discussed below.

#### *Silt content (s)*

Silt content is the fraction of silt in the unpaved road surface materials, with silt being defined as particles smaller than 75 micrometers in diameter.<sup>5</sup> USEPA provides typical silt percentage values for unpaved roads at industrial facilities. My analysis uses an unpaved road silt fraction of 8.5%, which is the average silt fraction for construction sites listed by the USEPA.<sup>6</sup> The DEIR also uses

---

<sup>3</sup> *Id.*, p. 13.2.2-4.

<sup>4</sup> *Id.*, Table 13.2.2-2.

<sup>5</sup> *Id.*, p.13.2.2-1

<sup>6</sup> *Id.*, Table 13.2.2-1.

8.5% silt for its calculations of unpaved road fugitive dust, but again, the DEIR uses the inappropriate public road unpaved road emission factor.

*Truck weight (W)*

Vehicle weights are the other main component of the AP-42 emission factor for calculating PM2.5 and PM10 emission rates from unpaved roads. It is the average vehicle weight that is used for the emission calculation (usually the average of loaded and unloaded truck weights).<sup>7</sup>

The DEIR does not provide information on truck weights, with the CalEEMod emission calculation output files provided for my review list the Phase 1 construction haul trucks as being HHDT class.<sup>8</sup> For my emission rate analysis, I calculated a mean truck weight of 34.6 tons, as follows:

- Unloaded truck weight: 16.5 tons (33,000 lbs)<sup>9</sup>
- Haul truck load: 16 cubic yards (DEIR, Air Quality Technical Report, Appendix A)
- Material density: 2.26 tons/cubic yard (Rock Crushing Emissions spreadsheet used in DEIR emissions calculations)
- Haul truck material weight:  $16 \text{ yd}^3 * 2.26 \text{ tons/yd}^3 = 36.16 \text{ tons}$
- Loaded truck weight:  $= 16.5 \text{ tons} + 36.16 \text{ tons} = 52.66 \text{ tons}$
- Average unloaded/loaded haul truck weight:  $(16.5 \text{ tons} + 52.66 \text{ tons})/2 = 34.6 \text{ tons}$ .

For comparison, the USEPA, in developing AP-42 Section 13.2.1, identifies an average vehicle weight of 35 tons for heavy duty diesel trucks.<sup>10</sup> Heavier trucks result in higher fugitive dust emissions; as the weight of the trucks increase, so do the emissions.

*Rainfall correction (P)*

Short-term PM2.5 and PM10 emission rates should not be calculated using a rainfall correction, as there are many consecutive days in San Diego County when there is no rainfall. Accordingly, my unpaved road fugitive dust emission rate calculations did not apply a rainfall correction to 24-hour PM2.5 and PM10 emission rates.

Unpaved haul road PM2.5 and PM10 emission rates, using the above-described methods, are calculated and presented in Exhibit B. Table 3 lists a summary of these daily emission rates.

Table 3: AP-42 Unpaved Road Fugitive PM Emissions

| AP-42 Unpaved Road Emissions | PM10<br>(lb/day) | PM2.5<br>(lb/day) |
|------------------------------|------------------|-------------------|
| Phase 1 Site Preparation     | 15.35            | 1.53              |
| Phase 1 Grading Activities   | 430.77           | 43.08             |
| Total:                       | 446.12           | 44.61             |

<sup>7</sup> *Id.*, p.13.2.2-6.

## 2.4 Fugitive Dust Emissions from Bulldozer/ Crawler Tractors

Equations used to calculate particulate matter (fugitive dust) emissions from the NSP's bulldozing and crawler tractors are obtained from EPA's air pollution emission factor equations for Western Surface Coal Mining, overburden material.<sup>11</sup> The bulldozing of overburden equations are as follows:

$$\text{PM}_{10} \text{ E} = k * [(1.0) * (s)^{1.5}] / (M)^{1.4} * (1-CE)$$

$$\text{PM}_{2.5} \text{ E} = k * [(5.7) * (s)^{1.2}] / (M)^{1.3} * (1-CE)$$

Where: E = emission factor in lb/hr

k = scaling factor:

0.75 scaling factor for PM<sub>10</sub>

0.022 scaling factor for PM<sub>2.5</sub><sup>12</sup>

s = material silt percentage (%)

Increasing silt content will increase fugitive dust emissions

M = material moisture content (%)

Increasing moisture content will decrease fugitive dust emissions

CE = wet suppression control efficiency

Increasing control efficiency will decrease fugitive dust emissions

It should be noted that the DEIR and the CalEEMod inputs often contain discrepancies. For example, for Phase 1 site preparation, the DEIR lists four crawler tractors (DEIR, p.2.3-69), while the CalEEMod input and output files assume three wheeled dozers. For my calculations, I applied the CalEEMod input values, since these are the basis for Dudek's technical analysis.

I used the same material silt and moisture percentages as the DEIR, but I included both bulldozers and crawler/tractors in these bulldozing emission calculations. A crawler tractor is essentially a bulldozer propelled on tracks (like a military tank), while the DEIR specifies bulldozers as being wheeled.

The DEIR assumes a 61% fugitive dust control efficiency by applying water at specific intervals. The 61% control efficiency apparently comes from the South Coast Air Quality Management District (SCAQMD) CEQA Handbook Fugitive Dust Mitigation Tables, but the DEIR does not provide an actual reference.<sup>13</sup>

Bulldozing and crawler tractor PM<sub>2.5</sub> and PM<sub>10</sub> emission rates, using the above-described methods, are calculated and presented in Exhibit B. Table 4 lists a summary of these daily emission rates.

Table 4: AP-42 Bulldozing and Crawler Tractor Fugitive PM Emissions

| AP-42 Bulldozing/ Crawler Tractor Emissions | PM10<br>(lb/day) | PM2.5<br>(lb/day) |
|---------------------------------------------|------------------|-------------------|
| Phase 1 Site Preparation                    | 7.05             | 3.87              |
| Phase 1 Grading Activities                  | 25.83            | 14.20             |
| Total:                                      | 32.88            | 18.07             |

## 2.5 Fugitive Dust Emissions from Grading Equipment

Equations used to calculate particulate matter (fugitive dust) emissions from the NSP’s graders and scrapers are obtained from EPA’s air pollution emission factor equations for Western Surface Coal Mining, overburden material.<sup>14</sup> The grading of overburden equations are as follows:

$$PM10 E = k * [(0.051) * (s)^{2.0}] * (1-CE)$$

$$PM2.5 E = k * [(0.040) * (s)^{2.5}] * (1-CE)$$

Where: E = emission factor in lb/VMT

k = scaling factor:

0.60 scaling factor for PM10

0.031 scaling factor for PM2.5<sup>15</sup>

s = material silt percentage (%)

Increasing silt content will increase fugitive dust emissions

CE = wet suppression control efficiency

Increasing control efficiency will decrease fugitive dust emissions

The DEIR assumes a 61% fugitive dust control efficiency by applying water at specific intervals

CaleEMod does not include emission calculations for scrapers, thus the DEIR substantially under-estimates this fugitive dust emission component. I used the same material silt percentage as the DEIR, but I included both graders and scrapers in these grading emission calculations as both types of equipment generate fugitive dust emissions. A scraper is a large mechanical device that excavates and then stores the material it excavates, while a grader consists of only a blade to move and shape material.<sup>16</sup> In terms of fugitive dust potential, a scraper can cause much more emissions than a grader, due to the mechanical rasping and excavation activities of the scraper.

I applied the same USEPA AP-42 emission factors for both scrapers and graders, which will almost certainly under-estimate emissions from scrapers. USEPA AP-42 Section 13.2.3 (Heavy Construction Operations) indicates fugitive emissions from scrapers are much greater than from

<sup>14</sup> EPA, AP-42, Section 11.9 – Western Surface Coal Mining, October 1998, Table 11.9-1. Available at: <https://www3.epa.gov/ttn/chief/ap42/ch11/final/c11s09.pdf>

<sup>15</sup> *Id.*

<sup>16</sup> Images of construction equipment can be found at: <https://www.slideshare.net/isnindian/scraper-rippergraderdozer>

graders. USEPA’s scraper particulate matter emission factor is approximately 20 lb/VMT PM, which is roughly four time greater than the emission factor for scrapers. I chose to use USEPA’s scraper emission factor for graders due to the lower emission factor rating for scrapers.<sup>17</sup> This is a non-conservative approach that likely result in under-reporting emissions.

Grader and Scraper PM2.5 and PM10 emission rates, using the above-described methods, are calculated and presented in Exhibit B. Table 5 lists a summary of these daily emission rates. The DEIR did not assume any graders or scrapers for Phase 1 site preparation.

Table 5: AP-42 Grader and Scraper Tractor Fugitive PM Emissions

| AP-42 Grader/ Scraper Emissions | PM10<br>(lb/day) | PM2.5<br>(lb/day) |
|---------------------------------|------------------|-------------------|
| Phase 1 Site Preparation        |                  |                   |
| Phase 1 Grading Activities      | 307.53           | 33.21             |
| Total:                          | 307.53           | 33.21             |

## 2.6 Fugitive Dust Emissions from Rock Crushing

Equations used to calculate particulate matter (fugitive dust) emissions from the rock crushing emissions are obtained from USEPA’s air pollution emission factor equations for Crushed Stone Processing (AP-42 Section 11.9.2) and Aggregate Handling and Storage Piles (AP-42 Section 13.2.4). I did not revise the DEIR stone crushing emissions, but the DEIR used an anomalously low wind speed for calculating fugitive dust emissions during crushed stone drops and transfers.

The material handling equation is as follows:

$$E = k * [(0.0032) * (U/5)^{1.3}] / (M/2)^{1.4} * (1-CE)$$

Where: E = emission factor in lb/hr

k = scaling factor:  
 0.35 scaling factor for PM10  
 0.053 scaling factor for PM2.5<sup>18</sup>

U = mean wind speed during emission period (mph)  
 Increasing wind speed will increase fugitive dust emissions

M = material moisture content (%)  
 Increasing moisture content will decrease fugitive dust emissions

CE = wet suppression control efficiency  
 Increasing control efficiency will decrease fugitive dust emissions

<sup>17</sup> EPA, AP-42, Section 13.2.3 – Heavy Construction Operations, January 1995, Table 13.2.3-1. Available at: <https://www3.epa.gov/ttn/chief/ap42/ch13/final/c13s02-3.pdf>

<sup>18</sup>EPA, AP-42, Section 13.2.4 – Aggregate Handling and Storage Piles, November 2006, p. 13.2.2-4. Available at: <https://www3.epa.gov/ttn/chief/ap42/ch13/final/c13s0204.pdf>

The DEIR analysis assumed a mean wind speed of 2.98 mph, obtained as the average of all wind speeds included in the 2010-2012 Escondido meteorological data used in the DEIR DPM health risk assessment. Because the appropriate analysis for an EIR relies on peak daily emissions, the DEIR's approach will under-estimate fugitive dust from rock crushing material handling. Construction emissions are limited to hours 0700 through 1600 (DEIR DPM Health Risk Assessment Modeling Inputs), so peak wind speeds during this period should be used in the material handling fugitive dust emission rate calculations. I calculated the peak average wind speed during hours 0700 – 1600 to be 11.6 mph, again using the 2010-2012 Escondido meteorological data.

The DEIR assumes a 3% moisture content for material handling and did not apply any control (mitigation) measures to this activity. As these values seem reasonable given the project material and activities, I did not revise these DEIR assumptions.

Rock crushing and subsequent material handling PM2.5 and PM10 emission rates, using the above-described methods, are calculated and presented in Exhibit B. Table 6 lists a summary of these daily emission rates.

Table 6: AP-42 Rock Crushing and Handling Fugitive PM Emissions

| AP-42 Rock Crushing and Material Handling Emissions | PM10 (lb/day) | PM2.5 (lb/day) |
|-----------------------------------------------------|---------------|----------------|
| Phase 1 Site Preparation                            |               |                |
| Phase 1 Grading Activities                          | 138.41        | 19.74          |
| Total:                                              | 138.41        | 19.74          |

## 2.7 Fugitive Dust Emissions from Wind Erosion

As discussed above, the DEIR failed to consider wind erosion emissions in verifying compliance with emissions significance criteria or ambient air quality standards. Furthermore, CalEEMod does not have the ability to address wind erosion emissions. From the CalEEMod User's Guide:

Wind-blown fugitive dust is not calculated in CalEEMod because of the number of input parameters required such as soil type, moisture content, wind speed, etc. This limitation could result in underestimated fugitive dust emissions if high wind and loose soil are substantial characteristics for a given land use/construction scenario.<sup>19</sup>

Fugitive dust emissions from wind erosion activities are typically calculated using USEPA's emission factors for industrial wind erosion.<sup>20</sup> USEPA's industrial wind erosion equation is as follows:

<sup>19</sup> CAPCOA, CalEEMod User's Guide, Technical Paper, July 2011, p. 4). Available at: <http://www.aqmd.gov/docs/default-source/caleemod/techpaper.pdf>

<sup>20</sup> EPA, AP-42, Section 13.2.5 – Industrial Wind Erosion, November 2006. Available at: <https://www3.epa.gov/ttn/chief/ap42/ch13/final/c13s0205.pdf>

$$P = 58*(u^* - u_t^*)^2 + 25*(u^* - u_t^*)$$

$$P = 0 \text{ for } u^* \leq u_t^*$$

Where:

$u^*$  = friction velocity (m/s)

$u_t^*$  = threshold friction velocity (m/s)

$u^* = 0.053 * u_{10}^+$

$u_{10}^+$  = fastest mile of reference anemometer for period between disturbances (m/s)

The fastest two-minute wind speed of 30 mph or greater equals a fastest mile

The 2010 – 2012 Escondido meteorological data do not include the fastest two-minute wind speed information necessary for calculating wind erosion emissions. To overcome this deficiency, I processed five years of meteorological data (2013 – 2017) from the McClellan – Palomar Airport (KCRQ), which is a National Weather Service ASOS site that measures two-minute wind speed data.<sup>21</sup> KCRQ is roughly 15 kilometers west of the NSP site, while the Escondido data were measured about 11 kilometers south of the NSP site.

To illustrate the potential for wind erosion fugitive dust emissions (as PM10) in the NSP area, I assessed one wind event comprising peak easterly Santa Ana winds exceeding two-minute wind speeds of approximately 30 mph. This event occurred on May 13, 2014, and was a dry easterly wind event (wind blowing from the east towards the coast). I also assessed potential wind erosion emissions from this event using the Pacific Northwest National Laboratory (PNNL) DUSTRAN model, which was validated by comparing DUSTRAN-calculated dust concentrations with observations of wind erosion on the US Department of Energy’s Hanford Site in southeastern Washington.<sup>22</sup> A summary of the fugitive dust emissions (as PM10) calculated by USEPA AP-42 Section 13.2.5 and DUSTRAN are shown in Table 7.

Table 7: Wind Erosion Fugitive PM10 Emission Rate Calculations

| Wind Erosion PM 10 Emission Calculations for May 13, 2014 | AP42, 13.2.5 | DUSTRAN   |
|-----------------------------------------------------------|--------------|-----------|
| Threshold friction velocity (m/s):                        | 0.62         | 0.42      |
| Total particulate emissions (g/m <sup>2</sup> ):          | 1.98         | 11.05     |
| Maximum particulate emissions (g/m <sup>2</sup> ):        | 1.69         | 4.36      |
| Area or subarea (m <sup>2</sup> ):                        | 1,109,040    | 1,109,040 |
| Total particulate emissions (tons/day):                   | 2.43         | 13.50     |
| Total particulate emissions (pounds/day):                 | 4,851        | 27,006    |

As can be seen from Table 7, extremely large quantities of fugitive PM10 emissions are possible during wind erosion events at the NSP site, greatly exceeding the quantities identified in the DEIR from mechanically-induced fugitive dust sources. This is particularly true for the DUSTRAN

<sup>21</sup> ASOS is an acronym for Automated Surface Observing Systems; see: <http://www.nws.noaa.gov/ost/asostech.html>

<sup>22</sup> Shaw, William J., et al. at PNNL, An evaluation of the wind erosion module in DUSTRAN, Atmospheric Environment, 42 (2008), pp. 1907–1921.

emission rate calculations. The area of wind erosion emissions (1,109,040 square-meters), is the Phase 1 construction area of the Hillside, Knoll, Mesa, Terraces, and Valley residential area developments.

Wind erosion PM10 emission rates, using the above-described methods, are calculated and presented in Exhibit B. For purposes of air dispersion modeling described below, I limited my analysis to the USEPA industrial wind erosion (AP-42 Section 13.2.5) calculations, which are significantly lower than those calculated by DUSTRAN.

### **3. Air Dispersion Modeling Analysis of Corrected NSP Construction Fugitive Dust Emissions**

I prepared air dispersion modeling of 24-hour PM10 and PM2.5 impacts from NSP's construction emissions, using USEPA's AERMOD model, version 16216r. This is the latest version of the model. For this analysis, the pollutants of concern are the 24-hour PM2.5 NAAQS and the 24-hour PM10 CAAQS. The 24-hour PM10 CAAQS is  $50 \mu\text{g}/\text{m}^3$ , represented as the absolute highest 24-hour value. The 24-hour PM2.5 NAAQS is  $35 \mu\text{g}/\text{m}^3$ , represented as the 8<sup>th</sup>-highest 24-hour value averaged over three years.

I modeled the construction fugitive dust emissions using AREAPOLY sources covering the areas of Phase 1 construction activities. These areas are shown in Exhibit A, and total 1,109,040 square-meters. As described earlier, I evenly-distributed the calculated emissions throughout these areas, which is likely to under-estimate modeled impacts.

AREAPOLY sources require the following AERMOD inputs:

- A source identifier number or name;
- Source Location X (Easting) coordinate (UTM Zone 11, NAD83);
- Source Location Y (Northing) coordinate (UTM Zone 11, NAD83);
- Source base elevation (meters above sea level);
- Emission flux of PM10 and PM2.5 ( $\text{g}/(\text{s}\cdot\text{m}^2)$ );
- Release height of the area source (meters);
- Number of polygon vertices;
- X and Y coordinates for each polygon vertex (UTM Zone 11, NAD83);
- Initial vertical dispersion of the area source plume ( $\text{SZ}_0$ , in meters).

I assessed release heights equal to 5.0 meters and initial vertical dispersion ( $\text{SZ}_0$ ) of 2.33 meters (5 meters/ 2.15) for each AREAPOLY source modeled. With the exception of wind erosion emissions, I modeled all emission sources using a unit emission rate (since each source is modeled separately). For AREAPOLY PM10 sources (other than wind erosion), I used a unit emission rate of  $1.00\text{E}-05 \text{ g}/(\text{s}\cdot\text{m}^2)$ . For AREAPOLY PM2.5 sources (other than wind erosion), I used a unit emission rate of  $1.00\text{E}-06 \text{ g}/(\text{s}\cdot\text{m}^2)$ . This is a standard air quality modeling practice known as "chi-over-Q," which allows efficient post-processing of modeled results using the actual emission rate of each pollutant for each source. This method is particularly useful for modeling sources with many pollutants, or scenarios with multiple or changing emission rates, since the source only needs to be modeled once.

The unit emission rate output can be post-processed with the actual emission rate of each pollutant without having to re-run the model each time. I used the actual calculated hourly PM10 emission rates when modeling wind erosion impacts.

Modeled source and receptor locations also require terrain elevation data, in meters above sea level. I obtained the terrain elevation data for these locations using the National Elevation Dataset (NED) GeoTiff file for the area, which includes the NSP site and the surrounding locations. GeoTiff is a binary file that includes data descriptors and geo-referencing information necessary for extracting terrain elevations. I extracted terrain elevations from 1/3<sup>rd</sup> arc-second (10-meter resolution) NED files using USEPA's AERMAP program, v. 11103. AERMAP is included in the regulatory-approved AERMOD modeling system.

### 3.1 Meteorological Data and Background Air Quality

I used 2010 – 2012 Escondido meteorological data for modeling fugitive dust emissions and assessing compliance with the 24-hour PM10 CAAQS and 24-hour PM2.5 NAAQS. This is the same meteorological data set used in DEIR for preparing their DPM health risk assessment. For wind erosion emissions, I used KCRQ 2013 – 2017 meteorological data, as this data set has wind measurements necessary for calculating wind erosion emissions. Wind roses of the 2010-2012 Escondido meteorological data and the 2013 – 2017 KCRQ data are shown in Exhibit C.

Air quality data are used to determine whether an area is attaining state and national ambient air quality standards. These data are also used to develop background air quality levels, which are then added to project-incremental impacts to determine compliance with the applicable CAAQS and NAAQS.

Background PM2.5 and PM10 air quality data are available from the SDAPCD site in Escondido, which was closed in 2015. Although the site is no longer operating, it is applicable for background particulate matter levels as it is in relatively close-proximity to NSP. For 2015, PM10 was not measured for a complete year at Escondido. The maximum 24-hour PM10 concentration measured at Escondido in 2015 was 30  $\mu\text{g}/\text{m}^3$ . For years 2013 – 2015, the 24-hour PM2.5 design concentration (in the form of the PM2.5 NAAQS) was 26.8  $\mu\text{g}/\text{m}^3$ .<sup>23</sup>

### 3.2 NSP PM10 Impacts Exceed the 24-Hour PM10 CAAQS

I performed air dispersion modeling to calculate the highest 24-hour PM10 concentrations attributable to NSP's construction activities, modeled with three-years of Escondido meteorological data. The modeling shows significant violations of the 24-hour PM10 CAAQS (50  $\mu\text{g}/\text{m}^3$ ), extending well beyond the NSP site. Importantly, the modeled 24-hour PM10 impacts exceed the CAAQS without the addition of background levels. A map showing the locations of 24-hour PM10 impacts from NSP's construction emissions, overlaid onto aerial imagery, are shown in Exhibit D. This map includes two 24-hour PM10 isopleths: 100% of the CAAQS (50  $\mu\text{g}/\text{m}^3$ ) and 200% of the CAAQS (100  $\mu\text{g}/\text{m}^3$ ). These isopleth maps do not include the background PM10 concentrations

---

<sup>23</sup> SDAPCD, Annual Air Quality Monitoring Network Plan: 2015, July 2016.

discussed in Section 3.1.

### 3.3 NSP PM2.5 Impacts Exceed the 24-Hour PM2.5 NAAQS

I also performed air dispersion modeling to calculate eighth-highest 24-hour PM2.5 concentrations attributable to NSP, averaged over three-years of modeled Escondido meteorological data. The modeling shows violations of the 24-hour PM2.5 NAAQS ( $35 \mu\text{g}/\text{m}^3$ ) when including background PM2.5 data measured at Escondido. Maps showing the locations of 24-hour PM2.5 impacts from NSP's construction emissions, overlaid onto aerial imagery, are shown in Exhibit D. These isopleth maps are presented two ways: without and with the background PM2.5 concentrations discussed in Section 3.1. The map showing 24-hour PM2.5 impacts without background values includes isopleths of 10 and  $15 \mu\text{g}/\text{m}^3$ , which are levels chosen to depict modeled concentrations near the NSP site boundary. The map showing 24-hour PM2.5 impacts with background values includes a  $35 \mu\text{g}/\text{m}^3$  isopleth, which is the 24-hour PM2.5 NAAQS.

### 3.4 NSP Wind Erosion Fugitive Dust Impacts

I modeled NSP wind erosion emissions using May 13, 2014 meteorological data from the KCRQ ASOS site. As discussed above, I only assessed the wind erosion emissions calculated using USEPA's industrial wind erosion equations, which are much smaller than those calculated by PNNL's DUSTRAN program.

Since wind erosion is limited to two hours during the wind conditions of May 13, 2014, I assessed both one-hour and 24-hour PM10 impacts. One-hour PM10 impacts from wind erosion exceed  $200 \mu\text{g}/\text{m}^3$  well-beyond the NSP site boundary, while 24-hour PM10 impacts are roughly  $20 \mu\text{g}/\text{m}^3$  at the NSP boundary. The 24-hour wind erosion PM10 impacts will exacerbate the already significant 24-hour PM10 CAAQS violations that are modeled to occur from NSP's mechanical construction activities. While there are no one-hour CAAQS or NAAQS levels established for PM10, the one-hour PM10 impacts may contribute to acute adverse health effects, including asthma.<sup>24</sup> Maps showing the locations of one-hour and 24-hour PM10 impacts from NSP wind erosion emissions, overlaid onto aerial imagery, are shown in Exhibit D.

## 4. Health Risk Assessment of NSP Diesel Particulate Matter Emissions

Diesel engine exhaust is classified by the State of California as a toxic air contaminant (TAC) and as a chemical known to cause cancer in humans.<sup>25</sup> Diesel engine exhaust is also a Proposition 65 listed carcinogen, which requires notification to individuals when the exposure exceeds the No Significant Risk Level (NSRL) of 10 per million excess cancer risk.<sup>26</sup>

---

<sup>24</sup> Delfino, Ralph J., et. al., Association of Asthma Symptoms with Peak Particulate Air Pollution and Effect Modification by Anti-inflammatory Medication Use, *Environmental Health Perspectives*, 110, 10, 2002, pp. A607 – A617.

<sup>25</sup> California Office of Environmental Health Hazard Assessment, *Health Risk Assessment for Diesel Exhaust*, May 1998.

<sup>26</sup> California Office of Environmental Health Hazard Assessment, *Safe Drinking Water and Toxic Enforcement Act of 1986, Chemicals Known to the State to Cause Cancer or Reproductive Toxicity*, June 19, 2015.

Although there are many toxic constituents in diesel exhaust, e.g. benzene, aldehydes, and metals, it is diesel particulate matter (DPM) that is used to assess excess cancer risks from diesel engine exhaust. The California Air Resources Board (CARB) and the California Office of Environmental Hazard Assessment (OEHHA) developed a DPM inhalation cancer potency factor which is used to assess diesel engine exhaust excess cancer risks. From OEHHA and CARB:

The inhalation cancer potency factor was derived from whole diesel exhaust and should be used only for impacts from the inhalation pathway (based on diesel PM measurements). The inhalation impacts from speciated emissions from diesel-fueled engines are already accounted for in the inhalation cancer potency factor.<sup>27</sup>

The DPM inhalation cancer potency factor, with units of inverse air concentration ( $(\mu\text{g}/\text{m}^3)^{-1}$ ), is used to convert DPM air concentrations to a unitless value of excess cancer risk. For DPM, OEHHA and CARB have identified an inhalation cancer potency factor of  $3.00\text{E}-04 (\mu\text{g}/\text{m}^3)^{-1}$ , and an oral potency slope of  $1.1 (\text{mg}/(\text{kg}\cdot\text{day}))^{-1}$  for dose calculations.<sup>28</sup>

Using OEHHA's 2015 Health Risk Assessment Guidelines, I calculated the excess cancer risk from exposure to  $1.0 \mu\text{g}/\text{m}^3$  of DPM for the first nine years of a child's life, from birth onwards. This is the most sensitive 9-year period of life, and OEHHA has developed age sensitivity factors and age-specific breathing rates for children which greatly increase the excess cancer risk compared to the same exposure for adults.<sup>29</sup> Applying OEHHA's guidelines, I calculate an excess cancer risk of  $6.27\text{E}-04$  (627 per million) for exposure to  $1.0 \mu\text{g}/\text{m}^3$  of DPM for the first nine years of a child's life. This value, which is calculated and shown in Exhibit E, is applied during post-processing of the modeled DPM air concentrations.

As discussed above, the DEIR incorrectly models construction DPM emissions, only covering a small portion of the project site and assessing only a fraction of the total construction DPM emissions. I prepared an air dispersion modeling analysis and health risk assessment (HRA) of construction DPM emissions for the entire project site, including a 9-year exposure DPM HRA.

The construction DPM emissions I modeled in this HRA are presented in Exhibit E. Consistent with the 24-hour PM<sub>10</sub> and PM<sub>2.5</sub> modeling analyses, I distributed these DPM emissions evenly over the entire Phase 1 construction area. This approach is likely to underestimate DPM air concentrations and associated health risks, but is necessitated by the lack of construction sequence information in the DEIR.

The DEIR also incorrectly models operational DPM emissions, and only assesses future exposures to areas within the NSP site. I prepared an air dispersion modeling analysis of operational DPM emissions for a wide-area of receptors, which forms the basis for a 9-year exposure DPM HRA. For

---

<sup>27</sup> Consolidated Table of OEHHA/ARB Approved Risk Assessment Health Values, Updated February 23, 2017, p. 15.

<sup>28</sup> Id., p.7.

<sup>29</sup> California Office of Environmental Health Assessment, Air Toxics Hot Spots Program Risk Assessment Guidelines, Guidance Manual for Preparation of Health Risk Assessments, February 2015.

the operational DPM HRA, I used the same source and DPM emission rate information assessed in the DEIR, but added additional receptors to assess off-site and additional on-site exposures.

I limited the operational DPM HRA to the off-site vehicle emissions assessed in the DEIR, omitting the gas station since fueling operations do not directly emit DPM. These off-site vehicle activities are modeled as adjacent AERMOD volume sources, which require the following inputs:

- A source identifier number or name;
- Source Location X (Easting) coordinate (UTM Zone 11, NAD83);
- Source Location Y (Northing) coordinate (UTM Zone 11, NAD83);
- Source base elevation (meters above sea level);
- Emission rate of DPM (g/s);
- Center height of the volume source (meters);
- Initial horizontal dispersion of the area source plume (SYINIT – meters).
- Initial vertical dispersion of the area source plume (SZINIT – meters).

Consistent with the DEIR, I applied a series of adjacent volume sources, using the following parameters:

- Release height = 1.6 meters for I-15, Mesa Rock Rd. to I-15, and Mesa Rock Rd. to I-15 segments;
- SYINIT = road width/2.15 = 13.58 meters for I-15;
- SYINIT = road width/2.15 = 6.53 meters for Mesa Rock Rd. to I-15;
- SYINIT = road width/2.15 = 6.77 meters for Deer Springs Rd.;
- SZINIT = 1.6/2.15 = 0.74 meters for I-15, Mesa Rock Rd. and Deer Springs Rd. segments.<sup>30</sup>

I modeled all DPM sources for NSP's operational HRA with a unit emission rate of 1.0 g/s. This will facilitate post-processing using actual DPM emission rates by source, and the calculated excess cancer risk associated with 1.0  $\mu\text{g}/\text{m}^3$  of DPM exposure.

For both construction and operational emissions, modeled unit emission rate DPM concentrations are post-processed with both actual emission rates and 9-year excess cancer risk health risk multipliers. Modeled construction and operational DPM emission rates, including excess cancer risk post-processing inputs, are shown in Exhibit E.

#### 4.1 Excess Cancer Risks from Construction DPM Emissions

I performed air dispersion modeling to calculate period average construction DPM concentrations, modeled with three-years of Escondido meteorological data. These DPM air concentrations are converted to excess cancer risk values using the construction emissions and risk calculation information provided in Exhibit E. Maps showing the locations of 5 and 10 per million excess cancer risks from NSP's construction DPM emissions, overlaid onto aerial imagery, are shown in

---

<sup>30</sup> USEPA, Haul Road Workgroup Final Report Submission to EPA-OAQPS, March 2, 2012, pp. 4-6.

Exhibit F. The 10 per million risk isopleth represents DPM exposures at the SDAPCD excess cancer risk significance level; the 5 per million risk isopleth is one-half the significance level ((DEIR, Air Quality Technical Appendix, Appendix C, p. iv).

#### 4.2 Excess Cancer Risks from Operational DPM Emissions

I performed air dispersion modeling to calculate period average operational DPM concentrations, modeled with three-years of Escondido meteorological data. These DPM air concentrations are converted to excess cancer risk values using the operational emissions and risk calculation information provided in Exhibit E. Maps showing the locations of 5 and 10 per million excess cancer risks from NSP's construction DPM emissions, overlaid onto aerial imagery, are shown in Exhibit F. The 10 per million risk isopleth represents DPM exposures at the SDAPCD excess cancer risk significance level; the 5 per million risk isopleth is one-half the significance level.

### 5. Crystalline Silica

The DEIR obliquely addresses crystalline silica emissions, but fails to identify the crystalline silica content of the NSP site soils and subsequent fugitive dust emissions. This is a relatively simple measurement, but the DEIR has not performed this task. Given the magnitude of the fugitive dust emissions, and resulting ambient air concentrations of PM10 and PM2.5, this is a significant omission in the DEIR.

California has established a chronic reference exposure level of  $3.0 \mu\text{g}/\text{m}^3$  for crystalline silica.<sup>31</sup> The DEIR should obtain site-specific crystalline silica content data of the NSP site soils, and apply these mass-fraction levels to annual-average modeled PM10 emissions caused by construction activities.

### 6. Concluding Remarks

Corrected construction fugitive dust emissions will cause modeled impacts above the 24-hour PM10 CAAQS ( $50 \mu\text{g}/\text{m}^3$ ) and 24-hour PM2.5 NAAQS ( $35 \mu\text{g}/\text{m}^3$ ). Wind erosion events can add significantly to the air quality impacts caused by NSP's construction activities. In addition, construction and operational DPM emissions result in excess cancer risks greater than the 10 per million significance threshold. The NSP DEIR failed to identify these significant findings.

The DEIR assesses construction emissions (although incorrectly) within the project site, but fails to quantify PM10 and PM2.5 emissions that will be associated with off-site road widening and construction. This is particularly important for residential and other uses along Deer Springs Road, including the Golden Door Resort, which will be exposed to impacts from both NSP's on-site and off-site construction emissions.

The DEIR modeling uses actual terrain data for its limited modeling analyses. My re-analyses of the DEIR shortcomings also use actual terrain elevations (obtained using AERMAP). This, however, is

---

<sup>31</sup> Consolidated Table of OEHHA/ARB Approved Risk Assessment Health Values, Updated February 23, 2017, p. 11.

not necessarily a complete analysis of possible air quality impacts. The USEPA acknowledges potential concerns regarding modeled impacts in areas of terrain that are both lower and higher than the emission source.<sup>32</sup> In essence, and most importantly for the NSP site location, AERMOD does not account for downslope flow that can occur during stable conditions, thus under-estimating modeled impacts in areas downslope of the emission sources. Furthermore, AERMOD may not adequately calculate air impacts in areas upslope from emission sources. The area surrounding the NSP site includes areas of terrain that are both lower and higher than the emission source terrain elevations, depending on the plume travel direction.

To address this concern, the DEIR air dispersion modeling should be assessed with both actual and flat terrain for sources and receptors, as is currently required by the South Coast Air Quality Management District (SCAQMD).<sup>33</sup> In other words, the DEIR should assess ambient air impacts in two ways: using the AERMOD default method of using actual terrain and the non-default method of applying flat terrain. The maximum ambient air impacts from these two methods is to be used for assessing compliance with the NAAQS, CAAQS, or other standards. From the SCAQMD:

If some receptors are lower and some receptors are higher than the base elevation of the source, AERMOD should be run twice – once using the default option and the second time using the non-default option. The maximum ground-level concentration from both runs should be reported.

The NSP DEIR should be revised and recirculated to address the emission rate, air dispersion modeling, and health risk assessment shortcomings discussed above.

Thank you for the opportunity to provide comments on the NSP DEIR. My CV is attached as Exhibit G.

In summary, I hold B.S. (1978) and M.S. (1980) degrees in Atmospheric Science from the University of California at Davis. I specialize in atmospheric dispersion modeling, which uses regulatory-approved computer programs to estimate chemical concentrations in the air. I have prepared well over 1,000 air dispersion modeling analyses requiring on-site or site-specific meteorological data. I have extensive experience with many different air dispersion programs, including the ISC, AERMOD, OCD, MPTER, COMPLEX-I, CRSTER, and other plume models, as well as the MESOPUFF, MESOPUFF II, INPUFF, and CALMET/CALPUFF puff models. In addition, I have prepared hundreds of health risk assessments of major air toxics sources in California and the United States.

I also have extensive experience calculating air pollution emissions, including fugitive dust sources from scores of complex projects. In 2010, I provided detailed comments to USEPA regarding revision of AP-42 Section 13.2.1, Paved Roads. I have been qualified to calculate fugitive dust emissions in United States District Court proceedings.

Summary of Wind Erosion Emissions  
 Calculated by AP-42 Section 13.2.5 and DUSTAN

| Wind Erosion PM 10 Emission Calculations for<br>May 13, 2014 | AP42, 13.2.5 | DUSTAN    |
|--------------------------------------------------------------|--------------|-----------|
| Threshold friction velocity (m/s):                           | 0.62         | 0.42      |
| Total particulate emissions (g/m <sup>2</sup> ):             | 1.98         | 11.05     |
| Maximum particulate emissions (g/m <sup>2</sup> ):           | 1.69         | 4.36      |
| Area or subarea (m <sup>2</sup> ):                           | 1,109,040    | 1,109,040 |
| Total particulate emissions (tons/day):                      | 2.43         | 13.50     |
| Total particulate emissions (pounds/day):                    | 4,851        | 27,006    |

Summary of Wind Erosion Emission Calculation Inputs  
AP-42 Section 13.2.5 and DUSTRAN

Particle size multiplier (K): 0.5 PM10 (AP-42, Section 13.2.5, Table 13.2.5-1)  
 ANHT: 7.92 meters  
 Surface threshold ustar: 0.62 m/s (AP-42, Section 13.2.5, Table 13.2.5-2)  
 Surface area: 1,109,040 m<sup>2</sup>

Site-specific roughness length: 0.005 m

DUSTRAN inputs (User's Manual, Section 2.5.2):

| Threshold friction velocity for dry soil: |              | 0.2 m/s                                      |                              |                |  |
|-------------------------------------------|--------------|----------------------------------------------|------------------------------|----------------|--|
| Gillette & Passi Factor C:                |              | 1.00E-02 g/(m <sup>-6</sup> s <sup>3</sup> ) |                              |                |  |
| Soil Texture Class                        | Fraction (β) | Uplift availability (γ)                      | Dust productivity factor (δ) | δ (Normalized) |  |
| Clay (<2 μm)                              | 0.34         | 0.08                                         | 0.027                        | 0.045          |  |
| Small Silt (2-20 μm)                      | 0.28         | 1.00                                         | 0.280                        | 0.467          |  |
| Large Silt (20-50 μm)                     | 0.28         | 1.00                                         | 0.280                        | 0.467          |  |
| Sand (50-100 μm)                          | 0.10         | 0.12                                         | 0.012                        | 0.020          |  |
| Sum:                                      |              | 1.00                                         |                              | 1.00           |  |

Maximum water adsorption (w'): 7.4 %  
 Dust flux adj. for sand particles(G'): 1.02  
 Vegetation mask (α): 1.00 (1.00 = no vegetation; 0.00 = complete vegetation coverage)  
 Gravimetric soil moisture content (w): 12.0 %  
 Soil wetness factor (f<sub>w</sub>): 2.10  
 Threshold friction velocity for moist soil: 0.42 m/s

## Summary

I have over 35 years of regulatory and private-sector experience in air quality impact analyses, health risk assessments, meteorological monitoring, and geographic information systems. I specialize in litigation support; I have successfully provided testimony in numerous cases, both as an individual consultant and as part of a team of experts.

## Education

- M.S., Atmospheric Science, University of California, Davis, 1980.
- B.S., Atmospheric Science, University of California, Davis, 1978.

## Air Dispersion Modeling

- I am experienced in applying many different air dispersion models, including programs still in the development phase. I have prepared well over 1,000 air dispersion modeling analyses requiring the use of on-site or site-specific meteorological data. These runs were made with the USEPA ISC, OCD, MESOPUFF, INPUFF, CALPUFF, ISC-PRIME, AERMOD, COMPLEX-I, MPTER, and other air dispersion models.
- I prepared and submitted technical comments to the USEPA on beta-testing versions of AERMOD; these comments are being addressed and will be incorporated into the model and instructions when it is ready for regulatory application.
- I am experienced in performing air dispersion modeling for virtually every emission source type imaginable. I have modeled:
  - Refineries and associated activities;
  - Mobile sources, including cars, trains, airplanes, trucks, and ships;
  - Power plants, including natural gas and coal-fired;
  - Smelting operations;
  - Area sources, such as housing tracts, biocides from agricultural operations, landfills, highways, fugitive dust sources, airports, oil and gas seeps, and ponds;
  - Volume sources, including fugitive emissions from buildings and diesel construction combustion emissions;
  - Small sources, including dry cleaners, gas stations, surface coating operations, plating facilities, medical device manufacturers, coffee roasters, ethylene oxide sterilizers, degreasing operations, foundries, and printing companies;
  - Cooling towers and gas compressors;
  - Diatomaceous earth, rock and gravel plants, and other mining operations;
  - Offshore oil platforms, drilling rigs, and processing activities;
  - Onshore oil and gas exploration, storage, processing, and transport facilities;
  - Fugitive dust emissions from roads, wind erosion, and farming activities;
  - Radionuclide emissions from actual and potential releases.
- I have extensive experience in modeling plume depletion and deposition from air releases of particulate emissions.
- As a senior scientist, I developed the Santa Barbara County Air Pollution Control District (SBAPCD) protocol on air quality modeling. I developed extensive modeling capabilities for the SBAPCD on VAX 8600 and Intel I-860 computer systems; I acted as systems analyst for the SBAPCD air quality modeling system; I served as director of air quality analyses for numerous major energy projects; I performed air quality impact analyses using inert and photochemical models, including EPA, ARB and private-sector models; I performed technical review and evaluating air quality and wind field models; I developed software to prepare model inputs consistent with the SBAPCD protocol on air quality modeling for OCD, OCDCPM, MPTER, COMPLEX-I/II and ISC.
- I provided detailed review and comments on the development of the Minerals Management Service OCD model. I developed the technical requirements for and

supervised the development of the OCDCPM model, a hybrid of the OCD, COMPLEX-I and MPTER models.

- I prepared the "Modeling Exposures of Hazardous Materials Released During Transportation Incidents" report for the California Office of Environmental Health Hazard Assessment (OEHHA). This report examines and rates the ADAM, ALOHA, ARCHIE, CASRAM, DEGADIS, HGSYSTEM, SLAB, and TSCREEN models for transportation accident consequence analyses of a priority list of 50 chemicals chosen by OEHHA. The report includes a model selection guide for adequacy of assessing priority chemicals, averaging time capabilities, isopleth generating capabilities, model limitations and concerns, and model advantages.
- I am experienced in assessing uncertainty in emission rate calculations, source release, and dispersion modeling. I have developed numerous probability distributions for input to Monte Carlo simulations, and I was a member of the External Advisory Group for the California EPA *Air Toxics Hot Spots Program Risk Assessment Guidelines, Part IV, Technical Support Document for Exposure Assessment and Stochastic Analysis*.

### **Health Risk Assessment**

- I have prepared more than 300 health risk assessments of major air toxics sources. These assessments were prepared for AB 2588 (the Air Toxics "Hot Spots" Information and Assessment Act of 1987), Proposition 65, and other exposure analysis activities. More than 150 of these exposure assessments were prepared for Proposition 65 compliance verification in a litigation support setting.
- I reviewed approximately 300 other health risk assessments of toxic air pollution sources in California. The regulatory programs in this review include AB 2588, Proposition 65, the California Environmental Quality Act, and other exposure analysis activities. My clients include the California Attorney General's Office, the Los Angeles County District Attorney's Office, the SBAPCD, the South Coast Air Quality Management District, numerous environmental and community groups, and several plaintiff law firms.
- I am experienced in assessing public health risk from continuous, intermittent, and accidental releases of toxic emissions. I am experienced in generating graphical presentations of risk results, and characterizing risks from carcinogenic and acute and chronic noncarcinogenic pollutants.
- I am experienced in communicating adverse health risks discovered through the Proposition 65 and AB 2588 processes. I have presented risk assessment results in many public settings -- to industry, media, and the affected public.
- For four years, I was the Air Toxics Program Coordinator for the SBAPCD. My duties included: developing and managing the District air toxics program; supervising District staff assigned to the air toxics program; developing District air toxics rules, regulations, policies and procedures; management of all District air toxics efforts, including AB 2588, Proposition 65, and federal activities; developing and tracking the SBAPCD air toxics budget.
- I have prepared numerous calculations of exposures from indoor air pollutants. A few examples include: diesel PM<sub>10</sub> inside school buses, formaldehyde inside temporary school buildings, lead from disturbed paint, phenyl mercuric acetate from water-based paints and drywall mud, and tetrachloroethene from recently dry-cleaned clothes.

### **Litigation Support**

- I have prepared numerous analyses in support of litigation, both in Federal and State Courts. I am experienced in preparing F.R.C.P. Rule 26(a)(2) expert reports and providing deposition and trial testimony (I have prepared eight Rule 26 reports). Much of my work is focused on human dose and risk reconstruction resulting from multiple air emission sources (lifetime and specific events).

- I am experienced in preparing declarations (many dozens) and providing expert testimony in depositions and trials (see my testimony history).
- I am experienced in providing support for legal staff. I have assisted in preparing numerous interrogatories, questions for depositions, deposition reviews, various briefs and motions, and general consulting.
- Recent examples of my work include:

*DTSC v. Interstate Non-Ferrous; United States District Court, Eastern District of California (2002).*

In this case I performed air dispersion modeling, downwind soil deposition calculations, and resultant soil concentrations of dioxins (TCDD TEQ) from historical fires at a smelting facility. I prepared several Rule 26 Reports in my role of assisting the California Attorney General's Office in trying this matter.

*Akee v. Dow et al.; United States District Court, District of Hawaii (2003-2004).*

In this case I performed air dispersion modeling used to quantify air concentrations and reconstruct intake, dose, excess cancer risk, and noncancer chronic hazard indices resulting from soil fumigation activities on the island of Oahu, Hawaii. I modeled 319 separate AREAPOLY pineapple fields for the following chemicals: DBCP, EDB, 1,3-trichloropropene, 1,2-dichloropropane, and epichlorohydrin. I calculated chemical flux rates and modeled the emissions from these fumigants for years 1946 through 2001 (56 years) for 34 test plaintiffs and 97 distinct home, school, and work addresses. I prepared a Rule 26 Expert Report, successfully defended against Daubert challenges, and testified in trial.

*Lawrence O'Connor v. Boeing North America, Inc., United States District Court, Central District of California, Western Division (2004-2005).*

In this case I performed air dispersion modeling, quantified air concentrations, and reconstructed individual intake, dose, and excess cancer risks resulting from approximately 150 air toxics sources in Los Angeles and Ventura Counties, California. I prepared these analyses for years 1950 through 2000 (51 years) for 173 plaintiffs and 741 distinct home, school, and work addresses. I prepared several Rule 26 Reports, and the case settled on the eve of trial in September, 2005. Defendants did not attempt a Daubert challenge of my work.

- I have prepared scores of individual and region-wide health risk assessments in support of litigation. These analyses include specific sub-tasks, including: calculating emission rates, choosing proper meteorological data inputs, performing air dispersion modeling, and quantifying intake, dose, excess cancer risk, and acute/chronic noncancer health effects.
- I have prepared over 150 exposure assessments for Proposition 65 litigation support. In these analyses, my tasks include: reviewing AB 2588 risk assessments and other documents to assist in verifying compliance with Proposition 65; preparing exposure assessments consistent with Proposition 65 Regulations for carcinogens and reproductive toxicants; using a geographic information system (Atlas GIS) to prepare exposure maps that display areas of required warnings; calculating the number of residents and workers exposed to levels of risk requiring warnings (using the GIS); preparing declarations, providing staff support, and other expert services as required. I have also reviewed scores of other assessments for verifying compliance with Proposition 65. My proposition 65 litigation clients include the California Attorney General's Office, the Los Angeles County District Attorney's Office, As You Sow, California Community Health Advocates, Center for Environmental Health, California Earth Corps, Communities for a Better Environment, Environmental Defense Fund, Environmental Law Foundation, and People United for a Better Oakland.

### **Geographic Information Systems**

- ArcGIS: I am experienced in preparing presentation and testimony maps using ArcView versions 3 through 9.3. I developed methods to convert AutoCAD DXF files to ArcView polygon theme shape files for use in map overlays.

- I have created many presentation maps with ArcView using MrSID DOQQ and other aerial photos as a base and then overlaying exposure regions. This provides a detailed view (down to the house level) of where air concentrations and health risks are projected to occur.
- Using ArcView, I have created numerous presentations using USGS Topographic maps (as TIFF files) as the base on to which exposure regions are overlaid.
- MapInfo for Windows: I prepared numerous presentation maps including exposure isopleths, streets and highways, and sensitive receptors, labels. I developed procedures for importing Surfer isopleths in AutoCAD DXF format as a layer into MapInfo.
- Atlas GIS: I am experienced in preparing presentation maps with both the Windows and DOS versions of Atlas GIS. In addition to preparing maps, I use Atlas GIS to aggregate census data (at the block group level) within exposure isopleths to determine the number of individuals living and working within exposure zones. I am also experienced in geocoding large numbers of addresses and performing statistical analyses of exposed populations.
- I am experienced in preparing large-scale graphical displays, both in hard-copy and for PowerPoint presentations. These displays are used in trial testimony, public meetings, and other litigation support.
- I developed a Fortran program to modify AutoCAD DXF files, including batch-mode coordinate shifting for aligning overlays to different base maps.

#### **Ozone and Long-Range Transport**

- I developed emission reduction strategies and identified appropriate offset sources to mitigate project emissions liability. For VOC offsets, I developed and implemented procedures to account for reactivity of organic compound species for ozone impact mitigation. I wrote Fortran programs and developed a chemical database to calculate ozone formation potential using hydroxyl radical rate constants and an alkane/non-alkane reactive organic compound method.
- I provided technical support to the Joint Interagency Modeling Study and South Central Coast Cooperative Aerometric Monitoring Program. With the SBAPCD, I provided technical comments on analyses performed with the EKMA, AIRSHED, and PARIS models. I was responsible for developing emissions inventory for input into regional air quality planning models.
- I was the CEQA project manager for the Santa Barbara County Air Quality Attainment Plan Environmental Impact Report (EIR). My duties included: preparing initial study; preparation and release of the EIR Notice of Preparation; conducting public scoping hearings to obtain comments on the initial study; managing contractor efforts to prepare the draft EIR.
- I modified, tested, and compiled the Fortran code to the MESOPUFF model (the precursor to CALPUFF) to incorporate critical dividing streamline height algorithms. The model was then applied as part of a PSD analysis for a large copper-smelting facility.
- I am experienced in developing and analyzing wind fields for use in long-range transport and dispersion modeling.
- I have run CALPUFF numerous times. I use CALPUFF to assess visibility effects and both near-field and mesoscale air concentrations from various emission sources, including power plants.

#### **Emission Rate Calculations**

- I developed methods to estimate and verify source emission rates using air pollution measurements collected downwind of the emitting facility, local meteorological data, and dispersion models. This technique is useful in determining whether reported source emission rates are reasonable, and based on monitored and modeled air concentrations, revised emission rates can be created.

- I am experienced in developing emission inventories of hundreds of criteria and toxic air pollutant sources. I developed procedures and programs for quantifying emissions from many air emission sources, including: landfills, diesel exhaust sources, natural gas combustion activities, fugitive hydrocarbons from oil and gas facilities, dry cleaners, auto body shops, and ethylene oxide sterilizers.
- I have calculated flux rates (and modeled air concentrations) from hundreds of biocide applications to agricultural fields. Emission sources include aerial spraying, boom applications, and soil injection of fumigants.
- I am experienced in calculating emission rates using emission factors, source-test results, mass-balance equations, and other emission estimating techniques.
- I have been qualified in Federal court to provide opinions on calculating emission rates from fugitive sources of particulate matter.

### Software Development

- I am skilled in computer operation and programming, with an emphasis on Fortran 95.
- I am experienced with numerous USEPA dispersion models, modifying them for system-specific input and output, and compiling the code for personal use and distribution. I own and am experienced in using the following Fortran compilers: Lahey Fortran 95, Lahey Fortran 90 DOS-Extended; Lahey F77L-EM32 DOS-Extended; Microsoft PowerStation 32-bit DOS-Extended; and Microsoft 16-bit.
- I configured and operated an Intel I-860 based workstation for the SBAPCD toxics program. I created control files and recoded programs to run dispersion models and risk assessments in the 64-bit I-860 environment (using Portland Group Fortran).
- Using Microsoft Fortran PowerStation, I wrote programs to extract terrain elevations from both 10-meter and 30-meter USGS DEM files. Using a file of discrete x,y coordinates, these programs extract elevations within a user-chosen distance for each x,y pair. The code I wrote can be run in steps or batch mode, allowing numerous DEM files to be processed at once.
- I have written many hundreds of utilities to facilitate data processing, entry, and quality assurance. These utility programs are a "tool chest" from which I can draw upon to expedite my work.
- While at the SBAPCD, I designed the ACE2588 model - the first public domain multi-source, multi-pathway, multi-pollutant risk assessment model. I co-developed the structure of the ACE2588 input and output files, supervised the coding of the model, tested the model for quality assurance, and for over 10 years I provided technical support to about 200 users of the model. I was responsible for updating the model each year and ensuring that it is consistent with California Air Pollution Control Officer's Association (CAPCOA) Risk Assessment Guidelines.
- I developed and coded the ISC2ACE and ACE2 programs for distribution by CAPCOA. These programs were widely used in California for preparing AB 2588 and other program health risk assessments. ISC2ACE and ACE2 contain "compression" algorithms to reduce the hard drive and RAM requirements compared to ISCST2/ACE2588. I also developed ISC3ACE/ACE3 to incorporate the revised ISCST3 dispersion model requirements.
- I developed and coded the "HotSpot" system - a series of Fortran programs to expedite the review of air toxics emissions data, to prepare air quality modeling and risk assessment inputs, and to prepare graphical risk presentations.
- I customized ACE2588 and developed a mapping system for the SBAPCD. I modified the ACE2588 Fortran code to run on an Intel I-860 RISC workstation; I updated programs that allow SBAPCD staff to continue to use the "HotSpot" system – a series of programs that streamline preparing AB 2588 risk assessments; I developed a risk assessment mapping system based on MapInfo for Windows which linked the MapInfo mapping package to the "HotSpot" system.
- I developed software for electronic submittal of all AB 2588 reporting requirements for the SBAPCD. As an update to the "HotSpot" system software, I created software that

allows facilities to submit all AB 2588 reporting data, including that needed for risk prioritization, exposure assessment, and presentation mapping. The data submitted by the facility is then reformatted to both ATDIF and ATEDS formats for transmittal to the California Air Resources Board.

- I developed and coded Fortran programs for AB 2588 risk prioritization; both batch and interactive versions of the program were created. These programs were used by several air pollution control districts in California.

### **Air Quality and Meteorological Monitoring**

- I was responsible for the design, review, and evaluation of an offshore source tracer gas study. This project used both inert tracer gas and a visible release to track the onshore trajectory and terrain impaction of offshore-released buoyant plumes.
- I developed the technical requirements for the Santa Barbara County Air Quality/Meteorological Monitoring Protocol. I developed and implemented the protocol for siting pre- and post-construction air quality and meteorological PSD monitoring systems. I determined the instrumentation requirements, and designed and sited over 30 such PSD monitoring systems. Meteorological parameters measured included ambient temperature, wind speed, wind direction, sigma-theta (standard deviation of horizontal wind direction fluctuations), sigma-phi (standard deviation of vertical wind direction fluctuations), sigma-v (standard deviation of horizontal wind speed fluctuations), and sigma-w (standard deviation of vertical wind speed fluctuations). Air pollutants measured included PM<sub>10</sub>, SO<sub>2</sub>, NO, NO<sub>x</sub>, NO<sub>2</sub>, CO, O<sub>3</sub>, and H<sub>2</sub>S.
- I was responsible for data acquisition and quality assurance for an offshore meteorological monitoring station. Parameters measured included ambient temperature (and delta-T), wind speed, wind direction, and sigma-theta.
- In coordination with consultants performing air monitoring for verifying compliance with Proposition 65 and other regulatory programs, I wrote software to convert raw meteorological data to hourly-averaged values formatted for dispersion modeling input.
- Assisting the Ventura Unified School District, I collected air, soil, and surface samples and had them analyzed for chlorpyrifos contamination (caused by spray drift from a nearby citrus orchard). I also coordinated the analysis of the samples, and presented the results in a public meeting.
- Using summa canisters, I collected numerous VOC samples to characterize background and initial conditions for use in Santa Barbara County ozone attainment modeling. I also collected samples of air toxics (such as xylenes downwind of a medical device manufacturer) to assist in enforcement actions.
- For the California Attorney General's Office, I purchased, calibrated, and operated a carbon monoxide monitoring system. I measured and reported CO air concentrations resulting from numerous types of candles, gas appliances, and charcoal briquettes.

### **Support, Training, and Instruction**

- For 10 years, I provided ACE2588 risk assessment model support for CAPCOA. My tasks included: updating the ACE2588 risk assessment model Fortran code to increase user efficiency and to maintain consistency with the CAPCOA Risk Assessment Guidelines; modifying the Fortran code to the EPA ISC model to interface with ACE2588; writing utility programs to assist ACE2588 users; updating toxicity data files to maintain consistency with the CAPCOA Risk Assessment Guidelines; developing the distribution and installation package for ACE2588 and associated programs; providing technical support for all users of ACE2588.
- I instructed approximately 20 University Professors through the National Science Foundation Faculty Enhancement Program. Instruction topics included: dispersion modeling, meteorological data, environmental fate analysis, toxicology of air pollutants, and air toxics risk assessment; professors were also trained on the use of the ISC2ACE dispersion model and the ACE2 exposure assessment model.

- I was the instructor of the Air Pollution and Toxic Chemicals course for the University of California, Santa Barbara, Extension certificate program in Hazardous Materials Management. Topics covered in this course include: detailed review of criteria and noncriteria air pollutants; air toxics legislation and regulations; quantifying toxic air contaminant emissions; criteria and noncriteria pollutant monitoring; air quality modeling; health risk assessment procedures; health risk management; control/mitigating air pollutants; characteristics and modeling of spills and other short-term releases of air pollutants; acid deposition, precipitation and fog; indoor/occupational air pollution; the effect of chlorofluorocarbons on the stratospheric ozone layer. I taught this course for five years.
- I have trained numerous regulatory staff on the mechanics of dispersion modeling, health risk assessments, emission rate calculations, and presentation mapping. I provided detailed training to SBAPCD staff in using the HARP program, and in comparing and contrasting ACE2588 analyses to HARP.
- Through UCSB Extension, I taught a three-day course on dispersion modeling, preparing health risk assessments, and presentation mapping with Atlas GIS and MapInfo.
- I hold a lifetime California Community College Instructor Credential (Certificate No. 14571); Subject Matter Area: Physics.
- I have presented numerous guest lectures – at universities, public libraries, farm groups, and business organizations.

### **Indoor Air Quality**

- I prepared mercury exposure assessments caused by applying indoor latex paints containing phenylmercuric acetate as a biocide.
- Using a carbon monoxide monitor, I examined CO concentrations inside rooms of varying sizes and with a range of ventilation rates. Indoor sources of CO emissions included gas appliances and candles. I also examined CO concentrations within parking garages.
- I calculated air concentrations of tetrachloroethene inside homes and cars from offgassing dry-cleaned clothes.
- I examined air concentrations of formaldehyde inside manufactured homes and school buildings. I also calculated formaldehyde exposures from carpet emissions within homes.
- I assessed lead air exposures and surface deposition from deteriorating lead-based paint applications within apartments. I also calculated lead air concentrations and associated exposures resulting from milling of brass pipes and fittings.
- While employed by the SBAPCD, I assisted with exposure assessment and awareness activities for Santa Barbara County high-exposure radon areas.
- I calculated BTEX air concentrations and health risks inside homes from leaking underground fuel tanks and resultant contaminated soil plumes. I also assessed indoor VOC exposures and remediation options with the AERIS model.
- I have assessed indoor air concentrations from numerous volatile organic compound sources, including printing operations, microprocessor manufacturing, and solvent degreasing activities.
- I calculated indoor emission flux rates and air concentrations of elemental mercury for plaintiff litigation support purposes. This analysis included an exposure reconstruction (home, school, workplace, outside, and other locations) for 16 plaintiffs who had collected spilled mercury in their village. The study required room volume calculations, air exchange rates, exposure history reconstruction, mercury quantity and droplet size estimation, elemental mercury flux rate calculations (including decay with time), and resultant air concentration calculations. I calculated both peak acute (two-hour) and 24-hour average concentrations.
- I calculated emission rates of lead from disturbed paint surfaces. I then calculated indoor air concentrations of lead for plaintiff litigation support purposes.

### Publications

- To establish a legal record and to assist in environmental review, I prepared and submitted dozens of detailed comment letters to regulatory and decision-making bodies.
- I have contributed to over 100 Environmental Impact Statements/Reports and other technical documents required for regulatory decision-making.
- I prepared two software review columns for the *Journal of the Air and Waste Management Association*.
- Correlations of total, diffuse, and direct solar radiation with the percentage of possible sunshine for Davis, California. *Solar Energy*, 27(4):357-360 (1981).

### Employment History

- Self-Employed Air Quality Consultant 1992 to 2018
- Santa Barbara County APCD, Senior Scientist 1988 to 1992
- URS Consultants, Senior Scientist 1987 to 1988
- Santa Barbara County APCD, Air Quality Engineer 1983 to 1987
- Dames and Moore, Meteorologist 1982 to 1983
- UC Davis, Research Associate 1980 to 1981

Re: **Requirement to Fully Evaluate Water Conservation Feasibility and Impacts in Newland Sierra EIR**

Dear Ms. Smith:

I am writing on behalf of my client, Golden Door Properties, LLC (“Golden Door”), regarding the Court of Appeal’s recent decision in Golden Door Properties, LLC v. Vallecitos Water District. The appellate court’s written opinion,<sup>1</sup> as well as the statements of the court at the hearing for this case,<sup>2</sup> highlighted the critical role of the County of San Diego in fully and faithfully analyzing both the feasibility and potential impacts of the significant water conservation measures (approx. 36% cutback for all existing water customers) that the Vallecitos Water District has stated will be required in order to ensure that there is enough water for the Newland Sierra project.

In sum, the Court of Appeal’s opinion highlighted critical deficiencies in the draft environmental impact report (“EIR”) for the Newland Sierra project. The County’s duty as lead agency under the California Environmental Quality Act is to correct these deficiencies—including a request to the District to modify, correct, or supplement its WSA and receipt of a revised water supply assessment (“WSA”)—and recirculate the draft EIR along with the revised WSA for further public review and comment.

As we have explained in our prior correspondence,<sup>3</sup> the County’s role as lead agency in the CEQA EIR process is indeed “to independently review the [WSA] document and ensure that

---

<sup>1</sup> A copy of the Court of Appeal’s written opinion is attached hereto as Enclosure 1.

<sup>2</sup> An unofficial transcript of the argument and hearing before the Court of Appeal in San Diego on March 16, 2018, is attached hereto as Enclosure 2.

<sup>3</sup> See, e.g., Letter from Latham & Watkins on behalf of The Golden Door, dated August 14, 2017, at pp. 79-105; Letter from Latham & Watkins on behalf of The Golden Door, dated May 15, 2017, RE: *The*

the WSA is not built on unspecified and deferred ‘mitigation’ to substantiate the essential 36% water usage reduction.” The Court of Appeal affirmed this principle in its written opinion, stating that the County’s “function” under the CEQA process is to “to review the information in the WSA and to evaluate *any* objections and challenges to the accuracy of the information and analysis.” (Encl. 1 [Slip opinion at p. 23 (emphasis added)].)<sup>4</sup> The Court of Appeal also explained that “if the County does not properly perform its statutory obligations, Golden Door will have the right to seek a judicial remedy in the CEQA process.” (*Ibid.*) In other words, the County may not simply defer to the District’s conclusions in its WSA without independently evaluating those conclusions, including on issues regarding the District’s authority to implement drastic, permanent/long-term conservation mandates on existing customers throughout the District.

Unfortunately, the draft EIR for the Newland Sierra project does not undertake this analysis, stating only that previous efforts to conserve water to a level of a “25.6 percent reduction in water use demonstrates that Vallecitos’ customers can respond to calls for water conservation ....”<sup>5</sup> The draft EIR does not otherwise discuss whether this conservation level (either a 25.6% reduction or the 36% reduction that will be required as indicated by the District’s WSA) is actually “feasible,” nor does it disclose the potential impacts of such a drastic cutback on existing customers or on the environment. Additionally, the draft EIR fails to point to any official decision by the District to adopt or implement those cutbacks, such as the adoption of a new District ordinance regarding water usage, including any amendment to the District’s Urban Water Management Plan (“UWMP”) that would be required in order make such a decision and any other official action required by District Ordinance No. 198.

“Feasible” is defined clearly by CEQA: “‘Feasible’ means capable of being accomplished in a successful manner within a reasonable period of time, taking into account *economic, environmental, legal, social*, and technological factors.” (14 Cal. Code Regs., section 15364 [emphasis added].) But, as noted, the Newland Sierra draft EIR does not actually evaluate whether the 36% cutback required to accommodate the project is “capable of being accomplished in a successful manner within a reasonable period of time, taking into account *economic, environmental, legal, social*, and technological factors.” The draft EIR just assumes, based on unique circumstances of the past, that a level of 25.6% reduction can be achieved. The draft EIR does not evaluate whether a greater 36% cutback could be achieved, particularly given the legal obstacles we have identified in our previous correspondence. These “legal factors” include the fact that the governing UWMP does not provide that the District’s supply deficit will be achieved solely through “Conservation Required” on existing customers. The County has not disclosed or analyzed the fact that a formal amendment to the UWMP under the Water Code

---

*County's Responsibility Regarding Analysis of the Vallecitos Water District's Water Supply Assessment for the Newland Sierra Project.*

<sup>4</sup> See also p. 3, explaining that the decision “does not preclude Golden Door from challenging the WSA in the CEQA proceedings and/or challenging any later-approved Water Verification under applicable statutory procedures.”; p. 24, explaining that “The lead agency *must* evaluate the comments and include written responses to the comments in the final EIR.” (emphasis added).

<sup>5</sup> Newland Sierra Draft EIR, Chapter 2.14, at p. 2.14-39.

must be undertaken and approved by the District before the project may proceed. Similarly, another “legal factor” affecting the feasibility of District-wide, permanent/long-term conservation mandates includes the fact that District Ordinance No. 198 generally prohibits new potable water connections under Drought Response Level 3, which is the level that the District would need to enact in order to achieve a District-wide 36% conservation mandate.

Notably, the Court of Appeal also highlighted the requirement in Water Code section 10911 that requires the District to “set[] forth the measures that are being undertaken to acquire and develop those water supplies.” Simply stating without any detail or analysis that “Conservation Required” will make up for the entirety of the 25% to 36% supply deficits in future years does not comply with Section 10911, particularly given the legal obstacles that we have noted for enacting such drastic permanent water conservation mandates.

As the Court of Appeal aptly noted in its written opinion, “Thus, even assuming the WSA concludes that water supply deficits can be remedied solely by conservation measures, this does not necessarily mean the District *has the authority to implement those measures.*” (Enclosure 1 [Slip opn. at p. 21 (emphasis in original)].) The Court of Appeal underscored this point again in its opinion, writing “If Golden Door shows during the CEQA process that the current Water Management Plan would preclude the District from requiring the level of conservation set forth in the WSA, the disclosure of this fact would be potentially relevant in determining whether the water supply would be sufficient for the project demands.” (*Ibid.*)

Though the draft EIR notes that District Ordinance 198 and the UWMP exist, it does not provide any substantive disclosure or discussion regarding the impact of these legal requirements and limitations on the feasibility of this level of conservation mandates (36% reduction across all existing customers).

Finally, it is important to note that the Court of Appeal expressed similar concerns to those expressed by the Golden Door regarding the District’s WSA:

- Justice O’Rourke: “It doesn’t sound like very good water management from what you are portraying to build a subdivision and users that you can’t support. South Africa now has a couple of cities undergoing similar problems with this very moment of running out of water.” (Enclosure 2 [March 16 hearing transcript, at p. 7].)
- Justice Haller: “I think all of us have great concern over your concern about the water.” (*Id.* at p. 8.)

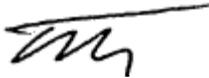

As the Court of Appeal explained, “When a WSA ‘is found to be incomplete or to contain inaccurate information or faulty analysis, the lead agency should request the water supplier to modify, correct or supplement the WSA.’” (Enclosure 1 [Slip opn. at p. 22].) Consistent with this explanation of the law, the Golden Door requests that the County direct the District to modify, correct, or supplement the WSA to provide an honest and complete analysis of water supply in the District under sections 10910 and 10911 of the Water Code. A revised WSA should include, among other things, detail regarding the water conservation mandates

LATHAM & WATKINS<sup>LLP</sup>

contemplated by the District to accommodate its water supplies to make way for the project, i.e., “the measures that are being undertaken to acquire and develop [the District’s] water supplies.”

Thank you for your consideration, and we look forward to seeing how the County addresses these important concerns.

Best regards,

Taiga Takahashi

COURT OF APPEAL, FOURTH APPELLATE DISTRICT

DIVISION ONE

STATE OF CALIFORNIA

GOLDEN DOOR PROPERTIES, LLC,

Plaintiff and Appellant,

v.

VALLECITOS WATER DISTRICT,

Defendant and Respondent;

COUNTY OF SAN DIEGO et al.,

Real Parties in Interest and  
Respondents.

D072280

(Super. Ct. No.  
37-2016-00037559-CU-WM-NC)

APPEAL from a judgment of the Superior Court of San Diego County, Ronald Frazier, Judge. Affirmed.

Latham & Watkins, Christopher W. Garrett and Taiga Takahashi for Plaintiff and Appellant.

Law Offices of Scott & Jackson and Jeffrey G. Scott for Defendant and Respondent.

Thomas E. Montgomery, County Counsel, and Claudia G. Silva, Assistant County Counsel, for Real Party in Interest and Respondent the County of San Diego.

Gatzke Dillon & Ballance, Mark J. Dillon, Michael P. Masterson and David Hubbard for Real Party in Interest and Respondent Newland Sierra, LLC.

Newland Sierra, LLC seeks to build a large residential development in an unincorporated rural area of northeastern San Diego County (County). An adjacent property owner, Golden Door Properties, LLC (Golden Door), filed a lawsuit against the public water supplier for the proposed project (Vallecitos Water District (District)), and named Newland Sierra and the County as real parties in interest. In the amended complaint, Golden Door challenged two statutory assessments in which the District concluded there is sufficient water supply for the project. The court sustained a demurrer without leave to amend on grounds of lack of finality, failure to exhaust remedies, and mootness. We affirm.

## OVERVIEW

As part of its lead agency review under the California Environmental Quality Act (CEQA), the County requested the District to prepare two statutory documents known as a Water Supply Assessment (WSA) and a Water Verification to analyze water availability for the project. (See Wat. Code, § 10910; Gov. Code, § 66473.7.)<sup>1</sup> The

---

<sup>1</sup> All unspecified statutory references are to the Water Code.

District prepared the WSA and Water Verification in a single combined document. After a public hearing, the District's board approved the report and transmitted it to the County.

Before the County analyzed the District's report and incorporated it into its environmental impact report (EIR), Golden Door filed a writ of mandate petition and complaint, requesting the superior court to declare the Water Verification invalid because it contained flawed analysis, was inconsistent with the District's general water planning document, and violated applicable statutes.

In response, the District rescinded its Water Verification and reissued the report solely as a WSA. Golden Door then amended its complaint to include this fact. In its amended complaint, Golden Door asserted similar challenges to the WSA and also requested that the court address its challenges to the Water Verification (despite that it no longer existed) as an exception to the mootness doctrine.

Defendants successfully demurred to the amended complaint, and Golden Door contends the court erred on numerous grounds. We reject these contentions. Golden Door's challenges to the WSA are barred because governing law precludes claims against a public water supplier for an alleged inadequate WSA while the CEQA process is ongoing. (*California Water Impact Network v. Newhall County Water Dist.* (2008) 161 Cal.App.4th 1464, 1477-1491 (*California Water*)). Golden Door's challenges to the rescinded Water Verification are moot and there are no valid exceptions to the mootness doctrine under the circumstances of the case. This affirmance does not preclude Golden Door from challenging the WSA in the CEQA proceedings and/or challenging any later-approved Water Verification under applicable statutory procedures.

## FACTUAL AND PROCEDURAL BACKGROUND

We summarize the facts based on the properly pleaded allegations, inferences from the factual allegations, information in materials attached to the complaint, and matters properly subject to judicial notice. (See *Yvanova v. New Century Mortgage Corp.* (2016) 62 Cal.4th 919, 924.)

In January 2015, Newland Sierra submitted an application to the County (the lead agency under CEQA) for its proposed development. The proposal includes a planned community with 2,135 homes, 81,000 square feet of commercial development, a school, vineyards, open space conservation areas, parks, and equestrian facilities.

The next month, the County issued a notice of preparation of the project's EIR. The County then requested the District (the water supplier for the project area) to prepare a WSA and a Water Verification for the proposed project. Under applicable statutes, the purpose of these documents is to evaluate whether total water supplies during a specified period will meet the projected water demand of a proposed project. (See *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 433 (*Vineyard*)). Although the documents have a similar objective, the function of each document and the rules governing challenges to each document differ.

The WSA is primarily an informational report for CEQA purposes. Governing law requires CEQA lead agencies to request the potential water supplier to prepare a WSA. (See §§ 10910-10911; Gov. Code, § 66473.7.) After receiving the WSA, the lead agency must consider the analysis as part of the basis for disclosing whether sufficient water supplies exist for the project. (*Vineyard, supra*, 40 Cal.4th at pp. 428-435.)

Objections to the conclusions or analysis contained in a WSA are generally limited to challenges brought in the EIR process or as part of a Water Verification proceeding. (*California Water, supra*, 161 Cal.App.4th at pp. 1477-1491.)

Unlike the WSA, a Water Verification can be prepared by the water supplier at any time during the approval process and is not necessarily part of the EIR analysis. (See *Vineyard, supra*, 40 Cal.4th at p. 433.) The agency may prepare the Water Verification as a stand-alone document or as part of a WSA report. A Water Verification is a precondition to the project's final subdivision map approval, and is required to provide "firm assurances" of adequate water supply. (*Vineyard, supra*, 40 Cal.4th at p. 434.) A Water Verification thus serves as a fail-safe mechanism: a subdivision generally cannot be approved until and unless the local water agency determines there is sufficient water to supply the project. The water supplier can rely on a WSA in preparing the Water Verification. (Gov. Code, § 66473.7, subd. (c)(2).) A local agency or any other interested party has 90 days from the issuance of the Water Verification to bring a writ of mandate petition challenging the report. (Gov. Code, §§ 66499.37, 66473.7, subds. (b)(2), (o).)

On October 5, 2016, after a public hearing, the District adopted the combined WSA and a Water Verification report (Combined Report) that concluded there was sufficient water supply for the Newland Sierra project. Three weeks later, Golden Door filed a superior court action against the District, challenging the District's approval of the Combined Report, and seeking to prohibit the County from using or relying on the report

in its CEQA analysis. Golden Door named the County and Newland Sierra as real parties in interest.

In the lawsuit, Golden Door alleged the conclusions in the Combined Report were flawed in numerous ways. Of relevance here, Golden Door asserted that the conclusions were predicated on water conservation measures that would substantially reduce water availability for existing users. It maintained that this compelled conservation was inconsistent with: (1) the District's Urban Water Management Plan (Water Management Plan), a planning document that must be prepared every five years to evaluate the region's water supply and demand over a 20-year period (§§ 10620, 10621); and (2) certain "water duty factors" adopted in September 2016.

Golden Door claimed the Water Management Plan projects a 20-year *water supply deficit* under all scenarios—showing a deficit in 2020, 2025, 2030, and 2035 in normal, dry, and multiple dry year scenarios. Golden Door alleged that "[i]n an attempt to mask this fatal flaw," the Combined Report relies on a "'Conservation Required' " figure that creates "a new rationing requirement" that allegedly "makes up as much as 36 percent of the District's demand." Golden Door maintained that this new conservation requirement will apply "perpetually on a District wide-basis" in contradiction to the Water Management Plan, and therefore it constituted a de facto amendment to the Water Management Plan and water duty factors, without providing the statutorily-required notice and comment periods. (See §§ 10621, 10642, 10608.26.) Golden Door further alleged that the conservation measures identified in the Combined Report violate District

Ordinance No. 198, which sets forth the District's drought management plan, including a process for instituting drought response levels.

In response to the complaint, Newland Sierra requested (with the County's support) that the District rescind its action approving the Combined Report, and instead issue the report solely as a WSA (and defer the adoption of a Water Verification until a later stage of the project). On November 16, 2016, the District's board agreed with this proposal and adopted the WSA as a single report (without the Water Verification). The resolution vacating the Combined Report stated that "the Board of Directions of the District deems it would serve the best interests of the District and the public served to avoid costly litigation by rescinding the action approving the [Combined Report]."

The newly approved WSA report contained conclusions and analysis essentially identical to the Combined Report. The WSA concludes that "with development of the resources identified, there will be sufficient water supplies over a 20-year planning horizon to meet the projected demand of the proposed Project and the existing and other planned development projects within the District's service area." The WSA states that "Conservation is an important component of the District's water supply plan to meet future demands, fulfilling as much as . . . approximately 36% of the demand requirements . . . to meet 2020 demands under multi-dry year conditions, but lessening over time to . . . approximately 26% of the demand requirements . . . in 2025 through 2035."

Golden Door then filed an amended writ of mandate petition and complaint. The first six causes of action seek declaratory relief challenging the conclusions of the rescinded Water Verification. The seventh through thirteenth causes of action challenge

the legal adequacy and validity of the WSA. The allegations identified the same alleged deficiencies as were identified in the initial petition/complaint. On its challenge to the (rescinded) Water Verification, Golden Door added that the matter was not moot because (1) "the District's ability to verify a water supply for the [Project] is a matter of continuing public interest and the need for the [Water Verification] is highly likely to recur" despite that the actual "verification may not occur for several years"; (2) property owners and voters in a potential County referendum concerning the proposed project need to have a current understanding as to "whether the District could legally verify the Newland Project's water supply"; and (3) "[b]ecause the District re-approved the same water availability analysis in both the [Combined Report] and [the reissued WSA], it is highly likely that the District would re-approve the existing analysis for a [Water Verification] on a later date . . . ."

Newland Sierra filed a demurrer, asserting: (1) the first through fifth causes of action challenging the Water Verification are moot and not ripe because the District rescinded the Water Verification on November 16, 2016, and Golden Door's allegations do not establish grounds for an exception to the mootness doctrine; (2) the seventh through thirteenth causes of action challenging the WSA are unmeritorious because the District's act of approving the WSA is not a "final act" for purposes of mandamus review

and/or Golden Door failed to exhaust its administrative remedies provided in the CEQA statutory scheme, relying on *California Water, supra*, 161 Cal.App.4th 1464.<sup>2</sup>

The County and the District also filed demurrers, and both joined in Newland Sierra's supporting memorandum of points and authorities.

In its tentative ruling, the court found in defendants' favor based on its conclusion that Golden Door's challenge to the Water Verification was moot, and the challenges to the WSA were premature, citing *California Water*. At the hearing on the motion, Golden Door's counsel focused on the WSA challenge, and stated he agreed *California Water* "stands for the general proposition that challenges to [WSA's] can only be brought after there's an approved environmental impact report . . . . Therefore . . . we were pleading uphill when we filed this case . . . ." But counsel argued this is an "appropriate case" to make an exception because Golden Door's challenges concern the inconsistency between the WSA and the Water Management Plan (and Ordinance 198), and the County will not consider those issues in the CEQA process because they concern procedural matters and constitute de facto amendments of the District's governing rules. In support, Golden Door's counsel discussed the County's "silence" in the demurrer proceedings:

"[T]he County has been strangely silent in these proceedings. . . . [¶] . . . Instead of filing a pleading saying, 'Yes, every claim that's been raised in this petition and complaint, every one of those claims will be adjudicated by the County. Don't worry. We're the agency that has this administrative remedy. It is an available administrative remedy. It's timely, and we will look at all these issues.' Instead, we

---

<sup>2</sup> Newland Sierra also challenged the sixth cause of action on separate grounds, but because Golden Door concedes the demurrer was proper on this cause of action, we need not discuss these grounds.

just have a simple joinder and silence from the County about whether we're going to see that. [¶] . . . [¶]

"So without a commitment by the County to provide that type of review of all those issues rather than just a weighing of, on the face of [the WSA], does it say [there is sufficient] water . . . . [I]n these unique circumstances[,] . . . we don't think we have an available administrative remedy.

"And in part, what I'm concerned about is the developer, [which has] filed the only [memorandum of points and authorities] here, will say, 'You have a great remedy,' and then when the County issues [the EIR] and we say, 'Wait a minute, there're all these problems with the WSA,' they'll say, 'Too bad. It's not our purview. We're just a CEQA agency. We just weigh it as a piece of evidence.' "

Newland Sierra's counsel countered that the case fell squarely within the *California Water* decision, and Golden Door would have the opportunity to raise all of the challenges raised in its current complaint in the CEQA action:

"Every one of those arguments needs to be presented to the County as a basis for invalidating the EIR's water supply section, and the County will then have the full record before it and it will make the call. It will make the judgment call. . . . [¶] So everything you heard today . . . is the outline, the transcript, the script for what needs to be presented to the County . . . once the draft EIR is released, and it's not even out yet. So we've got to get the EIR out. It's got to be vetted publicly. It's got to go through hearing processes. Counsel's going to . . . have remedies. They just have to be patient."

The court then asked, "You're saying they do have the administrative remedy?"

Newland Sierra's counsel responded:

"They do have an administrative remedy . . . . [¶] . . . [¶] And counsel can use every one of those arguments to try to convince the County . . . to deny this project. . . . And if they're successful, the project could be denied and at which time litigating over advisory water supply documents on a project that was never approved would be just a colossal waste of everyone's time, energy, money, and resources, including this Court's. [¶] . . . [¶] . . . [I]f the water situation is so dire with so many deficiencies and shortfalls and

deficits, then the County—under the WSA law [as interpreted in *California Water*], . . . is free to accept/reject that WSA. They're free to request additional information. It's a process, and we have to allow the process, and counsel at bottom has to wait. They have remedies."

After Newland Sierra's counsel completed this argument, assistant County counsel Claudia Silva made a brief comment: "Good afternoon, your Honor. I just wanted to address very quickly the County's silence. Until there's a certified [EIR] or at least a draft EIR that's gone out . . . [,] [¶]. . . [¶] . . . the role of the County is in that EIR process, and that's the scope of our role, not to sit as a super legislature over the [D]istrict on this particular WSA process."

Golden Door's counsel responded:

"What Ms. Silva said I think proves my point, which is . . . that the County can accept or reject the information in the document. None of them say that the County will review whether or not it conflicts with the [D]istrict's . . . Water Management Plan. None of them say that the County will determine whether or not it conflicts with a prior ordinance which the [D]istrict adopted which said 'No new water hookups if you're cutting existing users back over 30 percent.' . . .

"And so simply we have a situation where—and the law is simply that [the WSA] just floats around as an informational document. The [D]istrict won't even be a party to the CEQA proceedings. . . . [S]ince [the County] [doesn't] sit as a super legislature or a super judiciary . . . where they adjudicate the validity of the WSA, we'll never get that determination and we'll never get to the 36 percent cutback that's embodied in their set aside."

After taking the matter under submission, the court issued a final judgment adhering to its tentative ruling and sustained the demurrer without leave to amend. The court found the challenges to the Water Verification are moot because the Water Verification was "rescinded" and the court was "not persuaded" the asserted exceptions to

the mootness doctrine applied. The court further found the principles set forth in *California Water* barred Golden Door's challenges to the WSA.

## DISCUSSION

### I. *Review Standard*

"On appeal from a judgment dismissing an action after sustaining a demurrer without leave to amend, the 'reviewing court gives the complaint a reasonable interpretation, and treats the demurrer as admitting all material facts properly pleaded.' [Citation.] It 'is error for a trial court to sustain a demurrer [if] the plaintiff has stated a cause of action under any possible legal theory.' " (*Soto v. Motel 6 Operating, L.P.* (2016) 4 Cal.App.5th 385, 389.)

We apply a de novo review, and are not bound by the trial court's construction of the complaint. (*Soto, supra*, 4 Cal.App.5th at p. 389.) We accept as true the well-pleaded material facts, as well as the reasonable inferences that may be drawn from these facts. (*Fremont Indem. Co. v. Fremont General Corp.* (2007) 148 Cal.App.4th 97, 111.) "Whether the plaintiff will be able to prove these allegations is not relevant; our focus is on the legal sufficiency of the complaint." (*Los Altos Golf and Country Club v. County of Santa Clara* (2008) 165 Cal.App.4th 198, 203, italics omitted.)

### II. *Challenges to WSA*

#### A. *Applicable Law*

In the CEQA process, the lead agency must request a WSA from the water supplier before approving a specified project (including the Newland Sierra project). (§ 10910, subs. (b), (c)(1).) The WSA must evaluate whether the total water supplies

during a 20-year period will meet the projected water demand of the proposed project. (§ 10910, subd. (c)(4).) The water supplier may incorporate into the WSA information from the water system's most recent Water Management Plan, if the plan contained an evaluation of the potential project demand. (§ 10910, subd. (c)(2).) But if the plan did not include this information, the WSA for the project "shall include a discussion" as to "whether the public water system's total projected water supplies available during normal, single dry, and multiple dry water years during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the public water system's existing and planned future uses . . . ." (§ 10910, subd. (c)(3).)

The WSA shall also identify any existing water supply entitlements, water rights, or water service contracts relevant to the identified water supply for the proposed project, and describe the quantities of water received in prior years by the public water system under the existing water supply entitlements, water rights, or water service contracts. (§ 10910, subd. (d)(1).) "If, as a result of its assessment, the public water system concludes that its water supplies are, or will be, insufficient, the public water system shall provide to the city or county its plans for acquiring additional water supplies, setting forth the measures that are being undertaken to acquire and develop those water supplies." (§ 10911, subd. (a).)

The statutes specify the timeframe for preparing and submitting a WSA. Specifically, the "governing body" of each public water system is required to "approve" the WSA at a regular or special meeting and must submit the WSA to the lead agency not later than 90 days from the date on which the request was received. (§ 10910, subd.

(g)(1.) If the water supplier fails to submit the WSA, the lead agency may seek a writ of mandamus to compel the water supplier to comply. (§ 10910, subd. (g)(3).) After the water supplier provides the WSA to the lead agency, the lead agency must include the WSA in any CEQA environmental documents prepared for the project, and may include an evaluation of the information contained in the WSA. (§ 10911, subds. (b), (c).) Based on its evaluation, the lead agency "shall determine, based on the entire record, whether projected water supplies will be sufficient to satisfy the demands of the project, in addition to existing and planned future uses. If the [lead agency] determines that water supplies will not be sufficient, [it] shall include that determination in its findings for the project." (§ 10911, subd. (c).)

#### B. California Water

Ten years ago, the *California Water* court extensively reviewed this statutory scheme in addressing an environmental organization's (C-WIN) challenge to a water district's WSA in factual circumstances very similar to those found here. (*California Water, supra*, 161 Cal.App.4th at pp. 1478-1481.) There, a water agency prepared a WSA at the request of the CEQA lead agency (the City) that was conducting a CEQA evaluation of a proposed industrial/business park development. (*Id.* at p. 1473.) Before the City had an opportunity to review and evaluate the WSA and incorporate it into the EIR, C-WIN filed a writ of mandate petition and complaint in the superior court, alleging the WSA was legally deficient and misleading in various respects. (*Id.* at p. 1474.) As here, the challenger named the water district, the lead agency, and the project developer as defendants or real parties in interest. (*Id.* at p. 1474 & fn. 7.)

These defendants moved for judgment on the pleadings, raising several arguments, including: (1) under the applicable statutes the WSA was a "technical informational document and not a final act or determination" subject to judicial review; and (2) the challenger (C-WIN) failed to exhaust its administrative remedies and was required to first raise objections with the lead agency in the EIR proceedings. (*California Water, supra*, 161 Cal.App.4th at pp. 1474-1475.) The trial court agreed, and granted the motion for judgment on the pleadings without reaching the merits of C-WIN's challenges. (*Id.* at p. 1475.) The Court of Appeal affirmed on both alternative grounds. (*Id.* at pp. 1482-1491.)

Regarding the first (finality) ground, the court explained that a public agency's determination is not subject to judicial challenge until it is final in the sense that the agency " 'possesses "no further power to reconsider or rehear the claim," ' " and that whether an administrative determination is final depends on the governing statutes. (*California Water, supra*, 161 Cal.App.4th at pp. 1485-1486.) After reviewing the WSA statutes, the court concluded the Legislature did not intend the WSA to be final for purposes of the mandamus remedy because its primary purpose in the EIR process is an informational tool, and not a final action for purposes of ensuring or requiring water supply. (*Ibid.*)

The court explained: "[T]he code is . . . clear that nothing in the WSA itself or the statutes governing its preparation actually imposes any duty upon the water supplier to provide water services to the project. (See . . . § 10914.) Thus, . . . the WSA is . . . a technical, informational advisory opinion of the water provider. Though the WSA is

required by statute to include an assessment of certain statutorily identified water supply issues and is required to be included in the EIR, the WSA's role in the EIR process is akin to that of other informational opinions provided by other entities concerning potential environmental impacts—such as traffic, population density or air quality. The fact that the duties of the water provider in preparing the WSA and responsibility of the lead agency in requesting the WSA are committed to statute does not change the fundamental nature of the WSA itself as an advisory and informational document." (*California Water, supra*, 161 Cal.App.4th at p. 1486.)

The court also supported its conclusion by discussing legislative history showing that the WSA requirement "was motivated by a concern that certain counties and cities were either ignoring or inadequately considering water supply issues prior to approving new developments. While the Legislature wanted to ensure that lead agencies thoroughly considered water supply issues and wanted to add transparency to the entire process, the Legislature committed the final determination on water supply issues to the lead agency, *not the water providers*. Indeed an earlier iteration of the WSA law that gave the water providers ultimate determination of whether insufficient water supplies constituted 'significant environmental effects under CEQA' was rejected because opponents viewed it as shifting land use decisionmaking authority from the cities and counties to water suppliers." (*California Water, supra*, 161 Cal.App.4th at p. 1486.)

The court additionally considered the related Water Verification statutes: "[O]n the same day the Legislature enacted [the WSA law], it also enacted [the law] which provides nonagency third parties with an opportunity to seek judicial intervention [to

challenge a Water Verification] under Government Code section 66473.7 to compel a water system to comply with the [W]ater [V]erification law. That the Legislature omitted the right to third party judicial intervention from [the WSA statutes] is instructive as to how the WSA should be viewed in the larger context of the EIR process. The WSA is but an interlocutory and preliminary step in the EIR process, and in general, interim determinations are not subject to mandamus review." (*California Water, supra*, 161 Cal.App.4th at p. 1486.)

The court also emphasized the lead agency's review powers after the water agency's "final" approval of its WSA: "Once the WSA is approved by the water provider's governing board the WSA is submitted to the lead agency. The lead agency may then evaluate the information included in the WSA. [(§ 10911, subd. (c).)] [This power to 'evaluate' the WSA necessarily invests the lead agency with the authority to consider, assess and examine the quality of the information in the WSA and endows the lead agency with the right to pass judgment upon the WSA. *While the lead agency must include the WSA in the EIR, the lead agency is not required to accept the WSA's conclusions. The lead agency may in evaluating the WSA accept or disagree with the water provider's analysis or may request additional information from the water provider. In any event, the lead agency is required by statute to make the ultimate determination, based on the entire record, whether water supplies are sufficient.* [(§ 10911, subd. (c).)]

The lead agency may make a finding that adequate water supplies exist (or do not exist) to meet the project's anticipated demand, even if that finding is inconsistent with the

conclusions in the [WSA]." (*California Water, supra*, 161 Cal.App.4th at p. 1487, italics added, fn. omitted.)

The *California Water* court thus concluded: "[B]ecause the adoption of a WSA does not create a right or entitlement to water service or impose, expand, or limit any duty concerning the obligation of a public water system to provide certain service and because the lead agency has a separate (from the water provider's WSA) and independent obligation to assess the sufficiency of water supplies for the proposed project, . . . the WSA is not a final agency decision, determination or action as that term is used in the context of mandamus relief. Under the WSA law framework, the 'final' decision for the purposes of writ review occurs only after the lead agency acts—completes its obligations under the WSA and CEQA." (*California Water, supra*, 161 Cal.App.4th at pp. 1487-1488.)

The *California Water* court also found C-WIN was barred from judicially challenging the WSA by the separate (but functionally similar) administrative exhaustion doctrine, explaining the "exhaustion requirement[] . . . avoid[s] . . . premature interruption of administrative processes, allowing an agency to develop the necessary factual background of the case, letting the agency apply its expertise and exercise its statutory discretion, and administrative efficiency and judicial economy." (*California Water, supra*, 161 Cal.App.4th at pp. 1489-1490.) C-WIN argued this doctrine was inapplicable because it could not obtain relief in the CEQA process as the "'City had no authority to disapprove, modify or set-aside the WSA' . . . ." (*Id.* at p. 1490.) The *California Water* court disagreed, reiterating that a lead agency has the statutory authority

"to evaluate the WSA and the concomitant duty to make the final determination on the sufficiency of water supplies," and is empowered "to approve or disapprove the WSA or to request the Water District to revise, modify, amend or supplement the WSA." (*Ibid.*) The court emphasized "the adequacy of the WSA will [be subject to] judicial review" in the CEQA process, noting that a prior EIR for the same project had been successfully challenged based on a deficient water analysis. (*Id.* at p. 1491.)

The court further noted that to the extent C-WIN was arguing the lead agency had no authority to review its challenges to the WSA, this argument should be made first to the administrative agency: "[I]t lies within the power of the administrative agency to determine in the first instance and before judicial relief may be obtained whether a given controversy falls within its granted jurisdiction." (*California Water, supra*, 161 Cal.App.4th at p. 1491.) The court also observed that requiring exhaustion of administrative remedies "conserves the parties' and the court's resources and avoids the possibility of multiple and simultaneous litigation as well as inconsistent rulings concerning the same project. In addition, . . . a direct challenge to a WSA in the middle of the EIR review proceedings could delay the review process and could preclude the lead agency from completing and certifying the EIR within the timeframes required under CEQA." (*Ibid.*)

### C. California Water Bars Golden Door's WSA Challenges

As a sister Court of Appeal, we are not bound by *California Water*. (*Mega Life & Health Ins. Co. v. Superior Court* (2009) 172 Cal.App.4th 1522, 1529.) But we choose to follow its holding because we find its analysis persuasive. On our own independent

review of the applicable statutes, we agree with the court's reasoning and conclusion. For purposes of mandamus review, a WSA is not final when it is approved by the water supplier and the administrative exhaustion doctrine generally requires the applicant to first challenge the WSA through the CEQA process.

Golden Door does not identify grounds to show *California Water* improperly interpreted the governing statutes, and instead argues its holding should not bar this action because Golden Door will not have an available remedy in the CEQA process under the unique circumstances of this case. We find these arguments unavailing.

First, Golden Door contends the WSA constitutes a "de facto amendment" of the Water Management Plan, to which the CEQA process is inapplicable, and thus Golden Door cannot obtain relief in the CEQA process. It asserts that the WSA declares future year supply deficits will be "resolved solely through" conservation measures and there is no support in the existing Water Management Plan to permit water supply problems to be addressed in this fashion. Golden Door thus argues the WSA has effectively amended the Water Management Plan for all future projects. Golden Door likewise emphasizes its allegations that the WSA is inconsistent with District Ordinance 198, which requires specific findings before instituting drought procedures, and argues that the WSA constitutes an improper amendment of this ordinance. Golden Door thus contends that if it is not permitted to challenge the WSA at this time (outside the EIR process), the public will be at risk of "being force-fed" Water Management Plan amendments and District Ordinance 198 determinations in the future, and the WSA determinations will become "baked into" the District's water analysis process.

These arguments reflect a misunderstanding of the WSA's function in the environmental review process. Even assuming the WSA is inconsistent with the Water Management Plan or a District ordinance, this does not mean that it *changes* these documents. As discussed in *California Water*, the WSA does not create a right or entitlement to water service, and is solely an informational report. (*California Water, supra*, 161 Cal.App.4th at pp. 1486, 1487-1488; § 10914.) Thus, even assuming the WSA concludes that water supply deficits can be remedied solely by conservation measures, this does not necessarily mean the District *has the authority to implement those measures*.

Golden Door characterizes the claimed inconsistencies between the WSA and the Water Management Plan as procedural defects, but this does not take Golden Door's challenge outside the normal CEQA process for challenging a WSA. If Golden Door shows during the CEQA process that the current Water Management Plan would preclude the District from requiring the level of conservation set forth in the WSA, the disclosure of this fact would be potentially relevant in determining whether the water supply would be sufficient for the project demands. (See, e.g., *Preserve Wild Santee v. City of Santee* (2012) 210 Cal.App.4th 260, 274-275, 282-286 [rejecting a WSA in an EIR because it did not explain a substantial discrepancy between the estimated water demand for a project and the available water supply].) Moreover, as the *California Water* court observed, whether the lead agency has the authority to consider certain challenges to a WSA should be considered in the first instance by the administrative agency (here the

County), and not by the courts. (*California Water, supra*, 161 Cal.App.4th at pp. 1490-1491.)

Golden Door next argues this case is distinguishable from *California Water* because it has alleged facts showing it would be futile to challenge the WSA in the CEQA process. In support, Golden Door relies on its allegation that: "'County staff have stated that they intend to rely upon the [WSA] as approved by the District and that they will not reexamine the facts or analysis used by the District in approving the [WSA].'" Even assuming this allegation is true, it would not preclude Golden Door from challenging the County's acceptance of an allegedly flawed WSA report. When a WSA "is found to be incomplete or to contain inaccurate information or faulty analysis, the lead agency should request the water supplier to modify, correct or supplement the WSA." (*California Water supra*, 161 Cal.App.4th at p. 1487, fn. 21.) If, as Golden Door suggests, the County will not perform this statutory obligation to review the accuracy of the information provided in the informational documents (particularly when such information has been challenged in the EIR process), an objector can challenge the EIR through the statutory procedures. Thus, the claim that the County will not perform its duties is premature and, as in *California Water*, it is not subject to attack through a direct challenge to the WSA.

Golden Door additionally relies on the brief remark made by the assistant County counsel during the hearing on the demurrer: "I just wanted to address very quickly the County's silence. Until there's a certified [EIR], or at least a draft EIR that's gone out[,]

... [¶] ... [¶] ... the role of the County is in that EIR process, and that's the scope of our role, not to sit as a super legislature over the [D]istrict on this particular WSA process."

Golden Door argues this statement confirms the County has no intention of evaluating the correctness of the WSA's conclusions. Golden Door's characterization of County counsel's remarks is not reasonable. Viewed in context, County counsel was responding to Golden Door's counsel's argument that he was concerned his client would not have the opportunity to raise challenges to the WSA in the CEQA process because the County merely joined in Newland Sierra's arguments and never affirmatively stated that it would " 'look at all these issues.' " Reasonably understood, County counsel's response to this concern was to emphasize the *timing* of its participation in the environmental evaluation process. County counsel correctly described that the local agency does not become involved in the water supplier's analysis *until* the EIR evaluation, explaining, "that's the scope of our role, not to sit as a super legislature over the district *on this particular WSA process.*" (Italics added.) This statement does not suggest the County will not perform its function to review the information in the WSA and to evaluate any objections and challenges to the accuracy of the information and analysis. In any event, as discussed above, if the County does not properly perform its statutory obligations, Golden Door will have the right to seek a judicial remedy in the CEQA process.

Golden Door's reliance on *Action Apartment Ass'n v. Santa Monica Rent Control Bd.* (2001) 94 Cal.App.4th 587 is misplaced. In that case, the court held the administrative remedies were inadequate as applied to a landlord seeking relief from a

law regarding the payment of interest earned on security deposits. Although we agree with *Action Apartment* that the existence of an administrative remedy does not bar a judicial action *if* the administrative remedy would be inadequate, Golden Door has not shown the remedy is inadequate given the statutory scheme governing WSA's and EIR's.

Golden Door requests that we take judicial notice of portions of the draft EIR for the project, and argues that these portions confirm the County will not effectively analyze or understand flaws in the WSA, including the District's improper reliance on conservation measures to satisfy new water demands arising from the project. We decline to take judicial notice of this document. The draft EIR was circulated for public comment in June 2017, one month after the trial court judgment in the case. It is a fundamental appellate principle that an appellate court reviews the judgment based on the record at the time the court made its challenged rulings. (See *Reserve Insurance Co. v. Pisciotta* (1982) 30 Cal.3d 800, 813.)

Moreover, the draft EIR would not change the result in this case because it does not support Golden Door's assertion that it does not have an adequate remedy in the EIR process. A draft EIR is not a final document. The public (including Golden Door) will have the opportunity to review and comment on the information contained in the draft EIR, including identifying omissions or flaws in the analysis and/or asserting that the document does not sufficiently or accurately identify possible environmental impacts. (Cal. Code Regs., tit. 14, §§ 15200, 15204, subd. (a).) The lead agency must evaluate the comments and include written responses to the comments in the final EIR. (Cal. Code Regs., tit. 14, § 15088, subd. (a).) If a party believes the responses do not sufficiently

address its concerns, it may seek judicial review. Given this process, the allegation that a *draft* EIR does not discuss or resolve Golden Door's concerns with the WSA does not mean Golden Door does not have an adequate remedy in the CEQA process. The existence of the draft EIR underscores the propriety of the *California Water* decision.

### III. *Challenges to Verification*

Golden Door also challenges the court's ruling sustaining the demurrer on the first through fifth causes of action that challenge the Water Verification.

The first five causes of action seek declaratory relief determining that the Water Verification (contained in the rescinded Combined Report) violates applicable law because it fails to provide "firm assurances" of sufficient water supplies for the project, fails to adequately analyze potential groundwater impacts, and fails to ensure priority of water to low income households.

A necessary predicate for declaratory relief is the existence of an actual, present controversy between the parties. (*Linda Vista Village San Diego Homeowners Association, Inc. v. Tecolote Investors, LLC* (2015) 234 Cal.App.4th 166, 181; *Otay Land Co. v. Royal Indem. Co.* (2008) 169 Cal.App.4th 556, 562-563.) "For a probable future controversy to constitute an 'actual controversy,' however, the probable controversy must be ripe." (*Environmental Defense Project of Sierra County v. County of Sierra* (2008) 158 Cal.App.4th 877, 885 (*Environmental Defense*)). "A 'controversy is "ripe" when it has reached . . . the point that the facts have sufficiently congealed to permit an intelligent and useful decision to be made.'" (*Ibid.*) Whether an "actual controversy" exists is a

question of law. (*Wilson & Wilson v. City Council of Redwood City* (2011) 191 Cal.App.4th 1559, 1582.)

There is no present controversy concerning the Water Verification because the District rescinded its approval of this document. Therefore the matter is moot. (See *National Ass'n of Wine Bottlers v. Paul* (1969) 268 Cal.App.2d 741, 743, 746-748 [case challenging agency's orders moot after marketing order was rescinded].) Seeking to avoid this bar, Golden Door contends the dispute is highly "likely to recur" because it is reasonable to conclude the District will issue the same or similar Water Verification later in the approval process. Golden Door relies on the fact that the District reissued the identical Combined Report, except that it called the document a "WSA."

An appellate court retains discretion to decide a moot issue under various circumstances, including if the case presents an important issue of public interest that is likely to recur. (See *Californians for Alternatives to Toxics v. California Dept. of Pesticide Regulation* (2006) 136 Cal.App.4th 1049, 1069; *County of Fresno v. Shelton* (1998) 66 Cal.App.4th 996, 1006.) This exception is inapplicable here.

First, it is speculative to conclude the issue will recur, i.e., that District will issue the same Water Verification. As discussed, the WSA will undergo scrutiny in the EIR administrative process (by the lead agency, other agencies, and the public, including potential judicial challenges). It is certainly possible that during this process the analysis of water supplies will change, triggering needed modifications to the Water Verification. Further, the Water Verification need not be issued until the final subdivision map phase (Gov. Code, § 66473.7), which—as Golden Door concedes in its amended complaint—

"may not occur for several years." At that time, there may be different District board members, a different Water Management Plan, and different facts surrounding water supply and demand issues in the relevant geographic areas. Although Golden Door alleged that the District is likely to adopt the same Water Verification, this claim is speculative in light of the record before us. In reviewing a ruling on a demurer, we disregard "conclusions of fact or law, opinions, speculation, or allegations contrary to law or judicially noticed facts." (*Shea Homes Ltd. Partnership v. County of Alameda* (2003) 110 Cal.App.4th 1246, 1254.)

This case is distinguishable from our recent decision in *Cleveland National Forest Foundation v. San Diego Association of Governments* (2017) 17 Cal.App.5th 413. In *Cleveland National*, this court considered a case remanded from the California Supreme Court after the high court held a portion of an EIR was inadequate. (*Id.* at pp. 421-422.) The issue for our consideration was whether the entire case should be remanded to the trial court, or whether we should rule on the contentions relating to the portions of the EIR that the California Supreme Court did not address. (*Id.* at pp. 422-424.) The public entity argued the issues were moot because the existing EIR would need modifications. (*Id.* at p. 423.) But the majority of this court rejected this claim, noting there was no evidence in the record that the EIR had been decertified and could no longer be relied upon. (*Id.* at pp. 423-424.)

Here, by contrast, the evidence is undisputed that the Water Verification no longer exists and cannot be relied upon for a project approval, and there is no evidentiary basis

for concluding a new Water Verification would be the same or similar to the former Water Verification. Thus, any opinion would be advisory.

Golden Door relies on a line of cases recognizing that declaratory relief may be appropriate if the facts show a public entity will continue to engage in the challenged practice in the future. (See, e.g., *Environmental Defense, supra*, 158 Cal.App.4th at pp. 886-887; *California Alliance for Utility etc. Education v. City of San Diego* (1997) 56 Cal.App.4th 1024, 1029-1030.) Those cases are distinguishable because they contain facts showing (or supporting a reasonable inference) that the challenged actions will continue. For example, in *Environmental Defense*, the public entity "made it clear" it would continue engaging in the same challenged zoning practice "in the future." (158 Cal.App.4th at p. 886.) In this case, there are no factual allegations from which we can draw a reasonable inference that the District would reissue the *same* Water Verification in the future.

Golden Door notes that the District has an alleged practice of issuing a WSA and Water Verification as a single document, and argues we should infer from this fact that the new Water Verification will be the same as the existing WSA. This inference is not reasonable. It may be reasonable to infer that when the two statutorily-required documents are issued at the same time, they will have the same or similar analyses and conclusions. But when, as here, the WSA and Water Verification will likely be issued years apart, this logic of the inference falls away.

Further, contrary to Golden Door's assertions, the fact that the District vacated the Water Verification to avoid the current litigation does not mean the issue is ripe. The

Legislature provided public water agencies the discretion to wait until the final subdivision map process to approve a Water Verification. (Gov. Code, § 66473.7; see *Vineyard, supra*, 40 Cal.4th at p. 433.) Although an agency has the authority to issue the Verification earlier and to combine it with the WSA, the agency can reasonably decide that by doing so and triggering an immediate challenge, the agency would be subjecting the public to unnecessary litigation costs before there is any certainty that the project will be approved and will move forward. This decision does not show any form of bad faith or suggest the issue is not moot.

Additionally, the question of the propriety of any approved Water Verification will not evade review, an important factor in finding an exception to the mootness doctrine. (See *Cleveland National Forest Foundation v. San Diego Association of Governments* (2017) 3 Cal.5th 497, 511; *In re Conservatorship of Person of John L.* (2010) 48 Cal.4th 131, 142, fn. 2.) If the County certifies the EIR and approves the project, the project cannot move forward (i.e. no final subdivision map can be approved) *until* the District approves a new Water Verification showing its ability to provide a "sufficient water supply that will meet the projected demand associated with the proposed [development]." (Gov. Code, § 66473.7, subd. (c); *Vineyard, supra*, 40 Cal.4th at p. 453.) The statutes provide that once the water supplier approves the Water Verification, a third party objector (such as Golden Door) may bring a judicial challenge to the report's analysis and/or conclusions. (Gov. Code, §§ 66473.7, subd. (o), 66499.37.)

Finally, we find unhelpful Golden Door's focus on the fact that water supply and demand issues are matters of strong public interest. We agree with this fact, but the

specific question before us here concerns the adequacy of a Water Verification to ensure a project has sufficient water supply in a situation when the Water Verification has not yet been issued. There is no public interest in issuing an advisory opinion on this matter, particularly because it would bypass the specific statutory scheme governing challenges to a Water Verification and would potentially overlap with the County's consideration of the same issues with respect to the WSA. There is no public interest in permitting premature judicial intervention. The project cannot go forward without a certified EIR and a Water Verification. In its appellate brief, Newland Sierra acknowledges that Golden Door "retains the right to challenge the EIR, the WSA prepared for the EIR, and the Water Verification" at the appropriate times. The County and the District expressly joined in this brief, which necessarily includes this acknowledgment.

#### DISPOSITION

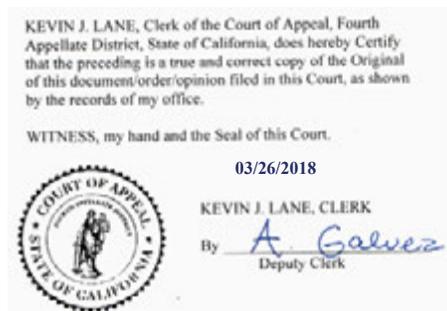

Judgment affirmed. Appellant to bear respondents' costs on appeal.

| Justice Nares  | (Beginning of audio recording) ... Justice Haller and to my left is Justice O'Rourke. This panel will hear Golden Door Properties versus Vallecitos Water District and Newland Sierra. Come forward please. I think Justice McConnell already told you about the time limits, etc. That's number 40. You can state your name as you make your presentation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Mr. Garrett    | Ready for me to be at the podium?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Justice Nares  | Yes. Oh, we need more chairs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Mr. Scott      | No, no, no, that's okay. We can sit over here. We just wanted to make our appearances.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Justice Nares  | Are you sure, because –                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Mr. Scott      | Yes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Justice Nares  | Very well. Once we start hearing from the other side, you can make your appearances at that time. Thank you. Counsel?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Mr. Garrett    | <p>Good afternoon your honor, my name is Chris Garrett, Latham and Watkins, and I'm representing the Golden Door, the appellant today. We obviously have the burden here, and I wanted – I do think in this situation, we're dealing with the facts as pleaded in our First Amended Complaint, and I do think it's very important to talk about those facts as we pled them.</p> <p>The growth and infrastructure for growth is vitally important for California's today. It's vitally important to us as an agricultural and hospitality operation. We have 35,000 to 40,000 trees. We just purchased 10,000 new avocado citrus trees to be planted. We use some water from Vallecitos. We also use water from groundwater.</p> <p>What's happening with water and water infrastructure is extremely important. And it's extremely important to us as a member of the community that there be the infrastructure and the water supplies in place for growth – thus, our interest in this case.</p> <p>California has a very clear and specified way to make sure that we have enough water and water infrastructure for our projects. That consists of everything we cited in our brief. I'm not going to go through that in detail</p> |

but obviously, the Urban Water Management Plans, which are the cookbooks for making sure that there's enough water there before houses are built, plans are made, things are committed, and there are the two stages: the water supply assessment and the water supply verification.

We are one of 70,000 water users who depend on Vallecitos for water. As alleged in our First Amended Complaint, the District first adopted –

Justice Haller

You know, it might be a little more helpful to get to what really are the issues, and the issue is I think whether or not, the decision is final for purposes of you being able to act upon it, whether you exhausted your administrative remedies. We're very familiar with what's in your complaint. I just think that might be a better use of your time.

Mr. Garrett

Right. Thank you very much.

The decision that the District took – there were two of them – in October and November of 2016. The first decision was embodied in a document labeled Water Supply Verification. The second decision, the decision was made again in the document labeled Water Supply Assessment.

In our view, this is a very extraordinary document. It could have been called a resolution. It could have been called a district ordinance. It could have been called a banana. And our point, this was not the run of mill water supply assessment that was ultimately adopted in November.

This water supply assessment had something in it which no other water supply assessment which has ever been reviewed by a court had in it, and that is a District commitment to a – the “Conservation Required” number for all of the Vallecitos customers. All 70,000 of them. What the District did in order to balance the books and to show that there was enough water to allow for new connections was to say we are 35% short in 2020 for our users in a normal water year. So, how do we balance those books? And this is shown in appellant's appendix 517 which includes the table from the Water Supply Assessment. Those books in 2020 where the supply was 21,000 acre-feet, the demand total which they estimated in the latest water – Urban Water Management Plan was 32,000 and then there – that's a difference of 11,447 acre-feet for the total demand in the District, a deficit was shown in the Urban Water Management Plan.

So, how did they balance the books and come up with enough water to serve new development? They added a factor which they called

|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                | “Conservation Required,” which basically the decision that we’re going to force existing users to cut back from the demands that we’ve already estimated they would normally have.                                                                                                                                                                                                                                                                                                                         |
| Justice Haller | Again, we are aware of that. The question I’m try to get you to is, is the Water Supply Assessment a final – is final for legal purposes?                                                                                                                                                                                                                                                                                                                                                                  |
| Mr. Garrett    | Right.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Justice Haller | It’s now a part of EIR, and there’s full opportunity within that process for it to be – it is an informational document. I know you are very unhappy with it. Water is very important.                                                                                                                                                                                                                                                                                                                     |
|                | This project can never be completed unless, at the end of the day, the EIR gets through and is not challenged and, number 2, that there is – that the subdivision map is approved and one of the approvals has to be sufficient water. And I know you don’t think that this WSA is valid and I understand what you are saying. But what we are trying to get to is, is this the right time or the right forum to be challenging it.                                                                        |
| Mr. Garrett    | Let me give you the shortest most precise answer I can. This WSA included the “Conservation Required” number. That was a final decision. As shown in the County’s environmental impact report, that was treated as a final decision – a commitment by the District to reduce the 70,000 existing users’ water usage from what was shown in Urban Water Management Plan by 35 percent. There will be no review of that decision in the County’s EIR. That’s the water supply assessment which is normally – |
| Justice Haller | That it becomes part of the EIR that it cannot be challenged like any other informational document within the EIR?                                                                                                                                                                                                                                                                                                                                                                                         |
| Mr. Garrett    | Well I think the answer is –                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Justice Haller | Or is that –                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Mr. Garrett    | Maybe no. Maybe no and we are very concerned because –                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Justice Haller | Well, one of the things that has to be looked at in a EIR is the supply of water. Is it not?                                                                                                                                                                                                                                                                                                                                                                                                               |
| Mr. Garrett    | Yes, that’s right.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <u>Speaker</u> | <u>Dialogue</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Justice Haller | And if – the public, you, neighbors, any number of people have the right to say: This simply is not supported; it’s not reliable.                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Mr. Garrett    | Right. And the EIR which we would request the Court take judicial notice of from the County says –                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Justice Haller | Now it’s just a draft EIR, correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Mr. Garrett    | That’s right, the draft –                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Justice Haller | And the draft EIR had not been adopted at the time of the hearing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Mr. Garrett    | Right.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Justice Haller | Okay.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Mr. Garrett    | Your honor, and I think what we want to say is it’s indicative of why our administrative remedy in this case is not adequate because that commitment to the “Conservation Required” is not going to be reviewed by the County in the EIR CEQA process.                                                                                                                                                                                                                                                                                                 |
| Justice Haller | Well, it’s not a matter of them reviewing it. It’s a matter of they have to put it out for public comment.                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Mr. Garrett    | Right.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Justice Haller | And then it is subject to criticism from the public is it not?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Mr. Garrett    | That’s right.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Justice Haller | Alright, and if they don’t follow that process, that’s a basis to challenge the EIR is it not?                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Mr. Garrett    | If the information is lacking – for example, in this court in the Save Wild Santee, found the information lacking, then you’re right. There is a remedy at that point to say, County, you made the wrong call, the information doesn’t support the conclusion that there is enough water there – the factual information.<br><br>That whole statutory scheme is based on the concept that the water supply assessment is information, not decision-making by the District. It doesn’t embody – in this case, the water assessment embodies a decision. |

| <u>Speaker</u>   | <u>Dialogue</u>                                                                                                                                                                                                                                                                                                             |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Justice O'Rourke | What we are trying to ask you is what would preclude you from raising this point later?                                                                                                                                                                                                                                     |
| Mr. Garrett      | Your honor, I think what would happen and what has happened so far in the draft, which may happen when the County if they approve the project and certify the final, is they assume the 35 percent "Conservation Required" in 2020 from all 70,000 users is a given – is a touchstone which they, the County, can't review. |
| Justice O'Rourke | It's not – that doesn't answer the question. What precludes you from raising these issues later?                                                                                                                                                                                                                            |
| Mr. Garrett      | Well the standard – in a CEQA case, you weigh the information, and the question is, was the County's decision supported by substantial evidence.                                                                                                                                                                            |
| Justice O'Rourke | Can't you say the information provided by the water district is spurious and not credible and below the proven needs of the users? Can't you say that later? Our concern is this – that you're seeking a premature decision or should be say the advisory opinion from this court.                                          |
| Mr. Garrett      | Yes.                                                                                                                                                                                                                                                                                                                        |
| Justice O'Rourke | That's where we are getting at.                                                                                                                                                                                                                                                                                             |
| Justice Nares    | That's really the heart of our concern.                                                                                                                                                                                                                                                                                     |
| Mr. Garrett      | Yes. Understood. And in most cases, the water supply assessment is just information but what I'm saying here is that the County – there is a decision buried in here which the County is not reviewing.                                                                                                                     |
| Justice O'Rourke | But if the County won't let you raise the point, you come here on a writ, can't you?                                                                                                                                                                                                                                        |
| Mr. Garrett      | Yes.                                                                                                                                                                                                                                                                                                                        |
| Justice Haller   | Or you can come here and (inaudible) about what they did based on that.                                                                                                                                                                                                                                                     |
| Mr. Garrett      | And we will attempt to raise as much as we can.                                                                                                                                                                                                                                                                             |
| Justice Haller   | And you can challenge the EIR on that basis as well, can you not?                                                                                                                                                                                                                                                           |
| Mr. Garrett      | Well, we can challenge the EIR, and what I would like to example is that it's not clear what we will have same ability to challenge this decision                                                                                                                                                                           |

| <u>Speaker</u>   | <u>Dialogue</u>                                                                                                                                                                                                                                                                                                                                                      |
|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                  | that's embedded in this WSA in the CEQA process or in the Water Supply Verification process.                                                                                                                                                                                                                                                                         |
| Justice Haller   | We have 90 days after that is adopted. Do you know?                                                                                                                                                                                                                                                                                                                  |
| Mr. Garrett      | We can file the actions. We can file the lawsuits. But it's – what the issue is, is whether the County's decision that there was enough water for the project, is it supported by substantial evidence. So in that situation, the court is looking to see if there is evidence there. They are not weighing the evidence.                                            |
|                  | The County doesn't sit – as counsel for the County said in the trial court hearing, it doesn't sit as a super legislature. So the County is not reviewing and saying, was that a wise decision by the District to order that 35% cut back.                                                                                                                           |
| Justice Haller   | But –                                                                                                                                                                                                                                                                                                                                                                |
| Justice O'Rourke | But if you want an advisory opinion from us that it's not enough water, so that when you want to challenge everything down the road, you can point to our decision. It's a judicial determination of your point.                                                                                                                                                     |
| Mr. Garrett      | Well, let me put it this –                                                                                                                                                                                                                                                                                                                                           |
| Justice O'Rourke | I'm not sure we are equipped to give you that at this juncture, or at any juncture.                                                                                                                                                                                                                                                                                  |
| Mr. Garrett      | We're not – I'm not asking for a judicial decision that there is not enough water. What I'm asking for is the judicial decision that our first amended complaint stated a cause of action that embedded in the WSA was a decision by the District which was an invalid decision to order –                                                                           |
| Justice O'Rourke | It amounts to the same thing though doesn't it?                                                                                                                                                                                                                                                                                                                      |
| Mr. Garrett      | No, I don't – with all due respect your honor –                                                                                                                                                                                                                                                                                                                      |
| Justice O'Rourke | But you've got it nicely packaged and tight in the (inaudible) but that's basically what you are asking for counsel.                                                                                                                                                                                                                                                 |
| Mr. Garrett      | Well, I have searched and I have never found in a CEQA case, a situation where a lead agency like the County looks at a decision that one of the advisory decisions had made and says that is an incorrect legal decision; we the County sitting as the super legislature rule that that ordered 35% cutback which makes the books balanced that that was an invalid |

| <u>Speaker</u>   | <u>Dialogue</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                  | cutback because it conflicted with the District's Urban Water Management Plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Justice O'Rourke | It doesn't sound like very good water management from what you are portraying to build a subdivision and users that you can't support. South Africa now has a couple of cities undergoing similar problems with this very moment of running out of water.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Mr. Garrett      | And your honor, we do have a process in place and ordinarily, the process works. What happened here was embedded in the decision-making. First, it was a water supply verification. I mean, literally, the same words and we could challenge and the statute very clearly said we can sue can challenge that water supply verification and we did. That was how this case started. No one disagreed when we first filed our lawsuit against exactly those same words that we had a cause of action and that we were entitled to bring it because the Legislature specifically said there was a 90-day statute of limitations for the water supply verification. The label was changed. They changed it to water supply assessment. If they changed it to district resolution or district ordinance, I believe you would agree that we have a cause of action to say that ordinance is invalid because it conflicts with the Urban Water Management Plan. |
| Justice Haller   | So, you are saying that we should look below the surface so to speak and call it for what it is?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Mr. Garrett      | I think in this situation when you are looking at a demurrer and we pled it with a great deal of specificity, we pled –                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Justice O'Rourke | Can you allege that they are involved in a deceptive scheme by changing the labeling? What if you alleged it was –                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Mr. Garrett      | The only – what we alleged was that it word for word the same. They changed the label. And the only explanation given in the preceding was that they wanted to avoid costly litigation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Justice Haller   | Wait – what they did was they invalidated the WSV. It's not as if they changed labels. They have the right – the WSA can be filed at – the verification plan can be filed either with the EIR at the same time at that or at a later proceeding.<br><br>They initially filed them together, then when this litigation occurred, they decided we are not going to fight that battle right now. So they                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <u>Speaker</u> | <u>Dialogue</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                | therefore, invalidated that. So what's before us only is the WSA, which will become a part of the EIR.                                                                                                                                                                                                                                                                                                                                                                                                       |
| Mr. Garrett    | Your honor, I don't think we disagree. I just do want to say that the facts are that there was a single document. The heading was WSA/WSV. And that's what we sued on. And that – at that time everyone agreed that was a valid lawsuit. After our lawsuit was filed, the exact – this is what we pled – I mean, this is – I'm not making this up from – the exact same document was approved. But the title was changed and one footnote was changed. That's what we pled. That was the demurrer that the – |
| Justice Haller | I think all of us have great concern over your concern about the water. Your biggest issue here is whether you are just premature as we have been trying to discuss with you.                                                                                                                                                                                                                                                                                                                                |
| Mr. Garrett    | Right, and let me just – again, I'd rather answer your questions than say anything, but to go back to the question about WSA, I agree – normally, it would be premature. We just have an unusual fact pattern here which was decided on demurrer and I believe –                                                                                                                                                                                                                                             |
| Justice Nares  | Have you seen this fact pattern in any other water case?                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Mr. Garrett    | No, I haven't.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Justice Haller | So, you don't think the water case out of Los Angeles – really, yours is virtually on point?                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Mr. Garrett    | No, I don't because in that situation and C-WIN there was no –                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Justice Haller | Factual difference.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Mr. Garrett    | There was no allegation that the District – it was actually the city in approving the water supply assessment – was changing – was making a decision about that would affect all 70,000 users like requiring them to cut back. And in C-WIN, there was no argument that the water supply assessment conflicted with the Urban Water Management Plan. So, I mean, to us, those are two distinguishing things.                                                                                                 |
| Justice Haller | I think – the time for you to address the WSA is in connection with the EIR –                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Mr. Garrett    | Right.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <u>Speaker</u>   | <u>Dialogue</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Justice Haller   | And the time to address the W – water verification is at the point in time when final approval is being given and you have complete rights to be able to do that.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Mr. Garrett      | I agree with everything you said. I don't disagree with any of that except in the last sentence, the last phrase that you used, the nuances – if you look at the standard of review that is court or the trial court would apply, in looking at the County's decision to certify the EIR, the standard of decision there does not allow the court – first of all, the water district is not a party to that proceeding. So, the court does not have jurisdiction to say that the District acted improperly in making a decision in within that WSA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Justice O'Rourke | They have the power to say there's not enough water.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Mr. Garrett      | Yes they do.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Justice O'Rourke | Based on the record.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Mr. Garrett      | Let me give you a counterfactual.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Justice O'Rourke | Done that many times at the court haven't we?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Mr. Garrett      | <p>I would submit that if the District had adopted an ordinance that said, we've decided to cut things back. We are going cut thing things back by 35 percent. You know, our books don't balance right now. We are the only District in the state where they don't balance. We have this huge – we're going to change that and we are going to force all the District residents to cut back by that amount.</p> <p>Just assume that happened and assume it was supported by substantial evidence and they had details about how they were going to do that. And then they adopted this WSA, I'd be out of luck. Because at that point, there would be evidence in the record that the District had made a decision that justified that departure from the Urban Water Management Plan. So, for in that situation, I have no cause of action against the County for saying you were wrong when you said there was not enough – there was sufficient water because the County relied upon a District decision that all the users were going to be forced to cut back by 35 percent.</p> <p>So, it's that decision which I don't – I believe under the standard of review under CEQA, it's not clear that we'll be able to raise that issue, that legal issue. And again, the court –</p> |

| Justice Haller | Counsel, you may want to be careful about certain statements you're making today because they may come back to bite you in the CEQA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Mr. Garrett    | May come back to haunt me. Right – well, that's true. But I imagine that the court will rule what the appropriate way is on the law regardless of what I say today. And I'll have to act upon that. And at least I will know that I did not fail to sue when I needed to sue.<br><br>So I would say that. And again I would say secondly, we have the problem of the – what standard of review for the County to use and in this situation, we have the facts shown in our request for judicial notice where the County did except the District's decision to cut back. I mean, an integral part of their discussion about the water and the draft EIR is – this all makes sense. There will be these cutbacks. The District has said they will cause these cutbacks to take place. And unless, in a challenge that EIR, it is certain that my client can say, that assumption about that District decision is an incorrect decision. You the County should have looked beyond that and weighed whether that was the correct policy decision by the District or the correct legal decision by the District. Then, it's very difficult to say that the County's made a mistake. |
| Justice Haller | Well we'll see what the public has to say during the public period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Mr. Garrett    | I neglected to save any time for rebuttal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Justice Nares  | You may save time for rebuttal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Mr. Garrett    | Thank you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Justice Nares  | Everybody is going to be heard.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Mr. Garrett    | Okay. Thank you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Mr. Hubbard    | Good afternoon. My name is David Hubbard. I will be speaking on the behalf of Newland Sierra. I'm not sure if counsel for the County or the water district intends to make a presentation. I think they are available to answer questions of the panel.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Justice Nares  | And who do you represent?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Mr. Hubbard    | I represent Newland Sierra.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Justice Nares  | Okay.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Mr. Hubbard    | <p>Real Party in Interest. I'd really just like to make couple of quick points. The trial court properly followed the very clear directions that are provided in the C-WIN case. And in that case, the court held as a matter of law, a WSA is not a decisional document. It's not a final document that represents an action by the water district. It is informational only. The court even likened it to technical report that gets attached to an EIR. And for that reason, the court in C-WIN determined as a matter of law, the time and place to challenge anything associated with the WSA is during the CEQA process: make your comments known to lead agency, exhaust your administrative remedies, and if you are not happy with the result from the CEQA process, then you go and file a petition for writ of mandate in the superior court, and you can challenge the WSA at that point. As to – and that's what the court held, and that's what should happen in this case, and there is no prejudice to anyone here. No argument that Golden Door would like to make, no remedy that they would seek is foreclosed by letting the CEQA process run its course and then giving them the opportunity to sue at that point.</p> <p>But there is another issue that has gotten somewhat lost here. And that is Golden Door has yet another opportunity to challenge the WSA and that's through Government Code 66473.7 subdivision o. And what happens under that provision is that any member of the public that does not agree with the sufficiency of the water verification that the water district must issue before Newland Sierra can turn any dirt on their project at all, any person who is upset, doesn't agree with it, doesn't believe that the grounds on which the water verification was issued are sound, they can within 90 days to challenge it.</p> <p>Both of those remedies remain open for Golden Door. But we are just not there yet. The CEQA process has to complete itself. The County has to decide whether they want to approve this project at all. They may not. And if they decide to deny the project, all this goes away. But if they approve the project, still nothing can happen at Newland Sierra until they get their project specific water verification from the water district.</p> <p>And once that water verification is issued, Golden Door or any other person who wants to challenge it has ninety days to do so. And all of those issues about how the conservation requirements might be imposed or what – who's going to be affected by them, all of those things can be adjusted at that time.</p> <p>Again we're just not there yet. So, the fundamental point is that the demurrer takes nothing away from Golden Door. They lose nothing by it. All it requires is that they await the final decision from the County</p> |

|                | and the water district. I'm happy to answer any questions you might have.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Justice Nares  | Apparently none. Thank you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Mr. Hubbard    | Thank you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Justice Nares  | Anyone else wish to be heard? Just a second. Okay. Then, you may close.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Mr. Garrett    | <p>One thing that counsel just said is that after the EIR is finished, we can challenge the WSA at that time. That's actually not a correct statement. Again, the form of action is we can sue the County and we can say the County made the wrong decision in certifying the EIR and made the wrong decision because its decision wasn't supported by substantial evidence on certain issues, on water for whatever example. We cannot sue to overturn the WSA. There is no remedy for that. It's not provided under CEQA. It's not provided under the Water Code. The water district is not a party. So the WSA is a document that what was adopted in November of 2016 will stand regardless of what happens in CEQA.</p> <p>That's also true under the water supply verification process. And again, as we pled, that document embodies a present decision by the District – a decision at that time in 2016 to cut us all back by 35 percent – “Conservation Required.” Again, that's what we pled. And we believe that to be the case.</p> <p>We already here are facing the 35 percent cutback and neither the CEQA remedy nor the WSV remedy will allow us to overturn that decision. We literally have no other forum where the District will be a party. Where we can adjudicate the merits of the decision that is located there.</p> <p>The other thing I wanted to mention is that in the WSV process, the Legislature specifies that the WSA is substantial evidence. So, when we get to the WSV process, if you reject my lawsuit today and the – goes forward and the WSV can happen at any time whether or not the EIR is certified or not certified, the first thing is that the WSA is substantial evidence.</p> <p>Is the court in that situation in reviewing a WSV allowed to pierce that evidence and go behind it and say, we're going to go back several years to 2016 and decide that the WSA was wrongly taken and the conservation decision made in that WSA was wrongly decided by that</p> |

|                  | District for various legal reasons under the Water Code or the Urban Water Management Plan?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|                  | Again, I don't believe that the statute makes that clear at that time. We will make that argument if our lawsuit is rejected here but I would submit to the court that we run a substantial risk of not being able to overturn that decision and being faced with a substantial evidence review with the WSA that embodies decisions, and the court is going to say that was a policy decision by the District so we can't disregard that. The other question is what happens –                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Justice O'Rourke | You've made your record for a due process argument down the road haven't you –                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Mr. Garrett      | Well, I would love –                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Justice O'Rourke | – for the hearing you are entitled to.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Mr. Garrett      | I would love to say that due process applies to every legal challenge to every project but there are times when there are not remedies or you have to choose the right remedy, and if you don't pick the right remedy, you're out of luck. The last thing I wanted to say was that what happens if the project is rejected? What if the County says, no we're not going to approve the project for some other reason. What if the WSV isn't approved? The WSA still stands. It still embodies this cutback by 35%, and what are we to think? The District now decided that all 70,000 of us must cut back, and we don't have the water up to 2035, and this water is being saved, if you will, for new development and the existing users have to cutback.<br><br>Now that maybe a great policy decision by the District, but I submit its a policy decision that has to be made by the District via an ordinance, a resolution, and if they make that decision, it needs to be consistent with the Urban Water Management Plan. And, so we have no remedy in that situation either. Thank you. |
| Justice Nares    | Thank you very much. Thank you, the matter is submitted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

Re: Newland Sierra (Log No. PDS2015-ER-15-08-001; SCH No. 2015021036, Project Numbers: PDS2015-GPA-15-001, PDS2015-SP-15-001, PDS2015-REZ-15-001, PDS2015-TM-5597, PDSXXXX-HLP-XXX) – Transmittal of Report by Megan Jennings, Ph. D., re Biological Resource Planning with Respect to the Newland Sierra Project

Dear Ms. Smith:

As you know, we represent Golden Door Properties, LLC (“Golden Door”), a world-class resort and agricultural operation in rural Twin Oaks Valley. The Golden Door has restored farming and beekeeping on its property, including the replanting of many new trees on the property—sharing its bounty at a community Farm Stand and through retail operations. The Golden Door has raised many concerns with the County about the proposed Newland Sierra Project and the impacts of adding urban density the size of the City of Del Mar in our rural community.

We write today with particular respect to the Project’s biological resources analysis. The Golden Door and expert biologist Megan Jennings, Ph. D., have previously raised concerns regarding the Project’s impacts on wildlife connectivity and habitat fragmentation, and have provided comments to the County describing the draft environmental impact report’s (“DEIR”) flaws in analyzing these impacts. Attached is an additional report from Dr. Jennings supplementing prior comments. This report discusses the interrelation of wildfire risk and cumulative development projects to the proposed Project’s biological impacts. In particular, her report discusses the need for corridor redundancy as part of sound biological planning.

# **Effects of Wildfire on Wildlife and Connectivity**

*Prepared by: Megan K. Jennings, Ph.D.*

January 23, 2018

## **Introduction**

In southern California, where human impacts from development are limiting habitat connectivity for wide-ranging vertebrate species, fire is a disturbance regime that may also fragment habitats, further impacting those species. Although fire is a natural process in the southwestern U.S., increasing human development near open spaces has led to unnatural fire regimes with increased fire starts and an increased potential for vegetation-type conversion as a result. In the biodiversity hotspot of southern California, many studies have focused on the effects of urbanization and landscape fragmentation on wildlife. However, there has been relatively little attention to how human-mediated landscape fragmentation may influence natural disturbance processes, like wildfire, and how these synergistic disturbances impact wildlife populations.

Both fire frequency and size are increasing in southern California and are correlated with increasing anthropogenic development and human population growth in the region (Syphard et al. 2007, 2009). These studies suggest that at high human population densities, fire is eliminated from the ecosystem when contiguous vegetation necessary to carry fire is broken up by asphalt, concrete, and buildings. However, at intermediate human densities, housing developments and roadways are a source of increased fire ignitions which then spread into wildlands (Syphard et al. 2007, 2009). Both scenarios (too little fire, too frequent fire) present potential threats for species and community dynamics in southern California as shifts in the natural fire regime, coupled with increasing habitat fragmentation, have the potential to impact wildlife populations, communities, and entire ecosystems. In the highly urbanized landscape of southern California, long-term impacts such as habitat fragmentation and loss and shifts in disturbance regimes like the natural fire cycles, have resulted in persistent landscape changes (Syphard et al. 2009).

This report focuses on the impacts to wildlife connectivity posed by the proposed Newland Sierra project in the context of wildfires and the need for corridor redundancy. The Newland Sierra project proposes to build more than 2,100 homes on the I-15 corridor in the unincorporated portion of San Diego County between Escondido and Temecula. The project would be located in the area proposed for the North County Multiple Species Conservation Program (NCMSCP) on a site that has been identified as pre-approved mitigation area (PAMA).

As described in my previous reports (Jennings 2017a, 2017b), this project poses risks to wildlife connectivity in the area and could compromise overall design objectives of the NCMSCP. The proposed Newland Sierra project will significantly affect high quality core habitat and wildlife movement for both more common and sensitive and protected species to a degree that is not mitigated by the project design. The proposed project will have long-term direct and indirect impacts on wildlife from roadways, increased human activity, edge effects, human activity, and increasing fire frequency on wildlife movement. Due to the risks of wildfire and the numerous cumulative projects proposed along the I-15 corridor in northern San Diego County and southern Riverside County, it is particularly important to account for corridor redundancy in considering the Newland Sierra project. Regional connectivity plans must provide corridor redundancy to serve the range of species that may need to move between patches of habitat (Pinto and Keitt

2009, McRae et al. 2012), and to buffer against landscape disturbances, such as wildfires (Mcrae et al. 2008, McRae et al. 2012, Cushman et al. 2013, Olson and Burnett 2013). The biological analysis in the project's draft environmental impact report lacked sufficient consideration of these issues.

### **Impacts of Wildfires and Shifting Fire Frequencies on Wildlife**

Disturbances that occur at large spatial scales, such as Santa Ana wind-driven fires in southern California, like the recent Lilac Fire in San Diego County, are most likely to change landscape configuration, or pattern, which can lead to change in resource availability, environmental features, and corresponding responses in the structure of populations and communities, all key metrics to landscape integrity (Sousa 1984, Pickett and White 1985, Fraterrigo and Rusak 2008, Turner 2010). Large-scale landscape changes, particularly fragmentation (Gardner et al. 1993), have been shown to alter biotic interactions, and lead to a loss of connectivity evidenced by a decline in dispersal, reduced survival rates (Riley et al. 2003), and limited gene flow (Riley et al. 2006). In southern California, the two disturbances that overlap and interact, fire and human development, are the predominant drivers of the landscape. In this region, empirical evidence suggests a shift is underway in the disturbance regime (Keeley and Fotheringham 2003, Safford and Van de Water 2014).

Shifts in fire regime typically involve changes to fire intensity, size, frequency, type, seasonality, and severity (Flannigan et al. 2000). Fire-return intervals, the average time between two fire events, in the shrubland habitats like the areas where the Lilac Fire occurred and the Newland-Sierra development is proposed were historically 30 to 100 years. In similar areas of the County, fires are 33% more frequent now than pre-settlement, due in large part to increased development and roadways (Figure 1; Keeley et al. 1999, Safford and Van de Water 2014). This shifting disturbance regime with shortened intervals between fires interrupts the successional cycle, reduces plant diversity, and results in vegetation and habitat type change to non-native and grass dominated landscapes (Keeley 2005), reducing habitat suitability and connectivity for species dependent on intact shrubland landscape. Shifting weather patterns resulting from climate change may also contribute to the alteration of fire regimes in southern California. Climate models predict that temperatures will increase and humidity will decrease (Miller and Schlegel 2006). Under these conditions, Santa Ana winds, the hot, dry winds from the deserts in the east, may occur more often and later in the season when fuels loads are highest (Miller and Schlegel 2006, Guzman-Morales et al. 2016). The concurrent disturbances of expanding human development and a shifting climate may alter how fire structures the landscape. Extensive development, particularly in exurban areas, results in increases in human-caused ignitions and fires of large spatial extents (Syphard and Keeley 2015), as well as an overall increase in fire threat (Figure 2), which can have long-lasting impacts on the landscape and wildlife habitat.

Many wildlife species that occur in the Mediterranean-type ecosystems of southern California have adapted to wildfires. Wildlife exhibit differential responses to wildfires depending on the availability of refugia and species' mobility, which determine their susceptibility to impacts from the direct effects of the fire. Habitat and diet breadth, population size and growth rates, as well as landscape connectivity can affect post-fire colonization and overall resilience to these types of stochastic events. While some research efforts in southern California have taken advantage of the

natural experiment presented by San Diego's 2003 and 2007 wildfires to gather information about bird (Mendelsohn et al. 2008), small mammal (Brehme et al. 2011, Diffendorfer et al. 2012), large mammal (Schuette et al. 2014), and herpetofauna (Rochester et al. 2010) responses to wildfire, there is much to learn about individual- and population-level responses, in particular as it relates to increasing fire frequency. Linking the effects of shifting fire regimes on wildlife where frequent fire may result in vegetation type conversion from shrublands to grass-dominated habitats (Keeley 2005, Keeley and Brennan 2012) is a significant challenge. There is evidence of the effect of increasing fire frequency on some species, such as the iconic coastal sage scrub species, the threatened California gnatcatcher (*Polioptila californica californica*). Already challenged by habitat loss and fragmentation in the coastal regions of southern California, frequent fires have degraded habitat for the gnatcatcher (Winchell and Doherty 2014) as California sagebrush (*Artemisia californica*), laurel sumac (*Malosma laurina*), and white sage (*Salvia apiana*), key habitat elements for the bird, have been replaced by non-native annual grasses in areas that have experienced repeated fires. Habitat specialists and small species are not the only ones subject to the impacts of increasing fire frequency. Despite the fact that mountain lions (*Puma concolor*) are highly mobile and able to move away from fires, the species is potentially at risk from vegetation-type conversion to non-native annual grasslands (Jennings et al. 2016). Although this species may tolerate grasslands when moving between habitats (Zeller et al. 2014), habitat fragmentation between San Diego County and the Santa Ana Mountains to the north has limited gene flow and resulted in inbreeding for the southern California population (Ernest et al. 2014), a situation which further habitat degradation, particularly as a result of increasing fire frequency, could worsen.

### **Wildfire and Connectivity**

Habitat connectivity is essential to climate-smart landscape strategies (Heller and Zavaleta 2009) and strengthens ecosystem resilience to additional stressors such as habitat fragmentation (Beier and Gregory 2012), and other disturbances, e.g., fire and disease (Noss 1991, Hilty et al. 2006). Across much of southern California, the state's Natural Community Conservation Planning (NCCP) program and the federal Habitat Conservation Plan (HCP) have been used to establish conservation networks to protect natural communities and prevent further habitat fragmentation (Ogden Environmental and Energy Services 1996, Riverside County 2003). Although the direct effects of anthropogenic landscape alteration, namely habitat loss and fragmentation, are paramount in this region (Soulé 1991, Crooks 2002, Beier et al. 2006), the indirect effects of intense human development such as changing patterns of natural disturbance regimes, e.g. wildfire, may present an equally large risk to landscape integrity. As human populations in southern California have grown dramatically over the last century, particularly in coastal areas, short fire-return intervals paired with habitat fragmentation, may have synergistic and long-term impacts on landscape connectivity that present a formidable conservation challenge. Given that these disturbances exert measurable impacts individually (Lindenmayer et al. 2008, Turner 2010), it is likely that the synergistic effects of shifting disturbance regimes and fragmentation present a serious threat to landscape connectivity (Turner 2010).

Given the importance of landscape connectivity to ensuring population viability and persistence, accurate assessments of physical and functional connectivity are critical. Dynamic landscape processes, like wildfires, may impede movement for many species in the short-term, but an altered fire regime may permanently alter landscape linkages. In particular, shifting disturbance

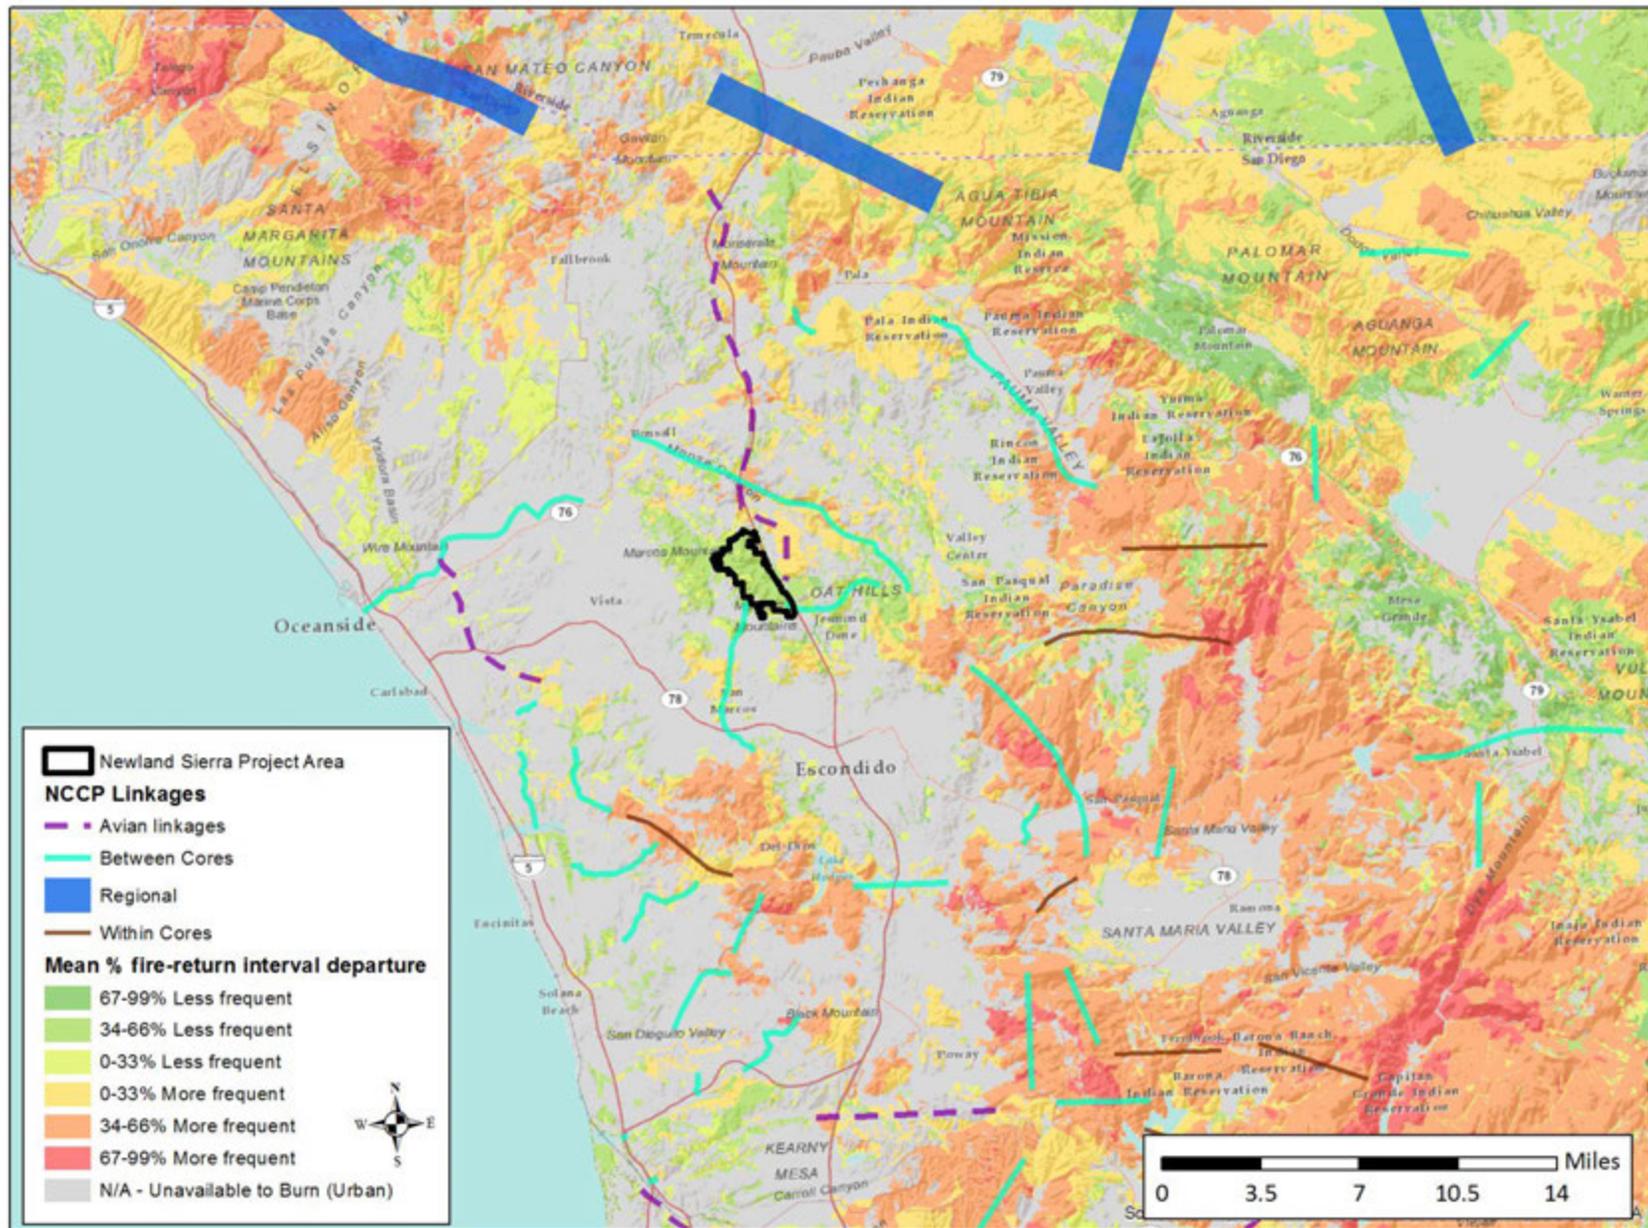

regimes, like the increase in fire frequency and size reported in southern California, may have synergistic impacts that erode landscape connectivity if efforts are not made to buffer the number or impacts of fire on landscape linkages. New approaches to identifying factors that impair physical and functional connectivity are needed to develop mitigation strategies to maintain landscape connectivity if urbanization is considered on fire-frequent landscapes, with a particular focus on the coastal areas that are most impacted by development, and foothills and valleys where the wildland-urban interface is most at risk for increases in fire frequencies and consequential type conversion.

Building resilience into these networks of conserved lands can be approached from two perspectives: 1) reducing ignitions in fire-prone areas, and 2) account for these altered disturbance dynamics in conservation planning efforts like the Draft NCMSCP. Robust measures to reduce ignitions should be employed. However, reducing ignitions alone is unlikely to protect San Diego County's open spaces from fire and must be paired with complementary approaches to provide for habitat and connectivity when fires do occur. This includes planning for redundancy in linkages connecting habitat patches (Pinto and Keitt 2009). Because a single path is unlikely to equally serve all individuals of a species, let alone all potential species that may need to move between patches of habitat, multiple corridors between landscape blocks are often necessary (Pinto and Keitt 2009, McRae et al. 2012). Furthermore, this redundancy can also buffer against uncertainty and dynamic processes, particularly disturbances, on the landscape (Mcrae et al. 2008, McRae et al. 2012, Cushman et al. 2013, Olson and Burnett 2013). As discussed in my previous comments on the Newland Sierra draft environmental impact report, the project's biological analysis is deficient in its consideration of corridor redundancy. Threats to wildlife connectivity from wildfire emphasize the need to consider corridor redundancy with respect to Newland Sierra and the NCMSCP.

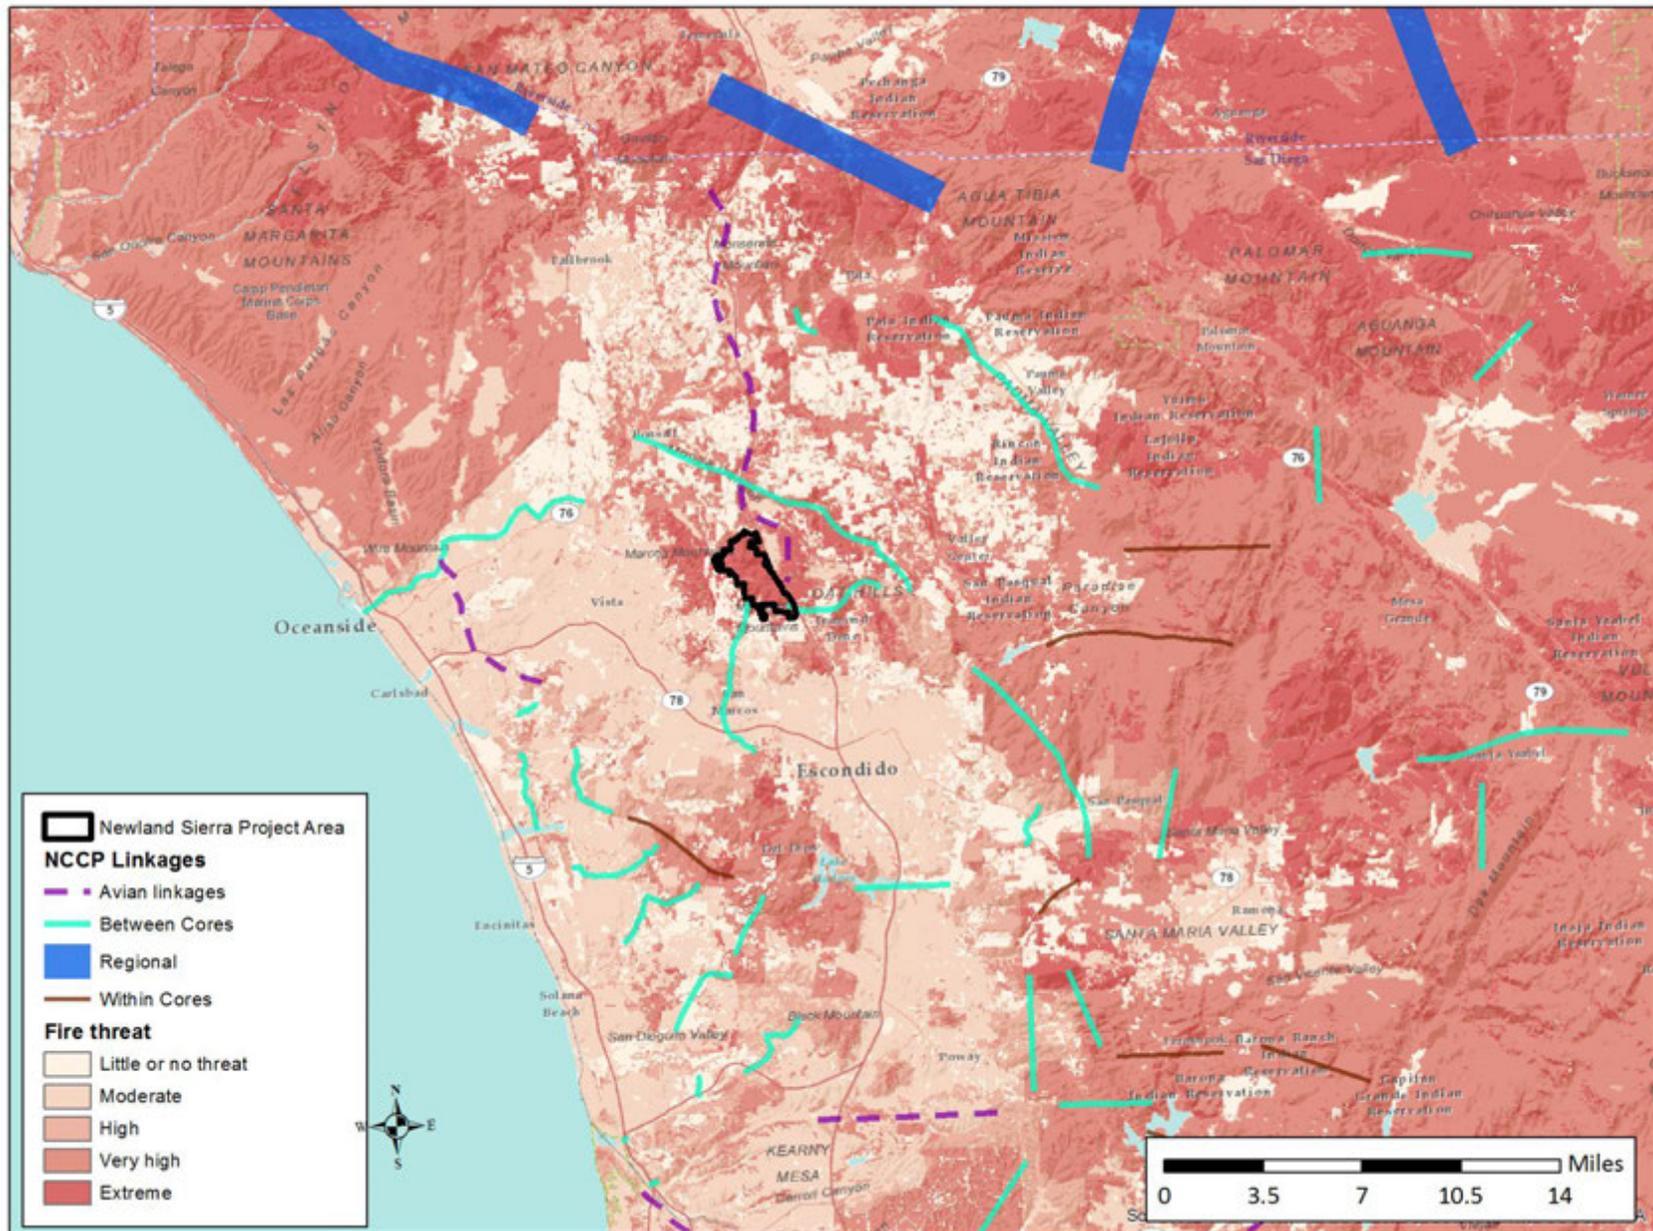

Furthermore, the assessment of connectivity and redundancy to provide for wildlife movement under a variety of conditions must be conducted at a regional scale. For San Diego County, this means consideration of conservation planning efforts and acquisitions as well as development projects in Orange and Riverside Counties. In particular, the Santa Ana-Palomar landscape linkage that has been identified as a critical movement corridor for many species (South Coast Wildlands 2008), most notably the mountain lion (Vickers et al. 2015), spans both San Diego and Riverside Counties and could be affected by several development projects that could limit functional connectivity in northern San Diego County.

Together with the cumulative projects proposed in this region, Newland Sierra could restrict wildlife movement in northern San Diego County as well as any opportunities to build resilience into a regional connectivity plan by providing for corridor redundancy. The Merriam Mountains area is currently one of the few shrub-dominated open spaces in San Diego County that has not experienced overly frequent wildfires which lead to increased risk of vegetation-type conversion from shrublands to non-native annual grasslands (Figure 1). Preserving a relatively intact landscape, such as the Merriam Mountains, is critical to developing a functional preserve system for the NCMSCP. However, the proposed Newland-Sierra Project's new roadways, increased traffic, homes, and increased wildland-urban edge are all known sources of fire ignitions in southern California (Syphard and Keeley 2015) that will threaten to increase the fire frequency in this area, which is already at high risk of fire due to the site's vegetation and terrain features

(Figure 2), as well as the risk of vegetation-type conversion. These same project elements will also further restrict wildlife movement in an area where movement is already constrained. The synergistic effects of restricted movement and habitat degradation caused by increasing fire frequency could greatly reduce connectivity in this region and threaten the functionality of the proposed preserve network under the NCMSCP. Figure 1 illustrates that few linkages remain in San Diego County that are not challenged by crossing urban development or areas that have burned repeatedly and are at risk for weed incursion, habitat degradation, and vegetation-type conversion. When dynamic landscape processes are considered, effective planning for landscape connectivity will require consideration of all potential projects that may affect wildlife movement as well as the synergistic disturbances that also affect landscape connectivity. The NCMSCP provides an opportunity for this type of regional wildlife connectivity planning, but individual development proposals considered in isolation and without adequately accounting for regional corridor redundancy could threaten the overall effectiveness of the planning process.

**Figure 1.** Map of fire-return interval departure (Safford and Van de Water 2014) for northern San Diego County and linkages identified in the [Management Strategic Plan Connectivity documents](#) for San Diego’s NCCP areas.

**Figure 2.** Map of fire threat for northern San Diego County as classified by [California’s Fire and Resource Assessment Program](#) and linkages identified in the [Management Strategic Plan Connectivity documents](#) for San Diego’s NCCP areas.

Re: County's Incomplete Response to Golden Door's Public Records Act Request Regarding the Draft NC MSCP and Newland Sierra Project Site

Dear Mr. Menvielle:

I am writing on behalf of Golden Door Properties, LLC ("Golden Door") regarding its August 8, 2017 request under the Public Records Act for records relating to the North County Multiple Species Conservation Program ("NC MSCP") and the Newland Sierra project site. We thank you for your response; however, your response appears incomplete. Several of our requests were not met, and some documents appear to have been improperly withheld or redacted. We ask that you supplement your response within 10 calendar days of the date of this letter and provide any necessary clarifications regarding the County's basis for withholding certain information.

As you know, the Golden Door opposes the Newland Sierra project and has reviewed and commented on the County's environmental documents for that project. The biological analysis in the draft environmental impact report ("DEIR") for the Newland project relies on a proposed "hardline" designation for the project site in the NC MSCP—a plan that is in draft form and has not been published, despite previous representations that the draft plan would be made publicly available by the end of 2017. In order to more fully understand the County's purported justification for this proposed "hardline" designation, the Golden Door requested information from the County under the Public Records Act. The County has repeatedly asserted that it has scientific evidence to support its characterization of the Newland project site as a "hardline" in the NC MSCP; yet, this information has not been provided to the public. The documents produced by the County in response to the Golden Door's August 8, 2017 request fail to support the County's claims and raise significant concerns about the characterization of the Newland site as a "hardline" project in the draft NC MSCP. The effect of this failure is compounded because the Newland Sierra project's DEIR relies on these unsupported claims and illusory analysis regarding the NC MSCP to make significance determinations under the California Environmental Quality Act ("CEQA").

Unless the County provides this underlying analysis and evidence as previously requested, we must conclude that the inclusion of the Newland Sierra project in the NC MSCP was the result of a political concession in favor of a developer advocating for an unapproved amendment to the General Plan and not the result of an actual, good faith, substantive planning effort based on biological principles and evidence or an objective and good faith environmental review. The absence of this evidence calls into question the veracity of the following statements made in the County's June 5, 2017 letter (from County Planning and Services Director Mark Wardlaw):

- “[I]nclusion of the Project in the Draft Plan does not, in any manner, indicate County support for the Project or provide the Project with an approval advantage.”
- “The Project’s inclusion in the Draft Plan reflects the County’s view that the Project’s proposed development footprint and open space preserve area should be considered within the conservation analysis for the Draft Plan but does not give the project any preferential treatment or eliminate any mitigation requirements.”
- “A fundamental piece of the Draft Plan will be a conservation analysis that forms the scientific basis upon which the Wildlife Agencies will base their biological opinions and findings in order to issue the County an Incidental Take Permit per the Act. The conservation analysis is currently in a working draft form that includes a preliminary analysis of potential impacts in the planning area, as well as an analysis of potential build-out of a preserve through mitigation, avoidance, and land acquisition. In order to complete this analysis, the County conducted an assessment of potential projects that are currently expected to occur within the planning area for the Draft Plan.”

Should any such evidentiary support actually exist, the County must provide it to the public and re-circulate the Newland Sierra DEIR. If no such evidentiary support exists – which would be contrary to the County’s prior public statements – the County must remove any analysis or conclusions relying upon the non-existent biological analysis in the Newland Sierra DEIR and recirculate the document.

**I. THE COUNTY HAS FAILED TO PROPERLY DISCLOSE PUBLIC RECORDS IN RESPONSE TO THE GOLDEN DOOR’S REQUEST.**

The Golden Door’s August 8, 2017 records request cited specific language from (1) a June 5, 2017 letter from County Planning and Services Director Mark Wardlaw (**Attachment A**) and (2) a May 23, 2017 draft of the NC MSCP, and requested various documents and communications regarding the same. The County, however, has failed to provide such documents, which include a preliminary conservation analysis, documents pertaining to County biologists, a specific request from a project applicant, and specific biological surveys. Notably, we are now approaching a year that these issues continue to be unresolved, and the public has still not seen a revised draft of the NC MSCP or the explanations or analysis that Mr. Wardlaw promised in his letter from last June. Notably, Mr. Wardlaw repeatedly stated in his June 5, 2017

letter that a new draft NC MCSP, along with supporting evidence, would be released to the public for review “by the end of 2017.” Nearly half-way through 2018, we have yet to see this new draft or the supporting evidence that the County asserts exists but refuses to disclose.

**Preliminary Conservation Analysis.** The Golden Door requested the “preliminary conservation analysis” referenced in Mr. Wardlaw’s June 5, 2017 letter and various communications pertaining thereto. The documents produced by the County do not appear to include a “preliminary conservation analysis.” The County produced a document titled “Preliminary Comments on the Conservation Strategy Methodology by FWS for discussion at 4-13-17 meeting w/ County.” This document is attached as **Attachment B**. Attachment B appears to be a list of comments prepared by the U.S. Fish and Wildlife Service (“USFWS”) responding to a separate “conservation analysis” with specific page references. The underlying document to which the USFWS comments respond, however, is not provided. Further, the “preliminary conservation analysis” noted in Mr. Wardlaw’s letter appears to reference a document prepared by “County biologists,” not a document prepared by USFWS.<sup>1</sup>

Please provide the “preliminary conservation analysis” referenced in Mr. Wardlaw’s letter and the authors and date of such document. Please also provide all related documents and communications, as requested in the Golden Door’s August 8, 2017 letter, to the extent such documents have not already been disclosed. Should the County determine that any records or portions of records might be exempt from disclosure, pursuant to Government Code section 6253, please disclose the non-exempt portion of the document and redact the portion the County asserts is exempt from disclosure and state the specific legal basis upon which such information is being withheld.

**County Biologists.** The Golden Door requested communications related to the Newland Sierra project site and the “County biologists” referenced in Mr. Wardlaw’s June 5, 2017 letter. The documents produced by the County do not identify any “County biologists” and do not provide any contracts or other documents demonstrating a relationship between any biologists and the County that demonstrate the existence of any “County biologists.” The County’s own CEQA Guidelines require a memorandum of understanding following a specific form to be executed with consultants, such as any “County biologists” providing analysis for the NC MCSP.<sup>2</sup>

Two email chains produced by the County include communications with Tom Oberbauer of AECOM. One email chain from December 19, 2016, includes an email sent from County staff member Alexandra Elias to Mr. Oberbauer in which she asks whether Mr. Oberbauer is “doing

---

<sup>1</sup> The complete sentence in Mr. Wardlaw’s June 5, 2017 letter referencing the “preliminary conservation analysis” reads as follows: “In conducting the preliminary conservation analysis, **County biologists** believe that the open space design and future preservation of the 1,209 acres of land that the Project proposes complements the anticipated preserve and Pre-Approved Mitigation Area for the Draft Plan.” (Emphasis added.)

<sup>2</sup> The County’s CEQA Guidelines, including a sample memorandum of understanding, are available online at <http://www.sandiegocounty.gov/pds/docs/CEQAGDLN.pdf>.

the ‘project review’ of the proposed Newland hardline for consistency with the Planning Agreement/NC Plan.” This email is attached as **Attachment C**. No response to Ms. Elias’s question is provided.

The second email chain ranges from December 7, 2016, to December 19, 2016, and includes a request from Ms. Elias to Mr. Oberbauer to “have a biologist that knows the NC plan look at a proposed hardline for a project to ensure that making findings can be made prior to including it in the Plan.” Ms. Elias goes on to note that draft findings and “other bio info” have already been prepared and are ready for Mr. Oberbauer’s review. In a subsequent email on this chain, Mr. Oberbauer states that he can review the information. The name of the project referenced in this second email chain is not provided, and no responsive analysis from Mr. Oberbauer is included. This second email chain is attached as **Attachment D**. We also note that portions of Attachment D have been improperly redacted. (Discussed further below.)

Based on review of the County’s production, therefore, it appears that the County considers Mr. Oberbauer to be its sole biologist, the County lacks any formal agreement with Mr. Oberbauer, and the County is unable to produce any biological analysis provided by Mr. Oberbauer. Moreover, it appears that Mr. Oberbauer was provided with findings and “other bio info” that had been prepared by someone else and that he did not provide any unique analysis or data. In addition, we note that Mr. Oberbauer is not included on the County’s list of approved CEQA consultants (**Attachment E**). Finally, Mr. Wardlaw’s letter referred to “County biologists” in the plural, but the documents produced by the County provide no indicia of any other individual that could potentially be construed as one of the “County biologists” referenced by Mr. Wardlaw.

Please provide the names of all “County biologists” referenced in Mr. Wardlaw’s letter, describe the relationship of such biologists to the County, and provide any documents, including contracts or other agreements, setting forth or describing the relationship between such biologists and the County. Please also provide all related documents and communications, as requested in the Golden Door’s August 8, 2017 letter, to the extent such documents have not already been disclosed. Should the County determine that any records or portions of records might be exempt from disclosure, pursuant to Government Code section 6253, please disclose the non-exempt portion of the document and redact the portion the County asserts is exempt from disclosure and state the specific legal basis upon which such information is being withheld.

**Applicant’s Request.** The Golden Door requested documents and communications related to the “applicant’s request” that the Newland Sierra project site be included as a “hardline” project in the draft NC MSCP, which is noted in a May 23, 2017 draft of the NC MSCP. The County produced no such request from the “applicant,” which is presumably Newland Sierra. Please provide the “applicant’s request” referenced in the May 23, 2017 draft of the NC MSCP and all related documents and communications, as requested in the Golden Door’s August 8, 2017 letter, to the extent such documents have not already been disclosed. Should the County determine that any records or portions of records might be exempt from disclosure, pursuant to Government Code section 6253, please disclose the non-exempt portion of the document and redact the portion the County asserts is exempt from disclosure and state the specific legal basis upon which such information is being withheld. Please note that any

communications from Newland Sierra or its representatives to the County regarding the NC MSCP may not be subject to any claim of privilege, because Newland Sierra is not a party to the NC MSCP.

**Biological Surveys.** The Golden Door requested specific “[b]iological surveys” referenced in the May 23, 2017 draft NC MSCP, which purportedly were conducted between 2000 and 2015, as well as related documents and communications. The County’s disclosure did not include any biological surveys. Please provide the “[b]iological surveys” referenced in the May 23, 2017 draft of the NC MSCP and all related documents and communications, as requested in the Golden Door’s August 8, 2017 letter, to the extent such documents have not already been disclosed. Should the County determine that any records or portions of records might be exempt from disclosure, pursuant to Government Code section 6253, please disclose the non-exempt portion of the document and redact the portion the County asserts is exempt from disclosure and state the specific legal basis upon which such information is being withheld.

## **II. THE COUNTY IMPROPERLY WITHHELD AND REDACTED DOCUMENTS**

In addition to our concerns that the County failed to provide documents responsive to the Golden Door’s request, we are concerned that certain documents and information have been improperly withheld or redacted. The California Public Records Act dictates that public records must be disclosed to the public, upon request, unless there is a legal basis not to do so. The County has asserted blanket privilege and withholding claims, without providing the specific basis for nondisclosure of the information. Any exemption to disclosure is narrowly construed. (*County of Los Angeles v. Superior Court* (2012) 211 Cal.App.4th 57, 63.)

**Withheld Documents.** Your letter dated September 8, 2017, states that “several” email chains were withheld pursuant to the attorney-client privilege and that two email chains were withheld because they would reflect or reveal the deliberative process between staff and management.

For the several email chains withheld pursuant to the attorney-client privilege, the County provides no information aside from its assertion of privilege. Please describe each email withheld pursuant to the attorney-client privilege, including the individuals sending or receiving the emails, the email’s date, the specific request from the Golden Door to which the email is responsive, and the basis for the privilege. In addition, please disclose whether any such emails have been shared with third parties, such as Newland Sierra, which may break any otherwise applicable privilege asserted by the County. Or, pursuant to Government Code section 6253, redact the portions of these records that the County asserts is privileged and produce the remainder of the document that is non-privileged, such as the email headers with factual information regarding the sender, addressees, cc’s, bcc’s, transmittal date and time, etc. Without such information, it is impossible for us to evaluate the County’s assertions of privilege with the information available to us.

For the two email chains withheld subject to the deliberative process privilege, a brief, conclusory, and insufficient description is provided. When asserting the deliberative process privilege, the burden is on the party asserting the privilege to establish the conditions for the

privilege. (See *Citizens for Open Gov't v. City of Lodi* (2012) 205 Cal.App.4th 296, 306; *Humane Society of U.S. v. Superior Court* (2013) 214 Cal.App.4th 1233, 1267.) Here, your September 8, 2017 letter describes that the two email chains withheld pursuant to the deliberative process privilege pertained to internal discussions regarding questions received from the public and a general policy statement about avoiding “chilling” staff’s communication. While we do not dispute the principles of this general policy statement about “chilling,” mere recitation of generally applicable policy is insufficient to invoke the deliberative process privilege. (*Citizens for Open Gov't, supra*, 205 Cal.App.4th at 307.) In addition, the deliberative process privilege is provided for senior public officials, not all levels of agency staff. (See *Regents of University of California v. Superior Court* (1999) 20 Cal.4th 509, 540.) The deliberative process privilege also is reserved for formulation of government policy, not any communication among or between staff members. (*Ibid.*).

Further explanation is required, and we request that for each withheld email you provide, at least, the individuals sending or receiving the emails, the email’s date, the specific request from the Golden Door to which the email is responsive, the question from the public being discussed, and a thorough description of the public’s interest in non-disclosure of each specific email in the importance CEQA places on public disclosure of information relating to a public agency’s environmental analysis. In addition, please disclose whether any such emails have been shared with third parties, such as Newland Sierra, which may break any otherwise applicable privilege asserted by the County. Or, pursuant to Government Code section 6253, redact the portions of these records that the County asserts is privileged and produce the remainder of the document that is non-privileged, such as the email headers with factual information regarding the sender, addressees, cc’s, bcc’s, transmittal date and time, etc. Without such information, it is impossible for us to evaluate the County’s assertions of privilege with the information available to us.

**Redacted Document.** In addition, the County redacted significant portions of an email chain between Mr. Oberbauer and County staff, which has been attached as **Attachment D**, including non-privileged information contained in the email headers. (See, e.g., California Civil Discovery Practice (4th ed Cal CEB) § 3.8 [“The privilege, however, protects only the content of the communication; it does not immunize the underlying facts from disclosure.”].) We are unaware of any privilege protecting the biologist’s communications with the County, and we ask that the County provide more detail on the basis for redacting the emails, including the factual information contained in the email headers. The basis for such redactions was not discussed in your letter of September 8, 2017. It appears that an attorney may be included on the email chain via a “gmail” account; therefore, more information is needed to understand any attorney-client relationship that may be implicated and how privilege is implicated for the redacted portions of the email chain. The County cannot properly claim a blanket privilege based on the mere inclusion of an attorney on the email.

Further, we do not believe the emails constitute a “deliberative process” because the biologist is not a member of the agency, nor is the County in the process of evaluating an action or making a decision. (Gov. Code §§ 6254(k), 6255; *Rogers v. Superior Court* (1993) 19 Cal.App.4th 469, 478 [citing *American Civil Liberties Union v. Deukmejian* (1982) 32 Cal.3d

440, 447]; see also *Times Mirror Co. v. Superior Court* (1991) 53 Cal.3d 1325, 1342.) The County must clarify its reasoning behind asserting the deliberative process privilege.

Moreover, we are concerned this email chain may have been shared with representatives of the Newland Sierra or other third parties that may break any otherwise applicable privilege, if one exists. We request the County to explain whether the emails have been shared with any third party and the basis for any assertion of the privilege with such parties.

Because these emails may contain important information regarding biological issues necessary for the public to adequately participate in the NC MSCP process and to understand the Newland Sierra DEIR's reliance on such information, please provide a response within 10 calendar days of the date of this letter. It has been nearly a year since the County asserted to us that evidence for the Newland Sierra project's inclusion in the NC MSCP indeed exists but, to date, no evidence to support that claim has been made available. Accordingly, if we do not hear back within a reasonable time period, please be advised that we are prepared to exercise our rights under Government Code sections 6258 and 6259 to judicial review of the propriety of the County's disclosure in this matter.

We thank you for your time and attention to this matter. Please do not hesitate to contact us should you have any questions or comments.

Sincerely,

Taiga Takahashi

## **RESPONSE TO "INVESTIGATION NEEDED INTO NEWLAND'S MISLEADING BACKROOM DEALING FOR ITS 'SIERRA' PROJECT AND POTENTIAL IMPLICATIONS FOR COUNTY STAFF"**

Dear Mr. Garrett,

At the request of the County Board of Supervisors and Chief Administrative Officer Helen Robbins-Meyer, Planning & Development Services (PDS) is responding to your May 17, 2017 letter titled "Investigation Needed into Newland's Misleading Backroom Dealing for Its 'Sierra' Project and Potential Implications For County Staff."

### **Background**

As you know, the County is currently processing an application submitted by Newland Sierra LLC for a proposed development project (Project) located north of Deer Springs Road, directly west of Interstate 15 in the North County Metropolitan Subregional Plan and Bonsall Community Plan areas, within unincorporated San Diego County. The Project includes a General Plan Amendment, Specific Plan, Rezone, and Tentative Map to subdivide approximately 1,985 acres into 2,135 dwelling units, 81,000 square feet of commercial space, a 6-acre school site, approximately 36 acres of public and private parks, 19 miles of trails and approximately 1,209 acres of biological open space. While the Project is located on a site similar to that on which the former Merriam Mountains project was proposed, it is a new application and includes a new project description.

### **County's Role in the Process**

As the lead agency, PDS completes an independent evaluation of private land development applications, including the Project, for compliance with applicable County, State and Federal laws, regulations and ordinances. As such, PDS is not an advocate for or against the Project, but acts in an independent regulatory capacity as the lead agency for the Project. Based on its independent evaluation of the Project's compliance with applicable requirements, PDS will

formulate a recommendation for the Planning Commission and then the Board of Supervisors (Board) who has the ultimate authority to (i) certify or decline to certify an Environmental Impact Report (EIR) for the Project; and (ii) approve or deny the Project. In addition, and as described more fully below, during the processing of the Project by the County, there will be extensive opportunities for public review and comment, including input from the appropriate community/ sponsor group, public review and comment of the Draft EIR, and public hearings held by both the Planning Commission and the Board about the Project and the evaluation. This is in addition to the public EIR scoping meeting and Notice of Preparation (NOP) public review period that have already occurred for the Project.

As part of the County's independent evaluation of projects, PDS consults with other agencies which may have additional permitting authorities. Your letter raises concerns that PDS staff are included on emails between the United States Fish and Wildlife Service (USFWS) and the California Department of Fish and Wildlife (CDFW) (collectively referred to as Wildlife Agencies) and the applicant. However, it is common practice for the County, a project applicant, and the Wildlife Agencies to communicate where a project will require approvals and/or concurrence from both the County and the Wildlife Agencies. It is also standard practice for the County to elevate issues within an agency to pursue issue resolution. The County's role in communicating with other agencies does not include advocating or lobbying these agencies to approve projects. The County has not traveled to the USFWS Regional Office in Sacramento or to the USFWS office in Washington, D.C. on behalf of the project applicant to circumvent working with the local USFWS Carlsbad Office.

While the County facilitates the public input process and consults with outside agencies, it should be clarified that the Building Industry Association (BIA) is independent from the County. None of the analysis or determinations made by PDS were based on the BIA matrix nor did the County have any involvement in its preparation. Lastly, PDS recovers the full cost of services related to the processing land development permit applications through deposit accounts that are paid for by project applicants. PDS does not use public funds to process permit applications.

### **Public Participation in the Process**

A Draft EIR is being prepared for the Project by the applicant and will be released for a 60-day public review and comment period. All public comments received during the comment period are responded to and included in a Final EIR to be presented to the Planning Commission and Board at noticed public hearings for consideration and action. The Project will also likely require permits from the California Regional Water Quality Control Board and the U.S. Army Corps of Engineers and will, therefore, also likely undergo public review in accordance with the National Environmental Policy Act (NEPA).

Impacts to biological resources are studied as part of the California Environmental Quality Act (CEQA) and NEPA processes and appropriate mitigation is required to be provided. Through analysis of the biological resources onsite, it has been determined that the Project will result in impacts to Diegan coastal sage scrub (CSS) and result in the need for "take" of the California gnatcatcher, a federally listed threatened species. In accordance with the Endangered

Species Act (Act), there are currently three options for the Project to pursue take authorization for the California gnatcatcher including: (i) obtaining a Section 7 permit; (ii) obtaining a Section 10 permit; or (iii) through the issuance of and concurrence on a Habitat Loss Permit (HLP) in accordance with Section 4(d) of the Act, State Natural Community Conservation Planning (NCCP) Act Conservation Guidelines and Process Guidelines, and the County's HLP Ordinance implementing the 4(d) process. The applicant's pursuit of these permits requires the County's involvement with and determinations by the Wildlife Agencies.

#### **Multiple Species Conversation Program – Draft North County Plan (Draft Plan)**

The Project is also located within the planning area for the Multiple Species Conservation Plan – Draft North County Plan (Draft Plan), a regional multi-species Habitat Conservation Plan (HCP) and NCCP currently being prepared for consideration and approval by the Board and the Wildlife Agencies. Should the Draft Plan be approved, it would provide a fourth option for the Project to pursue take authorization for the California gnatcatcher.

As part of the effort to develop the Draft Plan, the County is conducting stakeholder outreach and engagement to gather input and feedback from interested parties as we work with the Wildlife Agencies to develop the Draft Plan. The County intends to release a public review of the Draft Plan and kick-off scoping for the environmental documentation process by the end of 2017, including the issuance of a NOP.

Currently, the County shows the Project site as a proposed "hardline" (preserve and development area defined) project within the Draft Plan. As was done in the previous public review of a prior iteration of the Draft Plan that was released in 2009, the anticipated public review of the Draft Plan will include supplemental information within an appendix that explains and justifies why certain projects were included as proposed hardlines. Information provided below indicates some of the rationale for including proposed hardline projects, which will be fully articulated in the public review of the Draft Plan that is anticipated for release at the end of 2017. It should also be noted that although the Wildlife Agencies accepted a hardline for the former Merriam Mountains project, this Project does not propose to revise or rely upon that hardline, but instead proposes a new hardline based on the current proposed Project.

In order for a project to be included as a hardline within the approved Multiple Species Conservation Plan – North County Plan (Final Plan), the project footprint to be developed and the footprint to be preserved, including any offsite mitigation areas, must be concurred upon by the Wildlife Agencies, the project proponent, and the County. While the Project is the only proposed project included within the current Draft Plan that has not yet received Board approval, inclusion of the Project in the Draft Plan does not, in any manner, indicate County support for the Project or provide the Project with an approval advantage. The Project will separately need Board approval as required by applicable laws and ordinances, and if it is denied by the Board or significantly revised, it will be removed or modified within the Draft Plan. In addition to the Board's required approval of the Project, the Wildlife Agencies will also need to approve take, either through the incidental take permit for the Final Plan or via one of the other options listed above.

The Project's inclusion in the Draft Plan reflects the County's view that the Project's proposed development footprint and open space preserve area should be considered within the conservation analysis for the Draft Plan but does not give the project any preferential treatment or eliminate any mitigation requirements. A fundamental piece of the Draft Plan will be a conservation analysis that forms the scientific basis upon which the Wildlife Agencies will base their biological opinions and findings in order to issue the County an Incidental Take Permit per the Act. The conservation analysis is currently in a working draft form that includes a preliminary analysis of potential impacts in the planning area, as well as an analysis of potential build-out of a preserve through mitigation, avoidance, and land acquisition. In order to complete this analysis, the County conducted an assessment of potential projects that are currently expected to occur within the planning area for the Draft Plan.

The main purpose of identifying projects and including them as proposed hardlines is so they can be properly incorporated in the conservation analysis of the Draft Plan. Inclusion of the Project as a proposed hardline does not exempt the project from or eliminate the need for the Project to provide mitigation for its biological impacts under either the Act or CEQA. In conducting the preliminary conservation analysis, County biologists believe that the open space design and future preservation of the 1,209 acres of land that the Project proposes complements the anticipated preserve and Pre-Approved Mitigation Area for the Draft Plan. As a result, the Project has been included in the Draft Plan and, to be included in the Final Plan, the Wildlife Agencies must concur. The Final Plan will also have to be approved by the Board.

The County appreciates your interest in the evaluation of the Project application and the formulation of the Draft Plan. You have been included on PDS's notification list to receive a notice of the availability of public review of the Draft EIR for the Project. We look forward to receiving additional comments from the Golden Door on the Draft EIR when it is released. If you have any questions about the Project, please contact the Project Manager, Ashley Smith at (858) 495-5375 or [Ashley.Smith2@sdcounty.ca.gov](mailto:Ashley.Smith2@sdcounty.ca.gov) or Planning Manager, Mark Slovick at (858) 495-5172 or [Mark.Slovick@sdcounty.ca.gov](mailto:Mark.Slovick@sdcounty.ca.gov).

## **Preliminary Comments on the Conservation Strategy Methodology by FWS for discussion at 4-13-17 meeting w/County**

Document needs a summary of conservation policies and regulations (if there are any) and how those apply to assumptions regarding conservation analysis (e.g. wetlands, vernal pools, narrow endemics) – do any of these policies override potential impacts regardless of whether an occurrence is in or out of the PAMA

B.1.1 pp B-5: Private development impacts within the Permit Area should not be compared to impacts in the Plan Area, by definition the permit area is the area where all impacts will occur.

It is not clear from footnote on table B-1 and text on page B-6 whether or not the agriculture clearing is inclusive to the impacts for single-family homes/private development or is additive.

Pp B-6, exemptions up to 4500 ac of ag impacts with no mitigation; text states 2000 inside PAMA and 4500 outside PAMA which totals 8500 ac?

Covered Sp Analysis pp B-7: impacts to species est. for future discretionary private development and hardline projects...does not include County projects? Need to clarify/consistent use of the term discretionary private development projects vs single family homes

What is “sustainable species occurrences: replacing itself overtime? We need to be assessing core populations not just individual occurrences

B.1.3 (pp B-8) Not clear what the conservation objectives are based on ...a the proportion of natural vegetation, species habitat and occurrences...?

Species Observation (pp B-9): what are the timeframes of the observation data.

Species Occurrence (pp B-9): the use of the 0.25mi linear distance may not be appropriate for all species or all observations.

Pp B-10 description of the areas outside the Permit Area....verify that these areas were excluded from the analysis..(Gregory canyon to be put back in)

Pp B-12 how is County’s mitigation (for County projects, single family homes and agricultural) accounted for in estimating contribution to Preserve Assembly (will this be acquisition of new lands or use of existing County baseline lands?)

Table B-2 and B-3: May need to consider changing mitigation ratios, recommend that css mitigate in kind.

Vegetation Analysis (Based on review of overall methodology and then the specific analysis for Scrub)

Vegetation Community Conservation - Table B-4

- What is last row “various natural vegetation communities” include
- What about Agriculture – is there a targeted amount that needs to be conserved?

- Not clear how Avoidance Ordinance acreage was calculated – is this the steep slopes that will be avoided? Foot note refers to appendix B which is this document
- What is the difference between columns 6 “estimated acquisition...” and 7 “estimated additional conserved private land” which refers to a footnote that says these would be from “purchase of conservation easements”
- Estimated acquisition by public agencies is 20,860 – of this 10,708 are identified as mitigation for single family residence and 4,500 for agricultural expansion – Will the mitigation for County projects also be included in this column? If you do not account for county project mitigation, there still is only 5,652 identified to meet “nccp” standards or to be purchased by Wildlife Agencies

Please explain the basis for assuming that 10% will be avoided outside PAMA – It seems that the assumption of what will be avoided due to steep slopes would be the same regardless of whether it is in or out of PAMA

For each vegetation community –

- What does the acreage of the first table under important planning unit represent? If it is the PAMA/Preserve – why does it not always match the summary of the Veg 1B table – see santa margarita scrub 4,816 versus 5016 (the rest match for scrub – did not check other veg types) – Also, since planning units are limited to the PAMA/Preserve, it is awkward to track impacts versus conservation within planning units – It may make more sense to define planning units more broadly so that we can then evaluate impacts in a given area versus conservation.
- Can you expand the Veg 1B tables to include impacts by unit, similar to the conservation? Also, can you add a column that shows the total acreage to be conserved (i.e. Baseline+some percentage of PAMA+hardline)– location matters since not all units are important for specific species

#### Table B-5 Single family residence

- Need some assessment of where single family impacts will occur
- Estimated conservation for each vegetation type is not a required conservation objective, but the impacts were estimated by vegetation type? Need to get clarification
- Does the impact assessment (9,811) include lands that can subdivide and then invoke the exemption?
- County is committing to purchase 10,708 acres of habitat to mitigate for these impacts – is it in kind? How will it be tracked relative to the impacts – rough step? And where will it occur – same planning unit?
- Section 3.3.1 New Single family residential exemptions states that the allowances maybe exceeded for fire protection and reference to the fire MOU – this is an incorrect assumption – the fire MOU only addresses existing structures as of the date of the MOU (1997) – it does not cover new development.

#### Agriculture

- Need some assessment of where impacts are likely to occur

- Footnote 1 on table B-1 implies that County is committing to mitigate at a 1:1 ratio – will it be in kind? Within same unit? How will it be tracked?

Table B-6 and B-7: how were avoidance assumptions determined and how relates to the % avoided patch sizes; explain basis of assumptions..

Pp B-21. If avoidance of scrub habitat primarily occurs on steep slopes this strategy may be problematic for species analysis (eg if species does not prefer steep slopes such as the CAGN)

Table B-Veg1B: Are Tribal Lands in Fee excluded from the Planning Units?

Table B-Veg1E

- Footnote 2 states that it is assumed that 50% of small patches and 70% of med and large patches will be avoided within the PAMA – what is this based on, how will it be implemented – the reference to section 3.4.1 of the HCP does not provide any additional information
- If there is only 14,466 acres of scrub habitat within the PAMA as shown in the first column, how can the conservation objective in table B-Veg 1G be 17,500?

Table B-Veg1F

- If Table IE estimates that 6,059 acres of the PAMA have development potential – how does the County assure that only 1,842 acres will be impacted within the PAMA?

Table B-Veg1G

- Please clarify what the basis is for the total conservation objective – does this represent the goal that was put into the SITES model? 2010 analysis (table 16) had a goal of conserving 80% within PAMA which equaled 62% conservation in Plan Area for scrub
- Please explain footnote 1 – 8% of 8,407 does not equal 735 – also, what is the basis for assuming 8% and how is this different then the acquisition column?

Species Analysis – (did not evaluate goals, objectives, management or monitoring that is included in HCP – all of this is relevant to overall conservation analysis)

Assumption that there will be no impacts to baseline preserve species occurrence seems flawed in that there are covered activities that can occur there

Sustainable occurrences — “can replace itself over time within a particular geographic location within the Plan Area” - definition is too general, how do you define location, over what period of time – who decides

Core areas and core species populations should be identified as part of the conservation objectives and included in the analysis of impacts and conservation

Need some assessment of where single family and agricultural impacts will occur – if the only known occurrences will be impacted by these activities, offsetting measures may not be feasible

Table B-9 – vegetation communities too broad for some of the species

Dun skipper – delete grassland and make consistent with text in species section

San Diego button-celery – delete scrub, chaparral, grassland, meadow and seep

Spreading navarretia – delete scrub, chaparral, grassland, meadow and seep

Spadefoot – not sure any one veg community is appropriate – needs ponded water

SKR – should be grassland

Spineflower – soil is more relevant than veg community

Thornmint – soil is more relevant than veg community

Species Predictive Models – Not great for most species on covered species list – may work for more of the watch species list – probably ok for vp species, riparian species, horned lizard

For SKR, Gnatcatcher, ARTO, and spineflower need to use more refined models (some may have already been developed by others ie gnatcatcher model).

If the model is no good, then just explain why and then don't include in the text - Harbison's dun skipper, Hermes Copper, Western spadefoot toad,

golden eagle – may work for identifying foraging habitat, but nest sites and territories need to be addressed, more recent data should be available from USGS.

Table B-10 – for vernal pools, there are specific soils that support them in plan area (e.g. Placentia) – does parent material and texture capture this specificity?

Species Specific Tables (broad comments, not species specific)

- Can the dates of the occurrences be added to the “C” tables
- G tables – is assumption that all mitigation is just based on vegetation or for some species does occupancy need to be demonstrated?
- Can impact and conservation to be broken down by unit
- H tables – how will the acquisition track with impacts? Will specific vegetation or predicted habitat be targeted?
- Is there a summary table for each species – combine tables G and H in some fashion so reader can assess overall impacts and conservation

Issues to be clarified/resolved in order to do analysis

Permit area (take occurs) and Plan area (covered activities and conservation): do we need to differentiate for the purposes of this plan because impacts on conservation lands (within the Plan

Area) from management activities would not be covered if they are not within the Permit area.  
When using the term outside PAMA does this mean the Permit Area or Plan Area?

Does the conservation from the hardline projects functionally contribute to the Preserve?

Need an inventory and consensus on baseline preserve lands contribution to the Preserve (extent of recreation, fragmentation, other potentially conflicting uses; BLM MOU still valid; management and monitoring consistent with the Plan)

How to ensure distribution of conservation within Planning Units: vegetation target range; species core areas/occurrences.

Tom, you're also doing the "project review" of the proposed Newland hardline for consistency with the Planning Agreement/NC Plan?

Thanks for all you're doing (the week before Christmas!!)

Alex

Hello Keoni:

Susan Harris is out sick. She has asked me to ask you to send me the species accounts as soon as you finish with them. If there are some that you don't think you will have time to work on, you can send those to me as well. I will have time to work on them today through Wednesday.

Thanks

Tom Oberbauer

Thanks Tom. Yes let's plan on discussing at 9:30 tomorrow. If you're available in person that would be great, but we can also call you if that's easier just let us know. We will meeting with our Director in our Drake conference room if you plan to attend in person.

Thanks again,

Mark Slovic, Planning Manager  
County of San Diego | Planning & Development Services T. 858.495.5172<tel:858.495.5172>

Hi Tom and Claudia,

Sorry for not getting back to you sooner, but are you available tomorrow to discuss with our Director at around 9:30 or 10 am?

Thanks,

Mark Slovick, Planning Manager

That would work. By mail or delivery to my office? Since the office is not far from the County building, maybe you could have it brought to the receptionist by somebody who has to go to a meeting in the County building.

Thanks

Tom Oberbauer

Tom:

We need to have a biologist that knows the NC plan look at a proposed hardline for a project to ensure that making findings can be made prior to including it in the Plan.

I believe we have the draft HLP findings and other bio info ready for review (Mark Slovick will confirm and send asap), but I wanted to make sure you could block out some time for this.

Thank you so much in advance.  
Alex

Pursuant to the County CEQA Guidelines, Planning & Development Services (PDS) selects lists of individuals (not firms) that are approved to prepare CEQA documents for the County for privately initiated projects through a Request for Qualifications (RFQ) and selection process. Consultant lists are reestablished periodically. Applicants are responsible for selecting and direct contracting with specific consultants from the County's list to prepare CEQA documents for private projects. Prior to the first submittal of a CEQA document prepared by a listed consultant for a private project, the applicant, consultant, consultant's firm (if applicable) and County shall execute a Memorandum of Understanding (MOU) or similar agreement that addresses payment, communications, confidentiality of information, and report preparation and handling. Consultants that prepare CEQA documents for County initiated projects will continue to be selected through the standard County procurement processes.

**VIA HAND DELIVERY**

San Diego County Board of Supervisors  
County Board of Supervisors  
1600 Pacific Highway, Room 402  
San Diego, CA 92101  
Attn: Clerk of the Board of Operations

Re: Housing Affordability within San Diego County; Agenda Item 5

Dear Supervisors Cox, Jacob, Gaspar, Roberts, and Horn:

As you know, we represent the Golden Door Properties LLC (the “Golden Door”), which owns and operates an award-winning spa and resort that opened in 1958, along with sustainable agricultural operations. Adjacent to the Golden Door, the Newland Real Estate Group, LLC (“Newland”) has proposed a revised Merriam Mountains project, known as the “Sierra” project (the “Newland Sierra Project” or “Project”) on property located near Deer Springs Road. Newland’s proposal includes 2,135 residential units but fails to include a necessary affordable housing component.

We understand the Board is considering requesting the Chief Administrative Officer to investigate options to promote construction of homes in the unincorporated region and to close the housing gap. The Golden Door has employees of all income levels who need access to more affordable housing within North County. However, the proposed Newland Sierra Project is not located on a site that the County has identified for new housing construction in the North County metro area (see, e.g., Smart Growth Opportunity Areas, Figure H-2, General Plan Housing Element), it does not provide any affordable housing, and its market analyses are outdated and are inaccurate. Newland Sierra defines “affordable” as “assuming 4.0 percent interest rate, 10 percent down payment and a 35 percent of household income for housing.” However, interest rates today are higher (4.625%) and rising, and federal standards define “affordable” as costing “no more than 30% of the monthly household income for rent *and* utilities.”<sup>1</sup> And Newland

---

<sup>1</sup> See Enclosure 1; see also U.S. Dept. of Housing and Urban Development, *Affordable Housing*, [https://www.hud.gov/program\\_offices/comm\\_planning/affordablehousing/](https://www.hud.gov/program_offices/comm_planning/affordablehousing/) (last visited Apr. 17, 2018); San Diego Housing Federation, *Frequently Asked Questions*, <https://www.housingsandiego.org/find-housing-faq> (last visited Apr. 17, 2018).

Sierra has refused to commit to legally commit to providing affordable housing, incorrectly claiming on its website that the County has no such requirements.<sup>2</sup>

Accordingly, if the County were to approve the Newland Sierra Project, it would violate the County's General Plan because the Project lacks the required affordable housing which is expressly specified as necessary in the County's General Plan. (See General Plan Policy H-1.9; see also Government Code § 65300.5, *California Native Plant Society v. City of Rancho Cordova* (2009) 172 Cal.App.4th 603, 635-636 [project must comply with specific and mandatory general plan policies].)

***Existing County Policies Require an Affordable Housing Component for General Plan Amendment Projects.*** The County's General Plan already contains a policy requiring that **“developers [ ] provide an affordable housing component when requesting a General Plan amendment for large-scale residential project[s] when this is legally permissible.”** (General Plan, Policy H-1.9)(emphasis supplied). Current California law does make a mandatory “affordable housing component” legally permissible. Thus, the Board of Supervisors has the existing legal authority under California law to require an affordable housing component in every project that requires a General Plan amendment, as specified in Policy H-1.0. Thus, the Chief Administrative Officer and County Counsel, and the Board of Supervisors, have a mandatory duty under the County's adopted General Plan to require affordable housing conditions that are “legally permissible” under California law in order to implement the County's existing affordable housing policy embodied in Policy H-1.0

As it stands now, the County Board of Supervisors is required to impose a condition requiring an affordable housing component for projects seeking a General Plan amendment. The pending Newland Sierra project does not contain such an affordable housing component, and therefore is inconsistent with the existing General Plan. The courts have explained what “legally permissible” means within the context of affordable housing:

[I]t is well established that ***price controls are a constitutionally permissible form of regulation with regard to real property*** as well as to other types of property or services. . . . Accordingly, just as it would be permissible for a municipality to attempt to increase the amount of affordable housing in the community and to promote economically diverse developments by ***requiring all new residential developments to include a specified percentage of studio, one-bedroom, or small-square-footage units, there is no reason why a municipality may not alternatively attempt to achieve those same objectives by requiring new developments to set aside a percentage of its proposed units for sale at a price that is affordable to moderate- or low-income households.***

---

<sup>2</sup> See Enclosure 2; see also Newland Sierra *FAQ, Types of Housing*, <https://www.newlandsierra.com/faq/> (last visited Apr. 17, 2018).

(*California Building Industry Assn. v. City of San Jose* (2015) 61 Cal.4th 435 [emphasis added] (“CBIA”).) Therefore, the County may impose price control requirements on proposed new developments or require new residential developments to include a specified percentage of affordable units. The pending Newland Sierra project does not include either, despite the County’s General Plan policy requiring “legally permissible” action to ensure that General Plan amendment projects include an affordable housing component.

***The County May Immediately Impose an Affordable Housing Requirement on Newland Sierra.*** Implementing a requirement for a percentage of affordable homes within a new development is something the County can immediately implement and is required to implement under the express provisions of the General Plan. The General Plan policy is already in place that imposes a requirement on the pending Newland Sierra Project. Here, there is a clear nexus between the imposition of affordable housing requirements on development and the effects on the region. (See e.g. *San Remo Hotel L.P. v. City and County of San Francisco* (2002) 27 Cal.4th 643 [government may impose permitting condition without running afoul of the Takings Clause if it demonstrates an essential nexus and reasonable relationship between the permitting condition and a deleterious public impact of the development].)

In any event, the California Supreme Court has ruled that no “nexus” requirement applies to a condition requiring an affordable housing component for a residential development project. (*CBIA, supra*, 61 Cal.4th at 474-75, 479 [rough proportionality/nexus requirements do not apply to restrict developer’s use of property].) The Supreme Court relied upon *Ehrlich v. City of Culver City* (1996) 12 Cal.4th 854 to reach this conclusion. (*Id.* at 475-76.) *Ehrlich* involved the imposition of conditions on a case-by-case basis, rather than through a broader inclusionary housing ordinance, enabling a greater amount of discretion for the deployment of the city’s police power. (*Ehrlich, supra*, 12 Cal.4th at 869.) As such, the County may rely on its existing General Plan and implement appropriate inclusionary zoning requirements as a project condition on Newland Sierra prior to project approval. (*CBIA*, 61 Cal.4th at 477 [“Moreover, as we have explained above, the validity of the ordinance’s requirement that at least 15 percent of a development’s for-sale units be affordable to moderate- or low-income households does not depend on an assessment of the impact that the development itself will have on the municipality’s affordable housing situation.”].)

Though the law on this issue is firmly established, i.e., the County certainly does have the authority today to impose an affordable housing condition on the Newland Sierra project, if County Counsel somehow disagrees with this legal conclusion and believes that further steps are needed to make an affordable housing component “legally permissible,” then County Counsel should be directed to prepare any appropriate documents needed to implement this mandatory portion of the adopted General Plan, and any processing of the current General Plan amendment project of Newland Sierra project, should be suspended until the County adopts an ordinance to implement its own General Plan requirements. The County could simply impose the same requirement for affordable housing as upheld by the California Supreme Court in the City of San Jose case, using the wording of any ordinance or conditions adopted by the City of San Jose. Along with any other General Plan change or zoning ordinance amendment that is included in the Newland project approvals, County staff and the County Counsel can simply include project

conditions and/or an ordinance adopting affording housing requirements approved in the San Jose case, at the same time as the Board considers any other project approvals.

We ask that the County Chief Administrative Officer and County Counsel be directed to immediately propose project conditions or any other legal documents required to implement General Policy H-1.9 for the Newland project, and no further processing of the Newland project should occur until these actions are taken to implement General Plan Policy H-1.9. If County Counsel concludes that General Plan Policy H-1.9 is unenforceable, and the County lacks the legal authority to impose conditions requiring affordable housing components under the terms of that Policy, the Board should request County Counsel to describe the reasons for this conclusion.

Failure to pay attention the mandatory requirements of General Plan Policy H-1.9 will only result in needless delays and disruptions in any decisions the Board may make with respect to new developments covered by this Policy, such as Newland.

We thank you for your time and attention to our comments, and ask that they be incorporated both into the administrative record for the Newland Sierra Project and this Agenda Item 5. Please do not hesitate to contact me should you have any questions.

Best regards,

*Christopher Garrett*

## Affordable Housing

### Who Needs Affordable Housing?

Families who pay more than 30 percent of their income for housing are considered cost burdened and may have difficulty affording necessities such as food, clothing, transportation and medical care. An estimated 12 million renter and homeowner households now pay more than 50 percent of their annual incomes for housing. A family with one full-time worker earning the minimum wage cannot afford the local fair-market rent for a two-bedroom apartment anywhere in the United States.

### Where Can Individuals Find Assistance?

Individuals looking for assistance can:

- Find rental, homebuyer, and homeowner assistance
- Find resources for homeless persons, including, youth, veterans, and the chronically homeless
- Find help for victims of foreclosure and Hurricane Sandy and for persons living with HIV/AIDS

### What is HUD Doing to Support Affordable Housing?

Within the Office of Community Planning and Development, the Office of Affordable Housing Programs (OAH) administers the following grant programs designed to increase the stock of housing affordable to low-income households.

The HOME Investments Partnerships Program (HOME) provides grants to States and local governments to fund a wide range of activities including 1) building, buying, and/or rehabilitating housing for rent or homeownership or 2) providing direct rental assistance to low-income families. It is the largest Federal block grant program for State and local governments designed exclusively to create affordable housing for low-income households.

The National Housing Trust Fund (HTF) supports the acquisition, new construction, or reconstruction of rental units for extremely low-income families or families with incomes below the poverty line, whichever is greater.

HUD's Office of Housing and Office of Public and Indian Housing also administer programs to increase the amount of affordable housing available for low-income households across the nation.

### What Information Does HUD Provide?

The HUD Exchange provides a hub for HOME Program information, tools and templates, research, evaluations, best practices, guides, training manuals, and more including:

- HOME Laws and regulations
- Policy guidance (Policy Memos, HOME *FACTS*, HOMEfires)
- HOME Frequently Asked Questions (FAQs)
- HOME Dashboard Reports and other HOME Reports

Related tools and resources can be accessed through HOME Topics.

The HUD Exchange also provides:

**Email Updates** – To receive CPD communications about program policy, upcoming trainings, resources, reporting deadlines, technical assistance, and more, sign up on the HUD Exchange Mailing List.

**Training Opportunities** – For information on upcoming events, self-paced online training, and recorded webinars, go to Training and Events.

**Grantee Information** – To view amounts awarded to organizations under HUD programs over the past several years, go to CPD Allocations and Awards. To learn more about the agencies and organizations that have received funding, visit About Grantees.

**Assistance with Reporting System Questions** – If you have a question related to eCon Planning Suite or IDIS, please submit your question and get a response through Ask A Question.

**In-depth Advising** – To learn about extended communication or long-term assistance available to CPD grantees, visit Technical Assistance.

If you are an organization with a policy question related to HOME, or National Housing Trust Fund (HTF) please contact your local HUD Field Office for assistance.

### How Can My Organization Receive Funds?

Participating jurisdictions receive HOME grants through a formula to fund housing programs which meet local needs and priorities. To find out about how to apply for HOME assistance in your community, contact an agency nearest to your community.

Types of Housing

Q: What types of housing will be built?

A: A mixture of for-sale homes is proposed. No apartments or rental homes are proposed. The homes will be a variety of single-family detached homes, attached townhomes, cluster homes, age-targeted, and larger lot single-family homes.

Share your thoughts with us by clicking [here \(/contact\)](#)

---

Q: Will there be any rental units?

A: No rental apartment buildings are proposed for the community.

Share your thoughts with us by clicking [here \(/contact\)](#)

---

Q: Are there any "affordable housing" requirements for the community?

A: The County of San Diego does not require subsidized or otherwise "income-restricted" housing to be provided in a project. However, we do plan to have a variety of housing types available, including some at price points that are attainable for middle-income families.

Re: Revised Independent Analysis of Zoning Regulations, Constraints and Development Potential of Newland Owned Commercial Parcels Report prepared by Delane Engineering

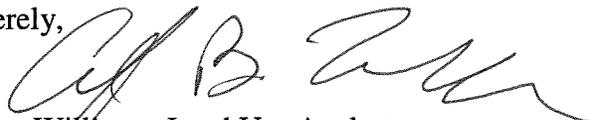

Dear Ms. Smith

Please find enclosed a revised report by Delane Engineering regarding the "Independent Analysis of Zoning Regulations, Constraints and Development Potential of Newland Owned Commercial Parcels." Our office previously submitted the report with our comment letter on the Draft Environmental Impact Report for the Newland Sierra Project. The previously submitted report incorrectly showed that Newland Sierra owned land currently occupied by the AM/PM gas station at Mesa Rock Road. This has been corrected, and the exhibits to the report have also been revised to reflect this change.

The revision, however, does not change the conclusion of the report which finds that due to regulatory and environmental constraints on the site a maximum of 618,000 square feet of office professional uses, and 77,000 square feet of general commercial uses could be built on the portions of the Newland Sierra Project site currently designated for office commercial and general commercial, for a total of 695,000 square feet. Therefore, the report finds that the site would not accommodate the 2 million square feet of commercial retail space including "big box" retail, claimed by Newland Sierra and repeated often by Newland Sierra in media reports and at community meetings.

If you have any questions, please do not hesitate to contact me.

Sincerely,

Clifton Williams, Land Use Analyst  
LATHAM & WATKINS LLP

| SUBJECT | <b>Independent Analysis of Zoning Regulations, Constraints, and Development Potential of Newland Owned Commercial Parcels</b> |

According to the June 2017 Draft Environmental Impact Report (DEIR) prepared for the Newland Sierra Development, the entire project area is currently zoned for 99 dwelling units and 58.2 acres of commercial office space (53.6 acres of C30, Office Professional, and 4.6 acres of C36, General Commercial). The Newland project proposes amending the General Plan and zoning to allow for the project's proposed 2,135 dwelling units and 81,000 square feet (SF) of commercial retail (C-5). See **Figure 1** for a land use breakdown from the Project Description section of the Newland DEIR.

The Newland DEIR claims that the 58.2 acres of currently zoned commercial property yields 2,008,116 SF of potential development under the Existing General Plan and that the proposed zoning changes result in similar or fewer overall land use and traffic impacts. The Newland DEIR also concludes that 2,008,116 SF of commercial development is feasible on the project site, and marketing material distributed by Newland at public meetings suggests the commercial parcels could include “big box” retail stores.

The Newland DEIR does not provide any detail on how the parcels would support over 2 million SF of development and does not own all the parcels. Per the County Zoning ordinance, development on the parcels is limited to two-stories and 35-ft in total height, with setbacks up to 60-ft. In addition, much of the property lies on “steep slopes”. Per the County Resource Protection Ordinance (RPO), steep slopes are defined as those natural slopes exceeding 25% in slope gradient and are a protected resource. Over 30% of the area of the commercial parcels qualifies as steep slopes per the RPO. As shown in **Figure 2**, the percent of steep slope area in several of the parcels exceeds 10% of the parcel area and requires an open space easement on the area of steep slopes (the yellow and red colored areas of Figure 2). Proposed development is not allowed to encroach more than 10% into an open space easement. In addition to steep slopes as a protected resource, the entire site consists of significant sloping that increases development costs and reduces development potential.

As shown in **Figure 3**, deducting for area of steep slopes and parking (at County ordinance rate of 4 stalls per thousand SF) yields a total developable building area available of 309,000 SF for C30 Office Professional and 38,500 SF for C36 General Commercial for a total of 347,500 SF. At 2 story height

restriction, the total building square footage feasible is 618,000 SF for C30 Office Professional and 77,000 SF of C36 General Commercial, for a total building square footage of 695,000 SF<sup>1</sup>. Note that there are additional potential constraints not taken into account that may further reduce feasible building square footage, including slope grading and earthwork, views, cost, economic viability, and other environmental factors.

The C30 zone does not allow “big box” retail stores. Section 2300 of the County Zoning Ordinance states that the intent of the C30 zone is as follows: “The C30 Use Regulations are intended to create and enhance areas where administrative, office and professional services are the principal and dominant use. It is also intended that uses involving high volumes of vehicular traffic be excluded from the C30 Use Regulations. Typically, the C30 Use Regulations would be applied near residential areas, have a scale and appearance compatible with and complementary to the adjacent residential use, and have pedestrian as well as vehicular access.”

The C36 General Commercial Zone does allow General Retail Sales which would include “big box” retail. However, as noted approximately 77,000 SF of retail would be allowed, which is smaller than the typical Costco (144,500 SF), Home Depot (105,000 SF), or Wal-Mart supercenter store (182,000 SF).<sup>2</sup> The 4.6 acres zoned C36 is bisected by Mesa Rock Road, further diminishing the ability for the property to develop in a single block, as would be required for any type of large format retail. Small convenience store retail, akin to the existing AM/PM minimart is more likely.

The Newland DEIR claims that the trip generation and distribution of the proposed residential development would be similar to and offset by the current commercial property. However, while the commercial parcels are limited to the far southeast corner of the entire project site, the Newland Sierra project as proposed sprawls out far across the hillsides northwest of the commercial parcels. Proposed project trip distribution is then spread out through three project access roads (Mesa Rock Road, Sarver Lane, and Twin Oaks Valley Road) causing further travel to and from the freeway and increased traffic on Deer Springs Road. However, when current land use is compared to proposed land use, it is apparent that trip distribution for the commercial parcels (if fully developed to current general plan) would result in differing trip distribution, with all traffic required to access the parcels from Mesa Rock Road. This is not addressed in the Newland project documents.

Finally, any development of only the commercial properties would not result in the environmental impacts and earth moving, blasting, noise, and other construction related impacts of the proposed Newland development across its nearly 2,000 acre site.

---

<sup>1</sup> The high level conceptual footprint designs provided in this memorandum are for the purpose of approximating the buildable area on the Newland Sierra project site under the existing General Plan and are not to be construed as a development proposal or design-level engineering.

**Re: Request for Recirculation of Draft Environmental Impact Report for the Newland Sierra Project Due to Misleading and Inaccurate Claims**

Dear Ms. Smith:

I am writing on behalf of my client, Golden Door Properties, LLC (“Golden Door”) to request that the County of San Diego withdraw the existing the Draft Environmental Impact Report (“EIR”), SCH No. 2015021036, and revise and recirculate it, pursuant to the California Code of Regulations, Title 14, section 15088.5(a)(4). Section 15088.5(a)(4) requires an EIR to be recirculated when it is “so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.”

That is the case here, because the project applicant, along with its primary environmental consultant (Dudek), have consistently and inaccurately set forth to the public a fundamentally inaccurate and misleading project comparison that includes “two million square feet of office space and big box retail” (See Enclosure 1: April 13, 2018 mailing by project applicant to County residents; see also Draft EIR at p. 1-34 [Project Description Chapter, asserting that “existing General Plan land use designations would allow approximately 99 residential dwelling units and 2,008,116 square feet of commercial space.”) This oft-repeated statement by the project proponent and Dudek is false, and relying upon this assertion in the draft EIR leaves the County extremely vulnerable to liability under the California Environmental Quality and the Code of Civil Procedure section 1021.5.

Dudek’s analysis is fundamentally flawed under Section 15088.5 for the following reasons.

*First*, under the California Environmental Quality Act (“CEQA”), an agency must use a reasonable measure of the environment’s state absent the project to decide whether a given project’s environmental effects are likely to be significant—typically referred to as the “baseline.” The baseline consists of “the physical environmental conditions in the vicinity of the project, as they exist at the time . . . environmental analysis is commenced . . .” (California

Code of Regulations, title 14, section 15125, subd. (a) [commencing with section 15000, the “CEQA Guidelines”].)

Dudek and Newland’s repetition of the project’s comparison to “two million square feet of office space and big box retail” is a clear violation of CEQA Guidelines section 15125—it is clear that “two million square feet of office space and big box retail” is a completely imaginary description of “the physical environmental conditions in the vicinity of the project, as they exist at the time . . . environmental analysis is commenced . . . .”

*Second*, the case law is clear—indeed the California Supreme Court has explained—that **“An approach using hypothetical allowable conditions as the baseline results in ‘illusory’ comparisons that ‘can only mislead the public as to the reality of the impacts and subvert full consideration of the actual environmental impacts,’ a result at direct odds with CEQA’s intent.”** (*Communities for a Better Environment v. South Coast Air Quality Mgmt. Dist.* (2010) 48 Cal. 4th 310, 322 [emphasis added]; see also *San Joaquin Raptor Rescue Center v. County of Merced* (2007) 149 Cal. App. 4th 645, 658 [“the baseline environmental setting must be premised on realized physical conditions on the ground, as opposed to merely hypothetical conditions allowable under existing plans”].)

As in *Communities for a Better Environment* and *San Joaquin Raptor Rescue Center*, Dudek and Newland’s repetition of the project’s comparison to “two million square feet of office space and big box retail” is directly at odds with CEQA’s intent. There is no entitled right to “two million square feet of office space and big box retail” in this area. There is no historical precedent for “two million square feet of office space and big box retail” in this area. There are no pending applications for “two million square feet of office space and big box retail” in this area. There is no market demand for “two million square feet of office space and big box retail” in this area. (Enclosure 2: Cushman & Wakefield Demand Study, dated July 31, 2017 [“[T]here does not appear to be significant demand for office space in the subject’s designated site area. . . . [T]here is little to no current demand for retail development at the subject’s site.”].) When considering site-specific constraints and other County requirements, it is not physically possible to locate “two million square feet of office space and big box retail” in this area. (Enclosure 3: Delane Engineering, Independent Analysis of Zoning Regulations, Constraints, and Development Potential of Newland Owned Commercial Parcels.) Finally, the “two million square feet of office space and big box retail” claim is contradicted by the SANDAG Series 12, 2050 Growth Forecast, which projected fewer than 500,000 square feet of commercial uses in this area, not 2,000,000 square feet, *using inputs validated by the County of San Diego*. (Enclosure 4: Professional Land Use Analysis of SANDAG Growth Forecast Data on Newland Sierra Project Site Commercial Area.) Accordingly, there is no reasonable justification for using “two million square feet of office space and big box retail” as the environmental baseline for comparison for the project, nor is it appropriate to incorporate into the “No Project” or “Existing General Plan” alternatives.

Yet this erroneous and misleading baseline infects not only the applicant’s communications to the public on this project, but also the analysis in the draft EIR. For example, Chapter 2.14 uses “projected” water demand based on full build-out of General Plan conditions. (DEIR at p. 2.14-67 [Table 2.14-1].) Using this purely hypothetical baseline, Dudek asserts that

the project will result in a “35 percent reduction in water use compared with the 2011 General Plan water demand.” (*Id.* at p. 2.14-45.) Notably, Dudek fails to provide a comparison of the project’s water use based on existing conditions, which does not include “two million square feet of office space and big box retail.” Newland makes similar claims regarding other significant, adverse environmental impacts, stating that the addition of a population the size of the City of Del Mar in this currently largely undeveloped area will somehow result in “less peak hour traffic.” (Enclosure 1.) (E.g., *Woodward Park Homeowners Assn., Inc. v. City of Fresno* (2007) 150 Cal.App.4th 683, 691 [“the environmental impact report usually measured the project's impacts by comparing it to a massive hypothetical office park, instead of comparing it to the vacant land that actually exists at the project site. This hypothetical office park was a legally incorrect baseline, which resulted in a misleading report of the project's impacts.”].)

*Third*, the “two million square feet of office space and big box retail” claim is not supported by any substantial evidence. CEQA Guidelines section 15384 explains that “substantial evidence” may not include “Argument, speculation, unsubstantiated opinion or narrative, [or] evidence which is clearly erroneous or inaccurate.” Dudek and Newland’s assertion that the Project site could support “two million square feet of office space and big box retail,” either as a matter of the market or physical feasibility, constitutes “Argument, speculation, unsubstantiated opinion or narrative, [or] evidence which is clearly erroneous or inaccurate.” The spurious claim of “two million square feet of office space and big box retail” comes from an overly simplistic and fundamentally misleading calculation of the total acreage zoned for General Commercial and Office-Professional multiplied by the maximum floor-area ratio for the site.<sup>1</sup> But common sense dictates that the maximum hypothetical development intensity, which does not account for other restrictions from site topography, height limits, setbacks, market demand, etc., does not mean that development to the maximum hypothetical intensity is physically possible, much less “reasonably foreseeable.” As the evidence shows, “two million square feet of office space and big box retail” is neither physically possible nor economically foreseeable. (See Enclosures 2 and 3.)

*Fourth*, the purported “two million square feet of office space and big box retail” claim is not even consistently applied in the Draft EIR, as if even Dudek’s sub-consultants do not really believe it. For example, the Draft EIR traffic study concedes that “two million square feet of office space and big box retail” on the project site is unlikely, by assessing traffic trips for the “general plan” condition corresponding to far fewer than “two million square feet of office space and big box retail” (about 850,000 to 942,000 square feet). (See Enclosure 5: STC Traffic, Inc. Newland Sierra Office Trip Generation Assessment.)

It is this type of clear and inherent contradiction in the Draft EIR analysis that renders it “so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded” such that the current Draft EIR must be withdrawn, revised to correct the severe deficiencies identified here, and recirculated for a new public review, comment, and response period. For the County to proceed in reliance upon this clearly

---

<sup>1</sup> 53.6 acres Office-Professional \* 43,560 s.f. per acre \* maximum FAR of 0.8, plus 4.6 acres of General-Commercial \* 43,560 s.f. per acre \* maximum FAR of 0.7.

LATHAM & WATKINS<sup>LLP</sup>

faulty analysis will leave the County exposed to high risk of legal vulnerability under CEQA and other applicable laws. County staff should insist that Dudek and the applicant revise its analysis to comply with legal requirements.

If you have any questions, please do not hesitate to contact me.

Very truly yours,

Taiga Takahashi

**ENCLOSURE 1**

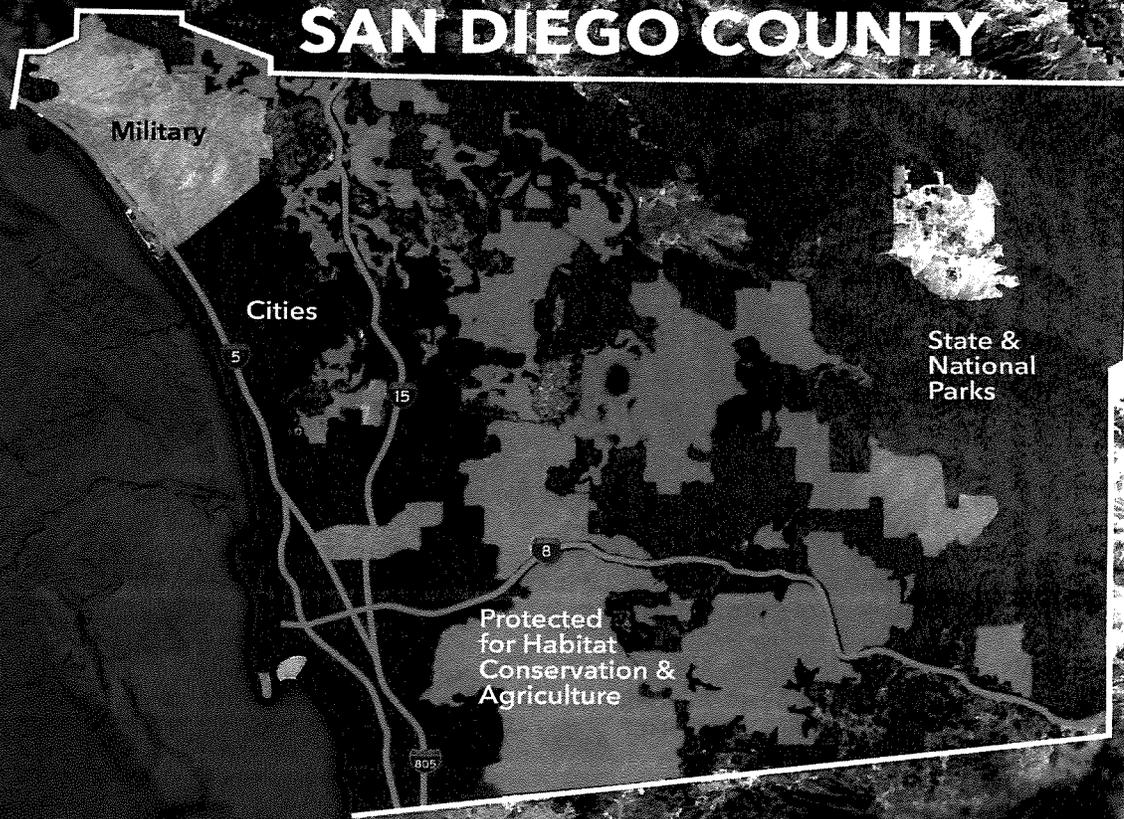

# HOMES FOR NORTH COUNTY

Land designated for development in North County should be used for homes and open space for the next generation, not two million square feet of office space and big box retail.

## NEWLAND SIERRA

# SAN DIEGO COUNTY

94.6% of County land is off limits to development, yet our site has been planned for development.

-  Protected for Habitat Conservation & Agriculture
-  State & National Parks

# A BETTER CHOICE

With 94.6 percent of unincorporated County land set aside and protected, how we plan and develop the remaining 5.4 percent is important to the future of every resident of San Diego County.

Currently, on a site one mile from Escondido and San Marcos, the County General Plan calls for two million square feet of office space, big box retail and parking (equal in size to the Westfield North County Mall), along with 99 large estates spread out on big lots.

In contrast, Newland Sierra provides what is most needed in the community, homes and open space. Our plan leaves 61 percent of the property as public open space, along with 36 acres of parks and 19 miles of trails. There will be about one home per acre, located in seven smaller neighborhoods nestled between ridges, within the valleys.

This results in less peak hour traffic, 52 percent less water use, planned additional conservation areas and added fire protection. It will also be San Diego County's first carbon-neutral community.

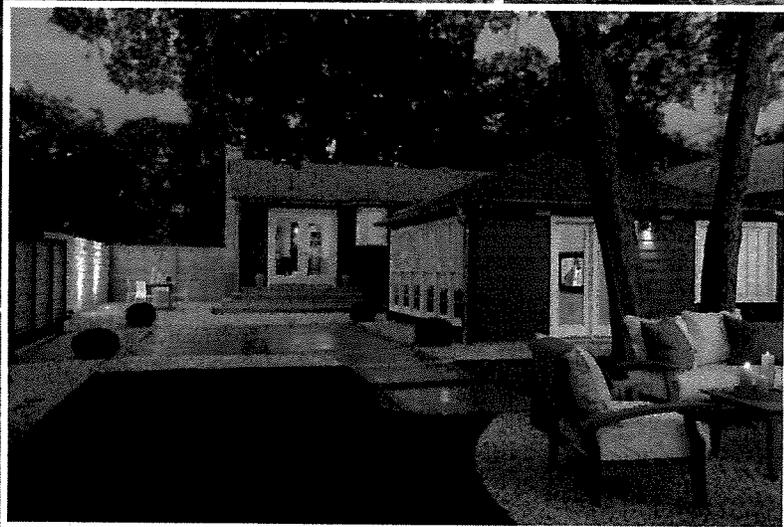

*This information is provided based on current development concepts and is subject to governmental review and approvals. Actual development of the property may vary from the materials presented herein and are therefore, subject to change without notice.*

# A PLAN THAT FITS NORTH COUNTY'S CHARACTER

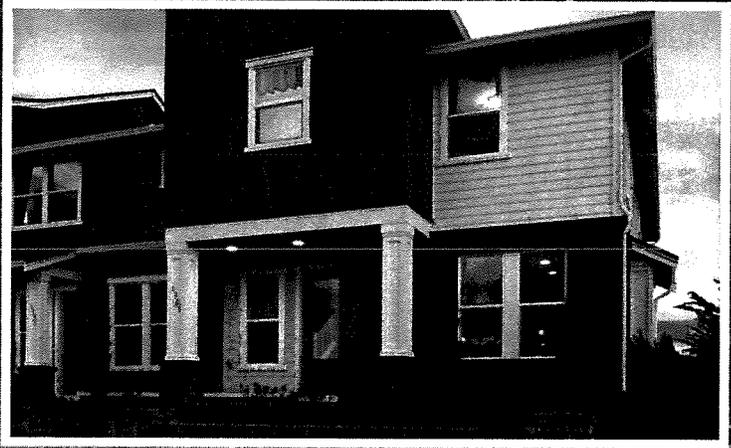

## 61% OPEN SPACE

36 acres of public parks and 19 miles of trails will promote both active and passive outdoor recreation.

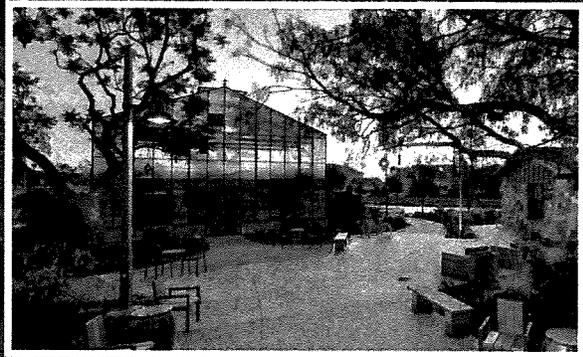

Ridgelines and **SIGHTLINES WILL BE PROTECTED** by siting neighborhoods in the valleys, respecting the natural contours of the land.

Neigh  
nestle  
prote

**SEVEN DISTINCT NEIGHBORHOODS** with a broad range of designs and price points, including single-family start-up homes and age-qualified senior housing, are nestled into valley floors.

A small, **MIXED-USE TOWN CENTER** is included with convenient neighborhood shopping and amenities, and a new K-8 school site.

Neighborhoods nestled into valleys, protecting views.

Deer Springs Road

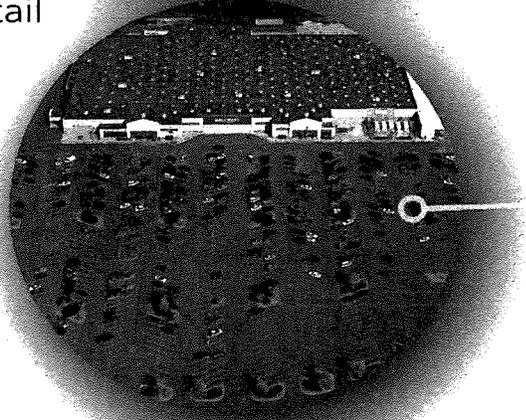

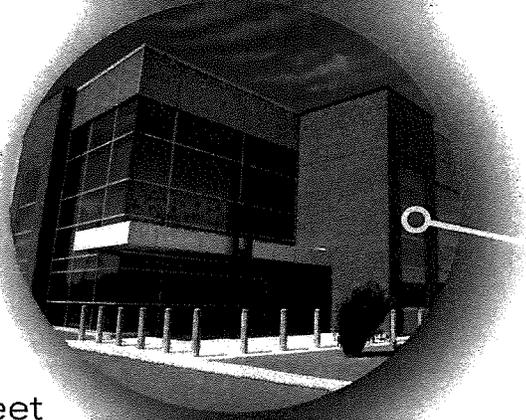

15

# THE CURRENT GENERAL PLAN IS NOT WHAT NORTH COUNTY NEEDS

99 estate  
homes on  
large lots

2 million square feet  
of office & retail

# CURRENT GENERAL PLAN

Today, the San Diego County General Plan calls for massive development of retail and office along the freeway, plus 99 estate homes on large lots.

This results in more peak hour traffic, more water use and no public parks or open space.

# DEDICATED PUBLIC OPEN SPACE

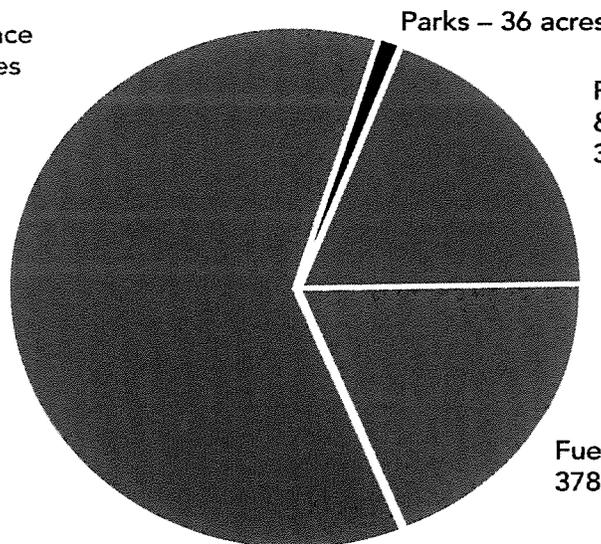

Of the Newland Sierra property's 1,986 acres, 1,209 will be preserved as permanent public open space.

Of the remaining 777 acres, nearly half (378 acres) will remain open space devoted to carefully maintained brush management areas, along with 36 acres of parks and 19 miles of trails.

Our design preserves the property's natural character and dramatic topography, while providing the opportunity for an incredible amount of open space that would be preserved forever.

NEWLAND SIERRA  
LAND USE

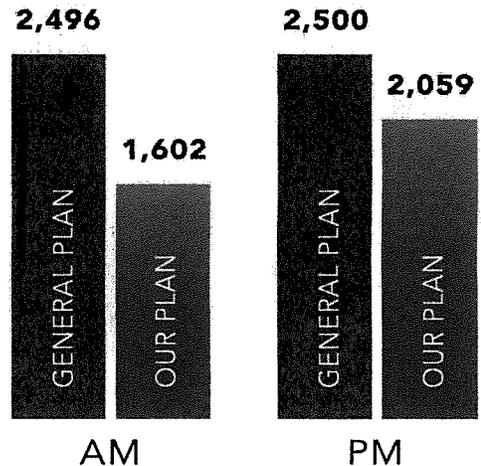

# LESS PEAK HOUR TRAFFIC AND WATER USE

## TRAFFIC

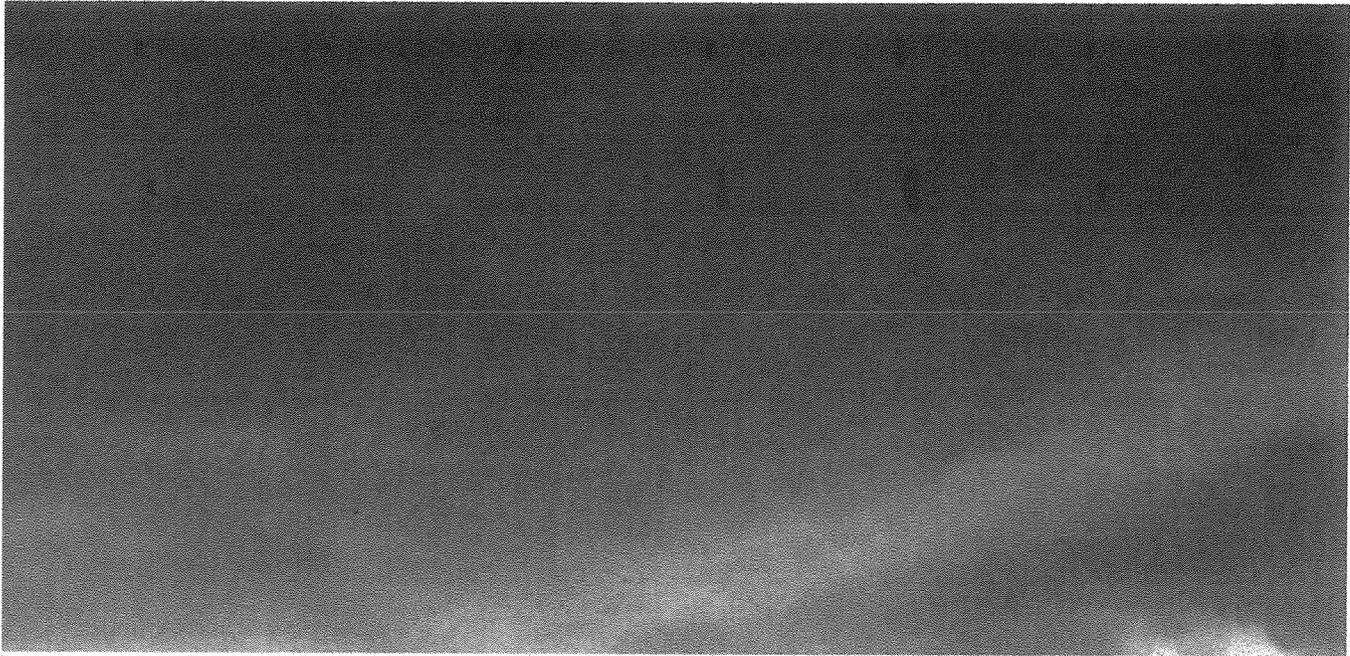

To alleviate existing problems and accommodate new houses, Deer Springs Road will be widened to four lanes from I-15 into the City of San Marcos. The I-15 interchange will also be improved.

Twin Oaks Valley Road will be widened to four lanes from Deer Springs Road to beyond Buena Creek Road to address current congestion problems.

Peak hour traffic will be reduced by nearly 1,000 trips in the mornings and 500 trips in the evenings compared to the General Plan.

## WATER

Newland Sierra reduces the property's water needs by 51% as compared to the uses in the current General Plan.

Our neighborhoods are designed to be a model for smart water use. Each home is required to have drought tolerant landscaping, while rainfall and runoff will be captured and directed into bioswales for landscaping and to recharge the aquifer.

ACRE-FEET OF  
PROJECTED  
WATER USE

*\*GSI Water  
Conservation Report*

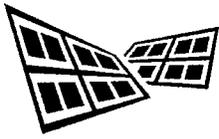

With thoughtful planning and abundant opportunities for outdoor recreation, Newland Sierra supports both a sustainable environment and a sustainable lifestyle.

# A COMMITMENT TO SUSTAINABILITY

Newland Sierra will be the most environmentally sustainable master-planned community in San Diego.

## **SOLAR PANELS**

All homes will feature solar panels to offset residential electricity consumption, and community buildings and street lights will also be solar-powered.

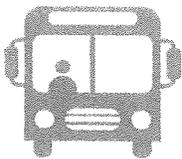

## **VEHICLE CHARGERS**

To encourage electric vehicle use, each home will be equipped with an electric vehicle charger, helping to reduce energy needs and emissions.

## **ELECTRIC BICYCLES**

Electric bike stations will be placed throughout the neighborhoods to provide residents with alternative transportation within the community.

## **SHUTTLES ON & OFF SITE**

A shuttle system will connect residents internally to the community parks and amenities, and externally to the public transportation network.

*Newland Sierra will result in no net increase in greenhouse gas emissions. We will be the first 100 percent carbon-neutral plan in San Diego.*

**NEWLAND  
SIERRA**

# SIERRA

April 13, 2018

[REDACTED]  
Encinitas, CA 92024 [REDACTED]

Dear [REDACTED]

Just like any local will tell you, North County San Diego is a special place to live, with just the right balance of urban convenience, small-town feel and beautiful natural surroundings. As a planner and a builder, I don't hesitate to say that this community is unique, in all the right ways.

Yet it's no secret that the area finds itself in a tricky spot. Many large local employers and a burgeoning regional economy are stacked against the same challenge facing the whole county and state – not enough homes for working families, with prices steadily moving further and further out of reach.

In this context, there's a choice to be made – embrace an opportunity to help solve the problem, or keep moving toward a future where young families and workers are priced out of the area, forcing many to commute hours to and from work every day.

Our team at Newland Sierra believes we have the better choice for North County.

Included along with this letter is a fact booklet describing our approach and plan for the property just north of San Marcos, which provides new, affordable homes for North County's next generation while leaving more than 60 percent of the land as permanent public open space.

The San Diego County General Plan has specifically set this land aside for new development. It currently calls for two million square feet of office space, parking structures and big box retail, along with 99 estate-style homes spread out on big lots. That plan simply does not fit the community, and it does not address the county's housing needs.

Our vision is different, and better suited to the situation today. We're proposing a General Plan Amendment that provides a range of home types, and leaves more than 1,200 acres of the property as public open space, along with 36 acres of parks, and 19 miles of trails. New commercial development is designed to cater to the neighborhoods, with amenities like a grocery store, restaurants and a dry cleaner, as opposed to more big box retail or large office buildings.

Newland Sierra will add a new stock of homes that are right-priced for the area, allowing new families to stay and grow here in North County, and for empty nesters to find the right fit for their changing lives. And as a result of years of detailed study and thoughtful planning, our plan produces less traffic, reduces water needs, and improves fire protection compared to the current General Plan.

The enclosed booklet also describes how the plan has been designed to preserve the site's natural character and dramatic topography, with buildings nestled between ridges and within valleys, almost entirely out of view. We are also proud to share that Newland Sierra will be a carbon-neutral development, with all emissions from the project managed through sustainable planning features or investment in carbon credits.

This property will be developed. The question is how. Our plan will provide a range of new homes to meet the needs of North County's next generation, while opening more than 60 percent of the property as new public open space. The existing General Plan fills much of this space with luxury estates we don't need, along with massive office and big box retail development that doesn't fit.

I hope you agree Newland Sierra is the better plan for North County. Please take a moment and review the fact booklet. Then let us know what you think by completing and returning the enclosed postage-paid card. You can also send an email to [linda@newlandsierra.com](mailto:linda@newlandsierra.com) or give us a call at (760) 571-9204.

We hope to hear from you, and thanks.

Sincerely,

A handwritten signature in black ink that reads "Rita Brandin". The signature is written in a cursive style with a large, sweeping initial "R".

Rita Brandin

Senior Vice President and Development Director

Unincorporated Area of North San Diego County, San Diego County, CA 92069

Cushman & Wakefield File ID: 17-38503-900283

Dear Ms. Van Ness:

In fulfillment of our agreement as outlined in the Letter of Engagement dated July 25, 2017, we are pleased to transmit our findings in the form of a demand study of the above referenced property.

The subject property consists of 2,535,192 square feet of land located in San Diego County, CA 92069. The subject property is located on the northwest corner of Deer Springs Road and Freeway I-15, in the City of Unincorporated Area of North San Diego County, County of San Diego. The site is unimproved hillside with steep terrain, sloping downward from West to East toward Freeway I-15.

This letter is invalid as an opinion of demand if detached from the report, which contains the text, exhibits, and Addenda.

Respectfully submitted,

**CUSHMAN & WAKEFIELD WESTERN, INC.**

## Summary of Critical Observations

### SUMMARY OF CRITICAL OBSERVATIONS

The strengths and weaknesses analysis applies both specifically (attributes internal or specific to the subject) and generally (external or economic considerations that influence the subject).

#### Strengths

- The subject is located adjoining Freeway I-15 which is the singular access from San Diego County to Riverside County.

#### Weaknesses

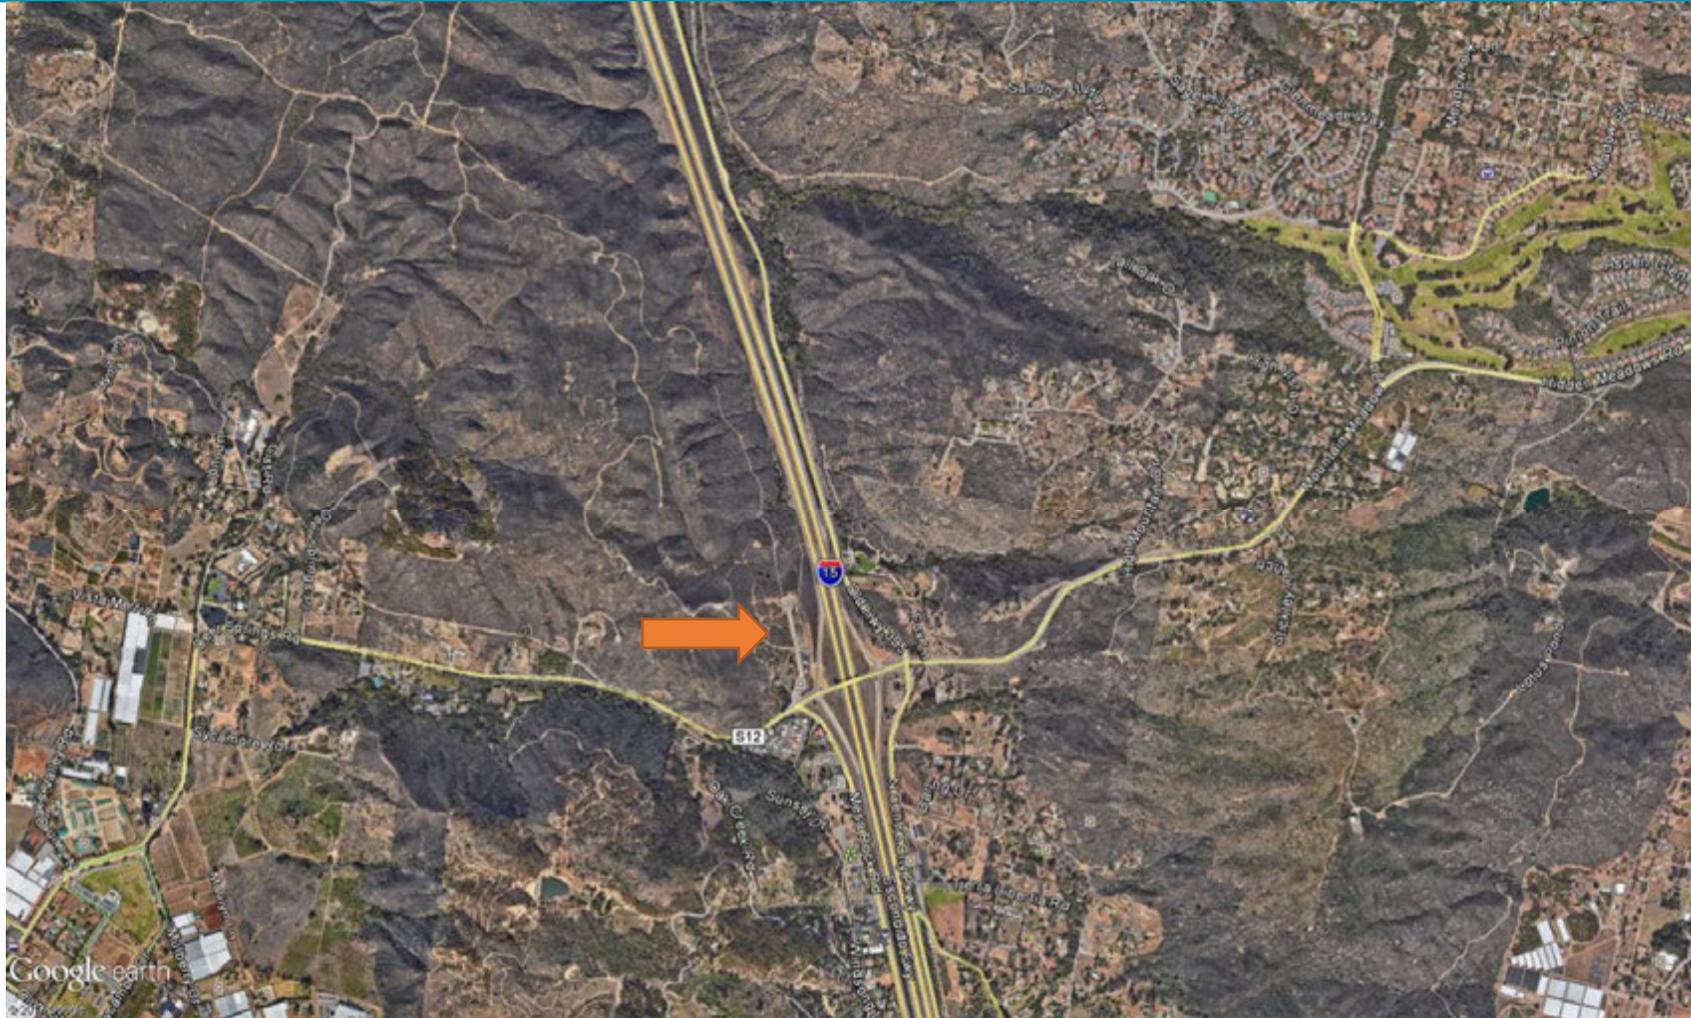

- The subject's site is steep and will be difficult to develop. At present, there is insufficient homes to support any significant commercial development on the site.

#### Conclusions

Based on the preceding strengths and weaknesses, the subject property's specific zoned use does not appear to be a feasible development at this time.

# Scope of Work

## Overview

Scope of work is the type and extent of research and analyses involved in an assignment. To determine the appropriate scope of work for the assignment, we considered the intended use of the appraisal, the needs of the user, the relevant characteristics of the subject property, and other pertinent factors. Our concluded scope of work is summarized below, and in some instances, additional scope details are included in the appropriate sections of the report:

## Research

- We inspected the property and its environs. Physical information on the subject was obtained from the property owner's representative, public records, and/or third-party sources.
- Regional economic and demographic trends, as well as the specifics of the subject's local area were investigated. Data on the local and regional property market (supply and demand trends, rent levels, etc.) was also obtained. This process was based on interviews with regional and/or local market participants, primary research, available published data, and other various resources.
- Other relevant data was collected, verified, and analyzed. Property data was obtained from various sources (public records, third-party data-reporting services, etc.) It is, however, sometimes necessary to rely on other sources deemed reliable, such as data reporting services.

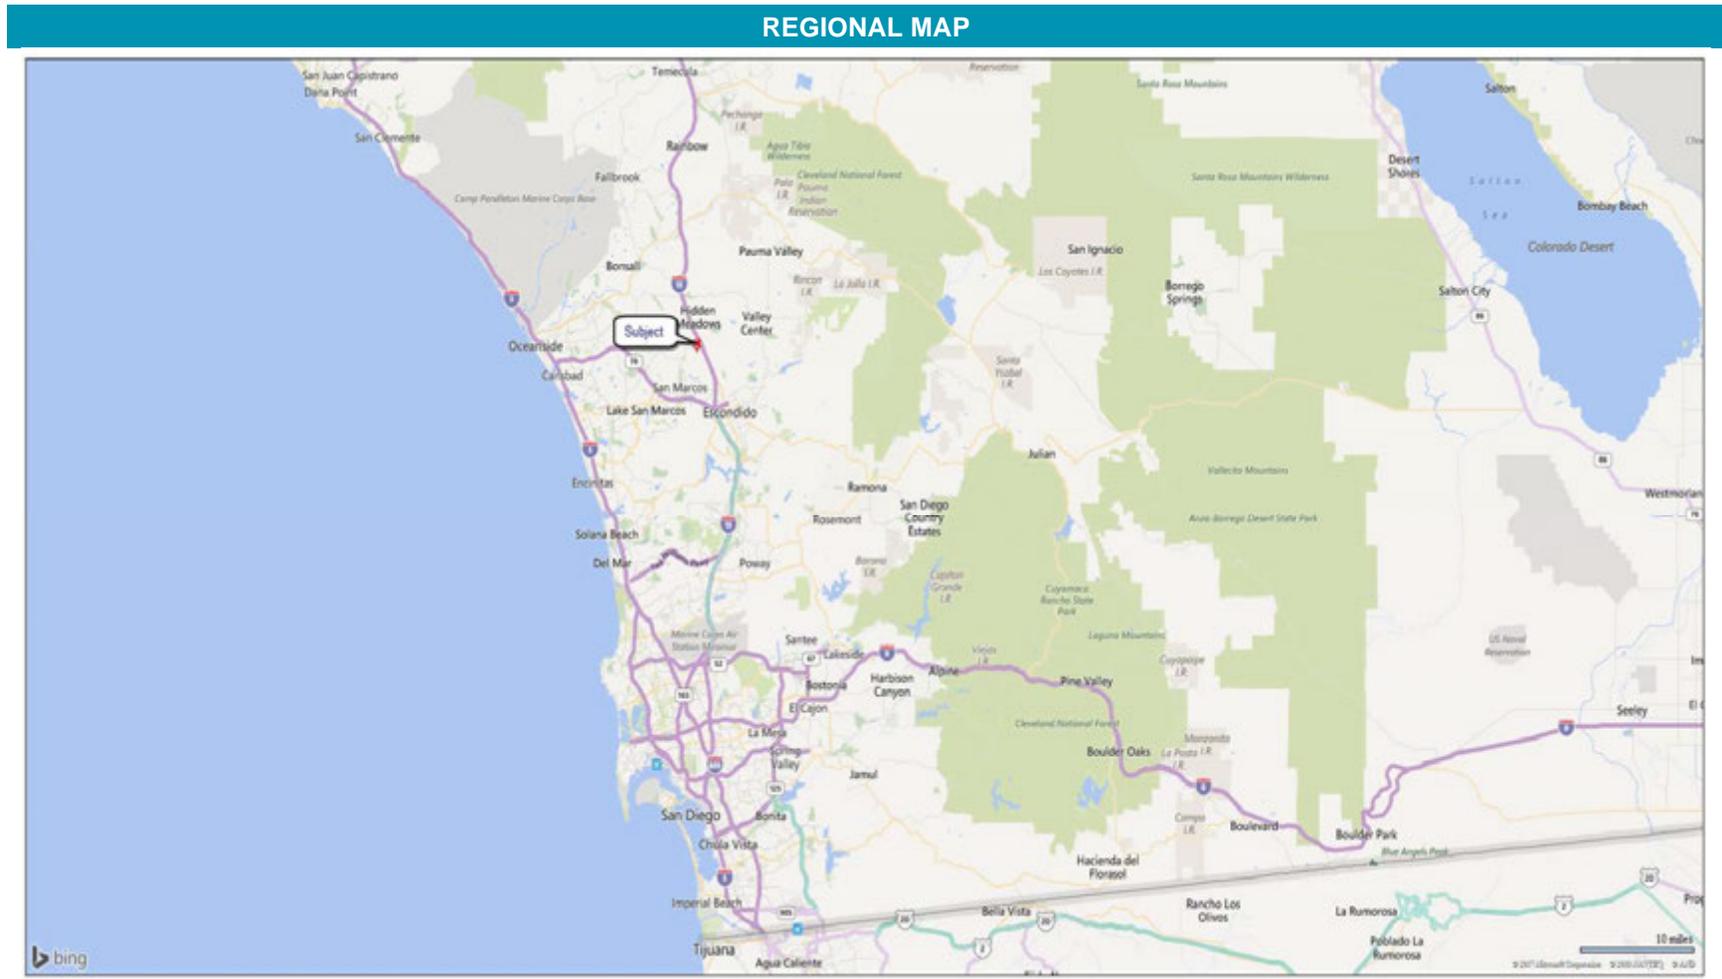

## Analysis

- Based upon the subject property characteristics, prevailing market dynamics, and other information, we developed an opinion of the market's demand for commercial use on the subject property.
- We analyzed the data gathered using generally accepted methodology to arrive at a probable demand.

This report is intended to comply with the reporting requirements outlined under USPAP for consulting assignment. Cushman & Wakefield Western, Inc. has an internal Quality Control Oversight Program. This Program mandates a "second read" of all appraisals. Assignments prepared and signed solely by designated members (MAIs) are read by another MAI who is not participating in the assignment. Assignments prepared, in whole or in part, by non-designated appraisers require MAI participation, Quality Control Oversight, and signature.

For this assignment, Quality Control Oversight was provided by Trevor Chapman, MAI.

# Regional Analysis

## Regional Analysis

### Market Definition

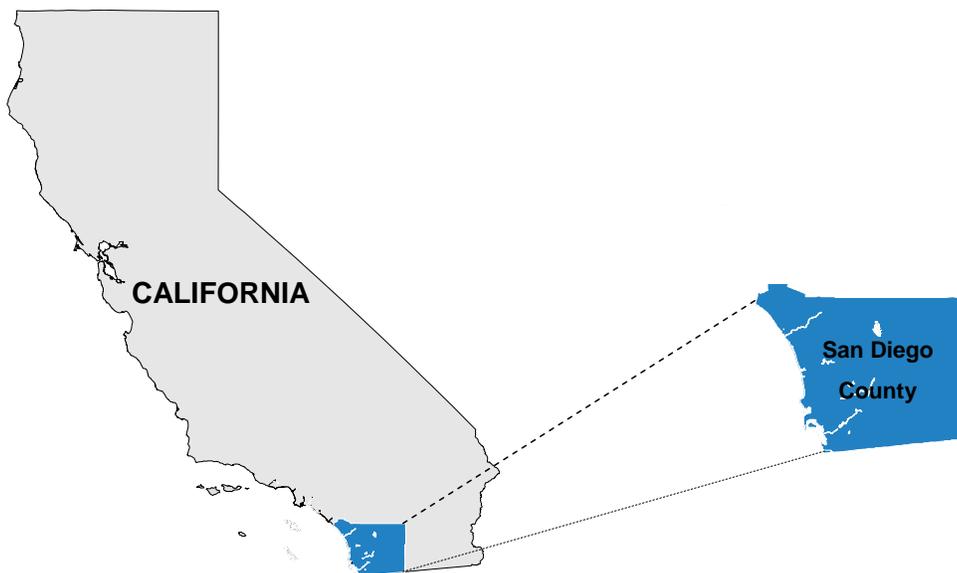

San Diego County is the second largest county by population in the state of California, with approximately 3.3 million residents, according to Experian Marketing Solutions' 2016 estimates. To the north, the county is bordered by Orange and Riverside County, and Imperial County to the east. San Diego is located north of Mexico, sharing a border with Tijuana. As a coastal community, the region is home to miles of beaches and mild-semi-arid climate, making it a desirable residential and commercial location. One of the strongest technology hubs in Southern California, the region also home to one of the largest concentrations of military defense services in the world, with military facilities hosting the United States Navy, Coast Guard and Marine Corps. Over the past three years as recovery has taken its course, construction and consumer spending has picked alongside substantial employment and income growth.

Further considerations are as follows:

- According to Experian Market Solutions' 2016 estimates, San Diego County is the fifth most populous county in the United States. Roughly half of the region's total population resides in the City of San Diego.
- The City of San Diego is the region's economic hub and home to well over half of the jobs and nearly three-quarters of the region's largest employers including Qualcomm, Sony Electronics, Inc., and Sempra Energy.

The San Diego-Carlsbad Metropolitan Statistical Area (MSA) is encapsulated within San Diego County, and is located at the southwestern-most corner of the continental United States. Below is a map of the region:

### SAN DIEGO-CARLSBAD, CA METROPOLITAN STATISTICAL AREA (MSA)

Source: Cushman & Wakefield Valuation & Advisory

## Current Trends

San Diego County's expanding economy is driven by the region's diverse industry base and above-average employment opportunities. According to the State of California Employment Development Department, nonfarm employment in the region gained 18,200 jobs over the twelve month period ending in April 2017. San Diego County reported an unemployment rate of 3.8 percent as of April 2017, 1.0 percent below the state rate of 4.8 percent and 60 basis points below the national rate of 4.4 percent reported during the same month. The region's economy continues to expand with the professional & business services, high-tech, biotech and government sectors propelling regional employment growth. Unemployed workers continue to be absorbed as mid-wage jobs are increasing, however at a slower rate than exhibited over previous year. Recent layoffs by some of the region's major employers, including Qualcomm, have hindered growth in recent years, however displaced workers have made their way into the professional & business services sector, which is expected to be the primary driving force behind improving labor markets and income growth in the near term. Despite high business and real estate costs in the region, San Diego County is expected to exhibit positive economic trends in the near-term.

Further points for consideration include:

- After experiencing a slowdown in recent years, San Diego's biotechnology and nanotechnology clusters have again began to flourish. Biotech firms in the region are successfully raising early as well as growth stage capital, while others are either planning significant IPOs or are being acquired by larger-scale biotech and pharmaceutical companies. The San Diego-based pharmaceutical firm Tocagen filed the largest IPO the region has seen in the past three years of \$98.0 million in April 2017, while Forge Therapeutics has raised \$15.0 million in Series A financing, among a number of other regional firms. Growth in these leading industries will contribute to the expanding professional service payrolls through the near term.
- San Diego's specialization in military intelligence has enabled further expansion of the region's defense sector. Over first quarter 2017, numerous defense firms including General Atomics, Northrop Grumman, General Dynamics, QED Systems, Boeing and BAE Systems have received contracts amounting to over \$1.0 billion for items ranging from military IT to electromagnetic aircraft launch systems, support systems and unmanned aerial vehicles. Additionally in March 2017, the region was awarded \$1.6 million in federal grants from the Department of Defense's Office of Economic Adjustment to support the region's leading defense contractors. Despite some expected volatility and upside risks, San Diego's defense sector is positioned to grow through the near term.
- Demolition work began on Manchester Financial Group's \$1.3 billion redevelopment of the Navy Broadway Complex in downtown San Diego, home the U.S. Navy's southwest regional headquarters. Plans for the mixed-use Manchester Pacific Gateway call for eventually replacing the entire campus with a new 17-story Navy office building, a 1,100-room convention center hotel, a 260-room boutique hotel, nearly 300,000 square feet of retail space. The development is expected to be completed over the next three years, creating more than 2,400 construction jobs and nearly 3,000 permanent jobs in the region.
- San Diego International Airport (SAN) officials have approved moving forward with plans to build a new \$229.5 million federal inspection services facility in Terminal 2 of the airport. Slated for completion in June 2018, an accelerated construction schedule was implemented to support anticipated growth at the airport, which currently handles more than 300,000 international passengers annually. According to airport officials, international air travel in 2018 is anticipated to contribute \$432.0 million in annual economic impact to the region.

- The U.S. Navy presented six construction firms with contracts collectively amounting to \$500.0 million over the next five years during first quarter 2017. The construction deals call on the firms for the design and development of the Naval Special Warfare Command Coastal Campus at Naval Base Coronado, one of the region's major employers. Three of the construction companies are local San Diego firms, including Harper Construction Co., RQ Construction LLC and Soltek Pacific Construction Co. The development, among many others in San Diego County, will contribute to employment growth in the region's construction sector in the near term, projected at 1.6 percent growth through 2021.
- According to the California Association of Realtors, home prices in San Diego County have exceeded values reported during the region's peak in 2007. As of March 2017, median closing prices for existing, single-family homes rose 3.8 percent year-over-year, to \$571,000. Additionally, single-family home sales increased 42.3 percent over the previous month and 8.2 percent over the previous year. Experts have suggested that the lack of inventory, low mortgage rates, and an imbalance between home construction and demand have helped increase housing prices.

## Demographic Trends

### Demographic Profile

San Diego's median age of 35.0 years is 3.0 years lower than the national median age of 38.0 years. The region outperforms the nation in terms of affluence and educational attainment with an average annual income of \$93,540 and 34.7 percent of its population holding Bachelor's degrees or higher. In comparison, only 29.0 percent of the nation's population holds a Bachelor's or advanced degree. San Diego's relative economic strengths can be attributed to the region's strong high-tech, biotech and professional services sectors, which provide high-wage positions and often require advanced degrees. Age and educational attainment contribute to the raised income levels in San Diego and relatively strong professional & business services sector, attracting high net worth individuals that should further elevate the region's demographics.

Further considerations regarding San Diego County's demographic trends are as follows:

- According to Experian Marketing Solutions, San Diego's median annual household income is currently \$64,907, 19.1 percent higher than the national average of \$54,505.
- San Diego County outperforms the U.S. in terms of households earning annual incomes of greater than \$100,000, with 30.3 percent of the region's households versus 23.0 percent of the nation.
- San Diego's demographics have fueled growth in industries that require advanced education. These sectors include biotechnology, business and professional service sectors. The chart below provides a demographic comparison between San Diego and the United States:

| Demographic Characteristics<br>San Diego MSA vs. United States<br>2016 Estimates |                  |                  |
|----------------------------------------------------------------------------------|------------------|------------------|
| Characteristic                                                                   | San Diego<br>MSA | United<br>States |
| Median Age (years)                                                               | 35.0             | 38.0             |
| Average Annual Household Income                                                  | \$93,540         | \$78,425         |
| Median Annual Household Income                                                   | \$64,907         | \$54,505         |

## Population

According to Experian Marketing Solutions' 2016 estimates, the San Diego-Carlsbad MSA is home to a population of 3.3 million individuals. Over the past decade, San Diego's annual population growth of 1.2 percent followed national population growth trends closely. Since 2006, the region's population expansion has fluctuated between 1.0 and 1.5 percent, with further growth hindered by the high cost of living, business costs, and rising home values. Population growth in the San Diego area has historically outpaced that of the national average, as the favorable climate conditions and diverse economy make Southern California a primary location for individuals, families, and businesses. Despite the high cost of living (26.0 percent higher than the national average according to Moody's Analytics), the region has a young, well-educated employment base. San Diego's population is primarily concentrated along the 20-mile Pacific Coast. The greatest population densities, not surprisingly, are located in proximity to the region's few major freeways—Interstate 5 (I-5), Interstate 805 (I-805), Interstate 8 (I-8), and Interstate 15 (I-15).

The following highlights the key statistics for population growth for San Diego County:

- With a current population of 3.3 million individuals, San Diego grew at an average annual rate of 1.2 percent between 2006 and 2016. Over the corresponding period, the national population fell short of the region's growth by 40 basis points, reporting growth of 0.8 percent.
- Through 2021, San Diego's population is forecast to grow at an average rate of 0.9 percent. In comparison the population of the United States' is expected to grow at an average annual rate of 0.7 percent. Population growth may however be hindered as the San Diego housing market continues to appreciate. As housing prices and the overall cost of living continue to increase, lower-income residents will likely seek opportunities in more affordable markets.

The following graph compares historical and projected population growth between San Diego and the United States:

The following table compares historical and forecasted population growth trends for the San Diego-Carlsbad MSA and the United States between 2006 and 2021:

| Annualized Population Growth<br>San Diego-Carlsbad Metropolitan Statistical Area<br>2006-2021 |                |                |                |                |                             |                             |

### Households

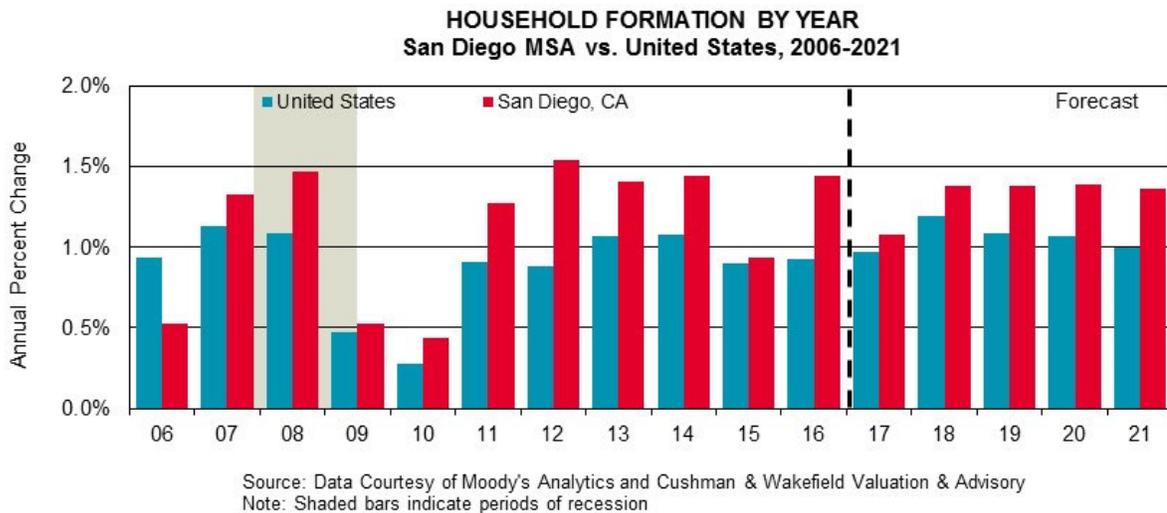

Between 2006 and 2016, household formation trends in San Diego outpaced the national growth by 30 basis points annually. Household formation trends in San Diego appear to mirror overall population gains, which is also similar to the performance for the nation. Over the past decade, household formation and population growth both averaged 1.2 percent annually, as the housing market recovered, income levels increased steadily, and the millennial generation entered the first-time home buyers' market. In March 2017, the California Association of Realtors reported an increase single-family home sales of nearly 8.2 percent over the previous year. Additionally single family permits in the region have increased in 2016 over the previous year, and are projected to continue increasing into the near term. The rise in home sales has been supported by the rise in income levels, which have kept pace with national rates, and the reaccelerating of high-tech and biotech, and professional services performance in the region. Through 2021, San Diego's household formation is projected to increase to an average annual rate of 1.4 percent, outperforming the nation's projected average.

Further considerations regarding San Diego County's household formation are:

- Annual household growth between 2006 and 2016 averaged 1.2 percent in San Diego County, 30 basis points higher than the nation's ten-year average growth rate of 0.9 percent.

- The projected five-year average household growth rate for San Diego County is forecasted at 1.4 percent, 30 basis points higher than the expected national average household growth rate of 1.1 percent.
- Household formation growth is limited by the available land for development and fluctuating single-family permits in the region. The tightness of the market has caused higher housing prices, and the high cost of living is likely to impede future population growth, ultimately pushing low to middle class residents out of the area.

The following graph compares historical and projected household formation between San Diego County and the United States:

## Economic Trends

### Gross Metro Product

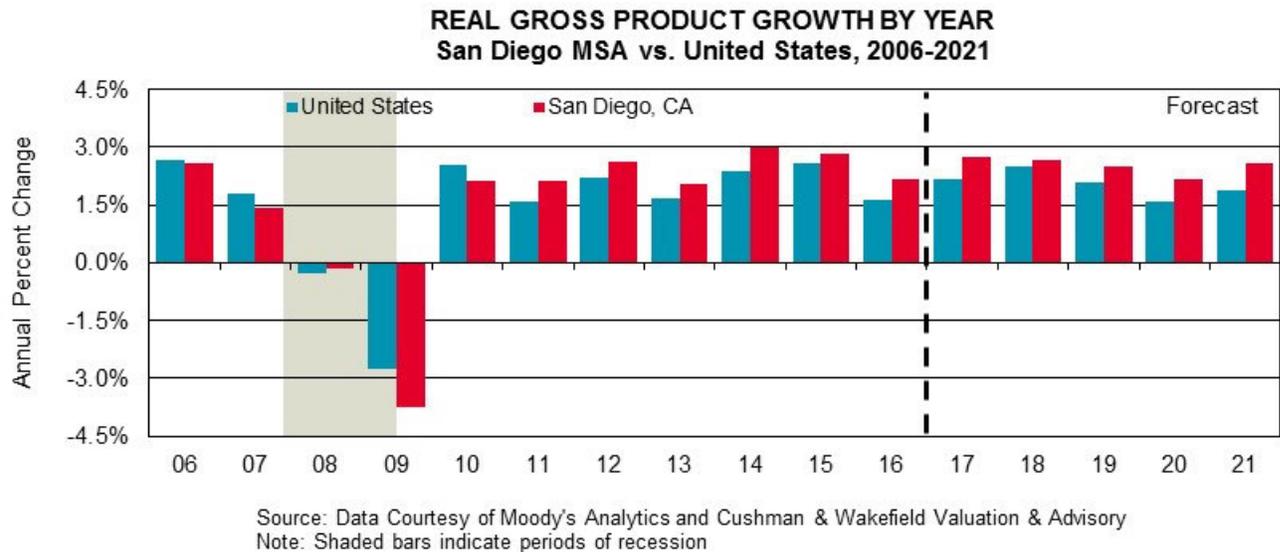

Between 2006 and 2016, San Diego's Gross Metro Product (GMP) grew by 1.4 percent annually, exceeding the nation's Gross Domestic Product (GDP) annual growth rate of 1.3 percent over the same period. A large share of the region's GMP output is produced by high-value industries including the high-tech, biotechnology and defense sectors. Historically, San Diego's Gross Metro Product growth trends have closely followed that of the nation. The most recent economic recession left a significant impact on the region and caused San Diego's GMP growth to decrease to lows of negative 4.2 percent in 2009, 1.4 percentage points lower than the national average during this period. Recovering from the last recession, San Diego has since surpassed the GMP growth trend of the nation over 2016. As the region continues to expand, San Diego's GMP growth is forecasted to exceed that of the nation through 2021, and reach peak growth of 2.7 percent in 2018.

Some notable considerations include:

- Between 2006 and 2016, the region averaged a 1.4 percent annual growth in GMP, 10 basis points higher than the average annual growth of 1.3 percent exhibited by the U.S. over the same time period.
- Over the next five years, San Diego's average annual GMP growth rate is projected to further accelerate to 2.5 percent annually, 50 basis points above the 2.0 percent projected rate of the nation over the same period. As indicated by its relative growth in GMP, the San Diego area is poised for a sustainable, long-term rate of growth.

- Growth in the San Diego region will be driven by expanding its professional and business services and technology sectors, as well as the strengthening of the construction sector. Increased consumer confidence coupled with income growth in the market have contributed to the expansion of the San Diego MSA’s economy over the past decade, a trend that is expected to continue in the near term.

The following graph compares historical and projected real gross product growth between San Diego County and the United States:

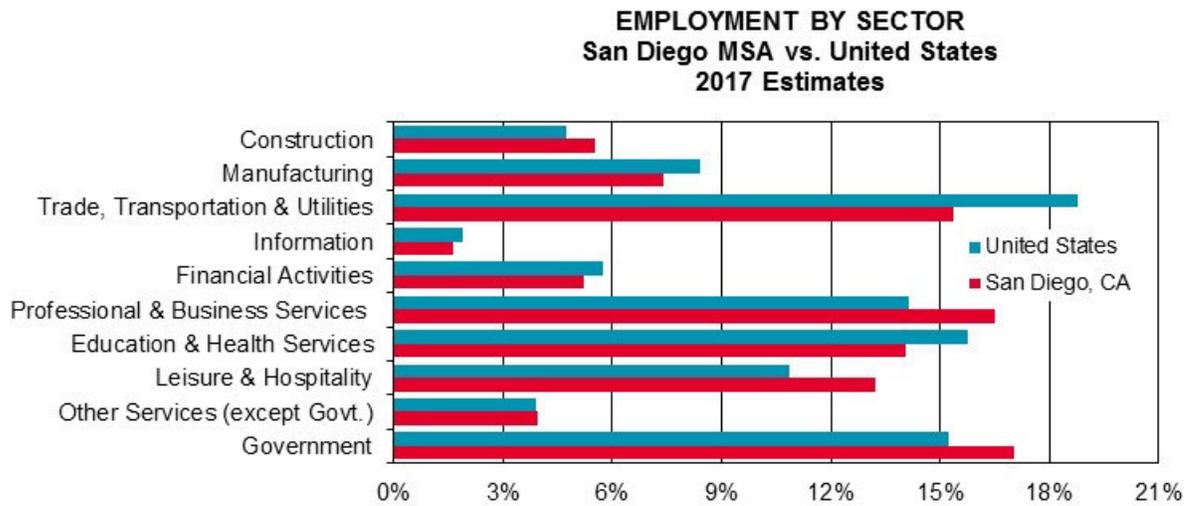

### Employment Distribution

San Diego’s industry sector composition includes economic diversity comparable to that of the nation. The region’s industry mix is heavily weighted in the government, professional & business services, and trade, transportation & utilities sectors. Industries of the professional & business services sector, including biotech, defense, information technology and software engineering, have contributed significantly in terms of employment in the region over the past decade. Continued defense contracts will support employment and income stability in the region, while technology production and the bioscience sector in the area promote growth and fare well in the global economy. According to forecasts by Moody’s Analytics, San Diego’s main employment sectors are expected to remain healthy and contribute to employment growth in the near term.

Additional considerations regarding employment distribution in San Diego County are as follows:

- San Diego is most heavily weighted in the government and profession & business services sectors, holding employment shares of 17.0 percent and 16.5 percent, respectively. These leading sectors are more heavily weighted in the region’s employment distribution than the nation, holding shares 1.7 percent and 2.4 percent greater than the nation, respectively.
- San Diego is relatively underweighted in the trade, transportation & utilities and education & health services sectors, compared to the nation, despite these sectors holding significant employment shares in the region (15.4 percent and 14.1 percent, respectively). However, the education & health services sector is expected to see some of the most significant growth in the region of 1.8 percent through the near term.

The chart below compares employment by industry sector between San Diego County and the United States:

Source: Data Courtesy of Moody's Analytics and Cushman & Wakefield Valuation & Advisory

## Major Employers

San Diego's list of major employers reflects the region's relative strengths in its leading sectors including government, education and healthcare and high-tech sectors. The government sector accounts for the largest share of total nonfarm employment, as half of the region's major employers are military units. Despite being underweighted in comparison to the nation, nearly half of the largest employers in San Diego fall in the education and health services sector. The San Diego MSA is home to two Fortune 500 corporations, Qualcomm Inc. and Sempra Energy, ranked 110<sup>th</sup> and 279<sup>th</sup> respectively on the national list as of year-end 2016. Over the previous year, Qualcomm has moved up in the ranks from 123<sup>rd</sup> place, while Sempra Energy fell nine spots from the previous year's list. Despite layoffs in recent years, Qualcomm employs approximately 13,500 professionals, while Sempra Energy has approximately 5,000 employees in the San Diego region. Two other San Diego based companies, CareFusion Corp. and PriceSmart made Fortune's larger compilation of top 1,000 companies.

Additional considerations regarding San Diego County's major employers include:

- The government sector, specifically the military, has a great influence on the employment climate in San Diego. San Diego County's largest employer, the Marine Corps Base Camp Pendleton, continues to take on more employees and anchors to the local economy. Currently, there are more than 100,000 individuals employed by the United States Navy in the region.
- Despite the education & health services sector being underweighted in San Diego compared to the nation, the region's second largest employer, the University of California, San Diego, falls in the sector. The university currently employs 29,287 individuals. Although the top ten employers in the region, a number of educational institutes additionally contribute to employment numbers in the sector, including San Diego State University with 5,064 employees and the San Diego Community College District with 4,733 employees.
- As for the private sector employers in San Diego, Sharp Health is the region's largest private employer with 16,896 employees while Scripps Health is a close second with 14,644 employees.

The table below lists the top employers in terms of total employees in the San Diego County MSA:

| Largest Employers<br>San Diego-Carlsbad, CA  |                     |                  |
|----------------------------------------------|---------------------|------------------|
| Company                                      | No. of<br>Employees | Business<br>Type |
| Marine Corps Base Camp Pendleton             | 43,331              | Military         |

## Employment Growth

Between 2006 and 2016, San Diego's total nonfarm employment averaged 0.8 percent growth annually, as significant losses were reported during the period of the last recession. The San Diego MSA has historically outperformed the nation with consistent year-over-year employment growth, however the impact of the last recession caused the region to trail national employment growth averages. Leading into and through the recession, San Diego's employment growth consistently fell short, reporting a record low growth rate of negative 5.0 percent in 2009. Coming out of the recent recession, San Diego has recorded a positive employment growth trend, with the region outperform the nation once again as of 2012. This performance trend alongside above-average income growth is expected to continue through 2021, as the region's high-tech sector fuels job growth and acts as a catalyst for the professional services job sector.

Employment sector trends are as follows:

- From 2006 to 2016, San Diego's annual employment growth average of 0.8 percent exceeded the nation's annual growth rate of 0.6 percent by 20 basis points during the same period.
- Extending the forecasted period through 2021, San Diego is expected to report average employment growth of 0.9 percent annually, 10 basis points higher than the national projected average annual growth rate of 0.8 percent over the same period. Growth will be supported by gains in the education & health services (1.8 percent), professional & business services (1.4 percent) and leisure & hospitality (1.4 percent) sectors.
- Professional & business services payroll expansion is projected to outpace overall employment growth in the region through 2021, with average annual growth of 1.4 percent. Highly-skilled professional sectors will be the driving force behind the region's improving labor market and above-average income growth.
- Biotechnology will propel the economy, although the outlook is more uncertain than in previously years. San Diego's biotechnology firms will continue to be an area of strength in the region, raising capital with ease for further growth. While the outlook is positive, risks are weighted to the downside.

The following graph compares historical and projected total employment growth between San Diego County and the United States:

Source: Data Courtesy of Moody's Analytics and Cushman & Wakefield Valuation & Advisory  
Note: Shaded bars indicate periods of recession

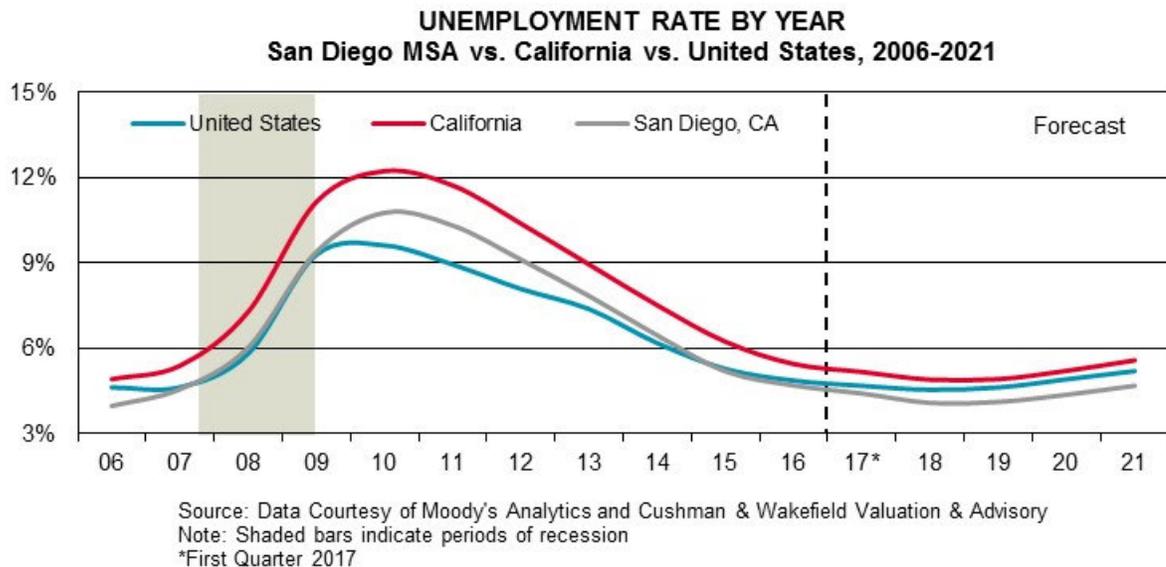

## Unemployment

According to the Bureau of Labor Statistics' April 2017 data, the San Diego-Carlsbad MSA's unemployment rate is currently at 3.8 percent, 80 basis points below the rate reported during the same month of the previous year. The region's unemployment rate trended well below the state of California's average, reported at 4.8 percent, as well as the national rate of 4.4 percent as of April 2017. Through the near term, San Diego's unemployment rate is expected to maintain a similar rate, while remaining below state and national rates. San Diego's economy is projected to strengthen in the coming quarters, generating additional jobs that will continue to reduce the region's unemployment rate.

Notable points concerning the region's unemployment rate are as follows:

- Over the past decade between 2006 and 2016, San Diego County averaged an unemployment rate of 7.1 percent, 30 basis points higher than the national average of 6.8 percent for the same time period. The outlook for the next five years will be more favorable than the national projections.
- Unemployment in the region peaked during 2010 to 10.8 percent and declined steadily in subsequent years as economy recovery following the recession ran its course. Although improvements are expected in the near term, the local unemployment rate will remain slightly above the pre-recessionary record low of 4.0 percent recorded in 2006.
- Looking forward, Moody's Analytics forecasts that increased hiring will have significant positive impact on the unemployment rate in San Diego County. Through 2021, the unemployment rate is expected to remain below the 5.0 percent range, averaging at about 4.3 percent, while the national average is expected to be 4.8 percent during the same period.

The following graph compares historical and projected unemployment rate between San Diego County and United States:

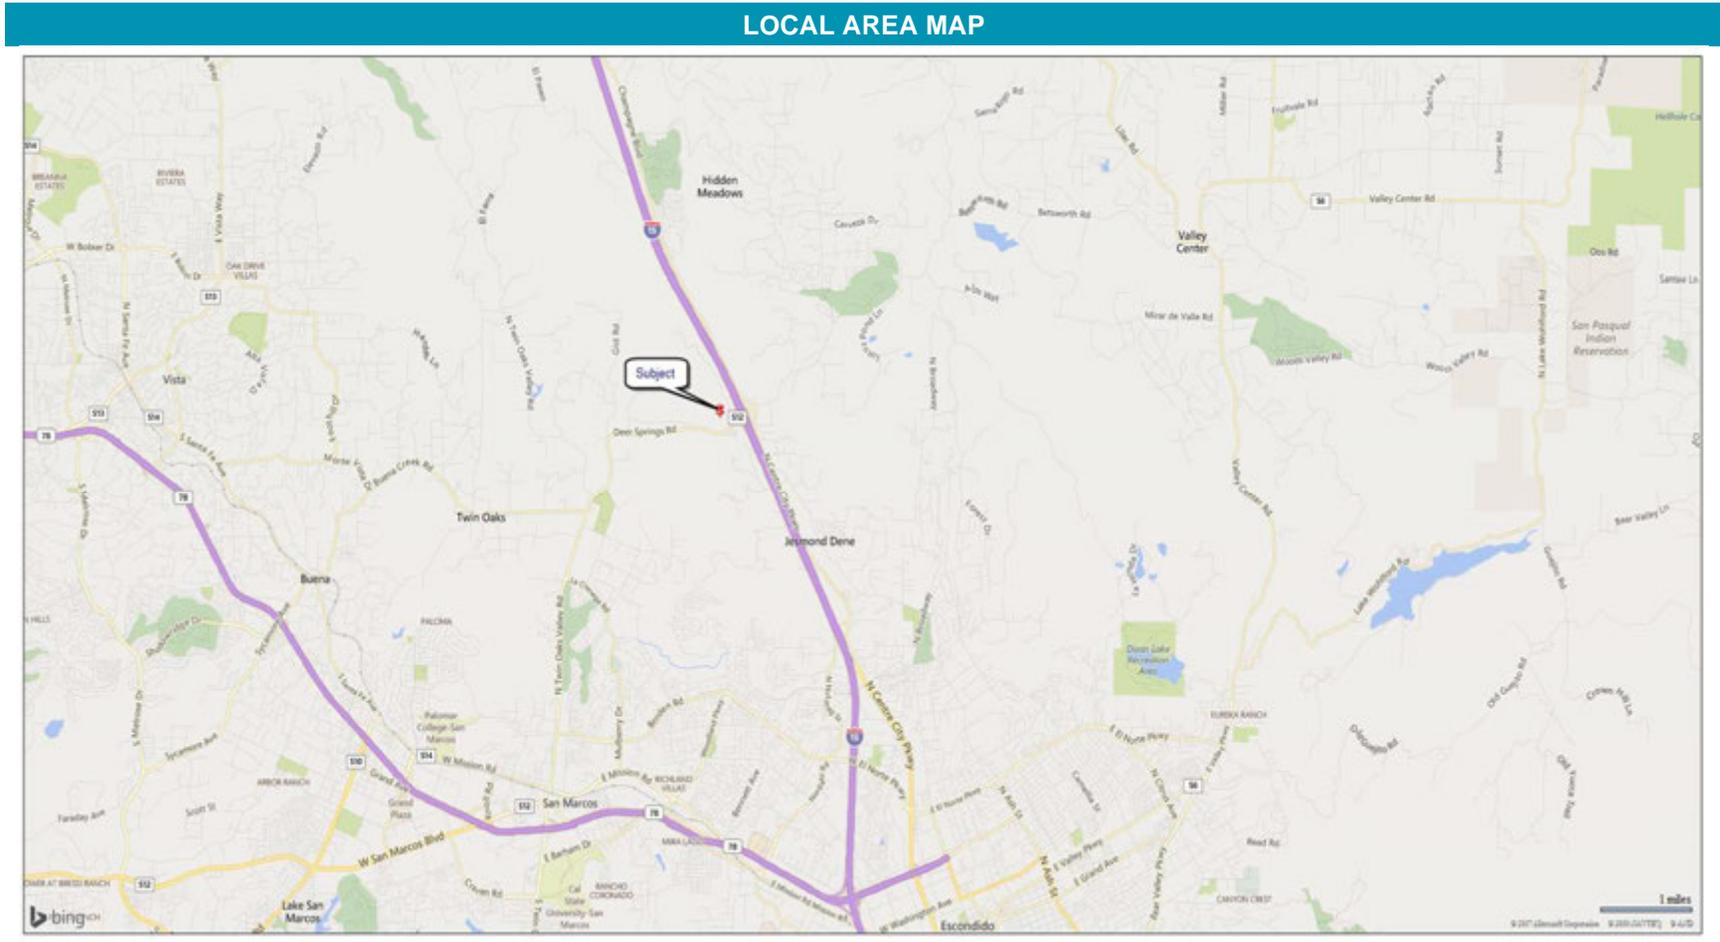

## Conclusion

San Diego County's demographics and high-wage employment growth have supported economic expansion following the last recession. Despite slowing pace in recent years, the region continues to outperform the nation, with a similar trend expected in the near term. The region's diversified employment base will continue to compare favorably with the United States, although job growth will slow to the nation as the economy reaches full employment. The majority of employment growth will be driven by the high-skill professional and business services sector, with the high-tech and defense sectors continuing to support the region's economic growth. The high business and housing cost may dampen the region's growth, but forecasts are optimistic that the region's strong demographics and highly educated population will be able to mitigate these high costs. The layoffs at Qualcomm have had an impact on the region's performance, but in the long term, will continue to be a major factor in the area's growth. San Diego County is expected to continue as an above-average performer moving forward, keeping pace with the state and exceeding national growth in the near term.

Further considerations are as follows:

- San Diego's rising professional & business services sector is largely based on high-tech, pharmaceutical, military technology and software industries. Growth of jobs requiring high-skill and education levels will be the driving force behind the region's improving labor market and above-average income growth in the near term.
- The relative strength of the defense sector and specialization in military intelligence will contribute to the region's expansion modestly. After experiencing setbacks in recent year, the industry is positioned to experience growth despite upside risks.
- San Diego's desirable coastal location and high quality of life will continue to attract a younger, well-educated, and relatively affluent population to the area. The county's diversified economy makes the region an attractive choice for businesses as well.

# Local Area Analysis

## Neighborhood Analysis

### Location

The community of Twin Oaks is located approximately 2½ miles north of the city of Escondido, west of Interstate 15 (I-15), west of the unincorporated Valley Center area, and south of Old Castle Road. Downtown San Diego is located 35± miles to the south and the closest beaches are located 15± miles to the southwest within the city of Carlsbad. The southern-most city of Riverside County, Temecula, is located 15± miles to the north along I-15. The community encompasses approximately 8 square miles of unincorporated territory in San Diego County characterized by mountainous terrain, rolling hills, some gently sloping valley floors, and rock outcroppings. The community is nestled amongst the rolling terrain of a mountaintop, several hundred feet above the I-15 corridor. No major watercourses cross the area.

### Access / Transportation

The community is primarily accessed via the Mountain Meadow Road/Deer Springs Road exit off I-15. Mountain Meadow Road is a 4-lane secondary road which travels up the mountain to a network of 2-lane minor roads that provide access to the homes of the community. I-15 travels north and south, just east of the community, providing northern access to areas of San Diego and Riverside Counties. To the south, I-15 provides access to the cities of Escondido, San Marcos, and San Diego. State Highway 78 (SH-78) is located in the city of Escondido and provides access to the cities of San Marcos, Vista, Carlsbad, and Oceanside to the west. McClellan Palomar Airport, located 13± miles to the southwest in the city of Carlsbad, provides the nearest certified public carrier service.

### Demographics

According to Experian Marketing Solutions Inc., the community (3-mile radius) consisted of 18,473 residents in 2016. The median household income increased from \$73,539 in 2000 to \$105,073 in 2016. Empty nesters and retirees have primarily resided in the community from the 1970s and 1980s, when most of the development occurred. However, some developments have attracted families as well.

### Employment

According to [www.city-data.com](http://www.city-data.com), industries providing employment to the area include education, health, and social services, professional, scientific, management, administrative, waste management, and retail. Employees commute to the nearby cities of Escondido, San Marcos, Vista, or throughout San Diego County as I-15 and SH-78 provide good access to major employment centers. A number of locally owned businesses support some of the community's needs.

### Amenities / Services

The Lawrence Welk Resort is located just north of the community along I-15 and also includes a golf course. The nearest medical center is located in Escondido. Fallbrook Community Airpark is located 12± miles to the northwest. Palomar College and University of California State University-San Marcos are located within 7± miles to the south in the city of San Marcos.

### Land use

The majority of homes were custom built during the 1970s and 1980s on larger lots. More recently, home prices have been in the \$600,000 to \$800,000 range, with some homes above \$1,000,000.

### Conclusions

The community of Twin Oaks is located in northern San Diego County just north of the city of Escondido. Downtown San Diego is located 35± miles to the south and the closest beaches are located 15± miles to the southwest within the

city of Oceanside. The community encompasses approximately 8 square miles of unincorporated territory in San Diego County characterized by mountainous terrain, rolling hills, some gently sloping valley floors, and rock outcroppings. The community has good access to I-15 but is more distant from community services and employment. However, as Twin Oaks has attracted many retirees and empty nesters, employment is not as critical as amenities and lifestyle.

| Primary Land Area:          | 58.200 acres / 2,535,192 square feet (A portion of the total 1,985 acre master-planned community)                                                                                                                                                                                                                                                                                                             |
| Frontage/Access/Visibility: | <p>The subject property has frontage on the following streets: Mesa Rock Road and Deer Springs Road.</p> <p>Access is considered good for the subject's current condition.</p> <p>Visibility is good.</p>                                                                                                                                                                                                     |
| Site Improvements:          | The site is unimproved hillside with steep terrain, sloping downward from West to East toward Freeway I-15                                                                                                                                                                                                                                                                                                    |
| Land Use Restrictions:      | We were not given a title report to review. We do not know of any easements, encroachments, or restrictions that would adversely affect the site's use. However, we recommend a title search to determine whether any adverse conditions exist.                                                                                                                                                               |
| Flood Zone Description:     | <p>The subject property is located in flood zone X (Areas determined to be outside the 500 year flood plain) as indicated by FEMA Map 06073C0752H, dated May 16, 2012.</p> <p>The flood zone determination and other related data are provided by a third party vendor deemed to be reliable. If further details are required, additional research is required that is beyond the scope of this analysis.</p> |
| Seismic Hazard:             | Though Southern California generally has earthquake faults and associated hazard areas, the subject is not known to be within a designated earthquake fault hazard zone.                                                                                                                                                                                                                                      |
| Overall Site Utility:       | The subject site irregular in shape, but is functional for its current use.                                                                                                                                                                                                                                                                                                                                   |
| Location Rating:            | Good                                                                                                                                                                                                                                                                                                                                                                                                          |

## Zoning

### LAND USE DESIGNATIONS

---

Zoning: Existing: C30 (Office-Professional) and C35 (General Commercial / Limited Residential)  
Proposed: C34 (General Commercial / Residential Use)

---

Discussion: Nonresidential building intensity is expressed as a maximum floor-area ratio (FAR). A floor- area ratio (FAR) is the ratio of the gross building square footage on a lot to the **net square footage** of the lot or parcel.

Under the current zoning of C30, the maximum FAR (Floor Area Ratio) is .80 of the site area for Village areas and .45 for semi-rural areas. Based on the estimated site area at 53.6 acres, at a maximum, this translates to a total building area from 1,050,667 to 2,008,116 square feet. However, this does not mean that all of the allowed building area could be physically or economically constructed, as the net square footage of the site is unknown.

Under the current zoning of C34, the maximum FAR is .70 of the site area for Village areas and .45 FAR for semi-rural areas. The estimated site area is 4.6 acres. At a maximum, this translates to a total building area from 90,169 to 140,263 square feet. Again, as the net site area is unknown, this does not mean that all of the allowed building area could be physically or economically constructed.

According to the County of San Diego's General Plan, the maximum FAR is provided based on regional categories to guide intensity of development. This denotes the upper range for each component, but there is no expectation that this would be achieved when each component is applied in the same area.

As well, the maximum density for lands designated as Semi-Rural is also based on the slope of the site.

## Residential

As can be seen in the chart above, home sales and pricing have increased over the past two years, with attached product indicating a 31 percent increase. During the same time period, average home size decreased slightly from 1,789 to 1,768 square feet, resulting in an increase in price points from \$328 to \$384 per square foot, a 17 percent increase. As well, foreclosure activity has also been declining over the same time period.

Numerous articles in the San Diego Union and elsewhere describe the lack of affordable housing in the San Diego County. Many subdivisions and master-planned communities have been proposed to address this concern, but have some difficulty in obtaining approvals. The subject's previous efforts to obtain entitlements under the master-planned community known as Merriam Mountains was rejected by the County Board of Supervisors back in 2010. A recent proposal under new ownership, envisions less density (2,135 homes instead of 2,600 homes) and is currently in the entitlement process with the County of San Diego.

## Office Market Analysis

The following is a summary of the office market in the outlying North San Diego County area (which includes the subject's area), as of the 2<sup>nd</sup> quarter 2017, according to CoStar Analytics.

### Overview

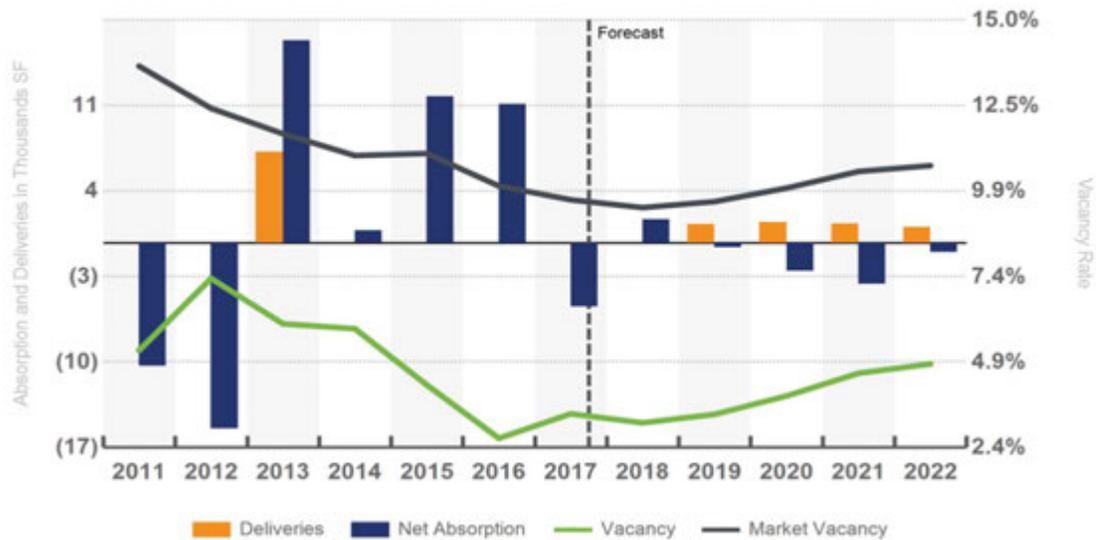

| Outlying SD County N Office   |                             |              |                    |

| 2008 | 712       | 2            | 0.3%     | (43)           | -6.1%    | --                 |
| 2007 | 709       | 0            | 0.0%     | 0              | 0.0%     | --                 |
| 2006 | 709       | 0            | 0.0%     | 15             | 2.1%     | 0.0                |
| 2005 | 709       | 0            | 0.0%     | (3)            | -0.5%    | --                 |

As can be seen from the charts, vacancies have been increasing with nothing under construction and a negative in net absorption. The expected trend through 2022 is for little to no growth in the office market. The conclusion is that there is little to no demand for office space in the subject's location.

Existing office and other employment centers are located along the Highway 78 corridor and in the City of Escondido. It appears that the existing development adequately serves the region.

## Retail Market Analysis

The following is a summary of the retail market in the outlying North San Diego County area (which includes the subject's area), as of the 2<sup>nd</sup> quarter 2017, according to CoStar Analytics.

Though slightly better than the office market with a lower (and stabilizing) vacancy, there is no retail construction and a slight negative absorption expected through 2022.

Existing retail as well as community and regional centers are located along the Highway 78 corridor and in the City of Escondido. It appears that the existing development adequately serves the region.

## CONCLUSIONS DEMAND (CURRENT)

### Residential

Those factors typically gauged to determine demand for housing would indicate that demand in this submarket should improve in the future. As discussed, growth rates are expected to continue in San Diego County and the North County Inland MSA area in the long-term. It is anticipated that as remaining residential land inventory decreases in San Diego County, those projects available closer to employment centers should capture a larger market share of effective demand for housing. Though product continues to be absorbed and builders incentives have declined, pricing increases may plateau as interest rates are expected to increase.

In summary, overall long-term demand factors for San Diego County and the subject's submarket are positive. In the near-term, the upward pricing trends appear to be slowing and future interest rate increases may have an effect on absorption.

### Office

Currently, office use is mostly located in the Escondido, San Marcos and Vista areas along the Route 78 corridor. Office workers in these areas generally commute from areas outside the trade area. There is no current construction of office and a net negative (2,000 sf) absorption as of the 2<sup>nd</sup> quarter 2017. Thus, there does not appear to be significant demand for office space in the subject's designated site area.

## Retail

As stated in the Retail Market discussion, there is little to no current demand for retail development at the subject's site.

## Assumptions and Limiting Conditions

"Report" means the appraisal or consulting report and conclusions stated therein, to which these Assumptions and Limiting Conditions are annexed.

"Property" means the subject of the Report.

"Cushman & Wakefield" means Cushman & Wakefield, Inc. or its subsidiary that issued the Report.

"Appraiser(s)" means the employee(s) of Cushman & Wakefield who prepared and signed the Report.

The Report has been made subject to the following assumptions and limiting conditions:

- No opinion is intended to be expressed and no responsibility is assumed for the legal description or for any matters that are legal in nature or require legal expertise or specialized knowledge beyond that of a real estate appraiser. Title to the Property is assumed to be good and marketable and the Property is assumed to be free and clear of all liens unless otherwise stated. No survey of the Property was undertaken.
- The information contained in the Report or upon which the Report is based has been gathered from sources the Appraiser assumes to be reliable and accurate. The owner of the Property may have provided some of such information. Neither the Appraiser nor Cushman & Wakefield shall be responsible for the accuracy or completeness of such information, including the correctness of estimates, opinions, dimensions, sketches, exhibits and factual matters. Any authorized user of the Report is obligated to bring to the attention of Cushman & Wakefield any inaccuracies or errors that it believes are contained in the Report.
- The opinions are only as of the date stated in the Report. Changes since that date in external and market factors or in the Property itself can significantly affect the conclusions in the Report.
- The Report is to be used in whole and not in part. No part of the Report shall be used in conjunction with any other analyses. Publication of the Report or any portion thereof without the prior written consent of Cushman & Wakefield is prohibited. Reference to the Appraisal Institute or to the MAI designation is prohibited. Except as may be otherwise stated in the letter of engagement, the Report may not be used by any person(s) other than the party(ies) to whom it is addressed or for purposes other than that for which it was prepared. No part of the Report shall be conveyed to the public through advertising, or used in any sales, promotion, offering or SEC material without Cushman & Wakefield's prior written consent. Any authorized user(s) of this Report who provides a copy to, or permits reliance thereon by, any person or entity not authorized by Cushman & Wakefield in writing to use or rely thereon, hereby agrees to indemnify and hold Cushman & Wakefield, its affiliates and their respective shareholders, directors, officers and employees, harmless from and against all damages, expenses, claims and costs, including attorneys' fees, incurred in investigating and defending any claim arising from or in any way connected to the use of, or reliance upon, the Report by any such unauthorized person(s) or entity(ies).
- Except as may be otherwise stated in the letter of engagement, the Appraiser shall not be required to give testimony in any court or administrative proceeding relating to the Property or the Appraisal.
- The Report assumes (a) responsible ownership and competent management of the Property; (b) there are no hidden or unapparent conditions of the Property, subsoil or structures that render the Property more or less valuable (no responsibility is assumed for such conditions or for arranging for engineering studies that may be required to discover them); (c) full compliance with all applicable federal, state and local zoning and environmental regulations and laws, unless noncompliance is stated, defined and considered in the Report; and (d) all required licenses, certificates of occupancy and other governmental consents have been or can be obtained and renewed for any use on which the value opinion contained in the Report is based.
- The physical condition of the improvements considered by the Report is based on visual inspection by the Appraiser or other person identified in the Report. Cushman & Wakefield assumes no responsibility for the soundness of structural components or for the condition of mechanical equipment, plumbing or electrical components.
- Unless otherwise stated in the Report, the existence of potentially hazardous or toxic materials that may have been used in the construction or maintenance of the improvements or may be located at or about the Property was not considered in arriving at the opinion of value. These materials (such as formaldehyde foam insulation, asbestos insulation and other potentially hazardous materials) may adversely affect the value of the Property. The Appraisers are not qualified to detect such substances. Cushman & Wakefield recommends that an environmental expert be employed to determine the impact of these matters on the opinion of value.
-

- In the event of a claim against Cushman & Wakefield or its affiliates or their respective officers or employees or the Appraisers in connection with or in any way relating to this Report or this engagement, the maximum damages recoverable shall be the amount of the monies actually collected by Cushman & Wakefield or its affiliates for this Report and under no circumstances shall any claim for consequential damages be made.
- • If the Report is referred to or included in any offering material or prospectus, the Report shall be deemed referred to or included for informational purposes only and Cushman & Wakefield, its employees and the Appraiser have no liability to such recipients. Cushman & Wakefield disclaims any and all liability to any party other than the party that retained Cushman & Wakefield to prepare the Report.
- Any estimate of actual cash value, if included within the agreed upon scope of work and presented within this Report, is based upon an agreed upon procedure with the client as identified by the client within their definition. C&W makes no warranties regarding the accuracy or relevance of this estimate.
- Unless otherwise noted, we were not given a soil report to review. However, we assume that the soil's load-bearing capacity is sufficient to support existing and/or proposed structure(s). We did not observe any evidence to the contrary during our physical inspection of the property. Drainage appears to be adequate.
- Unless otherwise noted, we were not given a title report to review. We do not know of any easements, encroachments, or restrictions that would adversely affect the site's use. However, we recommend a title search to determine whether any adverse conditions exist.
- Unless otherwise noted, we were not given a wetlands survey to review. If subsequent engineering data reveal the presence of regulated wetlands, it could materially affect property value. We recommend a wetlands survey by a professional engineer with expertise in this field.
- Unless otherwise noted, we observed no evidence of toxic or hazardous substances during our inspection of the site. However, we are not trained to perform technical environmental inspections and recommend the hiring of a professional engineer with expertise in this field.
- By use of this Report each party that uses this Report agrees to be bound by all of the Assumptions and Limiting Conditions, Hypothetical Conditions and Extraordinary Assumptions stated herein.

Re: Revised Independent Analysis of Zoning Regulations, Constraints and Development Potential of Newland Owned Commercial Parcels Report prepared by Delane Engineering

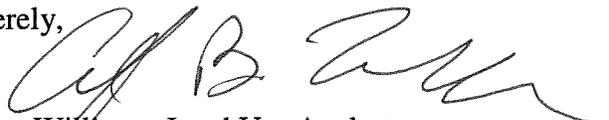

Dear Ms. Smith

Please find enclosed a revised report by Delane Engineering regarding the "Independent Analysis of Zoning Regulations, Constraints and Development Potential of Newland Owned Commercial Parcels." Our office previously submitted the report with our comment letter on the Draft Environmental Impact Report for the Newland Sierra Project. The previously submitted report incorrectly showed that Newland Sierra owned land currently occupied by the AM/PM gas station at Mesa Rock Road. This has been corrected, and the exhibits to the report have also been revised to reflect this change.

The revision, however, does not change the conclusion of the report which finds that due to regulatory and environmental constraints on the site a maximum of 618,000 square feet of office professional uses, and 77,000 square feet of general commercial uses could be built on the portions of the Newland Sierra Project site currently designated for office commercial and general commercial, for a total of 695,000 square feet. Therefore, the report finds that the site would not accommodate the 2 million square feet of commercial retail space including "big box" retail, claimed by Newland Sierra and repeated often by Newland Sierra in media reports and at community meetings.

If you have any questions, please do not hesitate to contact me.

Sincerely,

Clifton Williams, Land Use Analyst  
LATHAM & WATKINS LLP

Enclosure

## TECHNICAL MEMORANDUM

| FROM    | John Prince, PE, PMP – DELANE Engineering, Inc.                                                                               |
| SUBJECT | <b>Independent Analysis of Zoning Regulations, Constraints, and Development Potential of Newland Owned Commercial Parcels</b> |

According to the June 2017 Draft Environmental Impact Report (DEIR) prepared for the Newland Sierra Development, the entire project area is currently zoned for 99 dwelling units and 58.2 acres of commercial office space (53.6 acres of C30, Office Professional, and 4.6 acres of C36, General Commercial). The Newland project proposes amending the General Plan and zoning to allow for the project's proposed 2,135 dwelling units and 81,000 square feet (SF) of commercial retail (C-5). See **Figure 1** for a land use breakdown from the Project Description section of the Newland DEIR.

The Newland DEIR claims that the 58.2 acres of currently zoned commercial property yields 2,008,116 SF of potential development under the Existing General Plan and that the proposed zoning changes result in similar or fewer overall land use and traffic impacts. The Newland DEIR also concludes that 2,008,116 SF of commercial development is feasible on the project site, and marketing material distributed by Newland at public meetings suggests the commercial parcels could include “big box” retail stores.

The Newland DEIR does not provide any detail on how the parcels would support over 2 million SF of development and does not own all the parcels. Per the County Zoning ordinance, development on the parcels is limited to two-stories and 35-ft in total height, with setbacks up to 60-ft. In addition, much of the property lies on “steep slopes”. Per the County Resource Protection Ordinance (RPO), steep slopes are defined as those natural slopes exceeding 25% in slope gradient and are a protected resource. Over 30% of the area of the commercial parcels qualifies as steep slopes per the RPO. As shown in **Figure 2**, the percent of steep slope area in several of the parcels exceeds 10% of the parcel area and requires an open space easement on the area of steep slopes (the yellow and red colored areas of Figure 2). Proposed development is not allowed to encroach more than 10% into an open space easement. In addition to steep slopes as a protected resource, the entire site consists of significant sloping that increases development costs and reduces development potential.

As shown in **Figure 3**, deducting for area of steep slopes and parking (at County ordinance rate of 4 stalls per thousand SF) yields a total developable building area available of 309,000 SF for C30 Office Professional and 38,500 SF for C36 General Commercial for a total of 347,500 SF. At 2 story height

restriction, the total building square footage feasible is 618,000 SF for C30 Office Professional and 77,000 SF of C36 General Commercial, for a total building square footage of 695,000 SF<sup>1</sup>. Note that there are additional potential constraints not taken into account that may further reduce feasible building square footage, including slope grading and earthwork, views, cost, economic viability, and other environmental factors.

The C30 zone does not allow “big box” retail stores. Section 2300 of the County Zoning Ordinance states that the intent of the C30 zone is as follows: “The C30 Use Regulations are intended to create and enhance areas where administrative, office and professional services are the principal and dominant use. It is also intended that uses involving high volumes of vehicular traffic be excluded from the C30 Use Regulations. Typically, the C30 Use Regulations would be applied near residential areas, have a scale and appearance compatible with and complementary to the adjacent residential use, and have pedestrian as well as vehicular access.”

The C36 General Commercial Zone does allow General Retail Sales which would include “big box” retail. However, as noted approximately 77,000 SF of retail would be allowed, which is smaller than the typical Costco (144,500 SF), Home Depot (105,000 SF), or Wal-Mart supercenter store (182,000 SF).<sup>2</sup> The 4.6 acres zoned C36 is bisected by Mesa Rock Road, further diminishing the ability for the property to develop in a single block, as would be required for any type of large format retail. Small convenience store retail, akin to the existing AM/PM minimart is more likely.

The Newland DEIR claims that the trip generation and distribution of the proposed residential development would be similar to and offset by the current commercial property. However, while the commercial parcels are limited to the far southeast corner of the entire project site, the Newland Sierra project as proposed sprawls out far across the hillsides northwest of the commercial parcels. Proposed project trip distribution is then spread out through three project access roads (Mesa Rock Road, Sarver Lane, and Twin Oaks Valley Road) causing further travel to and from the freeway and increased traffic on Deer Springs Road. However, when current land use is compared to proposed land use, it is apparent that trip distribution for the commercial parcels (if fully developed to current general plan) would result in differing trip distribution, with all traffic required to access the parcels from Mesa Rock Road. This is not addressed in the Newland project documents.

Finally, any development of only the commercial properties would not result in the environmental impacts and earth moving, blasting, noise, and other construction related impacts of the proposed Newland development across its nearly 2,000 acre site.

---

<sup>1</sup> The high level conceptual footprint designs provided in this memorandum are for the purpose of approximating the buildable area on the Newland Sierra project site under the existing General Plan and are not to be construed as a development proposal or design-level engineering.

**TECHNICAL MEMORANDUM**

April 17, 2018

**From:** Clifton Williams, Land Use Analyst  
**Subject:** SANDAG Growth Forecast Data on Newland Sierra Project Site Commercial Area

The following technical land use memorandum reviews and evaluates information from the San Diego Association of Governments (“SANDAG”) on the land use assumptions made in the SANDAG Series 12, 2050 Growth Forecast, for the area zoned C36 Office Commercial and C30 General Commercial on the Newland Sierra Project site.

Newland Sierra, LLC (“Newland” or the “Project Applicant”) claims in its draft environmental impact report (“EIR”), marketing brochures, and web site, that “2 million square feet of office space and big box retail” could currently be built within the commercially zoned areas of the Newland Sierra Project site. SANDAG’s Series 12 model contradicts this claim. This especially important, because the model assumptions were provided to SANDAG by the County of San Diego, and the results of the model runs were validated by the County of San Diego.

**I. BACKGROUND**

SANDAG is the regional planning agency in San Diego County and is responsible for regional planning of transportation infrastructure throughout the County. SANDAG is made up of the governments of 18 city jurisdictions and the County of San Diego. SANDAG is the regional clearinghouse for demographic and land use data, and it use this date to create detailed growth projections for the County of San Diego, which informs regional resource allocations for transportation, housing, and other local, state and federal funds.

SANDAG produces demographic growth models to aid in the allocation of resources throughout the San Diego region. According to the SANDAG web site,<sup>1</sup> “The SANDAG forecasts are used by policymakers and the general public, as well as by public and private agencies throughout the region. For example, SANDAG uses the forecasts to develop the

---

<sup>1</sup> SANDAG, *About SANDAG*, <http://sandag.org/index.asp?fuseaction=about.home>.

Regional Transportation Plan (RTP), the Regional Comprehensive Plan (RCP), and the Air Quality Conformity Plan. Local jurisdictions use the forecasts for general plan updates and capital facilities planning, including environmental impact reports (EIR), as well as for local transportation planning. Other agencies, such as the San Diego County Water Authority and the San Diego Regional Energy Office, use aspects of the SANDAG forecasts to develop plans for providing these essential services.”

According to Section 3.1 (page 33) of the 2050 Regional Growth Forecast Process and Model Documentation (relevant excerpts provided in Exhibit A):

Determining the amount and location of housing unit and employment capacity in the region is a key to allocating the long-range regional forecast to jurisdictions, communities, and neighborhoods. These capacities represent key policy inputs to the forecasting process, reflecting current land use plans and policies, as well as the implementation of smart growth development strategies throughout the region.

## **II. SERIES 12 MODEL**

The Series 12 model is the model that currently contains all of the land use inputs provided by the regional jurisdictions and was used to generate the 2050 Regional Growth Forecast. The Series 12 model was created concurrently with the approval of the County General Plan Update in 2011 and includes all of the land use assumptions provided by the County of San Diego that reflect the land uses in the General Plan Update.

SANDAG uses land use inputs provided by jurisdictions around the County to develop a model that shows where growth will occur and how traffic patterns will emerge throughout the region. According to Section 3.1 (page 33) of the 2050 Regional Growth Forecast Process and Model Documentation:

For the 2050 Regional Growth Forecast, SANDAG staff worked directly with local jurisdictions to understand how local land use plans and policies might change and evolve in the next forty years. Through this process the 2050 Regional Growth Forecast is based primarily on local land use plans, many of which have been updated in the past four years, and also includes draft plan updates and more robust redevelopment assumptions within existing plans under the assumption that more existing lands may be redevelopable given the longer time horizon of the forecast (forty years, for this forecast, as compared with twenty five years in other forecasts).

Therefore, the assumptions in the growth forecast reflect the agency’s determination of the land uses that will occupy a given site.

### **III. MODEL DEVELOPMENT**

#### **A. How the County is Broken into Units**

According to Section 3.2 (page 34) (Exhibit A) of the 2050 Regional Growth Forecast Process and Model Documentation, “SANDAG uses a multilevel geographic reference system. The foundation of the system is the Master Geographic Reference Area (MGRA). The approximately 21630 MGRAs are the result of overlaying several layers of geographic boundaries: census tracts, community planning areas, city boundaries, spheres of influence, and zip codes. Census tracts also are split using other criteria (e.g. ridgelines) to develop traffic analysis zones for use in the transportation models. Housing unit and employment capacity is determined for each MGRA.”

#### **B. Jurisdictional Input**

According to Section 3.2 (page 34) of the 2050 Regional Growth Forecast Process and Model Documentation:

Before the capacities can be calculated, a great deal of land use inputs must be gathered and corroborated. SANDAG relies heavily on the involvement of the local jurisdiction staffs for this task. First, a set of maps is prepared for local review. ...

The local jurisdictions reviewed a full set of maps in 2008 in preparation for the 2050 Forecast released in 2010. Each of the maps depicted a different aspect of land use: (1) planned land uses (i.e. the general or community plan), (2) existing land uses, (3) areas that are fully or partially constrained from development for policy or environmental reasons, and (4) areas that have the potential to redevelop (change use) or infill (intensify the existing use). The local planners reviewed each map for completeness and accuracy, noting any corrections directly on the maps. In addition, they provided SANDAG with information about any “site specific” projects. These are development projects that are currently under construction or have final approval and financing. As the maps were returned, SANDAG staff made the necessary edits to the various GIS databases. This process was an iterative process, involving more than a year’s worth of effort on the part of SANDAG and local staff, to update land use and cross-check it against local records.

The inputs for the unincorporated areas were handled differently. At the time of the forecast, the County was engaged in a major update to its general plan. The County had created an interim land use layer that was being considered for adoption by the Board of Supervisors. This land use layer, known as the Referral Map draft of the County’s General Plan Update, along with relevant constraint overlays, were modeled for the 2050 Forecast.

The Referral Map ultimately became the adopted County General Plan.

The Model Documentation goes on to state at pages 34 and 35:

Once the databases are updated, the process of determining housing and employment capacity begins. ... In the next step, the CAPACITY program computes the housing unit and/or employment capacity for each development type code within each parcel. ... Employment densities are based on observed regional parameters and are specific to more than 50 different employment land uses.

**C. Accuracy Validation and Jurisdictional Sign Off**

According to Section 3.2 (page 36) of the 2050 Regional Growth Forecast Process and Model Documentation:

Once a capacity database is created, it is subjected to a series of computerized checks for consistency and accuracy. If inconsistencies or inaccuracies are discovered, the source of these are determined and corrected and the capacity database is recalculated. This process is iterated until an acceptable capacity database is created.

The data are aggregated for jurisdictions and community plan areas. Tables illustrating existing housing units and employment and housing and employment capacities are constructed and sent to each jurisdiction for their review and comment. If a jurisdiction determines that the capacities generated by the capacity program are inconsistent with their current plans and policies, the inconsistencies are noted and corrected and the capacity database is recomputed and subjected to the computerized checks. The new capacities then are forwarded to the jurisdictions for their review. This process is repeated until there is consensus among the jurisdictions that the capacity database is a reasonable representation of their current plans and policies or likely land use alternatives based on draft plans nearing completion.

**IV. NEWLAND SIERRA SANDAG SERIES 12 MODEL LAND USE ASSUMPTIONS**

**A. SANDAG Information**

Information on land use assumptions used in the Series 12, 2050 Growth Forecast for the Newland Sierra Project site was obtained by Clifton Williams, Land Use Analyst for Latham & Watkins LLP, from Rachel Cortes, Ph.D, Associate Regional Models Analyst with SANDAG.

**B. Newland Sierra Project Site MGRAs**

The MGRAs included in the Newland Sierra Site are shown on the map provided by Rachel Cortes and attached as Exhibit B. The area of the Project site currently zoned C36 Office Professional and C30 General Commercial adjacent to and north of Mesa Rock Road are wholly within MGRA 16980 and 16974.

**C. MGRA Site Assumptions**

Rachel Cortes at SANDAG provided an Excel Spreadsheet (Exhibit C) which includes the employment capacity and housing capacity in each MGRA on the Project site. It is important to note that the SANDAG Regional Growth Forecast does not forecast buildout square footage for commercially designated property. Instead, the Model determines Employment Capacity within each MGRA if commercial land uses are indicated.

- The Employment Capacity for MGRA 16980 is 1,117 employees,
- The Employment Capacity for MGRA 16974 is 246 employees.
- Therefore, the total forecasted employees for these sites is 1,363 employees.

**V. TRANSLATING EMPLOYMENT CAPACITY INTO BUILDING SQUARE FOOTAGE.**

**A. Methodology**

To determine the building square footage projected in a particular MGRA, Employment Capacity can be multiplied by a common ratio of square feet per employee. The City of San Diego used this methodology in the Final Environmental Impact Report for the City of San Diego's 2007 General Plan Update ("General Plan EIR") (relevant excerpts provided in Exhibit D). The methodology is detailed in section 3.18 of the General Plan EIR at page 3.18-3, which states:

It is important to note that the SANDAG 2030 Regional Growth Forecast does not forecast building square footage. The City based the 2004 and 2030 building square feet estimates on the SANDAG (Series 11) 2030 Regional Growth Forecast for Civilian Employment. For the purposes of this Program EIR, the City derived the building square footage estimates from the forecast by using typical square feet per employee by land use designation (retail, office, and industrial) ratios.

**B. Employment to Commercial Square Footage Conversion**

The City of San Diego used the following table at page 3.18-5 of the General Plan EIR, to convert the employees to building square footage for various commercial land use types:

| <b>Generalized Land Use Type</b> | <b>Description</b>      | <b>Square Foot per Employee</b> |
|----------------------------------|-------------------------|---------------------------------|
| Visitor Commercial               | Hotel/Motel (Lo-Rise)   | 1400                            |
| Visitor Commercial               | Hotel/Motel (Hi-Rise)   | 1000                            |
| Visitor Commercial               | Resort                  | 1000                            |
| Industrial                       | Heavy Industry          | 550                             |
| Industrial                       | Industrial Parks        | 400                             |
| Industrial                       | Light Industry-General  | 400                             |
| Industrial                       | Warehousing and Public  | 800                             |
| Retail Commercial                | Wholesale Trade         | 500                             |
| Retail Commercial                | Regional Shopping       | 450                             |
| Retail Commercial                | Community Shopping      | 400                             |
| Retail Commercial                | Neighborhood Shopping   | 350                             |
| Retail Commercial                | Specialty Commercial    | 300                             |
| Retail Commercial                | Automobile Dealerships  | 300                             |
| Retail Commercial                | Store-Front             | 300                             |
| Retail Commercial                | Other Retail Trade      | 300                             |
| Office Commercial                | Office (High-Rise)      | 300                             |
| Office Commercial                | Office (Lo-Rise)        | 300                             |
| Office Commercial                | Government Office/Civic | 300                             |

The table shows that Office Commercial uses convert at a rate of 300 square feet per employee. A Hughes Marino study (Exhibit E) states that, “today’s office worker averages 175 square feet of space – down from 225 square feet in 2010, and 275 square feet in 2007.” Therefore, the ratio of square feet per employee is likely less today.

### **C. Commercial Square Footage on Newland Sierra Project Site**

According to the Project Description in the Draft EIR for the Newland Sierra Project at page 1-29, the existing community plan land use designations for commercial area on the Project site include 4.6 acres of General Commercial and 53.6 acres of Office Professional. Therefore, the total number of commercial acres on the site is 58.2 acres. It should be noted that the acreage described in the Newland Sierra DEIR are the commercial acres owned by Newland Sierra and are part of the Project site. However, MGRA 16980 and 16974 also include the existing AM/PM mini-mart and gasoline station which are not part of the Newland Sierra Project site. It is impossible to further parse the employment capacity within the MGRA, so the total commercial square footage for Newland Sierra must be reduced by the square footage of the AM/PM mini-mart site.

The City of San Diego table above includes 450 square feet per employee for Regional Shopping and 300 square feet per employee for Office Commercial uses. Property designated Office Professional comprises 92% of the commercial area on the Project site and is therefore the dominant land use type within the MGRAs. If a factor of 350 square feet per employee were used to determine the commercial square footage planned on the property, it would appear to take into account the difference between Regional Shopping and Office Commercial uses and provide a conservative estimate of the building square footage.

## VI. CONCLUSION

Based on the 1,363 employees estimated in the Series 12, 2050 Growth Forecast for the Newland Sierra Project site, and a conversion rate of 350 square feet per employee, the maximum amount of commercial square footage projected by the SANDAG 2050 Growth Forecast for the Project site is 477,050 square feet.

**350 square feet per employee (x) 1,363 employees = 477,050 square feet**

As noted above, the land use assumptions for the site were provided by the County of San Diego to SANDAG, and the conclusions of the model runs were verified with the County of San Diego before they were included in the 2050 Growth Forecast. Therefore, the demographic profile of the site in not only the determination of SANDAG, but it is also the determination of the County of San Diego.

The Newland Sierra's public pronouncements that the project site supports a building capacity of "2,008,116 square feet of commercial space" or "two million square feet of office space and big box retail" are inconsistent with the projections in the SANDAG 2050 Growth Model, which were verified and validated by the County of San Diego.

# CLIFTON WILLIAMS

As a Land Use Analyst, Clif Williams works on complex governmental entitlement and regulatory matters and with governmental entities throughout the western United States.

## Profile / Expertise

- Land use and entitlement for all forms of real estate development
- California Environmental Quality Act (CEQA)
- Regulatory diligence prior to purchase or sale
- Government affairs and strategic planning and communications with government entities

## Experience

Prior to joining Latham, Mr. Williams served as Chief of Staff to the San Diego City Council President, and served as the Committee Consultant to the San Diego City Council's Land Use and Housing Committee and the Natural Resources Committee.

Mr. Williams has participated in the entitlement of energy generation and infrastructure projects, commercial office parks, shopping malls, large housing tracts, and mixed-use, transit oriented developments throughout California and the western United States. Mr. Williams has also completed property diligence for the acquisition of billion dollar real estate portfolios, and for lenders on large commercial projects.

Mr. Williams' experience includes:

- Entitlement and regulatory matters for the permitting of a 15-story, class A office building in San Diego, California
- Land use and regulatory diligence on a US\$1 billion real estate acquisition portfolio with property throughout California
- Property diligence throughout San Diego County, California to find a location for a new peaker power plant
- Research and development of "highest and best use" and value maximization for property owner condemned for a regional freeway
- Entitlement for the redevelopment of a sand and gravel quarry into a transit-oriented mixed use development with 1800 residential units and 160,000 square feet of commercial retail and office space
- Consultation on land use initiatives and referenda
- Entitlement and agency interaction at all levels including City, Coastal Commission, Regional Water Quality Control Board and State Lands Commission, for the largest desalination facility in the western United States.
- US\$1 billion expansion of a regional shopping mall to add 750,000 square feet of retail space and 200 residential units in the City of San Diego.
- Entitlements and regulatory affairs for the development of a 200-MW wind farm in the unincorporated San Diego County, California

## CHAPTER 3: LAND USE PLANS AND POLICIES

---

### 3.1 ROLE OF PLANS AND POLICIES IN THE FORECAST

Determining the amount and location of housing unit and employment capacity in the region is a key to allocating the long-range regional forecast to jurisdictions, communities, and neighborhoods. These capacities represent key policy inputs to the forecasting process, reflecting current land use plans and policies, as well as the implementation of smart growth development strategies throughout the region. Land use data collected from the local jurisdictions provides policy inputs to both the Urban Development Model (UDM) and the Interregional Commute Model (IRCM).

The four previous forecasts dealt with the land use plan update issue in different ways. The Series 8 Forecast, released in 1995, simply assumed slight residential density increases across the board in all jurisdictions. That approach was criticized as being arbitrary, and not addressing the nexus between land use and transportation.

The 2020 Forecast, released in 1999, was the first SANDAG attempt to model future smart growth development patterns. Residential and employment capacity was added throughout the urban areas of the region in the form of transit-oriented development within walking distance of approximately 150 current and future transit stops, called transit focus areas (TFA). In areas where several TFAs were clustered, however, the resulting land use patterns sometimes were too far removed from current plans, causing concern for some jurisdictions.

The 2030 Cities/County Forecast was developed as a component of the Regional Comprehensive Plan (RCP). This forecast was based on current plans and policies of the incorporated jurisdictions and the draft General Plan update for unincorporated areas.

Like the 2030 Cities/County Forecast, no smart growth areas other than those contained in the current plans and policies of the jurisdictions were included in the land use assumptions for the 2030 Regional Growth Forecast Update.

For the 2050 Regional Growth Forecast, SANDAG staff worked directly with local jurisdictions to understand how local land use plans and policies might change and evolve in the next forty years. Through this process the 2050 Regional Growth Forecast is based primarily on local land use plans, many of which have been updated in the past four years, and also includes draft plan updates and more robust redevelopment assumptions within existing plans under the assumption that more existing lands may be re-developable given the longer time horizon of the forecast (forty years, for this forecast, as compared with twenty five years in other forecasts).

## 3.2 HOUSING AND EMPLOYMENT CAPACITY

SANDAG uses a multilevel geographic reference system. The foundation of the system is the Master Geographic Reference Area (MGRA). The approximately 21630 MGRAs are the result of overlaying several layers of geographic boundaries: census tracts, community planning areas, city boundaries, spheres of influence, and zip codes. Census tracts also are split using other criteria (e.g. ridgelines) to develop traffic analysis zones for use in the transportation models. Housing unit and employment capacity is determined for each MGRA.

Before the capacities can be calculated, a great deal of land use inputs must be gathered and corroborated. SANDAG relies heavily on the involvement of the local jurisdiction staffs for this task. First, a set of maps is prepared for local review. For the City of San Diego there is a map set for each community planning area. The 17 other cities receive maps depicting activity within their general plan boundaries.

The local jurisdictions reviewed a full set of maps in 2008 in preparation for the 2050 Forecast released in 2010. Each of the maps depicted a different aspect of land use: (1) planned land uses (i.e. the general or community plan), (2) existing land uses, (3) areas that are fully or partially constrained from development for policy or environmental reasons, and (4) areas that have the potential to redevelop (change use) or infill (intensify the existing use). The local planners reviewed each map for completeness and accuracy, noting any corrections directly on the maps. In addition, they provided SANDAG with information about any "site specific" projects. These are development projects that are currently under construction or have final approval and financing. As the maps were returned, SANDAG staff made the necessary edits to the various GIS databases. This process was an iterative process, involving more than a year's worth of effort on the part of SANDAG and local staff, to update land use and cross-check it against local records.

The inputs for the unincorporated areas were handled differently. At the time of the forecast, the County was engaged in a major update to its general plan. The County had created an interim land use layer that was being considered for adoption by the Board of Supervisors. This land use layer, known as the Referral Map draft of the County's General Plan Update, along with relevant constraint overlays, were modeled for the 2050 Forecast.

Once the databases are updated, the process of determining housing and employment capacity begins. The program GPALL evaluates current land use, planned land use, the existence of constraints, redevelopment potential, and other characteristics to determine the appropriate development type code. The development type code is used in the Urban Development Model (UDM) to determine where activity can occur during the forecast period. Sixteen types of land are identified through the program (listed in Table 5). For forecasting purposes, redevelopment is defined as a change of use, and infill means an intensification of the same use. Agricultural Redevelopment is a special case. In many parts of the region, land in existing agricultural use is actually planned for some other use, and may eventually develop with that other use. Therefore, unless the underlying general or community plan category is Agriculture, or there is a constraint to development, land in agricultural use is considered to be developable for nonagricultural uses.

**Table 5  
Development Type Codes**

| Code | Description                                |
|------|--------------------------------------------|
| 1    | Developed                                  |
| 2    | Constrained or Unusable                    |
| 3    | Vacant Developable                         |
| 4    | Employment Infill                          |
| 5    | Single Family Infill                       |
| 6    | Multifamily Infill                         |
| 7    | Residential to Employment Redevelopment    |
| 8    | Single Family to Multifamily Redevelopment |
| 9    | Mobile Home to Residential Redevelopment   |
| 10   | Agricultural Redevelopment                 |
| 11   | Employment to Residential Redevelopment    |
| 12   | Employment to Employment Redevelopment     |
| 13   | Residential to Road Way or Freeway         |
| 14   | Employment to Road Way or Freeway          |
| 15   | Employment or Residential to Mixed Use     |
| 16   | Vacant to Mixed Use                        |

In the next step, the CAPACITY program computes the housing unit and/or employment capacity for each development type code within each parcel. By definition, areas assigned a development type code of 1 or 2 have no remaining capacity. Also by definition, areas that are vacant or agricultural and developable (codes 3 and 10) always have remaining capacity, which is calculated as:

$$\text{Remaining Capacity} = \text{Acres} \times \text{Density}$$

Housing unit densities are prescribed by the general or community plan. Most plans use density ranges, such as 4 to 8 units per acre (du/acre), and the local planners identify where within each range development usually occurs. On vacant land, the midpoint (50 percent) of the range is typical, which in this case means the land planned for 4-8 du/acre would develop at 6 units per acre. On redevelopment or infill land, 75 percent of the range is common. Therefore, a 4 to 8 du/acre range would yield either 7 units per acre. Employment densities are based on observed regional parameters and are specific to more than 50 different employment land uses.

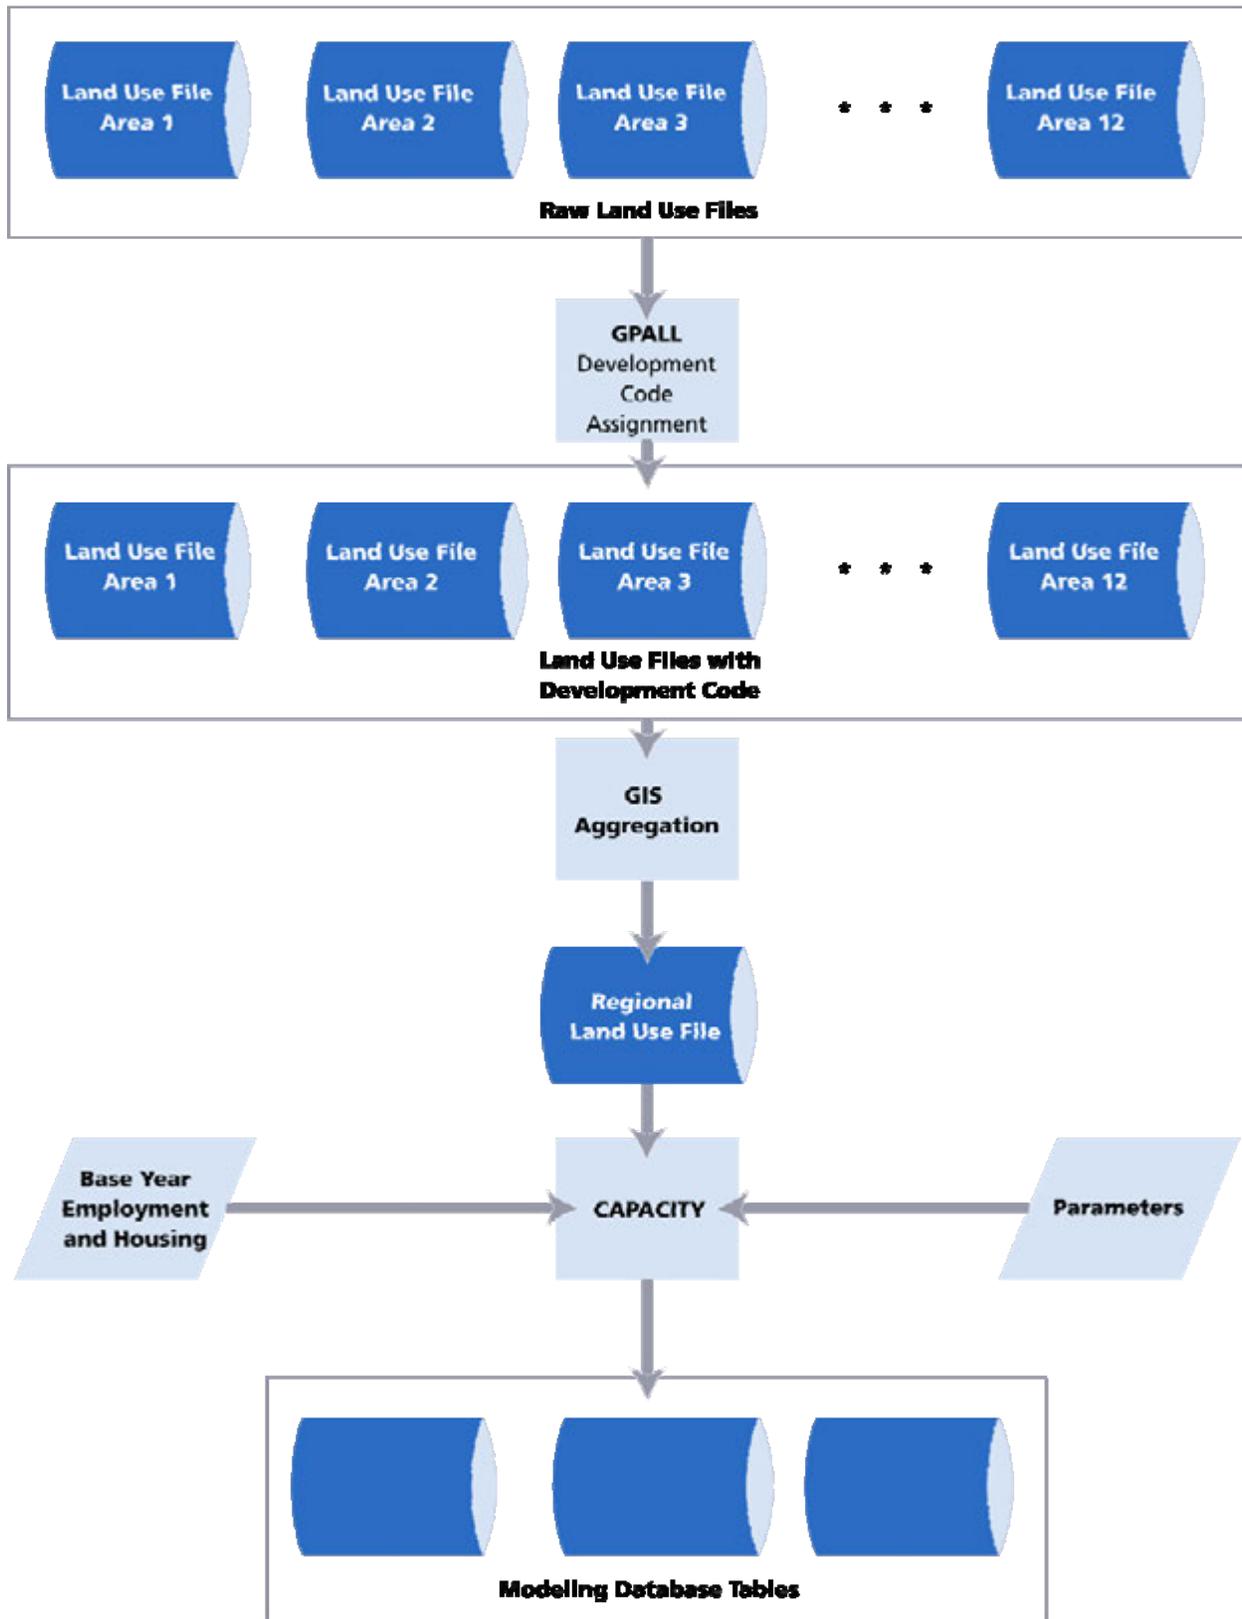

Remaining capacity for nonagricultural redevelopment areas (codes 7, 8, 9, 11, 12, 15) also is calculated using the above formula. In these cases, however, existing activity is removed first. For example, in areas that have the potential to redevelop from existing single family use to multifamily use (code 8), single family units are removed before the multifamily units are added. The removal of existing activity means that areas can have negative capacity. For example, in areas identified with the potential for residential to employment redevelopment (code 7), the existing housing would be replaced with nonresidential activity, and the housing unit capacity would be a negative number equal to the number of existing units in the year 2008. Potential infill areas (codes 4, 5, 6) add units or employment to the already existing activity up to, but not exceeding, the prescribed density. There is no loss of activity in infill areas.

Program output comprises database tables that are used in the allocation modules of UDM. The derivation of capacity is illustrated in Figure 9.

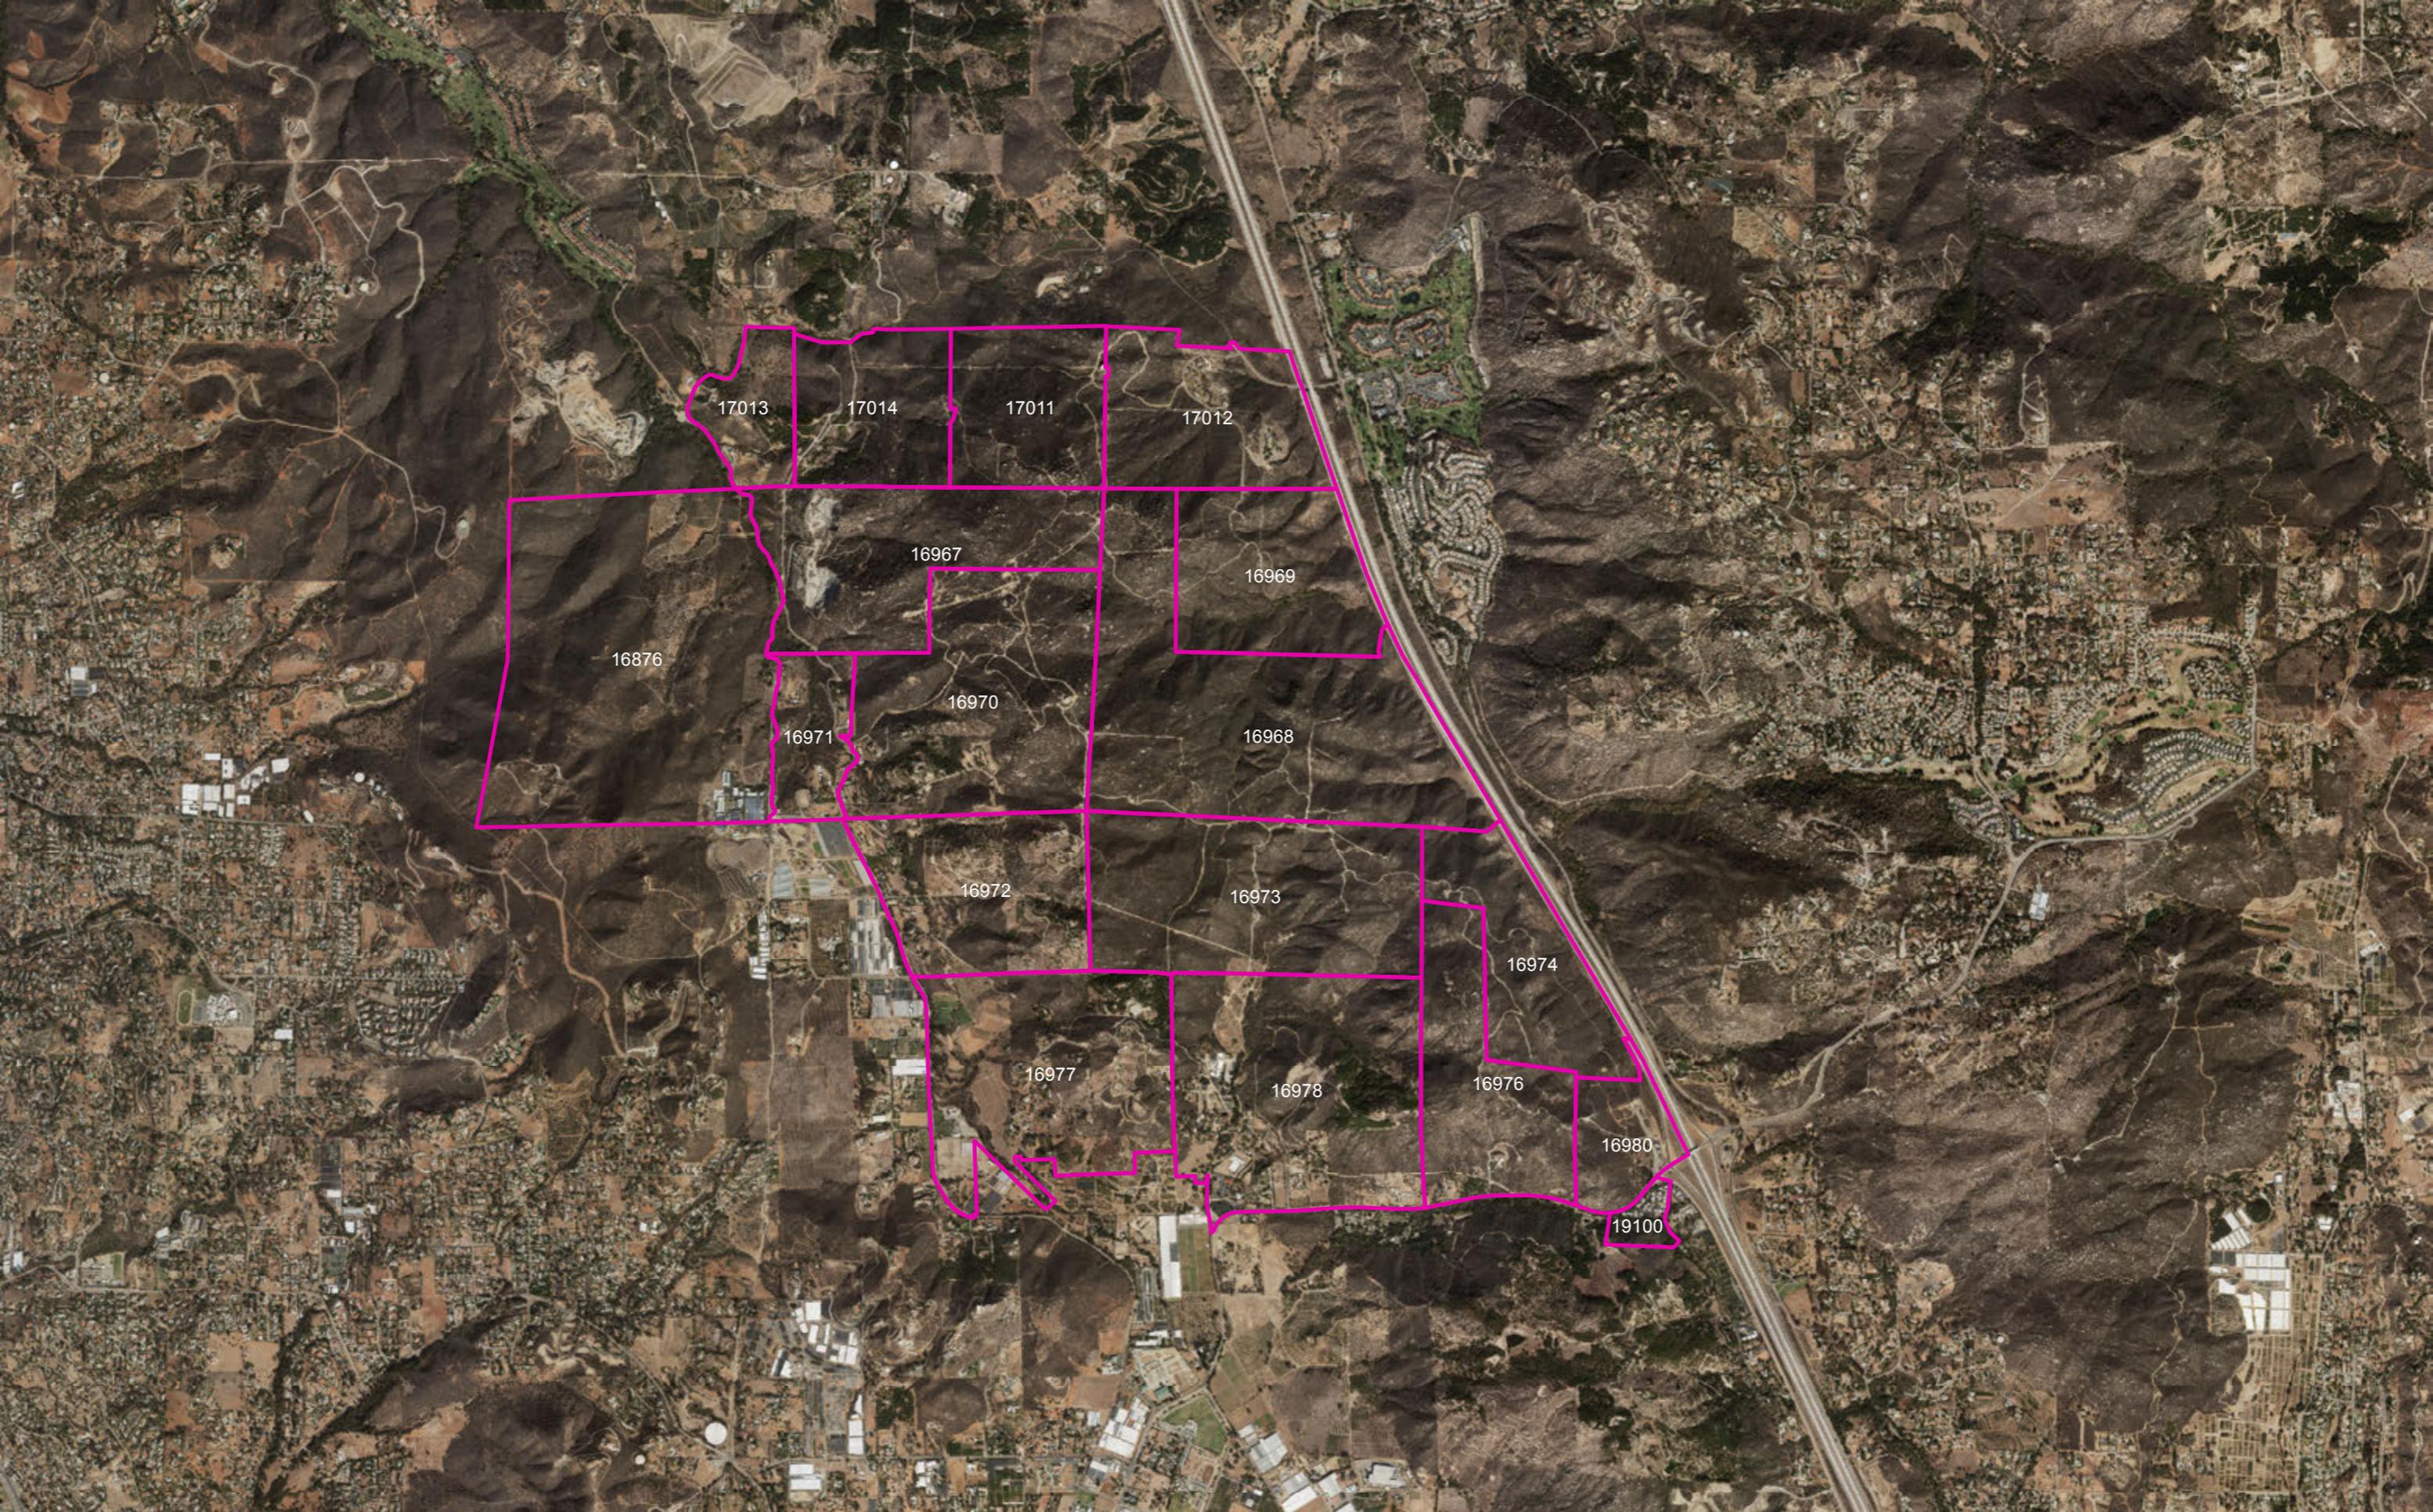

Once a capacity database is created, it is subjected to a series of computerized checks for consistency and accuracy. If inconsistencies or inaccuracies are discovered, the source of these are determined and corrected and the capacity database is recalculated. This process is iterated until an acceptable capacity database is created.

The data are aggregated for jurisdictions and community plan areas. Tables illustrating existing housing units and employment and housing and employment capacities are constructed and sent to each jurisdiction for their review and comment. If a jurisdiction determines that the capacities generated by the capacity program are inconsistent with their current plans and policies, the inconsistencies are noted and corrected and the capacity database is recomputed and subjected to the computerized checks. The new capacities then are forwarded to the jurisdictions for their review. This process is repeated until there is consensus among the jurisdictions that the capacity database is a reasonable representation of their current plans and policies or likely land use alternatives based on draft plans nearing completion.

# **EXHIBIT D**

As part of the SANDAG forecast process, the City provides land use inputs to SANDAG addressing the feasibility of development to existing conditions and constraints that may limit future development. By 2030, SANDAG forecasts that approximately 107,400 additional multifamily units could be built within the City, which is a 54 percent increase in multifamily units from 2004 consistent with adopted community plan land use designations. Overall, when including the additional single-family units, SANDAG forecasts a 24 percent increase in the total number of units by 2030.

It is important to note that the SANDAG 2030 Regional Growth Forecast does not forecast building square footage. The City based the 2004 and 2030 building square feet estimates on the SANDAG (Series 11) 2030 Regional Growth Forecast for Civilian Employment. For the purposes of this Program EIR, the City derived the building square footage estimates from the forecast by using typical square feet per employee by land use designation (retail, office, and industrial) ratios. The City used building square footage estimates for 2030, so that it could be compared relationship to the theoretical build out scenario as part of the environmental analysis. Since uses with lower employment densities, such as industrial, typically have more square footage per employee than uses with higher employment densities, such as office, it is difficult to use gross estimate of total square footage as an indicator of employment growth.

The SANDAG 2030 forecast uses an econometric forecast for regional employment population growth for the San Diego region based on national and statewide forecasts that incorporate demographic and economic factors. SANDAG uses employees per acre by land use types rather than building square footage in the forecast process. Between 2004 and 2030, SANDAG forecasts that the civilian employment will increase by 24 percent in the City.

SANDAG forecasts that the percentage increase for both new housing units and civilian jobs are at 24 percent for the City. The forecast indicates that jobs to housing ratio (civilian employment per housing unit) increases less than one percent from 1.60 in 2004 to 1.61 by 2030. During this same period, that employment density in the City increases by 10 percent from 24.8 to 27.4 civilian employments per developed employment acre.

### **Comparison between the Theoretical Build Out and the SANDAG 2030 Forecast Scenarios**

Although the theoretical build-out scenario does not have a time horizon associated with it, there could be substantially more development than forecasted under the Year 2030 scenario. When comparing the two scenarios, there could be 24 percent more total housing units (which would be predominantly multifamily) and 298 percent more non-residential building square feet. The theoretical build-out scenario assumes for residential development that existing land uses, located on plan designated multifamily land, would redevelop or infill at the maximum point of their adopted community plan residential density range. For non-residential (commercial and industrial uses), the analysis assumes that all existing land uses, located on plan designated non-residential land, would redevelop or infill at the maximum allowed zoning ordinance FAR.

**Table 3.18-2  
Comparison between the Theoretical Build Out Scenario and  
the SANDAG 2030 Forecast Scenario for Total Non-Residential Square Feet**

| SANDAG 2030 Forecast (Estimates) |              |                                 |         | Theoretical Build Out |                                 |         |                           |         |
|----------------------------------|--------------|---------------------------------|---------|-----------------------|---------------------------------|---------|---------------------------|---------|
| Base Year                        | Horizon Year | Change from Existing Conditions |         | Theoretical           | Change from Existing Conditions |         | Change from 2030 Forecast |         |
| 2004                             | 2030         | Numeric                         | Percent | Build Out             | Numeric                         | Percent | Numeric                   | Percent |
| 203,833,250                      | 275,702,300  | 71,869,050                      | 35%     | 1,097,680,700         | 893,847,450                     | 439%    | 821,978,400               | 298%    |

## Notes:

- 1) The theoretical build-out scenario was prepared solely for the purposes of the General Plan Environmental Impact Report only and should not be used for any other long range planning purposes.
- 2) Build -out scenario refers to the theoretical maximum build out of all lands within the planning area in accordance with assigned land use designations.
- 3) The SANDAG 2030 Regional Growth Forecast does not forecast building square footage. The 2004 and 2030 building square feet estimates are based on the SANDAG (Series 11) 2030 Regional Growth Forecast for Civilian Employment. The building estimates were derived from the forecast by using typical square feet per employee by land use designation (retail, office, and industrial) ratios as in the table below.

| Generalized Land Use Type | Description             | Square Foot per Employee |
|---------------------------|-------------------------|--------------------------|
| Visitor Commercial        | Hotel/Motel (Lo-Rise)   | 1400                     |
| Visitor Commercial        | Hotel/Motel (Hi-Rise)   | 1000                     |
| Visitor Commercial        | Resort                  | 1000                     |
| Industrial                | Heavy Industry          | 550                      |
| Industrial                | Industrial Parks        | 400                      |
| Industrial                | Light Industry-General  | 400                      |
| Industrial                | Warehousing and Public  | 800                      |
| Retail Commercial         | Wholesale Trade         | 500                      |
| Retail Commercial         | Regional Shopping       | 450                      |
| Retail Commercial         | Community Shopping      | 400                      |
| Retail Commercial         | Neighborhood Shopping   | 350                      |
| Retail Commercial         | Specialty Commercial    | 300                      |
| Retail Commercial         | Automobile Dealerships  | 300                      |
| Retail Commercial         | Store-Front             | 300                      |
| Retail Commercial         | Other Retail Trade      | 300                      |
| Office Commercial         | Office (High-Rise)      | 300                      |
| Office Commercial         | Office (Lo-Rise)        | 300                      |
| Office Commercial         | Government Office/Civic | 300                      |

## Notes:

- 1) The theoretical build-out scenario for square feet assumes the full utilization of the allowable zoning ordinance floor area ratio (FAR) for land that is designated for retail, office, and industrial uses, except for downtown. The theoretical build-out scenario includes the build out building square footage that is reported in the 2006 adopted Downtown Community Plan.
- 2) Although theoretically possible based only on the allowable maximum floor area ratio, there could be constraints in place that would limit or reduce the feasibility of additional square footage at the maximum floor area ratio, such as physical constraints, regulatory constraints, or market conditions.
- 3) The (Series 11) 2030 Region Growth Forecast allocated additional multifamily units to multifamily designated land considered more feasible for future development.
- 4) The (Series 11) 2030 Region Growth Forecast was approved by the SANDAG Board for planning purposes in September 2006. The 2030 Forecast uses the Year 2004 as a base year and 2030 as the forecast horizon year.

t f l e

Why small spaces need big perks to keep employees happy.

By Jason Hughes

The tech industry has done amazing things for humanity and its contributions

are ubiquitous in virtually everything we do. It comes as no surprise that the tech industry also forced the old-school commercial office space world to re-evaluate its boring, vanilla, box-like past. With the help of creative architects and planners, office space is striking a balance between work and life.

For the first half of the 20th century, office space consisted of wooden desks grouped in rows, sometimes hundreds of them. In the '60s, Herman Miller created the office cubicle, which has since been demonized as one step removed from living under a freeway overpass. The idea was to provide at least a minimal sense of privacy for individuals. And while that was transformative, we've now come full-circle with many companies returning to completely open workstations and virtually zero privacy. Unlike the old days, however, the new office model boasts a generous amount of community space peppered with areas for individual seclusion.

Most of us remember the days of studying at library carrels in a 2' x 3' desk with partitions to minimize distractions. Including room for a chair that "area" consisted of about 15 square feet of space. Working in a minimal space for short bursts is tolerable. And studying for midterms in a library carrel in order to avoid your noisy roommate is different than working a full-time job. But is cramming bodies into less space the right long-term move?

Today's office worker averages 175 square feet of space – down from 225 square feet in 2010, and 275 square feet in 2007. Now, at 78% of the size from the pre-2010 era (64% of pre-2007), are companies benefiting? Are their employees?

Yes – and no. Everyone has read about Google's amazing cafeterias, massage rooms, and park-like environments, but many company decision-makers look at Google's offices and focus only on the high-density employee benching areas. They want to implement that, but not the perks. These companies are reverting to the pre-'60s era of cramming bodies into space. In the short run, companies with this mindset find themselves "real estate

efficient,” but see employee engagement and culture plummet over time. This ultimately results in decreased retention and poor recruiting, and can be the beginning of a long, downward corporate spiral.

Google and other leading tech companies have invested millions of dollars hiring psychology experts to understand how good office space design and efficiencies can be exploited to create positive economic returns. Piggybacking on their learning has its benefits, but only if you emulate all aspects – not just the fiscally friendly ones!

While tech companies have lessened the stigma of minimizing space per employee, many others who seek to emulate them forget how overwhelmingly generous they are with their perks. Google’s philosophy is to “create the happiest, most productive workplace in the world.” Most planning experts are pushing for a substantial increase in amenity space – often devoting upwards of 15% of the entire space to cafeterias, game rooms, etc. This is in addition to ample collaboration and meeting space.

So what’s next? What else will the Googles of the world teach the rest of us about office space? Many progressive companies are now fine-tuning the “engagement” aspect of their space. That includes having space employees truly look forward to being in, where they can share ideas while also having the privacy they need at times. How fortunate would society be if employees everywhere felt like “going to the office” was a wonderful privilege rather than a necessary evil?

We can all learn from the tech leaders who have charted the best ways before us. Less is not more when it comes to office space. Those who sacrifice overall space efficiencies in the name of economics will suffer long-term mediocrity as a result.

**ENCLOSURE 5**

April 24, 2018

**Latham & Watkins, LLP**

Attention: Andrew Yancey

12670 High Bluff Drive

San Diego, CA 92130

**Subject: Newland Sierra Office Trip Generation Assessment**

Dear Andrew:

STC Traffic, Inc. was asked to review the trip generation associated with the County General Plan land use. The table below, extracted from the Newland Sierra Traffic Impact Analysis report (LLG, May 2017), indicates that the General Plan land uses are forecast to generate 20,969 trips per day. The General Plan includes 4.94 acres of General Commercial, 53.64 acres of Office Professional and 99 estate residential dwelling units.

**TABLE 11-1  
COMPARISON OF TRIP GENERATION - GENERAL PLAN LAND USES VERSUS PROPOSED PROJECT**

| Land Use                                                                   | Quantity           | Rate <sup>a</sup> | Daily Trip Ends (ADT) | AM Peak Hour |              | PM Peak Hour |              |
|----------------------------------------------------------------------------|--------------------|-------------------|-----------------------|--------------|--------------|--------------|--------------|
|                                                                            |                    |                   |                       | % of ADT     | Vol          | % of ADT     | Vol          |
| <b>A. Existing General Plan Land Uses</b>                                  |                    |                   |                       |              |              |              |              |

| <b>Net Increase(+)/ Decrease (-)</b>                                       |                    |                   | <b>1,240</b>          |              | <b>-895</b>  |              | <b>-441</b>  |

STC was asked to determine the total square footage associated with the trip generation calculated for the project site. Since the trip generation is based on acreage, the total trips were divided by the square footage trip generation rate for the same uses to determine the total square footage associated with the forecast trips.

| Land Use                    | General Plan Forecast Trips (acres) | Trip Generation Rate (trips/ksf) | Estimated Square Footage based on Trips |
|-----------------------------|-------------------------------------|----------------------------------|-----------------------------------------|
| General Commercial          | 5,568 vpd                           | 120/ksf                          | 46,500 sf                               |
| Professional Office         | 16,092 vpd                          | 20/ksf                           | 804,600 sf                              |
| <b>TOTAL SQUARE FOOTAGE</b> |                                     |                                  | <b>851,100 SF</b>                       |

SANDAG Trip Generation Rates were used to forecast the volumes in both the LLG study and in the table above. However, the SANDAG Trip Generation Rate for Standard Commercial Office Building is 100,000 square feet or less. Over 100,000 sf the Office Park rate should be considered. An office park generates trips at a rate of 200 trips per acre when compared to the standard commercial office rate of 300 trips per acre. By applying the 200 trips per acre, the Professional Office trip generation is reduced to 10,728 trips per day.

Using the adjusted trip generation rate for the Office Park Use, the table below was generated to forecast the total square footage on the site.

| Land Use                    | General Plan Forecast Trips (acres) | Trip Generation Rate (trips/ksf) | Estimated Square Footage based on Trips |
|-----------------------------|-------------------------------------|----------------------------------|-----------------------------------------|
| General Commercial          | 5,568 vpd                           | 120/ksf                          | 46,500 sf                               |
| Office Park                 | 10,728 vpd                          | 12/ksf                           | 894,000 sf                              |
| <b>TOTAL SQUARE FOOTAGE</b> |                                     |                                  | <b>940,500 SF</b>                       |

In either scenario (Professional Office or Office Park), the total square footage falls well below 1 million square feet. If the project were to develop at either 1 million or 2 million square feet, the trip generation for the site would be much higher than what was reflected in the TIA:

**Estimated Trips @ The Office Park Rate (200/acre or 12/ksf)**

1000 ksf @ 12 / ksf = 12,000  
 2000 ksf @ 12 / ksf = 24,000

**Estimated Trips @ The Standard Office Rate (300/acre or 20/ksf)**

1000 ksf @ 20 / ksf = 20,000  
 2000 ksf @ 20 / ksf = 40,000

Information circulated by Newland Sierra and included on their project webpage (<https://www.newlandsierra.com>) Frequently Asked Questions tab states that:

*“The County’s General Plan currently contains Land Use Designations for this property that would provide for 99 residential units, and over 2 million square feet of commercial and retail zoning (roughly the same size as two campuses for Cal State San Marcos).”*

The analysis provided in this letter demonstrates that the traffic associated with General Plan analysis provided in the Newland Sierra TIA (LLG, May 2017) does not support the 2 million square feet statement. The trips evaluated for the General Plan are estimated to reflect less than 1 million square feet of combined retail and office. A 2 million square foot project would generate twice the traffic and require twice the overall acreage (based on the trip generation rates only) than what was evaluated in the TIA.

**CLOSURE**

This analysis demonstrates that the 2 million square feet of retail claim included in the project website and information distributed by the project is inconsistent with the traffic analysis conducted for the project TIA.

If you have any questions about the information provided here, please call me at (760) 560-6605.

Sincerely,

Jennifer Seeger  
Assistant Deputy Director  
California Dept. of Housing and Community Development  
Division of Housing Development  
2020 W. El Camino Avenue, Suite 500  
Sacramento, California 95833

Re: San Diego County Housing Element

Dear Ms. Seeger:

We represent Golden Door Properties LLC (the “Golden Door”), which owns and operates an award-winning spa and resort that opened in 1958, along with sustainable agricultural operations. Adjacent to the Golden Door, the Newland Sierra, LLC (“Newland”) has proposed a revised Merriam Mountains project, known as the “Sierra” project (the “Newland Sierra Project” or “Project”) on property located near Deer Springs Road. Newland’s proposal includes 2,135 residential units but fails to include a necessary affordable housing component. Further, the County of San Diego is failing to implement the Housing Element which the County adopted in August of 2011, updated in April of 2017, and which your Department approved in the letter attached hereto as **Attachment A**. In particular, the County is failing to comply with General Plan Policy H-1.9 regarding the provision of affordable housing. This policy states that:

**Affordable Housing through General Plan Amendments.**  
Require developers to provide an affordable housing component when requesting a General Plan amendment for a large-scale residential project when this is legally permissible.

Unfortunately, the County staff is failing to propose conditions that will require an affordable component in the Newland Sierra Project, and Newland contends that it is not required to provide any affordable housing. The Newland Sierra Project requires a General Plan amendment that the County has been processing since May 7, 2015. The County has the legal authority to impose conditions requiring an affordable housing component as set forth in General Plan Policy H-1.9, but as of yet, neither County staff nor the County Counsel have proposed those conditions for this project.

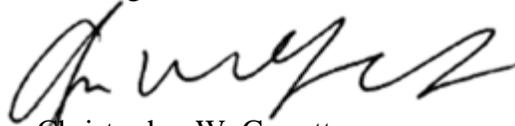

The Golden Door is opposed to any project on the Newland property that requires an amendment to the General Plan land use element or an exemption from the County’s Resource Protection Ordinance. Nonetheless, if the County intends to amend its General Plan and convert

this rural land, and completely exempt the project from the County's Resource Protection Ordinance, the County must nonetheless comply with Policy H-1.9.

We ask that your office take steps to investigate and remedy the County's failure to implement this key portion of its General Plan. The County's failure to comply with this mandatory policy can only delay or disrupt the County's overall planning for new housing in the County and its ability to provide affordable housing.

We have raised these issues with the Board of Supervisors and County staff at the Board's meeting of April 18, 2018, as set forth in the attached letter (**Attachment B**). However, the Board has so far decided to take no action on this matter. We therefore look to the Department for assistance in this matter.

Best regards,

Christopher W. Garrett  
of LATHAM & WATKINS LLP

June 15, 2017

Ms. Helen N. Robbins-Meyer, Chief Administrative Officer  
County of San Diego  
1600 Pacific Highway, Room 209  
San Diego, CA 92101

Dear Ms. Robbins-Meyer:

**RE: County of San Diego's 5<sup>th</sup> Cycle (2013-2021) Four-Year Update, Adopted Housing Element**

Thank you for submitting San Diego County's housing element adopted March 15, 2017 and initially received for review on May 1, 2017 with a corrected version received for review on May 22, 2017. Pursuant to Government Code (GC) Section 65585(h), the Department is reporting the results of its review.

The Department is pleased to find the adopted housing element in full compliance with State housing element law (Article 10.6 of the Government Code). The adopted element was found to be substantially the same as the revised draft element the Department's October 26, 2016 review determined met statutory requirements.

Pursuant to GC Section 65588(e)(2)(B) a local government in the SANDAG region that did not adopt a fourth planning period housing element by January 1, 2009 shall revise its housing element every four years, unless the local government met both of the following conditions: 1) adopted the fourth revision no later than March 31, 2010; and 2) completes any rezoning identified in the fourth revision by June 30, 2010. The County did not meet the requirements of GC 65588(e)(2)(B); therefore, it is subject to the four-year revision requirement until the County has adopted at least two consecutive revisions by the applicable due dates. Adoption of this housing element meets the requirements of the first four-year update. Provided the County adopts a housing element pursuant to the requirements of GC 65585 on or before the due date for 6<sup>th</sup> cycle housing elements, it will meet the second four-year update requirement and return to an eight-year update schedule.

Please note the County now meets specific requirements for State funding programs designed to reward local governments for compliance with State housing element law. Please see the Department's website for specific information about State funding programs at <http://www.hcd.ca.gov/grants-funding/active-funding/index.shtml>.

For your information, on January 6, 2016, HCD released a Notice of Funding Availability (NOFA) for the Mobilehome Park Rehabilitation and Resident Ownership Program (MPRRP). This program replaces the former Mobilehome Park Resident Ownership Program (MPROP) and allows expanded uses of funds. The purposes of this new

program are to loan funds to facilitate converting mobilehome park ownership to park residents or a qualified nonprofit corporation, and assist with repairs or accessibility upgrades meeting specified criteria. This program supports housing element goals such as encouraging a variety of housing types, preserving affordable housing, and assisting mobilehome owners, particularly those with lower-incomes. Applications are accepted over the counter beginning March 2, 2016 through June 30, 2017. Further information is available on the Department's website at: <http://www.hcd.ca.gov/grants-funding/active-funding/mprprop.shtml> .

The Department appreciates the assistance and cooperation Mr. Noah Alvey, Planning Manager, and Mr. Timothy Vertino, Lan Use/Environmental Planner, provided throughout the course of the housing element review. The Department wishes the San Diego County success in implementing its housing element and looks forward to following its progress through the General Plan annual progress reports pursuant to GC Section 65400. If the Department can provide assistance in implementing the housing element, please contact Robin Huntley, of our staff, at (916) 263-7422.

Sincerely,

Jennifer Seeger  
Assistant Deputy Director

**VIA HAND DELIVERY**

San Diego County Board of Supervisors  
County Board of Supervisors  
1600 Pacific Highway, Room 402  
San Diego, CA 92101  
Attn: Clerk of the Board of Operations

Re: Housing Affordability within San Diego County; Agenda Item 5

Dear Supervisors Cox, Jacob, Gaspar, Roberts, and Horn:

As you know, we represent the Golden Door Properties LLC (the “Golden Door”), which owns and operates an award-winning spa and resort that opened in 1958, along with sustainable agricultural operations. Adjacent to the Golden Door, the Newland Real Estate Group, LLC (“Newland”) has proposed a revised Merriam Mountains project, known as the “Sierra” project (the “Newland Sierra Project” or “Project”) on property located near Deer Springs Road. Newland’s proposal includes 2,135 residential units but fails to include a necessary affordable housing component.

We understand the Board is considering requesting the Chief Administrative Officer to investigate options to promote construction of homes in the unincorporated region and to close the housing gap. The Golden Door has employees of all income levels who need access to more affordable housing within North County. However, the proposed Newland Sierra Project is not located on a site that the County has identified for new housing construction in the North County metro area (see, e.g., Smart Growth Opportunity Areas, Figure H-2, General Plan Housing Element), it does not provide any affordable housing, and its market analyses are outdated and are inaccurate. Newland Sierra defines “affordable” as “assuming 4.0 percent interest rate, 10 percent down payment and a 35 percent of household income for housing.” However, interest rates today are higher (4.625%) and rising, and federal standards define “affordable” as costing “no more than 30% of the monthly household income for rent *and* utilities.”<sup>1</sup> And Newland

---

<sup>1</sup> See Enclosure 1; see also U.S. Dept. of Housing and Urban Development, *Affordable Housing*, [https://www.hud.gov/program\\_offices/comm\\_planning/affordablehousing/](https://www.hud.gov/program_offices/comm_planning/affordablehousing/) (last visited Apr. 17, 2018); San Diego Housing Federation, *Frequently Asked Questions*, <https://www.housingsandiego.org/find-housing-faq> (last visited Apr. 17, 2018).

Sierra has refused to commit to legally commit to providing affordable housing, incorrectly claiming on its website that the County has no such requirements.<sup>2</sup>

Accordingly, if the County were to approve the Newland Sierra Project, it would violate the County's General Plan because the Project lacks the required affordable housing which is expressly specified as necessary in the County's General Plan. (See General Plan Policy H-1.9; see also Government Code § 65300.5, *California Native Plant Society v. City of Rancho Cordova* (2009) 172 Cal.App.4th 603, 635-636 [project must comply with specific and mandatory general plan policies].)

***Existing County Policies Require an Affordable Housing Component for General Plan Amendment Projects.*** The County's General Plan already contains a policy requiring that **“developers [ ] provide an affordable housing component when requesting a General Plan amendment for large-scale residential project[s] when this is legally permissible.”** (General Plan, Policy H-1.9)(emphasis supplied). Current California law does make a mandatory “affordable housing component” legally permissible. Thus, the Board of Supervisors has the existing legal authority under California law to require an affordable housing component in every project that requires a General Plan amendment, as specified in Policy H-1.0. Thus, the Chief Administrative Officer and County Counsel, and the Board of Supervisors, have a mandatory duty under the County's adopted General Plan to require affordable housing conditions that are “legally permissible” under California law in order to implement the County's existing affordable housing policy embodied in Policy H-1.0

As it stands now, the County Board of Supervisors is required to impose a condition requiring an affordable housing component for projects seeking a General Plan amendment. The pending Newland Sierra project does not contain such an affordable housing component, and therefore is inconsistent with the existing General Plan. The courts have explained what “legally permissible” means within the context of affordable housing:

[I]t is well established that ***price controls are a constitutionally permissible form of regulation with regard to real property*** as well as to other types of property or services. . . . Accordingly, just as it would be permissible for a municipality to attempt to increase the amount of affordable housing in the community and to promote economically diverse developments by ***requiring all new residential developments to include a specified percentage of studio, one-bedroom, or small-square-footage units, there is no reason why a municipality may not alternatively attempt to achieve those same objectives by requiring new developments to set aside a percentage of its proposed units for sale at a price that is affordable to moderate- or low-income households.***

---

<sup>2</sup> See Enclosure 2; see also Newland Sierra *FAQ, Types of Housing*, <https://www.newlandsierra.com/faq/> (last visited Apr. 17, 2018).

(*California Building Industry Assn. v. City of San Jose* (2015) 61 Cal.4th 435 [emphasis added] (“*CBIA*”).) Therefore, the County may impose price control requirements on proposed new developments or require new residential developments to include a specified percentage of affordable units. The pending Newland Sierra project does not include either, despite the County’s General Plan policy requiring “legally permissible” action to ensure that General Plan amendment projects include an affordable housing component.

***The County May Immediately Impose an Affordable Housing Requirement on Newland Sierra.*** Implementing a requirement for a percentage of affordable homes within a new development is something the County can immediately implement and is required to implement under the express provisions of the General Plan. The General Plan policy is already in place that imposes a requirement on the pending Newland Sierra Project. Here, there is a clear nexus between the imposition of affordable housing requirements on development and the effects on the region. (See e.g. *San Remo Hotel L.P. v. City and County of San Francisco* (2002) 27 Cal.4th 643 [government may impose permitting condition without running afoul of the Takings Clause if it demonstrates an essential nexus and reasonable relationship between the permitting condition and a deleterious public impact of the development].)

In any event, the California Supreme Court has ruled that no “nexus” requirement applies to a condition requiring an affordable housing component for a residential development project. (*CBIA, supra*, 61 Cal.4th at 474-75, 479 [rough proportionality/nexus requirements do not apply to restrict developer’s use of property].) The Supreme Court relied upon *Ehrlich v. City of Culver City* (1996) 12 Cal.4th 854 to reach this conclusion. (*Id.* at 475-76.) *Ehrlich* involved the imposition of conditions on a case-by-case basis, rather than through a broader inclusionary housing ordinance, enabling a greater amount of discretion for the deployment of the city’s police power. (*Ehrlich, supra*, 12 Cal.4th at 869.) As such, the County may rely on its existing General Plan and implement appropriate inclusionary zoning requirements as a project condition on Newland Sierra prior to project approval. (*CBIA*, 61 Cal.4th at 477 [“Moreover, as we have explained above, the validity of the ordinance’s requirement that at least 15 percent of a development’s for-sale units be affordable to moderate- or low-income households does not depend on an assessment of the impact that the development itself will have on the municipality’s affordable housing situation.”].)

Though the law on this issue is firmly established, i.e., the County certainly does have the authority today to impose an affordable housing condition on the Newland Sierra project, if County Counsel somehow disagrees with this legal conclusion and believes that further steps are needed to make an affordable housing component “legally permissible,” then County Counsel should be directed to prepare any appropriate documents needed to implement this mandatory portion of the adopted General Plan, and any processing of the current General Plan amendment project of Newland Sierra project, should be suspended until the County adopts an ordinance to implement its own General Plan requirements. The County could simply impose the same requirement for affordable housing as upheld by the California Supreme Court in the City of San Jose case, using the wording of any ordinance or conditions adopted by the City of San Jose. Along with any other General Plan change or zoning ordinance amendment that is included in the Newland project approvals, County staff and the County Counsel can simply include project

conditions and/or an ordinance adopting affording housing requirements approved in the San Jose case, at the same time as the Board considers any other project approvals.

We ask that the County Chief Administrative Officer and County Counsel be directed to immediately propose project conditions or any other legal documents required to implement General Policy H-1.9 for the Newland project, and no further processing of the Newland project should occur until these actions are taken to implement General Plan Policy H-1.9. If County Counsel concludes that General Plan Policy H-1.9 is unenforceable, and the County lacks the legal authority to impose conditions requiring affordable housing components under the terms of that Policy, the Board should request County Counsel to describe the reasons for this conclusion.

Failure to pay attention the mandatory requirements of General Plan Policy H-1.9 will only result in needless delays and disruptions in any decisions the Board may make with respect to new developments covered by this Policy, such as Newland.

We thank you for your time and attention to our comments, and ask that they be incorporated both into the administrative record for the Newland Sierra Project and this Agenda Item 5. Please do not hesitate to contact me should you have any questions.

Best regards,

*Christopher Garrett*

## Affordable Housing

### Who Needs Affordable Housing?

Families who pay more than 30 percent of their income for housing are considered cost burdened and may have difficulty affording necessities such as food, clothing, transportation and medical care. An estimated 12 million renter and homeowner households now pay more than 50 percent of their annual incomes for housing. A family with one full-time worker earning the minimum wage cannot afford the local fair-market rent for a two-bedroom apartment anywhere in the United States.

### Where Can Individuals Find Assistance?

Individuals looking for assistance can:

- Find rental, homebuyer, and homeowner assistance
- Find resources for homeless persons, including, youth, veterans, and the chronically homeless
- Find help for victims of foreclosure and Hurricane Sandy and for persons living with HIV/AIDS

### What is HUD Doing to Support Affordable Housing?

Within the Office of Community Planning and Development, the Office of Affordable Housing Programs (OAH) administers the following grant programs designed to increase the stock of housing affordable to low-income households.

The HOME Investments Partnerships Program (HOME) provides grants to States and local governments to fund a wide range of activities including 1) building, buying, and/or rehabilitating housing for rent or homeownership or 2) providing direct rental assistance to low-income families. It is the largest Federal block grant program for State and local governments designed exclusively to create affordable housing for low-income households.

The National Housing Trust Fund (HTF) supports the acquisition, new construction, or reconstruction of rental units for extremely low-income families or families with incomes below the poverty line, whichever is greater.

HUD's Office of Housing and Office of Public and Indian Housing also administer programs to increase the amount of affordable housing available for low-income households across the nation.

### What Information Does HUD Provide?

The HUD Exchange provides a hub for HOME Program information, tools and templates, research, evaluations, best practices, guides, training manuals, and more including:

- HOME Laws and regulations
- Policy guidance (Policy Memos, HOME *FACTS*, HOMEfires)
- HOME Frequently Asked Questions (FAQs)
- HOME Dashboard Reports and other HOME Reports

Related tools and resources can be accessed through HOME Topics.

The HUD Exchange also provides:

- Email Updates** – To receive CPD communications about program policy, upcoming trainings, resources, reporting deadlines, technical assistance, and more, sign up on the HUD Exchange Mailing List.
- Training Opportunities** – For information on upcoming events, self-paced online training, and recorded webinars, go to Training and Events.
- Grantee Information** – To view amounts awarded to organizations under HUD programs over the past several years, go to CPD Allocations and Awards. To learn more about the agencies and organizations that have received funding, visit About Grantees.
- Assistance with Reporting System Questions** – If you have a question related to eCon Planning Suite or IDIS, please submit your question and get a response through Ask A Question.
- In-depth Advising** – To learn about extended communication or long-term assistance available to CPD grantees, visit Technical Assistance.

If you are an organization with a policy question related to HOME, or National Housing Trust Fund (HTF) please contact your local HUD Field Office for assistance.

### How Can My Organization Receive Funds?

Participating jurisdictions receive HOME grants through a formula to fund housing programs which meet local needs and priorities. To find out about how to apply for HOME assistance in your community, contact an agency nearest to your community.

Types of Housing

Q: What types of housing will be built?

A: A mixture of for-sale homes is proposed. No apartments or rental homes are proposed. The homes will be a variety of single-family detached homes, attached townhomes, cluster homes, age-targeted, and larger lot single-family homes.

Share your thoughts with us by clicking [here \(/contact\)](#)

---

Q: Will there be any rental units?

A: No rental apartment buildings are proposed for the community.

Share your thoughts with us by clicking [here \(/contact\)](#)

---

Q: Are there any "affordable housing" requirements for the community?

A: The County of San Diego does not require subsidized or otherwise "income-restricted" housing to be provided in a project. However, we do plan to have a variety of housing types available, including some at price points that are attainable for middle-income families.

**Re: Enforcement of Affordable Housing Requirements for  
Newland Sierra Project**

Dear Mr. Witt:

We understand that you may be handling legal matters regarding the County staff's processing of the developer's application for the Newland project. We write to ask you to ensure that the staff include a required "affordable housing component" that enforces County General Plan Housing Element Policy H-1.9 in their recommendations on the project, which the developer appears to have violated in its proposed project. We already have raised this issue before with the County in our April 17th letter to the Board of Supervisors (enclosed hereto as Attachment B to **Enclosure 1**), but we are writing to you directly to provide you with relevant legal authority and suggestions about how the staff could address the issue.

As you know we prefer to raise our client's concerns as early as possible in the process, rather than waiting for the public hearings. It is possible that our concerns are unnecessary, since it is possible that the County staff will include a required "affordable housing component" that enforces County General Plan Housing Element Policy H-1.9 in their recommendations on the project. Furthermore, we expect that our comments may be met with the response that the County must adopt an "ordinance" before imposing a Housing Element Policy H-1.9 affordable housing condition. This is not correct, but we believe that raising the issue directly with you now in this letter gives County Counsel sufficient time to draft any affordable housing ordinance, which could be included along with any ordinance that may be drafted by your office to exempt Newland from the Resource Protection Overlay Ordinance.

In particular, we wanted to alert you to a decision of the Superior Court of the County of Monterey in *Carmel Valley Association v. County of Monterey*, No. 17CV000131 (Apr. 24, 2018).

In *CVA v. Monterey*, the court held that the county's 7+ year delay in adopting revisions to its zoning ordinance to conform to the clear requirements of its general plan constituted an arbitrary and capricious abuse of discretion, based on the requirements of Government Code section 65860(c). (See pp. 15-17 of attached **Enclosure 2**.) Section 65860(c) states: "In the event that a zoning ordinance becomes inconsistent with a general plan by reason of amendment to the plan, or to any element of the plan, the zoning ordinance shall be amended within a reasonable time so that it is consistent with the general plan as amended."

As we have previously noted to the County (see Attachment B to **Enclosure 1**: April 17, 2018 Letter to County), General Plan Housing Element Policy H-1.9 is a clearly expressed, mandatory requirement that there be "an affordable housing component" provided as part of any "General Plan amendment for a large-scale residential project when this is legally permissible." The language of the General Plan Housing Element is sufficiently clear and mandatory such that no implementing ordinance is required in order for the policy to be enforced – in particular, with regards to the Newland Sierra project, which does not include any affordable housing component. Without such a component, the County cannot make the required findings of general plan consistency for the proposed Newland Specific Plan or the proposed Newland vesting tentative maps.

We note that Housing Element Policy H-1.9 has been part of the General Plan since at least the General Plan Update adopted in 2011. In 2012, the County stated that the policy would be implemented within "0-3 years."<sup>1</sup> So when initially adopted, it was intended that an implementing ordinance would be enacted by 2015. In 2013, the County changed this timeline to "2-7 years," delaying the implementing ordinance for this policy past 2015.<sup>2</sup> Notably, in 2017, the County disclosed that no additional resources were required to implement Housing Element Policy H-1.9.<sup>3</sup> This means that as of last year, either the County determined that it did not need an implementing ordinance to enforce the requirements of General Plan Housing Element Policy H-1.9, or that there was no reason for why an implementing ordinance should be further delayed. Thus, if an implementing ordinance were required, it seems likely that a court would find the County's now 7-year delay in conforming its zoning ordinance to the clear requirement of the

LATHAM & WATKINS LLP

General Plan Housing Element Policy H-1.9 to be unreasonable and in violation of Government Code section 65860.

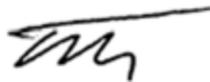

Accordingly, we again urge the County to enforce General Plan Housing Element Policy H-1.9 as we requested (both in writing and in person) several weeks ago at the April 17, 2018 meeting of the Board of Supervisors, through conditions attached to the Newland project. Further, if the County contends that it requires an implementing ordinance, even though that appears to contradict the statement in the 2017 Implementation Plan that no additional resources are required, then the County should start immediately in devising and adopting that ordinance.

This should not be difficult or complicated considering the clearly expressed requirement for affordable housing as part of General Plan amendment projects in Housing Element Policy H-1.9. (See, e.g., **Enclosure 3**: Excerpt from City of San Diego North City Future Urbanizing Area Framework Plan.)<sup>4</sup> The County should start immediately and pursue the matter with due diligence. The proposed ordinance could be heard by the Planning Commission this summer, either along with or before its consideration of the Newland project.

I also wanted to note that our concerns on this issue do not mean that our client approves of the Newland project if it contains a Housing Element Policy H-1.9 condition. This issue is important to our client the Golden Door because, if this and other projects are to be approved, many of the hospitality and agricultural workers on our client's property could benefit from the availability of affordable housing. The Golden Door draws many of its employees from the local community. My client believes the Newland project has been proposed for the wrong site, with the wrong design, but if it is going to be recommended for approval by County staff despite these objections, it should actually include an affordable housing component as required by the County General Plan. The fact that the Newland project does not contain any affordable housing as defined by the County's Housing Element underscores that the project – though it will add a new population the size of the City of Del Mar in a currently mostly undeveloped and uninhabited area – is not intended by Newland to provide any affordable housing to the community.

Please include this comment letter in the administrative record for the project. Thank you for your time and attention to this matter.

Very truly yours,

Taiga Takahashi  
of LATHAM & WATKINS LLP

Jennifer Seeger  
Assistant Deputy Director  
California Dept. of Housing and Community Development  
Division of Housing Development  
2020 W. El Camino Avenue, Suite 500  
Sacramento, California 95833

Re: San Diego County Housing Element

Dear Ms. Seeger:

We represent Golden Door Properties LLC (the “Golden Door”), which owns and operates an award-winning spa and resort that opened in 1958, along with sustainable agricultural operations. Adjacent to the Golden Door, the Newland Sierra, LLC (“Newland”) has proposed a revised Merriam Mountains project, known as the “Sierra” project (the “Newland Sierra Project” or “Project”) on property located near Deer Springs Road. Newland’s proposal includes 2,135 residential units but fails to include a necessary affordable housing component. Further, the County of San Diego is failing to implement the Housing Element which the County adopted in August of 2011, updated in April of 2017, and which your Department approved in the letter attached hereto as **Attachment A**. In particular, the County is failing to comply with General Plan Policy H-1.9 regarding the provision of affordable housing. This policy states that:

**Affordable Housing through General Plan Amendments.**  
Require developers to provide an affordable housing component when requesting a General Plan amendment for a large-scale residential project when this is legally permissible.

Unfortunately, the County staff is failing to propose conditions that will require an affordable component in the Newland Sierra Project, and Newland contends that it is not required to provide any affordable housing. The Newland Sierra Project requires a General Plan amendment that the County has been processing since May 7, 2015. The County has the legal authority to impose conditions requiring an affordable housing component as set forth in General Plan Policy H-1.9, but as of yet, neither County staff nor the County Counsel have proposed those conditions for this project.

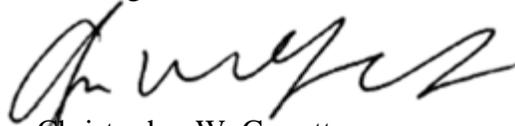

The Golden Door is opposed to any project on the Newland property that requires an amendment to the General Plan land use element or an exemption from the County’s Resource Protection Ordinance. Nonetheless, if the County intends to amend its General Plan and convert

this rural land, and completely exempt the project from the County's Resource Protection Ordinance, the County must nonetheless comply with Policy H-1.9.

We ask that your office take steps to investigate and remedy the County's failure to implement this key portion of its General Plan. The County's failure to comply with this mandatory policy can only delay or disrupt the County's overall planning for new housing in the County and its ability to provide affordable housing.

We have raised these issues with the Board of Supervisors and County staff at the Board's meeting of April 18, 2018, as set forth in the attached letter (**Attachment B**). However, the Board has so far decided to take no action on this matter. We therefore look to the Department for assistance in this matter.

Best regards,

Christopher W. Garrett  
of LATHAM & WATKINS LLP

June 15, 2017

Ms. Helen N. Robbins-Meyer, Chief Administrative Officer  
County of San Diego  
1600 Pacific Highway, Room 209  
San Diego, CA 92101

Dear Ms. Robbins-Meyer:

**RE: County of San Diego's 5<sup>th</sup> Cycle (2013-2021) Four-Year Update, Adopted Housing Element**

Thank you for submitting San Diego County's housing element adopted March 15, 2017 and initially received for review on May 1, 2017 with a corrected version received for review on May 22, 2017. Pursuant to Government Code (GC) Section 65585(h), the Department is reporting the results of its review.

The Department is pleased to find the adopted housing element in full compliance with State housing element law (Article 10.6 of the Government Code). The adopted element was found to be substantially the same as the revised draft element the Department's October 26, 2016 review determined met statutory requirements.

Pursuant to GC Section 65588(e)(2)(B) a local government in the SANDAG region that did not adopt a fourth planning period housing element by January 1, 2009 shall revise its housing element every four years, unless the local government met both of the following conditions: 1) adopted the fourth revision no later than March 31, 2010; and 2) completes any rezoning identified in the fourth revision by June 30, 2010. The County did not meet the requirements of GC 65588(e)(2)(B); therefore, it is subject to the four-year revision requirement until the County has adopted at least two consecutive revisions by the applicable due dates. Adoption of this housing element meets the requirements of the first four-year update. Provided the County adopts a housing element pursuant to the requirements of GC 65585 on or before the due date for 6<sup>th</sup> cycle housing elements, it will meet the second four-year update requirement and return to an eight-year update schedule.

Please note the County now meets specific requirements for State funding programs designed to reward local governments for compliance with State housing element law. Please see the Department's website for specific information about State funding programs at <http://www.hcd.ca.gov/grants-funding/active-funding/index.shtml>.

For your information, on January 6, 2016, HCD released a Notice of Funding Availability (NOFA) for the Mobilehome Park Rehabilitation and Resident Ownership Program (MPRRP). This program replaces the former Mobilehome Park Resident Ownership Program (MPROP) and allows expanded uses of funds. The purposes of this new

program are to loan funds to facilitate converting mobilehome park ownership to park residents or a qualified nonprofit corporation, and assist with repairs or accessibility upgrades meeting specified criteria. This program supports housing element goals such as encouraging a variety of housing types, preserving affordable housing, and assisting mobilehome owners, particularly those with lower-incomes. Applications are accepted over the counter beginning March 2, 2016 through June 30, 2017. Further information is available on the Department's website at: <http://www.hcd.ca.gov/grants-funding/active-funding/mprprop.shtml> .

The Department appreciates the assistance and cooperation Mr. Noah Alvey, Planning Manager, and Mr. Timothy Vertino, Lan Use/Environmental Planner, provided throughout the course of the housing element review. The Department wishes the San Diego County success in implementing its housing element and looks forward to following its progress through the General Plan annual progress reports pursuant to GC Section 65400. If the Department can provide assistance in implementing the housing element, please contact Robin Huntley, of our staff, at (916) 263-7422.

Sincerely,

Jennifer Seeger  
Assistant Deputy Director

**VIA HAND DELIVERY**

San Diego County Board of Supervisors  
County Board of Supervisors  
1600 Pacific Highway, Room 402  
San Diego, CA 92101  
Attn: Clerk of the Board of Operations

Re: Housing Affordability within San Diego County; Agenda Item 5

Dear Supervisors Cox, Jacob, Gaspar, Roberts, and Horn:

As you know, we represent the Golden Door Properties LLC (the “Golden Door”), which owns and operates an award-winning spa and resort that opened in 1958, along with sustainable agricultural operations. Adjacent to the Golden Door, the Newland Real Estate Group, LLC (“Newland”) has proposed a revised Merriam Mountains project, known as the “Sierra” project (the “Newland Sierra Project” or “Project”) on property located near Deer Springs Road. Newland’s proposal includes 2,135 residential units but fails to include a necessary affordable housing component.

We understand the Board is considering requesting the Chief Administrative Officer to investigate options to promote construction of homes in the unincorporated region and to close the housing gap. The Golden Door has employees of all income levels who need access to more affordable housing within North County. However, the proposed Newland Sierra Project is not located on a site that the County has identified for new housing construction in the North County metro area (see, e.g., Smart Growth Opportunity Areas, Figure H-2, General Plan Housing Element), it does not provide any affordable housing, and its market analyses are outdated and are inaccurate. Newland Sierra defines “affordable” as “assuming 4.0 percent interest rate, 10 percent down payment and a 35 percent of household income for housing.” However, interest rates today are higher (4.625%) and rising, and federal standards define “affordable” as costing “no more than 30% of the monthly household income for rent *and* utilities.”<sup>1</sup> And Newland

---

<sup>1</sup> See Enclosure 1; see also U.S. Dept. of Housing and Urban Development, *Affordable Housing*, [https://www.hud.gov/program\\_offices/comm\\_planning/affordablehousing/](https://www.hud.gov/program_offices/comm_planning/affordablehousing/) (last visited Apr. 17, 2018); San Diego Housing Federation, *Frequently Asked Questions*, <https://www.housingsandiego.org/find-housing-faq> (last visited Apr. 17, 2018).

Sierra has refused to commit to legally commit to providing affordable housing, incorrectly claiming on its website that the County has no such requirements.<sup>2</sup>

Accordingly, if the County were to approve the Newland Sierra Project, it would violate the County's General Plan because the Project lacks the required affordable housing which is expressly specified as necessary in the County's General Plan. (See General Plan Policy H-1.9; see also Government Code § 65300.5, *California Native Plant Society v. City of Rancho Cordova* (2009) 172 Cal.App.4th 603, 635-636 [project must comply with specific and mandatory general plan policies].)

***Existing County Policies Require an Affordable Housing Component for General Plan Amendment Projects.*** The County's General Plan already contains a policy requiring that **“developers [ ] provide an affordable housing component when requesting a General Plan amendment for large-scale residential project[s] when this is legally permissible.”** (General Plan, Policy H-1.9)(emphasis supplied). Current California law does make a mandatory “affordable housing component” legally permissible. Thus, the Board of Supervisors has the existing legal authority under California law to require an affordable housing component in every project that requires a General Plan amendment, as specified in Policy H-1.0. Thus, the Chief Administrative Officer and County Counsel, and the Board of Supervisors, have a mandatory duty under the County's adopted General Plan to require affordable housing conditions that are “legally permissible” under California law in order to implement the County's existing affordable housing policy embodied in Policy H-1.0

As it stands now, the County Board of Supervisors is required to impose a condition requiring an affordable housing component for projects seeking a General Plan amendment. The pending Newland Sierra project does not contain such an affordable housing component, and therefore is inconsistent with the existing General Plan. The courts have explained what “legally permissible” means within the context of affordable housing:

[I]t is well established that ***price controls are a constitutionally permissible form of regulation with regard to real property*** as well as to other types of property or services. . . . Accordingly, just as it would be permissible for a municipality to attempt to increase the amount of affordable housing in the community and to promote economically diverse developments by ***requiring all new residential developments to include a specified percentage of studio, one-bedroom, or small-square-footage units, there is no reason why a municipality may not alternatively attempt to achieve those same objectives by requiring new developments to set aside a percentage of its proposed units for sale at a price that is affordable to moderate- or low-income households.***

---

<sup>2</sup> See Enclosure 2; see also Newland Sierra *FAQ*, *Types of Housing*, <https://www.newlandsierra.com/faq/> (last visited Apr. 17, 2018).

(*California Building Industry Assn. v. City of San Jose* (2015) 61 Cal.4th 435 [emphasis added] (“*CBIA*”).) Therefore, the County may impose price control requirements on proposed new developments or require new residential developments to include a specified percentage of affordable units. The pending Newland Sierra project does not include either, despite the County’s General Plan policy requiring “legally permissible” action to ensure that General Plan amendment projects include an affordable housing component.

***The County May Immediately Impose an Affordable Housing Requirement on Newland Sierra.*** Implementing a requirement for a percentage of affordable homes within a new development is something the County can immediately implement and is required to implement under the express provisions of the General Plan. The General Plan policy is already in place that imposes a requirement on the pending Newland Sierra Project. Here, there is a clear nexus between the imposition of affordable housing requirements on development and the effects on the region. (See e.g. *San Remo Hotel L.P. v. City and County of San Francisco* (2002) 27 Cal.4th 643 [government may impose permitting condition without running afoul of the Takings Clause if it demonstrates an essential nexus and reasonable relationship between the permitting condition and a deleterious public impact of the development].)

In any event, the California Supreme Court has ruled that no “nexus” requirement applies to a condition requiring an affordable housing component for a residential development project. (*CBIA, supra*, 61 Cal.4th at 474-75, 479 [rough proportionality/nexus requirements do not apply to restrict developer’s use of property].) The Supreme Court relied upon *Ehrlich v. City of Culver City* (1996) 12 Cal.4th 854 to reach this conclusion. (*Id.* at 475-76.) *Ehrlich* involved the imposition of conditions on a case-by-case basis, rather than through a broader inclusionary housing ordinance, enabling a greater amount of discretion for the deployment of the city’s police power. (*Ehrlich, supra*, 12 Cal.4th at 869.) As such, the County may rely on its existing General Plan and implement appropriate inclusionary zoning requirements as a project condition on Newland Sierra prior to project approval. (*CBIA*, 61 Cal.4th at 477 [“Moreover, as we have explained above, the validity of the ordinance’s requirement that at least 15 percent of a development’s for-sale units be affordable to moderate- or low-income households does not depend on an assessment of the impact that the development itself will have on the municipality’s affordable housing situation.”].)

Though the law on this issue is firmly established, i.e., the County certainly does have the authority today to impose an affordable housing condition on the Newland Sierra project, if County Counsel somehow disagrees with this legal conclusion and believes that further steps are needed to make an affordable housing component “legally permissible,” then County Counsel should be directed to prepare any appropriate documents needed to implement this mandatory portion of the adopted General Plan, and any processing of the current General Plan amendment project of Newland Sierra project, should be suspended until the County adopts an ordinance to implement its own General Plan requirements. The County could simply impose the same requirement for affordable housing as upheld by the California Supreme Court in the City of San Jose case, using the wording of any ordinance or conditions adopted by the City of San Jose. Along with any other General Plan change or zoning ordinance amendment that is included in the Newland project approvals, County staff and the County Counsel can simply include project

conditions and/or an ordinance adopting affording housing requirements approved in the San Jose case, at the same time as the Board considers any other project approvals.

We ask that the County Chief Administrative Officer and County Counsel be directed to immediately propose project conditions or any other legal documents required to implement General Policy H-1.9 for the Newland project, and no further processing of the Newland project should occur until these actions are taken to implement General Plan Policy H-1.9. If County Counsel concludes that General Plan Policy H-1.9 is unenforceable, and the County lacks the legal authority to impose conditions requiring affordable housing components under the terms of that Policy, the Board should request County Counsel to describe the reasons for this conclusion.

Failure to pay attention the mandatory requirements of General Plan Policy H-1.9 will only result in needless delays and disruptions in any decisions the Board may make with respect to new developments covered by this Policy, such as Newland.

We thank you for your time and attention to our comments, and ask that they be incorporated both into the administrative record for the Newland Sierra Project and this Agenda Item 5. Please do not hesitate to contact me should you have any questions.

Best regards,

*Christopher Garrett*

## Affordable Housing

### Who Needs Affordable Housing?

Families who pay more than 30 percent of their income for housing are considered cost burdened and may have difficulty affording necessities such as food, clothing, transportation and medical care. An estimated 12 million renter and homeowner households now pay more than 50 percent of their annual incomes for housing. A family with one full-time worker earning the minimum wage cannot afford the local fair-market rent for a two-bedroom apartment anywhere in the United States.

### Where Can Individuals Find Assistance?

Individuals looking for assistance can:

- Find rental, homebuyer, and homeowner assistance
- Find resources for homeless persons, including, youth, veterans, and the chronically homeless
- Find help for victims of foreclosure and Hurricane Sandy and for persons living with HIV/AIDS

### What is HUD Doing to Support Affordable Housing?

Within the Office of Community Planning and Development, the Office of Affordable Housing Programs (OAH) administers the following grant programs designed to increase the stock of housing affordable to low-income households.

The HOME Investments Partnerships Program (HOME) provides grants to States and local governments to fund a wide range of activities including 1) building, buying, and/or rehabilitating housing for rent or homeownership or 2) providing direct rental assistance to low-income families. It is the largest Federal block grant program for State and local governments designed exclusively to create affordable housing for low-income households.

The National Housing Trust Fund (HTF) supports the acquisition, new construction, or reconstruction of rental units for extremely low-income families or families with incomes below the poverty line, whichever is greater.

HUD's Office of Housing and Office of Public and Indian Housing also administer programs to increase the amount of affordable housing available for low-income households across the nation.

### What Information Does HUD Provide?

The HUD Exchange provides a hub for HOME Program information, tools and templates, research, evaluations, best practices, guides, training manuals, and more including:

- HOME Laws and regulations
- Policy guidance (Policy Memos, HOME *FACTS*, HOMEfires)
- HOME Frequently Asked Questions (FAQs)
- HOME Dashboard Reports and other HOME Reports

Related tools and resources can be accessed through HOME Topics.

The HUD Exchange also provides:

**Email Updates** – To receive CPD communications about program policy, upcoming trainings, resources, reporting deadlines, technical assistance, and more, sign up on the HUD Exchange Mailing List.

**Training Opportunities** – For information on upcoming events, self-paced online training, and recorded webinars, go to Training and Events.

**Grantee Information** – To view amounts awarded to organizations under HUD programs over the past several years, go to CPD Allocations and Awards. To learn more about the agencies and organizations that have received funding, visit About Grantees.

**Assistance with Reporting System Questions** – If you have a question related to eCon Planning Suite or IDIS, please submit your question and get a response through Ask A Question.

**In-depth Advising** – To learn about extended communication or long-term assistance available to CPD grantees, visit Technical Assistance.

If you are an organization with a policy question related to HOME, or National Housing Trust Fund (HTF) please contact your local HUD Field Office for assistance.

### How Can My Organization Receive Funds?

Participating jurisdictions receive HOME grants through a formula to fund housing programs which meet local needs and priorities. To find out about how to apply for HOME assistance in your community, contact an agency nearest to your community.

Types of Housing

Q: What types of housing will be built?

A: A mixture of for-sale homes is proposed. No apartments or rental homes are proposed. The homes will be a variety of single-family detached homes, attached townhomes, cluster homes, age-targeted, and larger lot single-family homes.

Share your thoughts with us by clicking [here \(/contact\)](#)

---

Q: Will there be any rental units?

A: No rental apartment buildings are proposed for the community.

Share your thoughts with us by clicking [here \(/contact\)](#)

---

Q: Are there any "affordable housing" requirements for the community?

A: The County of San Diego does not require subsidized or otherwise "income-restricted" housing to be provided in a project. However, we do plan to have a variety of housing types available, including some at price points that are attainable for middle-income families.

CASE NO.: 17CV000131

**Intended Decision**

12 This matter came on for court trial on February 2, 2018. All sides were represented  
13 through their respective attorneys. The matter was argued and taken under submission.

14 This intended decision resolves factual and legal disputes, and shall suffice as a statement  
15 of decision as to all matters contained herein. (Cal. Rules of Court, rule 3.1590(c)(1).)  
16

17 **Background**

18 On April 22, 2004, the Lombardo Land Group submitted a development project  
 19 application to the County of Monterey. (AR 7222-7225.) The application was for a Combined  
 20 Development Permit, rezoning, use permit, General Plan Amendment, a Specific Plan, and a  
 21 Vesting Tentative Map for a "a proposed mixed-income new neighborhood." (AR 7222, 7224.)  
 22 The Applicant proposed 280 units,<sup>1</sup> of which 50% would be deed-restricted Affordable and  
 23 Workforce units. (AR 7224.)  
 24

25 In January 2008, the County circulated a Draft Environmental Impact Report (DEIR) for  
26 what it identified as the "Rancho Canada Village Specific Plan." (AR 214.) That DEIR received  
27

28 <sup>1</sup> The Applicant subsequently changed its proposal to seek the creation of 281 units. (AR 237.)

1 56 comment letters, many of which criticized its adequacy on a number of substantive grounds.  
2 (See, e.g., AR 8923, 9397-9401, 9596-9608, 19050-19116.) At that time, the firm preparing the  
3 DEIR was also working on an EIR for the County's General Plan update. That project took  
4 priority, forcing the Applicant to wait for its completion to proceed. (AR 11347-11348.)

5  
6 The new General Plan went into effect on October 26, 2010. (AR 13574.) It included  
7 changes to the Carmel Valley Master Plan (CVMP). CVMP Policy CV-1.6 established a new  
8 residential subdivision building limit of 266 new residential lots or units in Carmel Valley. (AR  
9 103, 11807, 11824.)<sup>2</sup> In recognition of the proposed Project, the 2010 General Plan established a  
10 Special Treatment Area (CVMP Policy CV-1.27) of "[u]p to 40 acres" for the Project site. (AR  
11 14036.) Within that Special Treatment Area, residential development was allowed at "a density  
12 of up to 10 units/acre,"<sup>3</sup> and was required to include "a minimum of 50% Affordable/Workforce  
13 Housing." (*Ibid.*)

14  
15 Further, the 2010 General Plan raised the minimum affordable housing requirement for  
16 all new housing development across the County to 25%, and committed the County to amending  
17 its Inclusionary Housing Ordinance, Monterey County Code Chapter 18.40 (Inclusionary  
18 Housing Ordinance or Ordinance) to reflect this change. (AR 13583.) To date, no such  
19 amendment has occurred.

20  
21  
22  
23 <sup>2</sup> The findings, General Plan EIR, and Final EIR all recite that the original version of the  
24 2010 General Plan contained a residential unit cap of 266 units. (AR 103, 3738, 11807, 11824.)  
25 However, the actual language of the General Plan refers to a residential unit cap of 200 units.  
(AR 13616.) No party explains this discrepancy. The difference, however, is irrelevant to the  
26 court's analysis. For ease of reference, the court assumes throughout this decision that the initial  
27 cap was 266 units.

28 <sup>3</sup> Notwithstanding this density designation, the Special Treatment Area is still subject to the  
building cap. (AR 13616 ["[n]ew residential subdivision Carmel Valley shall be limited to  
creation of 200 new units"], 14031.)

1 Finally, the General Plan mandated that, within 12 months, the County develop a  
2 Development Evaluation System (DES) in order to assess new development projects proposed  
3 outside of certain priority development areas based on a pass-fail grading system. (AR 13578-  
4 13579.) The General Plan defines "Community Areas, Rural Centers and Affordable Housing  
5 Overlay districts" as "the top priority for development in the unincorporated areas of the  
6 County." (AR 13578.) The County has not yet promulgated the DES.

8 Following the adoption of the General Plan, several lawsuits were filed, including one  
9 brought by Petitioner. (AR 19524.) Petitioner and the County ultimately reached a settlement,  
10 agreeing to an amendment to CVMP Policy CV-1.6 to reduce the residential subdivision limit in  
11 Carmel Valley from 266 new units to 190 new units. (AR 19964-19983; see also AR 3738.) The  
12 Board approved this amendment on February 12, 2013. (AR 14031-14032.) Of the 190-unit cap,  
13 24 of the units were reserved for another property, meaning that, absent a general plan  
14 amendment, the Project was limited to 166 units. (AR 13617, 3738.)

16 Rather than abandoning the Project and commencing the permitting and environmental  
17 review process anew, Real Parties developed a new 130-unit alternative (Alternative), which it  
18 claimed was intended to "respond[] to various concerns raised by the public during the  
19 processing of the [] [P]roject." (AR 18768.) Real Parties explained to the County that the  
20 Alternative addressed "most, if not all, of the concerns expressed by the public, and which  
21 include[d] flood control, utility, recreational, water supply, moderate income housing and other  
22 features that would benefit the community." (AR 18771.) Real Parties provided the County with  
23 extensive information on the Alternative, including proposed maps, property development  
24 standards, and a detailed description of the specific Project impacts the Alternative would  
25 alleviate. (AR 18768-18782.) Nevertheless, Real Parties insisted that the Alternative was "not a  
26 resubmittal for a new project." (AR 18770.)  
27  
28

1 Real Parties then worked with the County and its EIR consultant to prepare a  
2 Recirculated Draft Environmental Impact Report (RDEIR), to include, inter alia, a lengthy  
3 discussion of the Alternative. (AR 17126-17130, 1348-1372.) Real Parties asked the EIR  
4 consultant to “provide an equal level of analysis of the 130-unit alternative” and the Project. (AR  
5 17142.) To accomplish this task, the EIR consultant was forced to put the analysis of the  
6 Alternative in the “Project Description” chapter along with the Project, rather than in the  
7 Alternatives chapter.  
8

9 On June 1, 2016, the County released the RDEIR. (AR 18541.) The RDEIR’s “Project  
10 Description” chapter discussed both the Project and the Alternative, in significant, and roughly  
11 equivalent, detail. (AR 1321, 1348-1372.) The remaining six alternatives were described as  
12 before, in less detail, in the RDEIR’s alternatives chapter. The RDEIR concluded that the 130-  
13 unit Alternative was the “environmentally superior alternative.” (AR 18537, 18541-18543.) In  
14 November 2016, the County issued its Final Environmental Impact Report (FEIR).<sup>4</sup>  
15

16 On November 9, 2016, County Planning Staff recommended that the Planning  
17 Commission advise the County Board of Supervisors (the Board) to approve the 130-unit  
18 Alternative and certify the EIR. (AR 4099.) Staff also explained that, under the Alternative, an  
19 amendment to the Special Treatment Area language in CVMP Policy CV-1.27 would be required  
20 to reduce the affordability requirement from 50% to 20%. (AR 4107.) At the subsequent hearing  
21 on November 16, 2016, the Planning Commission voted 4-3 to adopt staff’s recommendation to  
22 recommend approval of the Alternative and certification of the FEIR. (AR 5256-5279.)  
23 However, the Planning Commission did not recommend that the Board adopt the proposed  
24 General Plan amendment, because it did not secure a majority of the Commission’s vote. (AR  
25 5347-5348.)  
26

27  
28 <sup>4</sup> The FEIR eliminated one alternative due to a change in ownership of the relevant property.  
(AR 134, 3803-3806, 3808-3809.)

1 On December 13, 2016, the Board unanimously approved the 130-unit Alternative based  
2 upon a revised vesting tentative map submitted by Real Parties in Interest (Real Parties). (AR  
3 5360-5361.) The Board also approved a General Plan amendment to the CMVP Policy CV-1.27  
4 Special Treatment Area for the Rancho Canada property, reducing the 50% of  
5 affordable/workforce housing to 20%, and rezoning the Property from public quasi-public to  
6 Medium Density Residential for 129 lots, and Low Density Residential for the Alternative's Lot  
7 130. (AR 5361.) As to inclusionary housing, the Board stated:

9 "Finding NO. 18: INCLUSIONARY HOUSING: The Alternative complies with the  
10 Inclusionary Housing Ordinance requirement to provide a minimum of 20% onsite affordable  
11 housing units. (MCC, Chapter 18.40) Unusual circumstances exist making it appropriate to  
12 modify the requirements of the Inclusionary Ordinance so that 20% Moderate-income housing,  
13 as proposed by the Alternative, is allowed in-lieu of the 8% Moderate-income, 6% Low-income  
14 and 6% Very Low income." (AR 143.)

16 Finally, the Board adopted Condition No. 112, which required Real Parties to comply  
17 with the Ordinance by constructing 25 on-site rental units affordable to moderate-income  
18 households. (AR 211.)

#### 19 *Administrative Record*

20 The court admitted the approximately 30,000-page administrative record into evidence.

21 Together with its opposition brief, the County filed a supplemental administrative record  
22 comprised of 1) omitted public comments on the 2008 DEIR; 2) the County 2015-2023 Housing  
23 Element, dated January 26, 2016; and 3) a Board Order entitled "2016 Annual Progress Report  
24 for the General Plan and Housing Element, and accompanying staff report," dated July 18, 2017.

25 Petitioner does not object to the addition of omitted public comments on the 2008 DEIR.  
26 Consequently, the court admits these comments into the administrative record.  
27  
28

1 Ordinance's requirement that the affordable housing units provided meet specified income  
2 requirements.

3           Additionally, 1) the County contends that Petitioner has waived its right to challenge the  
4 County's failure to timely adopt the DES; and 2) that Petitioner has failed to exhaust its  
5 administrative remedies as to its claims that the County did not timely adopt the DES or amend  
6 its Inclusionary Housing Ordinance. Because these arguments are threshold matters, the court  
7 will address them first.  
8

9           **1.1 Petitioner has not waived its right to challenge the County's failure to timely**  
10           **adopt the DES.**

11           The County maintains that, by virtue of a clause in a settlement agreement, Petitioner has  
12 waived its right to challenge the County's failure to timely adopt the DES. Petitioner responds  
13 that the release does not cover such claims.  
14

15           On November 24, 2010, Petitioner filed a petition for writ of mandate against the County  
16 alleging CEQA violations relating to the 2010 General Plan Update. The parties eventually  
17 entered into a settlement agreement. (AR 19964-19983.) As part of that agreement, executed on  
18 September 24, 2012, Petitioner released the County and its Board from all claims as of the  
19 Agreement's effective date "arising from or relating to certification of the Final EIR for the 2010  
20 Monterey County General Plan and approval of the 2010 Monterey County General Plan as  
21 adopted by the Board of Supervisors on October 26, 2010." (AR 19967.) The County notes that  
22 Petitioner's claim regarding the County's failure to timely promulgate the DES within 12 months  
23 of the 2010 General Plan's effective date was ripe on October 26, 2011. It therefore contends that  
24 the claim was subject to the release.  
25

26           The County's argument is without merit. The release related only to claims concerning  
27 the certification of the FEIR and the County's approval of the General Plan. Petitioner's claim  
28

1 regarding the timeliness of the DES implementation is not such a claim; it relates to the  
2 implementation of the General Plan, not the General Plan's FEIR, or approval process.

3 **1.2 Petitioner's claims are not barred for failure to exhaust its administrative**  
4 **remedies.**

5 The County asserts that Petitioner has failed to exhaust its administrative remedies as to  
6 its claims that the County did not timely adopt the DES or amend its Inclusionary Housing  
7 Ordinance. The County insists that Petitioner was required to exhaust all available administrative  
8 appeals and to raise its precise objections to the County's General Plan implementation "in a  
9 manner that [would have given] the County notice of and an opportunity to act on the issue."  
10

11 **1.2.1 The "Appeal Exhaustion" doctrine does not apply.**

12 The County insists that Petitioner's objections to the County's General Plan  
13 implementation efforts were never properly before the Board of Supervisors because those  
14 objections were only raised in the context of the Project approval process.  
15

16 "[W]here an administrative remedy is provided by statute, relief must be sought from the  
17 administrative body and this remedy exhausted before the courts will act." (*Abelleira v. District*  
18 *Court of Appeal* (1941) 17 Cal.2d 280, 292.) "Exhaustion of administrative remedies is a  
19 jurisdictional prerequisite to resort to the courts." (*Campbell v. Regents of University of*  
20 *California* (2005) 35 Cal.4th 311, 321, internal citations omitted.) Nevertheless, the exhaustion  
21 doctrine does not apply when the relevant statute under which review was offered does not  
22 establish "clearly defined machinery for the submission, evaluation and resolution of complaints  
23 by aggrieved parties." (*Rosenfield v. Malcolm* (1967) 65 Cal.2d 559, 566.)  
24

25 The County fails to identify any procedure in the County Code or General Plan that  
26 Petitioner could have followed to place their specific objections before the Board outside the  
27 context of the Project. Simply put, no such administrative remedy was available, and hence, the  
28 exhaustion doctrine does not apply. (*Id.* at p. 566.)

1                   **1.2.2 The “Issue Exhaustion” doctrine does not apply.**

2                   The County argues that Petitioner is required to satisfy what it calls “issue exhaustion.”  
3 According to the County, Petitioner was required to present its exact objections below so that the  
4 County would have had the opportunity to act and render litigation unnecessary.  
5

6                   The County’s argument relies entirely on citations to CEQA and administrative mandate  
7 cases. (See, e.g., *Resource Defense Fund v. Local Agency Formation Com.* (1987) 191  
8 Cal.App.3d 886, 894 [CEQA]; *Evans v. City of San Jose* (2005) 128 Cal.App.4th 1123, 1136  
9 [County redevelopment plan reviewed under Code Civ. Proc., § 1094.5].) This is no accident.  
10 CEQA expressly mandates such “issue exhaustion.” (Pub. Resources Code, § 21177, subd. (a).)  
11 The rule also applies in administrative mandamus petitions under Code of Civil Procedure  
12 section 1094.5 (*City of Walnut Creek v. County of Contra Costa* (1980) 101 Cal.App.3d 1012,  
13 1019.) In both cases, the actions are direct appeals from administrative proceedings at which an  
14 agency could act to resolve a party’s objections, such as by modifying the project or rejecting it  
15 in its entirety. Were there no such rule, a party could “withhold any defense then available to  
16 [her] or make only a perfunctory or ‘skeleton’ showing in the hearing and thereafter obtain an  
17 unlimited trial de novo, on expanded issues, in the reviewing court. [Citation.]” (*Pegues v. Civil*  
18 *Service Com.* (1998) 67 Cal.App.4th 95, 104, italics in original.) The rule is thus necessary “to  
19 preserve the integrity of the administrative proceedings and to endow them with a dignity beyond  
20 that of a mere shadow-play.” [Citation.]” (*Id.* at pp. 1019-1020.)  
21  
22

23                   Here, Petitioner’s challenges to the County’s General Plan implementation are brought as  
24 part of its petition for writ of *traditional* mandate under Code of Civil Procedure section 1085,  
25 not section 1094.5. It is true that Petitioner simultaneously seeks CEQA relief for its claims  
26 related to the Project, but the County’s exhaustion argument does not relate to those claims. As  
27 to Petitioner’s general plan implementation claims, no hearing or other administrative process  
28

1 occurred.<sup>6</sup> Nevertheless, the County complains that Petitioner raised the relevant issues but only  
2 did so “in conjunction with the Project.” But as discussed *ante*, the County does not identify any  
3 administrative procedure during which Petitioner could have raised these issues outside the  
4 context of the Project approval process. Regardless, Petitioner stated its precise objections in  
5 detail below, both orally and in writing. (E.g., AR 5422, 5435, 20102, 20105, 20333.)  
6

### 7 1.3 Standard of Review.

8 Petitioner seeks writs of mandate compelling the County to implement the DES and to  
9 amend its Inclusionary Housing Ordinance to conform to its General Plan. The County contends  
10 that its failure to take either action stemmed from deliberate decisions to prioritize other  
11 mandatory General Plan tasks. The County insists that these decisions were legislative in  
12 character. Petitioner responds that the decisions were not legislative because they did not involve  
13 enacting or amending the General Plan but rather, 1) as to the DES, failing to implement that  
14 Plan’s mandatory direction; and 2) as to the Inclusionary Housing Ordinance, failing to  
15 implement the Government Code’s mandatory statutory command.  
16

17 Code of Civil Procedure section 1085 “permits judicial review of ministerial duties as  
18 well as quasi-legislative and legislative acts. Mandate will lie to compel performance of a clear,  
19 present and usually ministerial duty in cases where a petitioner has a clear, present and beneficial  
20 right to performance of that duty. [Citation.]” (*County of Del Norte v. City of Crescent*  
21 *City* (1999) 71 Cal.App.4th 965, 972.) “A ministerial act is an act that a public officer is required  
22 to perform in a prescribed manner in obedience to the mandate of legal authority and without  
23 regard to his own judgment or opinion concerning such act’s propriety or impropriety, when a  
24

---

25  
26 <sup>6</sup> Code of Civil Procedure section 1085 nonetheless applies when one of the three mandatory  
27 criteria of Code of Civil Procedure section 1094.5 are not met. (See *O.W.L. Foundation v. City of*  
28 *Rohnert Park* (2008) 168 Cal.App.4th 568, 585.) These criteria include whether the agency  
decision was “made as a result of a proceeding in which by law a hearing is required to be given,  
evidence is required to be taken and discretion in the determination of facts is vested in a public  
agency.” (*Ibid.*, internal citations omitted.)

1 given state of facts exists. Discretion, on the other hand, is the power conferred on public  
2 functionaries to act officially according to the dictates of their own judgment. [Citation.]”  
3 (*Rodriguez v. Solis* (1991) 1 Cal.App.4th 495, 501-502.) Hence, “[w]here a statute or ordinance  
4 clearly defines the specific duties or course of conduct that a governing body must take, that  
5 course of conduct becomes mandatory and eliminates any element of discretion.” (*Great Western*  
6 *Savings & Loan Assn. v. City of Los Angeles* (1973) 31 Cal.App.3d 403, 413.) “Mandamus has  
7 long been recognized as the appropriate means by which to challenge a government official’s  
8 refusal to implement a duly enacted legislative measure.” (*Morris v. Harper* (2001) 94  
9 Cal.App.4th 52, 58; *Brown v. Chiang* (2011) 198 Cal.App.4th 1203, 1231.)

11 Legislative action is the formulation of a rule to be applied in future cases. (*McGill v*  
12 *Regents of Univ. of Cal.* (1996) 44 Cal.App.4th 1776, 1785.) Legislative action includes the  
13 adoption or amendment of a general plan (*Yost v. Thomas* (1984) 36 Cal.3d 561, 570),  
14 “investigation and information gathering in aid of, or as a basis for, prospective legislation”  
15 (*Carrancho v. California Air Resources Bd.* (2003) 111 Cal.App.4th 1255, 1266), adoption of a  
16 general zoning ordinance (*San Diego Bldg. Contractors Assn. v. City Council* (1974) 13 Cal.3d  
17 205, 212), and the determination of jurisdictional boundaries (*City of Santa Cruz v. Local Agency*  
18 *Formation Com.* (1978) 76 Cal.App.3d 381, 387). “Review of a local entity’s legislative  
19 determination is through ordinary mandamus under section 1085.” (*Mike Moore’s 24-Hour*  
20 *Towing v. City of San Diego* (1996) 45 Cal.App.4th 1294, 1303.) “Such review is limited to an  
21 inquiry into whether the action was arbitrary, capricious or entirely lacking in evidentiary  
22 support. [Citation.]” (*Corona-Norco Unified School Dist. v. City of Corona* (1993) 17  
23 Cal.App.4th 985, 992.) When undertaking this inquiry, “the court may not substitute its judgment  
24 for that of the agency, and if reasonable minds may disagree as to the wisdom of the agency’s  
25 action, its determination must be upheld. [Citation.]” (*Helena F. v. West Contra Costa Unified*  
26 *School Dist.* (1996) 49 Cal.App.4th 1793, 1799.) Moreover, the court ““must ensure that an

1 agency has adequately considered all relevant factors, and has demonstrated a rational  
2 connection between those factors, the choice made, and the purposes of the enabling statute.’  
3 [Citation.]” (*Western States Petroleum Assn. v. Superior Court* (1995) 9 Cal.4th 559,  
4 577.) Courts conduct this limited review “out of deference to the separation of powers between  
5 the Legislature and the judiciary, to the legislative delegation of administrative authority to the  
6 agency, and to the presumed expertise of the agency within its scope of authority.” (*California  
7 Hotel & Motel Assn. v. Industrial Welfare Com.* (1979) 25 Cal.3d 200, 212.)

9 Accordingly, the court must determine “whether the [County] had a ministerial duty  
10 capable of direct enforcement or a quasi-legislative duty entitled to a considerable degree of  
11 deference.” (*Carrancho, supra*, 111 Cal.App.4th at p. 1266.) Because they involve discretionary  
12 decisions within the core ambit of an agency, “[q]uasi-legislative administrative decisions are  
13 properly placed at that point of the continuum at which judicial review is more deferential;  
14 ministerial and informal actions do not merit such deference, and therefore lie toward the  
15 opposite end of the continuum.” (*Western States Petroleum Assn., supra*, 9 Cal.4th at p. 576.)  
16 Whether the provision at issue “impose[s] a ministerial duty, for which mandamus will lie, or a  
17 mere obligation to perform a discretionary function is a question of statutory interpretation.  
18 [Citation.]” (*AIDS Healthcare Foundation v. Los Angeles County Dept. of Public Health* (2011)  
19 197 Cal.App.4th 693, 701.) In making such a determination, “[w]e examine the ‘language,  
20 function and apparent purpose’ of the statute. [Citation.] . . . ‘Even if mandatory language  
21 appears in [a] statute creating a duty, the duty is discretionary if the [public entity] must exercise  
22 significant discretion to perform the duty.’ [Citation.]” (*Ibid.*)

25 **1.4 The County’s failure to implement the DES was not an abuse of its discretion.**

26 General Plan Policy LU-1.19 mandates that the DES “shall be established within 12  
27 months of adopting this [2010] General Plan,” or October 26, 2011. The DES has not yet been  
28 implemented.

1           Petitioner argues that the County had a mandatory, ministerial duty to comply with this  
2 Policy by timely promulgating the DES. The County contends that its failure to act was a  
3 legislative decision based on 1) numerous obstacles to the task's completion, including lawsuits,  
4 resultant amendments to the General Plan, and reduced staffing; and, based in part on these  
5 obstacles, 2) a discretionary choice to prioritize other mandatory General Plan tasks. The County  
6 notes that, over the past three years it has worked with the public and stakeholders to develop the  
7 DES and that "the final development of the DES will be a priority" going forward. It maintains  
8 that its decision to prioritize other tasks was not arbitrary or capricious. Petitioner responds that  
9 the County's inaction was not a legislative act because while amending a General Plan may be  
10 legislative, implementing Plan policies is not.

11           General Plan Policy LU-1.19 contains mandatory language. Nevertheless, the County  
12 must exercise "significant discretion" in developing the DES. (*Sonoma AG Art, LLC v.*  
13 *Department of Food and Agriculture* (2004) 125 Cal.App.4th 122, 127, citation omitted.) Policy  
14 LU-1.19 requires the County to develop "a pass-fail system" to assess proposed projects and  
15 their impact on County resources. (AR 13579.) Additionally, the County must devise "a  
16 mechanism to quantitatively evaluate development in light of the policies of the General Plan  
17 and the implementing regulations, resources and infrastructure, and the overall quality of the  
18 development." (*Ibid.*) That mechanism must include nine criteria, but the County has the  
19 discretion to include additional criteria if it deems them necessary. (*Ibid.*)

20           Further, the County must make discretionary decisions with respect to the devotion of  
21 limited resources to the development of the DES. The County is in a far better position than this  
22 court to allocate these resources appropriately in light of other priorities and budgetary  
23 constraints. Consequently, the court concludes that the County's decision as to the timing of its  
24 implementation of the DES is legislative in character, and may be overridden only if it is  
25  
26  
27  
28

1 “arbitrary, capricious or entirely lacking in evidentiary support. [Citation.]” (*Corona-Norco*  
2 *Unified School Dist., supra*, 17 Cal.App.4th at p. 992.)

3         The 2010 General Plan required the County to draft over 100 new ordinances, plans, and  
4 programs to implement the Plan’s Policies and goals. (AR 21029, 21034.) This process has  
5 required “interdepartmental coordination, obtaining technical information from county  
6 consultants, and scoping with stakeholders through extensive public outreach.” (AR 21034.)  
7 Moreover, since the Plan’s adoption, the County’s Planning Department has experienced  
8 significant turnover, with several key positions still vacant. (AR 21029.) In addition, litigation  
9 over the General Plan led to settlements requiring the adoption of General Plan amendments.  
10 (AR 21035-21036.) These issues required the County to “reallocate staff resources to process  
11 current planning entitlements, in accordance with the Permit Streamlining Act.” (*Ibid.*)  
12 Nevertheless, the County has applied the DES’ criteria to projects where applicable, ensuring the  
13 intent of the Policy has been observed. (AR 106.) Finally, the County has shown that  
14 development of the DES remains a priority. (See, e.g. AR 21026, 21030, 21040-21041.)

15         The court cannot therefore say that the County’s decision to prioritize other legislative  
16 tasks is an abuse of its discretion entitling Petitioner to a writ of traditional mandate.<sup>7</sup>

17         **1.5     The County’s failure to timely amend the Inclusionary Housing Ordinance**  
18                 **was an abuse of its discretion.**

19         General Plan Policy LU-2.13 requires “consistent application of an Affordable Housing  
20 Ordinance that requires 25% of new housing units be affordable to very low, low, moderate, and  
21 workforce income households.” (AR 13583.) Policy LU-2.13 also mandates that any such  
22 ordinance require that 6% of units be affordable to “very low-income households”; 6% of units

---

23  
24  
25  
26  
27 <sup>7</sup> This conclusion should not be construed as an approval of the County’s lengthy period of  
28 inaction. The court concludes only that, in the absence of arbitrary and capricious decision-  
making, the question whether the County’s inaction was appropriate is a political one, which lies  
outside the court’s purview.

1 be affordable to “low-income households”; 8% of units be affordable to “moderate-income  
2 households”; and 5% of units be affordable to “Workforce I income households.” (AR 13584.)

3         The Ordinance is inconsistent with Policy LU-2.13’s 25% affordable housing  
4 requirement, because it requires only 20% of “the total number of units approved for the  
5 residential development” to be inclusionary. (MCC, § 18.40.070.A.) The Ordinance is also  
6 inconsistent with Policy LU-2.13’s mandated distribution of housing units among different  
7 income levels, because it does not require that 5% of new inclusionary units be affordable to  
8 “Workforce I income households.” (See MCC, § 18.40.110.A.)

9  
10         Although the General Plan does not contain a specific time trigger for the necessary  
11 amendments, state planning and zoning law provides that the County “shall” amend the  
12 Ordinance “within a reasonable time so that it is consistent with the general plan as amended.”  
13 (Gov. Code, § 65860, subd. (c).) No such amendment has yet occurred. Accordingly, Petitioner  
14 argues that the County had a mandatory, ministerial duty to comply with state planning and  
15 zoning law by timely amending its Inclusionary Housing Ordinance to conform to the General  
16 Plan. Petitioner further argues that the more than seven years since the General Plan was enacted  
17 — and hence, when the inconsistency arose — is not a “reasonable time” in which to act. The  
18 County contends that its failure to act was a legislative decision based on 1) a weighing of  
19 “competing interests,” such as “the economic downturn”; 2) the fact that “very few inclusionary  
20 units [] have been produced”; and 3) “outside deadlines” such as “the deadline to adopt the  
21 Housing Element.” The County claims it has been proceeding “diligently” as to the amendment  
22 process in the past few years.

23  
24         Government Code section 65860, subdivision (c), mandates that the County amend its  
25 Ordinance to conform to the 2010 General Plan “within a reasonable time.” “The obvious  
26 purpose of subdivision (c) is to ensure an orderly process of bringing the regulatory law into  
27 conformity with a new or amended general plan . . . .” (*Leshar Communications, Inc. v. City of*  
28

1 *Walnut Creek* (1990) 52 Cal.3d 531, 546.) But while that section contains mandatory language,  
2 the enactment and amendment of zoning ordinances are legislative acts. (*Johnston v. City of*  
3 *Claremont* (1958) 49 Cal.2d 826, 835; *Yost, supra*, 36 Cal.3d at pp. 570-571.) Consequently, the  
4 arbitrary and capricious standard applies to the question of whether the County has unreasonably  
5 delayed its amendment of the Ordinance. (*Corona-Norco Unified School Dist., supra*, 17  
6 Cal.App.4th at p. 992.)

8 The County's delay was arbitrary and capricious. The County delayed its amendment on  
9 many of the same grounds as it deferred development of the DES, namely myriad other  
10 important tasks necessitated by the amendment of the General Plan and a paucity of staff  
11 available to address those tasks. (AR 21029, 21034-21036.) But unlike the DES, which as  
12 discussed *ante*, required significant time and discretion to develop, amending the Ordinance to  
13 conform it to the General Plan would require nothing more than approving the specific  
14 percentages already decided by the County, as set forth in Policy LU-2.13. (AR 13583-13854.)

16 Further, the suggestion that this act was not a priority for the County is unreasonable. The  
17 general plan is the "constitution for future development located at the top of the hierarchy of  
18 local government law regulating land use." (*DeVita v. County of Napa* (1995) 9 Cal.4th 763, 773,  
19 internal citations omitted.) Hence, "[a] zoning ordinance that is inconsistent with the general plan  
20 is invalid when passed [citations] and one that was originally consistent but has become  
21 inconsistent *must be brought into conformity with the general plan*. [Citation.]" (*Leshner, supra*,  
22 52 Cal.3d at p. 541, italics added; Gov. Code, § 65860, subd. (a) [zoning ordinances *shall be*  
23 *consistent with the general plan . . .*].)

25 The County's attempt to justify its inaction based on "competing interests and outside  
26 deadlines" is also unpersuasive. The County references a passage in its Housing Element in  
27 which it states, "due to the recent economic crisis, very little new development has been  
28 constructed in the County and few new inclusionary units have been produced." (AR 20914.)

1 Contrary to the County's suggestion, the observation that little development, including "few new  
2 inclusionary units" underscores the need for *more* inclusionary development. Regardless, the  
3 statement is conclusory, and the County has not cited supporting evidence in the record. (See  
4 *People v. Bassett* (1968) 69 Cal.2d 122, 139 [substantial evidence "must be reasonable in nature,  
5 credible, and of solid value; it must actually be 'substantial' proof of the essentials which the law  
6 requires in a particular case".]) Similarly, the County's statement in briefing that "outside  
7 deadlines (such as deadlines to receive grant monies)" justify its failure to act is unsupported by  
8 either explanation or citation to the record. Further, the other statement the County references  
9 from its Housing Element, that it "anticipates revisiting the Inclusionary Housing Ordinance to  
10 ensure consistency with the General Plan and reflect market condition" (AR 20980), is  
11 inadequate assurance in light of the County's already considerable delay. Finally, the fact that the  
12 County has discussed the need to revise the Ordinance at a Housing Advisory Committee  
13 meeting is insufficient to establish that the County is acting diligently. (AR 17705-17709.)

14  
15  
16 The court recognizes that it owes the County significant deference in reviewing its  
17 inactivity for abuse of discretion. (*California Hotel & Motel Assn., supra*, 25 Cal.3d at p. 212.)  
18 Nevertheless, even that broad deference has limits. (*American Coatings Assn., Inc. v. South*  
19 *Coast Air Quality Dist.* (2012) 54 Cal.4th 446, 461 [even under arbitrary or capricious review, a  
20 "reasonable basis for the decision" is required]; see also *Halaco Engineering Co. v. South*  
21 *Central Coast Regional Com.* (1986) 42 Cal.3d 52, 79 [the arbitrary or capricious standard  
22 "encompasses," *inter alia*, "conduct not supported by a fair or substantial reason".]) In short, the  
23 court cannot say that the County's delay of over seven years in implementing a simple  
24 amendment to its Inclusionary Housing Ordinance was reasonable. (Gov. Code, § 65860, subd.  
25 (c).)

26  
27 **1.6 The Alternative is consistent with General Plan Policy LU-1.19.**  
28

1           Petitioner contends that the County erred in finding that the Alternative was consistent  
2 with General Plan Policy LU-1.19. Petitioner further contends that without a DES, any finding of  
3 consistency with that Policy is *per se* improper. The County responds that although it has not  
4 enacted a DES, it nevertheless evaluated the Alternative in light of the criteria prescribed by  
5 Policy LU-1.19. (See AR 106-109.) Petitioner does not challenge the substance of the County's  
6 evaluation. Instead, Petitioner replies that these criteria were nonexclusive and that their  
7 application is valid only in the context of a quantitative, pass-fail system, as the Policy envisions  
8 the DES will be.

10           As to the County's general plan consistency findings, the court must assess whether the  
11 County "acted arbitrarily, capriciously, or without evidentiary basis. [Citation.]" (*Concerned*  
12 *Citizens of Calaveras County v. Board of Supervisors* (1985) 166 Cal.App.3d 90, 96.) The  
13 County's consistency findings "can be reversed only if [they are] based on evidence from which  
14 no reasonable person could have reached the same conclusion. [Citation.]" (*A Local & Regional*  
15 *Monitor v. City of Los Angeles* (1993) 16 Cal.App.4th 630, 648.) The Board's reading of its  
16 General Plan "comes to this court with a strong presumption of regularity." (*Sequoyah Hills*  
17 *Homeowners Assn. v. City of Oakland* (1993) 23 Cal.App.4th 704, 717.) "This is because the  
18 body which adopted the general plan policies in its legislative capacity has unique competence to  
19 interpret those policies when applying them in its adjudicatory capacity. [Citation.]" (*Save our*  
20 *Peninsula Committee v. Monterey County Board of Supervisors* (2001) 87 Cal.App.4th 99, 142.)  
21 This court's role "is simply to decide whether [County] officials considered the applicable  
22 policies and the extent to which the proposed project conforms with those policies. [Citations.]"  
23 (*Sequoyah Hills, supra*, 23 Cal.App.4th at pp. 719-720.)

26           The Board determined that the purposes underlying Policy LU-1.19 could be adequately  
27 served by evaluating the Alternative in light of the Policy's minimum criteria. Specifically, it  
28 found, "the fact that the County has not adopted the DES does not preclude consideration of the

1 project. This resolution includes evaluation of this development in accordance with Policy LU-  
2 1.19.” (AR 106.) The Board explained that “based on the specific facts associated with this  
3 application it is determined that the project would pass the DES, if a pass/fail scoring system  
4 were in place.” (*Ibid.*) And, after a discussion of the Alternative’s consistency with the majority  
5 of the criteria, the Board concluded that the Alternative was consistent with Policy LU-1.19. (AR  
6 107-109.)

8 The Board engaged in a thorough analysis of the DES’ criteria; its finding that the  
9 Alternative is consistent with Policy LU-1.19 is not “arbitrar[y], capricious[, or without  
10 evidentiary basis. [Citation.]” (*Concerned Citizens of Calaveras County, supra*, 166 Cal.App.3d  
11 at p. 96.) The court cannot say “no reasonable person could have reached the same conclusion.  
12 [Citation.]” (*A Local & Regional Monitor, supra*, 16 Cal.App.4th at p. 648.) It is possible that the  
13 Board would have reached a different conclusion if a formal DES were existent, but it is not this  
14 court’s role to so speculate. (*Sequoiah Hills, supra*, 23 Cal.App.4th at pp. 719-720.)

16 Petitioner argues that even if the above is so, the use of a pass-fail system is a  
17 fundamental, mandatory policy to which the Alternative must conform. The court disagrees. It is  
18 true that “the nature of the policy and the nature of the inconsistency are critical factors to  
19 consider.” (*Families Unafraid to Uphold Rural El Dorado County v. El Dorado County Bd. of*  
20 *Supervisors* (1998) 62 Cal.App.4th 1332, 1341.) “A project is inconsistent if it conflicts with a  
21 general plan policy that is fundamental, mandatory, and clear. [Citation.]” (*Endangered Habitats*  
22 *League, Inc. v. County of Orange* (2005) 131 Cal.App.4th 777, 782.) “In other words, a project’s  
23 consistency with a general plan’s broader policies cannot overcome a project’s inconsistency  
24 with a general plan’s more specific, mandatory and fundamental policies. [Citations.]” (*Spring*  
25 *Valley Lake Association v. City of Victorville* (2016) 248 Cal.App.4th 91, 101.) But these  
26 principles do not apply here.  
27  
28

1 Policy LU-1.19 provides that, for certain areas, including the one in which the Project is  
2 located, a DES “shall be established . . . . *The system* shall be a pass-fail system and shall include  
3 a mechanism to quantitatively evaluate development in light of the policies of the General Plan  
4 and the implementing regulations, resources and infrastructure, and the overall quality of the  
5 development.” (AR 13578-13579, italics added.) Policy LU-1.19’s mandatory language applies  
6 to the requisite elements of the DES *once established*, not to specific projects.  
7

8 **1.7 The Alternative is only partially consistent with the Inclusionary Housing**  
9 **Ordinance.**

10 Petitioner argues that the Alternative is inconsistent with the Inclusionary Housing  
11 Ordinance in two ways. First, Petitioner maintains that the County erred in its calculation of the  
12 minimum number of affordable housing units by considering only new units as opposed to total  
13 units. Second, Petitioner asserts that the County erred by departing from the Ordinance’s  
14 requirement that the affordable housing units provided be distributed among moderate-, low-,  
15 and very-low-income households.  
16

17 Before reaching these arguments, it is necessary to address the standard of review.  
18 Petitioner argues that the court independently reviews the County’s interpretation of the  
19 ordinance. The County responds that its determination that the Alternative conformed to its  
20 ordinance is entitled to deference.  
21

22 Petitioner is correct that, to the extent that the Board’s decision rests on its interpretation  
23 of the ordinance, “a question of law is presented for our independent review. [Citation.]” (*MHC*  
24 *Operating Limited Partnership v. City of San Jose* (2003) 106 Cal.App.4th 204, 219.) However,  
25 the County is correct that its interpretation is entitled to deference. (*Ibid.*) Indeed, “[t]he  
26 appropriate mode of review . . . is one in which the judiciary, although taking ultimate  
27 responsibility for the construction of the statute, accords great weight and respect to the  
28 administrative construction.” (*International Business Machines v. State Bd. of*

1 *Equalization* (1980) 26 Cal.3d 923, 931, fn. 7.) “How much weight to accord an agency’s  
2 construction is situational, and greater weight may be appropriate when an agency has a  
3 comparative interpretive advantage over the courts, as when the legal text to be interpreted is  
4 technical, obscure, complex, open-ended, or entwined with issues of fact, policy, and discretion.”  
5 (*American Coatings Assn., Inc.*, *supra*, 54 Cal.4th at p. 461, internal citations omitted.) Further, a  
6 body which adopts an ordinance “in its legislative capacity has unique competence to interpret  
7 th[e] [ordinance] when applying [it] in its adjudicatory capacity.” (*Save our Peninsula*  
8 *Committee*, *supra*, 87 Cal.App.4th at p. 142.)

10 **1.7.1 The County’s calculation of the minimum number of affordable**  
11 **housing units was reasonable.**

12  
13 Petitioner contends that the County erred in its calculation of the minimum number of  
14 affordable housing units. The Inclusionary Housing Ordinance provides, “To satisfy its  
15 inclusionary requirement on-site, a residential development must construct inclusionary units in  
16 an amount equal to or greater than twenty (20) percent of the total number of units approved for  
17 the residential development . . . .” (MCC, § 18.40.070.A.)<sup>8</sup> The Project will provide 25 such  
18 units. The Project consists of 130 units, but five of these units already exist. If the calculation is  
19 based on the total number of units, the Ordinance would require 26 units. If instead, as the  
20 County determined, only new units need be considered, only 25 units would be required.  
21 Petitioner argues that the term “total number of units” means what it says. The County interprets  
22

23  
24 <sup>8</sup> Normally, General Plan Policy LU-1.19 would require development in the Project area to  
25 contain 35% affordable housing. (AR 13579.) Additionally, Policy LU-2.13 requires amendment  
26 of the Ordinance to mandate that “25% of new housing units be affordable to very low, low,  
27 moderate, and workforce income households.” (AR 13583.) However, as part of the approvals,  
28 the Board amended the text of CVMP Policy CV-1.27, which addresses the specific area in  
which the Project is located, to clarify, “*Notwithstanding any other General Plan policies,*  
residential development may be allowed with a density of up to 10 units/acre in this area with a  
minimum 20% affordable housing.” (AR 145, italics in original.) The amended language  
effectively renders the portions of General Plan Policies LU-1.19 and LU-2.13 quoted above  
inapplicable to the Project.

1 the Ordinance to refer only to new construction, noting that the County Code defines “residential  
2 development” as the construction of “new or additional dwelling units and/or lots.” (MCC, §  
3 18.40.040.Y.)

4         Petitioner’s interpretation is not without merit. However, this court owes considerable  
5 deference to the Board because that body adopted the Ordinance in its legislative capacity (*Save*  
6 *our Peninsula, supra*, 87 Cal.App.4th at p. 142) and because interpretation of the Ordinance is  
7 “entwined with issues of fact, policy, and discretion.” (*American Coatings Assn., Inc., supra*, 54  
8 Cal.4th at p. 461, internal citations omitted.) Moreover, the County’s interpretation is both  
9 reasonable and supported by the text of the Ordinance.  
10

11         As used in MCC section 18.40.070.A, the term “total number of units approved” is  
12 modified twice by the term “residential development,” which is defined as the construction of  
13 “new or additional dwelling units and/or lots.” (MCC, § 18.40.040.Y.) This is logical; the term  
14 “development” implies new or modified property. Likewise, the Ordinance’s stated purpose  
15 repeatedly emphasizes development:  
16

17         “The purposes of this Chapter are to enhance the public welfare, benefit the property  
18 being *developed*, assure compatibility between future housing *development* and the housing units  
19 affordable to persons of very low, low, and moderate income, and ensure that remaining  
20 *developable* land in the County is utilized in a manner consistent with State and local housing  
21 policies and needs.” (MCC, § 18.40.030, italics added.)  
22

23         In short, the County did not err in its interpretation of the Ordinance.

24                 **1.7.2 The County’s decision to exempt the Project from the normal**  
25                         **distribution of affordable housing units was not supported by**  
26                         **substantial evidence.**

27         Finally, Petitioner disputes the Board’s finding that the Project complied with the  
28 Ordinance notwithstanding that it would construct 25 rental units affordable to moderate-income

1 households only. The County claims that “unusual or unforeseen circumstances” justified this  
2 departure from the normal distribution of affordable housing units among households of different  
3 income levels.

4           MCC section 18.40.110.A requires projects to set aside 8% of the total units in the  
5 development for moderate-income households, 6% for low-income households, and an additional  
6 6% for very-low-income households.<sup>9</sup> The Ordinance also provides that this distribution may be  
7 departed from where “as a result of unusual or unforeseen circumstances, it would not be  
8 appropriate to apply, or would be appropriate to modify, the requirements of this Chapter . . .  
9 based on substantial evidence, supporting that determination.” (MCC, § 18.40.050.B.2.)

10           Here, the Board found “unusual or unforeseen circumstances” present. Although not  
11 expressly stated, it appears the Board concluded that the reduction in the area unit cap effected  
12 by the County’s 2013 amendment to the CVMP was the relevant unforeseen circumstance.<sup>10</sup>  
13 Thus, the Board cited the applicant’s representation “that due to the significant reduction in units  
14 proposed between the Project and the Alternative it is not financially feasible to comply with the  
15 Inclusionary Ordinance’s requirements, particularly related to providing low and very low-  
16  
17  
18

---

19           <sup>9</sup> The Ordinance defines these terms as referring to households “with an annual income  
20 which does not exceed one hundred twenty (120) percent of the median income, adjusted for  
21 household size” [moderate-income household]; “with an annual income which does not exceed  
22 HUD’s annual determination for low income households with incomes of eighty (80) percent of  
23 the median income, adjusted for household size” [low-income household]; and “with an annual  
24 income which does not exceed HUD’s annual determination for very low income households  
25 earning fifty (50) percent of median income, adjusted for household size” [very-low-income  
26 household]. (MCC, § 18.40.040.Q, T, and BB.)

27           <sup>10</sup> By contrast, the County’s choice of the 130-unit Alternative alone was not an “unusual or  
28 unforeseen circumstance.” The County had the power to approve the Project or an alternative,  
especially if the County adjudged that alternative less harmful to the environment than the  
Project. (Pub. Resources Code, §§ 21002-21002.1, 21004; Guidelines, § 15002, subd. (a)(3);  
*Dusek v. Redevelopment Agency* (1985) 173 Cal.App.3d 1029, 1041 [rejecting claim that CEQA  
was violated where the agency approved a narrower project than the one described in an EIR].)

1 income units.” (AR 143.) In support of this finding, the County referenced two letters from local  
2 banks, both of which state that bank financing would not be available if the Alternative complied  
3 with the Ordinance’s requirements. (AR 20413-20414.) Petitioner contends that this evidence is  
4 insufficient because, inter alia, it is unsure “what these letters are responding to and the nature of  
5 the request.”<sup>11</sup> Petitioner does not elaborate, but the court agrees with its underlying sentiment;  
6 the bank letters lack sufficient foundation to constitute substantial evidence.  
7

8 “Substantial evidence”<sup>12</sup> requires evidence of ‘ponderable legal significance.’ [Citation.]  
9 It is not synonymous with ‘any’ evidence.” (*Newman v. State Personnel Bd.* (1992) 10  
10 Cal.App.4th 41, 47.) Thus, “[s]ubstantial evidence is relevant evidence that a reasonable mind  
11 might accept as adequate to support a conclusion. Such evidence must be reasonable, credible,  
12 and of solid value.” (*California Youth Authority v. State Personal Bd.* (2002) 104 Cal.App.4th  
13 575, 584-585, internal citations omitted.) Further, substantial evidence “‘must actually be  
14 ‘substantial’ proof of the essentials which the law requires in a particular case.’ [Citations.]”  
15 (*United Professional Planning, Inc. v. Superior Court* (1970) 9 Cal.App.3d 377, 392-393.)  
16 Expert opinion may constitute substantial evidence, but only if the expert’s opinion is “based on  
17 conclusions or assumptions supported by evidence in the record. Opinion testimony which is  
18  
19

20 <sup>11</sup> Petitioner further contends that 1) it is “unclear” whether Real Parties “currently have bank  
21 financing for the Project”; and 2) “difficulty obtaining bank financing” is not an unusual or  
22 unforeseen circumstance. Petitioner’s arguments mischaracterize the County’s point. It is  
23 irrelevant whether Real Parties currently have bank financing. The County relies on the letters to  
24 support the applicant’s claim that it would be financially infeasible to comply with the  
25 Ordinance’s prescribed allocation of affordable housing units. Moreover, “difficulty obtaining  
26 bank financing” is not the unusual or unforeseen circumstance at issue. Rather, as stated above,  
27 the amendment of the CVMP’s unit cap and resulting development of the Alternative was the  
28 “unforeseen circumstance” that the applicant argued rendered strict compliance with the  
Ordinance economically infeasible. (See AR 20413-20414.)

26 <sup>12</sup> MCC Chapter 18.40 does not define “substantial evidence.” The court presumes that the  
27 County intended the term to be defined and applied as it has been in other contexts, such as, for  
28 example, in review of a petition for writ for administrative mandate. (Code Civ. Proc., § 1094.5,  
subd. (c).)

1 conjectural or speculative 'cannot rise to the dignity of substantial evidence.' [Citation.]”

2 (*Roddenberry v. Roddenberry* (1996) 44 Cal.App.4th 634, 651.)

3 Neither letter is of “ponderable legal significance” because 1) neither letter explains in  
4 sufficient detail how the “unforeseen circumstance” rendered it economically infeasible for Real  
5 Parties to comply with the Inclusionary Housing Ordinance; and 2) the record does not document  
6 any of the assumptions upon which the relevant opinions are based. (*Newman, supra*, 10  
7 Cal.App.4th at p. 47.) The first letter, from Monterey County Bank, states “the loss in revenue  
8 generated by an increase in the percentage or allocation of inclusionary housing renders your  
9 project economically infeasible to enable us to offer you bank financing. These requested  
10 changes to the inclusionary housing would result in insufficient cash flow and profit necessary to  
11 support bank financing.” (AR 20413.) The letter does not provide any basis for its conclusion of  
12 a potential “loss in revenue.” (*Ibid.*) The letter details neither the revenue the Project would  
13 generate nor the resulting loss in revenue from complying with the Ordinance. Similarly, the  
14 letter speaks of “insufficient cash flow and profit,” but because the bank does not tie these terms  
15 to specific numbers, it is impossible to determine whether this conclusion is reliable. (*Ibid.*)

16 Nor is the 1st Capital Bank letter substantial evidence of financial infeasibility. The Bank  
17 states that financing is “problematic” and that “in discussions” between unnamed parties “we  
18 have considered the inclusion of 6% low and 6% very low levels of affordability for the  
19 inclusionary homes in rendering this determination.” (AR 20414.) The Bank follows with a  
20 conclusory paragraph suggesting that only Real Parties’ preferred outcome “may be considered  
21 to qualify for loan financing.” (*Ibid.*) The letter provides no support for either point.

22 Finally, the County asserts that the Board of Supervisors also based its decision on the  
23 belief that “moderate income housing fit the particular needs of Carmel Valley.” The County  
24 bases this claim on a single statement by a Supervisor made at the December 13, 2016 Board of  
25 Supervisors meeting at which the Alternative was approved. (AR 5485.) There, the Supervisor  
26  
27  
28

1 opined that exempting the Alternative from the normal distribution of affordable housing was  
2 “eminently reasonable” based on, inter alia, “the area’s existent affordable housing including the  
3 Pacific Meadow and more.” (AR 5485:5-8.) The Supervisor offered no further explanation or  
4 supporting facts. (*Ibid.*) Likewise, the County fails to cite to evidence in the record substantiating  
5 the comment. Absent evidentiary support, the comment does not constitute substantial evidence.  
6 (See *California Youth Authority, supra*, 104 Cal.App.4th at pp. 584-585.)  
7

8 Put simply, the conclusory opinions set forth in the bank letters and in the  
9 aforementioned testimony “cannot rise to the dignity of substantial evidence.” (*Roddenberry,*  
10 *supra*, 44 Cal.App.4th at p. 651, citation omitted.)

## 11 **2.0 Petitioner brings several CEQA Claims.**

12 Petitioner raises a number of claims under CEQA. Specifically, Petitioner contends that  
13 1) the EIR’s Project Description is unstable and “shifting”; 2) Real Parties effectively abandoned  
14 the Proposed Project in favor of the Alternative, but feigned otherwise; and 3) the EIR did not  
15 analyze a reasonable range of alternatives.  
16

17 Real Parties respond that 1) the Project Description is not unstable because the 281-Unit  
18 Project and the 130-Unit Alternative are differentiated throughout the EIR; 2) the Project  
19 remained the true project throughout the EIR process; and 3) the EIR analyzed a sufficient range  
20 of legally feasible alternatives.  
21

### 22 **2.1 The EIR’s Project Description is not “shifting” or “unstable.”**

23 Petitioner argues that the EIR’s Project Description “straddles” both the Project and the  
24 Alternative, impermissibly shifting between them, causing confusion, and vitiating the EIR’s  
25 function as a vehicle for public participation in the environmental review process.  
26

27 “The purpose of an environmental impact report is to identify the significant effects on  
28 the environment of a project, to identify alternatives to the project, and to indicate the manner in  
which those significant effects can be mitigated or avoided.” (Pub. Resources Code, § 21002.1.)

1 To meet these goals, an EIR must adequately define the project. “[A]n accurate, stable and finite  
2 project description is the *sine qua non* of an informative and legally sufficient EIR. The defined  
3 project and not some different project must be the EIR’s bona fide subject.” (*County of Inyo v.*  
4 *City of Los Angeles* (1977) 71 Cal.App.3d 185, 199.) “[O]nly through an accurate view of the  
5 project may the public and interested parties and public agencies balance the proposed project’s  
6 benefits against its environmental cost, consider appropriate mitigation measures, assess the  
7 advantages of terminating the proposal and properly weigh other alternatives. [Citation.]” (*San*  
8 *Joaquin Raptor Rescue Center v. County of Merced* (2007) 149 Cal.App.4th 645, 655.) “A  
9 curtailed, enigmatic or unstable project description draws a red herring across the path of public  
10 input.” (*County of Inyo, supra*, 71 Cal.App.3d at pp. 197-198.) Nevertheless, “[t]he CEQA  
11 reporting process is not designed to freeze the ultimate proposal in the precise mold of the initial  
12 project; indeed, new and unforeseen insights may emerge during investigation, evoking revision  
13 of the original proposal.” (*Id.* at p. 199.)

14  
15  
16 “With respect to an EIR’s project description, only four items are mandatory: (1) a  
17 detailed map with the precise location and boundaries of the proposed project, (2) a statement of  
18 project objectives, (3) a general description of the project’s technical, economic, and  
19 environmental characteristics, and (4) a statement briefly describing the intended uses of the EIR  
20 and listing the agencies involved with and the approvals required for implementation.  
21 (Guidelines, § 15124.)” Aside from these four items, the Guidelines advise that the project  
22 description should not ‘supply extensive detail beyond that needed for evaluation and review of  
23 the [project’s] environmental impact.’ (Guidelines, § 15124.)” (*California Oak Foundation v.*  
24 *Regents of University of California* (2010) 188 Cal.App.4th 227, 269-270.)

25  
26 Petitioner’s argument relies heavily on *County of Inyo, supra*, 71 Cal.App.3d 185. There,  
27 the City of Los Angeles proposed to increase groundwater pumping to supply growing water  
28

1 needs. (*Id.* at p. 189.) The EIR initially described the project as “a proposed increase of 51 cfs<sup>13</sup>  
2 in the long-term subsurface extraction rate and an increase of 65 cfs in the high-year rate, these  
3 increases being destined solely for ‘unanticipated’ uses within the Owens Valley.” (*Ibid.*)  
4 However the EIR went on to discuss proposals “far broader than the initially described project”  
5 including a water conservation program, rearrangement of reservoir operations, and the  
6 extraction of groundwater at a significantly higher rate than proposed in the initial project  
7 description. (*Id.* at p. 190.) Further, the EIR shifted between these descriptions repeatedly, as did  
8 the final approval resolution. (*Id.* at pp. 190-191.) Consequently, the court concluded the City’s  
9 “selection of a narrow project as the launching pad for a vastly wider proposal frustrated  
10 CEQA’s public information aims.” (*Id.* at pp. 199-200.)

11  
12 *County of Inyo* is distinguishable. Here, the RDEIR does not shift between differing  
13 descriptions of the project. Instead, the Project Description chapter of the RDEIR demarcates  
14 between the 281-Unit Proposed Project and the 130-Unit Alternative:

15  
16 “The Rancho Cañada Village Project (Proposed Project) would develop an 81-plus-acre  
17 area within the West Course at Rancho Cañada Golf Club in Carmel Valley, California, an  
18 unincorporated area of Monterey County (County). The project site would be comprised of a mix  
19 of residential and recreational uses, including a 281-unit residential neighborhood and 39 acres  
20 of permanent open space and common areas within the 81-plus acres.

21  
22 “The 130-Unit Alternative is proposed as a planned unit development (PUD) on  
23 approximately 82 acres. This alternative proposes similar uses as the Proposed Project but with a  
24 lower number of overall units and lower density.” (AR 1348, fn. omitted.)

25 The RDEIR goes on to note that the Project and the Alternative are proposed for the same  
26 geographical location. (AR 1349.) However, it then describes them separately. The RDEIR

27  
28 <sup>13</sup> The term “cfs” denotes “cubic feet per second” of water extracted.

1 begins with a detailed description of the Project, setting forth the distribution of proposed  
2 housing, open space and common areas, a restoration and mitigation plan, neighborhood parks, a  
3 circulation framework, utilities, drainage, design guidelines, and construction plans. (AR 1352-  
4 1364.) The RDEIR then presents a similar level of detail as to the Alternative. (AR 1364-1373.)  
5 Throughout the RDEIR, the Project and the Alternative are clearly differentiated (see, e.g., AR  
6 18430), and the Project is consistently identified (See, e.g. AR 1315, 1352 [describing the  
7 Project as “a 281-unit residential neighborhood”]; 1840).<sup>14</sup>

9 Accordingly, Petitioner’s claim that the Project Description is “unstable” is meritless.

10 **2.2 The EIR’s Project Description is not accurate.**

11 Petitioner also argues that the EIR’s Project Description is inaccurate to the extent it  
12 suggests that the Proposed Project, not the Alternative, is the true project.

14 “The EIR’s function is to ensure that government officials who decide to build or approve  
15 a project do so with a full understanding of the environmental consequences and, equally  
16 important, that the public is assured those consequences have been taken into account.”  
17 (*Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40  
18 Cal.4th 412, 449.) These goals cannot be accomplished without an accurate project description.  
19 (*County of Inyo, supra*, 71 Cal.App.3d at p. 199 [“an accurate, stable and finite project  
20 description is the *sine qua non* of an informative and legally sufficient EIR”].) “An accurate  
21 project description is necessary for an intelligent evaluation of the potential environmental  
22 effects of a proposed activity.” (*San Joaquin Raptor, supra*, 27 Cal.App.4th at p. 730.)

24 As the RDEIR recognized, the 2010 General Plan and 2013 amendment to the CVMP  
25 effectively limited residential subdivision development in Carmel Valley to 166 new units. (AR

---

26 <sup>14</sup> Additionally, the Project did not proceed from a narrow description to a “vastly wider  
27 proposal.” (*Id.* at pp. 199-200.) In fact, the reverse is true. The Alternative is significantly  
28 narrower than the Project; it was designed in part to reduce Project impacts. (AR 1365, 18541,  
18768.)

1 1319.) To facilitate the Project, then, “the residential unit cap from residential subdivision would  
2 need to be raised to 305 units.” (*Ibid.*) Shortly thereafter, Real Parties developed the 130-unit  
3 Alternative. (AR 18768.)

4 Real Parties provided the County with extensive information on the Alternative,  
5 including proposed maps, property development standards, and a detailed description of the  
6 specific impacts the Alternative would alleviate. (AR 18768-18782.) Real Parties asked the EIR  
7 consultant to “provide an equal level of analysis of the 130-unit alternative” and the Project. (AR  
8 17142.) However, to accomplish this task, the EIR consultant was forced to put the analysis of  
9 the Alternative in the “Project Description” chapter along with the Project, rather than in the  
10 Alternatives chapter. (*Ibid.*) Thus, the RDEIR’s “Project Description” chapter discussed both the  
11 Project and the Alternative, in significant, and roughly equivalent, detail. (AR 1321, 1348-1372.)

12 The remaining six alternatives were described as before, in much less detail, in the  
13 RDEIR’s alternatives chapter. (AR 1843-1856.) Neither Real Parties nor the County offer any  
14 explanation why the Alternative was treated differently than the other six alternatives. Only the  
15 Alternative was analyzed “at a level of detail equal to that for the Proposed Project.” (AR 1321.)  
16 Of the remaining six alternatives,<sup>15</sup> only two, Alternatives 1 (the No-Project Alternative) and 4  
17 (the Low Density Alternative) would satisfy the CVWP’s unit cap. (AR 1322-1323, 1325.) The  
18 RDEIR rejected both of these alternatives for failure to meet basic project objectives. (AR 1322,  
19 1325.) Perhaps most tellingly, the Project itself failed to meet the CVWP’s unit cap, a point the  
20 County expressly discussed in its findings. (AR 135.)

21 Real Parties note that CEQA does not prohibit the County from structuring its  
22 EIR in this fashion. Indeed an EIR need not follow any particular format so long as it contains  
23 the information required by CEQA and the Guidelines. (Cal. Code of Regs., tit. 14 (Guidelines),

24  
25  
26  
27  
28 <sup>15</sup> As mentioned *ante*, the FEIR subsequently eliminated one of these alternatives due to a  
change in ownership of necessary land. (See fn. 2, *supra*; AR 134, 3803-3806, 3808-3809.)

1 § 15120, subd. (a).) Lead agencies may tailor their EIRs “to different situations and intended  
2 uses . . . consistent with the guidelines . . .” (Guidelines, § 15160.) Here however, the error is  
3 not specifically the way in which the EIR is structured. Rather, the EIR’s structure evinces that  
4 the Alternative was the actual project under consideration.

5 “The defined project and not some different project must be the EIR’s bona fide subject.”  
6 (County of Inyo, supra, 71 Cal.App.3d at p. 199.) The Project’s history demonstrates that the  
7 “Alternative” effectively replaced the Project as the true project under consideration, and that  
8 consequently, the existing Project Description is inaccurate. Absent an accurate project  
9 description, the EIR could not fulfill its central function to provide sufficient information to  
10 allow the public and decision-makers to “ascertain the project’s environmentally significant  
11 effects, assess ways of mitigating them, and consider project alternatives.” (Sierra Club, supra,  
12 163 Cal.App.4th at p. 533; County of Inyo, supra, 71 Cal.App.3d at pp. 192-193.) In short, the  
13 EIR’s inaccurate project description violated CEQA.<sup>16</sup>

### 14 2.3 The EIR’s Alternatives analysis does not satisfy CEQA.

15  
16  
17  
18  
19  
20  
21 <sup>16</sup> Petitioner asserts a number of other indicators in the record in support of this conclusion.  
22 None are persuasive. For example, Petitioner observes that the vesting tentative map approved  
23 by the Board was not the original map, but rather, “a wholly new map” for the Alternative. (AR  
24 98.) However, CEQA authorizes the County to adopt an alternative rather than the project  
25 proposed, particularly if the County determines that alternative would be less harmful to the  
26 environment. (Pub. Resources Code, §§ 21002-21002.1, 21004; Guidelines, § 15002, subd.  
27 (a)(3).) “Decisionmakers . . . have the flexibility to implement that portion of a project which  
28 satisfies their environmental concerns.” (Dusek, supra, 173 Cal.App.3d at p. 1041.) Additionally,  
Petitioner erroneously suggests that the Alternative, rather than the Project was considered by the  
Planning Commission. In fact, the staff report reveals that both were considered. (AR 4104-  
4119.) The page that Petitioner cites in the record (AR 4123) is a page from staff’s Draft  
Resolution to the Planning Commission. Regardless, the court’s conclusion makes it unnecessary  
to discuss these and Petitioner’s other arguments along these lines.

1 Finally, Petitioner argues that the six alternatives analyzed in the EIR<sup>17</sup> do not represent a  
2 reasonable range of alternatives. The court notes that, because the Alternative was actually the  
3 Project, only five true alternatives were considered. The court also notes that the alternatives  
4 analysis was fatally skewed because it was undertaken in comparison to the Project, not the  
5 Alternative. (Pub. Resources Code, § 21002.1 [one purpose of an EIR is “to identify alternatives  
6 to the project”]; Guidelines, § 15126.6 [“[t]he EIR shall include sufficient information about  
7 each alternative to allow meaningful evaluation, analysis, and comparison *with the proposed*  
8 *project*”].) But even were this not the case, the alternatives analysis would still be deficient.

10 Petitioner contends that three of the alternatives were infeasible because they proposed  
11 densities in excess of the 190-unit cap established by CVMP Policy CV-1.6. Real Parties respond  
12 that the settlement did not divest the County’s land use authority or police power to approve  
13 alternatives in excess of the cap through a general plan amendment, and hence the alternatives  
14 were legally feasible.

16 “The core of an EIR is the mitigation and alternatives sections.” (*Citizens of Goleta*  
17 *Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 565.) An EIR must examine “a range of  
18 reasonable alternatives.” (Guidelines, § 15126.6, subd. (a).) CEQA establishes no categorical  
19 legal imperative as to the scope of alternatives to be analyzed in an EIR; no set number of  
20 alternatives is necessary to constitute a legally adequate range. (*Citizens of Goleta Valley, supra*,  
21 52 Cal.3d at p. 566.) The court will uphold the County’s “selection of alternatives unless it is  
22 ‘manifestly unreasonable’ or inclusion of an alternative does not ‘contribute to a reasonable  
23 range of alternatives.’ [Citation.]” (*Bay Area Citizens v. Association of Bay Area*  
24 *Governments* (2016) 248 Cal.App.4th 966, 1018.) This determination is “subject to a rule of

---

27 <sup>17</sup> Petitioner focuses on the RDEIR, which contained *seven* alternatives, overlooking that the  
28 change to *six* alternatives did not occur until the FEIR. (See fn. 2, *supra*.) This distinction does  
not affect the court’s analysis, however.

1 reason.” (*Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47  
2 Cal.3d 376, 407.)

3           Additionally, the alternatives examined must be “potentially feasible.” (Guidelines, §  
4 15126.6, subd. (a).) For these purposes, “feasible” is defined as “capable of being accomplished  
5 in a successful manner within a reasonable period of time, taking into account economic,  
6 environmental, legal, social, and technological factors.” (Guidelines, § 15364.) “[A]n alternative  
7 is not feasible where there is no way to legally implement it. [Citation.]” (*Uphold Our Heritage*  
8 *v. Town of Woodside* (2007) 147 Cal.App.4th 587, 602.)

9  
10           As discussed *ante*, CVMP Policy CV-1.6 limits development in the relevant area to 190  
11 new units, for which 24 are already accounted. (AR 14031-14032.) And, as Petitioner suggests,  
12 three of the five true alternatives proposed exceed the Policy’s unit cap; both the FEIR and the  
13 County’s findings acknowledge that approving any of these alternatives would require a General  
14 Plan amendment. (AR 135-136, 3738.) It is also true that the settlement agreement between  
15 Petitioner and the County does not “restrict the County’s land use authority or police power in  
16 any way with respect to future legislative, administrative or other actions by the County.” (AR  
17 19972.) Hence, Real Parties are correct that the three alternatives were legally feasible. Indeed,  
18 had the Board approved one of the three relevant alternatives, it could have simultaneously  
19 amended the general plan to raise the unit cap. The Board took exactly this step by amending  
20 CMVP Policy CV-1.27 as part of its Resolution certifying the FEIR and approving a Combined  
21 Development Permit for the Alternative. (AR 98, 102.)

22  
23           But the mere fact that the three relevant alternatives were legally feasible does not mean  
24 they were *practically* feasible. Amending the General Plan to enlarge the cap would have  
25 violated the County’s settlement agreement with Petitioner. (AR 3738.) While the County had  
26 the power to do this, it is clear that it did not have the will. The County’s own findings explain  
27 that the inconvenience, expense, and political costs to the County were too great to make any of  
28

1 the four relevant alternatives “capable of being accomplished in a successful manner within a  
2 reasonable period of time, taking into account economic, environmental, legal, social, and  
3 technological factors.” (Guidelines, § 15364; see *Citizens for Open Government v. City of*  
4 *Lodi* (2012) 205 Cal.App.4th 296, 313 [EIR properly rejected alternative uses for a site because  
5 the site was zoned only for a particular use].) Hence, as to Alternative 3, which proposed a 186  
6 unit project (AR 1849-1852), the County explained:

8 “The 190-unit cap was instituted as a result of settlement of litigation and retaining the  
9 cap avoids unnecessary controversy over the maximum level of residential development  
10 that is allowable within the CVMP area and avoids potential renewal of litigation under  
11 the settlement agreement. From a policy standpoint, the Medium-Density Alternative is  
12 not acceptable because it does not comply with the CVMP unit cap” (AR 135).

13 The County drew the same conclusion as to Alternatives 5 and 6, both of which proposed 281-  
14 unit projects (AR 136), and as to the “Proposed Project” itself (AR 135).

15 Only two alternatives, Alternatives 1 (the No-Project Alternative) and 4 (the Low Density  
16 Alternative) would satisfy the CVWP’s unit cap. (AR 1322-1323, 1325.) Although CEQA  
17 requires an EIR to explore a “no project” alternative (Guidelines, § 15126, subd. (e)), that  
18 “alternative” is not a true alternative because, by definition, it would meet “*almost none* of the  
19 project’s objectives.” (*Watsonville Pilots Assn v. City of Watsonville* (2010) 183 Cal.App.4th  
20 1059, 1090, italics in original.) Consequently, the EIR effectively examined only a single  
21 feasible alternative.

22 CEQA requires that an EIR provide “enough of a variation to allow informed decision  
23 making. [Citation.]” (*Mann v. Community Redevelopment Agency* (1991) 233 Cal.App.3d 1143,  
24 1151.) A single alternative cannot fairly be termed a “reasonable range of potentially feasible  
25 alternatives that will foster informed decision-making and public participation.” (Guidelines, §  
26 15126.6, subd. (a).) The court therefore concludes that the County’s selection of alternatives was  
27 “manifestly unreasonable,” in violation of CEQA. (*Federation of Hillside and Canyon*  
28 *Associations v. City of Los Angeles* (2000) 83 Cal.App.4th 1252, 1265.)

*Disposition*

The petition for writ of mandate is partially granted. Petitioner's request for a writ compelling the County to develop and promulgate the DES is denied. The remainder of the requested writ relief is granted.

The court directs Petitioner's attorney to prepare an appropriate judgment and writ consistent with this ruling, present them to opposing counsel for approval as to form, and return them to this court for signature.

## **7. AFFORDABLE HOUSING AND HOUSING FOR PERSONS WITH SPECIAL NEEDS**

---

**Section 3, Land Use**, defines the location, amount, and type of housing to be built in the NCFUA. Principles for the design of residential areas are included in **Section 4, Urban Design**. The principles in this section address housing needs that are unlikely to be satisfied by the market, but that must be met in order to create diverse communities meeting the needs of San Diego residents.

### **7.1 GUIDING PRINCIPLES: HOUSING**

- 7.1a Include housing affordable to all income levels in the NCFUA.
- 7.1b Provide the area's "fair share" of affordable housing and housing for persons with special needs, consistent with the City's Housing Element and the Regional Fair Share Distribution prepared by SANDAG.
- 7.1c Recognize that market economics will not result in the production of housing units for low-income households without specific requirements that they be included in development projects.
- 7.1d Funds collected by the City in lieu of construction of affordable dwelling units within the NCFUA shall be retained for future construction of affordable units within the NCFUA and shall not be distributed for use citywide.

### **7.2 IMPLEMENTING PRINCIPLES: INCLUSIONARY HOUSING REQUIREMENTS**

- 7.2a Apply to residential development projects the inclusionary requirements in effect for the NCFUA under the City's planned residential development provisions. These requirements specify that residential development projects must provide housing on-site, affordable to low-income families as certified by the San Diego Housing Commission.

This requirement can be fulfilled by: 1) a set aside of no less than 20 percent of the units for occupancy by, and at rates affordable to, families earning no more than 65 percent of median area income, adjusted for family size, or 2) a dedication of developable land of equivalent value. The affordable units must remain affordable for the life of the unit and should be phased proportionate to development of the market-rate units. The bedroom composition of the affordable units should be similar to that of the market-rate units. Developers of projects with ten or fewer housing units and projects falling within the estate and very low-density residential category may, at the discretion of the City, satisfy the requirements of the inclusionary program by donating to the City an amount of money equivalent to the cost of achieving the level of affordability required by the inclusionary program.

- 7.2b Affordable units should be dispersed throughout the NCFUA, primarily in or near the compact communities.
- 7.2c In planning for the NCFUA, recognize that the mandated level of affordability will require that developers be granted a density increase of 25 percent over the otherwise maximum allowable residential density, as well as at least one additional concession or incentive as described in California Government Code section 65913.4. Subarea planning studies should anticipate the awarding of the density bonus in analyzing demand for public facilities and in projecting future population.
- 7.2d If the City of San Diego adopts a citywide inclusionary housing program, the citywide program will take precedence.
- 7.2e If the City of San Diego adopts a citywide inclusionary housing program that includes measures to offset the cost of providing affordable housing, such as incentives relating to permit processing, development standards, and project financing, these offsets should apply in the NCFUA.

### **7.3 IMPLEMENTING PRINCIPLES: HOUSING FOR PERSONS WITH SPECIAL NEEDS**

- 7.3a Consistent with State Law (Welfare and Institutions Code Section 5115 et seq), recognize the 24-hour care of six or fewer mentally disordered or otherwise handicapped persons as residential use. Therefore, facilities caring for such persons in residential structures are not required to obtain conditional use permits. (However, state licensing is required in all cases).
- 7.3b Recognize the need for group housing and housing for persons with special needs or desires. Such housing can include congregate care for elderly persons, single-room occupancy hotels, housing for temporary workers, housing with supportive services such as daycare built into the development, and co-housing (an alternative form of housing which combines individual units with facilities for shared meals, child care and other support services) by establishing that, such uses are welcome in the NCFUA in areas designated by the Framework Plan for buildings and activities of compatible type and intensity. Encourage the siting of such housing during subarea plan preparation.
- 7.3c Encourage developers to work with builders and operators of group housing during subarea and project planning, and to integrate such housing into their projects.

**Re: Enforcement of County Contracting Requirements for Newland Sierra Project**

Dear Mr. Witt:

I am writing on behalf of my client Golden Door Properties LLC (“Golden Door”) regarding what appears to be the use of unauthorized/unapproved consultants for the Newland Sierra Project environmental impact report (“EIR”). We understand that you may be handling legal matters regarding the County staff’s processing of the developer’s application for the Newland project. This letter concerns Newland’s compliance with the County of San Diego’s CEQA contracting rules, as set forth in the County’s officially approved CEQA Guidelines. I am writing to you to request that processing of this project halt until this matter is resolved. (If you are not the County Counsel responsible for this type of matter, please forward this letter to the individual in your office who would be responsible for handling this matter.)<sup>1</sup>

The County of San Diego CEQA Guidelines<sup>2</sup> state clearly that consultants used to author technical studies in support of EIRs for projects within the County’s jurisdiction must be pre-approved through inclusion on the County’s “CEQA Consultants List for Privately Initiated

---

<sup>1</sup> I have also cc’d your client to this letter in case your office is not the appropriate office to initially handle this matter.

<sup>2</sup> Available at <https://www.sandiegocounty.gov/content/dam/sdc/pds/docs/CEQAGDLN.pdf> (“All technical studies and environmental impact reports (EIRs) for privately initiated projects not prepared by staff shall be prepared by a consultant on the County of San Diego CEQA Consultant List for Privately Initiated Projects, to be further known as the ‘CEQA Consultant List.’”).

Projects,”<sup>3</sup> unless the retention of such consultants have been secured “through the standard County procurement processes.”

These approved consultant list requirements have been included in the County’s CEQA Guidelines to assure that the consultants retained are objective, qualified, and retained by the County using fairly applied and standard consultant contract terms in any agreement with the County.<sup>4</sup> The contracting rules and procedure set forth in the County’s CEQA Guidelines ensure that County has examined the record of performance, professional qualifications, and specialized experience, among other things, of potential consultants, that staff have access to all the relevant consultant documents and work product, and as a result the public is given access to these same documents through the Public Records Act. Failure to hire the approved consultants on the list, with the approved standard form contracts, frustrates the public’s interest in objectivity and transparency in work on public documents.

We also note that there has been recently a considerable amount of controversy regarding what appears to be the County’s plan to “bundle” or “batch” several General Plan amendment applications this summer in order to avoid new potential Supervisors and/or potential voter initiatives that may be chosen by the voters this fall.<sup>5</sup> The County’s unprecedented rush to approve these projects has required short-circuiting either or both of the County’s traditional planning practices (such as meaningful involvement and consultation of community sponsor groups) and the County’s clearly expressed legal requirements (such as the CEQA contracting requirements discussed herein). We suspect, therefore, that the County may be engaged in an improper pattern and practice of allowing EIR technical studies to be authored by unauthorized and unvetted consultants. Can you confirm that no other project that may be scheduled to go before the Planning Commission or the Board of Supervisors this summer or fall has used, in the project draft or final EIR, consultants not listed on the County’s approved CEQA consultant list?

Upon our review of the Newland draft EIR and the County’s disclosure so far of documents in relation to a request under the Public Records Act, it seems clear that the Newland draft EIR has violated the clear requirements of the County’s CEQA Guidelines.

---

<sup>3</sup> Available at

<https://www.sandiegocounty.gov/content/dam/sdc/pds/ProjectPlanning/docs/CeqaConsultantsList.pdf>.

<sup>4</sup> See, e.g., County of San Diego CEQA Guidelines, at A-6–A-7 (“Consultants may be removed from the CEQA Consultant List at any time for any of the following reasons: ... Quality of judgment, i.e., objective and scientific, regarding determination of environmental significance of impacts.”), & Attachment B (Form Memorandum of Understanding Environmental Impact Report / Technical Study Preparation).

<sup>5</sup> See, e.g., J. Harry Jones, *Provision allowing county to expedite housing projects draws ire* *Provision allowing county to expedite housing projects draws ire*, S.D. UNION TRIB. (May 12, 2018), available at <http://www.sandiegouniontribune.com/business/growth-development/sd-no-development-bundle-20180504-story.html>.

In particular, we noted that the following technical studies offered in support of the Newland EIR do not have authors that appear on the County’s “CEQA Consultants List for Privately Initiated Projects”:

| <b>Name</b>                                    | <b>Firm</b>           | <b>Topic Area</b>        | <b>EIR Reference</b>                                                                                               |
|------------------------------------------------|-----------------------|--------------------------|--------------------------------------------------------------------------------------------------------------------|
| Unspecified                                    | Ecology Artisans      | Agricultural Resources   | Appendix GG, Newland Sierra Agricultural Alternative Report                                                        |
| Robert Stroh                                   | Leighton & Associates | Groundwater              | Appendix J-4, Groundwater Resources, Newland Sierra, San Diego County, California                                  |
| Unspecified                                    | Fusco Engineering     | Transportation & Traffic | Appendix HH, Newland Sierra Parkway Feasibility Study, Evaluation of Alternatives to Widening of Deer Springs Road |
| Katy Cole, Greg O’Donnell, and Ronald T. Milam | Fehr & Peers          | Transportation & Traffic | Appendix R-2, Newland Sierra VMT Analysis to Respond to SB 743                                                     |
| Katy Cole, Ryan Caldera                        | Fehr & Peers          | Transportation & Traffic | Appendix R-3, Newland Sierra TDM Program - VMT Reduction Evaluation                                                |

Though we received some CEQA contracts in response to our October 10, 2017 request under the Public Records Act, we noted that there were no contracts disclosed in regards to the consultants listed above.<sup>6</sup>

---

<sup>6</sup> On October 10, 2017, my firm requested under the Public Records Act “Any and all documents submitted to the County pursuant to the aforementioned contracts or agreements,” among other categories of documents. On October 20, this was subsequently confirmed to the County as including “all documents and communications in the County’s possession provided by such third party to the County, provided by the County to that third party, or otherwise shared between the County and that third party pertaining to the Newland Sierra Project’s environmental review.” After receiving a relatively limited disclosure of documents in October and November 2017, I inquired as to the completeness of the County’s disclosure in an email letter to the County on April 10, 2018. I have yet to receive a substantive response to my April inquiry other than that a response is forthcoming, and so I assume that the County does not have any additional contracts responsive to the October 10th request. To be clear, we still consider the County’s disclosure in response to the October 10 request to have been inadequate and still await the County’s further response or disclosure. Finally, as you know, we prefer to raise our client’s concerns as early as possible in the process. It seems that sufficient time has passed, given our multiple requests under the Public Records Act, to presume that the County does not have evidence that the unauthorized consultants noted herein were properly retained pursuant to the County’s CEQA Guidelines (i.e., through inclusion on the approved list or retention “through the standard County procurement processes.”)

Because the County's CEQA Guidelines clearly require the use of specifically authorized consultants for these issue areas, the Newland EIR may not incorporate these technical studies and cannot proceed in its current form. Fortunately, we believe that the County has options that may resolve this problem, going forward:

*Option 1:* Halt processing of the Newland project until the County amends its approved CEQA consultants list to include the consultants listed above and each of the consultants noted above execute the standard contract as described in the County's CEQA Guidelines. Upon execution of any new contract, the consultant should review, revise, and update his/her work on the Newland project following the requirements of the County's contracting rules, as well as provide access to all his/her documents used for this work product to County staff as required by that contract. The revised and updated work should be made available to the public, as well as the documents made available to County staff, prior to any action on the Newland project by the Planning Commission.

*Option 2:* Halt processing of the Newland project, delete the technical studies noted above from the Newland EIR, provide Newland the opportunity to provide whatever analysis County staff believes is necessary to replace the deleted technical studies but using approved CEQA consultants, and recirculate the draft EIR for a new round of public review and comment pursuant to the CEQA Guidelines.

We believe that further processing and/or certification of the Newland EIR using these unauthorized consultants violates the County's clear CEQA consulting contracting rules. We hope that the County will remedy this serious error by halting processing the Newland project until the Newland EIR comes into compliance, either by amending the approved consultants list or by re-doing the affected technical studies and EIR analysis using approved consultants.

We would appreciate a response to this letter by May 23, 2018, so we can determine how best to proceed. If we do not hear from you by then, we will assume that the County intends to take no action and will proceed with processing the Newland EIR using these unauthorized consultants and technical studies, and we will proceed accordingly, which may include seeking judicial intervention for enforcement of its CEQA contracting rules.<sup>7</sup>

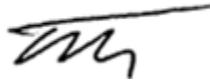

Please include this comment letter in the administrative record for the project, and thank you for your time and attention to this matter.

---

<sup>7</sup> Judicial intervention is warranted presently, since the Newland EIR has been released using unauthorized consultants, i.e., in violation of the County's CEQA Guidelines. Therefore, waiting to challenge the Newland EIR on this basis only after the County has rendered its decision on the project is not an adequate remedy. As the case law demonstrates, a local government's CEQA Guidelines are enforceable. (See, e.g., *Benton v. Board of Supervisors* (1991) 226 Cal.App.3d 1467, 1474-75; *Kennedy v. City of Hayward* (1980) 105 Cal.App.3d 953, 960 & fn.10; *AAGLA v. City of Los Angeles* (2001) 90 Cal.App.4th 1162, 1173; *California Bldg. Indus. Ass'n v. Bay Area Air Quality Mgmt. Dist.* (2016) 2 Cal.App.5th 1067, 1088; see also *Golden Door Properties, LLC v. County of San Diego* (37-2016-00037402, Apr. 28, 2017) Superior Court San Diego, Minute Order, at p. 8.)

**Re: Newland Sierra Project Conflicts with General Plan Collaboration Requirements**

Dear Mr. Pert and Mr. Stewart:

As you know, we represent Golden Door Properties, LLC (“Golden Door”), a world-class resort and agricultural operation in rural Twin Oaks Valley. The Golden Door has restored farming and beekeeping on its property, including the replanting of many new trees on the property—sharing its bounty at a community Farm Stand and through retail operations. The Golden Door has raised many concerns with the County about the proposed Newland Sierra Project and the impacts of adding urban density the size of the City of Del Mar in our rural community.

As discussed in greater detail in our comment letter on the Draft EIR, the Newland Sierra Project site is located on an important core habitat area that provides for regional linkage. It is located within pre-approved mitigation area (“PAMA”) land in the Draft North County Multiple Species Conservation Program (“NC MSCP” or “Plan”) and surrounded by PAMA on all sides. (See **Attachment A** [PAMA map].) The Project Site is the second largest block of contiguous natural habitat west of I-15 in PAMA. The draft NC MSCP habitat evaluation model indicates habitat on and adjacent to the Project Site is moderate, high, and very high quality habitat. The Newland Sierra Project threatens to fragment important core habitat area and sever regional wildlife connections.

We are concerned that the County has violated its own General Plan requirements to consult with federal and state agencies, such as yours, regarding the project’s potential environmental impacts in connection with its analysis of the Newland Sierra Project. San Diego

County General Plan Policy COS-1.4 requires collaboration with adjacent federal and state agencies, providing in full:

Collaborate with other jurisdictions and trustee agencies to achieve well-defined common resource preservation and management goals.

Therefore, the County was clearly required to collaborate with the California Department of Fish and Wildlife (“CDFW”) and the United States Fish and Wildlife Service (“FWS”).

The Draft EIR for the Newland Sierra Project indicates the County has failed to satisfy this requirement because it concludes that the policy is “not applicable,” as the “project applicant supports the County’s collaboration with other jurisdictions and trustee agencies.” (Draft EIR, Appendix DD, p. DD-16.) As an initial matter, it is a faulty conclusion to determine that Policy COS-1.4 does not apply to the Project because it only applies to the County. Ultimately, the County is responsible for the content of the EIR. (See *Friends of La Vina v. Cty. of Los Angeles*, 232 Cal.App.3d 1446; see also Pub. Res. Code § 21082.1, [“[A] draft EIR shall be prepared directly by, or under contract to, a public agency” and “draft documents” must reflect the independent judgment of the County.]; CEQA Guidelines § 15084(c) [agency required to “subject the draft to the agency’s own review and analysis.”].) Therefore, the County must abide by its General Plan, inclusive of Policy COS-1.4, in its analysis of the Newland Sierra Project and collaborate with your agencies.

In addition, the Draft EIR claims that the project applicant and the County have “coordinated and consulted” with the wildlife agencies. But, while meetings may have occurred, there is no evidence that the Project design has been altered to accommodate agency comments or that the County and Project applicant have reached an agreement with the agencies. Caselaw is clear that mere consultation does not amount to “collaboration.” In *California Native Plant Society v. City of Rancho Cordova* (2009) 172 Cal.App.4th 603, the court determined that the project was inconsistent with the city’s general plan’s policy requiring “consultation” and “coordination” with the state and federal wildlife agencies. There, the court noted that the city approved the project despite FWS’ “repeated objections that the proposed biological resource mitigation measures were inadequate,” analyzing the definitions of “coordinate” and “consultation” to determine that coordination requires more than just mere solicitation and consideration of input:

[W]e believe that even under this definition the concept of “coordination” means more than trying to work together with someone else . . .

Although the City suggests “coordination” is synonymous with “consultation”—and therefore the City satisfied its “coordination” obligation under the general plan at the same time it satisfied its “consultation” obligation under the plan—that is not true. While the City could “consult” with the Service by soliciting and considering the Service’s comments on the draft EIR, the City

could not “coordinate” with the Service by simply doing those things. The City may be correct in asserting that “[c]onsultation is not a synonym for ‘agreement,’” but Action NR.1.7.1 required more than “consultation” with the Service; it required “coordination,” and by definition “coordination” implies some measure of cooperation that is not achieved merely by asking for and considering input or trying to work together. Had the City intended the obligation under Action NR.1.7.1 to be one of mere “consultation,” it could have used that word, as it did in Action NR.1.1.3. The fact that it did not do so supports the conclusion that the City intended “coordination” to have a different meaning than “consultation,” consistent with the dictionary definitions of those words.

That the word “coordination,” as used in the City’s general plan, implies a measure of cooperation is apparent not only from the dictionary definition of the word, but also from the context in which the word is used in the plan.

(*Id.*, pp. 640-41.)

Here, General Plan Policy COS-1.4 requires the County to “collaborate,” with CDFW and FWS for resource preservation. Similar to “consult” in *California Native Plant Society v. City of Rancho Cordova*, “collaborate” carries with it a heavier burden than mere discussion with the agencies. CDFW and FWS levied serious concerns regarding the Newland Sierra Project’s potential wildlife impacts due to the important biological resources in the Project’s footprint, and proposed alternatives aimed at preserving wildlife corridors. Rather than take these comments seriously and engage with the agency in order to reach a mutually beneficial outcome, the Draft EIR designed alternatives based on the agency comments in a manner fundamentally designed to fail.

For example, the DEIR concludes that these alternatives would have increased land use planning impacts (DEIR at pp. 4-68, 4-77, 4-85, Table 4-1), whereas the Draft EIR concludes that the Project itself would have no such impacts. As discussed in the Golden Door’s comment letter on the Draft EIR, this is not the case. In addition, the Draft EIR failed to analyze easy solutions to the perceived issues with the agency alternatives, which could have been easily remedied through engagement with the agencies. For instance, the Draft EIR concludes that these alternatives would have an increased hazards impact due to the delay in fire services, but failed to analyze placing a fire station on the Project site to reduce the impact to a less than significant level.

Despite concluding that the Wildlife Agency Alternatives would reduce the impacts to biological resources, the Draft EIR rejects the alternatives. This does not amount to “collaboration” with the agencies to ensure the County’s resource preservation goals are met, but rather a cursory dismissal of valid agency concerns. As such, the Newland Sierra Project is inconsistent with the County’s General Plan requirements to collaborate with the wildlife

agencies. The agencies should ensure that the County does not abrogate its collaboration requirement in order to protect the important biological resources within the Project site.

We thank you for your time and attention to our comments. Should you have any questions, please do not hesitate to contact me at 858.523.5400.

Darin Neufeld  
Ashley Smith  
Planning and Development Services  
County of San Diego  
5510 Overland Avenue, Suite 310  
San Diego, CA 92123

Dear Mr. Neufeld and Ms. Smith:

I am writing on behalf of the Golden Door, to follow up my letter in January of this year asking that the County of San Diego (County) to do its part to ensure that greenhouse gas (GHG) emissions are reduced within the County. For your reference, I have included that letter here and ask that you include this letter and its attachments into the administrative record for the Newland Sierra project.

As you know, the Golden Door is a world class spa and resort committed to sustainability and environmental stewardship. We are much more than just a spa. We are also owners and operators of a significant agricultural operation, continuing a long agricultural tradition in our rural Twin Oaks Valley community. We have developed new water sources to feed our groves, prepared our soil with natural nutrient sources, and cultivated our trees for optimal health. At Golden Door, we believe in renewing our land to help revitalize the environment. We have transplanted thirty-five 30-year-old Manzanilla olive trees from a commercial orchard. recently added 131-acres of citrus groves to our agricultural holdings, and brought new life to over 75 acres of now fruitful avocado groves. With the growing threat of climate change, the Golden Door is committed to ensuring it reduces its on-site GHG emissions.

As such, we write today with particular respect to the Newland Sierra Project's significant GHG emissions impacts. Newland proposes mitigation measures M-GHG-1 and M-GHG-2 to require the Project to offset 100 percent of its GHG emissions from construction and operations. Both mitigation measures employ the following "geographic priority" scheme for such offsets:

- 1) project design features/on-site reduction measures;
- 2) off-site within the unincorporated areas of the County of San Diego;
- 3) off-site within the County of San Diego;
- 4) off-site within the State of California;
- 5) off-site within the United States; and
- 6) off-site internationally.

Newland's mitigation measure M-GHG-3 would implement design features alleged to mitigate 18 percent of the Project's operational emissions, leaving 100 percent of construction emissions and 82 percent of operational emissions to be mitigated through the purchase of off-site carbon offset credits.

Due to the Golden Door's significant concerns regarding the proposed Newland project, it retained Phyllis Fox, Ph.D., to analyze GHG issues related to the proposed Newland Sierra project. Dr. Fox already submitted a detailed report on the Newland DEIR's air quality and GHG

impacts analysis. As a General Plan Amendment project, the Newland Project could attempt to proceed pursuant to the carbon offset mitigation scheme set forth in the recently adopted Climate Action Plan, which on the requirements for "feasibility" set forth by the California Environmental Quality Act. Dr. Fox has drafted a report analyzing GHG mitigation proposals for the Newland Project and describing numerous mitigation measures that are likely feasible and should be considered – many of which have been adopted for other projects or endorsed by public agencies. The Golden Door submitted this report as a comment on the County's recent consideration of its Climate Action Plan. It is attached here as well, and it should be considered as a supplement to her prior comments on the Newland project. Each mitigation measure discussed in Dr. Fox's report – mitigation for both construction and operations emissions – should be considered by the County as part of EIR certification for the Project.

Thank you for your time and attention to our comments. Please do not hesitate to contact us should you have any questions or comments.

## GOLDEN DOOR®

San Diego County Planning Commissioners  
c/o Lisa Fitzpatrick, Planning & Development Services  
5510 Overland Avenue, Suite 110  
San Diego, CA 92123  
[Lisa.Fitzpatrick@sdcounty.ca.gov](mailto:Lisa.Fitzpatrick@sdcounty.ca.gov)

Dear Commissioners,

The Golden Door is a world class spa and resort committed to sustainability and environmental stewardship. But we are much more than just a spa, we are also owners and operators of a significant agricultural operation, continuing a long agricultural tradition in our rural community. We have developed new water sources to feed our groves, prepared our soil with natural nutrient sources, and cultivated our trees for optimal health. At Golden Door, we believe in renewing our land to help revitalize the environment. We have transplanted thirty-five 30-year-old Manzanillo olive trees from a commercial orchard, recently added 131-acres of citrus groves to our agricultural holdings, and brought new life to over 75 acres of now fruitful avocado groves. With the growing threat of climate change, the Golden Door is committed to ensuring it reduces its on-site greenhouse gas (GHG) emissions. As such, we ask that the County of San Diego (County) does its part to ensure GHG emissions are reduced within the County.

We are concerned that the Climate Action Plan (CAP) does not do its part to ensure California will achieve GHG reduction mandates set by the legislature. For example, the CAP should require that GHG impacts resulting from general plan amendments (sprawl projects) are mitigated using local GHG emission reductions projects. Local emission reductions projects include local boiler efficiency upgrades, reforestation projects, compost additions to rangeland, organic waste digestion, livestock management, urban forest and urban tree planting, and weatherization.

But, the CAP doesn't require mitigation projects for general plan amendments to be local. Instead, the CAP allows offset mitigation projects to occur off-shore, anywhere in the world unrestrained. A private developer can merely buy offset credits from a foreign entity, claiming to have reduced GHG emissions. Doing so may be hard to enforce, and off-shore offsets deprive County residents the localized reductions necessary to meet the County's goals, and the economic benefits associated with conducting offset projects within the County. Reducing GHG emissions in the County also has the important benefit of reducing other toxic air pollutants, known as co-pollutants, so that San Diego County residents will be able to breathe cleaner air. In fact, the California Air Resources Board has recognized the important "co-benefits" of reducing GHGs, such as contributions to the "green economy" and improving public health.

The CAP does provide one conceptual program for investment in local emissions-reducing projects. However, these local direct investment projects are "already spoken for," because they are needed to reduce GHG emissions from planned development already in the approved general plan. The development projects that

777 Deer Springs Road, San Marcos, CA 92069

Phone: 760.744.5777 • Reservations 800.424.0777 • [www.GoldenDoor.com](http://www.GoldenDoor.com)

require amendments to the general plan create new additional GHG emissions. The County must identify new local emissions-reducing projects that will mitigate these new additional GHG emissions before amending the general plan to allow more development in rural areas. Unfortunately, the CAP's proposal allows for unlimited sprawl development to move forward in reliance on a program of off-shore offsets that reneges on the County's promises and deprives its residents of important co-benefits.

The County's proposed off-shore offset program for sprawl projects would not meet the County's obligation to reduce its fair share of GHG emissions within the County and would deprive County residents of important co-benefits. County residents would miss out on potential reductions in toxic co-pollutants and commute times on our already congested roadways. The County's proposal would also deprive the local San Diego economy of important investment in green projects.

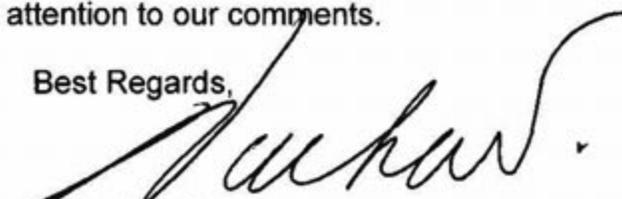

Also, off-shore offset projects encourage the setting aside of land in low- and lower-middle-income countries, which may impair economic development in those countries. Land that might otherwise be used by local governments for housing or other infrastructure projects, projects which might enable those developing economies to grow, is instead set aside by private developers. Similar impacts have occurred here in California, such as in Owens Valley, where residents were deprived of water in order to fuel Los Angeles' growth at the cost of Owens Valley's environment and economy. The County should not similarly depress low- and lower-middle-income countries in order to develop San Diego. We simply have no way to know what the ripple effects will be from imposing offset mitigation requirements in other states or countries where the County lacks authority and oversight. Environmental justice considerations at home and abroad must be taken into consideration.

Further, the effects of paying landowners not to farm their land (one such potential offset measure) may have unintentional consequences. Allowing land to lay fallow may result in greater flooding, as the land may not appropriately drain without assistance from crops. The County must consider the effects of these types of offset projects and others.

We ask that the County live up to its promises and require that offset projects and measures occur within San Diego County first. Action can be taken in the County to combat GHG emissions, and local businesses and landowners should be allowed to innovate before the County looks to other parts of the globe. The County's proposal in the Final CAP, to rely on off-shore offsets as justification for approving sprawl development projects, is a dereliction of duty and should be re-visited and revised before the County approves this important plan to reduce GHG emissions.

We thank you for your time and attention to our comments.

Kathy Van Ness  
General Manager/Chief Operating Officer  
Golden Door  
777 Deer Springs Road  
San Marcos, CA 92069

Dear Ms. Van Ness:

The County of San Diego is in the process of developing a Climate Action Plan (CAP) that will serve as a comprehensive strategy guide to reducing greenhouse gas (GHG) emissions in unincorporated areas of San Diego County, such as those where the Golden Door is located. The CAP primarily focuses on reducing GHG emissions by 2020 and 2030, consistent with legislatively adopted state targets. The Final Supplemental Environmental Impact Report (Final SEIR) for the CAP<sup>1</sup> argues that requiring further GHG reduction would be “speculative” with the information known today due to uncertainty regarding future technological advances and changes in state and federal law beyond 2030.<sup>2</sup>

However, the Final SEIR for the CAP concluded that impacts from the CAP are “significant and unavoidable.”<sup>3</sup> An EIR may conclude that an impact is significant and unavoidable only if all available and feasible mitigation measures have been proposed, but are inadequate to reduce the impact to a less than significant level.<sup>4</sup> The lead agency cannot simply conclude that an impact is significant and unavoidable without requiring all feasible mitigation.

Mitigation Measure GHG-1 in the CAP’s Final SEIR provides geographic priorities for GHG mitigation required to be implemented for General Plan Amendment projects, beginning with (1) project design features/on-site reduction measures; (2) off site within the unincorporated areas of the County of San Diego; (3) offsite within the County of San Diego; (4) offsite within the State of California; (5) offsite within the United States; and (6) offsite internationally<sup>5</sup> The County has indicated in responses to comments and public statements that a feasibility determination complying with CEQA’s feasibility standards will be required for a

---

<sup>2</sup> Final SEIR, p. 2.7-22.

<sup>3</sup> Final SEIR, p. 2.7-23.

<sup>4</sup> See Cal. Code Regs. Title 14 (“CEQA Guidelines”), § 15126.2.

<sup>5</sup> San Diego County, Climate Action Plan, p. 8-52.

project to move from mitigation in one geographic priority area to a subsequent geographic priority area on the list. The Newland Sierra Project uses a similar geographic priority list in GHG mitigation measures listed in its Draft EIR<sup>6</sup> but fails to include all feasible mitigation in one priority area to the next with the result that 18% of the mitigation is on-site and the balanced unenforceable and unidentified off-site mitigation measures.

The CAP has failed to require all feasible mitigation for greenhouse gas emissions from new developments. Instead, the County has styled the CAP as an “adaptive management plan” that would be adjusted based on future progress, technological innovations, and legislative changes. However, many GHG mitigation measures are currently available that could be required in the CAP to further reduce GHG emissions. These are discussed below with respect to the Newland Sierra Project, which will be located within the unincorporated area covered by the CAP and involves the full range of impacts and issues the CAP should address. While the GHG mitigation measures discussed below apply specifically to Newland Sierra, they should be considered feasible mitigation measures that must be considered in the feasibility determinations to be made with respect to the CAP’s list of geographic priorities.

## **1. NEWLAND SIERRA GHG MITIGATION IS INADEQUATE**

Newland Sierra<sup>7</sup> proposes to develop a 1,985-acre site west of Interstate 15 in rural San Diego County, about 6.4 miles north of the City of Escondido and about 4.6 miles north of the city of San Marcos (Newland Sierra Project or Project). Thus, it falls within the CAP project area. The Newland Sierra Project would include:

- 875 single family dwelling units
- 935 multi-family dwelling units
- 325 senior adult dwelling units
- 81,000 square feet of neighborhood commercial
- 6-acre, 555-student K-8 school site
- 35.9 acres of parks

The County has issued a draft environmental impact report (DEIR) for the Newland Sierra Project (Newland Sierra DEIR).<sup>8</sup> This DEIR states that total GHG emissions of 52,986 metric tons (MT) of equivalent carbon dioxide (CO<sub>2</sub>E) emissions per year (MT CO<sub>2</sub>E/yr) will be

---

<sup>6</sup> Newland Sierra Draft EIR, pp. 2.7-48, 2.7-51.

<sup>7</sup> On August 14, 2017, I provided written comments to the County discussing the Newland Sierra Draft EIR’s air quality and GHG analyses. This report’s additional analysis focusing on feasible GHG mitigation is intended to respond to the County’s focus on “feasibility” for the geographic priorities in the CAP, which will also be relevant to the Newland Sierra Project. The County’s proposal to use CEQA’s feasibility standard as the trigger to rely on subsequent geographic priority areas had not been made public at the time of my previous report.

<sup>8</sup> County of San Diego, Draft Environmental Impact Report, Newland Sierra Project, Prepared by Dudek, June 2017; available at <http://www.sandiegocounty.gov/content/sdc/pds/ceqa/SP-15-001/NSDEIR.html>

reduced by 18% through on-site design features. The remaining 82% of GHG emissions would be reduced through an offset program that does not include any locational requirements or direct investment requirements. The design features and offset program do not constitute all feasible mitigation to mitigate a significant impact under CEQA.

### **1.1. Operational GHG Mitigation**

The Project would generate GHG emissions from vehicular traffic and energy use. The Newland DEIR estimated that the “mitigated” Project would result in 43,498 MT CO<sub>2</sub>E/yr in the buildout year and concluded that mitigated GHG emissions would be “potentially significant” (Impact GHG-2).<sup>9</sup> The DEIR estimated that 18% of the increase in GHG emissions would be mitigated using on-site reductions achieved through a transportation demand management (TDM) program and on-site solar (M-GHG-3). The reduction of the remaining 82% of emissions would be achieved through an offset program that does not have any locational requirements or direct investment requirements (M-GHG-2).<sup>10</sup>

The proposed offset program and design features do not satisfy the CEQA requirement that mitigation must be real, permanent, quantifiable, verifiable, and enforceable to satisfy CEQA.<sup>11</sup> Further, the Newland Sierra DEIR has failed to require all feasible operational GHG mitigation.

There are many other on-site mitigation measures that could and should have been required before opting for off-site offsets. The following sections first explain why the offset program in M-GHG-2 and the design features in M-GHG-3 are not valid CEQA mitigation, followed by a discussion of additional feasible GHG mitigation that must be required to satisfy CEQA.

#### **1.1.1. Newland Sierra’s Carbon Offset Program Is Not Valid CEQA Mitigation**

Newland Sierra’s offset program would “offset” 82% of the project’s GHG emission. This offset program is inconsistent with CEQA and is not valid mitigation for the Project’s GHG emission increases. CEQA mitigation must provide certainty that the reductions will occur, that the claimed reductions are enforceable, and that the mitigation measures do not create additional impacts.<sup>12</sup>

---

<sup>9</sup> Newland Sierra DEIR, p. 2.7-42, -46, -72, Table 2.7-8.

<sup>10</sup> Newland Sierra DEIR, Section 7.6.1, pp. 7-42/49.

<sup>11</sup> Cal. Health & Safety Code Section 38562(d)(1).

<sup>12</sup> *Madera Oversight Coalition, Inc. v. Cty of Madera* (2011) 199 Cal. App. 4th 48, 83 [“[T]he EIR must describe and discuss feasible mitigation measures for each significant environmental effect, provided feasible measures exist”]; *Gray v. Cty. of Madera* (2008) 167 Cal. App. 4th 1099, 1116 [substantial evidence must show that mitigation measures will be effective and feasible]; CEQA Guidelines, §§ 15126.4, subd. (a)(1), 15091, subd. (b) (2); CEQA § 21081.6.

First, the Newland Sierra offset program proposes only 18% of the GHG reduction on site, forgoing benefits of local mitigation. Many additional feasible on-site GHG emission reduction options are available for the Newland Sierra Project that were not required. In contrast, a similar project, the 21,500-home Newhall Ranch project in north Los Angeles County, along the Santa Susana Mountains between five freeways and the Ventura County line,<sup>13</sup> proposes 53% of its reductions on site. In general, all feasible on-site mitigation should be required before off-site offsets are used because on-site reductions result in local co-benefits, including better health outcomes for Project and nearby residents, lower energy costs, improved access to transportation options, recreational opportunities, and general resource efficiency.<sup>14</sup> The Newland Sierra Project has failed to meet this goal.

Second, the DEIR fails to require that the offsets offer an equivalent GHG reduction benefit annually, as opposed to a one-time reduction.

Third, the offsets must be local to the extent feasible. The asserted 82% off-site emission reductions are not the extent feasible. Other EIRs have provided more effective requirements for emissions reductions to occur on-site or locally. For example, the CARB Southern California Consolidation Project DEIR<sup>15</sup> requires CARB to fully mitigate the construction-related GHG emissions before any grading takes place and to fully mitigate 100% of its annual operational GHG emissions each year for the life of the project. The Bilby Ridge DEIR also encourages the applicant “to consider generating or purchasing local and California-only carbon credits as the preferred mechanism to implement its off-site mitigation measure for GHG emissions and that will facilitate the State’s efforts in achieving the GHG emission reduction goal.” Compliance “shall be provided” in the application to the lead agency, LAFCo.<sup>16</sup>

On-site GHG mitigation is important because it contributes to the mitigation of other significant and unavoidable Project impacts, including AQ-2 (significant construction VOC, NO<sub>x</sub>, CO, PM<sub>10</sub>, PM<sub>2.5</sub> impacts), AQ-3 (significant daily operational VOC, CO, PM<sub>10</sub>, PM<sub>2.5</sub> impacts), and AQ-5 (significant annual VOC, CO, PM<sub>10</sub>, PM<sub>2.5</sub>). Thus, all feasible on-site GHG mitigation must be implemented as mitigation for other significant impacts. As discussed elsewhere in these comments, the Newland Sierra DEIR fails to require all feasible on-site GHG mitigation.

<sup>16</sup> Sacramento Local Agency Formation Commission (SLAFC), Draft Environmental Impact Report, Bilby Ridge Sphere of Influence Amendment, December 2017 (SLAFC, December 2017), Prepared by Ascent, Table ES-1, pp. ES-33, ES-39-40; available at [http://www.saclafco.org/Documents/Bilby\\_Ridge\\_DEIR/Bilby%20Ridge%20SOI%20Amendment-DEIR.pdf](http://www.saclafco.org/Documents/Bilby_Ridge_DEIR/Bilby%20Ridge%20SOI%20Amendment-DEIR.pdf)

The Project should only purchase and retire carbon credits that have been issued by a recognized and reputable, accredited carbon registry, as apparently assumed for all off-site offsets, if it is impracticable to fully offset operational emissions through direct investments or quantifiable and verifiable programs.<sup>17</sup>

The Chevron Refinery FEIR, for example, required Chevron to provide \$30 million over 10 years to fund the implementation of the “Community Greenhouse Gas Reduction Measures”, which measures shall be selected by the City through a public process with input from stakeholders from the City, North Richmond, and Chevron...<sup>18</sup>

Fourth, the Newland Sierra DEIR does not establish any limits on the location of the offsets, which could be on other continents under the DEIR’s proposal. In fact, all reductions could be obtained internationally, resulting in no local benefits or mitigation of other significant Project impacts. The County has admitted in its CAP that there are no projects within the County that would qualify for carbon credit sales at this time. This is further incentive to require all feasible on-site mitigation before offsets are considered. Comments 1.1.4 to 1.1.11 discuss additional feasible on-site mitigation that the County should require.

Fifth, the offset program does not require any direct investment in local infrastructure, allowing all off-site reductions to be offset purchases. Offset purchases would not mitigate other significant impacts that would be mitigated by on-site GHG mitigation.

Sixth, the offset program fails to identify nearby GHG mitigation options that have many local co-benefits. The offset program, for example, could require the funding of off-site, solar-powered EV charging stations (Comment 1.1.6) and energy efficiency improvements at existing facilities located in the surrounding communities that will be adversely impacted by the Project, including building retrofits and solar panel installations.

Seventh, the offset program includes a “true-up” provision, at the election of the Project applicant and subject to the County Planning Director’s approval, after Project approval, to reduce the quantity of GHG emissions the applicant is required to mitigate.<sup>19</sup> This would occur outside of CEQA review, preventing public comment.

Eighth, the Newland Sierra DEIR’s offset approach in M-GHG-1 and M-GHG-2 has not been approved by CARB. In fact, CARB recommends that “lead agencies prioritize on-site design features and direct investments in GHG reductions in the vicinity of the project.”<sup>20</sup> Without the concurrence of the expert agency on complicated GHG emissions calculations and

<sup>18</sup> Chevron Refinery Modernization Project Final EIR, Revisions to Draft EIR Volumes 1 & 2, June 2014, p. 4-26 (Chevron FEIR); available at <https://s3.amazonaws.com/chevron/Final+EIR/Volume+3+Final+EIR.pdf> and Chevron Refinery Modernization Project Environmental and Community Investment Agreement Between City of Richmond, California and Chevron Products Company, A Division of Chevron U.S.A. Inc.

<sup>19</sup> Newland Sierra DEIR, Table S-1, p. S.0-97-99.

<sup>20</sup> Newland Sierra DEIR, p. 2.7-47.

offsets, the County is not able to provide adequate assurance that the mitigation measures will be effective. Further, the lack of any enforceability for the “priority” system for the geographic location of offsets renders M-GHG-1 and M-GHG-2 inadequate under the requirements the County placed on itself in its General Plan and General Plan EIR.

Ninth, the offset approach does not require any reporting. The CARB Southern California Consolidation Project DEIR, for example, was considered enforceable “because ARB is required to submit a report as part of the Mitigation Monitoring and Reporting Program before any grading activities demonstrating it has complied with the standards and components of the mitigation measure.” Further, operational emissions are made enforceable by assuring compliance as follows:<sup>21</sup>

- Before ARB begins to occupy and operate the facility, it shall develop a GHG emissions report with the estimated first year facility emissions based on the final design in consideration of MM-GHG-2, and document how ARB is fully mitigating 100% of the first year’s estimated operational GHG emissions generated by the project through the options identified within the mitigation measure. ARB will post this report on ARB’s webpage.
- Every year thereafter (by the beginning of the new fiscal year) for the lifetime of the project (estimated at 30 years), ARB shall prepare an updated report with estimates for the following year’s operational emissions (which may include revised mobile source emissions based on survey data collected for MM-GHG-2), document how ARB is fully mitigating 100% of the projected year’s estimated operational GHG emissions generated by the project through direct investment activities, or by obtaining and retiring carbon offset credits as described in in a quantity sufficient to offset. ARB will post this report on ARB’s webpage.
- If during the lifetime of the project, the operational emissions are eliminated to zero through MM-GHG-2, ARB can publish a final report documenting that determination and end its obligations to further mitigate operational emissions.

### **1.1.2. Traffic Demand Management (TDM) Program Is Not Valid CEQA Mitigation**

The Newland Sierra DEIR assumed that 11.1% of Newland Sierra’s GHG reductions would be achieved through traffic demand management (TDM), detailed in measures project design features PDF-1 through PDF-20.<sup>22</sup> These measures rely primarily on “promoting” and “coordinating” activities that stand little chance of being effectively implemented in the Project’s rural setting far from transit infrastructure within a steep Project Site containing circuitous internal roads. “Promoting” and “coordinating” are not enforceable and thus do not qualify as valid CEQA mitigation.

The Applicant has not committed to funding and managing the TDM program. There is no requirement to convert the various “promoting” and “coordinating” activities into GHG reductions for comparison with assumed GHG emission reductions. Who would coordinate,

---

<sup>21</sup> CARB, March 2017, Table 1-1, p. 1-2.

<sup>22</sup> Newland Sierra DEIR, Table 2.7-7, p. 2.7-60 (“total VMT reduction from implementation of TDM program = 11.1%).

promote, and provide the various features of the TDM program? PDF-20 suggests the residents, through a homeowner's association, would be responsible. Who would pay for and assure that the TDM measures achieve the assumed GHG emission reductions? This measure should be modified to require funding by the Applicant through a Community Facilities District, County Service Area or other nonrevocable funding mechanism.<sup>23</sup>

The Newland Sierra DEIR's TDM program is not enforceable and thus is not valid CEQA mitigation. The CARB Southern California Consolidation Project EIR requires an aggressive TDM program designed to encourage the use of alternative transportation options to driving alone in a conventional vehicle.<sup>24</sup> The program requires CARB to undertake or fund feasible GHG mitigation, including direct investment opportunities such as funding building retrofit programs that invest in: cool roofs, solar panels, solar water heaters, smart meters, energy efficient lighting, energy efficient appliances, energy efficient windows, insulation, water conservation measures, and other similar retrofit measures associated with green buildings within the geographic area of the SCAQMD. The results will be summarized in a report that quantifies the emissions and credits and provides supporting technical documentation.<sup>25</sup> Compliance will be determined as follows:<sup>26</sup>

Implementation of this option has the potential to reduce operations-related GHG emissions from the transportation sector. The actual amount to be credited toward reductions under the Annual GHG Emissions Report will be based on survey of usage of these incentives. As part of the Monitoring and Mitigation Reporting Program, ARB shall prepare a report that quantifies the emissions and credits and provides supporting technical documentation. ARB will post the report on ARB's webpage. ARB will select the methodologies and self-monitor the Mitigation Monitoring and Reporting Program during the operations phase as described below in the 'Approach to Implementation on MM-GHG-2'.

The CARB DEIR sets out a two-tier process for determining compliance. First, the ARB will seek to directly undertake or fund feasible and cost-effective activities that reduce or sequester GHG emissions on a ton-per-ton basis as follows:

---

<sup>23</sup> CAPCOA, CEQA & Climate Change: Evaluating and Addressing Greenhouse Gas Emissions from Projects Subject to the California Environmental Quality Act, January 2008, Table 16, p. B-12; available at [www.capcoa.org/download/CAPCOA+White+Paper](http://www.capcoa.org/download/CAPCOA+White+Paper)

<sup>24</sup> CARB, March 2017, p. 5.7-46/47.

<sup>25</sup> CARB, March 2017, p. 5.7-47.

<sup>26</sup> CARB, March 2017, Table 1-1, p. 1-21.

Under this option, ARB will seek to directly undertake or fund feasible and cost-effective activities that reduce or sequester GHG emissions on a ton per ton basis to mitigate operational emissions. Direct investment opportunities include, but are not limited to, funding building retrofits programs that invest in: cool roofs, solar panels, solar water heaters, smart meters, energy efficient lighting (including, but not limited to, light bulb replacement), energy efficient appliances, energy efficient windows, insulation, water conservation measures, and any other similar retrofit measures associated with green buildings within the geographic area of the South Coast Air Quality Management District. As part of the Monitoring and Mitigation Reporting Program, ARB shall prepare a report that quantifies the emissions and credits and provides supporting technical documentation. ARB will post the report on ARB's webpage. ARB will select the methodologies and self-monitor the Mitigation Monitoring and Reporting Program during the operations phase as described below in the 'Approach to Implementation on MM-GHG-2'.

If this is not successful, then and only then are carbon credits considered:<sup>27</sup>

If the mitigation measures above do not reduce annual operational emission to zero, ARB may consider purchasing and retiring offsets from an accredited registry. As part of the Monitoring and Mitigation Reporting Program, ARB shall prepare a report that quantifies the emissions and credits and provides supporting technical documentation. ARB will post the report on ARB's webpage. ARB will select the methodologies and self-monitor the Mitigation Monitoring and Reporting Program during the operations phase as described below in the 'Approach to Implementation on MM-GHG-2'.

In contrast, the Newland Sierra DEIR does not set out any method to ensure that the assumed reductions are enforceable, beyond a transportation coordinator operating as part of a homeowner's association (PDF-20), with no requirement to measure or report to the CEQA lead agency.

At a minimum, the DEIR must include a detailed analysis of the effectiveness and likely implementation for each PDF and cannot merely assign CAPCOA credits that were intended to measure emissions reductions in more urban and mixed use (i.e., self-sustaining) areas.

### **1.1.3. Design Features Are Not Valid CEQA Mitigation**

The operational GHG emission calculations assume the use of 32 Project design features to reduce GHG emissions by 18%.<sup>28</sup> These design features are listed in the Newland Sierra DEIR as measures PDF-1 to PDF-32.<sup>29</sup> Because mitigation measure M-GHG-3 categorizes these

---

<sup>27</sup> CARB, March 2017, Table 1-1, p. 1-22 and p. 5.7-47 ("If the mitigation measures above do not reduce annual operational emission to zero, ARB may consider purchasing and retiring offsets from an accredited registry.").

<sup>28</sup> Newland Sierra DEIR, p. 2.7-47.

<sup>29</sup> Newland Sierra DEIR, pp. 7-7 to 7-10.

design features as mitigation measures,<sup>30</sup> all CEQA requirements for mitigation measures must apply to each design feature, including requirements for certainty and enforceability. These requirements have not been met.

The DEIR does not provide any basis for the assumed GHG emission reductions for these 32 design features. The DEIR cites CAPCOA 2010 as the basis for the assumed GHG emission reductions.<sup>31</sup> This document sets out complex formulae that can be used to calculate GHG emission reductions as a percentage of GHG emissions from vehicle miles traveled (VMT).<sup>32</sup> However, GHG emissions from the Project arise from both increases in VMT as well as increases in the use of utilities, including water, natural gas, and electricity. The DEIR does not contain any calculations to support the assumed GHG emission reductions for any of the design features. Further, the DEIR is silent on how it converted reductions expressed in terms of VMT based on the cited CAPCOA 2010 document into reductions expressed as a percentage of total Project GHG emissions.

The DEIR also does not require any post-Project demonstration that the GHG reductions assumed for project design features are achieved in practice. Thus, the assumed reductions are not enforceable and therefore are not valid CEQA mitigation. Design features must be enforceable to serve as a basis for controlling GHG emissions—but they are not, because the DEIR does not include any pre- or post-Project method to confirm that the reductions will occur. Further, the various design features are ambiguous as they are based on coordinating and promoting without identifying a responsible party, identifying a funding source, or requiring any monitoring and reporting to the County.

Project design features must be made enforceable—as required, for example, by the Newhall Ranch GHG mitigation program—by requiring the applicant or its designee to submit building design plans to San Diego County for review and approval before construction begins. These plans must demonstrate that each project component complies with the design features relied on as GHG mitigation. The County shall hold the applicant or its designee accountable for meeting the criteria in PDF-1 to PDF-32 prior to issuing building permits. Further, prior to the issuance of building permits, the applicant or its designee shall establish and fund a dedicated account to implement the various subsidies and programs called for in the PDF design features.<sup>33</sup>

---

<sup>30</sup> See, e.g., Newland Sierra DEIR, Table S-1, p. S.0-99; p. 2.7-47 (“Additionally, M-GHG-2 ensures the project design features will be implemented to further reduce potential GHG emissions.”); p. 2.7-51 (M-GHG-3: “To reduce GHG emissions, the project applicant () shall implement the project design features listed in EIR Table 2.7-7.”).

### 1.1.3.1. Design Feature PDF-1 (Land Use Diversity)

PDF-1 provides a 5% GHG credit for land use diversity. The basis for the assumed 5% is not disclosed or supported in the DEIR. Instead, it is simply asserted as a “land use strategy” that applies to vehicle miles traveled.<sup>34</sup> The Project contains a mere 81,000 square feet of neighborhood-serving commercial development in the Town Center<sup>35</sup> for 2,135 homes,<sup>36</sup> which is inadequate to meet the vast majority of residents’ commercial needs.

The proposed Specific Plan and land use designations allow for about 2,199 residential dwelling units and about 1,777,684 square feet of commercial use, or 808 square feet of commercial use per dwelling unit.<sup>37</sup> The Project, on the other hand, is providing only 38 square feet of commercial use per dwelling unit. The DEIR contains no evidence that such a low ratio of commercial to residential area warrants a 5% GHG credit.

Further, the commercial development will not occur until Phase 2, even though more than 1,800 of the proposed 2,135 homes will be constructed in Phase 1. Even if a land use diversity credit was warranted for this Project, the DEIR cannot provide a credit for the time period prior to the diversity of land uses being built out. Moreover, the Project Site layout spreads out across steep terrain with a circuitous internal road network, thus limiting the potential for alternative transportation. The proposed commercial site is about 2 miles away from the majority of residential units and is much more likely to cause added vehicle trips on Deer Springs Road from the units in the Valley, Summit, and Knoll neighborhoods (1,028 residential units total). Further, land use diversity credits should not be allowed for “park” use, which is required and assumed in residential areas, or a school “site” that has not even been committed to be used for a school and with no commitment as to which and how many of the students within the Project Site would be able to attend the school—particularly when the Project Site is proposed to be split between multiple school districts. In addition, the Town Center will attract traffic from nearby roadways, especially I 15, which has the potential to increase GHG emissions not otherwise accounted for.

Finally, the DEIR is silent on how compliance with the assumed 5% GHG emission reductions would be demonstrated. Thus, these measures are not enforceable and therefore not valid CEQA mitigation.

<sup>35</sup> Newland Sierra DEIR, pp. S.0-2, 1-2, 1-6, 1-25.

<sup>36</sup> Newland Sierra DEIR, p. 1-35.

<sup>37</sup> Newland Sierra DEIR, p. 1-35.

### **1.1.3.2. Design Features PDF-2 and -3 (Pedestrian and Bicycle Trails and Network)**

These two design features would develop a comprehensive trails network and provide bicycle racks along main travel corridors. Additional bicycle facilities should be provided, including:

- sufficient short-term and long-term bicycle parking facilities to meet peak season maximum demand;
- “end-of-trip” facilities including showers, lockers, and changing space; and
- a designated bicycle route connecting all units, on-site bicycle parking facilities, off-site bicycle facilities, site entrances, and primary building entrances, to all streets contiguous with the Project site in order to minimize conflicts with automobile parking and circulation facilities.<sup>38</sup>

The Newland Sierra DEIR assumed a 2% reduction in GHG emissions for these two measures. However, the DEIR fails to provide any support for the assumed 2% reduction in total GHG emissions. Further, the DEIR is silent on how compliance with the assumed 2% GHG emission reduction would be demonstrated. Thus, these measures are not enforceable and therefore are not valid CEQA mitigation.

### **1.1.3.3. Design Features PDF-4 to PDF-8 (Bike-, Car-, and Ride-Share Measures)**

These four design features provide for an electric bike share program, a car share program, a local shuttle service, and ridesharing support features for residents. The DEIR assumed a total GHG emission reduction of 2.8% for these five measures. The DEIR is silent on how the assumed emission reductions were calculated, who would pay for them, and who would implement and operate these measures. The DEIR also does not provide any reporting or other method to assure the assumed reductions actually occur.

These measures appear to require funding from and participation by residents or another external source, after the Project is fully built out. Further, the DEIR is silent on how compliance with the assumed 2.8% GHG emission reduction would be demonstrated. Thus, these measures are not enforceable and therefore are not valid CEQA mitigation. At a minimum, the DEIR should include a feasibility study to determine the potential effectiveness of such measures given the remote location and local terrain and a cost comparison against other methods of transportation to determine whether such measures will even meet the threshold level to be funded and implemented by the residents.

---

<sup>38</sup> See, e.g., March Joint Power Authority (MJPA), Draft Environmental Impact Report for the Meridian West Campus-Lower Plateau Project, Prepared by Dudek, June 2017 (MJPA, June 2017), Table 4.6-5, p. 4.6-40; available at [http://marchjpa.com/documents/docs\\_forms/deir\\_west.pdf](http://marchjpa.com/documents/docs_forms/deir_west.pdf)

#### **1.1.3.4. Design Feature PDF-9 (Provide Transit Subsidies for Residents)**

This design feature provides a transit fare subsidy for residents. The DEIR assumed a total GHG emission reduction of 0.9% for this measure. However, emission reductions would only occur if the subsidies are used. The DEIR fails to demonstrate that residents would use transit, even if subsidies are provided. As already noted, the nearest transit station is over six miles away, suggesting demand for transit subsidies may not exist or would be much lower than assumed in the DEIR.

This design also lacks any specificity, including who will pay for the subsidy, how much the subsidy will be, whether there are any restrictions on qualifying for the subsidy or use of the subsidy (e.g., only for certain transit authorities or modalities), and who would secure and distribute the subsidies.

The DEIR is also silent on how the assumed emission reduction of 0.9% was calculated, who would secure the subsidies, how they would be distributed to residents, and how the County would confirm the subsidies were used to offset VMT. Thus, PDF-9 is not enforceable and therefore is not valid CEQA mitigation.

#### **1.1.3.5. Design Feature PDFs 10-13, 20 (TDM Program Marketing for Residents)**

These PDFs establish a marketing program for the TDM program to promote the various design features to reduce vehicle miles traveled. The Newland Sierra DEIR fails to fund and set up a non-profit Transportation Management Organization (TMO) or equivalent management entity with the authority and funding to provide the TDM services assumed in these mitigation measures.<sup>39</sup>

Further, the transportation coordinator required by PDF-20 would not have the authority to require that residents partake of any of the design features offered to reduce VMT. Further, PDF-20 is not listed in Table 2.7-7 as a Project design feature to reduce GHG emissions.<sup>40</sup>

The remote location of the Project and its steep terrain would discourage the use of design features to reduce VMT. Further, it is illogical to assume additional GHG emission reductions (0.5%) for marketing an ineffective tool. Because the underlying program is inadequate, as explained above, marketing it without any authority to require any of the measures does not warrant an additional 0.5% reduction in total GHG emissions.

The DEIR is also silent on how the assumed emission reduction of 0.5% for these marketing measures was calculated and how the County would confirm the marketing resulted

---

<sup>39</sup> Newhall DAEA, p. 2-28, pdf 59.

<sup>40</sup> Newland Sierra DEIR, Table 2.7-7, p. 2.7-60.

in an additional 0.5% reduction in total GHG emissions. Thus, PDF 10-13 and 20 are not enforceable and therefore are not valid CEQA mitigation.

#### **1.1.3.6. Design Feature PDF 14 (Transit Subsidies)**

This design feature provides a transit fare subsidy for employees of the Town Center. It is not valid CEQA mitigation for the same reasons as PDF 9, which provides subsidies for residents. See Comment 1.1.3.5.

#### **1.1.3.7. Design Features PDF 15-19 (TDM Program Marketing for Employees)**

These design features provide a credit for marketing the Project's TDM program for employees and fails for the same reasons as PDFs 10-13. See Comment 1.1.3.5.

#### **1.1.3.8. Design Features PDF-21-32 (Other Project-Specific Reduction Features)**

The Newland Sierra DEIR identifies other design features that are included in the Project, but for which no GHG emission reductions were claimed. These measures include greywater systems, minimization of stormwater runoff, green waste collection, productive landscapes, cool roofs, and energy-efficient appliances.<sup>41</sup> The DEIR does not require that these measures actually be installed and used. For example, PDF-26 indicates that all single-family homes "shall be plumbed for greywater systems for use in private yards."<sup>42</sup> However, the DEIR does not require that these greywater systems be used, nor require them for multi-family and senior adult homes. Other EIRs require that these measures be "used."<sup>43</sup> Similarly, PDF-31 allows builders to "offer" residents their choice of energy-efficient appliances but does not provide for financial incentives, as required in other EIRs.<sup>44</sup>

These and other similar measures identified below should be specifically required as feasible GHG mitigation and made enforceable by requiring monitoring and reporting to assure they are installed and operated. However, any attempt to quantify emissions reductions from PDFs 21-32 would require recirculation of the DEIR for the public to analyze the effectiveness of such PDFs as mitigation measures under M-GHG-3.<sup>45</sup>

<sup>45</sup> *Laurel Heights Improvement Assn. v. Regents of University of California* (1993) 6 Cal. 4th 1112, 1120 (recirculation "required when the information added to the EIR changes the EIR in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of

In addition, other similar building envelope and facility operation measures are feasible and should also be required. These include:<sup>46,47,48,49</sup>

- Require bus stops, express lanes, and bus stop shelters for existing/ planned transit service;
- Energy use should be reported compared to targets set on per-capita energy use;
- Use of traffic calming measures including all internal sidewalks a minimum 5 feet wide, all sidewalks with vertical curbs, roadways routed to avoid “skewed intersections”;
- Internal and adjacent intersections should use the following traffic-calming features: marked crosswalks, count-down signal times, curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles;
- Applicant shall participate in funding of off-site traffic improvements to reduce idling by increasing traffic flow through synchronized traffic signals;<sup>50</sup> Internal and adjacent streets should use the following traffic-calming features: planter strips with trees, chicanes/chokers (variations in road width to discourage high-speed travel);
- Provide preferential parking for park and ride to incentivize carpooling, vanpooling, commuter bus, and electric vehicles;
- Require “cool parking” by, for example, providing tree cover to reduce heat-island effect;
- Provide storage space in garages for bicycles and bicycle trailers;
- Provide preferential parking for EV/CNG vehicles;
- Provide residential buildings with a “utility” room or space for recharging batteries – e.g., for use in a car, electric lawnmower, other electric landscaping equipment, and batteries for small items;
- Provide a complimentary electric lawnmower to each buyer with a yard;
- Use only drought-resistant native trees, trees with low emissions and high carbon sequestration potential;<sup>51</sup>

---

the project or a feasible project alternative or mitigation measure that would clearly reduce such an effect and that the project’s proponents have declined to implement.”).

<sup>51</sup> MJPA, June 2017, p. 4.6-34 (“water efficient landscaping: No turf; only drought tolerant plants”). The Newland Sierra DEIR allows warm-season turf grass in rear and side yards of single-family homes. (PDF-25).

- Use water-efficient irrigation systems, i.e., smart sprinkler meters, and landscaping techniques/design;
- Dedicate space in a centralized, accessible location for a weekly farmers' market;
- Orient building to maximize shade in the summer and maximize solar access to walls and windows in the winter;
- For non-roof surfaces, provide shade and/or use light-colored/high-albedo materials and/or open grid pavement for at least 30% of the site's nonroof impervious surfaces, including parking lots, walkways, plazas, etc., or place a minimum of 50% of parking spaces underground or covered by structured parking or use an open-grid pavement system for a minimum of 50% of the parking lot area;
- Require organic waste collection;
- Require the installation and use of low-water use faucets, toilets, shower heads, and appliances that exceed CALGreen residential voluntary measures; and
- Implement CALGreen Tier 2 standards or better.<sup>52</sup>

#### **1.1.4. All Feasible On-Site Solar Not Required**

The Newland DEIR assumed that 6.5% of Newland Sierra's GHG reductions would be achieved through on-site solar.<sup>53</sup> The DEIR asserts the Project would be designed to include solar photovoltaic panels for all single-family and multi-family residential development, sufficient to offset 100% of the residential structural electricity demand, excluding water demand.<sup>54</sup> The Newland DEIR variously estimated this would reduce GHG emissions from generation of electricity to support the Project by 3,453 MT CO<sub>2</sub>E/yr<sup>55</sup> to 3,737 MT CO<sub>2</sub>E/yr<sup>56</sup> or by about 6.5%. There are several problems with this assumed reduction in GHG emissions.

First, the Newland DEIR does not require the **use** of solar panels to generate on-site electricity, but only the installation of panels. There is no requirement in the DEIR to confirm that this design feature has been satisfactorily implemented and achieves the assumed GHG reductions. The DEIR cannot rely on solar panels to reduce GHG emissions from electricity use unless accompanied by an enforceable mitigation measure and sufficient design information to demonstrate feasibility, given site constraints.

Second, no analysis is provided to support the potential to generate 100% of the on-site electricity demand from on-site solar. On-site solar panels, absent storage options, may not be

---

<sup>52</sup> Newland Sierra DEIR, p. 2.7-19.

<sup>53</sup> Newland Sierra DEIR, pp. 2.7-41, 3.1-12 to 3.1-13.

<sup>54</sup> Newland Sierra DEIR pp. 3.1-12 to 3.1-13.

<sup>55</sup> Newland Sierra DEIR, p. 2.7-41.

<sup>56</sup> Newland Sierra DEIR, Table 2.7-6, p. 2.7-57.

able to offset 100% of the electrical demand. The failure to use 100% solar in residential units would increase GHG emissions from electricity generation by 3,453 to 3,737 MT CO<sub>2</sub>E/yr.<sup>57</sup> The DEIR should have evaluated all feasible renewable energy options, including geothermal, acquisition of additional land in the vicinity to install the needed PV panels, and entering into a long-term (20-year minimum) purchase agreement for renewable energy in which the provider is contractually bound to retire the Renewable Energy Credits (RECs) associated with the renewable energy on CARB's behalf.<sup>58</sup>

Third, the DEIR does not contain any design/development details to ensure that roofs can accommodate solar (e.g., they could be too steep or improperly oriented). The DEIR is also silent on how the multi-family units would be designed to accommodate solar.

Fourth, the DEIR assumes that street lighting would be solar powered but fails to require solar panels to satisfy this electrical demand or otherwise explain how solar street lighting would be made enforceable.<sup>59</sup>

Fifth, the DEIR is silent as to electrical demand and mitigation for landscaping and maintenance equipment, such as blowers and lawn mowers. These are frequently gas powered. A mitigation measure should be added requiring electrical landscaping equipment and exterior electrical outlets to allow sufficient powering.<sup>60</sup>

The DEIR should be modified to prohibit the use of electricity from off-site sources and to specifically require the use of on-site solar as mitigation, sufficient to supply 100% of the on-site electricity demand, as assumed in the GHG emission calculations. Absent an enforceable requirement to use solar for 100% of on-site residential electrical demand, the DEIR must include all feasible mitigation for GHG emissions from residential electrical demand. Further, the DEIR must demonstrate that 100% solar is feasible by providing design details of the single and multifamily units showing how solar panels will be integrated.

#### **1.1.5. The DEIR Fails to Mitigate GHG Emissions from Natural Gas Use**

The Newland Sierra Specific Plan stated the “project will increase demand for natural gas and electricity...”<sup>61</sup> GHG emissions from electricity use are mitigated using on-site solar panels, discussed in Comment 1.1.4. However, no mitigation at all is proposed for GHG emissions from natural gas use, which contributes 4.7% of the GHG emissions.<sup>62</sup> Mitigated

---

<sup>57</sup> Newland Sierra DEIR, p. 2.7-41.

<sup>58</sup> See, e.g., CARB, March 2017, Table 1-1, p. 1-2.

<sup>59</sup> Newland Sierra Specific Plan, p. 258 (“solar-powered street lights”).

<sup>60</sup> See, e.g., SLAFC, December 2017, Table ES-1, pp. ES-31, ES-36 (“provide electrical outlets on the exterior of project buildings to allow sufficient powering of electric landscaping equipment.”).

<sup>61</sup> Newland Sierra Specific Plan, p. 51.

<sup>62</sup> Newland Sierra DEIR, Table 2.7-6, p. 2.7-57.

GHG emissions equal unmitigated GHG emissions, indicating that the DEIR does not include any mitigation at all for GHG emissions from using natural gas.<sup>63</sup>

The increased demand in natural gas use is for building heating, water heating, and cooking associated with the residential, commercial, and school land uses at the Project site.<sup>64</sup> Table 1<sup>65</sup> indicates that the majority of the natural gas is used within on-site housing:

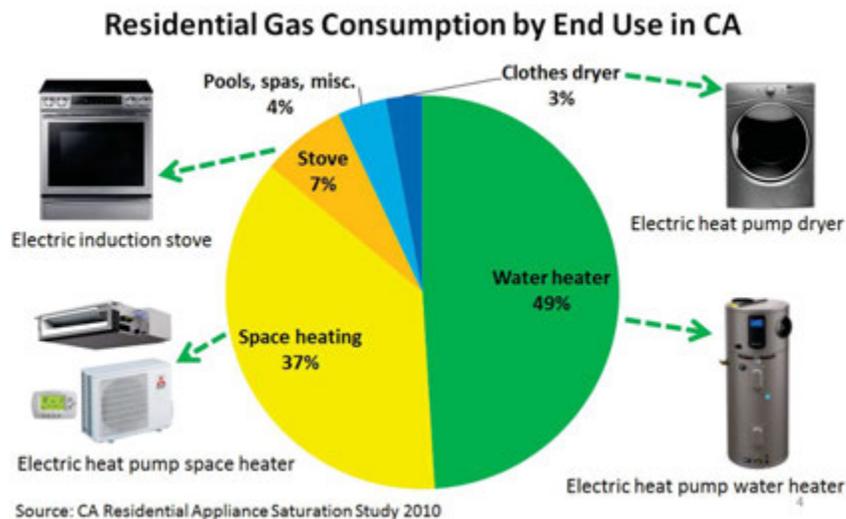

**Table 1**  
**Estimated Natural Gas Demand**

| Component             | Estimated Natural Gas Demand (kBTU/yr) |
|-----------------------|----------------------------------------|
| Commercial            | 181,440                                |
| School                | 196,020                                |
| Parks                 | 0                                      |
| Age-Qualified Housing | 4,662,660                              |
| Multi-Family Housing  | 15,983,800                             |
| Single-Family Housing | 24,931,000                             |
| <b>Total</b>          | <b>45,954,920</b>                      |

Source: Appendix K; CalEEMod 2013

Residential gas consumption for age-qualified, multi-family, and single-family housing is responsible for 99% of the projected gas use. These emissions can be significantly reduced by requiring all-electric housing, commercial, and school energy uses. Residential gas consumption, for example, can be eliminated by requiring electrified housing, as summarized in Figure 1.

**Figure 1**  
**Methods to Electrify Housing**

<sup>63</sup> Newland Sierra DEIR, Table 2.7-8 (GHG emissions from natural gas consumption = 2,452 MT/yr) compared to Table 2.7-6 (GHG emissions from natural gas consumption = 2,452 MT/yr).

<sup>64</sup> Newland Sierra DEIR, p. 3.1-13, Table S-2, pdf-32 (“All fireplaces would be natural-gas-fired.”), p. 1-15, PDF-32 (“All fireplaces would be natural-gas-fired.”).

<sup>65</sup> Newland Sierra DEIR, Table 3.1-2.

GHG emissions from electricity are now lower than from natural gas. Further, GHG emissions from electricity can be fully mitigated by requiring on-site solar panels. Technology is available today to replace all gas appliances with efficient electric appliances. The increase in electricity demand from electrifying housing could be fully offset by using on-site solar panels designed to handle the resulting increase in electrical load. California home builders, such as City Ventures<sup>66</sup> and KB Homes, have begun building homes without gas lines, replacing gas central heating, hot water and stoves with electric appliances. See, for example, the new solar all-electric homes already built in San Diego County<sup>67</sup> and elsewhere:<sup>68,69</sup>

Eliminating residential gas use eliminates the need to install gas pipelines under streets and inside homes, reducing home costs as well as construction GHG and criteria pollutant emissions. Electrification not only achieves significant GHG reductions, it also improves indoor air quality and safety by removing a flammable material from living areas. Improved safety is an important benefit in earthquake- and fire-prone areas such as the Project site.<sup>70</sup>

Figure 1 indicates that 86% of the residential gas consumption is for heating. GHG emissions from water heating, comprising 49% of the natural gas consumption, can be completely eliminated by requiring the use of high-efficiency heat pumps. These pumps pull in heat from ambient air, compress the air to increase its temperature, and route the resulting heat through a condenser coil to transfer heat to water in a tank. This is much more efficient than gas and electric resistance heating. Alternatively, solar water heaters could be used.

### 1.1.6. Electric Vehicle (EV) Charging Equipment

The Project would also include electric vehicle (EV) charging equipment in the garages of all single-family residential units<sup>71</sup> and in 3% of the Town Center's commercial core parking spaces. Further, the applicant would be "encouraged" to install EV charging stations in 3% of the park-and-ride parking spaces.<sup>72</sup> This does not constitute all feasible GHG mitigation achievable by EV charging equipment.

First, the Newland Sierra DEIR fails to require the **use** of this EV charging equipment. EV charging stations would only offset GHG emissions if Newland Sierra occupants and visitors were required to use battery electric vehicles (BEVs). Plug-in hybrid electric vehicles (PHEVs) can drive in gasoline mode and thus would not satisfy the assumed GHG reductions. Absent a requirement to only allow BEVs in all garages and parking spaces, the charging stations would not reduce GHG emissions. Newland Sierra should offer subsidies to residents, schools, and bus services to buy zero-emission vehicles to facilitate the use of the EV charging equipment.

Second, the charging stations themselves use electricity. The DEIR is silent on GHG emissions from supplying electricity for the charging stations. The DEIR should be modified to require the use of solar-powered charging stations.

Third, the DEIR only requires EV charging stations in the garages of all single-family homes. The DEIR should be modified to require EV charging stations for multi-family units, which comprise 995 of the Project's total of 2,135 residential units.<sup>73</sup>

Fourth, the DEIR only requires EV charging at 3% of its commercial center parking spaces.<sup>74</sup> The DEIR must require all feasible mitigation. Thus, it should be modified to require EV charging at 100% of its commercial center parking.

Fifth, the DEIR only "encourages" EV charging at 3% of the park-and-ride parking spaces. The DEIR should be modified to require EV charging at 100% of the park-and-ride parking spaces.

Sixth, the DEIR fails to include any off-site EV charging stations beyond the park-and-ride chargers. There are numerous nearby opportunities for off-site charging stations that should be required in lieu of generic, undefined future GHG offsets. The Newhall EIR, for example, requires that before the issuance of the first building permit, the applicant must provide proof of installation of off-site EV charging stations capable of serving 20 off-site parking spaces. Thereafter, the applicant must provide proof of installation of EV charging stations prior to issuance of a building permit per the following ratios: one off-site parking

---

<sup>71</sup> Newland Sierra Specific Plan, p. 131 ("Single-family homes shall include an electric vehicle charger in the garage").

<sup>72</sup> Newland Sierra DEIR, p. 2.7-38.

<sup>73</sup> Newland Sierra Specific Plan, Table 3.

<sup>74</sup> Newland Sierra Specific Plan, p. 125.

space shall be served by an electric vehicle charging station for every 30 dwelling units and one off-site parking space shall be serviced by an EV charging station for every 7,000 square feet of commercial development. EV charging stations capable of servicing 2,036 parking spaces would be required if the maximum allowable development occurs.<sup>75</sup>

Finally, the DEIR cannot rely on EV charging stations to reduce GHG emissions unless accompanied by an enforceable mitigation measure and sufficient design information to demonstrate feasibility, given site constraints. In the Newhall EIR, for example, building permits are contingent on demonstration of proof of installation of EV charging stations.<sup>76</sup> The CARB Southern California Consolidation EIR requires the mitigation to be quantified and supported by technical documentation in a report submitted as part of the Mitigation Monitoring and Reporting Program, using an approved methodology demonstrating the reductions are valid.<sup>77</sup>

### **1.1.7. Building Energy Efficiency**

The GHG emission calculations assume reductions from complying with the 2016 Title 24 standards or future, more stringent versions of Title 24 that are applicable to the land uses at buildout, predicting net zero efficiency mandates for residential building will be in effect when the first homes are constructed. However, Newland Sierra will only comply with net zero building efficiency if and when implemented. It is not required as mitigation and thus is not enforceable on the Applicant. However, building Newland Sierra to achieve net zero efficiency is feasible today and should be required as enforceable mitigation.

### **1.1.8. Traffic Signal Synchronization**

The Newland Sierra DEIR states that improvements will be made to off-site traffic signals and signal timing to mitigate traffic impacts, as part of the GHG Reduction Climate Change Action Plan.<sup>78</sup> These improvements are relied upon to reduce GHG emissions. However, traffic signalization is not required as enforceable mitigation. Further, the DEIR does not contain any details on the proposed signalization. Therefore, traffic signalization is not enforceable mitigation for GHG impacts.

The DEIR should be modified to specifically require that the applicant or its designee submit traffic signal plans for review and approval to the County and Caltrans and pay any needed fees. The DEIR should state that the Project is responsible for paying 100% of the applicable cost of the signal synchronization work, with assurance that the necessary funding will be available to fully implement this measure, prior to issuing traffic signal permits. Issuance of traffic signal permits shall be contingent on the applicant providing adequate

<sup>78</sup> Newland Sierra DEIR, p. 2.17-30 (CC-1.5).

evidence that the mitigation will be implemented as assumed in the GHG emission calculations.<sup>79</sup>

### 1.1.9. Zero-Emission Buses

The DEIR is silent on zero-emission buses for local school and general transit, a feasible mitigation measure that must be required as mitigated GHG impacts are significant, requiring all feasible mitigation.

The Project site will include a 6-acre school site and its residents will attend nearby schools.<sup>80</sup> These schools are served by school buses. The EIR should require that Newland Sierra fund zero-emission school and other transit buses that serve unincorporated areas of San Diego County. The DEIR, for example, should require that the Project applicant or its designee provide the County with proof that funding has been provided for the purchase, operation and maintenance of electric school and other buses. The proof of funding shall be demonstrated incrementally, paced to keep up with occupancy and enrollment levels.<sup>81</sup>

Further, many transit bus fleets are currently operating zero-emission buses in California.<sup>82</sup> Twelve major cities – including London, Paris, Los Angeles, and Cape Town – have recently committed to buying only zero-emission buses from 2025 and to making major areas free of fossil fuel emissions by 2030.<sup>83</sup> The Los Angeles County Metropolitan Transportation Authority has announced it will eliminate emissions from its 2,300 bus fleet by replacing its existing fleet with buses that run on electric batteries or other forms of zero-emission power.<sup>84</sup>

The Newhall Ranch Resource Management and Development Plan, for example, includes an electric transit bus program. This program requires the applicant or its designee to provide Los Angeles County with proof that it has provided a subsidy of \$100,000 per bus for the replacement of up to 10 diesel or compressed natural gas transit buses with electric buses. This measure is feasible and enforceable because the applicant must provide the subsidy in advance of securing the building permits.<sup>85</sup>

<sup>85</sup> Newhall DAEA, p. 2-30, pdf 61, Mitigation Measure 2-9: Electric Transit Bus Program.

### **1.1.10. Swimming Pool Heating**

Swimming pools may be constructed on residential lots at a homeowner's discretion, either as part of the primary purchase or after the house has been constructed and sold. The Applicant has estimated that no more than half of the lowest-density lots (2 to 4 dwelling units per acre) and no more than one-quarter to one-third of the next lowest-density lots (4 to 8 dwelling units per acre) are likely to have pools installed. Further, pools will be installed in three community parks.<sup>86</sup>

The GHG emission calculations do not include any emissions from pool heating nor any mitigation for these emissions. These emissions can be mitigated by requiring electric heating for swimming pools, provided by on-site solar panels. The Newhall Ranch Resource Management and Development Plan, for example, requires design plans that demonstrate that all swimming pools on the project site have been designed and constructed to use solar water heating or other technology with an equivalent level of energy efficiency.<sup>87</sup>

### **1.1.11. Electric Vehicle and Other Subsidies**

The Newland Sierra DEIR provides EV chargers, but does not require their use or provide any incentives for residents to purchase and use them. The Newhall EIR includes a mitigation measure that establishes a fund dedicated to providing subsidies for the purchase of EVs. The dedicated account must incrementally fund, for each project, a subsidy of \$1,000 per residence, on a first-come, first-served basis, for 50% of the total residences.<sup>88</sup> The developer of the Newhall Ranch subsidy program, for example, will provide more than \$21.5 million for residents and bus providers to buy electric vehicles, electric school and city buses and electric bikes as part of the bike-share program.<sup>89</sup> The Bilby Ridge DEIR provides incentives to future residents to purchase EnergyStar™ appliances (including clothes washers, dishwashers, fans, and refrigerators).

## **1.2. Construction GHG Mitigation**

The Newland Sierra Project would be constructed in two phases over 10 years. Phase I includes roadway improvements, installation of on-site water tanks, and construction of five neighborhoods. Phase 2 includes Camino Mayor improvements, two additional residential neighborhoods, and the Town Center.

<sup>86</sup> Technical Memorandum from John Porcello, GSI Water Solutions, Inc., to Rita Brandin, Newland Sierra, LLC, Re: Water Conservation Demand Study for the Newland Sierra Specific Plan and EIR, December 20, 2016, p. 15 and Table 11.

<sup>87</sup> Newhall DAEA, p. 2-26, pdf 57: Mitigation Measure 2-3: Swimming Pool Heating.

<sup>88</sup> Newhall DAEA, p. 2-27, pdf 58: Mitigation Measure 2-4: Residential Electric Vehicle Chargers and Vehicle Subsidy.

<sup>89</sup> Newhall DAEA, p. 2-27, Mitigation Measure 2-4: Residential Electric Vehicle Chargers and Vehicle Subsidy; Jeff Collins, Working Toward a 'Net Zero' Community, Orange County Register, December 3, 2017; available at <https://www.ocregister.com/2017/12/03/working-toward-a-net-zero-community/>

The Newland DEIR estimated that construction of the Project would emit 93,323 MT CO<sub>2</sub>E/yr, resulting in a potentially significant impact, labeled impact GHG-1.<sup>90</sup> The only mitigation required for these GHG emissions is M-GHG-1, which proposes to mitigate impacts from construction and vegetation removal emissions through an offset program that does not have any locational requirements or direct investment requirements.

This proposed offset program has all of the flaws previously discussed for the operational GHG offset program in Comment 1.1. Thus, the proposed construction offset program is inconsistent with CEQA and is not valid mitigation for the Project's construction GHG emission increases. CEQA mitigation must provide certainty that the reductions will occur, that the claimed reductions are enforceable, and that the mitigation measures do not create additional impacts.

Further, even assuming the offset program were valid CEQA mitigation, which it is not, the Newland Sierra DEIR significantly underestimated construction GHG emissions as discussed in my 8/14/17 comments. Thus, the offset program will not mitigate the significant increases in construction GHG emissions.

### **1.2.1. On-Site Mitigation Must Be Required for Construction Emissions**

Other agencies have established on-site mitigation measures to reduce GHG emissions from construction. Most of these measures have been required as CEQA mitigation for construction impacts in other EIRs.<sup>91,92,93,94,95,96</sup> These measures generally involve:

- reducing fuel use,
- enforcing idling time, including for delivery and construction vehicles (limited to 2 minutes),
- limiting and enforcing vehicle speed on unpaved roads to 15 mph,
- equipment maintenance checked by a certified visible emission evaluator,
- driver training,

<sup>94</sup> CAPCOA 2008, Appendix B, Table 16, pp. B-31 to B-32.

<sup>95</sup> SLAFC, December 2017, Table ES-1, p. ES-29.

<sup>96</sup> CARB, March 2017, Section 5.7.6.

- requiring construction vehicles to operate with the highest tier engines commercially available,
- using properly sized equipment,
- replacing or repowering older, less fuel-efficient equipment with newer models,
- using alternative fueled (e.g., biofuels, electric) engines for trucks and non-road equipment,
- using alternatives to diesel generators, such as dual-fuel generators that use a mix of natural gas or propane and diesel,
- using existing grid power for electric energy rather than operating temporary gasoline/diesel powered generators,
- requiring diesel equipment fleets to be lower emitting than any current emission standard,
- reducing employee commuting,
- conserving electricity,
- recycling and reusing wastes from construction,
- selecting construction materials with lower environmental impacts,
- using labor intensive techniques for excavation,
- using high modulus asphalt concrete for roads,
- using warm and half-warm asphalt mixes,
- recycling/reusing at least 50% of construction waste or demolition materials (including, but not limited to, soil, vegetation, concrete, lumber, metal, and cardboard),
- using gravel roads and surface treatment instead of bituminous/cement concrete pavements,
- taking maintenance into account during design,
- using locally-sourced building materials with a high recycled material content to the greatest extent feasible, but at least 10%,
- minimizing tree removal,
- using fly ash in concrete, and
- ensuring recycling of steel.

The Chevron EIR further required that Chevron hire, at commercially reasonable rates and at Chevron's expense, a qualified third-party entity acceptable to the City of Richmond to quantify and verify in writing whether the reductions achieved from its construction mitigation plan adequately mitigated the project's potentially significant GHG impact. The report "shall be subject to City's reasonable approval." For any year in which construction emissions are not reduced below the GHG significance threshold, Chevron was required to reduce emissions from other equipment at the refinery or permanently retire or retrofit from diesel to electric power, one or more facility sources that emit more than 300 MT CO<sub>2</sub>E/yr.<sup>97</sup> Similarly, the CARB Southern California Consolidation Project DEIR requires CARB to prepare a report that

---

<sup>97</sup> Chevron FEIR, p. 4-25.

quantifies the emissions and credits and provides supporting technical documentation, and to post the report on CARB's webpage.<sup>98</sup>

Further, the Sacramento Metropolitan Air Quality Management District (SMAQMD) specifically lists the following feasible on-site construction GHG mitigation measures:<sup>99</sup>

- Improve fuel efficiency from construction equipment:
  - Minimize idling time either by shutting equipment off when not in use or reducing the time of idling to no more than 3 minutes (5 minute limit is required by the state airborne toxics control measure [Title 13, sections 2449(d)(3) and 2485 of the California Code of Regulations]). Provide clear signage that posts this requirement for workers at the entrances to the site.
  - Maintain all construction equipment in proper working condition according to manufacturer's specifications. The equipment must be checked by a certified mechanic and determined to be running in proper condition before it is operated.
  - Train equipment operators in proper use of equipment.
  - Use the proper size of equipment for the job.
  - Use equipment with new technologies (repowered engines, electric drive trains).
- Perform on-site material hauling with trucks equipped with on-road engines (if determined to be less emissive than the off-road engines).
- Use alternative fuels for generators at construction sites such as propane or solar, or use electrical power.
- Use an ARB approved low carbon fuel for construction equipment. (*NOx emissions from the use of low carbon fuel must be reviewed and increases mitigated.*)
- Encourage and provide carpools, shuttle vans, transit passes and/or secure bicycle parking for construction worker commutes.
- Reduce electricity use in the construction office by using compact fluorescent bulbs, powering off computers every day, and replacing heating and cooling units with more efficient ones.
- Recycle or salvage non-hazardous construction and demolition debris (goal of at least 75% by weight).

---

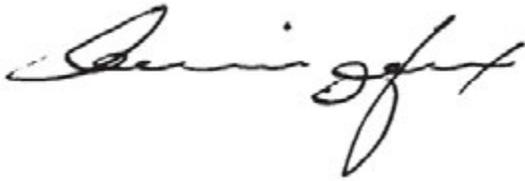

<sup>98</sup> CARB, March 2017, pp. 5.7-45/46.

<sup>99</sup> Sacramento Metropolitan Air Quality Management District (SMAQMD, Guidance for Construction GHG Emissions Reduction, CEQA Guide, December 2009, Revised September 2010, May 2016; available at <http://www.airquality.org/LandUseTransportation/Documents/Ch6ConstructionMitMeasuresFINAL5-2016.pdf>

- Use locally sourced or recycled materials for construction materials (goal of at least 20% based on costs for building materials, and based on volume for roadway, parking lot, sidewalk and curb materials). Wood products utilized should be certified through a sustainable forestry program.
- Minimize the amount of concrete for paved surfaces or utilize a low carbon concrete option.
- Produce concrete on-site if determined to be less emissive than transporting ready mix.
- Use SmartWay certified trucks for deliveries and equipment transport.
- Develop a plan to efficiently use water for adequate dust control.

In addition, the DEIR should require the use of established criteria for the selection of sustainable on-site construction equipment.<sup>100</sup>

National Research Council Committee on Surface Mining and Reclamation, Subcommittee on Oil Shale (1978-80)

### *REPRESENTATIVE EXPERIENCE*

Performed environmental and engineering investigations, as outlined below, for a wide range of industrial and commercial facilities including: petroleum refineries and upgrades thereto; reformulated fuels projects; refinery upgrades to process heavy sour crudes, including tar sands and light sweet crudes from the Eagle Ford and Bakken Formations; petroleum, gasoline and ethanol distribution terminals; coal, coke, and ore/mineral export terminals; LNG export, import, and storage terminals; crude-by-rail projects; bioenergy facilities; shale oil plants; crude oil/condensate marine and rail terminals; coal gasification and liquefaction plants; oil and gas production, including conventional, thermally enhanced, hydraulic fracking, and acid stimulation techniques; underground storage tanks; pipelines; compressor stations; gasoline stations; landfills; railyards; hazardous waste treatment facilities; nuclear, hydroelectric, geothermal, wood, biomass, waste, tire-derived fuel, gas, oil, coke and coal-fired power plants; transmission lines; airports; hydrogen plants; petroleum coke calcining plants; coke plants; activated carbon manufacturing facilities; asphalt plants; cement plants; incinerators; flares; manufacturing facilities (e.g., semiconductors, electronic assembly, aerospace components, printed circuit boards, amusement park rides); lanthanide processing plants; ammonia plants; nitric acid plants; urea plants; food processing plants; wineries; almond hulling facilities; composting facilities; grain processing facilities; grain elevators; ethanol production facilities; soy bean oil extraction plants; biodiesel plants; paint formulation plants; wastewater treatment plants; marine terminals and ports; gas processing plants; steel mills; iron nugget production facilities; pig iron plant, based on blast furnace technology; direct reduced iron plant; acid regeneration facilities; railcar refinishing facility; battery manufacturing plants; pesticide manufacturing and repackaging facilities; pulp and paper mills; olefin plants; methanol plants; ethylene crackers; alumina plants, desalination plants; selective catalytic reduction (SCR) systems; selective noncatalytic reduction (SNCR) systems; halogen acid furnaces; contaminated property redevelopment projects (e.g., Mission Bay, Southern Pacific Railyards, Moscone Center expansion, San Diego Padres Ballpark); residential developments; commercial office parks, campuses, and shopping centers; server farms; transportation plans; and a wide range of mines including sand and gravel, hard rock, limestone, nacholite, coal, molybdenum, gold, zinc, and oil shale.

*EXPERT WITNESS/LITIGATION SUPPORT*

- For the California Attorney General, assist in determining compliance with probation terms in the matter of *People v. Chevron USA*.
- For plaintiffs, assist in developing Petitioners' proof brief for *National Parks Conservation Association et al v. U.S. EPA, Petition for Review of Final Administrative Action of the U.S. EPA*, In the U.S. Court of Appeals for the Third Circuit, Docket No. 14-3147.
- For plaintiffs, expert witness in civil action relating to alleged violations of the Clean Air Act, Prevention of Significant Deterioration, for historic modifications (1997-2000) at the Cemex cement plant in Lyons, Colorado. Reviewed produced documents, prepared expert and rebuttal reports on PSD applicability based on NOx emission calculations for a collection of changes considered both individually and collectively. Deposed August 2011. *United States v. Cemex, Inc.*, In U.S. District Court for the District of Colorado (Civil Action No. 09-cv-00019-MSK-MEH). Case settled June 13, 2013.
- For plaintiffs, in civil action relating to alleged violations of the Clean Air Act, Prevention of Significant Deterioration, for historic modifications (1988 – 2000) at James De Young Units 3, 4, and 5. Reviewed produced documents, analyzed CEMS and EIA data, and prepared netting and BACT analyses for NOx, SO2, and PM10 (PSD case). Expert report February 24, 2010 and affidavit February 20, 2010. *Sierra Club v. City of Holland, et al.*, U.S. District Court, Western District of Michigan (Civil Action 1:08-cv-1183). Case settled. Consent Decree 1/19/14.
- For plaintiffs, in civil action alleging failure to obtain MACT permit, expert on potential to emit hydrogen chloride (HCl) from a new coal-fired boiler. Reviewed record, estimated HCl emissions, wrote expert report June 2010 and March 2013 (Cost to Install a Scrubber at the Lamar Repowering Project Pursuant to Case-by-Case MACT), deposed August 2010 and March 2013. *Wildearth Guardian et al. v. Lamar Utilities Board*, Civil Action No. 09-cv-02974, U.S. District Court, District of Colorado. Case settled August 2013.
- For plaintiffs, expert witness on permitting, emission calculations, and wastewater treatment for coal-to-gasoline plant. Reviewed produced documents. Assisted in preparation of comments on draft minor source permit. Wrote two affidavits on key issues in case. Presented direct and rebuttal testimony 10/27 - 10/28/10 on permit enforceability and failure to properly calculate potential to emit, including underestimate of flaring emissions and omission of VOC and CO emissions from wastewater treatment, cooling tower, tank roof landings, and malfunctions. *Sierra Club, Ohio Valley Environmental Coalition, Coal River Mountain Watch, West Virginia Highlands Conservancy v. John Benedict, Director, Division of Air Quality, West Virginia Department of Environmental Protection and TransGas Development System, LLC*, Appeal No. 10-01-AQB. Virginia Air Quality Board remanded the permit on March 28, 2011 ordering reconsideration of potential to emit calculations,

including: (1) support for assumed flare efficiency; (2) inclusion of startup, shutdown and malfunction emissions; and (3) inclusion of wastewater treatment emissions in potential to emit calculations.

- For plaintiffs, expert on BACT emission limits for gas-fired combined cycle power plant. Prepared declaration in support of CBE's Opposition to the United States' Motion for Entry of Proposed Amended Consent Decree. Assisted in settlement discussions. *U.S. EPA, Plaintiff, Communities for a Better Environment, Intervenor Plaintiff, v. Pacific Gas & Electric Company, et al.*, U.S. District Court, Northern District of California, San Francisco Division, Case No. C-09-4503 SI.
- Technical expert in confidential settlement discussions with large coal-fired utility on BACT control technology and emission limits for NO<sub>x</sub>, SO<sub>2</sub>, PM, PM<sub>2.5</sub>, and CO for new natural gas fired combined cycle and simple cycle turbines with oil backup. (July 2010). Case settled.
- For plaintiffs, expert witness in remedy phase of civil action relating to alleged violations of the Clean Air Act, Prevention of Significant Deterioration, for historic modifications (1998-99) at Gallagher Units 1 and 3. Reviewed produced documents, prepared expert and rebuttal reports on historic and current-day BACT for SO<sub>2</sub>, control costs, and excess emissions of SO<sub>2</sub>. Deposed 11/18/09. *United States et al. v. Cinergy, et al.*, In U.S. District Court for the Southern District of Indiana, Indianapolis Division, Civil Action No. IP99-1693 C-M/S. Settled 12/22/09.
- For plaintiffs, expert witness on MACT, BACT for NO<sub>x</sub>, and enforceability in an administrative appeal of draft state air permit issued for four 300-MW pet-coke-fired CFBs. Reviewed produced documents and prepared prefiled testimony. Deposed 10/8/09 and 11/9/09. Testified 11/10/09. *Application of Las Brisas Energy Center, LLC for State Air Quality Permit*; before the State Office of Administrative Hearings, Texas. Permit remanded 3/29/10 as LBEC failed to meet burden of proof on a number of issues including MACT. Texas Court of Appeals dismissed an appeal to reinstate the permit. The Texas Commission on Environmental Quality and Las Brisas Energy Center, LLC sought to overturn the Court of Appeals decision but moved to have their appeal dismissed in August 2013.
- For defense, expert witness in unlawful detainer case involving a gasoline station, minimart, and residential property with contamination from leaking underground storage tanks. Reviewed agency files and inspected site. Presented expert testimony on July 6, 2009, on causes of, nature and extent of subsurface contamination. *A. Singh v. S. Assaedi*, in Contra Costa County Superior Court, CA. Settled August 2009.
- For plaintiffs, expert witness on netting and enforceability for refinery being upgraded to process tar sands crude. Reviewed produced documents. Prepared expert and rebuttal reports addressing use of emission factors for baseline, omitted sources including coker, flares, tank landings and cleaning, and enforceability. Deposed. *In the Matter of Objection to the Issuance of Significant Source Modification Permit No. 089-25484-00453 to BP Products*

*North America Inc., Whiting Business Unit, Save the Dunes Council, Inc., Sierra Club., Inc., Hoosier Environmental Council et al., Petitioners, B. P. Products North American, Respondents/Permittee*, before the Indiana Office of Environmental Adjudication. Case settled.

- For plaintiffs, expert witness on BACT, MACT, and enforceability in appeal of Title V permit issued to 600 MW coal-fired power plant burning Powder River Basin coal. Prepared technical comments on draft air permit. Reviewed record on appeal, drafted BACT, MACT, and enforceability pre-filed testimony. Drafted MACT and enforceability pre-filed rebuttal testimony. Deposed March 24, 2009. Testified June 10, 2009. *In Re: Southwestern Electric Power Company*, Arkansas Pollution Control and Ecology Commission, Consolidated Docket No. 08-006-P. Recommended Decision issued December 9, 2009 upholding issued permit. Commission adopted Recommended Decision January 22, 2010.
- For plaintiffs, expert witness in remedy phase of civil action relating to alleged violations of the Clean Air Act, Prevention of Significant Deterioration, for historic modifications (1989-1992) at Wabash Units 2, 3 and 5. Reviewed produced documents, prepared expert and rebuttal report on historic and current-day BACT for NO<sub>x</sub> and SO<sub>2</sub>, control costs, and excess emissions of NO<sub>x</sub>, SO<sub>2</sub>, and mercury. Deposed 10/21/08. *United States et al. v. Cinergy, et al.*, In U.S. District Court for the Southern District of Indiana, Indianapolis Division, Civil Action No. IP99-1693 C-M/S. Testified 2/3/09. Memorandum Opinion & Order 5-29-09 requiring shutdown of Wabash River Units 2, 3, 5 by September 30, 2009, run at baseline until shutdown, and permanently surrender SO<sub>2</sub> emission allowances.
- For plaintiffs, expert witness in liability phase of civil action relating to alleged violations of the Clean Air Act, Prevention of Significant Deterioration, for three historic modifications (1997-2001) at two portland cement plants involving three cement kilns. Reviewed produced documents, analyzed CEMS data covering subject period, prepared netting analysis for NO<sub>x</sub>, SO<sub>2</sub> and CO, and prepared expert and rebuttal reports. *United States v. Cemex California Cement*, In U.S. District Court for the Central District of California, Eastern Division, Case No. ED CV 07-00223-GW (JCRx). Settled 1/15/09.
- For intervenors Clean Wisconsin and Citizens Utility Board, prepared data requests, reviewed discovery and expert report. Prepared prefiled direct, rebuttal and surrebuttal testimony on cost to extend life of existing Oak Creek Units 5-8 and cost to address future regulatory requirements to determine whether to control or shutdown one or more of the units. Oral testimony 2/5/08. Application for a Certificate of Authority to Install Wet Flue Gas Desulfurization and Selective Catalytic Reduction Facilities and Associated Equipment for Control of Sulfur Dioxide and Nitrogen Oxide Emissions at Oak Creek Power Plant Units 5, 6, 7 and 8, WPSC Docket No. 6630-CE-299.
- For plaintiffs, expert witness on alternatives analysis and BACT for NO<sub>x</sub>, SO<sub>2</sub>, total PM<sub>10</sub>, and sulfuric acid mist in appeal of PSD permit issued to 1200 MW coal fired power plant burning Powder River Basin and/or Central Appalachian coal (Longleaf). Assisted in drafting technical comments on NO<sub>x</sub> on draft permit. Prepared expert disclosure. Presented 8+ days

of direct and rebuttal expert testimony. Attended all 21 days of evidentiary hearing from 9/5/07 – 10/30/07 assisting in all aspects of hearing. *Friends of the Chatahooche and Sierra Club v. Dr. Carol Couch, Director, Environmental Protection Division of Natural Resources Department, Respondent, and Longleaf Energy Associates, Intervener*. ALJ Final Decision 1/11/08 denying petition. ALJ Order vacated & remanded for further proceedings, Fulton County Superior Court, 6/30/08. Court of Appeals of GA remanded the case with directions that the ALJ's final decision be vacated to consider the evidence under the correct standard of review, July 9, 2009. The ALJ issued an opinion April 2, 2010 in favor of the applicant. Final permit issued April 2010.

- For plaintiffs, expert witness on diesel exhaust in inverse condemnation case in which Port expanded maritime operations into residential neighborhoods, subjecting plaintiffs to noise, light, and diesel fumes. Measured real-time diesel particulate concentrations from marine vessels and tug boats on plaintiffs' property. Reviewed documents, depositions, DVDs, and photographs provided by counsel. Deposed. Testified October 24, 2006. *Ann Chargin, Richard Hackett, Carolyn Hackett, et al. v. Stockton Port District*, Superior Court of California, County of San Joaquin, Stockton Branch, No. CV021015. Judge ruled for plaintiffs.
- For plaintiffs, expert witness on NOx emissions and BACT in case alleging failure to obtain necessary permits and install controls on gas-fired combined-cycle turbines. Prepared and reviewed (applicant analyses) of NOx emissions, BACT analyses (water injection, SCR, ultra low NOx burners), and cost-effectiveness analyses based on site visit, plant operating records, stack tests, CEMS data, and turbine and catalyst vendor design information. Participated in negotiations to scope out consent order. *United States v. Nevada Power*. Case settled June 2007, resulting in installation of dry low NOx burners (5 ppm NOx averaged over 1 hr) on four units and a separate solar array at a local business.
- For plaintiffs, expert witness in appeal of PSD permit issued to 850 MW coal fired boiler burning Powder River Basin coal (Iatan Unit 2) on BACT for particulate matter, sulfuric acid mist and opacity and emission calculations for alleged historic violations of PSD. Assisted in drafting technical comments, petition for review, discovery requests, and responses to discovery requests. Reviewed produced documents. Prepared expert report on BACT for particulate matter. Assisted with expert depositions. Deposed February 7, 8, 27, and 28, 2007. *In Re PSD Construction Permit Issued to Great Plains Energy, Kansas City Power & Light – Iatan Generating Station, Sierra Club v. Missouri Department of Natural Resources, Great Plains Energy, and Kansas City Power & Light*. Case settled March 27, 2007, providing offsets for over 6 million ton/yr of CO<sub>2</sub> and lower NOx and SO<sub>2</sub> emission limits.
- For plaintiffs, expert witness in remedy phase of civil action relating to alleged violations of the Clean Air Act, Prevention of Significant Deterioration, for historic modifications of coal-fired boilers and associated equipment. Reviewed produced documents, prepared expert report on cost to retrofit 24 coal-fired power plants with scrubbers designed to remove 99% of the sulfur dioxide from flue gases. Prepared supplemental and expert report on cost

estimates and BACT for SO<sub>2</sub> for these 24 complaint units. Deposed 1/30/07 and 3/14/07. *United States and State of New York et al. v. American Electric Power*, In U.S. District Court for the Southern District of Ohio, Eastern Division, Consolidated Civil Action Nos. C2-99-1182 and C2-99-1250. Settlement announced 10/9/07.

- For plaintiffs, expert witness on BACT, enforceability, and alternatives analysis in appeal of PSD permit issued for a 270-MW pulverized coal fired boiler burning Powder River Basin coal (City Utilities Springfield Unit 2). Reviewed permitting file and assisted counsel draft petition and prepare and respond to interrogatories and document requests. Reviewed interrogatory responses and produced documents. Assisted with expert depositions. Deposed August 2005. Evidentiary hearings October 2005. *In the Matter of Linda Chipperfield and Sierra Club v. Missouri Department of Natural Resources*. Missouri Supreme Court denied review of adverse lower court rulings August 2007.
- For plaintiffs, expert witness in civil action relating to plume touchdowns at AEP's Gavin coal-fired power plant. Assisted counsel draft interrogatories and document requests. Reviewed responses to interrogatories and produced documents. Prepared expert report "Releases of Sulfuric Acid Mist from the Gavin Power Station." The report evaluates sulfuric acid mist releases to determine if AEP complied with the requirements of CERCLA Section 103(a) and EPCRA Section 304. This report also discusses the formation, chemistry, release characteristics, and abatement of sulfuric acid mist in support of the claim that these releases present an imminent and substantial endangerment to public health under Section 7002(a)(1)(B) of the Resource Conservation and Recovery Act ("RCRA"). *Citizens Against Pollution v. Ohio Power Company*, In the U.S. District Court for the Southern District of Ohio, Eastern Division, Civil Action No. 2-04-cv-371. Case settled 12-8-06.
- For petitioners, expert witness in contested case hearing on BACT, enforceability, and emission estimates for an air permit issued to a 500-MW supercritical Power River Basin coal-fired boiler (Weston Unit 4). Assisted counsel prepare comments on draft air permit and respond to and draft discovery. Reviewed produced file, deposed (7/05), and prepared expert report on BACT and enforceability. Evidentiary hearings September 2005. *In the Matter of an Air Pollution Control Construction Permit Issued to Wisconsin Public Service Corporation for the Construction and Operation of a 500 MW Pulverized Coal-fired Power Plant Known as Weston Unit 4 in Marathon County, Wisconsin*, Case No. IH-04-21. The Final Order, issued 2/10/06, lowered the NO<sub>x</sub> BACT limit from 0.07 lb/MMBtu to 0.06 lb/MMBtu based on a 30-day average, added a BACT SO<sub>2</sub> control efficiency, and required a 0.0005% high efficiency drift eliminator as BACT for the cooling tower. The modified permit, including these provisions, was issued 3/28/07. Additional appeals in progress.
- For plaintiffs, adviser on technical issues related to Citizen Suit against U.S. EPA regarding failure to update New Source Performance Standards for petroleum refineries, 40 CFR 60, Subparts J, VV, and GGG. *Our Children's Earth Foundation and Sierra Club v. U.S. EPA et al.* Case settled July 2005. CD No. C 05-00094 CW, U.S. District Court, Northern District of

California – Oakland Division. Proposed revisions to standards of performance for petroleum refineries published 72 FR 27178 (5/14/07).

- For interveners, reviewed proposed Consent Decree settling Clean Air Act violations due to historic modifications of boilers and associated equipment at two coal-fired power plants. In response to stay order, reviewed the record, selected one representative activity at each of seven generating units, and analyzed to identify CAA violations. Identified NSPS and NSR violations for NO<sub>x</sub>, SO<sub>2</sub>, PM/PM<sub>10</sub>, and sulfuric acid mist. Summarized results in an expert report. *United States of America, and Michael A. Cox, Attorney General of the State of Michigan, ex rel. Michigan Department of Environmental Quality, Plaintiffs, and Clean Wisconsin, Sierra Club, and Citizens' Utility Board, Intervenors, v. Wisconsin Electric Power Company, Defendant*, U.S. District Court for the Eastern District of Wisconsin, Civil Action No. 2:03-CV-00371-CNC. Order issued 10-1-07 denying petition.
- For a coalition of Nevada labor organizations (ACE), reviewed preliminary determination to issue a Class I Air Quality Operating Permit to Construct and supporting files for a 250-MW pulverized coal-fired boiler (Newmont). Prepared about 100 pages of technical analyses and comments on BACT, MACT, emission calculations, and enforceability. Assisted counsel draft petition and reply brief appealing PSD permit to U.S. EPA Environmental Appeals Board (EAB). Order denying review issued 12/21/05. *In re Newmont Nevada Energy Investment, LLC, TS Power Plant*, PSD Appeal No. 05-04 (EAB 2005).
- For petitioners and plaintiffs, reviewed and prepared comments on air quality and hazardous waste based on negative declaration for refinery ultra low sulfur diesel project located in SCAQMD. Reviewed responses to comments and prepared responses. Prepared declaration and presented oral testimony before SCAQMD Hearing Board on exempt sources (cooling towers) and calculation of potential to emit under NSR. Petition for writ of mandate filed March 2005. Case remanded by Court of Appeals to trial court to direct SCAQMD to re-evaluate the potential environmental significance of NO<sub>x</sub> emissions resulting from the project in accordance with court's opinion. California Court of Appeals, Second Appellate Division, on December 18, 2007, affirmed in part (as to baseline) and denied in part. *Communities for a Better Environment v. South Coast Air Quality Management District and ConocoPhillips and Carlos Valdez et al v. South Coast Air Quality Management District and ConocoPhillips*. Certified for partial publication 1/16/08. Appellate Court opinion upheld by CA Supreme Court 3/15/10. (2010) 48 Cal.4th 310.
- For amici seeking to amend a proposed Consent Decree to settle alleged NSR violations at Chevron refineries, reviewed proposed settlement, related files, subject modifications, and emission calculations. Prepared declaration on emission reductions, identification of NSR and NSPS violations, and BACT/LAER for FCCUs, heaters and boilers, flares, and sulfur recovery plants. *U.S. et al. v. Chevron U.S.A.*, Northern District of California, Case No. C 03-04650. Memorandum and Order Entering Consent Decree issued June 2005. Case No. C 03-4650 CRB.

- For petitioners, prepared declaration on enforceability of periodic monitoring requirements, in response to EPA's revised interpretation of 40 CFR 70.6(c)(1). This revision limited additional monitoring required in Title V permits. 69 FR 3203 (Jan. 22, 2004). *Environmental Integrity Project et al. v. EPA* (U.S. Court of Appeals for the District of Columbia). Court ruled the Act requires all Title V permits to contain monitoring requirements to assure compliance. *Sierra Club v. EPA*, 536 F.3d 673 (D.C. Cir. 2008).
- For interveners in application for authority to construct a 500 MW supercritical coal-fired generating unit before the Wisconsin Public Service Commission, prepared pre-filed written direct and rebuttal testimony with oral cross examination and rebuttal on BACT and MACT (Weston 4). Prepared written comments on BACT, MACT, and enforceability on draft air permit for same facility.
- For property owners in Nevada, evaluated the environmental impacts of a 1,450-MW coal-fired power plant proposed in a rural area adjacent to the Black Rock Desert and Granite Range, including emission calculations, air quality modeling, comments on proposed use permit to collect preconstruction monitoring data, and coordination with agencies and other interested parties. Project cancelled.
- For environmental organizations, reviewed draft PSD permit for a 600-MW coal-fired power plant in West Virginia (Longview). Prepared comments on permit enforceability; coal washing; BACT for SO<sub>2</sub> and PM<sub>10</sub>; Hg MACT; and MACT for HCl, HF, non-Hg metallic HAPs, and enforceability. Assist plaintiffs draft petition appealing air permit. Retained as expert to develop testimony on MACT, BACT, offsets, enforceability. Participate in settlement discussions. Case settled July 2004.
- For petitioners, reviewed record produced in discovery and prepared affidavit on emissions of carbon monoxide and volatile organic compounds during startup of GE 7FA combustion turbines to successfully establish plaintiff standing. *Sierra Club et al. v. Georgia Power Company* (Northern District of Georgia).
- For building trades, reviewed air quality permitting action for 1500-MW coal-fired power plant before the Kentucky Department for Environmental Protection (Thoroughbred).
- For petitioners, expert witness in administrative appeal of the PSD/Title V permit issued to a 1500-MW coal-fired power plant. Reviewed over 60,000 pages of produced documents, prepared discovery index, identified and assembled plaintiff exhibits. Deposed. Assisted counsel in drafting discovery requests, with over 30 depositions, witness cross examination, and brief drafting. Presented over 20 days of direct testimony, rebuttal and sur-rebuttal, with cross examination on BACT for NO<sub>x</sub>, SO<sub>2</sub>, and PM/PM<sub>10</sub>; MACT for Hg and non-Hg metallic HAPs; emission estimates for purposes of Class I and II air modeling; risk assessment; and enforceability of permit limits. Evidentiary hearings from November 2003 to June 2004. *Sierra Club et al. v. Natural Resources & Environmental Protection Cabinet, Division of Air Quality and Thoroughbred Generating Company et al.* Hearing Officer Decision issued August 9, 2005 finding in favor of plaintiffs on counts as to risk, BACT

(IGCC/CFB, NO<sub>x</sub>, SO<sub>2</sub>, Hg, Be), single source, enforceability, and errors and omissions. Assist counsel draft exceptions. Cabinet Secretary issued Order April 11, 2006 denying Hearing Offer's report, except as to NO<sub>x</sub> BACT, Hg, 99% SO<sub>2</sub> control and certain errors and omissions.

- For citizens group in Massachusetts, reviewed, commented on, and participated in permitting of pollution control retrofits of coal-fired power plant (Salem Harbor).
- Assisted citizens group and labor union challenge issuance of conditional use permit for a 317,000 ft<sup>2</sup> discount store in Honolulu without any environmental review. In support of a motion for preliminary injunction, prepared 7-page declaration addressing public health impacts of diesel exhaust from vehicles serving the Project. In preparation for trial, prepared 20-page preliminary expert report summarizing results of diesel exhaust and noise measurements at two big box retail stores in Honolulu, estimated diesel PM10 concentrations for Project using ISCST, prepared a cancer health risk assessment based on these analyses, and evaluated noise impacts.
- Assisted environmental organizations to challenge the DOE Finding of No Significant Impact (FONSI) for the Baja California Power and Sempra Energy Resources Cross-Border Transmissions Lines in the U.S. and four associated power plants located in Mexico (DOE EA-1391). Prepared 20-page declaration in support of motion for summary judgment addressing emissions, including CO<sub>2</sub> and NH<sub>3</sub>, offsets, BACT, cumulative air quality impacts, alternative cooling systems, and water use and water quality impacts. Plaintiff's motion for summary judgment granted in part. U.S. District Court, Southern District decision concluded that the Environmental Assessment and FONSI violated NEPA and the APA due to their inadequate analysis of the potential controversy surrounding the project, water impacts, impacts from NH<sub>3</sub> and CO<sub>2</sub>, alternatives, and cumulative impacts. *Border Power Plant Working Group v. Department of Energy and Bureau of Land Management*, Case No. 02-CV-513-IEG (POR) (May 2, 2003).
- For Sacramento school, reviewed draft air permit issued for diesel generator located across from playfield. Prepared comments on emission estimates, enforceability, BACT, and health impacts of diesel exhaust. Case settled. BUG trap installed on the diesel generator.
- Assisted unions in appeal of Title V permit issued by BAAQMD to carbon plant that manufactured coke. Reviewed District files, identified historic modifications that should have triggered PSD review, and prepared technical comments on Title V permit. Reviewed responses to comments and assisted counsel draft appeal to BAAQMD hearing board, opening brief, motion to strike, and rebuttal brief. Case settled.
- Assisted California Central Coast city obtain controls on a proposed new city that would straddle the Ventura-Los Angeles County boundary. Reviewed several environmental impact reports, prepared an air quality analysis, a diesel exhaust health risk assessment, and detailed review comments. Governor intervened and State dedicated the land for conservation purposes April 2004.
- Assisted Central California city to obtain controls on large alluvial sand quarry and asphalt plant proposing a modernization. Prepared comments on Negative Declaration on air quality,

public health, noise, and traffic. Evaluated process flow diagrams and engineering reports to determine whether proposed changes increased plant capacity or substantially modified plant operations. Prepared comments on application for categorical exemption from CEQA. Presented testimony to County Board of Supervisors. Developed controls to mitigate impacts. Assisted counsel draft Petition for Writ. Case settled June 2002. Substantial improvements in plant operations were obtained including cap on throughput, dust control measures, asphalt plant loadout enclosure, and restrictions on truck routes.

- Assisted oil companies on the California Central Coast in defending class action citizen's lawsuit alleging health effects due to emissions from gas processing plant and leaking underground storage tanks. Reviewed regulatory and other files and advised counsel on merits of case. Case settled November 2001.
- Assisted oil company on the California Central Coast in defending property damage claims arising out of a historic oil spill. Reviewed site investigation reports, pump tests, leachability studies, and health risk assessments, participated in design of additional site characterization studies to assess health impacts, and advised counsel on merits of case. Prepare health risk assessment.
- Assisted unions in appeal of Initial Study/Negative Declaration ("IS/ND") for an MTBE phaseout project at a Bay Area refinery. Reviewed IS/ND and supporting agency permitting files and prepared technical comments on air quality, groundwater, and public health impacts. Reviewed responses to comments and final IS/ND and ATC permits and assisted counsel to draft petitions and briefs appealing decision to Air District Hearing Board. Presented sworn direct and rebuttal testimony with cross examination on groundwater impacts of ethanol spills on hydrocarbon contamination at refinery. Hearing Board ruled 5 to 0 in favor of appellants, remanding ATC to district to prepare an EIR.
- Assisted Florida cities in challenging the use of diesel and proposed BACT determinations in prevention of significant deterioration (PSD) permits issued to two 510-MW simple cycle peaking electric generating facilities and one 1,080-MW simple cycle/combined cycle facility. Reviewed permit applications, draft permits, and FDEP engineering evaluations, assisted counsel in drafting petitions and responding to discovery. Participated in settlement discussions. Cases settled or applications withdrawn.
- Assisted large California city in federal lawsuit alleging peaker power plant was violating its federal permit. Reviewed permit file and applicant's engineering and cost feasibility study to reduce emissions through retrofit controls. Advised counsel on feasible and cost-effective NO<sub>x</sub>, SO<sub>x</sub>, and PM<sub>10</sub> controls for several 1960s diesel-fired Pratt and Whitney peaker turbines. Case settled.
- Assisted coalition of Georgia environmental groups in evaluating BACT determinations and permit conditions in PSD permits issued to several large natural gas-fired simple cycle and combined-cycle power plants. Prepared technical comments on draft PSD permits on BACT, enforceability of limits, and toxic emissions. Reviewed responses to comments, advised

counsel on merits of cases, participated in settlement discussions, presented oral and written testimony in adjudicatory hearings, and provided technical assistance as required. Cases settled or won at trial.

- Assisted construction unions in review of air quality permitting actions before the Indiana Department of Environmental Management ("IDEM") for several natural gas-fired simple cycle peaker and combined cycle power plants.
- Assisted coalition of towns and environmental groups in challenging air permits issued to 523 MW dual fuel (natural gas and distillate) combined-cycle power plant in Connecticut. Prepared technical comments on draft permits and 60 pages of written testimony addressing emission estimates, startup/shutdown issues, BACT/LAER analyses, and toxic air emissions. Presented testimony in adjudicatory administrative hearings before the Connecticut Department of Environmental Protection in June 2001 and December 2001.
- Assisted various coalitions of unions, citizens groups, cities, public agencies, and developers in licensing and permitting of over 110 coal, gas, oil, biomass, and pet coke-fired power plants generating over 75,000 MW of electricity. These included base-load, combined cycle, simple cycle, and peaker power plants in Alaska, Arizona, Arkansas, California, Colorado, Georgia, Florida, Illinois, Indiana, Kentucky, Michigan, Missouri, Ohio, Oklahoma, Oregon, Texas, West Virginia, Wisconsin, and elsewhere. Prepared analyses of and comments on applications for certification, preliminary and final staff assessments, and various air, water, wastewater, and solid waste permits issued by local agencies. Presented written and oral testimony before various administrative bodies on hazards of ammonia use and transportation, health effects of air emissions, contaminated property issues, BACT/LAER issues related to SCR and SCONOX, criteria and toxic pollutant emission estimates, MACT analyses, air quality modeling, water supply and water quality issues, and methods to reduce water use, including dry cooling, parallel dry-wet cooling, hybrid cooling, and zero liquid discharge systems.
- Assisted unions, cities, and neighborhood associations in challenging an EIR issued for the proposed expansion of the Oakland Airport. Reviewed two draft EIRs and prepared a health risk assessment and extensive technical comments on air quality and public health impacts. The California Court of Appeals, First Appellate District, ruled in favor of appellants and plaintiffs, concluding that the EIR "2) erred in using outdated information in assessing the emission of toxic air contaminants (TACs) from jet aircraft; 3) failed to support its decision not to evaluate the health risks associated with the emission of TACs with meaningful analysis," thus accepting my technical arguments and requiring the Port to prepare a new EIR. See *Berkeley Keep Jets Over the Bay Committee, City of San Leandro, and City of Alameda et al. v. Board of Port Commissioners* (August 30, 2001) 111 Cal.Rptr.2d 598.
- Assisted lessor of former gas station with leaking underground storage tanks and TCE contamination from adjacent property. Lessor held option to purchase, which was forfeited based on misrepresentation by remediation contractor as to nature and extent of

contamination. Remediation contractor purchased property. Reviewed regulatory agency files and advised counsel on merits of case. Case not filed.

- Advised counsel on merits of several pending actions, including a Proposition 65 case involving groundwater contamination at an explosives manufacturing firm and two former gas stations with leaking underground storage tanks.
- Assisted defendant foundry in Oakland in a lawsuit brought by neighbors alleging property contamination, nuisance, trespass, smoke, and health effects from foundry operation. Inspected and sampled plaintiff's property. Advised counsel on merits of case. Case settled.
- Assisted business owner facing eminent domain eviction. Prepared technical comments on a negative declaration for soil contamination and public health risks from air emissions from a proposed redevelopment project in San Francisco in support of a CEQA lawsuit. Case settled.
- Assisted neighborhood association representing residents living downwind of a Berkeley asphalt plant in separate nuisance and CEQA lawsuits. Prepared technical comments on air quality, odor, and noise impacts, presented testimony at commission and council meetings, participated in community workshops, and participated in settlement discussions. Cases settled. Asphalt plant was upgraded to include air emission and noise controls, including vapor collection system at truck loading station, enclosures for noisy equipment, and improved housekeeping.
- Assisted a Fortune 500 residential home builder in claims alleging health effects from faulty installation of gas appliances. Conducted indoor air quality study, advised counsel on merits of case, and participated in discussions with plaintiffs. Case settled.
- Assisted property owners in Silicon Valley in lawsuit to recover remediation costs from insurer for large TCE plume originating from a manufacturing facility. Conducted investigations to demonstrate sudden and accidental release of TCE, including groundwater modeling, development of method to date spill, preparation of chemical inventory, investigation of historical waste disposal practices and standards, and on-site sewer and storm drainage inspections and sampling. Prepared declaration in opposition to motion for summary judgment. Case settled.
- Assisted residents in east Oakland downwind of a former battery plant in class action lawsuit alleging property contamination from lead emissions. Conducted historical research and dry deposition modeling that substantiated claim. Participated in mediation at JAMS. Case settled.
- Assisted property owners in West Oakland who purchased a former gas station that had leaking underground storage tanks and groundwater contamination. Reviewed agency files and advised counsel on merits of case. Prepared declaration in opposition to summary

judgment. Prepared cost estimate to remediate site. Participated in settlement discussions. Case settled.

- Consultant to counsel representing plaintiffs in two Clean Water Act lawsuits involving selenium discharges into San Francisco Bay from refineries. Reviewed files and advised counsel on merits of case. Prepared interrogatory and discovery questions, assisted in deposing opposing experts, and reviewed and interpreted treatability and other technical studies. Judge ruled in favor of plaintiffs.
- Assisted oil company in a complaint filed by a resident of a small California beach community alleging that discharges of tank farm rinse water into the sanitary sewer system caused hydrogen sulfide gas to infiltrate residence, sending occupants to hospital. Inspected accident site, interviewed parties to the event, and reviewed extensive agency files related to incident. Used chemical analysis, field simulations, mass balance calculations, sewer hydraulic simulations with SWMM44, atmospheric dispersion modeling with SCREEN3, odor analyses, and risk assessment calculations to demonstrate that the incident was caused by a faulty drain trap and inadequate slope of sewer lateral on resident's property. Prepared a detailed technical report summarizing these studies. Case settled.
- Assisted large West Coast city in suit alleging that leaking underground storage tanks on city property had damaged the waterproofing on downgradient building, causing leaks in an underground parking structure. Reviewed subsurface hydrogeologic investigations and evaluated studies conducted by others documenting leakage from underground diesel and gasoline tanks. Inspected, tested, and evaluated waterproofing on subsurface parking structure. Waterproofing was substandard. Case settled.
- Assisted residents downwind of gravel mine and asphalt plant in Siskiyou County, California, in suit to obtain CEQA review of air permitting action. Prepared two declarations analyzing air quality and public health impacts. Judge ruled in favor of plaintiffs, closing mine and asphalt plant.
- Assisted defendant oil company on the California Central Coast in class action lawsuit alleging property damage and health effects from subsurface petroleum contamination. Reviewed documents, prepared risk calculations, and advised counsel on merits of case. Participated in settlement discussions. Case settled.
- Assisted defendant oil company in class action lawsuit alleging health impacts from remediation of petroleum contaminated site on California Central Coast. Reviewed documents, designed and conducted monitoring program, and participated in settlement discussions. Case settled.
- Consultant to attorneys representing irrigation districts and municipal water districts to evaluate a potential challenge of USFWS actions under CVPIA section 3406(b)(2). Reviewed agency files and collected and analyzed hydrology, water quality, and fishery data. Advised counsel on merits of case. Case not filed.

- Assisted residents downwind of a Carson refinery in class action lawsuit involving soil and groundwater contamination, nuisance, property damage, and health effects from air emissions. Reviewed files and provided advise on contaminated soil and groundwater, toxic emissions, and health risks. Prepared declaration on refinery fugitive emissions. Prepared deposition questions and reviewed deposition transcripts on air quality, soil contamination, odors, and health impacts. Case settled.
- Assisted residents downwind of a Contra Costa refinery who were affected by an accidental release of naphtha. Characterized spilled naphtha, estimated emissions, and modeled ambient concentrations of hydrocarbons and sulfur compounds. Deposed. Presented testimony in binding arbitration at JAMS. Judge found in favor of plaintiffs.
- Assisted residents downwind of Contra Costa County refinery in class action lawsuit alleging property damage, nuisance, and health effects from several large accidents as well as routine operations. Reviewed files and prepared analyses of environmental impacts. Prepared declarations, deposed, and presented testimony before jury in one trial and judge in second. Case settled.
- Assisted business owner claiming damages from dust, noise, and vibration during a sewer construction project in San Francisco. Reviewed agency files and PM10 monitoring data and advised counsel on merits of case. Case settled.
- Assisted residents downwind of Contra Costa County refinery in class action lawsuit alleging property damage, nuisance, and health effects. Prepared declaration in opposition to summary judgment, deposed, and presented expert testimony on accidental releases, odor, and nuisance before jury. Case thrown out by judge, but reversed on appeal and not retried.
- Presented testimony in small claims court on behalf of residents claiming health effects from hydrogen sulfide from flaring emissions triggered by a power outage at a Contra Costa County refinery. Analyzed meteorological and air quality data and evaluated potential health risks of exposure to low concentrations of hydrogen sulfide. Judge awarded damages to plaintiffs.
- Assisted construction unions in challenging PSD permit for an Indiana steel mill. Prepared technical comments on draft PSD permit, drafted 70-page appeal of agency permit action to the Environmental Appeals Board challenging permit based on faulty BACT analysis for electric arc furnace and reheat furnace and faulty permit conditions, among others, and drafted briefs responding to four parties. EPA Region V and the EPA General Counsel intervened as amici, supporting petitioners. EAB ruled in favor of petitioners, remanding permit to IDEM on three key issues, including BACT for the reheat furnace and lead emissions from the EAF. Drafted motion to reconsider three issues. Prepared 69 pages of technical comments on revised draft PSD permit. Drafted second EAB appeal addressing lead emissions from the EAF and BACT for reheat furnace based on European experience with SCR/SNCR. Case settled. Permit was substantially improved. See *In re: Steel Dynamics, Inc.*, PSD Appeal Nos. 99-4 & 99-5 (EAB June 22, 2000).

- Assisted defendant urea manufacturer in Alaska in negotiations with USEPA to seek relief from penalties for alleged violations of the Clean Air Act. Reviewed and evaluated regulatory files and monitoring data, prepared technical analysis demonstrating that permit limits were not violated, and participated in negotiations with EPA to dismiss action. Fines were substantially reduced and case closed.
- Assisted construction unions in challenging PSD permitting action for an Indiana grain mill. Prepared technical comments on draft PSD permit and assisted counsel draft appeal of agency permit action to the Environmental Appeals Board challenging permit based on faulty BACT analyses for heaters and boilers and faulty permit conditions, among others. Case settled.
- As part of a consent decree settling a CEQA lawsuit, assisted neighbors of a large west coast port in negotiations with port authority to secure mitigation for air quality impacts. Prepared technical comments on mobile source air quality impacts and mitigation and negotiated a \$9 million CEQA mitigation package. Represented neighbors on technical advisory committee established by port to implement the air quality mitigation program. Program successfully implemented.
- Assisted construction unions in challenging permitting action for a California hazardous waste incinerator. Prepared technical comments on draft permit, assisted counsel prepare appeal of EPA permit to the Environmental Appeals Board. Participated in settlement discussions on technical issues with applicant and EPA Region 9. Case settled.
- Assisted environmental group in challenging DTSC Negative Declaration on a hazardous waste treatment facility. Prepared technical comments on risk of upset, water, and health risks. Writ of mandamus issued.
- Assisted several neighborhood associations and cities impacted by quarries, asphalt plants, and cement plants in Alameda, Shasta, Sonoma, and Mendocino counties in obtaining mitigations for dust, air quality, public health, traffic, and noise impacts from facility operations and proposed expansions.
- For over 100 industrial facilities, commercial/campus, and redevelopment projects, developed the record in preparation for CEQA and NEPA lawsuits. Prepared technical comments on hazardous materials, solid wastes, public utilities, noise, worker safety, air quality, public health, water resources, water quality, traffic, and risk of upset sections of EIRs, EISs, FONSI, initial studies, and negative declarations. Assisted counsel in drafting petitions and briefs and prepared declarations.
- For several large commercial development projects and airports, assisted applicant and counsel prepare defensible CEQA documents, respond to comments, and identify and evaluate "all feasible" mitigation to avoid CEQA challenges. This work included developing mitigation programs to reduce traffic-related air quality impacts based on energy conservation programs, solar, low-emission vehicles, alternative fuels, exhaust treatments, and transportation management associations.

*SITE INVESTIGATION/REMEDICATION/CLOSURE*

- Technical manager and principal engineer for characterization, remediation, and closure of waste management units at former Colorado oil shale plant. Constituents of concern included BTEX, As, 1,1,1-TCA, and TPH. Completed groundwater monitoring programs, site assessments, work plans, and closure plans for seven process water holding ponds, a refinery sewer system, and processed shale disposal area. Managed design and construction of groundwater treatment system and removal actions and obtained clean closure.
- Principal engineer for characterization, remediation, and closure of process water ponds at a former lanthanide processing plant in Colorado. Designed and implemented groundwater monitoring program and site assessments and prepared closure plan.
- Advised the city of Sacramento on redevelopment of two former railyards. Reviewed work plans, site investigations, risk assessment, RAPS, RI/FSs, and CEQA documents. Participated in the development of mitigation strategies to protect construction and utility workers and the public during remediation, redevelopment, and use of the site, including buffer zones, subslab venting, rail berm containment structure, and an environmental oversight plan.
- Provided technical support for the investigation of a former sanitary landfill that was redeveloped as single family homes. Reviewed and/or prepared portions of numerous documents, including health risk assessments, preliminary endangerment assessments, site investigation reports, work plans, and RI/FSs. Historical research to identify historic waste disposal practices to prepare a preliminary endangerment assessment. Acquired, reviewed, and analyzed the files of 18 federal, state, and local agencies, three sets of construction field notes, analyzed 21 aerial photographs and interviewed 14 individuals associated with operation of former landfill. Assisted counsel in defending lawsuit brought by residents alleging health impacts and diminution of property value due to residual contamination. Prepared summary reports.
- Technical oversight of characterization and remediation of a nitrate plume at an explosives manufacturing facility in Lincoln, CA. Provided interface between owners and consultants. Reviewed site assessments, work plans, closure plans, and RI/FSs.
- Consultant to owner of large western molybdenum mine proposed for NPL listing. Participated in negotiations to scope out consent order and develop scope of work. Participated in studies to determine premining groundwater background to evaluate applicability of water quality standards. Served on technical committees to develop alternatives to mitigate impacts and close the facility, including resloping and grading, various thickness and types of covers, and reclamation. This work included developing and evaluating methods to control surface runoff and erosion, mitigate impacts of acid rock

drainage on surface and ground waters, and stabilize nine waste rock piles containing 328 million tons of pyrite-rich, mixed volcanic waste rock (andesites, rhyolite, tuff). Evaluated stability of waste rock piles. Represented client in hearings and meetings with state and federal oversight agencies.

*REGULATORY (PARTIAL LIST)*

- In December 2017, prepared comments on a DEIR for a bioenergy facility in San Bernardino County.
- In September and November 2017, prepared comments on revised Negative Declaration for Delicato Winery in San Joaquin County, California.
- In October and November 2017, prepared comments on North City Project Pure Water San Diego Program DEIR/DEIS to reclaim wastewater for municipal use.
- In August 2017, reviewed DEIR on a new residential community in eastern San Diego County and researched and wrote 60 pages of comments on air quality, greenhouse gas emissions, and health impacts.
- In August 2017, reviewed responses to comments on Part 70 operating permit and researched and wrote comments on metallic HAP issues.
- In July 2017, reviewed the FEIS for an expansion of the Port of Gulfport and researched and wrote 10 pages of comments on air quality and public health.
- In June 2017, reviewed and prepared technical report on an Application for a synthetic minor source construction permit for a new Refinery in North Dakota.
- In June 2017, reviewed responses to NPCA and other comments on the BP Cherry Point Refinery modifications and assisted counsel in evaluating issues to appeal, including GHG BACT, coker heater SCR cost effectiveness analysis, and SO<sub>2</sub> BACT.
- In June 2017, reviewed Part 70 Operating Permit Renewal/Modification for the Noranda Alumina LC/Gramercy Holdings I, LLC alumina processing plant, St. James, Louisiana, and prepared comments on HAP emissions from bauxite feedstock.
- In May and June 2017, reviewed FEIR on Tesoro Integration Project and prepared responses to comments on the DEIR.
- In May 2017, prepared comments on tank VOC and HAP emissions from Tesoro Integration Project, based on real time monitoring at the Tesoro and other refineries in the SCAQMD.
- In April 2017, prepared comments on Negative Declaration for Delicato Winery in San Joaquin County, California.

- In March 2017, reviewed Negative Declaration for Ellmore geothermal facility in Imperial County, California and prepared summary of issues.
- In March 2017, prepared response to Phillips 66 Company's Appeal of the San Luis Obispo County Planning Commission's Decision Denying the Rail Spur Extension Project Proposed for the Santa Maria Refinery.
- In February 2017, prepared comments on Kalama draft Title V permit for 10,000 MT/day methanol production and marine export facility in Kalama, Washington.
- In January 2017, researched and wrote 51 pages of comments on proposed Title V and PSD permits for the St. James Methanol Plant, St. James Louisiana, on BACT and enforceability of permit conditions.
- In December 2016, prepared comments on draft Title V Permit for Yuhuang Chemical Inc. Methanol Plant, St. James, Louisiana, responding to EPA Order addressing enforceability issues.
- In November 2016, prepared comments on Initial Study/Mitigated Negative Declaration for the AES Battery Energy Storage Facility, Long Beach, CA.
- In November 2016, prepared comments on Campo Verde Battery Energy Storage System Draft Environmental Impact Report.
- In October 2016, prepared comments on Title V Permit for NuStar Terminal Operations Partnership L.P, Stockton, CA.
- In October 2016, prepared expert report, Technical Assessment of Achieving the 40 CFR Part 423 Zero Discharge Standard for Bottom Ash Transport Water at the Belle River Power Plant, East China, Michigan. Reported resulted in a 2 year reduction in compliance date for elimination of bottom ash transport water. 1/30/17 DEQ Letter.
- In September 2016, prepared comments on Proposed Title V Permit and Environmental Assessment Statement, Yuhuang Chemical Inc. Methanol Plant, St. James, Louisiana.
- In September 2016, prepared response to "Further Rebuttal in Support of Appeal of Planning Commission Resolution No. 16-1, Denying Use Permit Application 12PLN-00063 and Declining to Certify Final Environmental Impact Report for the Valero Benicia Crude-by-Rail Project.
- In August 2016, reviewed and prepared comments on manuscript: Hutton et al., Freshwater Flows to the San Francisco Bay-Delta Estuary over Nine Decades: Trends Evaluation.
- In August/September 2016, prepared comments on Mitigated Negative Declaration for the Chevron Long Wharf Maintenance and Efficiency Project.

- In July 2016, prepared comments on the Ventura County APCD Preliminary Determination of Compliance and the California Energy Commission Revised Preliminary Staff Assessment for the Puente Power Project.
- In June 2016, prepared comments on an Ordinance (1) Amending the Oakland Municipal Code to Prohibit the Storage and Handling of Coal and Coke at Bulk Material Facilities or Terminals Throughout the City of Oakland and (2) Adopting CEQA Exemption Findings and supporting technical reports. Council approved Ordinance on an 8 to 0 vote on June 27, 2016.
- In May 2016, prepared comments on Draft Title V Permit and Draft Environmental Impact Report for the Tesoro Los Angeles Refinery Integration and Compliance Project.
- In March 2016, prepared comments on Valero's Appeal of Planning Commission's Denial of Valero Crude-by-Rail Project
- In February 2016, prepared comments on Final Environmental Impact Report, Santa Maria Rail Spur Project.
- In February 2016, prepared comments on Final Environmental Impact Report, Valero Benicia Crude by Rail Project.
- In January 2016, prepared comments on Draft Programmatic Environmental Impact Report for the Southern California Association of Government's (SCAG) 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy.
- In November 2015, prepared comments on Final Environmental Impact Report for Revisions to the Kern County Zoning Ordinance – 2015(C) (Focused on Oil and Gas Local Permitting), November 2015.
- In October 2015, prepared comments on Revised Draft Environmental Report, Valero Benicia Crude by Rail Project.
- In September 2015, prepared report, "Environmental, Health and Safety Impacts of the Proposed Oakland Bulk and Oversized Terminal, and presented oral testimony on September 21, 2015 before Oakland City Council on behalf of the Sierra Club.
- In September 2015, prepared comments on revisions to two chapters of EPA's Air Pollution Control Cost Manual: Docket ID No. EPA-HQ-OAR-2015-0341.
- In June 2015, prepared comments on DEIR for the CalAm Monterey Peninsula Water Supply Project.
- In April 2015, prepared comments on proposed Title V Operating Permit Revision and Prevention of Significant Deterioration Permit for Arizona Public Service's Ocotillo Power Plant Modernization Project (5 GE LMS100 105-MW simple cycle turbines operated as peakers), in Tempe, Arizona; Final permit appealed to EAB.

- In March 2015, prepared “Comments on Proposed Title V Air Permit, Yuhuang Chemical Inc. Methanol Plant, St. James, Louisiana”. Client filed petition objecting to the permit. EPA granted majority of issues. In the Matter of Yuhuang Chemical Inc. Methanol Plant, St. James Parish, Louisiana, Permit No. 2560-00295-V0, Issued by the Louisiana Department of Environmental Quality, Petition No. VI-2015-03, Order Responding to the Petitioners’ Request for Objection to the Issuance of a Title V Operating Permit, September 1, 2016.
- In February 2015, prepared compilation of BACT cost effectiveness values in support of comments on draft PSD Permit for Bonanza Power Project.
- In January 2015, prepared cost effectiveness analysis for SCR for a 500-MW coal fire power plant, to address unpermitted upgrades in 2000.
- In January 2015, prepared comments on Revised Final Environmental Impact Report for the Phillips 66 Propane Recovery Project. *Communities for a Better Environment et al. v. Contra Costa County et al. Contra Costa County (Superior Court, Contra Costa County, Case No. MSN15-0301, December 1, 2016).*
- In December 2014, prepared “Report on Bakersfield Crude Terminal Permits to Operate.” In response, the U.S. EPA cited the Terminal for 10 violations of the Clean Air Act. The Fifth Appellate District Court upheld the finding in this report in CBE et al v. San Joaquin Valley Unified Air Pollution Control District and Bakersfield Crude Terminal LLC et al, Super. Ct. No. 284013, June 23, 2017.
- In December 2014, prepared comments on Revised Draft Environmental Impact Report for the Phillips 66 Propane Recovery Project.
- In November 2014, prepared comments on Revised Draft Environmental Impact Report for Phillips 66 Rail Spur Extension Project and Crude Unloading Project, Santa Maria, CA to allow the import of tar sands crudes.
- In November 2014, prepared comments on Draft Environmental Impact Report for Phillips 66 Ultra Low Sulfur Diesel Project, responding to the California Supreme Court Decision, *Communities for a Better Environment v. South Coast Air Quality Management Dist. (2010) 48 Cal.4th 310.*
- In November 2014, prepared comments on Draft Environmental Impact Report for the Tesoro Avon Marine Oil Terminal Lease Consideration.
- In October 2014, prepared: “Report on Hydrogen Cyanide Emissions from Fluid Catalytic Cracking Units”, pursuant to the Petroleum Refinery Sector Risk and Technology Review and New Source Performance Standards, 79 FR 36880.
- In October 2014, prepared technical comments on Final Environmental Impact Reports for Alon Bakersfield Crude Flexibility Project to build a rail terminal to allow the import/export

of tar sands and Bakken crude oils and to upgrade an existing refinery to allow it to process a wide range of crudes.

- In October 2014, prepared technical comments on the Title V Permit Renewal and three De Minimus Significant Revisions for the Tesoro Logistics Marine Terminal in the SCAQMD.
- In September 2014, prepared technical comments on the Draft Environmental Impact Report for the Valero Crude by Rail Project.
- In August 2014, for EPA Region 6, prepared technical report on costing methods for upgrades to existing scrubbers at coal-fired power plants.
- In July 2014, prepared technical comments on Draft Final Environmental Impact Reports for Alon Bakersfield Crude Flexibility Project to build a rail terminal to allow the import/export of tar sands and Bakken crude oils and to upgrade an existing refinery to allow it to process a wide range of crudes.
- In June 2014, prepared technical report on Initial Study and Draft Negative Declaration for the Tesoro Logistics Storage Tank Replacement and Modification Project.
- In May 2014, prepared technical comments on Intent to Approve a new refinery and petroleum transloading operation in Utah.
- In March and April 2014, prepared declarations on air permits issued for two crude-by-rail terminals in California, modified to switch from importing ethanol to importing Bakken crude oils by rail and transferring to tanker cars. Permits were issued without undergoing CEQA review. One permit was upheld by the San Francisco Superior Court as statute of limitations had run. The Sacramento Air Quality Management District withdrew the second one due to failure to require BACT and conduct CEQA review.
- In March 2014, prepared technical report on Negative Declaration for a proposed modification of the air permit for a bulk petroleum and storage terminal to allow the import of tar sands and Bakken crude oil by rail and its export by barge, under the New York State Environmental Quality Review Act (SEQRA).
- In February 2014, prepared technical report on proposed modification of air permit for midwest refinery upgrade/expansion to process tar sands crudes.
- In January 2014, prepared cost estimates to capture, transport, and use CO<sub>2</sub> in enhanced oil recovery, from the Freeport LNG project based on both Selexol and Amine systems.
- In January 2014, prepared technical report on Draft Environmental Impact Report for Phillips 66 Rail Spur Extension Project, Santa Maria, CA. Comments addressed project description (piecemealing, crude slate), risk of upset analyses, mitigation measures, alternative analyses and cumulative impacts.

- In November 2013, prepared technical report on the Phillips 66 Propane Recovery Project, Rodeo, CA. Comments addressed project description (piecemealing, crude slate) and air quality impacts.
- In September 2013, prepared technical report on the Draft Authority to Construct Permit for the Casa Diablo IV Geothermal Development Project Environmental Impact Report and Declaration in Support of Appeal and Petition for Stay, U.S. Department of the Interior, Board of Land Appeals, Appeal of Decision Record for the Casa Diablo IV Geothermal Development Project.
- In September 2013, prepared technical report on Effluent Limitation Guidelines for Best Available Technology Economically Available (BAT) for Bottom Ash Transport Waters from Coal-Fired Power Plants in the Steam Electric Power Generating Point Source Category.
- In July 2013, prepared technical report on Initial Study/Mitigated Negative Declaration for the Valero Crude by Rail Project, Benicia, California, Use Permit Application 12PLN-00063.
- In July 2013, prepared technical report on fugitive particulate matter emissions from coal train staging at the proposed Coyote Island Terminal, Oregon, for draft Permit No. 25-0015-ST-01.
- In July 2013, prepared technical comments on air quality impacts of the Finger Lakes LPG Storage Facility as reported in various Environmental Impact Statements.
- In July 2013, prepared technical comments on proposed Greenhouse Gas PSD Permit for the Celanese Clear Lake Plant, including cost analysis of CO<sub>2</sub> capture, transport, and sequestration.
- In June/July 2013, prepared technical comments on proposed Draft PSD Preconstruction Permit for Greenhouse Gas Emission for the ExxonMobil Chemical Company Baytown Olefins Plant, including cost analysis of CO<sub>2</sub> capture, transport, and sequestration.
- In June 2013, prepared technical report on a Mitigated Negative Declaration for a new rail terminal at the Valero Benicia Refinery to import increased amounts of "North American" crudes. Comments addressed air quality impacts of refining increased amounts of tar sands crudes.
- In June 2013, prepared technical report on Draft Environmental Impact Report for the California Ethanol and Power Imperial Valley 1 Project.
- In May 2013, prepared comments on draft PSD permit for major expansion of midwest refinery to process 100% tar sands crudes, including a complex netting analysis involving debottlenecking, piecemealing, and BACT analyses.

- In April 2013, prepared technical report on the Draft Supplemental Environmental Impact Statement (DSEIS) for the Keystone XL Pipeline on air quality impacts from refining increased amount of tar sands crudes at Refineries in PADD 3.
- In October 2012, prepared technical report on the Environmental Review for the Coyote Island Terminal Dock at the Port of Morrow on fugitive particulate matter emissions.
- In October 2012-October 2014, review and evaluate Flint Hills West Application for an expansion/modification for increased (Texas, Eagle Ford Shale) crude processing and related modification, including netting and BACT analysis. Assist in settlement discussions.
- In February 2012, prepared comments on BART analysis in PA Regional Haze SIP, 77 FR 3984 (Jan. 26, 2012). On Sept. 29, 2015, a federal appeals court overturned the U.S. EPA's approval of this plan, based in part on my comments, concluding "...we will vacate the 2014 Final Rule to the extent it approved Pennsylvania's source-specific BART analysis and remand to the EPA for further proceedings consistent with this Opinion." Nat'l Parks Conservation Assoc. v. EPA, 3d Cir., No. 14-3147, 9/19/15.
- Prepared cost analyses and comments on New York's proposed BART determinations for NOx, SO2, and PM and EPA's proposed approval of BART determinations for Danskammer Generating Station under New York Regional Haze State Implementation Plan and Federal Implementation Plan, 77 FR 51915 (August 28, 2012).
- Prepared cost analyses and comments on NOx BART determinations for Regional Haze State Implementation Plan for State of Nevada, 77 FR 23191 (April 18, 2012) and 77 FR 25660 (May 1, 2012).
- Prepared analyses of and comments on New Source Performance Standards for Greenhouse Gas Emissions for New Stationary Sources: Electric Utility Generating Units, 77 FR 22392 (April 13, 2012).
- Prepared comments on CASPR-BART emission equivalency and NOx and PM BART determinations in EPA proposed approval of State Implementation Plan for Pennsylvania Regional Haze Implementation Plan, 77 FR 3984 (January 26, 2012).
- Prepared comments and statistical analyses on hazardous air pollutants (HAPs) emission controls, monitoring, compliance methods, and the use of surrogates for acid gases, organic HAPs, and metallic HAPs for proposed National Emission Standards for Hazardous Air Pollutants from Coal- and Oil-Fired Electric Utility Steam Generating Units, 76 FR 24976 (May 3, 2011).
- Prepared cost analyses and comments on NOx BART determinations and emission reductions for proposed Federal Implementation Plan for Four Corners Power Plant, 75 FR 64221 (October 19, 2010).

- Prepared cost analyses and comments on NO<sub>x</sub> BART determinations for Colstrip Units 1- 4 for Montana State Implementation Plan and Regional Haze Federal Implementation Plan, 77 FR 23988 (April 20, 2010).
- For EPA Region 8, prepared report: Revised BART Cost Effectiveness Analysis for Tail-End Selective Catalytic Reduction at the Basin Electric Power Cooperative Leland Olds Station Unit 2 Final Report, March 2011, in support of 76 FR 58570 (Sept. 21, 2011).
- For EPA Region 6, prepared report: Revised BART Cost-Effectiveness Analysis for Selective Catalytic Reduction at the Public Service Company of New Mexico San Juan Generating Station, November 2010, in support of 76 FR 52388 (Aug. 22, 2011).
- For EPA Region 6, prepared report: Revised BART Cost-Effectiveness Analysis for Flue Gas Desulfurization at Coal-Fired Electric Generating Units in Oklahoma: Sooner Units 1 & 2, Muskogee Units 4 & 5, Northeastern Units 3 & 4, October 2010, in support of 76 FR 16168 (March 26, 2011). My work was upheld in: *State of Oklahoma v. EPA*, App. Case 12-9526 (10th Cir. July 19, 2013).
- Identified errors in N<sub>2</sub>O emission factors in the Mandatory Greenhouse Gas Reporting Rule, 40 CFR 98, and prepared technical analysis to support Petition for Rulemaking to Correct Emissions Factors in the Mandatory Greenhouse Gas Reporting Rule, filed with EPA on 10/28/10.
- Assisted interested parties develop input for and prepare comments on the Information Collection Request for Petroleum Refinery Sector NSPS and NESHAP Residual Risk and Technology Review, 75 FR 60107 (9/29/10).
- Technical reviewer of EPA's "Emission Estimation Protocol for Petroleum Refineries," posted for public comments on CHIEF on 12/23/09, prepared in response to the City of Houston's petition under the Data Quality Act (March 2010).
- Prepared comments on SCR cost effectiveness for EPA's Advanced Notice of Proposed Rulemaking, Assessment of Anticipated Visibility Improvements at Surrounding Class I Areas and Cost Effectiveness of Best Available Retrofit Technology for Four Corners Power Plant and Navajo Generating Station, 74 FR 44313 (August 28, 2009).
- Prepared comments on Proposed Rule for Standards of Performance for Coal Preparation and Processing Plants, 74 FR 25304 (May 27, 2009).
- Prepared comments on draft PSD permit for major expansion of midwest refinery to process up to 100% tar sands crudes. Participated in development of monitoring and controls to mitigate impacts and in negotiating a Consent Decree to settle claims in 2008.
- Reviewed and assisted interested parties prepare comments on proposed Kentucky air toxic regulations at 401 KAR 64:005, 64:010, 64:020, and 64:030 (June 2007).

- Prepared comments on proposed Standards of Performance for Electric Utility Steam Generating Units and Small Industrial-Commercial-Industrial Steam Generating Units, 70 FR 9706 (February 28, 2005).
- Prepared comments on Louisville Air Pollution Control District proposed Strategic Toxic Air Reduction regulations.
- Prepared comments and analysis of BAAQMD Regulation, Rule 11, Flare Monitoring at Petroleum Refineries.
- Prepared comments on Proposed National Emission Standards for Hazardous Air Pollutants; and, in the Alternative, Proposed Standards of Performance for New and Existing Stationary Sources: Electricity Utility Steam Generating Units (MACT standards for coal-fired power plants).
- Prepared Authority to Construct Permit for remediation of a large petroleum-contaminated site on the California Central Coast. Negotiated conditions with agencies and secured permits.
- Prepared Authority to Construct Permit for remediation of a former oil field on the California Central Coast. Participated in negotiations with agencies and secured permits.
- Prepared and/or reviewed hundreds of environmental permits, including NPDES, UIC, Stormwater, Authority to Construct, Prevention of Significant Deterioration, Nonattainment New Source Review, Title V, and RCRA, among others.
- Participated in the development of the CARB document, *Guidance for Power Plant Siting and Best Available Control Technology*, including attending public workshops and filing technical comments.
- Performed data analyses in support of adoption of emergency power restoration standards by the California Public Utilities Commission for “major” power outages, where major is an outage that simultaneously affects 10% of the customer base.
- Drafted portions of the Good Neighbor Ordinance to grant Contra Costa County greater authority over safety of local industry, particularly chemical plants and refineries.
- Participated in drafting BAAQMD Regulation 8, Rule 28, Pressure Relief Devices, including participation in public workshops, review of staff reports, draft rules and other technical materials, preparation of technical comments on staff proposals, research on availability and costs of methods to control PRV releases, and negotiations with staff.
- Participated in amending BAAQMD Regulation 8, Rule 18, Valves and Connectors, including participation in public workshops, review of staff reports, proposed rules and other supporting technical material, preparation of technical comments on staff proposals, research on availability and cost of low-leak technology, and negotiations with staff.

- Participated in amending BAAQMD Regulation 8, Rule 25, Pumps and Compressors, including participation in public workshops, review of staff reports, proposed rules, and other supporting technical material, preparation of technical comments on staff proposals, research on availability and costs of low-leak and seal-less technology, and negotiations with staff.
- Participated in amending BAAQMD Regulation 8, Rule 5, Storage of Organic Liquids, including participation in public workshops, review of staff reports, proposed rules, and other supporting technical material, preparation of technical comments on staff proposals, research on availability and costs of controlling tank emissions, and presentation of testimony before the Board.
- Participated in amending BAAQMD Regulation 8, Rule 18, Valves and Connectors at Petroleum Refinery Complexes, including participation in public workshops, review of staff reports, proposed rules and other supporting technical material, preparation of technical comments on staff proposals, research on availability and costs of low-leak technology, and presentation of testimony before the Board.
- Participated in amending BAAQMD Regulation 8, Rule 22, Valves and Flanges at Chemical Plants, etc, including participation in public workshops, review of staff reports, proposed rules, and other supporting technical material, preparation of technical comments on staff proposals, research on availability and costs of low-leak technology, and presentation of testimony before the Board.
- Participated in amending BAAQMD Regulation 8, Rule 25, Pump and Compressor Seals, including participation in public workshops, review of staff reports, proposed rules, and other supporting technical material, preparation of technical comments on staff proposals, research on availability of low-leak technology, and presentation of testimony before the Board.
- Participated in the development of the BAAQMD Regulation 2, Rule 5, Toxics, including participation in public workshops, review of staff proposals, and preparation of technical comments.
- Participated in the development of SCAQMD Rule 1402, Control of Toxic Air Contaminants from Existing Sources, and proposed amendments to Rule 1401, New Source Review of Toxic Air Contaminants, in 1993, including review of staff proposals and preparation of technical comments on same.
- Participated in the development of the Sunnyvale Ordinance to Regulate the Storage, Use and Handling of Toxic Gas, which was designed to provide engineering controls for gases that are not otherwise regulated by the Uniform Fire Code.
- Participated in the drafting of the Statewide Water Quality Control Plans for Inland Surface Waters and Enclosed Bays and Estuaries, including participation in workshops, review of draft plans, preparation of technical comments on draft plans, and presentation of testimony before the SWRCB.

- Participated in developing Se permit effluent limitations for the five Bay Area refineries, including review of staff proposals, statistical analyses of Se effluent data, review of literature on aquatic toxicity of Se, preparation of technical comments on several staff proposals, and presentation of testimony before the Bay Area RWQCB.
- Represented the California Department of Water Resources in the 1991 Bay-Delta Hearings before the State Water Resources Control Board, presenting sworn expert testimony with cross examination and rebuttal on a striped bass model developed by the California Department of Fish and Game.
- Represented the State Water Contractors in the 1987 Bay-Delta Hearings before the State Water Resources Control Board, presenting sworn expert testimony with cross examination and rebuttal on natural flows, historical salinity trends in San Francisco Bay, Delta outflow, and hydrodynamics of the South Bay.
- Represented interveners in the licensing of over 20 natural-gas-fired power plants and one coal gasification plant at the California Energy Commission and elsewhere. Reviewed and prepared technical comments on applications for certification, preliminary staff assessments, final staff assessments, preliminary determinations of compliance, final determinations of compliance, and prevention of significant deterioration permits in the areas of air quality, water supply, water quality, biology, public health, worker safety, transportation, site contamination, cooling systems, and hazardous materials. Presented written and oral testimony in evidentiary hearings with cross examination and rebuttal. Participated in technical workshops.
- Represented several parties in the proposed merger of San Diego Gas & Electric and Southern California Edison. Prepared independent technical analyses on health risks, air quality, and water quality. Presented written and oral testimony before the Public Utilities Commission administrative law judge with cross examination and rebuttal.
- Represented a PRP in negotiations with local health and other agencies to establish impact of subsurface contamination on overlying residential properties. Reviewed health studies prepared by agency consultants and worked with agencies and their consultants to evaluate health risks.

#### *WATER QUALITY/RESOURCES*

- Directed and participated in research on environmental impacts of energy development in the Colorado River Basin, including contamination of surface and subsurface waters and modeling of flow and chemical transport through fractured aquifers.
- Played a major role in Northern California water resource planning studies since the early 1970s. Prepared portions of the Basin Plans for the Sacramento, San Joaquin, and Delta basins including sections on water supply, water quality, beneficial uses, waste load

allocation, and agricultural drainage. Developed water quality models for the Sacramento and San Joaquin Rivers.

- Conducted hundreds of studies over the past 40 years on Delta water supplies and the impacts of exports from the Delta on water quality and biological resources of the Central Valley, Sacramento-San Joaquin Delta, and San Francisco Bay. Typical examples include:
  1. Evaluate historical trends in salinity, temperature, and flow in San Francisco Bay and upstream rivers to determine impacts of water exports on the estuary;
  2. Evaluate the role of exports and natural factors on the food web by exploring the relationship between salinity and primary productivity in San Francisco Bay, upstream rivers, and ocean;
  3. Evaluate the effects of exports, other in-Delta, and upstream factors on the abundance of salmon and striped bass;
  4. Review and critique agency fishery models that link water exports with the abundance of striped bass and salmon;
  5. Develop a model based on GLMs to estimate the relative impact of exports, water facility operating variables, tidal phase, salinity, temperature, and other variables on the survival of salmon smolts as they migrate through the Delta;
  6. Reconstruct the natural hydrology of the Central Valley using water balances, vegetation mapping, reservoir operation models to simulate flood basins, precipitation records, tree ring research, and historical research;
  7. Evaluate the relationship between biological indicators of estuary health and down-estuary position of a salinity surrogate (X2);
  8. Use real-time fisheries monitoring data to quantify impact of exports on fish migration;
  9. Refine/develop statistical theory of autocorrelation and use to assess strength of relationships between biological and flow variables;
  10. Collect, compile, and analyze water quality and toxicity data for surface waters in the Central Valley to assess the role of water quality in fishery declines;
  11. Assess mitigation measures, including habitat restoration and changes in water project operation, to minimize fishery impacts;
  12. Evaluate the impact of unscreened agricultural water diversions on abundance of larval fish;
  13. Prepare and present testimony on the impacts of water resources development on Bay hydrodynamics, salinity, and temperature in water rights hearings;

14. Evaluate the impact of boat wakes on shallow water habitat, including interpretation of historical aerial photographs;
  15. Evaluate the hydrodynamic and water quality impacts of converting Delta islands into reservoirs;
  16. Use a hydrodynamic model to simulate the distribution of larval fish in a tidally influenced estuary;
  17. Identify and evaluate non-export factors that may have contributed to fishery declines, including predation, shifts in oceanic conditions, aquatic toxicity from pesticides and mining wastes, salinity intrusion from channel dredging, loss of riparian and marsh habitat, sedimentation from upstream land alternations, and changes in dissolved oxygen, flow, and temperature below dams.
- Developed, directed, and participated in a broad-based research program on environmental issues and control technology for energy industries including petroleum, oil shale, coal mining, and coal slurry transport. Research included evaluation of air and water pollution, development of novel, low-cost technology to treat and dispose of wastes, and development and application of geohydrologic models to evaluate subsurface contamination from in-situ retorting. The program consisted of government and industry contracts and employed 45 technical and administrative personnel.
  - Coordinated an industry task force established to investigate the occurrence, causes, and solutions for corrosion/erosion and mechanical/engineering failures in the waterside systems (e.g., condensers, steam generation equipment) of power plants. Corrosion/erosion failures caused by water and steam contamination that were investigated included waterside corrosion caused by poor microbiological treatment of cooling water, steam-side corrosion caused by ammonia-oxygen attack of copper alloys, stress-corrosion cracking of copper alloys in the air cooling sections of condensers, tube sheet leaks, oxygen in-leakage through condensers, volatilization of silica in boilers and carry over and deposition on turbine blades, and iron corrosion on boiler tube walls. Mechanical/engineering failures investigated included: steam impingement attack on the steam side of condenser tubes, tube-to-tube-sheet joint leakage, flow-induced vibration, structural design problems, and mechanical failures due to stresses induced by shutdown, startup and cycling duty, among others. Worked with electric utility plant owners/operators, condenser and boiler vendors, and architect/engineers to collect data to document the occurrence of and causes for these problems, prepared reports summarizing the investigations, and presented the results and participated on a committee of industry experts tasked with identifying solutions to prevent condenser failures.
  - Evaluated the cost effectiveness and technical feasibility of using dry cooling and parallel dry-wet cooling to reduce water demands of several large natural-gas fired power plants in California and Arizona.

- Designed and prepared cost estimates for several dry cooling systems (e.g., fin fan heat exchangers) used in chemical plants and refineries.
- Designed, evaluated, and costed several zero liquid discharge systems for power plants.
- Evaluated the impact of agricultural and mining practices on surface water quality of Central Valley streams. Represented municipal water agencies on several federal and state advisory committees tasked with gathering and assessing relevant technical information, developing work plans, and providing oversight of technical work to investigate toxicity issues in the watershed.

#### *AIR QUALITY/PUBLIC HEALTH*

- Prepared or reviewed the air quality and public health sections of hundreds of EIRs and EISs on a wide range of industrial, commercial and residential projects.
- Prepared or reviewed hundreds of NSR and PSD permits for a wide range of industrial facilities.
- Designed, implemented, and directed a 2-year-long community air quality monitoring program to assure that residents downwind of a petroleum-contaminated site were not impacted during remediation of petroleum-contaminated soils. The program included real-time monitoring of particulates, diesel exhaust, and BTEX and time integrated monitoring for over 100 chemicals.
- Designed, implemented, and directed a 5-year long source, industrial hygiene, and ambient monitoring program to characterize air emissions, employee exposure, and downwind environmental impacts of a first-generation shale oil plant. The program included stack monitoring of heaters, boilers, incinerators, sulfur recovery units, rock crushers, API separator vents, and wastewater pond fugitives for arsenic, cadmium, chlorine, chromium, mercury, 15 organic indicators (e.g., quinoline, pyrrole, benzo(a)pyrene, thiophene, benzene), sulfur gases, hydrogen cyanide, and ammonia. In many cases, new methods had to be developed or existing methods modified to accommodate the complex matrices of shale plant gases.
- Conducted investigations on the impact of diesel exhaust from truck traffic from a wide range of facilities including mines, large retail centers, light industrial uses, and sports facilities. Conducted traffic surveys, continuously monitored diesel exhaust using an aethalometer, and prepared health risk assessments using resulting data.
- Conducted indoor air quality investigations to assess exposure to natural gas leaks, pesticides, molds and fungi, soil gas from subsurface contamination, and outgassing of carpets, drapes, furniture and construction materials. Prepared health risk assessments using collected data.
- Prepared health risk assessments, emission inventories, air quality analyses, and assisted in the permitting of over 70 1 to 2 MW emergency diesel generators.

- Prepare over 100 health risk assessments, endangerment assessments, and other health-based studies for a wide range of industrial facilities.
- Developed methods to monitor trace elements in gas streams, including a continuous real-time monitor based on the Zeeman atomic absorption spectrometer, to continuously measure mercury and other elements.
- Performed nuisance investigations (odor, noise, dust, smoke, indoor air quality, soil contamination) for businesses, industrial facilities, and residences located proximate to and downwind of pollution sources.

**Re: Newland Sierra (Log No. PDS2015-ER-15-08-001; SCH No. 2015021036, Project Numbers: PDS2015-GPA-15-001, PDS2015-SP-15-001, PDS2015-REZ-15-001, PDS2015-TM-5597, PDSXXXX-HLP-XXX) – Failure to Properly Analyze and Mitigate Biological Impacts**

Dear Ms. Smith:

As you are aware, we represent Golden Door Properties, LLC (“Golden Door”), a world-class resort and agricultural operation in rural Twin Oaks Valley. The Golden Door has restored farming and beekeeping, including replanting many new trees, on its property, and shares its products through a community Farm Stand and other retail operations. The Golden Door has raised many concerns with the County about the proposed Newland Sierra Project and the impacts of adding urban density the size of the City of Del Mar in our rural community.

We write today with respect to the Project’s biological resources impacts, as follow-up to our letters dated May 22, 2017 (to the County) and May 21, 2018 (to the U.S. Fish & Wildlife Service, on which County staff were copied) and County staff’s letters to us dated June 5 and August 25, 2017 regarding the North County MSCP. As noted in the attached memorandum, there are many procedural and substantive deficiencies in the draft EIR and project application materials. We believe that these defects are of sufficient severity that the project application cannot proceed until these defects are corrected and the project’s environmental review documents are re-published to the public for review and comment under CEQA and other laws.

LATHAM & WATKINS<sup>LLP</sup>

Thank you for your time and attention to our comments. Please do not hesitate to contact us should you have any questions or comments.

Best regards,

Taiga Takahashi  
of LATHAM & WATKINS LLP

**I. THE PROJECT'S EXEMPTION FROM THE RESOURCE PROTECTION ORDINANCE CANNOT EXEMPT IT FROM THE CEQA SIGNIFICANCE THRESHOLDS.**

The significance threshold for biological resources is clear. As stated on page 2.4-81 of the draft EIR, "A significant impact would result if: ... The project would conflict with one or more local policies or ordinances protecting biological resources ... The project would impact any amount of wetlands or sensitive habitat lands as outlined in the Resource Protection Ordinance (RPO)." The Resource Protection Ordinance defines "sensitive habitat lands" as including not only wetlands, but also "steep slope lands." (County Code § 86.602(c).)

The Draft EIR erroneously asserts that "Impacts would be reduced to less than significant with implementation of M-BIO-8D, M-BIO-8A, and M-BIO-12" (draft EIR at pp. 2.4-134–135) but fails to discuss or analyze the fact that the Project's Resource Protection Plan admits that the project is not consistent with the RPO. (Dudek Resource Protection Plan for the Newland Sierra Project (April 2017) at pp. 4-5 ["County Staff and the Wildlife Agencies agree that the proposed Newland Sierra Project (project) is not feasible to implement if the County RPO is strictly applied to areas outside of the designated biological open space"]; see also draft EIR at p. 3.3-39 ["The project must also be in conformance with the RPO. However, the project is not strictly in conformance with RPO ...."].) Clearly, if the Newland project cannot be implemented due to the RPO, the project is necessarily fundamentally inconsistent and incompatible with the RPO's requirements. This is undoubtedly a significant impact under the County's CEQA significance thresholds. Newland's proposed exemption from the RPO, which would only take place after project approval, cannot exempt it from the significance threshold, which is applied before project approval.

**II. THE PROJECT'S BIOLOGICAL ANALYSIS IS MISSING CRUCIAL INFORMATION.**

**A. The Project analysis does not resolve impacts to the natural fire regime.**

Page 2.4-97 of the draft EIR states that "If the natural fire regime is suppressed, longer-than-natural fire return intervals can result in excessive buildup of fuel loads so that when fires do occur, they are catastrophic. Unnaturally long fire intervals can also result in senescence of plant communities, such as chaparral, that rely on shorter intervals for rejuvenation. The potential cumulative indirect project impacts would be **significant (Impact BI-C-1)**." (See also p. 2.4-65.)

The Draft EIR goes on to summarily conclude that "Potential cumulative indirect impacts would be significant and would be reduced to less than significant through mitigation measures M-BIO-8A through M-BIO-8E, which would provide for habitat management and conservation of open space areas that would allow for unimpeded wildlife movement and use. This impact would also be mitigated through M-BIO-10 through M-BIO-12." There is no discussion of the project's impacts on natural fire regimes. (See also Jennings, 2018: "Both scenarios (too little fire, too frequent fire) present potential threats for species and community dynamics in southern California as shifts in the natural fire regime, coupled with increasing habitat fragmentation, have the potential to impact wildlife populations, communities, and entire ecosystems.").

Only two mitigation measures address fire (M-BIO-8C and M-BIO-11) but neither discuss the project's impacts on natural fire regimes. In fact, if the project does indeed attain its goal "To minimize the potential exposure of the project Site to fire hazards" (p. 2.4-120), this would constitute creating "Unnaturally long fire intervals [which] can also result in senescence of plant communities, such as chaparral, that rely on shorter intervals for rejuvenation." Nothing in the

draft EIR addresses this impact, and its failure to do so prevents the EIR from providing a legally adequate CEQA analysis.

**B. The Project analysis does not conduct an adequate biological analysis of the impacts of the new interchange and instead illegally defers this analysis to another agency.**

Page 2.4-123 of the draft EIR provides a deferred mitigation measure for the impacts of the new interchange, which the draft EIR concedes “may have the potential to impact or remove biological resources, including RPO wetlands.” The draft EIR then concludes that further study by Caltrans will “ensure potential impacts to biological resources remain less than significant.” This a classic example of illegally deferred mitigation.

It is axiomatic that in the right circumstances, an agency may defer the implementation of mitigation measures provided that the mitigation is enforceable and effective. What the agency may not do, however, is purport to make a significance conclusion based on the future study of the impact. That is exactly what the draft EIR does here. M-BIO-13 only states that Caltrans “should prepare, or cause to be prepared, a biological resources study to evaluate these potential impacts.” The County cannot make a significance conclusion based on a future study. In addition, M-BIO-13 contains no provisions to “ensure potential impacts to biological resources remain less than significant.”

The impropriety of M-BIO-13 is even clearer when the draft EIR itself discloses that the Newland clearly does know some detail of the scope and nature of the new interchange. For example, Figure 6D of the RPP clearly shows the outline of some design of the new interchange – accordingly, the draft EIR must analyze these impacts and not defer them for future study by another agency.

**C. The Project’s analysis regarding off-site wetlands is not supported by substantial evidence.**

Table 3 of the RPP at page 22 asserts that impacts of off-site RPO wetlands is identical for either Option A or Option B. This appears to define common sense, given that Option A proposes “approximately 6,600-foot-long section of the segment of Deer Springs Road between Sarver Lane and Mesa Rock Road to a 2.1B Community Collector (two lanes of travel with a continuous center turn lane). The balance of the road southwest into the city of San Marcos and east to I-15, including its intersections with Sarver Lane and Mesa Rock Road, would be improved to a 4.1A Major Road (a four-lane road with a raised median),” whereas Option B proposes to “construct the entire length of the road from the I-15 interchange to its intersection with Twin Oaks Valley Road as a four-lane road, with an approximately 7,600-foot-long section of the road between Sarver Lane and Mesa Rock Road as a 4.1B Major Road (four lanes of travel with a continuous center turn lane), and the balance of the road, including its intersections with Sarver Lane and Mesa Rock Road, as a 4.1A Major Road.” Because Option A and Option B propose different widths to Deer Springs Road, the impacts to wetlands should also be different. But the RPP asserts the impact is identical. This cannot be the case unless Option A and Option B were identical, which they are not. Indeed, except for this one table, the entirety of the 70-page RPP makes no distinction between Option A and Option B—a severe informational deficiency that renders the draft EIR to be fundamentally incomplete and unable to legally proceed in its current form under CEQA.

This, along with other inconsistencies identified in our other correspond, render the draft EIR fundamentally inadequate under CEQA and it requires substantial revision and recirculation before proceeding on for further review.

**D. The Project analysis fails to identify or analyze inconsistency with the General Plan's resource protection requirements.**

The General Plan generally requires compliance with the County's Resource Protection Ordinance. (See 2017 County General Plan Implementation Plan, at pp. 30, 36, 39.)<sup>1</sup> The project proposes to exempt itself from the Resource Protection Ordinance; therefore, it cannot be deemed to have complied with the applicable General Plan Policies. (As noted in the Implementation Plan, these include M-2.3, M-4.5, LU-6.1, COS-2.1, COS-2.2, COS-2.3, COS-3.1, COS-3.2, LU-7.2, COS-6.3, COS-6.4, S-3.1, S-3.2, S-3.3, LU-6.8, COS-5.3, COS-12.2, S-8.1, S-8.2, and S-9.6.)

Though the draft EIR asserts that the project's RPP is the "functional equivalent" to the RPO, as noted in our August 2017 comment letter, there is no analysis or evidence that substantiates this conclusory assertion. Similarly, there is no analysis or evidence that the RPP complies with the applicable General Plan Policies noted herein.

**E. The Project analysis fails to analyze the project under the County's Biological Mitigation Ordinance.**

The EIR is also defective because it does not include an appropriate analysis of Biological Mitigation Ordinance requirements. Page 2.4-90 of the draft EIR claims that "The Biological Mitigation Ordinance does not apply to the draft North County Plan planning area. Therefore, no impacts to Biological Resource Core Areas would occur." This is an improper analysis under CEQA. The current publicly available draft North County MSCP (<https://www.sandiegocounty.gov/content/dam/sdc/pds/mscp/docs/MSCPNorthCountyPlan.pdf>) at pages 13-14 states that "The County's BMO (Appendix A) will be the primary instrument for determining mitigation requirements for discretionary development projects." Appendix A (<https://www.sandiegocounty.gov/content/dam/sdc/pds/mscp/docs/AppendixANCBMO.pdf>) presents draft Biological Mitigation Ordinance requirements for the North County MSCP area. If the project is going to take "credit" for being in the draft North County MSCP area (which it does, see, for example, page 3.3-44 of the draft EIR, asserting that "The proposed project is currently designated as 'Proposed Hardline Area' in the North County MSCP"), then it must also analyze the requirements of the current draft, including the draft Biological Mitigation Ordinance for the North County MSCP area. Otherwise, it is a defective analysis that does not meet CEQA's requirements. (See, e.g., *Banning Ranch Conservancy v. City of Newport Beach* (2017) 2 Cal.5th 918, 941 ["For all the reasons stated above, the Banning Ranch EIR is insufficient. The City did provide a detailed biological analysis of project impacts, which may have been adequate were Banning Ranch not in the coastal zone. But, however technically accurate the City's analysis might otherwise be, it fell short by failing to account for the Coastal Act's ESHA protections."].)

---

<sup>1</sup> Available at [https://www.sandiegocounty.gov/content/dam/sdc/pds/gpupdate/docs/GP/Implementation%20Plan\\_v2017.pdf](https://www.sandiegocounty.gov/content/dam/sdc/pds/gpupdate/docs/GP/Implementation%20Plan_v2017.pdf).

**F. The Project's analysis of impacts to California gnatcatcher is not supported by substantial evidence.**

The draft EIR notes that a large portion of the project site (over 700 acres) is designated as "critical habitat" for the California gnatcatcher, which is a federally protected species under the Endangered Species Act. (Draft EIR at p. 2.4-28.) The draft EIR then dismisses the critical habitat designation and concludes there will be a less than significant impact because "the project was designed to avoid 33 percent (25.2 acres) of the suitable habitat ...." (*Id.* at p. 2.4-93.) The threshold for significance makes no mention of "suitable habitat" – rather, it states broadly that an impact will be significant if the project "would reduce the likelihood of survival and recovery of listed species in the wild." (*Id.* at p. 2.4-81.) The draft EIR fails to provide any analysis regarding whether the project's impact on "*critical habitat*" "would reduce the likelihood of survival and recovery" of California gnatcatcher. The draft EIR cannot dismiss the critical habitat designation and focus only on "suitable habitat for nesting." As noted by the U.S. Fish & Wildlife Service, critical habitat "contain[s] features essential to the conservation of an endangered or threatened species and that may require special management and protection. Critical habitat may also include areas that are not currently occupied by the species but will be needed for its recovery."<sup>2</sup> "Nesting" is not the only important factor in the "survival and recovery of listed species in the wild"; "physical or biological features needed for life processes" must also be considered. These include: "space for individual and population growth and for normal behavior; cover or shelter; food, water, air, light, minerals, or other nutritional or physiological requirements; sites for breeding and rearing offspring; and habitats that are protected from disturbances or are representative of the historical geographical and ecological distributions of a species ... unoccupied areas that are essential for the conservation of the species." The draft EIR's failure to consider these factors renders it an inadequate document under CEQA.

**G. The Project does not adequately mitigate for impacts to oak root zones.**

The draft EIR states that there will be a requirement for 58.8 acres of mitigation for the project's impacts to oak root zones. (Draft EIR at p. 2.4-173.) The draft EIR also asserts that the project will provide "excess" mitigation of 2.1 acres. (*Ibid.*) This is a clear informational error that requires correction and recirculation, because the discrepancy in the calculation cannot be dismissed by mere "rounding error." The mitigation table discloses that the project will mitigate approximately 38.5 acres (21.7 on-site and 16.8 off-site). The mitigation requirement is approximately 58.8 acres; accordingly there is a mitigation *deficit of 21 acres*, not an excess of "2.1" acres. This failure to properly analyze and mitigate these impacts is sufficient to find the draft EIR legally inadequate. (See, e.g., *Lotus v. Department of Transportation* (2014) 223 Cal.App.4th 645.)

**H. The Project analysis' conclusory assertion regarding impacts to wildlife crossings is not supported by substantial evidence.**

Even though the project proposes to substantially expand the width of Deer Springs Road (to double or even triple its current size, from 2 lanes to 4 or 6 lanes), the draft EIR concludes, without any evidence, that "Wildlife are expected to cross Deer Springs Road and Twin Oaks Valley Road similar to current conditions, because the open space configuration would allow for continued movement to the south and west." Open space to the north and east does not determine the viability of wildlife crossings; rather, as noted by biological experts,

---

<sup>2</sup> See <https://www.fws.gov/endangered/what-we-do/critical-habitats-faq.html>.

**May 31, 2018**  
**Comment on Newland Sierra Project's**  
**Inadequate Biological Resources Analysis**

wildlife crossings are also impacted by the width of the road and traffic volumes, both of which the project proposes to substantially increase. These impacts require mitigation, but the project proposes none other than “open space”:

- “to adequately ensure there is functional connectivity for wildlife to move to and from the open space in the San Marcos Mountains, appropriately sited and designed wildlife crossing structures need to be installed along Twin Oaks Valley Road.” (Jennings, 2017);
- “The proposed increase in the size of Deer Springs Road, the improvements to the I-15 interchange, as well as the expansion of the footprint of development in the immediate vicinity of the I-15 interchange would be exceptionally difficult to plan so that wildlife could continue to move through the area, particularly given the importance of north-south movement through this area ... Appropriately sized, spaced, sited, and designed structures must be included in the design of the road to allow for wildlife movement to avoid increasing the mortality effect of the road and limit the degree of the barrier effect that will occur when the road is widened. Furthermore, incorporating the addition of wildlife crossing structure.” (Jennings, 2017);
- “Other roads of concern in the proposed project are Camino Mayor and the proposed section of Mesa Rock Road that would bisect the proposed central section of “open space”. These two roads would also need to incorporate appropriate wildlife crossing structures to limit the impacts of these roadways on habitat and movement.” (Jennings, 2017).

However, having “open space” does not address the actual increased physical difficulty of wildlife crossing what is currently a 2-lane road as compared to what the project proposes to be at least a 4-lane road or even 6-lane road. There is simply no substantial evidence in the record that “Wildlife are expected to cross Deer Springs Road and Twin Oaks Valley Road similar to current conditions” even when Deer Springs Road is widened to double or triple its current size.

**I. The Project analysis impermissibly fails to include an evaluation of a “non-MSCP hardline” alternative.**

Planning Director Mark Wardlaw wrote in a letter dated June 5, 2017, that:

In order for a project to be included as a hardline within the approved Multiple Species Conservation Plan - North County Plan (Final Plan), the project footprint to be developed and the footprint to be preserved, including any offsite mitigation areas, must be concurred upon by the Wildlife Agencies, the project proponent, and the County. While the Project is the only proposed project included within the current Draft Plan that has not yet received Board approval, inclusion of the Project in the Draft Plan does not, in any manner, indicate County support for the Project or provide the Project with an approval advantage.

**May 31, 2018**  
**Comment on Newland Sierra Project's**  
**Inadequate Biological Resources Analysis**

(See also Letter from R. Talleh, Deputy Director, Planning & Development Services, County of San Diego, *RE: Response to "North County MSCP Steering Committee Presentation"* (Aug. 25, 2017).)

However, the Newland Project draft EIR assumes the Project's inclusion in the "hardline" areas in the draft North County MSCP. Because the North County MSCP is still in draft form and still requires concurrence from federal and state wildlife agencies—and if it is indeed true that "inclusion of the Project in the Draft Plan does not, in any manner, indicate County support for the Project or provide the Project with an approval advantage"—the Project's environmental review documents must evaluate a "non-MSCP hardline" alternative. This alternative would analyze the Project under the possibility that the project site is not included with the MSCP hardline areas.

Failure to include a "non-MSCP hardline" alternative effectively concedes that the Project is going to be included within the North County MSCP hardline area and therefore is a violation of CEQA's rule against piecemealing project approvals. Assuming that the Project site will be designated as "hardline" in the North County MSCP does, in fact, "indicate County support for the Project or provide the Project with an approval advantage" if there is no evaluation of an alternative that does not assume the hardline designation.

Further, failure to analyze a "non-MSCP hardline" alternative or continuing to assume that the Newland Project will be designated as "hardline" in the final North County MSCP violates several mandatory general plan policies. First, as noted in our May 21 letter, General Plan Policy COS-1.4 requires the County to "collaborate," with federal and state wildlife agencies regarding resource preservation. Assuming the inclusion of the Newland project within the MSCP hardline areas before the North County MSCP has been approved violates this policy. Similarly, assuming the inclusion of the Project within the MSCP hardline areas prior to public review and comment on the current draft of the North County MSCP violates General Plan Policy COS-1.10. General Plan Policy COS-1.10 requires the County to "Ensure an open, transparent, and inclusive decision-making process by involving the public throughout the course of planning and implementation of habitat conservation plans and resource management plans." The County's assumption that the Newland Project will be approved as a hardline area in the North County MSCP effectively evades public involvement and input regarding whether the Project Site should be included as a hardline area.

To remedy these errors, the Newland EIR must either include the evaluation of a "non-MSCP hardline" alternative or it must be delayed until after the draft North County MSCP has been approved.

**Re: Newland Sierra (Log No. PDS2015-ER-15-08-001; SCH No. 2015021036, Project Numbers: PDS2015-GPA-15-001, PDS2015-SP-15-001, PDS2015-REZ-15-001, PDS2015-TM-5597, PDSXXXX-HLP-XXX) – Newland Sierra Project Inconsistency with North County MSCP**

Dear Ms. Smith:

As you are aware, we represent Golden Door Properties, LLC (“Golden Door”), a world-class resort and agricultural operation in rural Twin Oaks Valley. The Golden Door has restored farming and beekeeping, including replanting many new trees, on its property, and shares its products through a community Farm Stand and other retail operations. The Golden Door has raised many concerns with the County about the proposed Newland Sierra Project and the impacts of adding urban density the size of the City of Del Mar in our rural community.

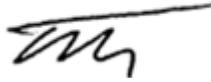

We write today with respect to the Project’s critical inconsistencies with the draft North County MSCP, as a follow-up and supplemental comment to our prior correspondence, in particular our letters dated May 21, 2018, and May 31, 2018. As noted in the enclosed report by Dr. Megan Jennings, there are many procedural and substantive deficiencies in the draft EIR with regarding to this issue. In particular, the draft EIR’s assumption that the Newland project will be designated as “hardline” in the draft North County MSCP “will threaten the functionality of the preserve in the central coastal zone of the [Gopher Canyon-Twin Oaks] plan area.” We believe that these defects are of sufficient severity that the project’s review and processing cannot proceed until these defects are corrected and the project’s environmental review documents are re-published to the public for review and comment under CEQA and other laws. Specifically, the County must evaluate a non-MSCP hardline alternative in the Newland EIR. As noted by the Fourth District Court of Appeal, a valid CEQA analysis should include an evaluation of the project against the current regulations, e.g.: “[E]stimates based on current

LATHAM & WATKINS<sup>LLP</sup>

regulations were also required since the anticipated revised regulations had not yet been enacted.” As you know, the draft North County MSCP has not yet been enacted.

Thank you for your time and attention to our comments. Please do not hesitate to contact us should you have any questions or comments.

Best regards,

Taiga Takahashi

## **Draft North County Multiple Species Conservation Plan Issues Relating to the Proposed Newland Sierra Project**

Megan K. Jennings, Ph.D.

June 12, 2018

Based on a review of the May 23, 2017 working draft of the North County Multiple Species Conservation Plan (NC MSCP), there are several issues of NC MSCP consistency and feasibility as it relates to the proposed Newland Sierra project and the proposed hardline of the project area in this draft of the NC MSCP. The proposed Newland Sierra project will preclude implementation of the conservation goals of the NC MSCP, challenging connectivity and the overall functionality of the reserve design of the NC MSCP as well as vegetation conservation targets.

### **Connectivity and Reserve Design Issues**

The proposed open space design for the Newland Sierra project is inconsistent with the conservation and connectivity goals of the North County MSCP and precludes resilient reserve design in the western portion of the plan area.

### ***Proposed Hardline Not Reviewed or Approved by Wildlife Agencies***

The proposed hardline of the Newland Sierra project was put into the draft plan by the County at the developer's request but not yet been reviewed by wildlife agencies or been available for public comment. Hardline projects are areas where development impact areas and the preserved open space areas have been predetermined and hardlined for the purposes of a conservation plan. Hardline projects are included and analyzed in Habitat Conservation Plans approved pursuant to 16 U.S.C. section 1539(a)(2)(A) and Natural Community and Conservation Planning Act (California Fish and Game Code section 2800 et seq.) plans such as the NC MSCP. These plans must receive concurrence from the U.S. Fish and Wildlife Service (USFWS) and the California Department of Fish and Wildlife (CDFW) prior to implementation.

In the case of the NC MSCP, the plan must also be approved by the County Board of Supervisors. To date, the NC MSCP has received neither the required concurrence from the wildlife agencies nor the approval of the Board of Supervisors. The determination to place this area into hardline is in direct conflict with the management goals of the NC MSCP and is based on an inadequate assessment of connectivity and is in direct conflict with Wildlife Corridor Conservation Goal and Actions (p. 5-83) stated in the Draft NC MSCP dated May 2017 (and see below).

### ***Connectivity Design of Project Inconsistent with NC MSCP Corridor Conservation Goal and Actions***

The main goal relating to connectivity is to “conserve wildlife corridors within the Preserve, and connect adjacent HCP core areas for a range of wildlife species.”

More specifically, the Corridor Conservation Actions (p. 5-83) state that:

- Large contiguous blocks of habitat are preferred
- Stepping stones are not a goal, rather a minimum
- Corridors should have edge buffering
- Design should consider factors that impact wildlife passage like human developments, edge effects, roads and driveway, reduced structural and compositional diversity of vegetation, agricultural cultivation, free roaming pets, lighting, and noise

- Whenever possible, include deliberate redundancies linking cores in more than one way to establish and/or retain functional connectivity

The proposed design of open space “Blocks” and “Corridors” in the Newland Sierra project is not consistent with these draft guidelines for connectivity planning and implementation in the NC MSCP. Instead, the proposed design separates the second largest block of open space remaining in the Draft NC MSCP Plan area in three separate blocks. The three separate blocks are 870.2, 153.9, and 185 acres and are described as “interconnected” (DEIR, p. 2.4-1). All are considered “medium” in size according to the Draft NC MSCP (pp. 4-4 to 4-5), and two are on the small end of medium. These three blocks are separated from each other by large sections of the development, roads, or passage through narrow pinch points that constrain wildlife movement. The design creates stepping stones that are separated and confined by the proposed development features and the “corridors” are not buffered from these effects. Furthermore, the most likely movement pathways in the proposed plan area will be permanently altered by development.

In the DEIR, the two smaller habitat blocks (Block 2 and Block 3) in the proposed project are included in a description of the proposed open space design as “large, interconnected open space blocks within the project” (DEIR, p. 2.4-1). The size of the proposed open spaces under the proposed development plan are compared to that of other preserved lands in the vicinity of the project area (DEIR, Table 2.4-24, p. 2.4-168) to assert that the two smaller habitat blocks (Block 2 and Block 3) in the proposed project are of adequate size and support a reserve design consistent with the Draft NC MSCP. However, what this in fact demonstrates is that the project would take the second largest block of habitat remaining west of I-15 in the NC MSCP Plan area and fragment it resulting in three smaller “medium” blocks, as defined by the Draft NC MSCP (pp. 4-4 to 4-5), two of which are on the small end of medium. This is directly in conflict with the stated connectivity and conservation planning goals of the NC MSCP.

In addition, the flawed logic justifying the open space design that would fragment this large habitat block ignores the fact that the configuration and location of these blocks is just as important as their size to supporting wildlife movement. Reducing the overall size of the habitat patch in this area will significantly impact wildlife habitat and movement and cannot be adequately mitigated by an open space design that introduces more fragmentation and exposure to edge effects.

### ***Site-Specific Connectivity Issues***

Under the Draft NC MSCP, the Valley Center Planning Unit (PU) and Gopher Canyon-Twin Oaks PU would more appropriately be treated as one piece, similar to the Santa Margarita-Mt. Olympus PU that crosses over I-15. The pre-approved mitigation area (PAMA) in the combination of these two units primarily functions to preserve wildlife connectivity, particularly east-west connectivity across I-15, and as such, should be interconnected when considering the stated goals and conservation actions for each PU. The Merriam Mountains is critical to accomplishing conservation actions stated in each of these Planning Units.

For the Valley Center PU, there is a Conservation Action that states (bold type added to emphasize critical elements of the NC MSCP objectives and actions that are threatened by the proposed Newland-Sierra hardline):

**Conserve land within this Planning Unit to ensure the ecological functionality of the Valley Center Linkage** (see Section 5.4)

*Issue: However, there is a conflict between specific proposed activities in the Newland-Sierra hardline area and this NC MSCP action, because the Merriam Mountains area is a key pinch point for this implementing this action.*

For the Gopher Canyon-Twin Oaks PU, one Conservation Action is to:

**Conserve land to provide for wildlife movement between the Gopher Canyon-Twin Oaks Planning Unit and conserved lands within adjacent MHCP Plan Areas (San Marcos).**

*Issue: Again, there is a conflict between specific proposed activities in the Newland-Sierra hardline area and this NC MSCP action, because the Merriam Mountains area is a key pinch point towards accomplishing this goal.*

Further, in the section on Regional Linkages under Section 5.4 “Preserve Connectivity” (p. 5-69), the description of the Valley Center Linkage (NC3) acknowledges “Several impediments to connectivity exist within this linkage including Interstate 15 and Old Highway 395. Portions of Moosa Creek, particularly west of Interstate 15, are heavily constrained by existing agricultural and residential development.”

As such, the Merriam Mountains area should be considered in planning for landscape connectivity between Valley Center and Bonsall, in particular for species that may move along ridges or mid-slopes and through chaparral rather than riparian areas.

The I-15 linkage should also have a wide buffer so as not to incur edge effects from adjacent development, wherever possible. There is already development in a number of locations along this linkage, so preserving larger blocks of high quality habitat for resting and foraging along the corridor are important for its functioning as a stepping stone corridor.

### **Vegetation Community Conservation Issues**

There are no specific vegetation community conservation acreage targets for each of the North County NC MSCP Planning Units (PUs), but this the scale at which impacts will occur and preservation of these vegetation communities requires a consideration of the spatial distribution of intact communities of each vegetation type as well as the distribution of the proposed activities (e.g., development projects such as the Newland Sierra project) that will fragment the natural vegetation in those areas.

There are 15,645 acres of chaparral vegetation, the predominant vegetation type in the Merriam Mountains, currently in the baseline preserve of the NC MSCP For chaparral vegetation. Another 24,885 acres of chaparral is within Pre-approved Mitigation Area (PAMA) and an additional 9,470 acres are likely to be acquired by public agencies and land conservancies.

The goal for this vegetation type is to establish: “Large areas of conserved chaparral vegetation, featuring a variety of chaparral types, throughout the Plan Area sufficient to maintain sustainable occurrences of covered species utilizing this habitat.”

The distribution of the types of chaparral vegetation mentioned is not mapped or described in the NC MSCP. According to the SANDAG vegetation layer, the Merriam Mountains chaparral is southern mixed chaparral.

**Chaparral Objectives** (bold type added to emphasize the critical element of the NC MSCP objectives and actions threatened by the proposed Newland-Sierra hardline):

- Conserve a total of X acres of chaparral vegetation featuring a variety of chaparral types, within publicly held and privately owned conserved lands (including Baseline Preserve).
- **Maintain the viability** of 15,645 acres of chaparral vegetation within the Baseline Preserve

- Conserve X acres of chaparral vegetation within the PAMA through avoidance and mitigation for private development projects during the 50-year permit term.
- Conserve X acres of chaparral vegetation within the PAMA through acquisition by public agencies and land conservancies during the 50-year permit term.

Chaparral Conservation Actions (bold type added to emphasize critical elements of the NC MSCP objectives and actions that are threatened by the proposed Newland-Sierra hardline):

- 1) **Conserve chaparral vegetation throughout the PUs**, particularly within the Santa Margarita-Mount Olympus (PU-1), Guejito-Pauma (PU-2), and Ramona (PU-8) PUs

*Issue:* There is a conflict between specific proposed activities in the Newland-Sierra hardline area and this NC MSCP objective, because the viability of entire vegetation communities cannot be accomplished if conservation targets are focused only on certain locations within the Plan Area. These targets must be set in a programmatic fashion (i.e., at the PU level), not on an ad-hoc, project-by-project basis.

- 2) **Conserve large areas of chaparral contiguous with other natural vegetation communities to provide linkages and corridors for covered species and other sensitive species within the plan area.**

- 3) **Manage chaparral vegetation within conserved lands to benefit covered species**, including Hermes copper butterfly, Del Mar manzanita, and Encinitas baccharis

*Issue:* There is a conflict between specific proposed activities in the Newland-Sierra hardline area and this NC MSCP objective, because this objective cannot be achieved if there are very few conserved lands within a PU. Acquisitions and conservation in PAMA must also be targeted to benefit covered species.

- 4) **Implement the North County BMO, RPO, and Conservation Subdivision Program to require avoidance, minimization, and mitigation measures for impacts to chaparral vegetation for private and public projects**

*Issue:* The Newland Sierra project should be held to this standard. The draft EIR proposes to exempt the project entirely from the RPO and essentially asserts that there are no requirements or standards of the BMO that may be applied, even though there is a draft BMO for North County in the draft NC MSCP.

Although the Objectives for the planning unit focus on the viability of natural vegetation within the baseline preserve, the 321 acres in the Gopher Canyon-Twin Oaks PU make up less than 7% of the chaparral vegetation within the PU. The viability of the vegetation is dependent on what is happening in the surrounding environs. This includes fragmentation that may introduce or increase the spread of invasive plants and increased fire risk that, through repeated fires at short intervals, could result in vegetation type conversion from chaparral to non-native annual grasses in this planning unit.

Fire-return intervals (the average time between two fire events) in southern Californian shrubland habitats are now 30% shorter now than during pre-settlement (Keeley *et al.* 1999, Safford *et al.* 2011). This shifting disturbance regime with shortened intervals between fires interrupts the successional cycle, reduces plant diversity, and can result in large-scale vegetation type conversion to non-native annual grasslands (Zedler *et al.* 1983, Bachelet *et al.* 2001, Lenihan *et al.* 2003, Syphard *et al.* 2006, Keeley and Brennan 2012), and has been linked to increased human development, particularly at intermediate densities (Syphard *et al.* 2007, 2009). As human populations in southern California have grown dramatically over the last century, particularly in coastal areas, short fire-return intervals paired with habitat fragmentation may have synergistic and long-term impacts on landscape connectivity that present a formidable conservation challenge.

In the NC MSCP Plan Area, the proposed hardline for the Newland Sierra project would result in loss and degradation of over 35% of the chaparral vegetation in the Gopher Canyon-Twin Oaks PU (1,760 acres out of 4,779). Overall, this represents a nearly 23% reduction of native cover across the entire planning unit (1,760 acres out of 7,752), contrary to chaparral Conservation Action 1.

With only 719 acres of baseline preserve in this PU to start with and over 7,000 acres of natural vegetation, development of greater than one-quarter of the land available for PAMA in this Planning Unit will threaten the functionality of the preserve in the central coastal zone of the plan area.

This is particularly concerning because the Gopher Canyon-Twin Oaks PU is one of only three PUs west of the I-15, and it is a critical component of the western portion of the plan area.

Further, the loss and fragmentation of this large, contiguous block of chaparral is inconsistent with Conservation Action 2 because potential linkages between the Valley Center PU immediately to the east will be separated and there will be no viable connection between the chaparral vegetation in these two PUs. This connection is important because the Valley Center PU is primarily made up of long, linear strings of preserve and PAMA, and large core areas are needed adjacent to these areas to preserve viable vegetation communities and populations of covered and listed plant and animal species.

In addition, if the NC MSCP covered species associated with chaparral are to maintain viable populations, then distribution of adequate blocks of contiguous habitat comprised of chaparral vegetation should be preserved throughout the plan area, rather than just in the 3 largest Planning Units (Santa Margarita-Mount Olympus, Guejito-Pauma, and Ramona), which are primarily east of I-15. These covered species include western spadefoot toad, coast horned lizard, golden eagle, and pallid bat.

Accordingly, it is critical that these important programmatic biological conservation issues are resolved through the NC MSCP process, before the Newland Sierra project should assume either the nature or extent of the NC MSCP's treatment of the Merriam Mountains area in developing any project in this area. Given the importance of the Merriam Mountains area to biological conservation objectives and actions in the draft NC MSCP and as set forth in federal and state laws and regulations, the best practice would be for the NC MSCP to be fully studied, analyzed, and approved before moving forward with any consideration of large-scale development in the Merriam Mountains area.

SUBJECT: Newland Sierra – San Diego County, California  
Acoustic and Vibration Review

Dear Ms. Van Ness:

Per your request, we have reviewed the following sections of the Draft Environmental Impact Report (DEIR) for the Newland Sierra Project (dated June 2017) in San Diego County, California with the primary focus the potential significant impacts to the existing operations at the Golden Door.

- Section 2.10 Noise
- Section 2.13 Traffic and Circulation
- Appendix Q: Noise Report (by DUDEK)
- Appendix R: Traffic Impact Analysis (by LLG)

In summary, the current Newland project assessment is incomplete. First, it does not fully address regulatory requirements; it does not include a proper noise survey of the project site and vicinity that establishes baseline conditions with appropriate confidence. Second, the Newland studies have not proposed mitigation measures for identified significant impacts; rather they propose deferred analysis or classifies them as unavoidable. We disagree with such positions for the reasons noted herein.

The study is missing an assessment of noise and vibration at the Golden Door property, where quiet ambient conditions are required for operation. Some construction activities identified in the study would likely be disturbing and clearly audible above ambient conditions, even if the San Diego County noise limits are met. The Newland technical analysis should, but does not, address these conditions.

## **NOISE AND VIBRATION CRITERIA**

The Newland technical analysis is generally missing an assessment of noise and vibration impacts to the Golden Door facility, located south-west of the project along Deer Springs Road. This assessment should be included given the Golden Door's proximity to Deer Springs Road and the project site. This receiver (the Golden Door property) should be assessed using the standards for residential uses and NSLUs since it includes sleeping facilities, and meets the following definition from *San Diego County Guidelines for Determining Significance* (dated January 2009):

### **1.1.6 Noise Sensitive Land Use (NSLU)**

Any residence, hospital, school, hotel, resort, library, or similar facility where quiet is an important attribute of the environment.

This type of facility relies on quiet ambient conditions with minimal intruding noise common in a rural area to operate successfully. Existing ambient conditions should be maintained to avoid significant impacts and such an assessment is required for CEQA items XI.c and XI.d discussed below.

## **NOISE SURVEY**

The noise study by DUDEK is incomplete as it has not properly documented existing ambient noise levels in the project vicinity. Only daytime short-term noise measurements (20 mins long) were taken (primarily next to existing roadways). This is insufficient to establish ambient noise conditions (CEQA Items XI.c & d) or to address regulatory requirements (CEQA Item XI.a).

Noise standards in the San Diego County General Plan are in terms of CNEL, which is the average noise level over 24-hours. Accordingly, CNEL inherently requires noise measurements over 24-hour period, at a minimum. Measurements were only taken during mid-day and do not allow for establishing the full range of noise exposure, particularly for congested segments such as Deer Springs Road (currently Traffic Level of Service F). (Refer to definitions of common acoustical terms attached to this letter.)

Statistical noise metrics (such as L90 and L99) (typically required to properly establish existing ambient conditions) are missing from the noise study. We anticipate ambient noise levels are very low away from the road on the Golden Door property and a survey of these conditions should be considered to properly evaluate the impact of construction related noise as discussed in the sections below.

The Newland technical analysis does not use proper instrumentation. Measured daytime levels were as low as 39 dBA, which is near the noise floor (lowest measurable level) of the sound level meter used in the Newland technical analysis (SoftdB Piccolo). This type of instrument may not be adequate in conducting 24-hour noise surveys since nighttime and early morning ambient noise levels are expected to be at or below this level.

Reported existing conditions on Deer Springs Road should be further evaluated and compared to the noise study performed for the San Diego County General Plan Update (FEIR Dated August 2011, Section 2.11), which reports existing noise levels close to 10 dB lower (64 dBA CNEL) than the DUDEK study at a similar distance from the road (100 feet). It is difficult to evaluate the credibility or merits of the Newland technical analysis without analysis as to why existing noise levels are different in the General Plan Update analysis.

#### **TRAFFIC NOISE MODELING**

The Newland noise study has not clearly documented the basis of modeling for future conditions without the project. This is key in assessing noise under CEQA Items a, b and c as described in the sections below.

The study has not included adequate documentation of modeled future conditions with the proposed road changes along Deer Springs Road (Options A and B) including adding new lanes (e.x. 6 lane vs 4 lane vs 2 lane with shared turning lane), grading and realignment that all affect traffic noise exposure. Without this information, the accuracy of the modeled future conditions cannot be verified.

#### **CEQA ITEM XI.a – Noise exposure exceeding codes and standards**

##### Traffic Noise

The study is missing assessment of project generated traffic noise against the following noise limits in the San Diego County General Plan (Table N-2, Items 1 & 3). A proper noise survey with minimum 24-hour measurements is required to address these limits as described in the section above.

- 60 dBA CNEL at existing or future noise sensitive land uses (NSLU)
- 65 dBA CNEL at existing commercial land uses

The Newland study has only partially assessed project noise against the following significance criteria (*San Diego County Guidelines for Determining Significance*). The Newland study has not properly documented existing conditions (see Noise Study section above). Further, the basis of the traffic noise modeling may be flawed and require revisiting as described below.

- 3 dB increase over existing, at “documented noisy site” (exceeding standards above)
- 10 dB increase over existing
- 2 dB increase over existing, inclusive of non-project conditions

Future traffic noise on Deer Springs Road without the project may be overpredicted, considering that this road and nearby intersections are currently operating at Level of Service LOS F as described in the Traffic Impact Analysis (Appendix R1a), which would limit traffic noise due to reduced speed during congestion. Traffic noise should be assessed under free traffic flow conditions (typically at LOS C), as this would result in worst-case noise exposure.

The predicted noise levels appear to be based on the expansion of Deer Springs Road according to the San Diego County General Plan, but this may not be an accurate representation of future conditions for the following reasons.

First, this roadway expansion may not be an active project or may not occur at all (could be accepted at LOS F), consistent with the *Regional Connectivity* policy in the Mobility Element of the San Diego County General Plan, considering this roadway is already beyond capacity:

*“Regional connectivity issues would apply when congestion on State freeways and highways causes regional travelers to use County roads, resulting in congestion on the County road network. Rather than widening County roads to accommodate this traffic, the deficiencies in the regional road network should be addressed.”*

Future traffic on this road (without the project), if expanded, may not increase, because traffic flow may be limited by the service level of the I-15 interchange area, as the Deer Springs Road segment and turning lanes were accepted at LOS E/F per the Mobility Element of the current general plan.

Furthermore, Caltrans reportedly has no projects in this area, including the I-15 interchange, and has stated that the traffic impact study is “insufficient and misleading” (see letter from Roy Abboud dated August 10, 2017). Since the Newland study appears to be the basis for future traffic noise analysis, it needs to be revised to address any changes in the traffic analysis

#### General Construction Noise

Section 3.3 of the report provides only a generic assessment of noise and vibration from general construction activities such as grading, earthmoving, batch processing and others. Assessment is only included for residential receivers near the proposed project entrance (I-15 interchange) and is missing assessment for other NSLUs such as residences and the Golden

Door property along Deer Springs Road. Assessment of construction of Deer Springs Road is also missing.

The study concludes the following are potentially significant impacts but proposes no mitigation (discussed below):

- On-site construction of Town Center neighborhood
- Construction on Mesa Rock Road at proposed project entrance

The study has incorrectly determined the following impacts to be less than significant due to “project design features” such as properly maintained construction equipment, generic setbacks from sensitive receivers, and others, but provides no quantitative evidence to support this claim (mitigation discussed below).

- Construction staging areas
- Equipment repair
- Portable Rock-Crushing/Processing Facility

#### Construction Related Traffic Noise

Construction traffic on Deer Springs Road is improperly assessed by comparing the anticipated number of vehicles on the road to what appears to be the peak hour and average daily traffic volume (ADT). Construction traffic is typically comprised of large trucks and other heavy vehicles, which generate higher noise levels than typical automobiles.

According to observations made during the Newland noise study, traffic on Deer Springs Road is primarily automobiles, with trucks accounting for less than 5% total volume. Construction traffic would therefore be out of character for this existing rural area and should instead be assessed based on noise increase over ambient conditions and the county’s limits at sensitive receivers.

#### Other Construction Activities

Some other construction activities may include blasting, pile driving, rock crushing, cement batch plant, and possibly others. The Newland study confirms such activities will likely be used for this project. The Newland study does not include a technical assessment of blasting noise but identifies it as a potentially significant impact requiring further analysis (mitigation discussed below).

The Newland study has not properly analyzed noise from pile driving, claiming the county’s impulsive noise limits do not apply since the pile driver would not generate noise for more than 20% of the hour, which is below the county’s threshold of 25% of the measurement time

(*San Diego County Guidelines for Determining Significance, Noise, Section 4.2.C*). However, the claimed 20% use time is based on a generic “use factor” used by noise prediction software issued by the Federal Highway Administration (FHWA). The Newland study does not even attempt to make an estimate of actual usage time. A project specific analysis should therefore be provided based on the actual and detailed project construction schedule and plan as discussed in the mitigation section below.

**CEQA ITEM XI.b – Excessive exposure to groundborne vibration or noise**

Construction Vibration

The study only provides generic assessment of construction vibration but confirms various activities including grading, blasting, and others are potentially significant. Specific assessment including all sensitive receivers near the project site and along Deer Springs Road should be carried out. Such assessment currently does not exist.

**CEQA ITEM XI.c & d – Substantial permanent or temporary increase in ambient noise**

Traffic Noise

Increases in traffic noise above existing conditions in the project vicinity would need to be reassessed once a proper noise study has been completed as discussed in the section above.

Construction Noise & Vibration

The study is missing an assessment of construction noise and vibration in comparison to local ambient conditions, and this would require a proper study as discussed above. Assessment should include the full range of planned construction processes such as blasting, batch processing, grading etc. as well as construction related traffic that may be out of character for this rural area. This assessment should be used to author specifications that are included in bidding and contract documents to accurately reflect project delivery methods that would affect construction costs.

Ambient noise levels on the Golden Door property are likely very low (40 dBA or less), particularly away from the road, and we anticipate construction activities such as blasting, pile driving and construction on Deer Springs Road would be clearly audible as estimated in Table 1 below. This type of facility requires a quiet environment, and such a large increase in noise levels would be disruptive and alternatives to loud construction methods (such as pile driving) may need to be required if there is no other feasible mitigation. This is particularly important for this large-scale development where construction reportedly could span close to 10 years.

TABLE 1 – Estimated Construction Noise at Golden Door Property

| Example Activity                                                                                  | Ref. Level at 50 ft (Lmax) <sup>1</sup> | Setback on Golden Door property | Predicted Noise Level <sup>2</sup> | Increase above Ambient (est. 40 dBA) |
|---------------------------------------------------------------------------------------------------|-----------------------------------------|---------------------------------|------------------------------------|--------------------------------------|
| Blasting                                                                                          | 94 dBA                                  | 2,000 ft                        | 62 dBA                             | +22 dB                               |
|                                                                                                   |                                         | 5,000 ft                        | 54 dBA                             | +14 dB                               |
|                                                                                                   |                                         | 10,000 ft                       | 48 dBA                             | +8 dB                                |
| Pile Driving                                                                                      | 101 dBA                                 | 2,000 ft                        | 69 dBA                             | +29 dB                               |
|                                                                                                   |                                         | 4,000 ft                        | 63 dBA                             | +23 dB                               |
| Batch Plant                                                                                       | 83 dBA                                  | 5,400 ft                        | 44 dBA                             | +4 dB                                |
| Grading<br>(Deer Springs Road)                                                                    | 85 dBA                                  | 50 ft                           | 85 dBA                             | +45 dB                               |
|                                                                                                   |                                         | 600 ft                          | 64 dBA                             | +24 dB                               |
| Compactor<br>(Deer Springs Road)                                                                  | 80 dBA                                  | 100 ft                          | 74 dBA                             | +34 dB                               |
|                                                                                                   |                                         | 600 ft                          | 59 dBA                             | +19 dB                               |
| Paver<br>(Deer Springs Road)                                                                      | 77 dBA                                  | 100 ft                          | 71 dBA                             | +31 dB                               |
|                                                                                                   |                                         | 600 ft                          | 56 dBA                             | +16 dB                               |
| Concrete Mixer Truck<br>(Deer Springs Road)                                                       | 79 dBA                                  | 100 ft                          | 73 dBA                             | +33 dB                               |
|                                                                                                   |                                         | 600 ft                          | 58 dBA                             | +18 dB                               |
| NOTES:                                                                                            |                                         |                                 |                                    |                                      |

## MITIGATION MEASURES

### Traffic Noise

The study states mitigation for traffic noise is infeasible due to adverse community response but provides no assessment of potential benefits for this project, which is required by CEQA in order for the public to make informed decisions.

Noise barriers are a common and effective mitigation for traffic noise and would likely benefit NSLUs (such as the Golden Door) along project impacted roadways such as Deer Springs Rd. There are a limited number of driveways on Deer Springs Road and periodic breaks in a noise barrier for driveways would not render these barriers ineffective. Any NSLUs that would receive limited or no benefit from installing noise barriers should be clearly identified in the study and mitigation and/or alternatives proposed.

The remaining traffic noise mitigation such as reduced speed limits and other traffic calming measures may not be undesirable since they may also be considered for traffic congestion relief on already overcrowded roadways such as Deer Springs Road.

### General Construction Noise & Vibration

Except for impulsive types of activities (discussed below), the Newland study only recommends deferred analysis (for vibration) or cites “project design features” that would likely not mitigate construction noise since they are generally considered industry standard practice (such as properly maintained construction equipment with working mufflers). The Newland study also states these project design features have already been considered in the assessment and therefore cannot be proposed as mitigation.

A proper study needs to first predict anticipated noise and vibration exposure during various construction phases, identify impacted areas and develop specific mitigation measures quantitatively shown to reduce impacts below threshold of significance. For some high-noise and vibration activities (such as pile driving, jackhammer, etc.), the only feasible mitigation may be use of alternative construction methods, and this should be confirmed with mock-up testing of such activities prior to EIR approval. The Newland study fails to employ the proper methodology.

In addition, use of noise barriers to mitigate construction noise should be based on a project specific study used to evaluate feasibility and identify specific locations, heights and extents for such mitigation measures. This is essential since noise attenuation provided by a barrier varies greatly depending on barrier height and location of source, receiver and barrier and topographical parameters.

A construction noise and vibration monitoring plan should be included as a mitigation measure to ensure regulatory noise limits continue to be met throughout construction and to provide a quantifiable record in the event of complaints. This measure should also establish protocols for mitigation if regulatory noise or vibration limits are exceeded such time restrictions, use of sound barriers and possibly others. The plan should include procedures to be followed when noise and vibration limits are exceeded. This is also recommended by Caltrans guidelines for construction vibration (*Transportation and Construction Vibration Guidance Manual*, September 2013).

### Blasting Noise & Vibration

The Newland study states that blasting will be used on this project and would be the primary source of construction vibration but only proposes deferred analysis for mitigation. This is not consistent with CEQA, which requires such studies be part of the EIR process and used to develop mitigation measures for identified significant impacts.

A project specific blasting study should be included in the EIR that identifies and includes all sensitive receivers in the project vicinity that may be impacted, including the Golden Door property. Given the proximity to existing residential uses, a pilot study of limited blasting should be undertaken to develop appropriate mitigation or determine if such activities should even be allowed, as it is conceivable that alternative construction methods may be warranted to control noise and vibration levels.

The Newland study only requires blasting vibration to meet the county's limit of 1 in/sec PPV (*San Diego County Guidelines for Determining Significance, Noise, Section 4.2.C*). However, this criteria may not be stringent enough given the sensitive nature of the surrounding uses.

Blasting noise and vibration should be assessed against the existing local ambient conditions since blasting noise would be out of character in this rural area. In the absence of a specific study used to establish appropriate limits above the existing ambient, we recommend limits of 50 dB (linear) for airborne noise and 0.02 in/sec PPV for vibration levels, based on the *Transportation and Construction Vibration Guidance Manual*, issued by Caltrans September 2013.

Blasting noise and vibration monitoring should be included as discussed above for general construction activities.

Where blasting would exceed noise and vibration levels discussed above, alternative demolition methods should be used. This could include manual methods (such as saw-cutting), expansive demolition (expansive mortar), electrical rock disintegration, and possibly others.

#### Future Development

This project proposes a large mixed-use development in a primarily rural area, and over time the project may encourage further development in this area. Future development should be assessed against the current ambient conditions to avoid incrementally allowing higher and higher noise and levels at nearby NSLUs. This mitigation measure should be considered for the proposed Specific Plan for the development area.

Enclosures:   Definitions of Common Acoustical Terms  
                  Curriculum Vitae – Nathan Sibon  
                  Curriculum Vitae – Chris Papadimos

### **DEFINITIONS OF COMMON ACOUSTICAL TERMS**

**Decibel, dB** – A unit describing the amplitude of sound, defined as 20 times of the logarithm of the ratio of the sound pressure measured to the reference pressure (20  $\mu$ Pa).

**A-weighted Sound Level, dBA** – The sound pressure measured using the A-weighting filter network that de-emphasizes the very low and very high frequency components of the sound spectrum in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.

**Ambient Noise** – The sound level in a given environment usually comprised of many sources in many directions near and far with no particular sound dominant. It is defined as  $L_{99}$  or the noise level exceeded 99% of the time.

**Background Noise** - The total noise from all sources other than the source of interest. It is often defined as  $L_{90}$  or the noise level exceeded 90% of the time.

**Community Noise Equivalent Level, CNEL** – The average A-weighted noise level in a 24-hour day, obtained after adding 5 dB to evening hours (7:00 pm to 10:00 pm) and 10 dB to sound levels measured in the night (between 10:00 pm and 7:00 am).

**Day/Night Noise Level,  $L_{dn}$  (or DNL)** – The average, 24-hour A-weighted noise level, obtained after adding 10 dB to levels measured at night (10:00 pm to 7:00 am).

**Integrated or Equivalent Noise Level,  $L_{eq}$**  – The energy average A-weighted noise level during the measurement period.

**Sound level meter** - An instrument that measures sound in dB. Various features are incorporated into such instrument including frequency bands, integration of sound over time and display of average, minimum, and maximum levels.

**Sound pressure level** - the ratio, expressed in decibels, of the mean-square sound pressure level to a reference mean-square sound pressure level that by convention has been selected to approximate the threshold of hearing (0.0002  $\mu$ bar)

**Frequency** – The number of times per second that the oscillation of a wave of sound or that of a vibrating body repeats itself, expressed in Hertz (Hz).

**Octave band** - The frequency range of one octave of sound frequencies. The upper limit is always twice the frequency of the lower limit. Octave bands are identified by the geometric mean frequency or center between the lower limit and the upper limit.

**NATHAN SIBON**  
**ASSOCIATE**

Mr. Sibon has been with our consulting practice since July 2014 after graduating from Columbia College Chicago with a B.S. in Acoustics. Since then, Mr. Sibon has been closely working under the direction of Mr. Papadimos and rapidly gaining practical consulting experience including all aspects of community and environmental noise and vibration.

Specifically, he has experience in establishing criteria to address local and state regulations, carrying out environmental surveys, analyzing traffic and construction impacts, developing and implementing mitigation strategies, and reviewing of environmental studies.

Mr. Sibon strives to provide meaningful, project specific solutions through clear understanding of the client's goals and early project involvement. He works on specific tasks associated with current projects either independently or under the direction of senior staff.

**PROJECT EXPERIENCE**

- 410 Noor - South San Francisco, CA - Acoustical study for proposed residential development under the departure path for San Francisco International Airport.
- Golden Gate Recreation Center - Oakland, CA - Noise remediation for rooftop mechanical equipment for community center to comply with local code.
- Hakone Gardens - Saratoga, CA - Participated in an acoustic study to address special event noise in the surrounding area for compliance with local code.
- Lagunitas Country Club - Ross, CA - Measured and assessed club noise to the surrounding residential community for environmental compliance.
- Rancho McHolland - Hemet, CA - Peer review of EIR for analyzing potential noise impacts for new gas station and carwash near existing residential neighborhoods.
- Raymond-Ticen Winery - St. Helena, CA - Measured and analyzed special event noise emissions at the winery and assessed potential impact to the project vicinity.
- Rotten Robbie - Sebastopol, CA - Participated in the review and analysis of car wash noise and evaluation of noise control options for local code compliance.
- Safari Highlands - Escondido, CA - Peer review of EIR for large-scale residential development to analyze potential noise and vibration impacts to surrounding areas.
- Safari Kid - Hayward, CA - Acoustic consulting for outdoor play area for daycare facility and develop mitigation for compliance with local code.
- St. Mary's Medical Center - San Francisco, CA - Facility mechanical equipment noise remediation to meet local code at surrounding residences.
- Suprema Meats - Oakland, CA - Participated in a noise study and peer review to assess facility potential impacts to the surrounding neighborhood.

## **CHRISTOPHER PAPADIMOS, INCE**

### ***PRINCIPAL***

CHRISTOPHER PAPADIMOS is an acoustical consultant with close to 30 years of professional experience in measuring, assessing and developing mitigation strategies for projects with acoustical and vibration requirements.

Since 1989, he has worked continuously on a large number of projects for various types of facilities involving environmental acoustics, noise and vibration control for mechanical systems, structural noise and vibration, and architectural acoustics. Projects include residential and commercial buildings, institutional and government buildings, worship and performing spaces, and transportation and industrial facilities.

Mr. Papadimos has authored numerous acoustical studies for various project types. Transportation noise and vibration studies include freeways and rail systems, road widening and improvement projects, and airport facilities. Other studies include residential, commercial and mixed use developments, and various types of industrial facilities.

Mr. Papadimos favors a practical approach of early integration of acoustical requirements into each project. He is experienced in establishing acoustical criteria, undertaking site and building surveys, developing and implementing mitigation strategies, reviewing construction methods and providing options for remedial solutions. He has participated on research projects, provided expert testimony and remains actively involved in the development of technical standards and guidelines.

### **PROFESSIONAL ENGAGEMENTS**

- Papadimos Group – Founding Principal (January 2005 to present)
- Cerami & Associates – Associate Principal (April 2004 to December 2004)
- Shen Milsom & Wilke – Associate (May 2001 to March 2004)
- Illingworth & Rodkin – Senior Consultant (January 1999 to May 2001)
- Frank Hubach Associates – Consultant (May 1995 to December 1998)
- Illingworth & Rodkin – Consultant (July 1989 to May 1995)

### **EDUCATIONAL BACKGROUND**

- University of California at Los Angeles , B. Sc. Mechanical Engineering, (1989) Magna Cum Laude, Departmental Scholar, Dean’s and Honor Lists
- Airport Noise Planning using INM Computer Modeling, Engineering Program, University of Texas at Austin, 1993

### **PROFESSIONAL SOCIETIES**

- ASHRAE – Past Chair for Technical Committee and Member
- Institute of Noise Control Engineering – Full Member
- AMCA – Voting Member for Standard Development

## **PROJECT EXPERIENCE (Partial List)**

- 410 Noor - South San Francisco, CA - Acoustical study for proposed residential development under the departure path for San Francisco International Airport.
- BART Subway Extension to SFO, Colma, CA - Noise and vibration consultant and expert witness to the Coalition of Colma Cemeteries.
- Bay Bridge Pile Demonstration Project - San Francisco, CA - Participated on environmental studies for the eastern span bridge replacement project.
- Black Dog Amphitheater - Burnsville, MN - Acoustic studies for new amphitheater to the surrounding communities
- Boot & Shoe Restaurant - Oakland, CA - Expert witness and peer review for restaurant remodel that included outdoor dining next to residential.
- Cal Memorial Stadium - Berkeley, CA - Acoustic consulting and expert witnessing for large renovation project to address community concerns.
- Community Pool - Calistoga, CA - Expert witness and analysis for new community pool project to limit noise emissions to surrounding residential areas.
- Caltrans Soundwall Studies - Participated in before and after noise studies to study the effectiveness of sound barriers under various weather conditions.
- Davies Vineyards Winery - St. Helena, CA - Provided acoustic review to address among other activities from a rooftop patio and amplified music.
- Emerystation Center - Emeryville, CA - Provided acoustic consulting services for new buildings and tenant improvement projects for code compliance.
- Foster City Aircraft Noise Exposure - Assessment of SFO aircraft noise to the City of Foster City for General Plan land use compatibility.
- Genentech Campus - South San Francisco, CA - Acoustic consulting for Hilltop Office Building 35, Employee Center, Central Plant Facility.
- Golden Gate Recreation Center - Oakland, CA - Noise remediation for rooftop mechanical equipment for community center to comply with local code.
- Hakone Gardens - Saratoga, CA - Completed acoustic study for event center to comply with local noise conditions and served as expert witness.
- Harold Smith & Sons - St Helena, CA - Completed acoustic study for materials handling and cement mixing facility that included noise control options.
- Livermore Municipal Airport - Livermore, CA - Acoustic studies to mitigate aircraft noise to nearby recently completed residential developments
- Macae Energy Center - Environmental noise studies for power generation complex in the rain forest to comply with World Bank regulations - Macae, Brazil

## **PROJECT EXPERIENCE (continued)**

- McCarran International Airport - Las Vegas, NV - Sound insulation studies for mixed-use development projects near the airport.
- Mercy Retirement and Care Center - Oakland, CA - Noise control for backup diesel generator to comply with local code.
- Oakland International Airport - Participated in sound insulation review studies for existing residential developments near the airport.
- Rancho McHolland - Hemet, CA - Peer review of EIR for analyzing potential noise impacts for new gas station and carwash near existing residential neighborhoods.
- Rotten Robbie - Sebastopol, CA - Peer review of car wash noise control options.
- Safari Highlands - Escondido, CA - Acoustic review of large-scale residential development to address environmental concerns including on wildlife.
- Safari Kid - Hayward, CA - Acoustic consulting for outdoor play area for daycare facility and develop mitigation for compliance with local code.
- St. Mary's Medical Center - San Francisco, CA - Community noise for facility mechanical equipment for surrounding residential areas.
- Stanford Hospitals and Clinics - Provided acoustic and vibration consulting services for the hospital replacement and existing hospital renovation projects.
- Stanford University - Palo Alto, CA - new construction and renovation projects including Old Chemistry, James H Clark Center, Lucas MRS Center, Crown Hall.
- Suprema Meats - Oakland, CA - Expert witness for facility noise remediation
- Sweetwater Saloon - Mill Valley, CA - Noise mitigation for nightclub expansion and renovation to limit noise emissions to surrounding areas.
- UGGPP Energy Center - San Francisco International Airport - Noise studies and attendance to energy commission hearings for new 1200 MW power plant.
- Wallingford Energy Center - Wallingford, Connecticut - 250 MW Simple Cycle Power Facility - comprehensive acoustical services.
- Warren Hall Seismic Retrofit, California State University at Hayward - Conducted noise and vibration feasibility studies for the seismic retrofit of this building.
- Westside Road Winery - Healdsburg, CA - Prepared acoustic study for facility expansion to include event center to address potential environmental impacts.
- UCSF Parnassus and Mission Bay Campuses, San Francisco, CA - Acoustic and vibration consulting for multiple new and existing research facilities.
- Valle Del Sol Master Planning - Feasibility studies for proposed large-scale mixed-use development near the Albuquerque International Airport.

**Re: Newland Sierra (Log No. PDS2015-ER-15-08-001; SCH No. 2015021036, Project Numbers: PDS2015-GPA-15-001, PDS2015-SP-15-001, PDS2015-REZ-15-001, PDS2015-TM-5597, PDSXXXX-HLP-XXX) – Newland Sierra Project Inconsistency with North County MSCP**

Dear Ms. Smith:

As you are aware, we represent Golden Door Properties, LLC (“Golden Door”), a world-class resort and agricultural operation in rural Twin Oaks Valley. The Golden Door has restored farming and beekeeping, including replanting many new trees, on its property, and shares its products through a community Farm Stand and other retail operations. The Golden Door has raised many concerns with the County about the proposed Newland Sierra Project and the impacts of adding urban density the size of the City of Del Mar in our rural community.

We write today with respect to the Project’s critical inconsistencies with the draft North County Multiple Species Conservation Plan (MSCP), as a follow-up and supplemental comment to our prior correspondence, in particular our letters dated May 21, 2018, May 31, 2018, and June 13, 2018.

We recently obtained documents as a result of a request under the Freedom of Information Act. These documents show that local agency experts were silenced after Newland Sierra proponents exerted political pressure on senior agency officials. These documents also clearly highlight the concerns of expert biologists regarding the Newland Sierra project – in particular, the assumption by the County and other proponents of the project that it is a “hardline” component of the draft North County MSCP.

In particular, these expert agency biologists noted that the inclusion of the Newland project as a “hardline” in the North County MSCP may actually doom the MSCP entirely. The

LATHAM & WATKINS<sup>LLP</sup>

unraveling of the North County MSCP would be a severe blow not only to the County but to development throughout North County.

Further, the expert agency biologists' concerns point to the need for a comprehensive cumulative impacts analysis of all the General Plan amendment projects in the North County and how they impact the North County MSCP. In other words, if the County's approval of over 10,000 units of housing in the unincorporated areas cripples the conservation goals of the MSCP, then it seems reasonably likely that the federal and state wildlife agencies will not approve any MSCP at all. We urge the County to reconsider this self-destructive path and postpone consideration of the Newland project until these serious issues are resolved.

Finally, in these newly released documents, the federal agencies clearly requested updated gnatcatcher surveys, but Newland has chosen that it will not perform those surveys until next year. If that is the case, then the processing of Newland's EIR must be delayed until next year, when those surveys can be performed.

Additional detail regarding this issue and others is set forth in the enclosures.

Thank you for your time and attention to our comments. Please do not hesitate to contact us should you have any questions or comments.

Best regards,

Taiga Takahashi  
of LATHAM & WATKINS LLP

1. **The Newland Sierra project risks dooming the North County MSCP.** In December 2016, U.S. Fish & Wildlife staff made the following comments regarding the Newland project:

- “The Newland Sierra project fragments a large core area of habitat proposed under the North County Plan.
- Because it is unclear how the County will account for the loss of this core area, it is unclear how the project could gain approval under the draft North County Plan as we know it.
- The Wildlife Agencies could not come to agreement with the project proponent on the off-site mitigation because the acreage proposed for conservation was insufficient to offset the acreage lost to development from the Newland Sierra project within the pre-approved mitigation area or PAMA (i.e., the offsite mitigation proposed neither removed a development area from the PAMA or increased the area of preserve outside of the PAMA).
- The Newland Sierra Project as proposed results in a net loss in preserve acreage over what is anticipated for mitigation in the Draft North County Plan.
- The County did not present a logical method to make up for this loss in mitigation.
- ***Should the County Board of Supervisors approve the project without fully addressing our concerns, including our potential objection to issuance of a 4(d) permit, the Service would need to evaluate the benefits to conservation of moving forward with the North County Plan.***
- ***By approving the Newland Sierra Project and others through the 4(d) rule without addressing inconsistencies with preserve assembly, the potential exists for the 4(d) rule to undermine the very process (i.e., regional NCCP/HCP development) it was aimed at supporting.***” (See Enclosure 1 [emphasis added].)

In other words, it appears as if federal agency biologists considered the Newland project to be so fundamentally incompatible with the goals of the North County MSCP that its approval would jeopardize the North County MSCP itself.

2. **Newland must perform a comprehensive cumulative impacts analysis of all the General Plan amendment projects in the North County, in order to evaluate how the County’s potential approval of all these projects will impact the North County MSCP.** If the approval of the Newland project or others essentially precludes the establishment of the North County MSCP, then the consequences of that decision must be analyzed and disclosed to the public.

3. **Newland must ensure that surveys for fairy shrimp are done in a scientifically valid manner.** In January 2017, a federal agency biologist noted that initial surveys for fairy shrimp were inadequate and new surveys were required:

Given the amount of rain we have already had this year, there may be more ponding on site than was observed in previous years - Please consider this email our approval for you to commence wet season surveys at this location according to the accepted survey guidelines for the listed large branchiopods, dated May 31, 2015, and pursuant to the conditions of your [respective] recovery permit[s]. Be aware that these surveys missed the first rains of the season therefore the results may be inconclusive. You will want to make sure you are able to substantiate any statements in your 90-day report by providing rain gauge and/or in-field observation information to demonstrate that you are meeting protocol requirements that: "Surveyors should visit sites after initial storm events

to determine when known or potential listed large branchiopod habitat has become inundated. Appropriate habitat is considered to be inundated when it holds greater than 3 cm of standing water 24 hours after a rain event." Please note that the LA County Natural History Museum encourages deposition of all collected fairy shrimp, not only listed species.

(Enclosure 2.) The project's biological analysis should therefore not only include new surveys for fairy shrimp, but surveys that are performed at the correct time using the correct methodology. Failure to conduct the surveys in this manner renders the analysis necessarily inadequate and must be revised and recirculated for public review and comment before the project may proceed through the CEQA process.

4. **Newland must perform new surveys for California gnatcatcher.** As recently as last month, federal agency biologists recognized that new surveys needed to be done for California gnatcatcher. The risk that new surveys may require additional environmental analysis, public review, and public comment under CEQA is not a valid basis to refuse to do those surveys or postpone them until a later time.

In addition, because it is known that the Newland project requires a new interchange at I-15 and Deer Springs Road, these new surveys are necessary in order to evaluate how the different designs for the interchange (for example, the "diamond" interchange; the "diverging diamond" interchange; the "diamond interchange with roundabout intersections; as described in the "Project Study Report-Project Development Support (PSR-PDS) To Request Scope Approval of Projects-funded-by-others In San Diego County near Escondido on Interstate 15 from 0.6 Mile South to 0.6 Mile North of Deer Springs Road Overcrossing," dated August 2015 [Enclosure 3]) may affect potential habitat and the nesting pair of gnatcatchers in the vicinity of the existing interchange.

Federal agency biologists expressed substantial concern about the project's potential impacts on gnatcatchers and habitat, writing in March 2017: "From the preliminary information we have received, the project will remove occupied CSS near the I-15 corridor supporting 1 gnatcatcher pair. ... Although unoccupied CSS exists in the southern interior section of the project site, this CSS also falls within the development footprint. Thus, birds displaced from existing occupied habitat cannot be expected to disperse to nearby unoccupied habitat onsite. Likewise, CSS within the northern portion of the site is already occupied. Based on this preliminary assessment, take of the gnatcatcher pair near the I-15 corridor is likely." (Enclosure 4.)

Accordingly, the Newland project must conduct updated gnatcatcher surveys before it may continue under the CEQA process in order to assess the potential for take and to analyze and/or recommend mitigation. Failure to do so is a violation of CEQA.

5. **The failure to conduct updated gnatcatcher surveys violates the General Plan.** Failure to update the gnatcatcher surveys violate the following General Plan goals and policies, as set forth below.

#### **GOAL COS-1**

**Inter-Connected Preserve System.** A regionally managed, inter-connected preserve system that embodies the regional biological diversity of San Diego County.

#### **Policies**

**COS-1.1 Coordinated Preserve System.** Identify and develop a coordinated biological preserve system that includes Pre-Approved Mitigation Areas, Biological Resource Core Areas, wildlife corridors, and linkages to allow wildlife to travel throughout their habitat ranges.

**COS-1.2 Minimize Impacts.** Prohibit private development within established preserves. Minimize impacts within

*Gnatcatcher*

established preserves when the construction of public infrastructure is unavoidable.

**COS-1.3 Management.** Monitor, manage, and maintain the regional preserve system facilitating the survival of native species and the preservation of healthy populations of rare, threatened, or endangered species.

**COS-1.4 Collaboration with Other Jurisdictions.** Collaborate with other jurisdictions and trustee agencies to achieve well-defined common resource preservation and management goals.

**COS-1.10 Public Involvement.** Ensure an open, transparent, and inclusive decision-making process by involving the public throughout the course of planning and implementation of habitat conservation plans and resource management plans.

**COS-2.1 Protection, Restoration and Enhancement.** Protect and enhance natural wildlife habitat outside of preserves as development occurs according to the underlying land use designation. Limit the degradation of regionally important natural habitats within the Semi-Rural and Rural Lands regional categories, as well as within Village lands where appropriate.

**COS-2.2 Habitat Protection through Site Design.** Require development to be sited in the least biologically sensitive areas and minimize the loss of natural habitat through site design.

As noted, the federal agencies have requested updated surveys, but Newland has chosen that it will not perform those surveys until next year: “The Applicant is aware that updated surveys will need to be done. They can't do those this year because of their EIR process doesn't want updated surveys. So they plan on conducting updated surveys next year.” (See Enclosure 5.) If that is the case, then the processing of Newland's EIR must be delayed until next year, when those surveys can be performed. Clearly, the failure to update the gnatcatcher surveys is inconsistent with COS-1.1, 1.2, 1.3, 1.4, 2.1, and 2.2. In addition, the active attempts by lobbyists to exclude and sideline expert biologists in the Fish and Wildlife Service is inconsistent with COS-1.10. (See Enclosure 6a and 6b.) And, even though much of the Newland site is designated as “critical habitat” for the gnatcatcher by the U.S. Fish and Wildlife Service, no effort has been made to avoid this critical habitat or even avoid occupied areas of gnatcatcher habitat. The draft EIR fails to include an alternative to keep development out of designated critical habitat or occupied gnatcatcher habitat.

5. **Newland should be required to acquire adequate mitigation lands to account for the loss of PAMA.** In December 2015, expert biologists at the U.S. Fish and Wildlife Service noted that mitigation lands should be of adequate biological value: “[S]ome properties are considered of greater biological value than others ... Because the proposed Newland Sierra development will result in a loss of wildlife habitat originally identified to be part of the Draft North County MSCP preserve, acquisition of PAMA lands planned for development helps ensure that there is no net loss of PAMA acreage and that the anticipated size and configuration of the planned preserve can be achieved. ... Conservation of the Hoospack or Pankey properties, while not insignificant, will not assist in maintaining the scope of PAMA lands needed to assemble the preserve anticipated by the Draft North County MSCP.” (Enclosure 7.) Newland later claimed that the Service's requests were “financially infeasible, both in project design and acquisition of specific, additional off-site mitigation.” However, the Applicant's conclusory assertion of economic infeasibility is insufficient under CEQA. (See, e.g., *County of San Diego v. Grossmont-Cuyamaca Community College* (2006) 141 Cal.App.4th 86, 108.) Accordingly, Newland must acquire comparatively valuable land in terms of biological conservation and preservation of PAMA acreage to avoid fatally prejudicing the North County MSCP. Failure to do so without substantial evidence of “financial infeasibility” would mean that the County could not approve this project, due to the requirements of CEQA. (See, e.g., *Woodward Park Homeowners Assn., Inc. v. City of Fresno* (2007) 150 Cal.App.4th 683; *Uphold Our Heritage v. Town of Woodside* (2007) 147 Cal.App.4th 587, 599, 602.)

Hi Mike:

I cannot thank you enough for all the support and love my Dad has received from USFWS- particularly R8. Steve continues to make progress daily-and we anticipate he will undergo his next surgery on Jan 25<sup>th</sup>. I'm filling-in for Steve while he is recovering, and I'd like to see if we can get this meeting scheduled soon. Sounds like the only conflicts for January on our end are:

**January 9 through January 12<sup>th</sup>**

**January 16 through 18<sup>th</sup>**

Thanks for the help and leadership, Mike.

All the best,

Maya Kepner for Steve Thompson

Also- you can contact me directly at:

## Newland Sierra Project

- We do not agree that the background information and history recently provided by the project proponent accurately reflects Service efforts to resolve the outstanding issues.
- We do not see value in going point by point to correct the information, rather we present our concerns with the project as presently proposed.
- The Newland Sierra project lies within the boundaries of a regional NCCP/HCP in development by the County of San Diego.
- Under the 4(d) rule, projects that need to clear coastal sage scrub, which is the primary habitat for the gnatcatcher, may move forward with County and Wildlife Agency (Department and Service) approval as long as the project does not undermine the conservation goals of the regional plan.
- The Newland Sierra project fragments a large core area of habitat proposed under the North County Plan.
- Because it is unclear how the County will account for the loss of this core area, it is unclear how the project could gain approval under the draft North County Plan as we know it.
- The Wildlife Agencies could not come to agreement with the project proponent on the off-site mitigation because the acreage proposed for conservation was insufficient to offset the acreage lost to development from the Newland Sierra project within the pre-approved mitigation area or PAMA (i.e., the offsite mitigation proposed neither removed a development area from the PAMA or increased the area of preserve outside of the PAMA).
- The Newland Sierra Project as proposed results in a net loss in preserve acreage over what is anticipated for mitigation in the Draft North County Plan.
- The County did not present a logical method to make up for this loss in mitigation.
- The Newland Sierra Project proponents are not precluded by the Service from moving forward with their proposed project design for approval by the County.
- During the draft EIR phase, the Wildlife Agencies will have the opportunity to comment on the project design, including any initial request for 4(d) concurrence.
- Because no NCCP or ESA permits have been issued for the North County Plan, these comments represent recommendations to the County.
- We believe due consideration would be given to our concerns in accordance with the signed planning agreement between the County and the Wildlife Agencies for the North County Plan, and this is the primary concern of the project proponents.
- Strong public opposition to the project is likely based on prior efforts to get Board of Supervisor approval for almost the exact same development footprint.
- Should the County Board of Supervisors approve the project without fully addressing our concerns, including our potential objection to issuance of a 4(d) permit, the Service would need to evaluate the benefits to conservation of moving forward with the North County Plan.
- These discussions would not involve the Newland Sierra Project proponents, as their project would have already been approved by the County.

- The Newland Sierra project is but one large project currently undergoing review by the County in advance of completion of the North County Plan.
- By approving the Newland Sierra Project and others through the 4(d) rule without addressing inconsistencies with preserve assembly, the potential exists for the 4(d) rule to undermine the very process (i.e., regional NCCP/HCP development) it was aimed at supporting.

---

Thank you for your quick response - I did note that the mapped areas of ponding were in the open space - Given the amount of rain we have already had this year, there may be more ponding on site then was observed in previous years -

Please consider this email our approval for you to commence wet season surveys at this location according to the accepted survey guidelines for the listed large branchiopods, dated May 31, 2015, and pursuant to the conditions of your [respective] recovery permit[s].

Be aware that these surveys missed the first rains of the season therefore the results may be inconclusive . You will want to make sure you are able to substantiate any statements in your 90-day report by providing rain gauge and/or in-field observation information to demonstrate that you are meeting protocol requirements that: "Surveyors should visit sites after initial storm events to determine when known or potential listed large branchiopod habitat has become inundated. Appropriate habitat is considered to be inundated when it holds greater than 3 cm of standing water 24 hours after a rain event."

Please note that the LA County Natural History Museum encourages deposition of all collected fairy shrimp, not only listed species.

Please send your survey report (hard copy at minimum) to Stacey Love.

Thanks,  
Susan

Thank you Susan for your email.

As you have probably already noted, these locations are situated within planned open space. As described in our BTR and previously provided documents, we disclose that we found a single puddle with western spadefoot toad larvae within the northwestern quarry site. Additionally, we never found any other puddled areas within the project footprint.

Please find attached a request to sample the puddles onsite that we may identify the species. We hope that we may receive quick approval given the nature of this situation. In order to address

Mr. Mayer's concerns, we will also review the puddles for western spadefoot eggs, larvae, and adults.

Thank you for your quick review and consideration.

Best,

**Subject:** Newland Sierra

Hello all - We received a call from a concerned citizen regarding potential vernal pools on the Newland Sierra project site. I've attached a map and a couple of the photos that were sent over - As you can see from the close up photo of one of the ponded areas, there appears to be fairy shrimp. I can not identify which species this is from a photograph - I'm guessing it is either the un-listed versatile fairy shrimp (*Branchinecta lindahli*) or the federally endangered San Diego fairy shrimp (*B. sandiegonensis*) based on what has been

observed to date in other areas, but this would need to be confirmed by a permitted biologist in the field. I do not recall any mention of potential vernal pools in the previous documents and have not had time to pull the file to check. I also do not recall whether any ponding was mapped as part of a wetland delineation for the Corps. I will continue to pass on any info I receive - given that fairy shrimp are out and there appears to be ponding on the site, we recommend that you have a permitted biologist survey the site for fairy shrimp. I am not sure which staff at the County is working on this project so please coordinate with them as appropriate.

## 1. INTRODUCTION

### Project Description:

The Newland Real Estate Group, LLC, in cooperation with the California Department of Transportation (Caltrans) and the County of San Diego, has initiated this Project Study Report-Project Development Support (PSR-PDS) to evaluate alternatives to increase capacity, improve mobility, and relieve congestion for the existing Interstate 15 (I-15) and Deer Springs Road interchange.

A summary of relevant project data is shown in the following table:

|                                                              |                                                                                                                             |
|--------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>Project Limits</b>                                        | 11 – SD – 15 – PM R36.0/R37.2                                                                                               |
| <b>Number of Alternatives</b>                                | 4                                                                                                                           |
| <b>Current Capital Outlay Support Estimate for PA&amp;ED</b> | \$700,000 to \$1,000,000                                                                                                    |
| <b>Current Capital Outlay Construction Cost Range</b>        | \$13,500,000 to \$20,200,000                                                                                                |
| <b>Current Capital Outlay Right-of-Way Cost Range</b>        | \$100,000 to \$500,000                                                                                                      |
| <b>Funding Source</b>                                        | Private and other                                                                                                           |
| <b>Type of Facility</b>                                      | Freeway interchange                                                                                                         |
| <b>Number of Structures</b>                                  | 1                                                                                                                           |
| <b>Anticipated Environmental Determination or Document</b>   | Mitigated Negative Declaration (MND)/ Finding of No Significant Impact (FONSI)                                              |
| <b>Legal Description</b>                                     | In San Diego County near Escondido on Interstate 15 from 0.6 Mile South to 0.6 Mile North of Deer Springs Road Overcrossing |
| <b>Project Development Category</b>                          | 3                                                                                                                           |

The remaining capital outlay support, right-of-way, and construction components of the project are preliminary estimates and are not suitable for budgetary purposes. A project report will serve as approval of the “selected” alternative and the remaining components of the project.

Other approvals required are:

- Federal Highway Administration (FHWA)
- County of San Diego

## 2. BACKGROUND

Improvements to the existing I-15 and Deer Springs Road interchange are a requirement of the proposed Sierra Project, which is currently under environmental review with the County of San Diego Planning Department. The Sierra Project is a

proposed community subdivision on 1,985-acres located west of I-15 and north of Deer Springs Road.

Interstate 15 is a major traffic corridor that originates near downtown San Diego and continues north to the United States border with Canada. The intersecting Deer Springs Road is currently an east-west two-lane county roadway between I-15 and Twin Oaks Valley Road. It serves the local communities of Hidden Meadows and San Marcos, while also acting as a link for traffic traveling between I-15 and State Route 78. It has been determined that the congestion along State Route 78 contributes to a significant amount of traffic traveling along this link through the project limits. The existing I-15 and Deer Springs Road interchange is a diamond configuration with single-lane on and off ramps. The interchange consists of two signalized freeway ramp intersections and has two nearby signalized local roadway intersections, which include the Deer Springs Road and Mesa Rock Road intersection, and the Mountain Meadow Road and Champagne Boulevard intersection.

### 3. PURPOSE AND NEED

#### **Purpose:**

The purpose of the proposed project is to plan for the projected regional population growth and increase in traffic demands at the existing I-15 and Deer Springs Road interchange for the planning design year 2040. The project proposes to widen and reconfigure the interchange to improve traffic operations and enhance transportation choices. The objectives of the project are to:

- Support anticipated regional growth and proposed local-area projects;
- Relieve congestion by providing sufficient vehicle capacity through the interchange area;
- Manage east-west travel between local communities;
- Enhance multi-modal choices;
- Improve the existing park and ride facility to provide transit connectivity; and
- Minimize environmental impacts.

#### **Need:**

The project area is located within San Diego County near Escondido, along a segment of Interstate 15 (I-15). I-15 is a major traffic corridor that serves the local communities of Hidden Meadows and City of San Marcos, while also acting as a link for traffic travelling to and from I-15 to and from State Route (SR) 78. The intersecting Deer Springs Road is classified as a 6-Lane Prime Arterial in the County of San Diego Mobility Element and is currently built as a two-lane facility between I-15 and Twin Oaks Valley Road. Based on growth forecasts prepared by the San Diego Association of Governments, the county's unincorporated areas, which encompass the project area, are expected to see an overall population growth of approximately 25 percent between 2015 and 2050. To accommodate this growth and

future capacity needs within the corridor, the interchange will require additional capacity. Regional growth coupled with the approved site developments in the immediate vicinity will result in increased volumes through the interchange by 2040 of about 25-40%, depending on the road segment. In addition to the projected traffic demands, the I-15/Deer Springs interchange is currently experiencing severe traffic congestion. Existing deficiencies of the I-15/Deer Springs interchange are summarized below:

- Three out of four I-15/Deer Springs interchange intersections are operating near or over the design capacity during peak period traffic volumes;
- Intersection delays of up to 45 seconds;
- High volumes of single occupancy vehicle travel, necessitating improved access to carpools, vanpools, and public transportation choices via existing park and ride facilities within the project area.

#### **4. TRAFFIC ENGINEERING PERFORMANCE ASSESSMENT**

A Traffic Engineering Performance Assessment (TEPA) was prepared in support of this PSR-PDS, which is included as Attachment I. The relevant findings and recommendations are included below for each build alternative. Prior to preparing the TEPA, a traffic modeling report was completed and approved by Caltrans and the County of San Diego. During the PA&ED phase, a full traffic study will be completed to confirm the anticipated traffic volumes and operations for each of the alternatives. Refer to Section 7 below for a description of each alternative.

The existing nonstandard intersection spacing between the Mesa Rock Road intersection and the southbound I-15 ramp termini negatively impact traffic operations in this area. Considering this, the existing north leg of the Mesa Rock Road intersection, which is proposed to be used as the main entrance for the Sierra Project, has been positioned as far west as possible for each of the build alternatives. Due to geometric, socio-economic, and other environmental constraints as described in the PEAR, this intersection cannot be positioned any further west. Also, the south leg of the Mesa Rock Road intersection cannot be moved due to existing development. In addition, the southbound I-15 ramp termini have been positioned as far east as possible for each of the alternatives in order to maximize the distance between these intersections and optimize the overall traffic operations for this area.

##### ***Alternative 1***

The No Build Alternative does not improve the existing operational conditions, and it is anticipated to operate at an unacceptable Level of Service (LOS) F for the design year traffic volumes.

### ***Alternative 2***

The proposed diamond interchange alternative is anticipated to operate at an acceptable LOS D or better for the design year traffic volumes. The queuing analysis indicates that the available intersection spacing between Mesa Rock Road and the I-15 ramp termini does not accommodate the estimated queue along westbound Deer Springs Road at Mesa Rock Road during the anticipated peak hour volumes. It is anticipated that adding a northbound loop off-ramp will improve the operations of the northbound ramp intersection during the PM peak hour. It is recommended that the feasibility of adding this loop ramp should be evaluated during the PA&ED phase.

### ***Alternative 3***

The proposed diverging diamond interchange alternative is anticipated to operate at an acceptable LOS D or better for the design year traffic volumes. The queuing analysis indicates adequate spacing between intersections.

### ***Alternative 4***

The proposed roundabout interchange alternative is anticipated to operate at an acceptable LOS D or better for the design year traffic volumes. However, due to recent and pending changes to standards and software used to analyze the capacity of roundabouts, it is anticipated that further analysis of this alternative will be required during the PA&ED phase to fully assess its traffic performance per the required Intersection Control Evaluation (ICE) process. As such, the Project Development Team (PDT) determined that this alternative should remain in the PSR-PDS.

## **5. DEFICIENCIES**

The existing I-15 and Deer Springs Road interchange is currently experiencing operational problems and is operating near or over its design capacity during peak period traffic volumes. Congestion delay exists along the southbound off-ramp during the AM peak period and the northbound on-ramp during the PM peak period. This is primarily due to the congestion delay along the Route 78 corridor, which causes the traffic to take this alternative Deer Springs Road route during the high peak period traffic volumes. In addition, the existing intersection spacing adjacent to the ramp termini does not accommodate the traffic queues along Deer Springs Road. Vehicle hours of delay, average speeds, travel times, and other traffic performance measures will continue to deteriorate as growth increases in the surrounding areas.

## **6. CORRIDOR AND SYSTEM COORDINATION**

The proposed project improvements for each of the build alternatives have been compared against the 2050 Regional Transportation Plan (RTP) for San Diego.

Based on the revenue constrained plan, I-15 would be widened to include 4 toll lanes (2 northbound and 2 southbound) located within the existing I-15 median from State Route 78 to Riverside County. The proposed project improvements would not impact the implementation of the additional toll lanes. Also, the widened Deer Springs Road overcrossing would be designed to accommodate the expected I-15 freeway cross section. Based on the revenue unconstrained plan, I-15 would be widened to include the same configuration as the revenue constrained plan.

The southbound direction of I-15 is located along the Extra Legal Load Network (ELLN), which requires a minimum vertical clearance of 20 ft. The existing Deer Springs Road Overcrossing currently has less than this requirement with 17.8 ft of vertical clearance. Vehicles requiring the additional clearance currently bypass the Deer Springs Road Overcrossing by exiting the freeway via the southbound off-ramp and then re-entering via the southbound on-ramp. ELLN clearances will be addressed in the proposed project via a similar travel pattern exiting and entering the mainline.

Deer Springs Road is classified as a 6-lane prime arterial in the San Diego County Mobility Element. An option being analyzed in the traffic study assumes Deer Springs Road as a 4.1A Major Road except for the portion between Sarver Lane and Mesa Rock Road which would be built as a 2.1B Community Collector segment with a continuous turn lane between Sarver Lane and Mesa Rock Road. Under this option, fewer vehicles will utilize Deer Springs Road in this option, since the roadway cross section of Deer Springs Road will be narrower than that in the General Plan Mobility Element. The narrower cross section is also supported by SANDAG for improved pedestrian and bicycle safety. Therefore, multiple variations of Deer Springs Road will be analyzed in the Traffic Operations Report during the PA&ED phase. In coordination with the County of San Diego, the project proposes to construct a narrower configuration of Deer Springs Road compared to the County Mobility Element, which is based on the findings of this report.

Improvements to the existing I-15 and Deer Springs Road interchange are currently not identified in the Regional Transportation Improvement Program (RTIP) for San Diego or the San Diego County General Plan. However, the proposed project improvements to the interchange support the proposed Sierra Project improvements, which is a private development located west of I-15 and north of Deer Springs Road.

The County of San Diego Bicycle Transportation Plan classifies Deer Springs Road as a Priority 3 proposed Class III bikeway. Priority 3 proposed bikeways are not included in the County Circulation Element map. The County Bicycle Transportation Plan proposes to incorporate bicycle parking, bicycle racks, and lockers at both of the existing County park-and-ride lots located within the project limits. Deer Springs Road is currently not identified in the 2050 San Diego Regional Bike Plan.

The project will coordinate with the SANDAG Transportation Demand Management (TDM) program iCommute to ensure the project is aligned with any TDM elements being considered in the project area.

## 7. ALTERNATIVES

In the development of the alternatives for the PSR-PDS and as part of the Intersection Control Evaluation (ICE) process, the PDT conducted an alternatives screening process through a series of workshops. During this screening process, the PDT determined weighted evaluation criteria along with a range of potential alternatives. The weighted evaluation criteria were then used to compare and rank each of the potential alternatives. As a result of this screening process, it was decided to eliminate the single point interchange (SPI) configuration, hook ramp interchange configuration, and a 6-leg roundabout configuration from further evaluation.

Each of the build alternatives propose to expand upon the western park-and-ride lot and maintain the size of the eastern park-and-ride lot that are located within the project limits, which will include features to encourage future bicycle and pedestrian traffic. The build alternatives will also consider the potential for multi-modal transit options that would be integrated with the proposed park-and-ride lots and the adjacent ramp termini, which will provide suitable bicycle and pedestrian connectivity.

The San Diego Bicycle Transportation Plan indicates a Class III bikeway within the project limits, however, a Class II bikeway will be considered between Mesa Rock Road and Champagne Boulevard for this project due to the volume of bicycle traffic indicated by crowdsource GPS information. During the PA&ED phase, the bicycle and pedestrian facilities will be further evaluated to optimize mobility, functionality, and safety for each of the build alternatives.

There are four alternatives identified in this report, which include the No Build Alternative.

### *Alternative 1*

This alternative is the No Build Alternative. The existing I-15 and Deer Springs Road interchange would remain unchanged and no work would be provided to improve operational conditions. The No Build Alternative does not meet the goals of this project to relieve congestion and is inconsistent with the purpose and need.

### *Alternative 2*

This alternative proposes to expand upon the existing diamond interchange configuration in order to improve operational conditions (see Attachment B). This alternative will require nonstandard intersection spacing between the southbound ramp termini and the Mesa Rock Road/Deer Springs Road intersection, and between the northbound ramp termini and the Champagne Boulevard/Deer Springs Road intersection. It proposes to realign the southbound ramps further east in order to improve upon the existing nonstandard intersection spacing between the southbound ramp termini and the Mesa Rock Road/Deer Springs Road intersection. Realigning

these ramps would likely require retaining walls along the southbound off-ramp and on-ramp. It is anticipated that adding a northbound loop on-ramp or off-ramp will improve the operations of the northbound ramp intersection during the PM peak hour. It is recommended that the feasibility of adding a loop ramp should be evaluated during the PA&ED phase. This alternative also proposes to widen Deer Springs Road to meet the increased traffic demand and will require the existing Deer Springs Road Overcrossing to be widened. It proposes to maintain the existing ELLN bypass of the Deer Springs Road Overcrossing via the southbound on and off-ramps.

### ***Alternative 3***

This alternative proposes to reconfigure the existing interchange into a diverging diamond interchange (DDI) configuration in order to improve operational conditions (see Attachment B). The proposed geometry follows the informational guide published by FHWA in August of 2014, which features a conventional 25 mph design speed and a 45 degree intersection angle at the points where the two directions of traffic cross each other. This alternative also proposes to widen Deer Springs Road to meet the increased traffic demand and will require the existing Deer Springs Road Overcrossing to be widened. It proposes to maintain the existing ELLN bypass of the Deer Springs Road Overcrossing via the southbound on and off-ramps utilizing a median opening for the ELLN vehicles to cross Deer Springs Road. This median opening would include several design features to keep other traffic from using it, such as a gate located within the opening, traversable concrete curb, chevron striping along the widened ramp shoulders, landscaping to block the view of the southbound on-ramp, and the geometric alignment of the median opening. This alternative may require a design exception for nonstandard intersection spacing between the southbound ramp termini and the Mesa Rock Road/Deer Springs Road intersection, and between the northbound ramp termini and the Champagne Boulevard/Deer Springs Road intersection. It may also require a design exception for the conventional design speed of 25 mph required for DDI interchange configurations.

### ***Alternative 4***

This alternative proposes to utilize the existing diamond configuration with roundabout intersections for the southbound and northbound ramp termini and for both of the adjacent local intersections along Deer Springs Road (see Attachment B). This alternative also proposes to widen Deer Springs Road to meet the increased traffic demand and will require the existing Deer Springs Road Overcrossing to be widened. It proposes to maintain the existing ELLN bypass of the Deer Springs Road Overcrossing via the southbound on and off-ramps utilizing a roundabout that the ELLN vehicles can navigate through. This alternative will require nonstandard intersection spacing between the southbound ramp termini and the Mesa Rock Road/Deer Springs Road intersection, and between the northbound ramp termini and the Champagne Boulevard/Deer Springs Road intersection. It may also require a design exception for the conventional design speed of 25 mph required for roundabout intersections.

| Design Standards Risk Assessment |                                                                                                  |                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------------------|--------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Alternative                      | Design Standard from Highway Design Manual Tables 82.1A & 82.1B                                  | Probability of Design Exception Approval (None, Low, Medium, High,) | Justification for Probability Rating                                                                                                                                                                                                                                                                                                                                                                 |
| 2                                | <sup>M</sup> Distance Between Ramp Intersection and Local Road Intersection                      | Low                                                                 | The nonstandard intersection spacing presents a traffic queuing issue for this alternative, while Alternative 3 and Alternative 4 do not. Although the intersection spacing is an improvement over the existing condition, it has less intersection spacing than Alternative 3. Further, the nonstandard spacing for Alternative 4 does not affect traffic operations due to its configuration type. |
| 3                                | <sup>M</sup> Distance Between Ramp Intersection and Local Road Intersection                      | High                                                                | This alternative provides the most intersection spacing of all the alternatives and does not present any traffic operation issues.                                                                                                                                                                                                                                                                   |
| 3                                | <sup>M</sup> Selection of Design Speed - Local Facilities - with Connections to State Facilities | High                                                                | The conventional design speed required for all DDI interchanges is less than the minimum speed. Therefore, this standard does not apply to or consider this type of interchange configuration. The proposed design speed would also be safer for pedestrians and bicyclists.                                                                                                                         |
| 4                                | <sup>M</sup> Distance Between Ramp Intersection and Local Road Intersection                      | High                                                                | The nonstandard intersection spacing for this alternative does not affect traffic operations due to its configuration type.                                                                                                                                                                                                                                                                          |
| 4                                | <sup>M</sup> Selection of Design Speed - Local Facilities - with Connections to State Facilities | High                                                                | The conventional design speed required for all roundabout intersections is less than the minimum speed. Therefore, this standard does not apply to or consider this type of interchange configuration. The proposed design speed would also be safer for pedestrians and bicyclists.                                                                                                                 |
| 4                                | <sup>A</sup> Median Width                                                                        | High                                                                | The minimum standard for median width is intended for facilities that may require future left turn lanes. Interchange configurations with roundabouts do not require left turn lanes or any other design feature that would require a median. Therefore, this standard does not apply to or consider this interchange configuration.                                                                 |

M = Mandatory, A = Advisory

## **8. RIGHT-OF-WAY**

Most, if not all, of the work will be located within the existing right-of-way limits. It is anticipated that some small partial property acquisitions may be required for some of the alternatives. It is anticipated that the existing freeway access control limits may require modification in order to relinquish the area necessary for the proposed park-and-ride expansion. In addition, a few temporary construction easements will be required from the various parcels adjacent to the project. For additional information, refer to the findings included in the Conceptual Cost Estimate – Right-of-Way Component, which is included as Attachment F.

### **Utilities:**

There are existing utilities located along Deer Springs Road and the local intersecting roadways, which include sewer, water, gas, electrical, and telecommunication facilities. The following utility companies or agencies have been identified as owners of the various utilities located within the project area: AT&T, County of San Diego, Cox Communications, Level 3 Communications, SDG&E, San Diego County Water Authority, Valley Center Municipal Water District, and Vallecitos Water District. Minor impacts to these facilities are anticipated and will be further evaluated during the PA&ED phase.

### **Railroad:**

There are no railroad facilities located within the project study limits.

## **9. STAKEHOLDER INVOLVEMENT**

Local agency representatives from the County of San Diego have been involved in the development of the alternatives during PDT meetings and project workshops. Coordination with representatives from the San Diego Association of Governments (SANDAG), the North County Transit District (NCTD), and the Riverside Transit Authority (RTA) has taken place to determine their involvement and to identify if any potential project features could be incorporated based on their interests. As the owner and operator of the State Highway System, Caltrans has provided independent quality assurance of this document. Future stakeholder outreach will be determined by the PDT and the opportunity for public meetings will be organized during the PA&ED phase.

## **10. ENVIRONMENTAL DETERMINATION/DOCUMENT**

In order to identify environmental issues, constraints, costs and resource needs, a Preliminary Environmental Analysis Report (PEAR) was prepared in support of this PSR-PDS, which is included as Attachment D.

The project would require the preparation of environmental documentation pursuant to the California Environmental Quality Act (CEQA) and the National Environmental Policy Act (NEPA). It is anticipated that an Initial Study (IS) with proposed Negative Declaration (ND) or Mitigated ND and a Routine Environmental Assessment with proposed Finding of No Significant Impact will be required for this project.

## 11. FUNDING

The proposed interchange project will be privately funded at some point after the County approves the proposed Sierra Development Project. As the project continues to develop, additional funding sources will be explored. Up to this point, it has been determined that this project is not eligible for Federal-aid funding and SANDAG currently does not have any planned funding for interchange improvements.

### Capital Outlay Project Estimate

|               | Range of Estimate |                | STIP Funds   |              | Other Funds  |                |
|---------------|-------------------|----------------|--------------|--------------|--------------|----------------|
|               | Construction      | Right-of-Way   | Construction | Right-of-Way | Construction | Right-of-Way   |
| Alternative 1 | \$0               | \$0            | \$0          | \$0          | \$0          | \$0            |
| Alternative 2 | \$20.2M           | \$0.1 - \$0.5M | \$0          | \$0          | \$20.2M      | \$0.1 - \$0.5M |
| Alternative 3 | \$15.8M           | \$0.1 - \$0.5M | \$0          | \$0          | \$15.8M      | \$0.1 - \$0.5M |
| Alternative 4 | \$13.5M           | \$0.1 - \$0.5M | \$0          | \$0          | \$13.5M      | \$0.1 - \$0.5M |

The level of detail available to develop these capital outlay project estimates is only accurate to within the above ranges and is useful for long-range planning purposes only. The capital outlay project estimates should not be used to program or commit capital outlay funds.

### Capital Outlay Support Estimate

Capital outlay support estimate for programming PA&ED for this project is estimated to be: \$700,000 to \$1,000,000

## 12. SCHEDULE

| Project Milestones       |      | Scheduled Delivery Date |
|--------------------------|------|-------------------------|
| BEGIN ENVIRONMENTAL      | M020 | August 2015             |
| CIRCULATE DED EXTERNALLY | M120 | April 2016              |
| PA & ED                  | M200 | January 2017            |

The anticipated funding fiscal year for construction is 2019.

**13. RISKS**

A Risk Register was completed for this project; see Attachment G.

**14. FHWA COORDINATION**

This project is considered to be a High Profile Project (HPP) in accordance with the current Federal Highway Administration (FHWA) and Department of Transportation (Caltrans) Joint Stewardship and Oversight Agreement.

FHWA “engineering and operational acceptability” must be obtained early in the PA&ED phase prior to circulation of the draft environmental document with an unsigned supplemental project study report (PSR) or an unsigned draft project report. FHWA “approval” will be given after the National Environmental Policy Act (NEPA) process is completed.

# Project Study Report – Project Development Support Capital Outlay Project Estimate

Dist - Co - Rte 11-SD-15  
PM R36.0/37.2  
Program Code N/A  
Project Number 11-14000093  
Month/Year August 2015

## PROJECT DESCRIPTION:

**Limits:** In San Diego County near Escondido on Interstate 15 (I-15) from 0.6 Mile South to 0.6 Mile North of Deer Springs Road Overcrossing.

**Proposed Improvement (Scope):** Reconstruct the existing I-15 and Deer Springs Road interchange.

**Alternate: 2**

## SUMMARY OF PROJECT COST ESTIMATE

|                                        |                          |
|----------------------------------------|--------------------------|
| TOTAL ROADWAY ITEMS                    | \$ <u>13,440,000</u>     |
| TOTAL STRUCTURE ITEMS                  | \$ <u>5,760,000</u>      |
| TOTAL ENVIRONMENTAL MITIGATION ITEMS   | \$ <u>650,000</u>        |
| SUBTOTAL CONSTRUCTION COSTS            | \$ <u>19,850,000</u>     |
| TOTAL RIGHT-OF-WAY ITEMS               | \$ <u>350,000</u>        |
| <br>TOTAL PROJECT CAPITAL OUTLAY COSTS | <br>\$ <u>20,200,000</u> |

I. ROADWAY ITEMS

|            | <u>Average Cost per Lane Mile</u> |   | <u>Number of Lane Miles</u> |   | <u>Total Cost</u>   |
|------------|-----------------------------------|---|-----------------------------|---|---------------------|
| Total Cost | <u>\$2,400,000</u>                | X | <u>5.6</u>                  | = | <u>\$13,440,000</u> |

Explanation:

Roadway items include costs associated with earthwork, pavement, drainage, traffic, electrical work, landscaping, and other minor items. The cost estimate includes a 20% contingency factor applied to the base cost. The cost estimate has been escalated to the fiscal year 2018 using an annual escalation factor of 3%. The fiscal year 2018 is the anticipated year for construction. Roadway items exclude costs associated with structures, environmental mitigation, and right-of-way. It also excludes costs associated with owner administration, professional engineering, environmental planning, and construction administration.

TOTAL ROADWAY ITEMS \$13,440,000

II. STRUCTURES ITEMS

|                          | Structure<br>(1)                    | Structure<br>(2)           | Structure<br>(3) |
|--------------------------|-------------------------------------|----------------------------|------------------|
| Bridge Name              | <u>Deer<br/>Springs<br/>Road OC</u> | <u>Retaining<br/>Walls</u> | _____            |
| Total Cost for Structure | <u>\$3,900,000</u>                  | <u>\$1,860,000</u>         | _____            |

Explanation:

Structures items include costs associated with widening the existing Deer Springs Road Overcrossing at I-15. Structures items include costs associated with retaining walls. The cost estimate includes a 20% contingency factor applied to the base cost. The cost estimate has been escalated to the fiscal year 2018 using an annual escalation factor of 3%. The fiscal year 2018 is the anticipated year for construction.

TOTAL STRUCTURE ITEMS \$5,760,000

III. ENVIRONMENTAL MITIGATION

|                          | <u>Quantity</u> | <u>Unit</u> | <u>Unit Price</u>  | <u>Item Cost</u>   |
|--------------------------|-----------------|-------------|--------------------|--------------------|
| Environmental Mitigation | <u>LS</u>       | <u>1</u>    | X <u>\$650,000</u> | = <u>\$650,000</u> |

Explanation:

Environmental mitigation includes costs associated with environmental surveys and monitoring, temporary erosion control, and storm water best management practices required during construction.

TOTAL ENVIRONMENTAL MITIGATION ITEMS      \$650,000

IV. RIGHT-OF-WAY ITEMS

|                                                                                 | Escalated<br>Value |
|---------------------------------------------------------------------------------|--------------------|
| A. Acquisition, including excess lands,<br>damages to remainder(s) and Goodwill | <u>\$100,000</u>   |
| B. Utility Relocation (State share)                                             | <u>\$250,000</u>   |

Anticipated Date of Right-of-Way Certification      2018  
(Date to which values are escalated)

Explanation:

Right-of-way items include costs associated with acquiring right-of-way, temporary construction easements, and anticipated utility relocations.

TOTAL RIGHT-OF-WAY ITEMS      \$350,000

## PROJECT DESCRIPTION:

**Limits:** In San Diego County near Escondido on Interstate 15 (I-15) from 0.6 Mile South to 0.6 Mile North of Deer Springs Road Overcrossing.

**Proposed Improvement (Scope):** Reconstruct the existing I-15 and Deer Springs Road interchange.

**Alternate: 3**

## SUMMARY OF PROJECT COST ESTIMATE

|                                        |                          |
|----------------------------------------|--------------------------|
| TOTAL ROADWAY ITEMS                    | \$ <u>11,250,000</u>     |
| TOTAL STRUCTURE ITEMS                  | \$ <u>3,550,000</u>      |
| TOTAL ENVIRONMENTAL MITIGATION ITEMS   | \$ <u>650,000</u>        |
| SUBTOTAL CONSTRUCTION COSTS            | \$ <u>15,450,000</u>     |
| TOTAL RIGHT-OF-WAY ITEMS               | \$ <u>350,000</u>        |
| <br>TOTAL PROJECT CAPITAL OUTLAY COSTS | <br>\$ <u>15,800,000</u> |

I. ROADWAY ITEMS

|            | <u>Average Cost per Lane Mile</u> |   | <u>Number of Lane Miles</u> |   | <u>Total Cost</u>   |
|------------|-----------------------------------|---|-----------------------------|---|---------------------|
| Total Cost | <u>\$2,295,000</u>                | X | <u>4.9</u>                  | = | <u>\$11,250,000</u> |

Explanation:

Roadway items include costs associated with earthwork, pavement, drainage, traffic, electrical work, landscaping, and other minor items. The cost estimate includes a 20% contingency factor applied to the base cost. The cost estimate has been escalated to the fiscal year 2018 using an annual escalation factor of 3%. The fiscal year 2018 is the anticipated year for construction. Roadway items exclude costs associated with structures, environmental mitigation, and right-of-way. It also excludes costs associated with owner administration, professional engineering, environmental planning, and construction administration.

TOTAL ROADWAY ITEMS \$11,250,000

II. STRUCTURES ITEMS

|                          | Structure<br>(1)                    | Structure<br>(2)           | Structure<br>(3) |
|--------------------------|-------------------------------------|----------------------------|------------------|
| Bridge Name              | <u>Deer<br/>Springs<br/>Road OC</u> | <u>Retaining<br/>Walls</u> | _____            |
| Total Cost for Structure | <u>\$2,100,000</u>                  | <u>\$1,450,000</u>         | _____            |

Explanation:

Structures items include costs associated with widening the existing Deer Springs Road Overcrossing at I-15. Structures items include costs associated with retaining walls. The cost estimate includes a 20% contingency factor applied to the base cost. The cost estimate has been escalated to the fiscal year 2018 using an annual escalation factor of 3%. The fiscal year 2018 is the anticipated year for construction.

TOTAL STRUCTURE ITEMS \$3,550,000

III. ENVIRONMENTAL MITIGATION

|                          | <u>Quantity</u> | <u>Unit</u> | <u>Unit Price</u>  | <u>Item Cost</u>   |
|--------------------------|-----------------|-------------|--------------------|--------------------|
| Environmental Mitigation | <u>LS</u>       | <u>1</u>    | X <u>\$650,000</u> | = <u>\$650,000</u> |

Explanation:

Environmental mitigation includes costs associated with environmental surveys and monitoring, temporary erosion control, and storm water best management practices required during construction.

TOTAL ENVIRONMENTAL MITIGATION ITEMS      \$650,000

IV. RIGHT-OF-WAY ITEMS

|                                                                                 | Escalated<br>Value |
|---------------------------------------------------------------------------------|--------------------|
| A. Acquisition, including excess lands,<br>damages to remainder(s) and Goodwill | <u>\$100,000</u>   |
| B. Utility Relocation (State share)                                             | <u>\$250,000</u>   |

Anticipated Date of Right-of-Way Certification      2018  
(Date to which values are escalated)

Explanation:

Right-of-way items include costs associated with acquiring right-of-way, temporary construction easements, and anticipated utility relocations.

TOTAL RIGHT-OF-WAY ITEMS      \$350,000

## 2. Project Description

### Purpose and Need

The project area is located within San Diego County, along a segment of Interstate 15 (I-15). I-15 is a major traffic corridor that serves the local community of Hidden Meadows and City of San Marcos, while also acting as a link for traffic traveling to and from I-15 to and from State Route (SR) 78. The intersecting Deer Springs Road is classified as a 6-Lane Prime Arterial in the County of San Diego Mobility Element and is currently built as a two-lane facility between I-15 and Twin Oaks Valley Road. Based on growth forecasts prepared by the San Diego Association of Governments (SANDAG), the County's unincorporated areas, which encompass the project area, are expected to see an overall population growth of approximately 25 percent between 2015 and 2050. To accommodate this growth and future capacity needs within the corridor, the interchange will require additional capacity. Regional growth, coupled with the approved site developments in the immediate vicinity, will result in increased volumes through the interchange by 2040 of approximately 25 to 40 percent, depending on the road segment. In addition to the projected traffic demands, the I-15/Deer Springs Road interchange is currently experiencing severe traffic congestion. Existing deficiencies of the I-15/Deer Springs Road interchange are summarized below:

- Three out of four I-15/Deer Springs Road interchange intersections are operating near or over design capacity during PM peak periods;
- Intersection delays of up to 45 seconds;
- High volumes of single-occupancy vehicle travel, necessitating improved access to carpools, vanpools, and public transportation choices via existing park-and-ride facilities within the project area.

The purpose of the proposed project is to plan for the projected regional population growth and increase in traffic demands on the existing I-15/Deer Springs Road interchange for the planning design year 2040. The project proposes to widen and reconfigure the interchange to improve traffic operations and enhance transportation choices. The objectives of the project are to:

- Support anticipated regional growth and proposed local-area projects;
- Relieve congestion by providing sufficient vehicle capacity through the interchange area;
- Manage east-west travel between local communities;
- Enhance multimodal choices;
- Improve the existing park-and-ride facility to provide transit connectivity; and
- Minimize environmental impacts.

### **Description of Work**

The design alternatives for the project include one No Build Alternative and three build alternatives, which include improvements to Deer Springs Road Interchange.

### **Alternatives**

#### ***Alternative 1***

This alternative is the No Build Alternative. The existing I-15 and Deer Springs Road interchange would remain unchanged and no work would be provided to improve operational conditions. The No Build Alternative does not meet the goals of this project to relieve congestion and is inconsistent with the purpose and need.

#### ***Alternative 2***

Alternative 2 proposes to expand upon the existing diamond configuration to improve operational conditions. This alternative would require nonstandard intersection spacing between the southbound ramp termini and the Mesa Rock Road/Deer Springs Road intersection and between the northbound ramp termini and the Champagne Boulevard/Deer Springs Road intersection. It proposes to realign the southbound ramps farther east to improve upon the existing nonstandard intersection spacing between the southbound ramp termini and the Mesa Rock Road/Deer Springs Road intersection. Realigning these ramps would require retaining walls along the southbound off-ramp and on-ramp. This alternative also proposes to widen Deer Springs Road to meet the increased traffic demand and would require the existing Deer Springs Road Overcrossing to be widened. It proposes to maintain the existing Extra Legal Load Network (ELLN) bypass of the Deer Springs Road Overcrossing via the southbound on- and off-ramps.

### ***Alternative 3***

Alternative 3 proposes to reconfigure the existing interchange into a diverging diamond interchange (DDI) configuration to improve operational conditions. The proposed geometry follows the informational guide published by the Federal Highway Administration (FHWA) in August 2014, which features a conventional 25-mile-per-hour (mph) design speed and a 45-degree intersection angle. This alternative also proposes to widen Deer Springs Road to meet the increased traffic demand and would require the existing Deer Springs Road Overcrossing to be widened. Alternative 3 also proposes to maintain the existing ELLN bypass of the Deer Springs Road Overcrossing via the southbound on- and off-ramps, utilizing a median opening for the ELLN vehicles to cross Deer Springs Road. This median opening would include several design features to keep other traffic from using it, such as a gate located within the opening, traversable concrete curb, chevron striping along the widened ramp shoulders, landscaping to block the view of the southbound on-ramp, and the geometric alignment of the median opening. This alternative may require nonstandard intersection spacing between the southbound ramp termini and the Mesa Rock Road/Deer Springs Road intersection and between the northbound ramp termini and the Champagne Boulevard/Deer Springs Road intersection. It may require a design exception for the conventional design speed of 25 mph required for DDI interchange configurations.

### ***Alternative 4***

Alternative 4 proposes to utilize the existing diamond configuration with roundabout intersections for the southbound and northbound ramp termini and for both of the adjacent local intersections along Deer Springs Road. This alternative also proposes to widen Deer Springs Road to meet the increased traffic demand and would require the existing Deer Springs Road Overcrossing to be widened. It proposes to maintain the existing ELLN bypass of the Deer Springs Road Overcrossing via the southbound on- and off-ramps, utilizing a roundabout through which the ELLN vehicles can navigate. This alternative would require nonstandard intersection spacing between the southbound ramp termini and the Mesa Rock Road/Deer Springs Road intersection and between the northbound ramp termini and the Champagne Boulevard/Deer Springs Road intersection. It may require a design exception for the conventional design speed of 25 mph required for roundabout intersections.

### 3. Anticipated Environmental Approval

Check the anticipated environmental determination or document for the proposed project in the table below.

| CEQA                                                                                           |                                     | NEPA                                                                            |                                     |

| CEQA Lead Agency (if determined):                                                              |                                     | Caltrans                                                                        |                                     |
| Estimated length of time (months) to obtain environmental approval:                            |                                     | 18 months                                                                       |                                     |
| Estimated person hours to complete identified tasks:                                           |                                     | 2,300                                                                           |                                     |

### 4. Special Environmental Considerations

Under any of the project build alternatives, there is the potential for impacts on biological resources, archaeological resources, and drainages. If any archaeological or historic resources identified within the area of potential effect (APE) are determined to be listed on or eligible for listing on the National Register of Historic Places (NRHP), then these would also be considered resources under Section 4(f). In compliance with Section 106 of the National Historic Preservation Act, a Finding of Effect (FOE) would need to be prepared to evaluate the effect of the proposed project on the eligible resource. If the proposed project results in a Finding of No Effect, then a *de minimis* finding would likely be appropriate with regard to Section 4(f). However, this will need to be further evaluated during the Project Approval/ Environmental Document (PA/ED) phase of the proposed project.

Deer Springs Creek runs through the south portion of the I-15/Deer Springs Road Interchange Project area. If temporary or permanent impacts are to occur, a Section 401 Water Quality Certification, Section 404 Nationwide Permit, and Section 1602 Streambed Alteration Agreement would be required; however, because the creek runs through a covered culvert from North Centre City Parkway south to Mesa Rock Road, impacts are not anticipated. Impacts to Deer Springs Creek will be further evaluated and documented during the PA/ED phase of the proposed project.

## **5. Anticipated Environmental Commitments**

Specific avoidance, minimization, and/or mitigation measures and commitments, and associated quantitative times and costs cannot be definitively determined at this time because the technical studies have not been initiated; however, for purposes of this Preliminary Environmental Analysis Report (PEAR), it is assumed that avoidance, minimization, and/or mitigation measures and commitments would consist of those measures that minimize project-related impacts typically used for similar transportation projects. Below is a list of environmental commitments by affected resource.

### **5.1 Community Impacts**

At this stage in project planning, partial and/or full acquisitions have not been finalized for each of the proposed build alternatives; however, all property and right-of-way (ROW) acquisitions as part of the proposed project would be conducted in accordance with California Department of Transportation (Caltrans) and FHWA policies and the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970. Properties would be purchased at fair market value, and relocation assistance for displaced residents would be provided. If any acquisitions are identified as necessary during the PA/ED phase, then a Relocation Impact Document (RID) would be prepared for the project. Additional community impacts will be discussed in the Community Impact Assessment (CIA) study such as; land use, potential growth, community character, transportation, environmental justice, and public involvement.

### **5.2 Section 4(f)**

The proposed project alternatives are not likely to have a direct affect on parks or historic resources eligible for the NRHP. These resources, if present, would be considered resources under Section 4(f) of the Department of Transportation Act. If it is found that project alternatives do affect historic properties eligible for the NRHP, then a determination of a deminimis impact finding or preparation of a Section 4(f) evaluation would be required.

### **5.3 Visual Impacts**

A Visual Impact Study will be prepared to evaluate visual impacts associated with the proposed project. The FHWA Visual Impact Assessment for Highway Projects guidelines will be followed to quantify the visual analysis.

### **5.4 Cultural Resources**

The proposed project alternatives may affect archaeological sites and possibly historic resources. It is anticipated that a Historic Properties Survey Report (HPSR), an Archaeological Survey Report (ASR), a Historic Resources Evaluation Report (HRER), as well as APE maps would be required for the project. An FOE report would also be required if properties that are directly impacted include resources that are found eligible for the NRHP, although this is not anticipated.

## **5.5 Water Quality Study**

The drainage channels adjacent to the interchange may be affected during construction. Coordination with the California Regional Water Quality Control Board (RWQCB) and the California Department of Fish and Wildlife (CDFW) will be required.

## **5.6 Paleontology**

A project-level Paleontological Identification Report (PIR) and Paleontological Evaluation Report (PER) would be required. Based on the findings of the report, a Paleontological Mitigation Plan (PMP) may be required. Any measures arising from the plan would need to be incorporated into the proposed project commitments.

## **5.7 Hazardous Waste/Materials**

Based on a review of the project site and a review of the State Water Resources Control Board (SWRCB) GeoTracker, hazardous waste may be present within the project limits. One leaking underground storage tank (LUST) site was identified near the Arco Gas Station between Mesa Rock Road and the I-15 southbound off-ramp. According to SWRCB GeoTracker data, this previously contaminated site has undergone cleanup, and the case is now closed. Because only one site was identified, and site cleanup has been completed, the project area is considered low risk. As part of the Phase I Environmental Site Assessment Process, an Initial Site Assessment (ISA) Checklist will be completed for further investigation during the PA/ED phase of this project.

It is assumed that the use, transport, and disposal of hazardous and potential hazardous materials used during construction would be conducted in accordance with applicable federal, state, and local requirements. Soils adjacent to paved areas in the project corridor may contain aerially deposited lead (ADL) from vehicle exhaust. An ADL survey would need to be performed during Caltrans Work Breakdown Structure (WBS) 165 phase of the proposed project according to Caltrans ADL testing guidelines. If the final construction alternative involves the acquisition of land with structures, the structures should be evaluated if lead-based paint (LBP) is suspected. Lead and other heavy metals, such as chromium, may be present in the yellow thermoplastic paint markings on the pavement. These surfacing materials should be tested for LBP prior to removal. If the final construction alternative involves the acquisition of land with structures or modification to existing bridges, the structures or bridges should be evaluated for asbestos-containing materials (ACM), if suspected, prior to demolition.

## **5.8 Air Quality**

The entire San Diego Air Basin is in a nonattainment area for ozone. Implementation of the proposed project would involve enhancements to the interchange, including improved signal timing and increased capacity, to accommodate existing and planned traffic generated in the project vicinity. Regional air quality will be addressed in terms of air quality impacts in the San Diego area. An Air Quality Study Report will be prepared to evaluate the impacts of the proposed project in accordance with Caltrans Transportation Project-Level Carbon Monoxide Protocol (December 1997). Because the project is capacity increasing, a transportation conformity determination would be required.

## **5.9 Noise**

A Noise Study in accordance with FHWA's Highway Traffic Noise Guidance and Policy and the Caltrans Traffic Noise Analysis Protocol will be prepared for this project due to sensitive receptors (mobile home park) within the impact area. In addition, an early coordination meeting will be requested to determine if the project would result in predicted traffic noise levels that approach or exceed the noise abatement criteria or if the predicted traffic noise levels would approach or substantially exceed existing noise levels.

## **5.10 Biology Study**

The interchange project is located within the North County Multiple-Species Conservation Plan (MSCP) and would be subject to the guidelines specific to the County's plan. Additionally, federally listed threatened or endangered species (including candidate species) or their critical or sensitive habitat may exist within the project area; however, further study will be required to determine if the project would adversely affect said species or their critical or sensitive habitat. At a minimum, a Natural Environment Study and potentially a Biological Assessment will be required to be prepared. Coordination with USFWS and CDFW will be required.

## **5.11 Wetlands Study**

Although the project area appears devoid of wetland resources, further study will be required to determine if wetlands actually occur within the project boundary and to quantify the project-related impacts on wetlands. A wetland delineation will be conducted. Coordination with, U.S. Fish and Wildlife Service (USFWS), and U.S. Army Corps of Engineers (USACE) may be required. Coordination with the Regional Water Quality Control Board (RWQCB) and California Department of Fish and Wildlife (CDFW) may also be required.

## **5.12 Traffic**

The proposed project would result in improved traffic flow through the project corridor and the improved interchanges; however, changes in traffic patterns and flow could result in potential impacts to local arterials that could require mitigation. Potential street, lane, and ramp closures may result in adverse temporary impacts on traffic during construction. Implementation of a Traffic Management Plan (TMP) during construction would be required and would include measures to address construction period traffic impacts.

## **6. *Permits and Approvals***

All construction activities within the Caltrans ROW must conform to the requirements of the National Pollutant Discharge Elimination System (NPDES) Stormwater Permit, Order No. 99-06-DWQ, NPDES No. CAS 000003, in addition to the responsibilities specified in the Stormwater Management Plan. The proposed project must also conform to the requirements of the General NPDES Permit for Construction Activities, Order No. 2009-

0009-DWQ, NPDES No. CAS 00002, and any subsequent general permits in effect at the time of project activity.

It is anticipated that if the proposed project impacts waters or wetlands, the following permits may be required:

- Water Quality Certification under Clean Water Act (CWA) Section 401 through the RWQCB;
- Nationwide Permit 14 under CWA Section 404 through USACE; and
- Streambed Alteration Agreement under Fish and Game Code 1602.

## **7. *Level of Effort: Risks and Assumptions***

The proposed project poses several risks pertaining to hazardous waste, biological resources, cultural resources, and the nearby community. As previously discussed, a decontaminated LUST site is located adjacent to the project area. It is assumed that if hazardous material is present onsite, it may require removal and disposal pursuant to federal or state law whether it is disturbed by the project or not.

While no sensitive habitats appear to be present in the project area and there does not appear to be any potential for special-status plants to occur, critical habitat for the federally threatened California gnatcatcher (CAGN) has been identified approximately 0.25 mile northeast of the project limits. CAGN is known to frequent areas with dense coastal sage scrub (CSS) vegetation. Within gore areas of the project limits, existing native CSS cover was observed on a field study conducted in 2014. Given the proximity to CAGN critical habitat and a history of CSS within the project area, focused, protocol-level CAGN surveys conducted by a federal 10(a)(1)(A) permitted biologist are recommended. The surveys would only be required in CSS areas within and adjacent to areas to be impacted by the proposed project. Surveys would determine the distribution and abundance of CAGN within the project site, which could potentially pose a risk to the project.

No bats, swift or swallow nests were observed on the existing bridge. If nesting or roosting activities are identified, avoidance and/or minimization measures would be required. The specifics of these measures would depend on the species and number of individuals.

It is known that Native Americans previously occupied areas near the I-15/Deer Springs Road Interchange Project location. As with many other projects that require excavation activities in southern California, there is the possibility of encountering potentially significant archaeological resources within the project area depending on the depth of construction for the project. The same risk also applies to paleontological resources; however, there is generally higher potential to uncover archaeological artifacts compared to paleontological specimens in this region.

Based on current designs of the proposed I-15/Deer Springs Road Interchange Project, there is slight risk that the project alignment would require additional ROW that could potentially result in community impacts.

## **8. PEAR Technical Summaries**

### **8.1 Land Use**

According to the San Diego County General Plan Land Use Map and Zoning Map, the project area is zoned commercial and office, residential mobile home, agriculture, and rural residential. Future land uses in the project area are guided by the County's General Plan and zoning ordinance. This area of the county is not built out, with many undeveloped parcels. For lands that are still vacant/undeveloped, a large percentage, including those near the proposed interchange, already have entitlements that are approved and in place. One development project within the immediate vicinity of the interchange is the Sierra-Newland Development Project. This is a proposed community subdivision on 1,985 acres currently undergoing environmental review with the County of San Diego Planning Department.

Within the project area, Deer Springs Road is primarily identified as a Collector Road, transitioning to a Major Road just southwest of Mesa Rock Road. The proposed project would be compatible with the County of San Diego's General Plan Mobility Element, which identifies Deer Springs Road as needing capacity improvements. Deer Springs Road is presently a 2 lane facility; however, per the County's current Mobility Element, Deer Springs Road classified as the following: from San Marcos City Limits to I-15 NB Ramp, Deer Springs Road is designated as a 6 lane prime arterial with a capacity of 50,000 ADT; and from I-15 NB ramp to Centre City Parkway, Deer Springs Road will be widened to be either 4 or 6 lanes depending on the traffic volumes for the specified design year and input from the County. The I-15/Deer Springs Interchange Project is consistent with these descriptions.

### **8.2 Section 4(f)**

It is not expected that any of the project alternatives would directly affect parks or historic sites eligible for or listed on the NRHP. No parks have been identified within the project area. However, if a significant archaeological site is found, as determined by Caltrans in consultation with the State Historic Preservation Officer (SHPO), appropriate Native American tribe, and the Advisory Council on Historic Preservation (ACHP), it may be NRHP eligible. If NRHP-eligible properties or resources are present in the project area, then they would be considered resources under Section 4(f) of the Department of Transportation Act; however, for the proposed project alternative, a *de minimis* impact finding will likely be determined. If it is found that the finalized project alternatives do adversely affect historic resources eligible for the NRHP, then preparation of a Section 4(f) evaluation would be required.

### **8.3 Growth**

The area immediately surrounding the project area includes existing residential, commercial, and industrial properties, as well as recreational open space. The area served

by the existing interchange is primarily residential with open space that has yet to be developed. The proposed project is not anticipated to appreciably affect the rate, type, or amount of growth that has already been accounted for in the City of Escondido, City of San Marcos, and San Diego County general plan documents. It is anticipated that following implementation of the proposed project, the pattern and rate of the population and housing growth would be consistent with rates projected in existing plans for the area.

#### **8.4 Farmlands/Timberlands**

The proposed project would not be located in an area that includes any farmlands that are designated by the California Department of Conservation (DOC) as prime farmland or farmland of local or state importance; however, DOC-classified unique farmland may temporarily and/or permanently be impacted by the proposed project. The proposed project would have no direct impacts to lands protected under the California Land Conservation Act of 1965, commonly known as the Williamson Act.

Directly north of the interchange and southwest of the interchange are some general use agricultural lands that may be impacted by construction activities. The northern agricultural land is the most likely to be impacted by construction activities, while the southwestern agricultural lands may be indirectly impacted. Indirect impacts would result from cumulative impacts due to changes in regional development patterns and growth-related changes. Indirect impacts to farmlands/timberlands would be further assessed in the Community Impact Assessment. Additional reconnaissance surveys need to be conducted to further analyze these resources.

#### **8.5 Community Impacts**

An existing mobile home park is located off of Deer Springs Road and Mesa Rock Road. Permanent impacts to this community would be minimal; however, a Community Impact Assessment (CIA) will need to be prepared to adequately assess impacts to the community cohesion and character.

Currently, no residential or commercial ROW impacts are anticipated. Because adequate ROW is present at the interchange, impacts to properties outside Caltrans ROW would be avoided to the extent feasible. If any partial or full acquisitions are required for the project, they will be thoroughly documented and assessed in the PA/ED phase. If any acquisitions are identified as necessary in a later project phase, then a RIS would be prepared for the project. Additional community impacts will be discussed in the Community Impact Assessment study such as; land use, potential growth, community character, transportation, and public involvement.

#### **8.6 Visual/Aesthetics**

The interchange project is within the County of San Diego's I-15 Corridor Subregional Plan and its Scenic Preservation Guidelines. In accordance with the plan, the project will protect and enhance scenic resources within the project area to the extent feasible.

Each of the proposed build alternatives could potentially affect the views of residences and businesses located adjacent to the project area, particularly related to the construction of improved structures, which could modify or obstruct views of sensitive viewers. The proposed project could also result in increased shading and increased glare from additional lighting, if incorporated into the project. In addition, removal of trees and vegetation may be necessary to construct the proposed project. A Visual Impact Assessment (VIA), in accordance with the FHWA Visual Impact for Highway Projects guidance, will be required. The VIA should address the aesthetic treatment of the new interchange structure and walls, vegetation removal, soundwalls, and measures to address impacts on sensitive viewer groups.

## **8.7 Cultural Resources**

Cultural resource identification, analysis, and subsequent reports will be conducted in compliance with the Amended Section 106 Programmatic Agreement (PA) in compliance with Section 106 of the National Historic Preservation Act (NHPA), as it pertains to the administration of the Federal-Aid Highway Program in California executed January 1, 2014. Potential historic properties will be identified and evaluated for inclusion in the NRHP as required by 36 Code of Federal Regulations (CFR) Part 800 and the regulations implementing Section 106 of the NHPA of 1966, as amended.

Preliminary research from a literature and records database search at the South Coast Information Center has revealed that there are cultural resources located in the project vicinity. This search covered both published and unpublished materials on previous researches and projects within the project vicinity as part of the scoping process. Native Americans may have previously occupied this area. There were nine recorded sites within a half mile radius of the project APE, with three sites recorded partially within the project APE. The majority of these sites were located on the eastern portion of the project APE. After reviewing the site reports and relevant literature, it was revealed that much of these sites were destroyed from previous construction projects. However, there is potential for encountering surface or buried archaeological artifacts during construction of the proposed project alternatives. If any of these cultural resources are encountered, or are deemed to be a CEQA historical resource, then the resource would require evaluation under Section 106, and an Archaeological Evaluation Report would be required.

It is also known that the area may contain remnants of historic trails and roads. Given the size and scope of the project, a pedestrian field survey by a qualified archaeologist will need to be conducted for the project area. This is done in order to assess whether or not the recorded sites still exist, and to discern if there are additional archaeological or historic resources in the project area. Based on the results of the survey and the completed ASR, monitoring during construction by a qualified archaeologist is recommended. If the widening of Deer Springs Road impacts an archaeological site that is potentially eligible for the NRHP, then a more detailed analysis will need to be conducted by a professionally qualified archaeologist. Depending on the results of the analysis, a memorandum of Understanding (MOU), and/or an Archaeological Data Recovery (Phase III) may become required.

Additionally, coordination with the Native American Heritage Commission (NAHC) would identify tribal representatives in the area and request a record of any known sacred grounds. As part of this outreach and consultation effort, interested parties such as historical societies, local historians and tribal representatives shall be contacted in order to ask if they have any known concerns or information beyond any archaeological properties that could affect the alternatives, cost, schedule, or viability of the proposed project alternatives.

An HPSR and APE maps would also be required for the proposed project. The literature and records search revealed a few historic buildings that were in a dilapidated state as of 2000. Subsequent research suggests that these buildings no longer exist.

Additionally, a survey will need to be conducted by an architectural historian as part of an evaluation of buildings or structures for the HRER that would be required. At this stage in the project proposal, no properties are expected to be impacted.

If any historic or archaeological resources within or adjacent to the APE are determined to be listed on or eligible for listing on the NRHP, then these would also be considered resources under Section 4(f). There may be additional cultural resources that meet the 50-year threshold and are not exempt under the Section 106 Programmatic Agreement; however, this would have to be determined when more detailed studies are conducted for the proposed project.

In accordance with Section 106 PA of the National Historic Preservation Act, a FOE would need to be prepared to evaluate the effect of the proposed project on the NRHP eligible resource, should any exist in the APE. If the proposed project results in a Finding of No Adverse Effect, then a *de minimus* finding would likely be appropriate with regard to Section 4(f). Based on the proposed build alternatives, no historic resources are anticipated to be impacted. However, the need for a Section 4(f) evaluation related to cultural resources, and the level of Section 4(f) evaluation, will be addressed during the PA/ED phase of the proposed project.

## **8.8 Water Quality and Stormwater Runoff**

Two drainages were observed within the project vicinity: Deer Springs Creek and South Fork Moosa Canyon Creek. Only Deer Springs Creek has the potential to be impacted because it flows through the southern portion of the project area; however, because the creek runs through a covered culvert from North Centre City Parkway south to Mesa Rock Road, water quality impacts are not anticipated. The second drainage is located on the northeast quadrant of I-15 and appears to be underground at Champagne Boulevard; it would most likely not be impacted by any construction activities or operation of the completed project. Both drainages are shown on the Environmental Constraints Map in Appendix E, Report Figures. Impacts to Deer Springs Creek and South Fork Moosa Canyon Creek will be further evaluated and documented in a Water Quality Study during the PA/ED phase of the proposed project.

Under the build alternatives, grading activities associated with construction could result in temporary soil erosion. Implementation of Best Management Practices (BMPs) would minimize erosion of exposed soils and the resulting movement of sediment into the storm drain system and downstream water bodies. During construction, the contractor would be required to implement several temporary site BMPs to limit soil erosion, implement water conservation practices, and maintain water quality. The construction site BMP strategy for the proposed project would consist of soil stabilization and sediment control devices.

The proposed project may require a Storm Water Pollution Prevention Plan (SWPPP) because the disturbed soil area could possibly be more than 1 acre. The proposed project alternatives may require a USACE 404 permit and an RWQCB 401 Water Quality Certification.

## **8.9 Geology, Soils, Seismic, and Topography**

Southern California is a seismically active region with numerous faults of various types and the potential for earthquakes of Richter scale magnitude. In San Diego County, where the proposed project lies, the San Jacinto Fault, which is California's second most active fault, after the San Andreas Fault, runs through northeast San Diego County. The Rose Canyon Fault is another major fault in San Diego County that runs through the downtown portion of San Diego County through La Jolla. A geotechnical investigation should be conducted during the PA/ED phase.

## **8.10 Paleontology**

Southern California has been a valuable resource for paleontological finds. There is the possibility of encountering paleontological resources within the project area, depending on the depth of construction for the project. A PIR and PER will need to be prepared for this project by a qualified paleontologist. Part of these reports will include a review of relevant published and unpublished geologic reports and paleontological locality records from the San Diego Natural History Museums. Geologic formations and paleontological deposits have a direct relationship with each other and should be considered jointly as part of the initial scoping process. The United States Geological Survey map for the project area was reviewed to gain information on geologic formations in the project area. Type Qoa covers most of the interchange which is old alluvial flood plain deposits from the late-to-middle Pleistocene epoch (6 – 11.5 million years ago). It consists of gravel, sand, silt, and clay. The other formation which covers the other large portion of the project is Kjd, Granodiorite of Jesmond Dean of the mid-Cretaceous epoch (95 – 115 million years ago). It consists of fine-grained, black and dark-gray granodiorite.

Additionally, coordination with other interested parties, such as museums, universities and knowledgeable individuals, should be undertaken as part of this effort. Given the size and scope of the project, a pedestrian survey of the project area should be conducted to identify any surface paleontological artifacts, fossils or specimen and geologic formations.

The depths of the excavations for the project have not yet been established , and intensive studies into the paleontological sensitivity of the region have not been conducted. Based on the findings of the PIR and PER reports, a PMP and construction monitoring maybe required.

### **8.11 Hazardous Waste/Materials**

As previously discussed, because only one hazardous waste cleanup site was identified adjacent to the I-15/Deer Springs Road interchange, the project area is considered low risk. An ISA Checklist and Phase I Environmental Site Assessment will be completed for further investigation during the PA/ED phase of this project.

Furthermore, the use, transport, and disposal of hazardous and potentially hazardous materials used during construction would be conducted in accordance with applicable federal, state, and local requirements.

### **8.12 Air Quality**

An Air Quality Study Report (AQSR) will be prepared to evaluate the impacts of the proposed project. The AQSR will address transportation conformity and project-level air quality impacts.

As previously stated, the entire San Diego Air Basin is in a nonattainment area for ozone. Regional air quality will be addressed in terms of air quality impacts in the San Diego area. It is anticipated that the proposed project would accommodate anticipated increases in vehicle traffic but would serve existing and planned land uses and developments. It is anticipated that the proposed project would reduce future congestion and improve traffic flow in the project area; therefore, it would potentially yield air quality benefits to the region. However, due to the capacity increasing elements associated with the proposed project, it is subject to Transportation Conformity. The project will be presented to TCWG in order to obtain concurrence that the project is in conformity with the air quality regulations. Following TCWG's recommendation, an Air Quality Conformity Report (AQCR) will be prepared. The AQCR will evaluate, among other items, regional emissions, project-level carbon monoxide and particulate matter emissions, mobile source air toxics emissions, naturally occurring asbestos, and construction emissions.

It is expected that operation results would improve area traffic congestion and therefore have a beneficial effect on air quality. It is possible that construction-related activities could produce air quality emissions. Possible mitigation measures for construction-related air quality effects, such as dust control measures, will be addressed in the AQSR.

### **8.13 Noise and Vibration**

The proposed project could temporarily increase noise levels as a result of construction activities. There are currently no soundwalls along the residential area along the southeastern portion of the interchange. The proposed project would most likely need to provide sound abatement for the sensitive receptors living adjacent to the interchange. A Noise Study Report (NSR) would be required to measure the noise impacts on nearby residences and other noise-sensitive land uses. Determination of the need for and the

placement of new soundwalls would be made during the PA/ED phase of the project based on the NSR. The Noise Abatement Decision Report (NADR) compiles information from the NSR, other relevant environmental studies, and the design considerations into a single, comprehensive document before public review of the proposed project. The final determination regarding the incorporation of any soundwalls would be based on the findings of the NSR and NADR and any input received from the public during the environmental document availability period.

#### **8.14 Biological Environment**

Non-Native Grasslands, Southern Mixed Chaparral, Coast Live Oak Woodland, Southern Coast Live Oak Riparian Forest, Chamise Chaparral, oak trees, and eucalyptus trees surround the interchange. The Non-Native Grassland, Southern Coast Live Oak Riparian Forest, Southern Mixed Chaparral, and the eucalyptus trees have the most potential to be impacted by the proposed build alternatives. The impact areas are along the west side of Deer Springs Road; just south of the road are mature oak trees and Deer Springs Creek. South Fork Moosa Canyon Creek is on the east side of I-15, at the intersection of Champagne Boulevard and Mountain Meadow Road, as well as mature eucalyptus trees north and south of Mountain Meadow Road. If there is construction work outside of the existing ROW, then these trees may be impacted. At this stage in the project, it is not expected that work outside of the existing ROW will be necessary.

Within gore areas, existing native CSS cover was observed on a field study conducted in 2014; however, it currently appears to be disturbed, non-native grasslands with sporadic CSS species based on a field survey completed in January and February 2015. Further field studies need to be conducted to verify these areas. No habitats of concern appear to be present in the project area, and there does not appear to be any potential for special-status plants to occur.

The interchange appears to be located within the Northern County MSCP. Based on the USFWS Critical Habitat Mapping database, there is no designated critical habitat for the CAGN within or immediately adjacent to the interchange area; however, designated habitat for CAGN has been identified approximately 0.25 mile northeast of the edge of the project area. Given the proximity to CAGN critical habitat and a history of CSS within the project area, then a habitat assessment for CAGN should be completed for the project. If habitat is found in the project area, then a focused, protocol-level CAGN surveys should be conducted by a federal 10(a)(1)(A) permitted biologist in accordance with 1997 Coastal California Gnatcatcher Presence/Absence Survey Guidelines published by USFWS. Surveys would determine the distribution and abundance of CAGN within the project site. The survey does not have to include the entire Biological Study Area (BSA,) but only CSS areas within and adjacent to areas to be impacted by the project.

No swift or swallows nests were observed on the existing bridge. Bats were not observed utilizing the structure either. Additional biological field studies will be conducted to verify these preliminary findings.

A Natural Environment Study will be prepared to accurately assess impacts to those resources and to identify appropriate mitigation and monitoring measures to minimize impacts.

### **8.15 Context-Sensitive Solutions**

Caltrans uses context-sensitive solutions as its approach to plan, design, construct, maintain, and operate its transportation system. Context-sensitive solutions use innovative and inclusive approaches that integrate and balance community, aesthetic, historic, and environmental values with transportation safety, maintenance, and performance goals. The plans are reached through a collaborative, interdisciplinary approach involving all stakeholders. As the project progresses through the design phase (PA/ED), context-sensitive solutions would be implemented through coordination among the Project Development Team, as appropriate. Any public outreach should also include the topic of context-sensitive solutions so that the community can provide input with regard to how the project will fit into the community. Community groups that would be contacted for public participation include, but are not limited to, Twin Oaks Valley Community Sponsor Group, and the I-15 Design Review Board. Some solutions that may apply to the project would be the incorporation of avoidance/minimization measures related to any identified cultural resources and surface or other treatments of any soundwalls or retaining walls that are required.

## **9. Summary Statement for PSR or PSR-PDS**

The anticipated document for compliance with the California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA) is a joint Initial Study (IS)/Environmental Analysis (EA) leading to a Mitigated Negative Declaration (MND). Caltrans will act as the Lead Agency for CEQA and, as of July 1, 2007, Caltrans has been assigned the responsibility for the environmental review, consultation, and any other action required in accordance with applicable federal laws pursuant to 23 United States Code (U.S.C.) 327, thereby making Caltrans the lead agency for NEPA as well. Under NEPA, the appropriate documentation will be a Finding of No Significant Impact (FONSI). The MND/FONSI timeline could require approximately 18 months from the start of the environmental studies to approval of the environmental document.

The potential impacts of the proposed project are summarized below.

A CIA will be prepared to assess any impacts to the adjacent mobile home park and/or nearby businesses.

Depending on the alternative that is selected, the proposed project may result in partial acquisitions of residential and/or commercial properties. A Draft and Final RID would be required to address any relocations that occur as a result of the project.

General use agricultural land may be impacted directly to the north of the project vicinity if construction exceeds the existing ROW in that area. Mitigation and/or avoidance and minimization measures will need to be developed if any impacts are anticipated to this resource.

Excavations could potentially encounter paleontological resources. A project-level PIR and PER will be required. Based on the report findings, a PMP may also be required.

The proposed build alternatives could impact cultural resources. An HPSR and an ASR will be required. An HRER will be required to assess properties of historic significance within the project vicinity. Coordination with the NAHC and individual tribal representatives will be necessary.

If impacts to Deer Springs Creek occur, the proposed project will require the following permits: a Water Quality Certification under CWA Section 401 through the RWQCB; a Nationwide Permit 14 or Individual Permit under CWA Section 404 through USACE, depending on the extent of impact on federal Waters (Waters of the United States); and a Streambed Alteration Agreement under Fish and Game Code 1602.

The proposed project will require a Water Quality Report to analyze the potential impacts of the project on the aquatic environment. The project will require an SWPPP because the disturbed soil area could exceed 1 acre. Although temporary and permanent BMPs related to water quality should be implemented, future detailed site investigations would determine additional BMPs to be recommended as permanent treatment BMPs.

ADL studies will need to be conducted on the unpaved areas along the roadway, and studies may also be required for the structures targeted for demolition that could possibly contain LBP and/or ACM.

The proposed project is intended to reduce congestion and vehicle delay times, and it would also increase capacity. An AQSR will be required to assess the potential for the project to result in impacts to air quality during construction and operation. In addition, a quantitative analysis of greenhouse gas emissions will be required.

The proposed build alternatives will require an NSR to measure the noise impacts on nearby residences and other noise-sensitive land uses. Soundwalls may be required.

The proposed project alternatives will require a Natural Environment Study (Minimal Impacts) to evaluate impacts on biological resources and to identify avoidance, minimization, and/or mitigation measures. Bats may be present under the existing bridge, and birds protected by the federal Migratory Bird Treaty Act and similar provisions under Department of Fish and Game code may be present. Additionally, the eucalyptus and oak trees found in the project vicinity may be impacted if construction exceeds the current ROW. Mitigation and/or avoidance measures will need to be developed in case any of these biological resources are impacted.

A decontaminated LUST site is located adjacent to the proposed project area. An ISA Checklist will be required for further investigation.

## **10. Disclaimer**

The PEAR provides an initial environmental evaluation of a project before it is programmed. While it anticipates the environmental constraints that may affect project

design, cost, schedule, and delivery, it is not an environmental determination or document. Based on the project description provided in the Project Study Report (PSR), the PEAR estimates the scope, schedule, and costs associated with the subsequent environmental compliance process and it documents the assumptions used to develop those estimates. The text briefly outlines the issues and assumptions. Project scope changes made after the PEAR will affect assumption and cost.

Project scope changes made after this PEAR is prepared may affect level of environmental approval, cost and schedule. Please note that the information provided is preliminary and based on cursory examination. All impacts and associated mitigation should be considered as estimates until the project areas are thoroughly surveyed by specialists. The cost estimates (which only include preparation hours) and conclusions in the PEAR are approximate and are based on cursory analyses of probable effects. A reevaluation of the PEAR will be needed for changes in project scope or alternatives, or in environmental laws, regulations, or guidelines.

11. List of Preparers

|                                                                      |                 |
|----------------------------------------------------------------------|-----------------|
| <b>Cultural Resources specialist:</b><br>Monica Corpuz               | Date: 6/18/2015 |
| <b>Biologist:</b><br>Arianne Preite                                  | Date: 6/23/2015 |
| <b>Community Impacts specialist:</b><br>Emily Hoyt                   | Date: 6/24/2015 |
| <b>Noise and Vibration specialist:</b><br>Areg Gharabegian           | Date: 4/27/2015 |
| <b>Air Quality specialist:</b><br>Bruce Campbell                     | Date: 4/27/2015 |
| <b>Paleontology specialist/liaison:</b><br>Monica Corpuz             | Date: 6/18/2015 |
| <b>Water Quality specialist:</b><br>Chris Hinds                      | Date: 4/27/2015 |
| <b>Hydrology and Floodplain specialist:</b><br>Portia Gonzalez, P.E. | Date: 4/27/2015 |

| <b>PEAR Preparer:</b><br>Emily Hoyt/Stephanie Blanco                 | Date: 7/30/2015 |

**12. Review and Approval**

I confirm that environmental cost, scope, and schedule have been satisfactorily completed and that the PEAR meets all Caltrans requirements.

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Project Purpose and Need**</b></p> <p><u>Purpose:</u><br/>                     The purpose of the proposed project is to plan for the projected regional population growth and increase in traffic demands on the existing I-15 and Deer Springs Road interchange for the planning design year 2040.</p> |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

The project proposes to widen and reconfigure the interchange to improve traffic operations and enhance transportation choices. The objectives of the project are to:

- Support anticipated regional growth and proposed local-area projects;
- Relieve congestion by providing sufficient vehicle capacity through the interchange area;
- Manage east-west travel between local communities;
- Enhance multi-modal choices;
- Improve the existing park and ride facility to provide transit connectivity; and
- Minimize environmental impacts.

Need:

The project area is located within San Diego County near Escondido, along a segment of Interstate 15 (I-15). I-15 is a major traffic corridor that serves the local communities of Hidden Meadows and San Marcos, while also acting as a link for traffic travelling to/from I-15 to/from SR 78. The intersecting Deer Springs Road is classified as a 6-Lane Prime Arterial in the County of San Diego Mobility Element and is currently built as a two-lane facility between I-15 and Twin Oaks Valley Road. Based on growth forecasts prepared by the San Diego Association of Governments, the county’s unincorporated areas, which encompass the project area, are expected to see an overall population growth of approximately 25 percent between 2015 and 2050. To accommodate this growth and future capacity needs within the corridor, the interchange will require additional capacity. Regional growth coupled with the approved site developments in the immediate vicinity will result in increased volumes through the interchange by 2040 of about 25-40%, depending on the road segment. In addition to the projected traffic demands, the I-15/Deer Springs interchange is currently experiencing severe traffic congestion. Existing deficiencies of the I-15/Deer Springs interchange are summarized below:

- Three out of four I-15/Deer Springs interchange intersections are operating near or over the design capacity during peak period traffic volumes;
- Intersection delays of up to 45 seconds;
- High volumes of single occupancy vehicle travel, necessitating improved access to carpools, vanpools, and public transportation choices via existing park and ride facilities within the project area.

\*\* The Transportation Planning PDT Representative is responsible for providing the PDT with the system-wide and corridor level deficiencies identified by Transportation Planning. The PDT uses the information provided by Transportation Planning to develop the purpose and need with contributions from other Caltrans functional units and external stakeholders at the initiation of the PID and is refined throughout the PID process. As the project moves past the project initiation stage and more data becomes available, the purpose and need is refined. For additional information on purpose and need see: [www.dot.ca.gov/hq/env/emo/purpose\\_need.htm](http://www.dot.ca.gov/hq/env/emo/purpose_need.htm)

|   | INITIAL PID INFORMATION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| a | <p>Does this facility provide for pedestrian safety and mobility needs? If so, describe pedestrian facilities. Do continuous and well-maintained sidewalks exist? Are pedestrians forced to walk in the roadway at any locations due to lack of adequate pedestrian facilities? Please explain.</p> <p>There is currently no existing sidewalk within the project limits. The proposed project improvements include 6' ADA accessible sidewalks on each side of Deer Springs Road between Mesa Rock Rd and Champagne Blvd. In addition, crosswalks are proposed to allow access for these intersecting streets.</p> |
| b | <p>Are pedestrian crossings located at reasonable intervals?</p> <p>Yes</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| c | <p>Are all pedestrian facilities within the corridor ADA accessible and in compliance with Federal and State ADA laws and regulations?</p> <p>Yes</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|   | FINAL PID INFORMATION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| d | <p>Will pedestrian travel deficiencies be corrected? How or why not?</p> <p>Yes, per Section 10.b. above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| e | <p>How will this project affect local agency plans for pedestrian safety and mobility improvements?</p> <p>The proposed facilities meet the current local agency plans, and will coordinate with local agency during the design.</p>                                                                                                                                                                                                                                                                                                                                                                                |
| f | <p>If the project is the construction of a new freeway or modification to an existing freeway, will it sever or destroy existing provisions for pedestrian travel? If yes, describe how pedestrian travel provisions will be included in this project.</p> <p>No</p>                                                                                                                                                                                                                                                                                                                                                |
| g | <p>Are there any external pedestrian advocacy groups and advisory committees that should be included in the project stakeholder list? If so, provide contact information.</p> <p>No</p>                                                                                                                                                                                                                                                                                                                                                                                                                             |
| h | <p>Have ADA barriers as noted in the District's ADA Transition Plan been identified within the project limits? If not included in the project, provide justification and indicate whether District Design coordinator approval was obtained.</p> <p>N/A</p>                                                                                                                                                                                                                                                                                                                                                         |

EA 11-41840K

From: Jason Fischer

The above-referenced project will require a(n) Original/Updated Conceptual Cost Estimate for the Right of Way Component by February 2016.

**Project Information**

Type and description of the project.

Project Setting:  Urban  Rural Current Land Use: Commercial, Residential, and Agricultural

Project Schedule: PID Date August 2015 PA&ED Date August 2016 RWC Date July 2018

Number of Alternatives to be Studied 4 Environmental Document Type MND/CE

Environment Mitigation Parcels/Credits Anticipated:  Yes  No  Unknown

Environmental Permits: Number 404, 401, 1602 Permits Needed Prior to PA&ED None

Permits to Enter for Environmental/Engineering Studies Yes

Number of Public Meetings Anticipated 2 Controversial:  Yes  No  Unknown

**Right of Way Requirements**

Additional R/W: Number of Parcels 6 Total Additional Area 33,000 Sq Ft

Number of Easements 10 Total Easement Area 25,000 Sq Ft

Access Points/Control:  No Anticipated Change  Change is Anticipated

Identify Change in Access: Potential relinquishment along existing SB I-15 off-ramp

Utilities:  None  Minor  Major Types of Utility facilities: Telecommunications, Water, Gas, Electrical and Sewer

Potholing Needed Number N/A

Railroad: Identify Rail Companies in the Vicinity of the Project: N/A

List Possible RR Needs (e.g. 'Flagging'): N/A

No Rail Companies in the Vicinity of the Project

Existing Facilities:  No Relinquishments/Vacations  Relinquishments  Vacations

Proposed Facilities:  No Relinquishments  Relinquishments

# CONCEPTUAL COST ESTIMATE – RIGHT OF WAY COMPONENT

## Schedule

Right of Way will require 12 months to deliver a Right of Way Certification #1 from Final R/W Maps. This estimate is based on a Right of Way Certification date of July 2018.

**Areas of Concern**

Provide a description of areas in close proximity to the project footprint that are likely to result in complex right of way issues if impacted (i.e. junkyards, cemeteries, utility towers, etc.).

If impacted, the existing Deer Springs Oak Mobile Home Estates located south of Deer Springs Road and west of I-15 that could potentially result in complex right-of-way issues. However, none of the proposed build alternatives are expected to impact this area.

**Assumptions and Limiting Conditions**

Provide a description of assumptions and limiting conditions.

Capital costs were based on a square foot estimate of the land area required and the Automated Valuation Model (AVM) of the adjacent parcels.

Carl Savage, District SW Coordinator Date

## STORM WATER DATA INFORMATION

### 1. Project Description

- *Clearly describe the type of project and major engineering features.*

The project proposes to widen Deer Springs Road from west of Mesa Rock Road to east of Centre City Parkway/Champagne Boulevard. The widening will require improvements to or replacement of the existing Deer Spring Road Bridge Overcrossing. In addition, improvements to intersections and freeway access ramps will also be required. The proposed project is located at the existing Interstate 15 (I-15)/Deer Springs Road Interchange between Mesa Rock Road and Champagne Boulevard.

The purpose of the Deer Springs Road Interchange modifications is to alleviate existing traffic congestion and improve interchange traffic operations to meet 2040 forecasted traffic demands. The improvements to Deer Springs Road and the I-15/Deer Springs Road Interchange are off-line improvements required to implement the Sierra Project. The Sierra Project is a proposed master-planned community project integrating residential, commercial, recreational, and open space land uses, on 1,985-acres located west of I-15 and north of Deer Springs Road. Currently Deer Springs Road is a two lane facility and the on and off ramps for the I-15 interchange are single lanes. The interchange and adjacent intersections are currently over capacity. With forecasted regional growth including the addition of the Sierra Project, improvements will be needed to reduce the congestion in the area.

- *Quantify total disturbed soil area and describe how it was calculated. It should be noted that projects that preserve, upkeep, and restore roadway structures do not need to include these activities within the calculation for DSA.*

The total disturbed soil area of the project has been estimated to be approximately 30 acres for each build alternative. This value is based on potential areas of exposed, erodible soil within the project limits that result from the construction of grading and roadways.

- *Quantify the existing impervious surface, and the impervious surface area after the project is completed.*

There are 12 acres of existing impervious surface within the project limits. The proposed project would add between 1.5 acres to 4.5 acres, depending on which alternative, of impervious surface for a total impervious area of 13.5 to 16.5 acres.

- *Identify all urban MS4 areas within the project limits.*

The project is located in Hidden Meadows, an unincorporated community of San Diego County. Within the project limits, the San Diego County operates under an MS4 permit that includes storm drain inlets, concrete ditches, natural dirt ditches, and Deer Springs Creek which crosses the I-15 south of Deer Springs Road Interchange, through a 10-foot by 5-foot Reinforced Concrete Box (RCB).

### 2. Site Data and Storm Water Quality Design Issues (refer to Checklists SW-1, SW-2, and SW-3)

*Project Engineer (PE) should confer with District/Regional Storm Water Coordinator, Landscape Architecture, Maintenance, Hydraulics, Construction and Environmental Units to define design issues.*

## I-15 / Deer Springs Interchange Long Form - Storm Water Data Report

Provide a narrative that contains pertinent information from source documents identified on SW-1 (e.g. Preliminary Geotechnical Report [PGR]) and a summary of the answers to the questions in SW-2 and SW-3. Use the bullets listed below as examples of information that should be described in the narrative. Note, not all of the information listed is available at each phase of a project (document status of availability, as appropriate). Information to be included will depend on the nature of the project and the site conditions.

- Identify Receiving Water Bodies (including the Hydrologic Area or sub-area [name and/or number]) and distance from the project's outfalls

Storm water runoff from the project site discharges into Deer Springs Creek through a system of inlets, culverts, natural channels and concrete channels. Deer Springs Creek flows south and westerly to San Marcos Creek which joins into Batiquitos Lagoon and ultimately discharges into the Pacific Ocean.

The San Diego Regional Water Quality Control Board (SDRWQCB) Region 9 has jurisdiction within the project limits. The project discharges into the SDRWQCB hydrologic unit 904.5, known as the San Marcos Hydrologic Area comprised of three Hydrologic Sub-Areas: Twin Oaks 904.53, Richland 904.52, and Batiquitos 904.51. The San Marcos Hydrologic Area is one of seven hydrologic areas within the Carlsbad Hydrologic Unit, see Figure 2.1.

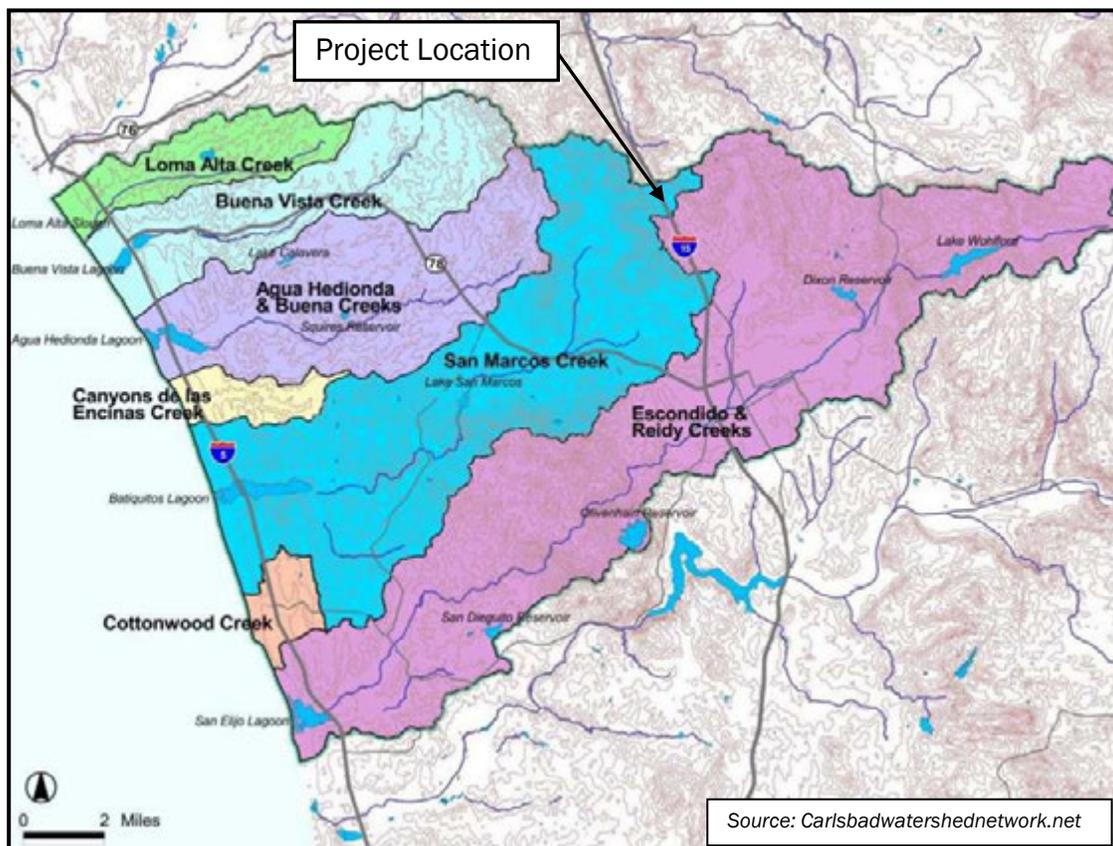

Figure 2.1: Carlsbad Hydrologic Unit

- Identify if any of the Receiving Water Bodies are on the 303(d) list / describe Pollutants of Concern

The San Marcos Creek is an impaired water body on the 303(d) list. Since the California Department of Transportation (Caltrans) must meet requirements set forth

under the National Pollutant Discharge Elimination System (NPDES) Permit mandated by the Federal Clean Water Act for discharge of storm water runoff to the Pacific Ocean, this project will need to be designed in conformance with NPDES requirements. The pollutants listed for San Marcos Creek on the 303(d) list are DDE (Dichlorodiphenyldichloroethylene), Phosphorus, Sediment Toxicity, and Selenium.

- Phosphorus can over stimulate the growth of aquatic plants to the detriment of other aquatic life and to some beneficial uses of the receiving water. Sources of phosphorous that may be present in highway runoff include tree leaves, surfactants, emulsifiers, and natural sources such as mineralized soil organic matter.
- DDE is a chemical similar to DDT (dichloro-diphenyl-trichloroethane), which was a pesticide once use widely to control insects in agriculture and insects that carry disease such as malaria. It was banned in the US in 1972 due to damage to wildlife. DDE has no commercial use.
- According to the California Coastal Commission, phosphorus, DDE, and sediment toxicity result primarily from urban runoff/storm sewers. The project will be mitigated by the use of Construction Site Best Management Practices (BMPs) and Permanent Treatment BMPs to prevent and minimize the discharge of pollutants contained in storm water runoff to the affected waterbodies.

The potential pollutant sources within the project right-of-way to be treated consist primarily of highway runoff. These items for the most part include total suspended solids (TSS) and total dissolved solids (TDS), specifically sediment resulting from erosion, but also including particulate and dissolved metals from the wearing of brake pads and the combustion products of fossil fuels as well as grease and oil from automobiles. The Targeted Design Constituent (TDC) for the receiving water is Phosphorus. The Permanent Treatment BMPs proposed for load reduction of the projects pollutants will address treatment for Phosphorus along with the anticipated pollutants expected in the project vicinity: TSS, TDS, Dissolved metals, grease and oil.

- *Identify if 401 certification is required*

A 401 certification will not be required because the project does not discharge to navigable waters.

- *Identify any Drinking Water Reservoirs and/or Recharge Facilities within project limit*

There are no known drinking water reservoirs and/or recharge facilities located with the project limits.

- *Describe RWQCB special requirements/concerns, including TMDLs or effluent limits*

The SDRWQCB developed a Water Quality Control Plan for the entire San Diego Basin. The plan identifies the beneficial uses of all water bodies within the region in order to determine the water quality objectives necessary to protect those uses. The beneficial uses of inland surface waters defined for the receiving waters within the Twin Oaks Hydrologic Sub-Area are as follows:

- Agricultural Supply (AGR) – Water for farming, horticulture, or ranching
- Water Contact Recreation (REC1) – Water for recreational activities involving body contact with water

## I-15 / Deer Springs Interchange Long Form - Storm Water Data Report

---

- Non-contact Water Recreation (REC2) – Water for recreational activities not involving body contact with water
- Warm Freshwater Habitat (WARM) – Water that supports aquatic ecosystems
- Wildlife Habitat (WILD) – Water that supports terrestrial ecosystems

The beneficial uses defined for groundwater within the Twin Oaks Hydrologic Sub-Area are as follows:

- Municipal and Domestic Supply (MUN) – Water for community, military, or individual water supply systems
- Agricultural Supply (AGR) – Water for farming, horticulture, or ranching
- Industrial Service Supply (PRO) – Water for industrial activities that do not depend primarily on water quality

NPDES permit Order (2012-0011-DWQ) was adopted by State Water Resources Control Board (SWRCB) effective as of July 1, 2013 and subsequently, On May 20, 2014, the SWRCB, adopted amendments to the Caltrans Statewide Stormwater Permit. Attachment IV was amended to incorporate specific requirements for 84 Total Maximum Daily Loads (TMDLs).

Attachment IV to the Caltrans NPDES permit outlines a methodology for prioritizing stream segments included in TMDLs in which Caltrans is subject to. The permit establishes BMP implementation requirements, evaluated in terms of compliance units. Caltrans is expected to achieve 1650 compliance units per year through the implementation of retrofit BMPs, cooperative implementation, and post construction treatment beyond permit requirements. This prioritization list is currently in development.

- *Describe local agency requirements/concerns*

The project area does not have any High Risk Areas such as municipal or domestic water supply reservoirs or ground water percolation facilities.

- *Describe project design considerations (climate, soil, topography, geology, groundwater, right-of-way requirements, slope stabilization, etc.)*

- The Caltrans March 2003 *Construction Site Best Management Practices (BMPs) Manual*, Table 2-1 designates the rainy season dates for Region 11 (San Diego County) from October 1 through May 1, but due to the minimal amount of rain received yearly in the southern California region, there are no construction work exclusion dates or seasonal construction restrictions required by state or local regulatory agencies.
- The *Caltrans Water Quality Planning Tool* calculates the annual rainfall in the project area as 18.61 inches.
- Based on the soil HSG Classification, Group B (*County of San Diego Hydrology Manual Appendix A*) within the project vicinity, it is estimated that the existing typical infiltration rates are <0.3 in/hr (*Caltrans Storm Water Quality Handbook Project Planning and Design Guide* pg. B-14).
- Rainfall intensity information for the project location will be obtained from NOAA.

## I-15 / Deer Springs Interchange Long Form - Storm Water Data Report

- More detailed information on the geology in the area will be added to this report upon the completion of the Geotechnical Design Report.
- The site exhibits variable topography from hilly and rugged ridges, peaks, and mesas to gently rolling valleys. Given the orientation of the cut slopes, stabilization is not needed. Fill slopes will be constructed at a ratio of 4:1 (H:V) and cut slopes at a ratio of 2:1 (H:V).
- Elevations within the project limits vary between 942 and 1057-feet above mean sea level (NAVD 88). Improvements within the project area will minimally impact the topographic and ground surface relief features.
- Right-of-way impacts for the project involve acquisition of temporary construction easements, permanent easements, and partial takes near state right-of-way or on private property.
- The local land use within the project area and adjacent areas consist primarily of undeveloped private land.
- There is no dry weather flow from Caltrans right of way present on the existing project area.

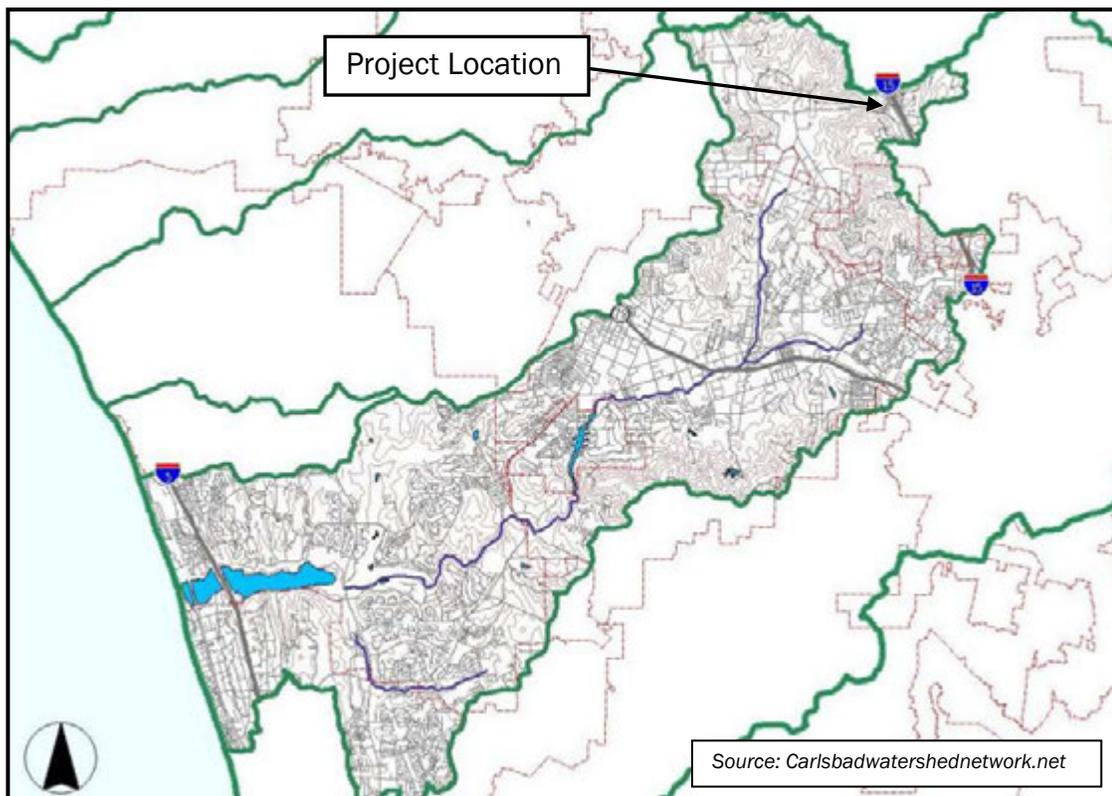

Figure 2.2: San Marcos Hydrologic Area Topography

- *Describe project risk level determination and identify project risk level*

The Risk Level (RL) for this project was determined using the Caltrans Project Risk Determination Guidance. Of the 3 levels established by the Construction General Permit (CGP), this project has a Risk Level of 2. The RL is calculated in two parts: 1) Project Sediment Risk (SR), and 2) Receiving Water Risk (RWR). For this project, SR is

Medium and RWR is high. The Risk determination Worksheet is provided in Attachment C.

- *Identify if project involves reuse of soil containing Aerially Deposited Lead (ADL)*

There are no known contaminated or hazardous soils within project limits at this time.

- *Identify Right-of-way costs for BMPs*

Construction and Maintenance of BMPs would be within the right-of-way limits and no additional right-of-way is required. Adequate funding, including supplemental funds, will be set aside for storm-water pollution control during construction.

- *Describe measures for avoiding or reducing potential stormwater impacts*

For project areas exceeding 1-acre in disturbed soil area, NPDES guidelines necessitate the development of a Storm Water Pollution Prevention Program (SWPPP) by the contractor prior to construction to establish project-specific permanent and temporary BMPs. During the design phase, Water Pollution Control Plans will be prepared to determine the minimum control requirements to be included in the SWPPP.

Within the graded regions along the freeway, runoff will be collected by biofiltration swales or detention basins prior to discharging into Deer Springs Creek.

Standard erosion control practices will be implemented to minimize soil erosion following construction activities. Typical measures utilized during construction include applications of fiber rolls for slope stability and sediment control, temporary construction entrances to prevent sediment tracking on paved surfaces, temporary drainage inlet protection, temporary concrete washouts for concrete spoils, street sweeping, contour grading, temporary check dams and temporary hydraulic mulch or soil binders/tackifiers.

Permanent erosion and sedimentation control features may include but will not be limited to the following: hydroseeding of steeper cut slopes, permanent fiber rolls, erosion control blankets, rip-rap, and improvement of drainage facilities to handle excess runoff.

The project alignment will be chosen to minimize impacts on receiving waters by limiting cut and fill slopes, minimizing disturbance of vegetation, and avoiding formations difficult to re-stabilize. Cut and fill slopes will be made as flat as feasible, and concentrated flows shall be collected in stabilized drains and channels. Benches are not required on slopes 2:1 (H:V) or flatter and the proposed slopes are not large enough to warrant the need of benches. Slopes will be vegetated, rounded or shaped to reduce concentrated flows and will be collected in stabilized drains and channels. Maintenance pullouts are recommended adjacent to the interchange ramps to provide Maintenance and Operations personnel safe access. In addition, native, drought-tolerant plant species may be recommended to minimize landscaping maintenance requirements.

Runoff from painted materials can cause a decrease in water quality. For this reason, the proposed improvements will limit the use of paint in architectural treatment. Textures will be used where appropriate to minimize the usage of paint and other related chemicals that may potentially contribute to storm water pollution.

The modifications to the interchange ramps will require additional drainage crossovers, inlets and outlets. If the proposed conditions are found to increase

## *I-15 / Deer Springs Interchange Long Form - Storm Water Data Report*

existing flow velocities, mitigation through the use of outlet velocity dissipation or bioswale devices will be implemented. These BMPs will also be utilized as permanent storm water pollution controls early in the construction process to provide additional protection.

- *Identify any existing Treatment BMPs within the project limits and their association with the project*  
The project site currently contains no existing Treatment BMPs.

### **3. Regional Water Quality Control Board Agreements**

*The District/Regional NPDES coordinator will furnish information and language for this part of the Checklist.*

- *Summarize any key negotiated understandings or agreements with RWQCB pertaining to this project. This would include any discussions relating to 401 Certifications, Waste Discharge Requirements, Rainfall Erosivity Waiver, or other required permits/certifications.*

This project does not require any negotiated understandings or agreements with RWQCB at this time.

This project conforms to NPDES-Caltrans Statewide Permit (Order No. 2012-001-DWQ) (NPDES No.CAS000003) and General Construction Permit (Order No. 2012-0006-DWQ) (NPDES CAS000002) apply to this project. The project owner will file a Notice of Intent (NOI) with the State Regional Water Quality Control Board at least 30 days prior to start of construction.

- *Document any specific meeting dates and contact names that reference the negotiated understandings and/or agreements. (Communication with the RWQCB is coordinated through the District/Regional NPDES Storm Water Coordinator.)*

To date no meetings have been held with the San Diego RWQCB to discuss this project and no agreements have been made.

### **4. Proposed Design Pollution Prevention BMPs to be used on the Project.**

*Summarize responses to Checklist DPP-1, Parts 1-5 in a short narrative. Use the sub-headings shown below for the type of information that should be described in the narrative. Note, not all of the bulleted information listed is required or available at each phase of a project. Information to be included will depend on the nature of the project and the site conditions. To comply with the CGP (II.D), sediment yield and site stabilization be described in the permanent erosion control strategy, such that the site will not pose any additional risk than pre-construction conditions.*

*Summarize any qualitative benefits of Design Pollution Prevention BMPs including reducing the release of pollutants to downstream waters, increased detention time to allow for infiltration, reduced discharges (volumetric flow rates), and ancillary filtration and infiltration within vegetated conveyances and surfaces, as described in Section 2.4.1.*

*Develop an estimate of quantities and costs for the erosion control/revegetation portion of the Design Pollution Prevention BMPs as part of the Storm Water BMP Cost Summary; include right-of-way costs if additional right-of-way is needed for erosion control. Complete for each phase of the project.*

#### **Downstream Effects Related to Potentially Increased Flow, Checklist DPP-1, Parts 1 and 2**

- *Identify any increase to velocity or volume of downstream flow*
- *Describe Existing vs. Post Construction Conditions*
- *Describe channel condition and design (e.g., will the project discharge to unlined channels)*

- *Describe potential for increased sediment loading*
- *Identify hydraulic changes that may affect downstream channel stability. (realignment, encroachment, etc.)*

The project may increase the velocity of flow within the project limits, but should have a negligible effect on downstream flow. During the construction phase of the project, conveyance systems will lead to biofiltration swales, or outlet velocity dissipation devices, which will minimize sediment discharges and will prevent an increase in peak flows discharged to receiving water bodies. All transitions between outlets and channels will be smooth to reduce turbulence and scour. Roadway runoff shall be treated and controlled to the maximum extent practical. The project will not encroach, cross, realign, or cause any other hydraulic changes to Deer Springs Creek that may affect downstream channel stability.

### Slope/Surface Protection Systems, Checklist DPP-1, Parts 1 and 3

- *Describe cut and fill requirements*
- *Describe existing and proposed slope conditions*
- *Describe the permanent erosion control strategy (plants, soils, mulch, blankets, establishment periods, etc.)*
- *Use Erosion Prediction Procedure to validate erosion control design (attach RUSLE2 Output as applicable)*
- *When required, provide date of approval of the Erosion Control Plan by Landscape Architecture and Maintenance*
- *Summarize any hard surfaces (rock blankets, paving)*

Conventional cut and fill grading techniques will be used to produce the proposed grades. Both cut and fill slopes will be constructed 2:1 of flatter and be less than 15 feet high. The existing slopes are both stable and vegetated with rounded shapes to reduce concentrated flow.

The existing slopes within the area are stable; however, during construction soil stabilization BMPs will be utilized to prevent soil particles from detaching and becoming suspended in storm water and non-storm water runoff.

These BMPs may include the following:

- The preservation of existing vegetation where required and when feasible;
- The implementation of temporary soil stabilization measures at regular intervals throughout the rainy season;
- The stabilization of non-active areas within 14 days of cessation of construction activities during the rainy season;
- The application of erosion control seeding or check dams for concentrated flow paths; and
- The application of permanent erosion control to remaining disturbed soil areas at the completion of the construction phase. Soil stabilization will involve the installation of uniform vegetative cover, fiber matrices, erosion control blankets, and/or fiber rolls.

## *I-15 / Deer Springs Interchange Long Form - Storm Water Data Report*

The aforementioned BMPs will be deployed in a sequence to follow the progress of grading and construction. As the locations of soil disturbance change, erosion controls will be adjusted accordingly to control storm water runoff at the downgrade perimeter.

Move-in/move-out (temporary and permanent erosion control) for the project shall include moving onto the project when an area is ready to receive temporary erosion control, setting up required personnel and equipment for the application of erosion control materials and moving out all personnel and equipment when erosion control in that area is completed.

Existing vegetation within the project limits consists primarily of desert brush. The soil type within the project limits range from loamy-sand, to areas of silt or clay. A Landscaping Design shall be developed and approved by the District Landscape Architect. The BMP vegetative surface area will feature native plants. Seed mixtures, mulch, tackifier, and fertilizer recommended by the District Landscape Architect will be utilized.

Hard surface protection (slope paving, rock slope protection) will be constructed beneath the bridge abutments where vegetation does not provide adequate erosion protection. In addition, hard surface BMPs are planned at the gore points within the interchanges for maintenance and safety purposes.

The total BMP area will be determined during the design stage of the project.

### Concentrated Flow Conveyance Systems, Checklist DPP-1, Parts 1 and 4

- *Briefly describe the Concentrated Conveyance Systems to be implemented for this project*

The exact locations and sizes of the drainage system components have not yet been determined. However, the project Drainage Report shall contain designs with the following general features:

- Surface runoff will be conveyed via curb and gutter, to inlets. Flared end sections and riprap material are proposed at the outlets of the storm drains to reduce the flow velocities of the discharged storm water.
- Bridge runoff will be collected in a bridge drainage system and conveyed to proposed treatment BMPs.

It shall be the intent of the drainage design to prevent increases to existing flow velocities through the use of grading, energy dissipaters, and bio-swales. The drainage report shall include an analysis of flows at the outlets of the project to determine impacts. Offsite drainage patterns will be maintained and onsite drainage patterns will be designed to closely mimic existing drainage patterns.

### Preservation of Existing Vegetation, Checklist DPP-1, Parts 1 and 5

- *Describe area(s) of clearing and grubbing identified and defined in the contract plans*

Clearing and grubbing will be performed on all areas located within the cut/fill. Clearing and grubbing limits will not be identified at this phase.

- *Describe area(s) that will be placed off-limits to the contractor, if applicable (e.g., ESA areas)*

Areas to be placed off-limits to the contractor have not been identified at this time. Locations will be shown on plans.

- Consider project changes to increase preservation or preserve/avoid critical areas such as floodplains, wetlands, problem soils, and steep slopes.

Preservation areas will not be identified at this project phase. Locations identified on project drawings will be fenced during construction.

## 5. Proposed Permanent Treatment BMPs to be used on the Project

Summarize responses to Checklist T-1, Parts 1-10 in a short narrative. Use the bullets listed below as examples of information that should be described in the narrative. Note, not all of the information listed is required or available at each phase of a project. Information to be included will depend on the nature of the project and the site conditions.

Develop an estimate of quantities and costs for the proposed Treatment BMPs as part of the Storm Water BMP Cost Summary; include additional right-of-way costs if needed for these BMPs. Complete for each phase of the project.

***This section of the SWDR should be used to develop the Technical Report required by the SWMP for projects that must consider Treatment BMPs, but are not able to incorporate them due to siting constraints. At PS&E stage, if the project must consider Treatment BMPs but is not able to incorporate them, document the date of the submittal of the Technical Report to the appropriate RWQCB.***

### Treatment BMP Strategy, Checklist T-1

- List the Targeted Design Constituent(s), if any.

The TDC for the project is phosphorous.

- List what percentage of the WQV (or WQF depending upon device) will be treated. If less than 100%, describe justification.

The goal of the project will be to treat 100% of the WQV/WQF. A more accurate number will be obtained at the design phase.

- Describe the Treatment BMP strategy for the watershed(s) within the project limits.

Phosphorus has been identified the first priority design pollutant for the proposed project due to the concentrations of phosphorus in the receiving waters of San Marcos Creek. The project will also address the anticipated pollutants expected in the project vicinity: TSS, TDS, Dissolved metals, grease and oil. Mitigation for short and long-term impacts to water quality is proposed through incorporating biofiltration swales, detention basins or Austin Sand Filters. Biofiltration swales and detention basins have a low to medium removal effectiveness for Sediment and Nutrient targeted constituents and are also considered sufficient treatment for Metals and Pathogens, per Caltrans Stormwater BMP website. Austin Sand Filters primarily remove TSS, dissolved metals, litter, and are effective at removing phosphorus, per *BMP Retrofit Pilot Program, FINAL REPORT*, January 2004.

The preliminary locations identified that could house a treatment BMP feature are in the southeast and southwest quadrants of the interchange. These BMPs should intercept and treat rainfall runoff from the roadway and assist in achieving future TMDL requirements. The biofiltration swales could potentially be placed on the shoulders of the ramps.

### Biofiltration Swales/Strips, Checklist T-1, Parts 1 and 2

- Are Biofiltration Swales/Strips incorporated into project? If not, explain reason why not feasible. If yes, list number of Biofiltration Swales and Strips, location(s), approximate dimensions of device, and total WQF treated.

Biofiltration BMPs are a potential Treatment BMP.

- *Quantify Tributary Area*

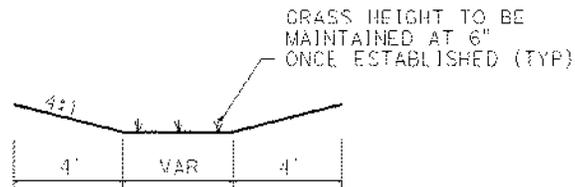

Tributary areas will not be determined at this project phase.

Biofiltration BMPs are linear channels that are lined with vegetation for the purpose of storm water conveyance and treatment. Biofiltration swales are designed to reduce the velocity of storm water runoff at the water quality event and remove particulate pollutants. These swales provide moderate to low treatment efficiencies for particulate and dissolved metals, grease and oil, and Total Suspended Solids (TSS). Most of the proposed biofiltration swales will follow existing and proposed roadway slopes, with some additional excavation required. They will also be designed to minimize flow depth, minimize flow velocity, maximize length, and eliminate standing water. The scour velocity for the type of soil will not exceed 4.0-feet per second per Table B-1 Summary of Biofiltration Strips and Swales Siting and Design Factors, of the Caltrans PPDG, July 2010.

Although the overall pavement area will increase, proposed biofiltration swales and grading modifications will reduce the increased flow rates to minimize additional storm water runoff to the Deer Springs Creek. These discharges will be treated through settling, infiltration and biofiltration as they pass slowly through the flat, vegetated, trapezoidal channel and into an inlet with apron.

Biofiltration swales require maintenance responsibilities including:

- Periodic sediment removal
- Trash, debris and vegetation removal
- Vegetation Management
- Animal/Vector control
- Removal of standing water
- Erosion and structural maintenance

**Figure 5.1: Biofiltration Swale Cross-Section**

The cross-section of the swales will be trapezoidal with a minimum top width of 12-feet, minimum depth of 1-foot and side slopes of 4:1 or flatter. The swales will be designed for both the water quality storm and the 25-year storm. For the water quality storm, the runoff shall have a minimum hydraulic residence time of 5 minutes, maximum flow velocity of 1-foot per second and maximum depth of 3-inches. For the 25-year storm, the storm water runoff shall have a maximum flow velocity of 4-feet per second, maximum depth of 1-foot, and a minimum freeboard of 6-inches below the edge of shoulder flow line. Swale grass heights will be maintained around 6-inches once established.

### Dry Weather Diversion, Checklist T-1, Parts 1 and 3

- *Are Dry Weather Diversions incorporated into project? If not, explain reason why not feasible. If yes, list number of Dry Weather Diversions, location(s), and total flow rate diverted.*

- Describe persistent dry weather flows
- Describe proximity to sanitary sewer
- Document Publicly Owned Treatment Works (POTW) and local health agencies acceptance
- Identify need for existing sanitary sewer pipeline upgrade

Dry weather flow is not an issue within the project area. Dry weather diversion devices will not be incorporated into the proposed design.

#### **Infiltration Devices – Checklist T-1, Parts 1 and 4**

- Are Infiltration Devices incorporated into project? If not, explain reason why not feasible (e.g. threat to local groundwater quality, etc.). If yes, list number of Infiltration Devices, location(s), and total WQV treated.
- Quantify approximate tributary area of impervious surface per Infiltration Device
- Calculate Water Quality Volume (WQV) treated per Treatment Infiltration Device
- Document soil type , HSG, and permeability
- Document groundwater depth
- Identify infiltration rate
- Discuss Geotechnical Integrity

An infiltration basin is a device designed to remove pollutants from surface discharges by capturing the Water Quality Volume (WQV) and infiltrating it directly to the soil rather than discharging to receiving waters. An infiltration basin could be used depending on the height of the water table and the permeability of soil. These findings will be reported in the Geotechnical Design Report and then it can be concluded whether an infiltration basin would be an adequate BMP.

#### **Detention Devices, Checklist T-1, Parts 1 and 5**

- Are Detention Devices incorporated into project? If not, explain reason why not feasible. If yes, list number of Detention Devices, location(s), and total WQV treated.
- Quantify approximate tributary area of impervious surface per Treatment Detention Basin
- Calculate WQV treated per Treatment Detention Basin
- Discuss Geotechnical Integrity
- Document groundwater depth
- Discuss hydraulic head sufficiency

A detention basin is a permanent device formed by excavating and/or constructing an embankment so that runoff from the water quality design storm is temporarily detained under quiescent conditions, allowing sediment and particulates to settle out before the runoff is discharged. The design flows throughout the project limits will be influenced by the following parameters: pavement area changes, storm water conveyance extensions or modifications, and grading modifications.

The design of any detention basin will use the guidance provided in the Caltrans PPDG.

#### **Gross Solids Removal Devices (GSRDs), Checklist T-1, Parts 1 and 6**

## *I-15 / Deer Springs Interchange Long Form - Storm Water Data Report*

---

- *Are GSRDs incorporated into project? If not, explain reason why not feasible or required. If yes, list number of GSRDs, location(s), and total tributary area treated.*
- *Is receiving water on a 303(d) list for trash or have Total Maximum Daily Loads (TMDLs) for trash been established?*
- *Calculate Tributary Area for each GSRD*
- *Estimate volume of each GSRD device*
- *Identify peak design flow*

Since the project site has no TMDL for trash or litter, GSRDs have not been proposed for the project improvements.

### Traction Sand Traps, Checklist T-1, Parts 1 and 7

- *Are Traction Sand Traps incorporated into project? If not, explain reason why not feasible or required. If yes, list number of Traction Sand Traps, location(s).*
- *Is Traction Sand or an abrasive applied to roadway more than twice per year?*
- *Estimate volume of traction sand applied (S) (ft<sup>3</sup>/yr)*
- *Estimate impact from highway sweeping, snow-blowing operations, or accumulation from other sources*
- *Discuss Traction Sand Trap cleaning frequency and Maintenance operational needs such as pullouts*

Traction sand is not regularly applied within the project limits; therefore there are no Traction Sand Trap Devices within the project limits.

### Media Filters, Checklist T-1, Parts 1 and 8

- *Are Media Filters incorporated into project? If not, explain reason why not feasible. If yes, list number of Media Filters, location(s), and total WQV treated.*
- *Identify type of Media Filter incorporated: Full Sedimentation Austin Sand Filter, Partial Sedimentation Austin Sand Filter or Delaware Sand Filter*
- *If an Austin Sand Filter is incorporated into project, identify if earthen configuration or lined*
- *Is pretreatment provided to capture sediment and litter?*
- *Quantify approximate tributary area of impervious surface per Media Filter*
- *Identify Water Quality Volume (WQV) treated per Media Filter*
- *Identify depth to groundwater*
- *Discuss local vector agency issues*

Media Filters remove fine sediment, particulate-associated pollutants, and sometimes dissolved pollutants. The normal configuration of such a device consists of an initial sedimentation basin or vault followed by a filtering vault that is lined with a media. Media Filters have been considered for the project location because they would treat for all the target pollutants. Media Filters have the potential to create a permanent pool of standing water where mosquito breeding is likely to occur and they are not preferred by vector control authorities. The filter material would require changing every three to five years along with standard detention basin maintenance. The construction costs are approximately three times that of a comparable sized detention basin. However, even with the increased construction and maintenance costs; media filters are being considered because, the TDC

## *I-15 / Deer Springs Interchange Long Form - Storm Water Data Report*

for San Marcos Creek is Phosphorus and these treatment BMPs are more effective at reducing this pollutant load than other viable options.

### Multi-Chambered Treatment Trains (MCTTs), Checklist T-1, Parts 1 and 9

- *Are MCTTs incorporated into project? If not, explain reason why not feasible. If yes, list number of MCTTs, location(s), and total WQV treated.*
- *Quantify approximate tributary area of impervious surface per MCTT*
- *Identify Water Quality Volume (WQV) treated per MCTT*
- *Discuss local vector agency issues*

Multi-chamber treatment trains use three treatment mechanisms in three different chambers. These include a catch basin with a sump, a sedimentation chamber with tube settlers and sorbet pads, and a filtering chamber lined with media. Similarly to Media Filters, MCTTs have the potential to create vector control issues, require excessive underground storage requirements, and additional maintenance. Therefore, MCTTs are not considered feasible for this project.

### Wet Basins, Checklist T-1, Parts 1 and 10

- *Are Wet Basins incorporated into project? If not, explain reason why not feasible. If yes, list number of Wet Basins, location(s), and total WQV treated.*
- *Quantify approximate tributary area of impervious surface per Wet Basin*
- *Identify Water Quality Volume (WQV) treated per Wet Basin*
- *Identify soil type and permeability*
- *Document groundwater depth*

Wet basins (constructed wetlands) are permanent pools of water designed to mimic naturally occurring wetlands. The main distinction between construction and natural wetlands is that constructed wetlands are placed in upland areas and are not subject to wetland protection regulations. Wet basins are not practical BMP devices because they should only be considered when the site is located where the visual aesthetics of the permanent pool is a considered a benefit (e.g. roadside rest area or vista point). In addition, wet basins require a steady source of water to maintain a permanent pool and the flows from the project site are intermittent. Wet Basins are not a feasible BMP for the project.

## **6. Proposed Temporary Construction Site BMPs to be used on Project**

*Summarize the selected Construction Site BMPs in a Short Narrative. The narrative should also include any pertinent details from the strategy used for the implementation of Construction Site BMPs (e.g. specific project conditions, construction operations, etc.) and monitoring. It is understood that the level of detail discussed will be different at each phase of the project. Include a brief summary to how the BMPs were estimated.*

- *Identify those Construction Site BMPs that have been designated as separate Bid Line Items.*
- *Identify those Construction Site BMPs incorporated as a lump sum in the Construction Site Management Item.*
- *Identify project risk level. If Risk Level 2 or 3, then identify planned monitoring locations and activities.*
- *Identify if dewatering will be required during the construction of the project. Describe circumstances. (i.e. will a separate dewatering permit be needed?)*

## *I-15 / Deer Springs Interchange Long Form - Storm Water Data Report*

---

- *Identify if active treatment systems (ATS) will be used for the site, or portions thereof.*
- *Document the coordination effort to get concurrence with Construction regarding the Construction Site BMP strategy and associated quantities (provide names of staff and date of meeting(s)). Attach a copy of the Construction Site BMP Consideration Form to the SWDR at PS&E.*
- *Develop an estimate of quantities and costs (for internal Caltrans use only) for Construction Site BMPs and monitoring as a part of the Storm Water BMP Cost Summary. Complete for each phase of the project.*

Construction Site BMPs will not be evaluated at this project phase. Proposed temporary construction site BMPs will be designed with coordination from the construction representative.

### **7. Maintenance BMPs (Drain Inlet Stenciling)**

*Briefly describe locations where drain inlet stenciling is required, such as within cities, towns, and communities with populations of 10,000 or more, or within designated MS4 areas. Include any specific stencil types and names of contacts that recommended stencil types or locations.*

All storm water draining into the underground pipe system is eventually discharged to the Pacific Ocean. The County of San Diego and Caltrans have endeavored to inform the public concerning the importance of preventing hazardous or poisonous materials from entering the storm water system. The County and Caltrans may use annotation on drainage inlets with stenciling stating “No Dumping – This Drains to Ocean.” Stenciling should be used on the County streets where dumping will impact Deer Springs Creek, or in other areas recommended by the responsible agency. In addition, Caltrans Maintenance will “number” the drainage inlets, and amend the drainage inlet inventory for the District.

| <p>Analyses of data indicated that when factors other than rainfall are held constant, soil loss is directly proportional to a rainfall factor composed of total storm kinetic energy (E) times the maximum 30-min intensity (I30) (Wischmeier and Smith, 1958). The numerical value of R is the average annual sum of EI30 for storm events during a rainfall record of at least 22 years. "Isoerodent" maps were developed based on R values calculated for more than 1000 locations in the Western U.S. Refer to the link below to determine the R factor for the project site.</p> <p><a href="http://water.epa.gov/polwaste/npdes/stormwater/Rainfall-Erosivity-Factor-Calculator.cfm">http://water.epa.gov/polwaste/npdes/stormwater/Rainfall-Erosivity-Factor-Calculator.cfm</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |               |

| <p>The soil-erodibility factor K represents: (1) susceptibility of soil or surface material to erosion, (2) transportability of the sediment, and (3) the amount and rate of runoff given a particular rainfall input, as measured under a standard condition. Fine-textured soils that are high in clay have low K values (about 0.05 to 0.15) because the particles are resistant to detachment. Coarse-textured soils, such as sandy soils, also have low K values (about 0.05 to 0.2) because of high infiltration resulting in low runoff even though these particles are easily detached. Medium-textured soils, such as a silt loam, have moderate K values (about 0.25 to 0.45) because they are moderately susceptible to particle detachment and they produce runoff at moderate rates. Soils having a high silt content are especially susceptible to erosion and have high K values, which can exceed 0.45 and can be as large as 0.65. Silt-size particles are easily detached and tend to crust, producing high rates and large volumes of runoff. Use Site-specific data must be submitted.</p> <p><a href="ftp://swrcb2a.waterboards.ca.gov/pub/swrcb/dwq/cgp/Risk/RUSLE/RUSLE_K_Factor/">ftp://swrcb2a.waterboards.ca.gov/pub/swrcb/dwq/cgp/Risk/RUSLE/RUSLE_K_Factor/</a></p> |  |               |
| <b>K Factor Value</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  | 0.2           |
| <b>C) LS Factor (weighted average, by area, for all slopes)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |               |
| <p>The effect of topography on erosion is accounted for by the LS factor, which combines the effects of a hillslope-length factor, L, and a hillslope-gradient factor, S. Generally speaking, as hillslope length and/or hillslope gradient increase, soil loss increases. As hillslope length increases, total soil loss and soil loss per unit area increase due to the progressive accumulation of runoff in the downslope direction. As the hillslope gradient increases, the velocity and erosivity of runoff increases. Use the LS table located in separate tab of this spreadsheet to determine LS factors. Estimate the weighted LS for the site prior to construction.</p> <p><a href="tp://swrcb2a.waterboards.ca.gov/pub/swrcb/dwq/cgp/Risk/RUSLE/RUSLE_LS_Factor/">tp://swrcb2a.waterboards.ca.gov/pub/swrcb/dwq/cgp/Risk/RUSLE/RUSLE_LS_Factor/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                           |  |               |

### Rainfall Erosivity Factor Calculator for Small Construction Sites

#### Facility Information

|             |            |
|-------------|------------|
| Start Date: | 05/01/2018 |
| End Date:   | 5/1/2020   |
| Latitude:   | 33.197     |
| Longitude:  | -117.125   |

#### Erosivity Index Calculator Results

AN EROSIIVITY INDEX VALUE OF **73.95** HAS BEEN DETERMINED FOR THE CONSTRUCTION PERIOD OF **05/01/2018 - 5/1/2020**.

A rainfall erosivity factor of 5.0 or greater has been calculated for your site and period of construction. **You do NOT qualify for a waiver from NPDES permitting requirements.**

## Risk Level Determination

For the GIS Map Method, the R factor for the project is calculated using the online calculator at (see cell to right). The product of K and LS are shown on the figure below. To determine soil loss in tons per acre, multiply the R factor times the value for K times LS from the map.

Information for the following data categories should be obtained, reviewed and referenced as necessary throughout the project planning phase. Collect any available documents pertaining to the category and list them and reference your data source. For specific examples of documents within these categories, refer to Section 5.5 of this document. Example categories have been listed below; add additional categories, as needed. Summarize pertinent information in Section 2 of the SWDR.

| DATA CATEGORY/SOURCES                                                                                                                                                                                                                                                                                                                                                                                                                                     | Date                                   |

Checklist SW-2, Storm Water Quality Issues Summary

**Checklist SW-2, Storm Water Quality Issues Summary**

Prepared by: Paul Kosinski Date: May 15, 2015 District-Co-Route: 11-SD-015

PM : R36.0/R37.2 Project ID (or EA): 11-1400093 (11-41840K) RWQCB: 9

The following questions provide a guide to collecting critical information relevant to project stormwater quality issues. Complete responses to applicable questions, consulting other Caltrans functional units (Environmental, Landscape Architecture, Maintenance, etc.) and the District/Regional Storm Water Coordinator as necessary. Summarize pertinent responses in Section 2 of the SWDR.

- |                                                                                                                                                                                                                                                  |                                              |                             |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------|-----------------------------|
| 1. Determine the receiving waters that may be affected by the project throughout the project life cycle (i.e., construction, maintenance and operation).                                                                                         | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 2. For the project limits, list the 303(d) impaired receiving water bodies and their constituents of concern.                                                                                                                                    | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 3. Determine if there are any municipal or domestic water supply reservoirs or groundwater percolation facilities within the project limits. Consider appropriate spill contamination and spill prevention control measures for these new areas. | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 4. Determine the RWQCB special requirements, including TMDLs, effluent limits, etc.                                                                                                                                                              | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 5. Determine regulatory agencies seasonal construction and construction exclusion dates or restrictions required by federal, state, or local agencies.                                                                                           | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 6. Determine if a 401 certification will be required.                                                                                                                                                                                            | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 7. List rainy season dates.                                                                                                                                                                                                                      | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 8. Determine the general climate of the project area. Identify annual rainfall and rainfall intensity curves.                                                                                                                                    | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 9. If considering Treatment BMPs, determine the soil classification, permeability, erodibility, and depth to groundwater.                                                                                                                        | <input type="checkbox"/> Complete            | <input type="checkbox"/> NA |
| 10. Determine contaminated soils within the project area.                                                                                                                                                                                        | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 11. Determine the total disturbed soil area of the project.                                                                                                                                                                                      | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 12. Describe the topography of the project site.                                                                                                                                                                                                 | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 13. List any areas outside of the Caltrans right-of-way that will be included in the project (e.g. contractor's staging yard, work from barges, easements for staging, etc.).                                                                    | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 14. Determine if additional right-of-way acquisition or easements and right-of-entry will be required for design, construction and maintenance of BMPs. If so, how much?                                                                         | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 15. Determine if a right-of-way certification is required.                                                                                                                                                                                       | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 16. Determine the estimated unit costs for right-of-way should it be needed for Treatment BMPs, stabilized conveyance systems, lay-back slopes, or interception ditches.                                                                         | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 17. Determine if project area has any slope stabilization concerns.                                                                                                                                                                              | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 18. Describe the local land use within the project area and adjacent areas.                                                                                                                                                                      | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |
| 19. Evaluate the presence of dry weather flow.                                                                                                                                                                                                   | <input checked="" type="checkbox"/> Complete | <input type="checkbox"/> NA |

### Checklist SW-3, Measures for Avoiding or Reducing Potential Storm Water BMPs

**Checklist SW-3, Measures for Avoiding or Reducing Potential Storm Water Impacts**

Prepared by: Paul Kosinski Date: May 15, 2015 District-Co-Route: 11-SD-015

PM : R36.0/R37.2 Project ID (or EA): 11-14000093 (11-41840K) RWQCB: 9

The PE must confer with other functional units, such as Landscape Architecture, Hydraulics, Environmental, Materials, Construction and Maintenance, as needed to assess these issues. Summarize pertinent responses in Section 2 of the SWDR.

Options for avoiding or reducing potential impacts during project planning include the following:

- |                                                                                                                                                                                                                                                                                     |                                         |                                        |                                        |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|----------------------------------------|----------------------------------------|
| 1. Can the project be relocated or realigned to avoid/reduce impacts to receiving waters or to increase the preservation of critical (or problematic) areas such as floodplains, steep slopes, wetlands, and areas with erosive or unstable soil conditions?                        | <input type="checkbox"/> Yes            | <input checked="" type="checkbox"/> No | <input type="checkbox"/> NA            |
| 2. Can structures and bridges be designed or located to reduce work in live streams and minimize construction impacts?                                                                                                                                                              | <input type="checkbox"/> Yes            | <input type="checkbox"/> No            | <input checked="" type="checkbox"/> NA |
| 3. Can any of the following methods be utilized to minimize erosion from slopes:                                                                                                                                                                                                    |                                         |                                        |                                        |
| a. Disturbing existing slopes only when necessary?                                                                                                                                                                                                                                  | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No            | <input type="checkbox"/> NA            |
| b. Minimizing cut and fill areas to reduce slope lengths?                                                                                                                                                                                                                           | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No            | <input type="checkbox"/> NA            |
| c. Incorporating retaining walls to reduce steepness of slopes or to shorten slopes?                                                                                                                                                                                                | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No            | <input type="checkbox"/> NA            |
| d. Acquiring right-of-way easements (such as grading easements) to reduce steepness of slopes?                                                                                                                                                                                      | <input type="checkbox"/> Yes            | <input type="checkbox"/> No            | <input checked="" type="checkbox"/> NA |
| e. Avoiding soils or formations that will be particularly difficult to re-stabilize?                                                                                                                                                                                                | <input type="checkbox"/> Yes            | <input type="checkbox"/> No            | <input checked="" type="checkbox"/> NA |
| f. Providing cut and fill slopes flat enough to allow re-vegetation and limit erosion to pre-construction rates?                                                                                                                                                                    | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No            | <input type="checkbox"/> NA            |
| g. Providing benches or terraces on high cut and fill slopes to reduce concentration of flows?                                                                                                                                                                                      | <input type="checkbox"/> Yes            | <input checked="" type="checkbox"/> No | <input type="checkbox"/> NA            |
| h. Rounding and shaping slopes to reduce concentrated flow?                                                                                                                                                                                                                         | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No            | <input type="checkbox"/> NA            |
| i. Collecting concentrated flows in stabilized drains and channels?                                                                                                                                                                                                                 | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No            | <input type="checkbox"/> NA            |
| 4. Does the project design allow for the ease of maintaining all BMPs?                                                                                                                                                                                                              | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No            |                                        |
| 5. Can the project be scheduled or phased to minimize soil-disturbing work during the rainy season?                                                                                                                                                                                 | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No            |                                        |
| 6. Can permanent storm water pollution controls such as paved slopes, vegetated slopes, basins, and conveyance systems be installed early in the construction process to provide additional protection and to possibly utilize them in addressing construction storm water impacts? | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No            | <input type="checkbox"/> NA            |

## Attachment G

Checklist DPP-1, Parts 1-5  
(Design Pollution Prevention BMPs)

|                                         |                                                    |                                     |
|-----------------------------------------|----------------------------------------------------|-------------------------------------|
| <b>Design Pollution Prevention BMPs</b> |                                                    |                                     |
| <b>Checklist DPP-1, Part 1</b>          |                                                    |                                     |
| Prepared by: <u>Paul Kosinski</u>       | Date: <u>May 15, 2015</u>                          | District-Co-Route: <u>11-SD-015</u> |
| PM : <u>R36.0/R37.2</u>                 | Project ID (or EA): <u>11-14000093 (11-41840K)</u> | RWQCB: <u>9</u>                     |

**Consideration of Design Pollution Prevention BMPs**

**Consideration of Downstream Effects Related to Potentially Increased Flow [to streams or channels]**

- Will project increase velocity or volume of downstream flow?  Yes  No  NA
- Will the project discharge to unlined channels?  Yes  No  NA
- Will project increase potential sediment load of downstream flow?  Yes  No  NA
- Will project encroach, cross, realign, or cause other hydraulic changes to a stream that may affect downstream channel stability?  Yes  No  NA

If Yes was answered to any of the above questions, consider **Downstream Effects Related to Potentially Increased Flow**, complete the DPP-1, Part 2 checklist.

**Slope/Surface Protection Systems**

- Will project create new slopes or modify existing slopes?  Yes  No  NA

If Yes was answered to the above question, consider **Slope/Surface Protection Systems**, complete the DPP-1, Part 3 checklist.

**Concentrated Flow Conveyance Systems**

- Will the project create or modify ditches, dikes, berms, or swales?  Yes  No  NA
- Will project create new slopes or modify existing slopes?  Yes  No  NA
- Will it be necessary to direct or intercept surface runoff?  Yes  No  NA
- Will cross drains be modified?  Yes  No  NA

If Yes was answered to any of the above questions, consider **Concentrated Flow Conveyance Systems**; complete the DPP-1, Part 4 checklist.

**Preservation of Existing Vegetation**

It is the goal of the Storm Water Program to maximize the protection of desirable existing vegetation to provide erosion and sediment control benefits on all projects.  Complete

Consider **Preservation of Existing Vegetation**, complete the DPP-1, Part 5 checklist.

**Design Pollution Prevention BMPs****Checklist DPP-1, Part 2**Prepared by: Paul Kosinski Date: May 15, 2015 District-Co-Route: 11-SD-015PM : R36.0/R37.2 Project ID (or EA): 11-14000093 (11-41840K) RWQCB: 9**Downstream Effects Related to Potentially Increased Flow**

1. Review total paved area and reduce to the maximum extent practicable.  Complete
2. Review channel lining materials and design for stream bank erosion control.  Complete
  - (a) See Chapters 860 and 870 of the HDM.  Complete
  - (b) Consider channel erosion control measures within the project limits as well as downstream. Consider scour velocity.  Complete
3. Include, where appropriate, energy dissipation devices at culvert outlets.  Complete
4. Ensure all transitions between culvert outlets/headwalls/wingwalls and channels are smooth to reduce turbulence and scour.  Complete
5. Include, if appropriate, peak flow attenuation basins or devices to reduce peak discharges.
6. Calculate the water quality volume infiltrated by DPP BMPs within the project limits. Include the percentage of the water quality volume for each BMP and subwatershed, as appropriate, for site conditions. These calculations will be used later in the T-1 checklist.  Complete

|                                         |                                                    |                                     |
|-----------------------------------------|----------------------------------------------------|-------------------------------------|
| <b>Design Pollution Prevention BMPs</b> |                                                    |                                     |
| <b>Checklist DPP-1, Part 3</b>          |                                                    |                                     |
| Prepared by: <u>Paul Kosinski</u>       | Date: <u>May 15, 2015</u>                          | District-Co-Route: <u>11-SD-015</u> |
| PM : <u>R36.0/R37.2</u>                 | Project ID (or EA): <u>11-14000093 (11-41840K)</u> | RWQCB: <u>9</u>                     |

**Slope / Surface Protection Systems**

1. What are the proposed areas of cut and fill? (attach plan or map)  Complete
2. Were benches or terraces provided on high cut and fill slopes to reduce concentration of flows?  Yes  No
3. Were slopes rounded and/or shaped to reduce concentrated flow?  Yes  No
4. Were concentrated flows collected in stabilized drains or channels?  Yes  No
5. Are new or disturbed slopes > 4:1 horizontal:vertical (h:v)?  Yes  No  
 If Yes, District Landscape Architect must prepare or approve an erosion control plan, at the District’s discretion.
6. Are new or disturbed slopes > 2:1 (h:v)?  Yes  No  
 If Yes, Geotechnical Services must prepare a Geotechnical Design Report, and the District Landscape Architect should prepare or approve an erosion control plan. Concurrence must be obtained from the District Maintenance Storm Water Coordinator for slopes steeper than 2:1 (h:v).
7. Estimate the net new impervious area that will result from this project. 4.0 acres  Complete

**VEGETATED SURFACES**

1. Identify existing vegetation.  Complete
2. Evaluate site to determine soil types, appropriate vegetation and planting strategies.  Complete
3. How long will it take for permanent vegetation to establish?  Complete
4. Minimize overland and concentrated flow depths and velocities.  Complete

**HARD SURFACES**

1. Are hard surfaces required?  Yes  No  
 If Yes, document purpose (safety, maintenance, soil stabilization, etc.), types, and general locations of the installations.  Complete
- Review appropriate SSPs for Vegetated Surface and Hard Surface Protection Systems.  Complete

## Design Pollution Prevention BMPs

### Checklist DPP-1, Part 4

Prepared by: Paul Kosinski Date: May 15, 2015 District-Co-Route: 11-SD-015

PM : R36.0/R37.2 Project ID (or EA): 11-14000093 (11-41840K) RWQCB: 9

#### Concentrated Flow Conveyance Systems

##### Ditches, Berms, Dikes and Swales

1. Consider Ditches, Berms, Dikes, and Swales as per Topics 813, 834.3, and 835, and Chapter 860 of the HDM.  Complete
2. Evaluate risks due to erosion, overtopping, flow backups or washout.  Complete
3. Consider outlet protection where localized scour is anticipated.  Complete
4. Examine the site for run-on from off-site sources.  Complete
5. Consider channel lining when velocities exceed scour velocity for soil.  Complete

##### Overside Drains

1. Consider downdrains, as per Index 834.4 of the HDM.  Complete
2. Consider paved spillways for side slopes flatter than 4:1 h:v.  Complete

##### Flared Culvert End Sections

1. Consider flared end sections on culvert inlets and outlets as per Chapter 827 of the HDM.  Complete

##### Outlet Protection/Velocity Dissipation Devices

1. Consider outlet protection/velocity dissipation devices at outlets, including cross drains, as per Chapters 827 and 870 of the HDM.  Complete

Review appropriate SSPs for Concentrated Flow Conveyance Systems.  Complete

|                                         |                                                    |                                     |
|-----------------------------------------|----------------------------------------------------|-------------------------------------|
| <b>Design Pollution Prevention BMPs</b> |                                                    |                                     |
| <b>Checklist DPP-1, Part 5</b>          |                                                    |                                     |
| Prepared by: <u>Paul Kosinski</u>       | Date: <u>May 15, 2015</u>                          | District-Co-Route: <u>11-SD-015</u> |
| PM : <u>R36.0/R37.2</u>                 | Project ID (or EA): <u>11-14000093 (11-41840K)</u> | RWQCB: <u>9</u>                     |

**Preservation of Existing Vegetation**

1. Review Preservation of Property, (Clearing and Grubbing) to reduce clearing and grubbing and maximize preservation of existing vegetation.  Complete
  
2. Has all vegetation to be retained been coordinated with Environmental, and identified and defined in the contract plans?  Yes  No
  
3. Have steps been taken to minimize disturbed areas, such as locating temporary roadways to avoid stands of trees and shrubs and to follow existing contours to reduce cutting and filling?  Complete
