Subject: HARMONY GROVE PROPERTY

ESCONDIDO, CALIFORNIA

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Dear Mr. Veltri:

In accordance with your request, we have performed a Phase I Environmental Site Assessment (ESA) of the property located at 2810 Country Club Drive in Escondido, California (Site). The Site is further identified by San Diego County Assessor's Parcel Numbers (APNs) 235-011-06, 238-021-08, -09, and -10. The Phase I ESA was performed to assess the potential presence of recognized environmental conditions (RECs) in support of due diligence activities.

This report summarizes the findings of the Phase I ESA including the potential presence of RECs as defined by the American Society for Testing and Materials Designation E 1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*.

We appreciate the opportunity to have provided our services on this project. Please contact us if you have any questions concerning this report or if we may be of further service.

Sincerely,

GEOCON CONSULTANTS, INC.

Jack Keener

Manager, Environmental Services

PHASE I ENVIRONMENTAL SITE ASSESSMENT

1. INTRODUCTION

This report presents the results of a Phase I Environmental Site Assessment (ESA) conducted on the property located at 2810 Country Club Drive in Escondido, California (the Site). The Site is further identified by San Diego County Assessor's Parcel Numbers (APNs) 235-011-06, 238-021-08, -09, and -10. We prepared this report in accordance with the request of Mr. Sam Veltri, on behalf of D.E. Shaw Composite Portfolios, LLC (the Client). The following sections identify the purpose, the scope of work and limitations/exceptions associated with the ESA, and the location of the property.

1.1 Purpose

The purpose of the Phase I ESA was to identify potential "recognized environmental conditions" (RECs) as defined by the American Society for Testing and Materials (ASTM) Designation E 1527-05 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Section 1.1.1 of the ASTM Standard E 1527-05 defines the term "recognized environmental conditions" as "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property." The term, as further defined by ASTM, "is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies." Conditions determined to be de minimis are not recognized environmental conditions.

The Phase I ESA also was conducted to satisfy the requirements of 40 Code of Federal Regulations (CFR) Part 312 titled *Standards and Practices for All Appropriate Inquiries*, as required under Sections 101(35)(B)(ii) and (iii) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The purpose of conducting an All Appropriate Inquiries (AAI) investigation into the previous ownership and uses of a property is to meet the provisions necessary for the landowner, contiguous property owner, and/or bona fide prospective purchaser to qualify for certain landowner liability protections under CERCLA. To assist in understanding the terminology contained in this report, a list of terms associated with the above-referenced standard and regulation, is provided in Appendix A.

The main components of this report, as specified by the referenced standards, include the following:

• **Site Reconnaissance:** The objective of the site reconnaissance is to obtain information indicating the likelihood of identifying recognized environmental conditions (RECs) in connection with the Site. The site reconnaissance was for the Site and adjoining properties only

and did not include moving on-site debris, vehicles, or other objects to allow for observation of the underlying ground surface. Off-site properties and features were viewed from the Site, nearby public rights-of-way, and via a drive-by reconnaissance of the surrounding area.

- **Physical Setting:** The objective of reviewing physical setting references is to obtain information concerning the topographic, geologic, and hydrogeologic characteristics of the Site and vicinity. Such information may be indicative of the direction and/or extent that a contaminant could migrate in the event of a spill or release.
- **Site History:** The purpose of consulting historical references is to develop a history of the previous uses of the Site and surrounding area in order to help identify the likelihood of past uses having led to RECs in connection with the Site. Historical sources reviewed included aerial photographs, site ownership and/or use information (as made available by the Client). In addition, we conducted interviews with persons who were reasonably expected to be knowledgeable about historical and/or current conditions at and uses of the Site.
- **Records Review:** The purpose of the records review is to obtain and review records that will help identify RECs at or potentially affecting the Site. We reviewed client-provided and publicly available federal, state, and local regulatory agency records pertaining to the Site.

1.2 Scope of Services/Exceptions

Proposal No. EP-2008-048 outlines the scope of services proposed for the study. We performed the services outlined in the referenced document, with the exceptions identified below.

- A 50-year chain-of-title report pertaining to the Site was not provided by the Client or obtained by us at the request of the Client.
- Historical fire insurance maps (Sanborns) were not reviewed because no historical map coverage was available for the site vicinity. A copy of the Certified Sanborn® Map Report is presented as Appendix F.

1.3 Site Location

The Site is located at Country Club Drive in Escondido, California. The approximate location of the Site is shown on the Vicinity Map presented as Figure 1.

2. SITE RECONNAISSANCE

We conducted a reconnaissance of the Site on January 16, 2009. Observations of adjacent properties took place during the inspection. Observations noted during the site reconnaissance are summarized below, along with any limitations encountered during the reconnaissance activities.

2.1 Physical Limitations

No physical limitations (e.g., locked rooms, fenced areas) were encountered during the site reconnaissance. At the time of the site reconnaissance, the weather was sunny with a temperature of approximately 70 degrees Fahrenheit.

2.2 Onsite Reconnaissance

The Site consists of undeveloped land covered with native vegetation. Unpaved roads traverse the central portion of the Site. A paved road traverses west to east through the approximate central portion of the Site and provides access to residential structures east of the Site. Power lines were parallel to the paved road and likely deliver electricity to private residences east of the Site. Scattered trash and debris was observed throughout the Site. The trash and debris appear to be concentrated at the central portion of the Site.

We observed remnants of a former residence which has remnants of a chimney on the north side of the location of the structure.

A concrete structure, approximately 8-12 feet deep by approximately 20 feet square, was observed in the central portion of the Site. The interior bottom of the structure was observed to be filled with trash and debris.

No significant odors, pools of liquid, significantly stained soil, distressed vegetation, aboveground storage tanks (ASTs), wells, or ponds were observed at the Site.

A Site Plan illustrating the noted site features is included as Figure 2. Photographs taken during the site reconnaissance are presented in Appendix B. The following table summarizes the observations made during the site reconnaissance regarding issues of potential environmental concern.

Issue of Potential Environmental Concern	Observed	Not Observed
Hazardous Substances/Petroleum Products		✓
Hazardous Wastes		✓
Aboveground/Underground Storage Tanks		✓
Unidentified Substance Containers		✓
Polychlorinated Biphenyls		✓
Wastewater Systems (drains/clarifiers/sumps)		✓
Evidence of Releases (stains, odors, stressed vegetation)		✓
Pools of Liquid, Pits, Ponds, Lagoons		✓
Wells		✓
Other Site Issues		✓

Project No. 09412-06-02 - 3 - February 5, 2009

2.3 Offsite Observations

Observed and reported current uses of adjacent properties and surrounding areas are described below:

Direction	Adjacent Properties	Surrounding Area
North	Escondido Creek and Harmony Grove Road	Rock quarry; dairy
East	Residential and undeveloped land	Open Space
South	Undeveloped	Open Space
West	Cordrey Drive; dairy; residential development	Open Space, Residential

3. PHYSICAL SETTING

The following sections include discussions of topographic, geologic and hydrogeologic conditions in the vicinity of the Site, based upon our document review and our visual reconnaissance of the Site and adjacent areas.

3.1 Topographic Features

Information concerning the topography and previous development of the Site and properties located in the Site vicinity was obtained from a review of U.S. Geological Survey (USGS) topographic maps of the San Marcos and Escondido, California 7.5-minute quadrangles (USGS). According to the map, the Site is situated at elevations ranging of approximately 580 feet above mean sea level (MSL) to 700 feet above MSL (MSL).

3.2 Geologic Conditions

The Site is located in the Peninsular Ranges geomorphic province of Southern California (Norris and Webb, 1976). This geomorphic province encompasses an area that extends 125 miles from the Transverse Ranges and the Los Angeles Basin south to the Mexican Border and beyond another 775 miles to the tip of Baja California. In general, the province consists of rugged mountains underlain by Mesozoic igneous and metamorphic rocks to the east and a dissected coastal plain underlain by Cenozoic sediments to the west. The province varies in width from approximately 30 to 100 miles, and is traversed by a group of sub-parallel fault zones trending roughly northwest.

The Site appears to be underlain by Granodiorite and Jurassic and/or Triassic metavolcanic rocks (California Division of Mines and Geology, 1966). Granodiorite consists of light-colored, fine-grained, angular-weathering granodiorite. Jurassic and/or Triassic metavolcanic rocks consist of predominantly dark-colored flows, tuff, breccia, and agglomerate of predominantly andesitic composition.

3.3 Regional Groundwater Quality and Occurrence

Sources prepared by the California Department of Water Resources (CDWR) and the California State Water Resources Control Board (SWRCB) were reviewed for information pertaining to groundwater quality and occurrence in the vicinity of the Site. Based on these sources, the Site is located within the Escondido Hydrologic Subarea (4.62) of the Carlsbad Hydrologic Unit (4.00) (SWRCB, 1994). Groundwater that occurs in the Escondido section of this Unit is generally sodium chloride in character and has a concentration of total dissolved solid (TDS) that ranges from 250 to 5,000 milligrams per liter (mg/l). Chemical character of this water can be largely attributed to local domestic waste disposal practices. In addition, the sodium chloride-sulfate character of surface flow in Escondido Creek is a result of effluent releases from the wastewater treatment plant at Escondido. (CDWR, 1967). Groundwater in the Escondido Hydrologic Subarea has existing beneficial use designations for municipal and agricultural purposes and potential beneficial use designations for industrial service supply purposes (SWRCB, 1994).

No CDWR wells are located on the Site or its adjacent properties (CDWR, 2003). Based on general knowledge of the local hydrogeology in the area, groundwater beneath the Site is presumed to flow generally towards Escondido Creek. Escondido Creek traverses east to west adjacent to the northern boundary of the Site and then bends south approximately 1,000 feet to the west of the Site. Depth to groundwater varies due to the topography of the Site. On the northern portion of the Site where ground elevation is lower, groundwater is estimated to be approximately 10-20 feet below ground surface (bgs). Depth to groundwater is expected to exceed 100 feet bgs in the central and southern portion of the Site. Groundwater depth and flow direction beneath the Site may vary due to proximity to creeks and streams, local irrigation practices, seasonal rainfall, and fracture systems in the underlying bedrock units.

4. SITE HISTORY

4.1 Publicly-Available Information

Publicly-available historical records, including aerial photographs, topographic maps and historical city directories, were available for the site and adjacent properties for selected years dating from 1901 to 2005. The following table presents a summary of information obtained from the sources used for this assessment. The aerial photographs, topographic maps and city directory reviewed are provided in Appendix C, D, and E, respectively.

1 7	Interpreted Use			
Year	Site	Adjacent and Nearby Properties	Source	
1901	There are no roadways or development visible. No structures are shown on Site. Escondido Creek runs adjacent to the Site.	No structures or roads are shown on properties adjacent to the Site.	Т	
1904	Similar to the 1901 topographic map.	Similar to the 1901 topographic map.	T	
1946	Two structures are visible in central portion of the Site with evidence of crops directly south of the structures. The remainder of the Site is undeveloped and covered with natural vegetation.	An unimproved road provides access from Harmony Grove Road to the onsite structures. Crops are visible to the west. Land to the east and south is undeveloped. Orchards are visible to the north as well as a rock quarry and Harmony Grove Road.	A	
1947	Country Club Drive is now visible running north/south and turning west through the Site.	Harmony Grove Road is now visible north of the Site. Route 15 is visible to the east of the Site.	Т	
1949	Similar to the 1947 topographic map.	Similar to the 1947 topographic map.	T	
1953	Crops appear to be planted on the southern portion of the Site.	Similar to the 1946 aerial photograph.	A	
1963	Crops previously observed on the southern portion of the Site appear to have been removed.	A few structures appear to the north of the Site including two, long, parallel structures.	A	
1968			T	
1974			A	
1975	Similar to the 1968 topographic map.	Roads have increased in number around the Site.	T	
1989	Vegetation appears to have increased near Escondido Creek on the north and west of the Site. All else similar to the 1974 aerial photograph.	Rock quarry to the north of the Site has grown in size. All else similar to the 1974 aerial photograph.	A	
1994	Similar to the 1989 aerial photograph.	Similar to the 1989 photograph.	A	
1996	Similar to the 1975 topographic map	Similar to the 1975 topographic map	T	
2002	An increased amount of trees appear on the western half of the Site. All else similar to the 1994 aerial photograph.	Similar to the 1994 aerial photograph.	A	
2005	Similar to the 2002 aerial photograph.	Similar to the 2002 aerial photograph	A	

Abbreviations:

A = aerial photographs

T = topographic maps

4.2 Interviews

According to our 2004 Phase I ESA, Mr. Sam Veltri of D.E. Shaw Composite Portfolios, LLC, a Site representative, was interviewed regarding current and historical uses of the Site. According to Mr. Veltri, the Site was developed for business use. Mr. Veltri indicated that, to his knowledge, underground or aboveground chemical storage tanks have not been located on the Site. Mr. Veltri stated that, to his knowledge, no environmental cleanup liens have been recorded against the Site, no institutional controls (e.g., zoning restrictions, building permit restrictions, well drilling prohibitions) or engineering controls (e.g., vapor barriers, venting systems) have been required for the Site, and no other land use restrictions are associated with the Site.

We contacted Mr. Sam Veltri for an interview regarding any changes to the Site. As of the date of this report, a response has not yet been received. The Client will be notified if any information received from the interview changes the conclusion of this report.

4.3 Prior Environmental Documents/Reports

We reviewed the following environmental reports provided by the Client regarding property for this assessment:

• Phase I Environmental Site Assessment, Harmony Grove Property, 2810 Country Club Drive, Escondido, California, prepared by Geocon Consultants, dated January 2004.

Pertinent information contained in the referenced report is summarized below.

The report was done as part of the due diligence process. The Site was vacant and undeveloped at the time of the report. Based on the findings presented in the report, the presence of RECs at the Site were not observed during the preparation of the report and that additional onsite environmental assessment did not appear to be warranted at the time.

5. REGULATORY AGENCY RECORDS

Regulatory agency records pertaining to the site and relevant nearby properties were searched for this assessment. The sources for this information included a regulatory database search firm (Section 5.1) local government agencies (Sections 5.2 to 5.6). The information requested from local government agencies was based on the site reconnaissance activities, historical research, and environmental database review. A summary of information obtained from the sources contacted is presented below. Based on information obtained through written requests to local government agencies, it was judged that interviews of regulatory officials would not provide any additional or meaningful information to this Phase I ESA.

5.1 Database Review

Environmental Data Resources, Inc (EDR), a regulatory database search firm, performed a search of federal, state and local databases for the Site and surrounding areas. A reproduction of the report titled *The EDR Radius Map with GeoCheck, The Harmony Grove Property, 2810 Country Club Drive, Escondido, CA 92029* and dated January 14, 2009 is presented as Appendix G. The following table lists databases that were searched and the number of listings.

Project No. 09412-06-02 - 7 - February 5, 2009

Notes: TP = Target Property Sites may be listed in more than one database		

Sites may be listed in more than one database

5.1.1 Site

Based on the database search summarized in Section 5.1, the following discussion provides detailed information regarding the Site and the status of the listings associated with the properties.

The Site was not listed in any of the databases searched by the EDR.

5.1.2 Nearby Properties

Based on the database search summarized in Section 5.1, the following discussion provides detailed information regarding properties reported to be located within an approximate 1 mile radius of the Site and the status of the listings associated with the properties.

No nearby properties were listed in any of the databases searched by the EDR

5.1.3 Non Geocoded (Unmapped) Sites

This portion of the regulatory database report identifies properties that have incomplete address information and could not be specifically plotted. Based on the interpreted distances of the listed facilities in relation to the Site there is a low likelihood that the listed non-geocoded facilities present an environmental concern to the Site at the current time.

5.2 California Department of Conservation Division of Oil and Gas

We reviewed California Department of Conservation Division of Oil and Gas (DOG) maps to estimate the distance and direction to the nearest oil or gas wells from the Site (California Department of Conservation, 2007). Based on our review, there are no oil or gas wells within the vicinity of the Site.

5.3 Water and Sewer Agencies

We contacted the Rincon Del Diablo Municipal Water District to obtain information pertaining to the reported source of water and method of sewage disposal for the site area, the location and depth of wells for the area, and any reported local drinking water contamination problems. A District representative indicated that water in the area is purchased from the San Diego County Water Authority and consists of a blend of Colorado River and Sacramento-San Joaquin Delta sources. In addition, the representative was not aware of reported drinking water contamination problems or of municipal drinking water wells onsite or in the general vicinity. Current residences are on local septic systems. However, according to a district representative, potable water will be provided to the Site by the Rincon Del Diablo Municipal Water District and the Site will be serviced by the San Diego County sewage system when the Site is redeveloped.

5.4 San Diego County Department of Environmental Health (DEH)

We submitted a request to the San Diego County DEH for records pertaining to the Site addresses. Joyce Ellman, a DEH representative, stated that no records were found.

5.5 County of San Diego Building Department

We reviewed the online database for the County of San Diego Building Department for permit information related to the Site. No permits were identified.

5.6 San Diego Air Pollution Control District

We submitted a request to the San Diego Air Pollution Control District (APCD) regarding public records associated with the Site. As of the date of this report, we have not been notified that records exist for the Site.

6. SUMMARY OF FINDINGS

The Site consists of undeveloped land traversed by unpaved and paved roads and covered with native vegetation. Three structures were observed onsite, including remnants of a former residence, a brick and clay/mud structure with three partial walls, and a square concrete structure. Trash and debris were observed scattered throughout the Site. No significant odors, pools of liquid, significantly stained soil, distressed vegetation, ASTs, wells, or ponds were observed at the Site.

Based on a review of historical aerial photographs and information obtained during the preparation of this ESA, the Site consisted primarily of undeveloped land with structures at the central portion of the Site as early as the late 1920s. Evidence of historical agricultural use onsite is apparent from at least the 1920s to the 1980s, although historical use appears to be sporadic and not continuous.

The Site was not listed in the searched regulatory databases. No cases of releases of hazardous substances to soil or groundwater at the Site or in the vicinity of the Site were found in the database report.

7. OPINIONS AND CONCLUSIONS

Based on the findings outlined herein, the potential for the existing presence of significant impacts to the Site from hazardous substances/wastes onsite is considered low. RECs were not identified during the preparation of this ESA. Additional environmental assessment is not warranted at this time.

Based on our observations and the absence of properties listed in the regulatory databases, significant adverse RECs from offsite properties is not expected at the Site. The observations did not include an evaluation of subsurface conditions at the property.

8. LIMITATIONS

The preliminary conclusions presented in this report are based upon reasonable visual observations made at the site and research of available materials within the scope and budget of the contract. The information presented is relevant to the dates of our site visit and should not be relied upon to represent conditions at later dates. The opinions expressed herein are based on our experience with similar studies and information

Project No. 09412-06-02 - 11 - February 5, 2009

obtained during our effort. If additional information becomes available, we request the opportunity to review the information and modify our opinions, if necessary.

The visual observations made by us were limited to accessed portions of the Site and the contiguous sites. Subsurface exploration, soil and groundwater sampling, and analytical laboratory testing were not within the scope of this study. In addition, this study did not include a 50-year chain-of-title review or a review of fire insurance maps. The Phase I ESA at the Site was conducted by us expressly and solely for D.E. Shaw Composite Portfolios, LLC. Any reliance upon the information, conclusions, or recommendations contained in this report for purposes other than the transfer of the subject property shall be at the sole liability of the party undertaking such use.

Our services have been conducted using the degree of care and skill ordinarily exercised, under similar circumstances, by environmental sciences consultants practicing in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented in this report. We are not responsible for the conclusions, opinions, or recommendations made by others based on this information.

This report was compiled based partially on information supplied to us from outside sources, other information that is in the public domain, and visual observations made at the property. The preliminary conclusions and recommendations herein are based solely on the information we obtained in compiling the report. We make no warranty as to the accuracy of statements made by others which may be contained in the report, nor are any other warranties or guarantees, express or implied, included or intended by the report except that it has been prepared in accordance with the current generally accepted practices and standards consistent with the level of care and skill exercised under similar circumstances by other professional consultants or firms performing the same or similar services. This report is intended to be used by the party authorizing the audit for the transfer of the property audited. None of the work performed hereunder shall constitute or be represented as a legal opinion of any kind or nature, but shall be a representation of findings of fact from records examined.

This evaluation does not address the presence of the following conditions unless specifically stated otherwise:

- Radon, electromagnetic fields, asbestos, lead-containing paint, mold, burn ash, lead in drinking water, methane gas, and wetlands;
- Chemical compounds which naturally occur in the environment;
- Commonly used household cleaning products, building materials, and consumables that may be hazardous; and
- Contaminants or contaminant concentrations that are not currently a concern but may be under future regulatory standards.

10. QUALIFICATIONS

Jack Keener states the following:

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312. I have the specific qualifications based on education, training, and experience, to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Jack Keener

Manager, Environmental Services

APPENDIX A

PHASE I ENVIRONMENTAL SITE ASSESSMENT TERMS

Adjoining/Adjacent Property Any real property or properties the border of which is

contiguous or partially contiguous with that of the Site, or that would be contiguous or partially contiguous with that

of the Site but for a street, road, or other public

thoroughfare separating them.

Business Environmental Risk A risk that can have a material environmental of

environmentally-driven impact on the business

associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated as part

of a Phase I ESA.

Data Failure A failure to achieve the historical research objectives

associated with a Phase I ESA.

Data Gap A lack of or inability to obtain information required as part

of a Phase I ESA despite good faith efforts by the environmental professional to gather such information.

De Minimis Environmental Condition An environmental condition that generally does not

present a material risk of harm to public health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of

appropriate governmental agencies.

Due Diligence The process of Inquiring Into the environmental

characteristics of a parcel of commercial real estate or other conditions, usually in connection with a commercial

real estate transaction.

Engineering Control A physical modification to a site or a facility to reduce or

eliminate the potential for exposure to hazardous substances or petroleum products in the soil or

groundwater on the property.

Environmental Lien A charge, security, or encumbrance upon title to a

property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances

or petroleum products upon a property.

Environmental Professional A person meeting the education, training and experience

requirements as set forth in 40 CFR §312.10(b).

Fill Dirt Dirt, soil, sand, or other earth that is obtained off-site that

is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of real

property.

Fire Insurance Maps Maps produced for private fire Insurance map companies

that indicate uses of properties at specified dates and

that encompass the Site.

Historical Recognized Environmental

Condition

An environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized

environmental condition currently.

Institutional Control A legal or administrative restriction on the use of, or access to, a site or facility to (1) reduce or eliminate

access to, a site or facility to (1) reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property, or (2)

prevent activities that could interfere with the

effectiveness of a response action, in order to ensure

PHASE I ENVIRONMENTAL SITE ASSESSMENT TERMS

Material Threat

Pits, Ponds, or Lagoons

maintenance of a condition of no significant risk to public health or the environment (e.g., a deed restriction).

A physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and

might result in impact to public health or the environment.

Man-made or natural depressions in a ground surface

that are likely to hold liquids or sludge containing hazardous substances or petroleum products.

Practically Reviewable Information that is provided by the source in a manner

and in a form that, upon examination, yields information relevant to the property without the need for extraordinary

analysis of Irrelevant data.

Reasonably Ascertainable Information that is (1) publicly available, (2) obtainable

from its source within reasonable time and cost constraints, and (3) practically reviewable.

Recognized Environmental Condition The presence or likely presence of any hazardous

substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground

water, or surface water of the property.

Sump A pit, cistern, cesspool, or similar receptacle where

liquids drain, collect or are stored.

Underground Storage Tank Any tank, ificluding underground piping connected to the

tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10 percent or more beneath the surface of the

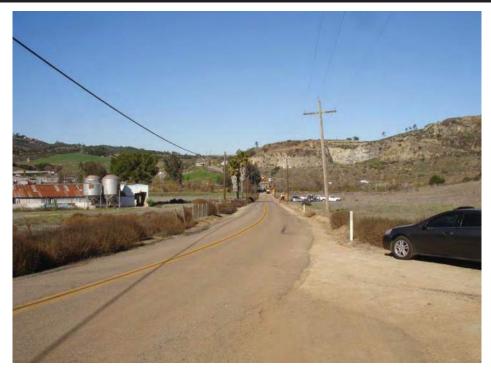

ground.

Wastewater Water that (1) is or has been used in an industrial or

manufacturing process, (2) conveys or has conveyed sewage, or (3) is directly related to manufacturing, processing, or raw materials storage areas at an

industrial plant.

The EDR Aerial Photo Decade Package

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

SUMMARY

City Directories:

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1903 through 2006. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 1/8th of a mile of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

Sanborn® Library search results Certification # 3A3E-4438-B84F

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

✓ Library of Congress

✓ University Publications of America

▼ EDR Private Collection

Limited Permission To Make Copies

Geocon Env. Consultants, Inc. (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

NO SITES FOUND

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

NPL where no further response is appropriate

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/10/2008 Date Data Arrived at EDR: 09/23/2008 Date Made Active in Reports: 10/16/2008

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

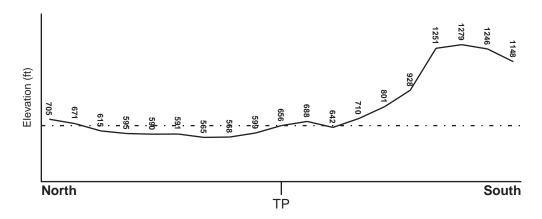

TOPOGRAPHIC INFORMATION

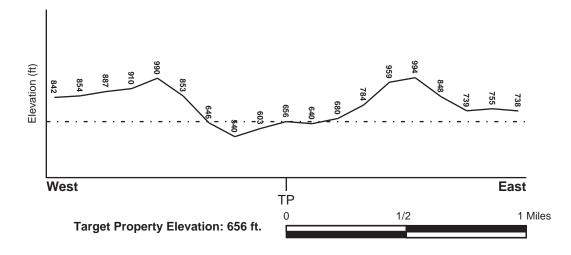

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

 MAP ID
 FROM TP
 GROUNDWATER FLOW

 Not Reported
 GROUNDWATER FLOW

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: ESCONDIDO

Soil Surface Texture: very fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 74 inches

			Soil Layer	r Information			
	Bou	ındary		Classi	fication	Saturated hydraulic conductivity micro m/sec	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:
2	5 inches	29 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:
3	29 inches	33 inches	unweathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:

GEOCHECK[®] - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: WYMAN

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database Source: Department of Health Services

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations Source: Department of Conservation

Telephone: 916-323-1779

RADON

State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208 Radon Database for California

Area Radon Information Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at

private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.
