MONTHLY GROUNDWATER MONITORING REPORT – AUGUST 2017
TULE WIND CONSTRUCTION PROJECT
EAST SAN DIEGO COUNTY, CALIFORNIA

On behalf of Avangrid Renewables, LLC (Avangrid), Geo-Logic Associates (GLA) is pleased to provide this letter presenting August 2017 daily water level data and weekly flowmeter readings from project construction-related wells (production wells 6, 6a, and 8, and piezometer PZ-1) on Rough Acres Ranch. In accordance with the requirements established in the County of San Diego Planning and Development Services in the Major Use Permit 3300 09-019, weekly groundwater production data must be recorded from wells 6, 6a and 8, and daily water level data measured in the piezometer (PZ-1) and in wells 6 and 8. This report presents a summary of the collected data obtained in August 2017.

Following initial training by GLA on water level and flowmeter protocols for the Tule Wind construction project, daily water levels and weekly flowmeter readings are being obtained by Carol Brady with LG Equipment. Additionally, wells 6, 8, 8a and PZ-1 are each equipped with a pressure transducer to measure and record water level data, which can be uploaded to corroborate the manual measurements throughout the construction program. Well 6a is a non-community public water supply well, supplying water to Rough Acres Ranch, and a pressure transducer cannot be inserted into this well; collection of water levels in this well is not required.

Weekly Flow Meter Readings. Flowmeter readings at each well are recorded on field forms, provide in Attachment 1. Based on the flow meter readings obtained during the August 2017 period, no groundwater was pumped, stored or applied from the project wells during the August period.

Since the start of the project in December 2016, the total volume of water pumped is 51.31 acre-feet; approximately 12.76 acre-feet from well 8 and the balance (38.55 acre-feet) from wells 6 and 6a (Attachment A – Groundwater Production Summary).

Daily Water Level Data. During the August 2017 period, water levels were measured manually in pumping Wells 6, 8, and piezometer PZ-1 each construction day and recorded on field forms (Attachment A). During prior months, when Well 8 was pumped, the water level dropped below the pressure transducer installed in this well, obstructing access, and a water level could not be measured below the pressure transducer. In lieu of measurements from Well 8, Ms. Brady measured water levels in Well 8a located 286 feet east of Well 8. With pumping discontinued at Well 8, water levels can be measured in Well 8, though water levels in Well 8a continue to be measured and recorded. Table 1 presents a summary of the manual measurements obtained during the month.

Based on the production and water level data presented, the project remains within its required groundwater parameters. Beginning in June the project began ramping down its draw from the wells. The remaining groundwater as established in the MUP is being held in reserve, in the event that it is needed.

CLOSING

This monthly report pertains to the Avangrid Tule Wind Project. It may not be appropriate for other projects or for other sites. If you have any questions, please contact me.

Sincerely,
Geo-Logic Associates

Sarah J. Battelle, CHG 609
Principal Geologist
