- Maximum floor area ratio is provided based on regional categories to guide intensity of development. Community Plans may specify specific areas where these FARs may be exceeded such as areas with shared parking facilities or mixed uses, areas in or around town centers or transit nodes, or when other special circumstances exist.
- Village Residential 2 (VR-2) and Semi-Rural 0.5 (SR-0.5) currently appear as one designation on the Land Use Map but are differentiated on the Regional Categories Map. The Land Use Map will be updated to reflect the different designations prior to finalization. Semi-Rural 0.5 is appropriate in the Semi-Rural Regional Category in areas where the predominant development pattern is 0.5-acre and larger parcels.
- The maximum density for lands designated as Semi-Rural is based on the slope of the site (see Table LU-2).
- This denotes the upper range for each component, but there is no expectation that this would be achieved when each component is applied in the same area. The maximum FAR in the Village Core Mixed Use Designation is 0.7 unless offsite parking is provided in conjunction with the proposed development. In that case, the maximum FAR could be up to 1.3.
- Maximum residential densities are applied per the Zoning Ordinance.
- The reflection of existing land uses on the Land Use Map results in some land use designations that are not consistent with the compatibility set forth in this table. This exception is available to existing land uses only.
- This designation solely reflects those designations retained from the former General Plan. New SPAs will not be shown on the Land Use Map under the SPA designation, rather these areas will retain their underlying land uses.
- Refer to Policy LU-1.6
- Residential uses would not occur within this designation unless the proposed development has been carefully examined to assure that there will be no significant adverse environmental impacts, and erosion and fire problems will be minimal.
