Executive Summary

The purpose of this study is to identify any potential transportation impacts associated with the County of San Diego (County) Agriculture Promotion Program (Proposed Project), as well as to recommend mitigation measures, as necessary.

Project Description

The Proposed Project involves amending the County's Zoning Ordinance to promote accessory uses to agricultural operations throughout the County of San Diego. Specifically, adoption of the Proposed Project would revise permitting requirements for uses currently allowed in agricultural areas and introduce a new permitting process for uses not currently addressed or included in the zoning code. Such revisions would promote the development of uses that are accessory to agricultural uses, such as microbreweries, cheese-making and dairy operations, on-site food production, mobile butchering, packing and processing, on-site retail horticulture sales, animal raising, roadside sales of agricultural products, agricultural tourism, and agricultural homestays on agricultural lands consistent with the County's General Plan. The Proposed Project would apply primarily to properties that are zoned Agriculture (A70 and A72), Specific Plan (S88), Holding Area (S90), and General Rural (S92); however, other zones with agricultural uses would also be affected. The Proposed Project includes amendments to the Animal Regulations that would apply to the keeping of animals in all zones with the affected designators. Lastly, adoption of the Proposed Project would allow small, boutique, and wholesale limited winery uses in the S92 zone.

Project Trip Generation

Table ES-1 displays the total number of acres that would be eligible for the program, the maximum number of new daily trips that could potentially be generated if all eligible parcels were buildout with the new eligible uses, and the anticipated trip generation rates¹ associated with the eligible parcels within each Community Planning Area (CPA).

Table ES-1 Project Trip Generation

CPA	Total Ag Land (Acres)	Assumed Acres that will be Improve ¹	Total New Daily Trip Generation	New Ag Trip Generation Rate Per Acre
Alpine	6,278	439	659	1.5
Bonsall	5,351	375	1,313	3.5
Central Mountain	5,092	356	71	0.2
County Islands	78	0 ²	0	0
Crest - Dehesa	6,696	469	610	1.3
Desert	6,857	480	240	0.5
Fallbrook	8,271	579	3,995	6.9
Jamul-Dulzura	26,597	1,862	1,862	1
Julian	7,601	532	479	0.9
Lakeside	10,749	752	1,203	1.6

¹ These rates are in addition to the standard 2.0 trips / acre rate associated with agricultural uses, as defined in SANDAG's Not So Brief Guide to Vehicular Trip Generation.

Table ES-1 Project Trip Generation

CPA	Total Ag Land (Acres)	Assumed Acres that will be Improve ¹	Total New Daily Trip Generation	New Ag Trip Generation Rate Per Acre
Mountain Empire	21,470	1,503	1,052	0.7
North County Metro	14,522	1,017	1,831	1.8
North Mountain	69,969	4,898	980	0.2
Otay	7,273	509	204	0.4
Pala - Pauma	10,746	752	752	1
Pendleton - De Luz	84,140	5,890	1,178	0.2
Rainbow	3,404	238	904	3.8
Ramona	24,468	1,713	3,083	1.8
San Dieguito	3,535	247	667	2.7
Spring Valley	205	14	11.2	0.8
Sweetwater	1,888	132	66	0.5
Valle De Oro	643	45	104	2.3
Valley Center	15,195	1,064	4,894	4.6
Total	341,028	23,871	26,157	1.1

Source: Chen Ryan Associates September 2016

Notes:

¹While there are 341,028 acres of land within the County of San Diego that are eligible for the program, it is not considered to be realistic to assume that every acre of land will implement these improvements based on data from recent agricultural development within the County of San Diego. Therefore, it is assumed that 7% of the eligible lands will construct/implement improvements by the horizon of this plan (30 years). Please see Section 3.1 for more information regarding this assumption.

²While the County Islands Community does have some agricultural land uses, no parcels are currently zoned to be applicable to the proposed changes; therefore, no new trips would be generated within the community.

Project Impacts

Based on the anticipated trip generation rates defined in Table ES-1, a countywide traffic impact assessment was conducted, assuming buildout of both the County's Land Use Element and the Mobility Element. Roadway segments projected to operate at LOS E or F, in which the Proposed Project is anticipated to add traffic to, were considered to be impacts the General Plan. It should be noted that the County's Mobility Element has already identified and accepted a list of roadway segments throughout the County as operating at LOS E or F under buildout of the General Plan. However, the Proposed Project will add additional traffic to these segments, which was not originally anticipated when the LOS on these segments was adopted. The segments in which the Mobility Element has identified and accepted as operating at LOS E and F, and the Proposed Project is projected to add traffic to, are identified separately below.

County Roadway Facilities

The Proposed Project would potentially impact the General Plan on the following roadway segments in which the County's Mobility Element has not identified or accepted as operating at LOS E or F under buildout of the adopted General Plan:

- Pala Mesa Drive, between Daisy Lane and Wilt Road;
- Pankey Road, between Pala Road and Pankey Place;
- North Pico Avenue, between East Kalmia Street and Mission Road; and
- Old Highway 395, between Mission Road and Rainbow Valley Road.

The Proposed Project would potentially impact the General Plan on the following roadway segments in which the County's Mobility Element has already identified and accepted as operating at LOS E or F under buildout of the adopted General Plan:

- Mission Road, between I-15 Ramos and Macadamia Drive;
- Pala Mesa Drive, between Old Highway 395 and Daisy Lane;
- Mirar De Valle Road, between Valley Center CPA Boundary and North Broadway;
- Lilac Road, between Valley Center Road and New Road 19;
- Mirar De Valle, between Cypress Ridge Drive and the North County Metro CPA Boundary; and
- Valley Center Road, between Lilac Road and Road 17.

State Facilities

The Proposed Project would potentially impact the General Plan on the following State Highways in which the County's Mobility Element has not identified or accepted as operating at LOS E or F under buildout of the adopted General Plan:

- None

The Proposed Project would potentially impact the General Plan on the following State Highways in which the County's Mobility Element has already identified and accepted as operating at LOS E or F under buildout of the adopted General Plan:

- SR-67, between Willows Road and SR-67;

Mitigation

Mitigation measures for the impacted roadway segments listed above are identified in Table 4.5. It should be noted that this study did not performed a feasibility analysis for the proposed mitigation measures in the table above. Feasibility of the proposed mitigation measures will be determined by the project EIR.

Bicycle and Pedestrian

Since the Proposed Project is only changing the County Zoning Ordinance, it will therefore not change any roadway, pedestrian or bicycle facilities within the County. Additionally, since this is a programmatic level analysis it is assumed that the Mobility Element will be fully built out and all roadways and intersections will be designed to County standards and will be able to accommodate the appropriate bicycle and pedestrian demand.

1.0 Introduction

The purpose of this study is to identify any potential transportation impacts associated with the County of San Diego (County) Agriculture Promotion Program (Proposed Project), as well as to recommend mitigation measures, as necessary.

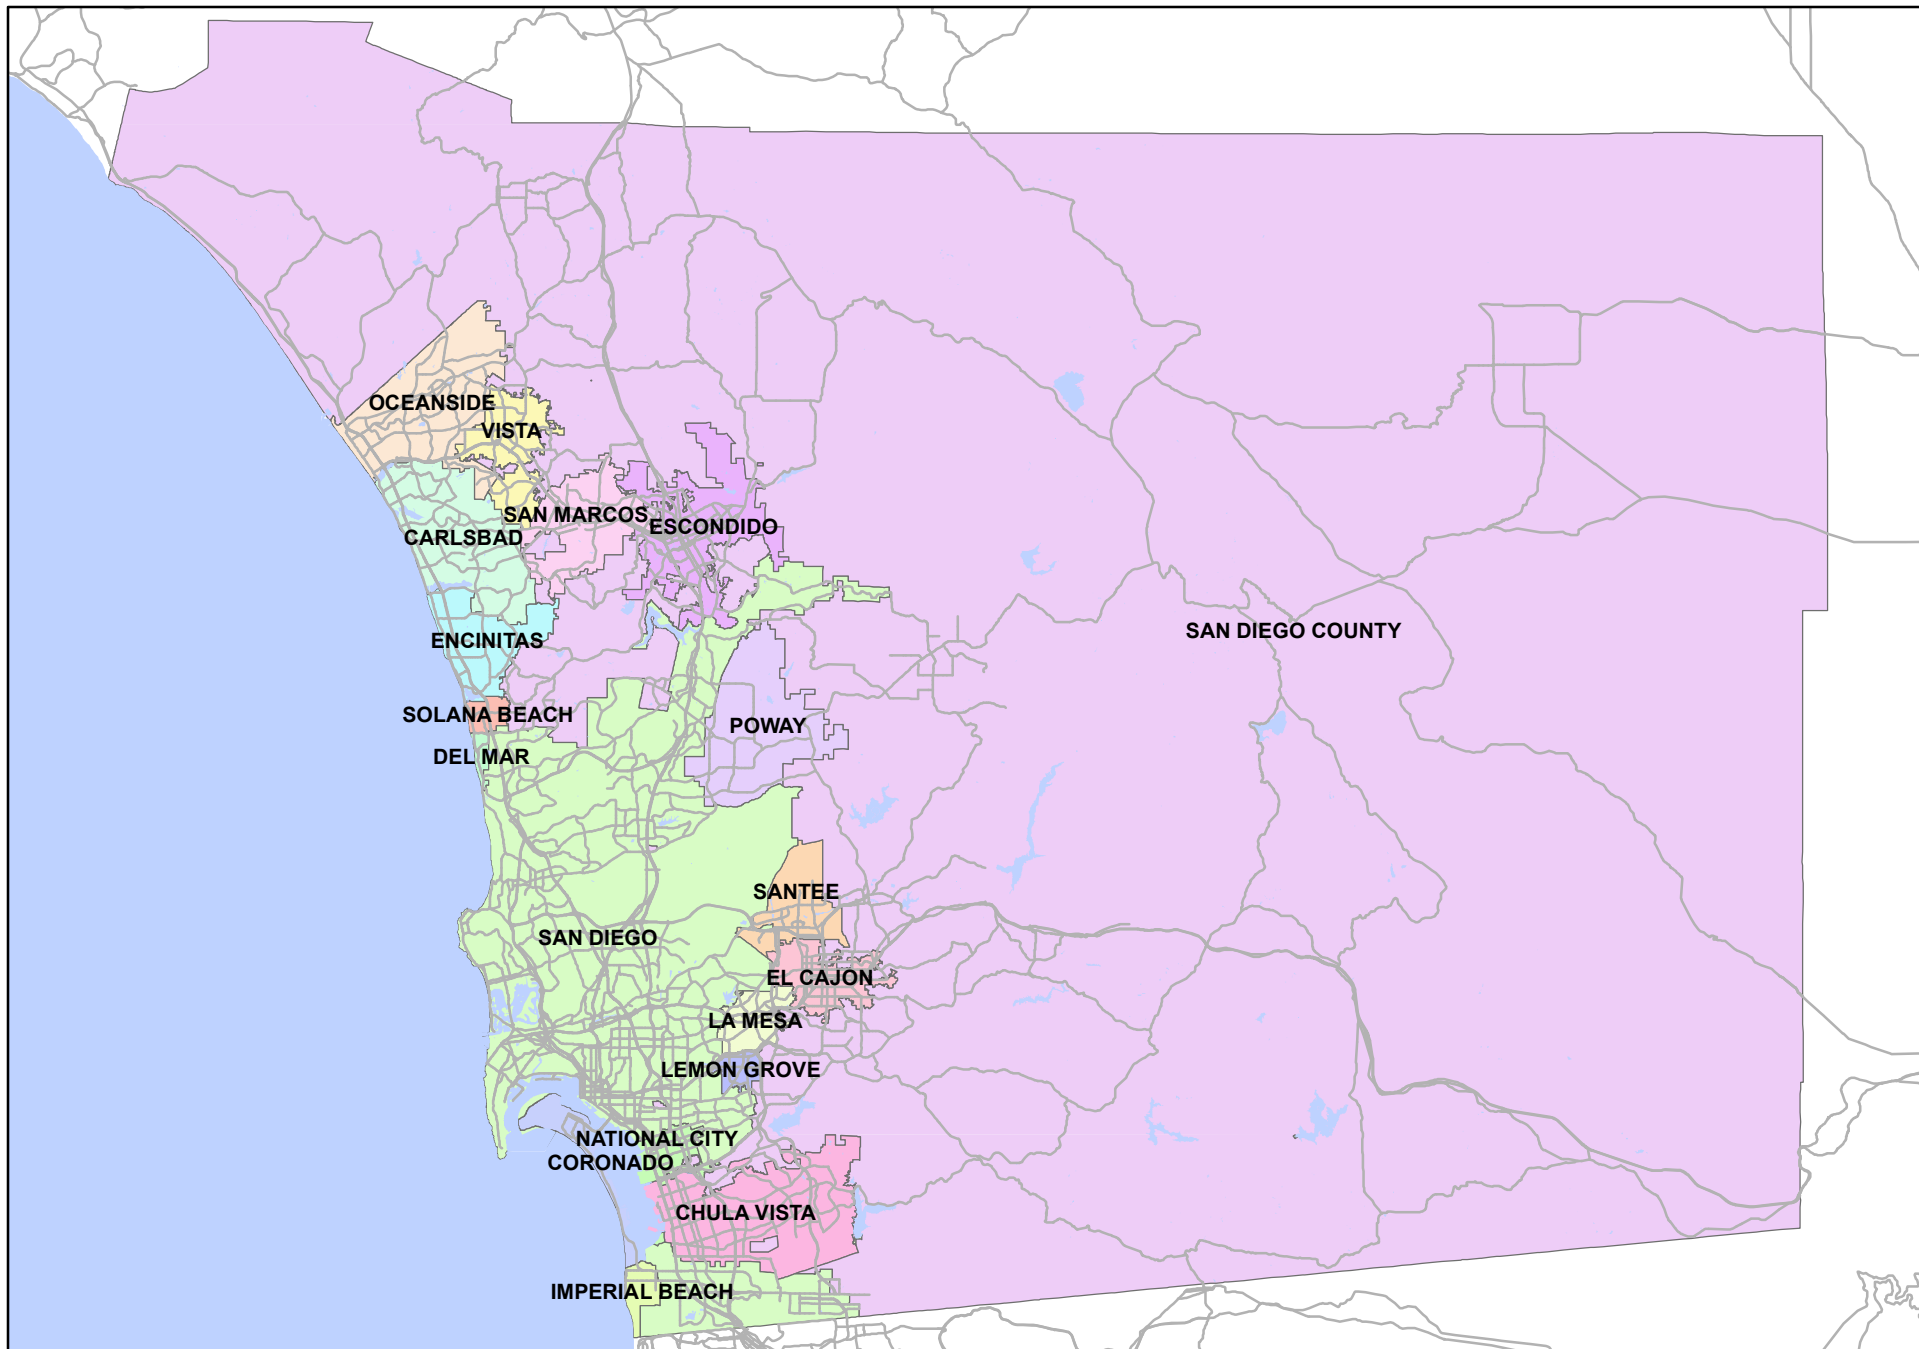

1.1 Project Description

The Proposed Project involves amending the County's Zoning Ordinance to promote accessory uses to agricultural operations throughout the County of San Diego. Specifically, adoption of the Proposed Project would revise permitting requirements for uses currently allowed in agricultural areas and introduce a new permitting process for uses not currently addressed or included in the zoning code. Such revisions would promote the development of uses that are accessory to agricultural uses, such as microbreweries, cheese-making and dairy operations, on-site food production, mobile butchering, packing and processing, on-site retail horticulture sales, animal raising, roadside sales of agricultural products, agricultural tourism, and agricultural homestays on agricultural lands consistent with the County's General Plan. The Proposed Project would apply primarily to properties that are zoned Agriculture (A70 and A72), Specific Plan (S88), Holding Area (S90), and General Rural (S92); however, other zones with agricultural uses would also be affected. The Proposed Project includes amendments to the Animal Regulations that would apply to the keeping of animals in all zones with the affected designators. Lastly, adoption of the Proposed Project would allow small, boutique, and wholesale limited winery uses in the S92 zone.

1.2 Project Location

San Diego County is bounded by the counties of Orange and Riverside to the north, the County of Imperial to the east, the United States–Mexico international border to the south, and the Pacific Ocean to the west (see **Figure 1-1**). The Proposed Project comprises an amendment to the Zoning Ordinance and would affect properties located within unincorporated portions of the County that are under the land use jurisdiction of the County. Therefore, the Proposed Project would not apply to lands in incorporated cities or to state, federal, or tribal lands. More specifically, the Proposed Project would apply to those unincorporated properties that support agricultural operations. Agricultural operations occur throughout the unincorporated area, with high concentrations in certain areas and in a variety of zones, including some industrial and commercially zoned areas.

Regional access throughout the affected area is provided by interstates, local state routes, and County roads. Primary north-south transportation facilities in the County include Interstates 5, 15, and 805, all of which are focused in the western part of the County. Other north-south State Highways include 67, 79, 125, and 163. Major east-west corridors include Interstate 8 and State Highways 54, 76, 78, and 94 and are dispersed throughout the County.

1.3 Report Organization

Following this Introduction chapter, this report is organized into the following chapters:

- Chapter 2: *Approach and Methodology* – Outlines the approach and methodologies used to assess the potential impacts associated with the Proposed Project.
- Chapter 3: *Proposed Project* – Documents the transportation related changes associated with the Proposed Project, including the anticipated increase in trip generation for agricultural uses and the modeling process used to assign the new trips to the County’s roadway network.
- Chapter 4: *Current General Plan Buildout Plus Project* – Identifies the roadway links that may potentially be impacted by the Proposed Project assuming the buildout of the Current General Plan.
- Chapter 5: *Current General Plan Buildout Plus GPAs in Process Plus Project* – There are several development projects within the County, that are currently in the discretionary permit process, that are seeking a General Plan Amendments (GPA) to request higher land uses densities than currently permitted in the County’s Land Use Element (GPAs in Process). At this time, it is unknown if these GPAs will be accepted as currently proposed, changed to provide lower densities or outright denied. It is also unknown how these projects will mitigate any new traffic related impacts associated with higher land use densities or if there will be associated changes to the County’s Mobility Element. Therefore, true impacts associated with the Proposed Project, assuming the addition to these GPAs in Process, cannot be accurately determined at this time. However, as a worst case scenario, this chapter evaluates the traffic operations under buildout of the Current General Plan plus the full development of all of the GPA projects currently in process, as well as the implementation of the Proposed Project. This section is provided for informational purposes only; therefore, no project specific impacts are identified.
- Chapter 6: *Hazards to Pedestrians and Bicycles* – Identifies any potential hazards and/or CEQA related impacts to pedestrians and bicycles that may be created by the Proposed Project.
- Chapter 7: *Summary of Findings* – Outlines and summarizes the findings of the report.

2.0 Approach and Methodology

This Transportation Impact Assessment has been prepared in support of the program-level EIR assessment of traffic operations throughout the County of San Diego of San Diego for the Proposed Project.

2.1 Project Approach

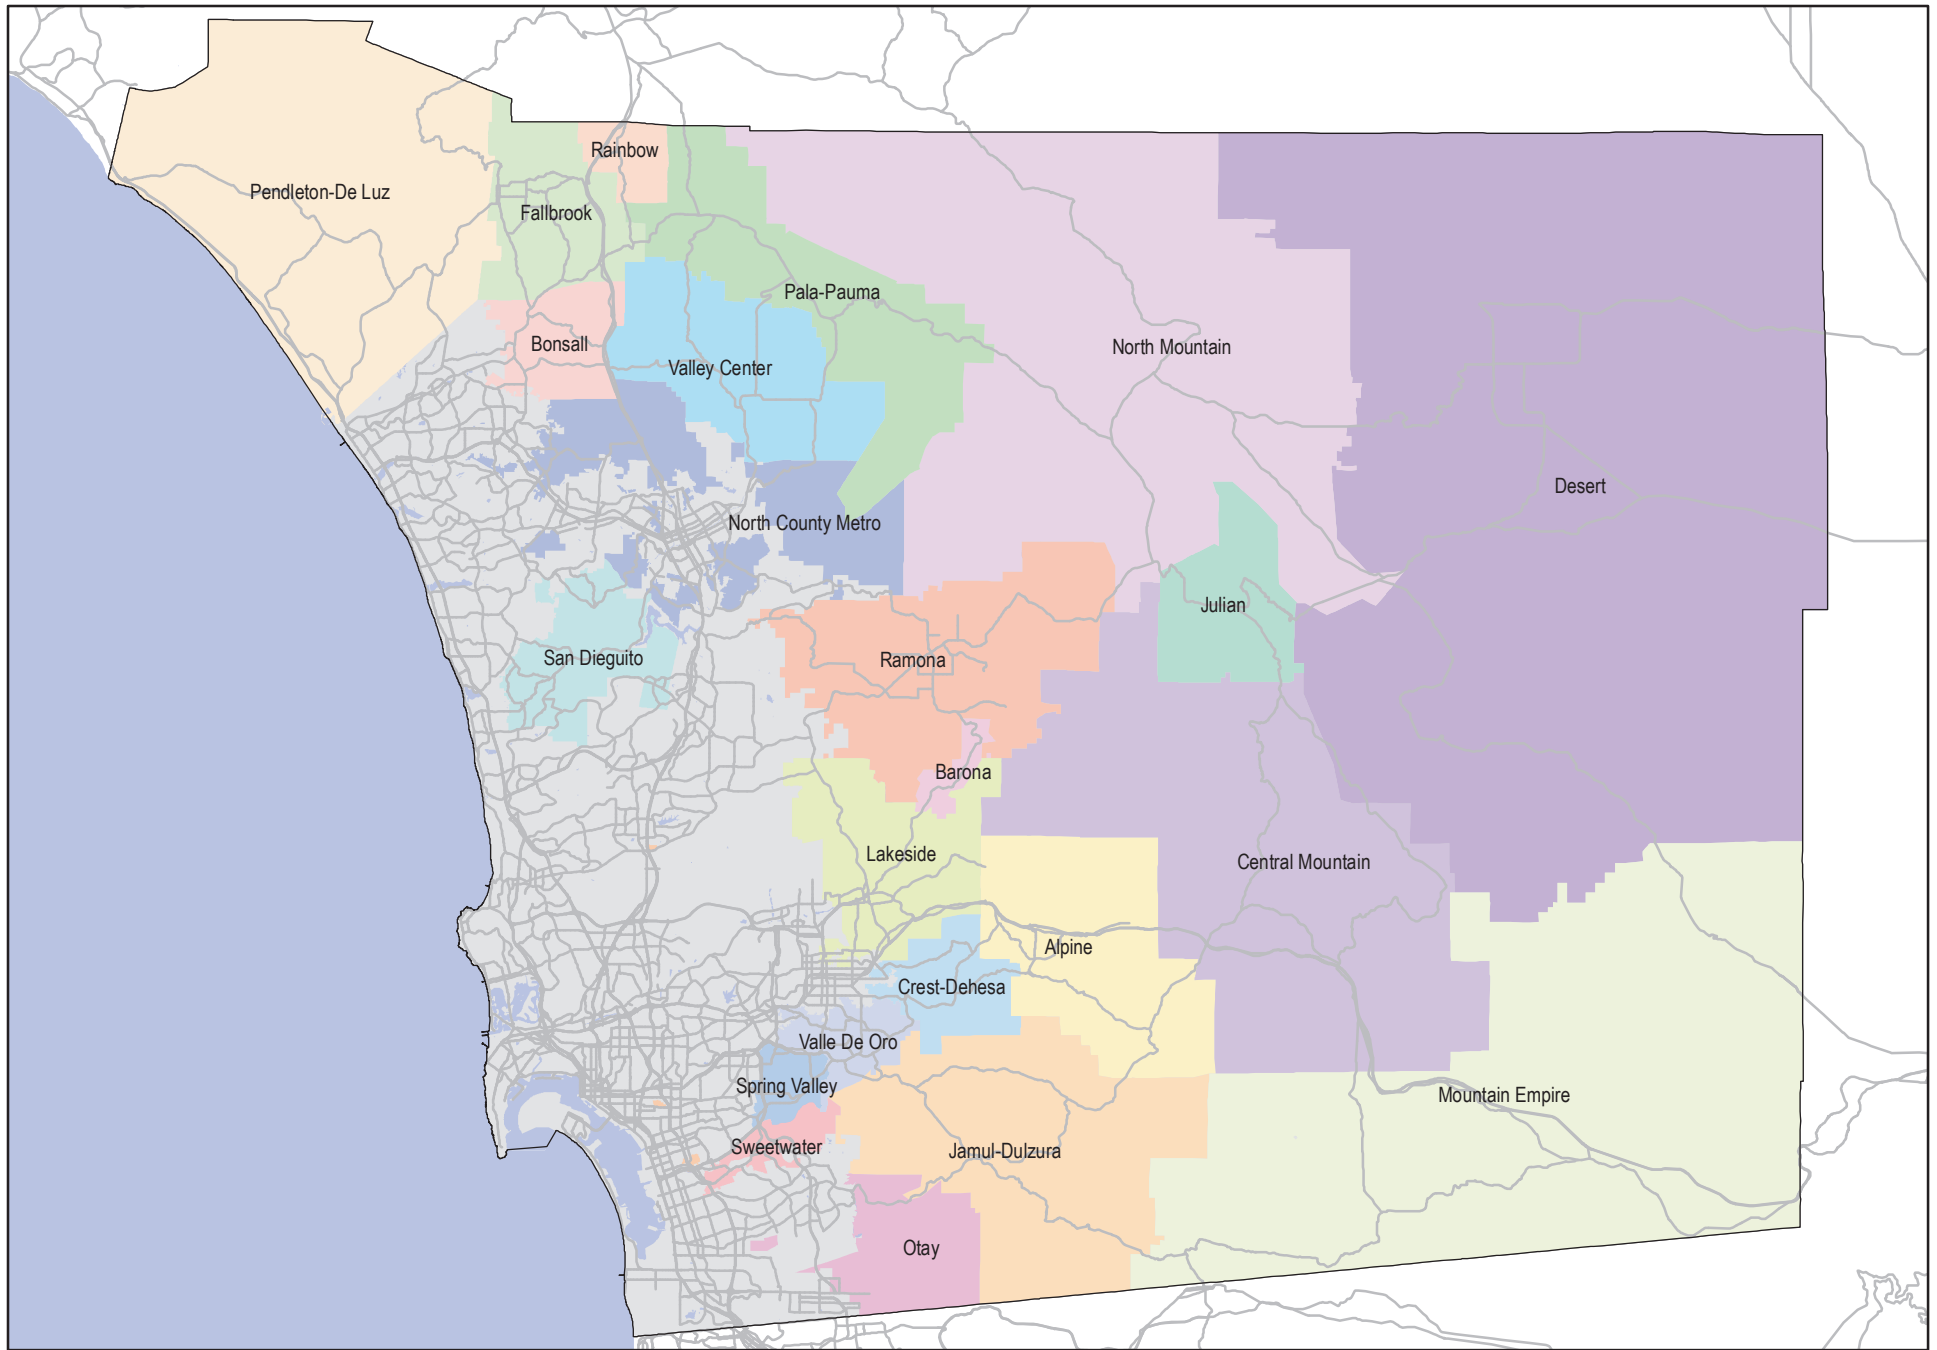

The assessment was performed in accordance with the requirements of the County of San Diego and the California Environmental Quality Act (CEQA) project review process. Given that this is a program-level transportation analysis with an associated large study area encompassing the unincorporated portions of the County of San Diego, traffic operations for County roads were evaluated by consideration of daily roadway segment operations rather than peak hour intersection operations. In addition to County roads, State highways perform an important access and circulation function for the County of San Diego and were therefore evaluated for operational deficiencies under the Proposed Project conditions.

Potential roadway deficiencies were determined based upon the County of San Diego's Roadway Segment Daily Capacity and LOS Standards and Caltrans's methodology for evaluating State highway operations, both of which are discussed in later sections of this chapter.

The analysis results in this study are summarized by Community Planning Area (CPA). A map depicting each CPA location is included as **Figure 2-1**.

The County's Mobility Element was adopted in association with the currently adopted General Plan. The Mobility Element was designed to accommodate future traffic demands associated with the planned land uses consistent with the County's General Plan. The County's General Plan assumes Mobility Element roads will operate at Level of Service (LOS) D or better unless a lower LOS was accepted for a road segment. Roadway improvements needed to mitigate impacts are those improvements necessary to meet LOS D or any lower LOS as established by the General Plan. Hence, it is assumed that buildout of the Mobility Element will accommodate the cumulative traffic associated with all future development anticipated by the County's General Plan by meeting the LOS policy goals established by the General Plan.

Improvements were determined on a segment-by-segment basis for all segments operating below LOS D, unless the segment was accepted by the General Plan to operate at LOS E or F. The required roadway classification was determined by comparing the forecast segment volume to the respective County roadway design capacity (LOS D or better as set by the General Plan) threshold and selecting the lowest roadway classification that would have sufficient capacity to accommodate the projected volume. However, roadway segments were not assumed to be improved beyond their planned Mobility Element classification.

2.2 Analysis Methodology

Detailed information on State highway facilities and Mobility Element roadway segment analysis methodologies, LOS standards, and impact thresholds are discussed in the following sections.

Level of Service Definitions

The concept of LOS is defined as a qualitative measure describing operational conditions within a traffic stream, and the motorist's and/or passengers' perception of operations. A LOS definition generally describes these conditions in terms of such factors as speed, travel time, freedom to maneuver, comfort, convenience, and safety. **Table 2.1** describes generalized definitions of the various LOS categories (A through F) as applied to roadway operations.

Table 2.1 LOS Definitions

LOS Category	Definition of Operation
A	This LOS represents a completely free-flow condition, where the operation of vehicles is virtually unaffected by the presence of other vehicles and only constrained by the geometric features of the highway and by driver preferences.
B	This LOS represents a relatively free-flow condition, although the presence of other vehicles becomes noticeable. Average travel speeds are the same as in LOS A, but drivers have slightly less freedom to maneuver.
C	At this LOS the influence of traffic density on operations becomes marked. The ability to maneuver within the traffic stream is clearly affected by other vehicles.
D	At this LOS, the ability to maneuver is notably restricted due to traffic congestion, and only minor disruptions can be absorbed without extensive queues forming and the service deteriorating.
E	This LOS represents operations at or near capacity. LOS E is an unstable level, with vehicles operating with minimum spacing for maintaining uniform flow. At LOS E, disruptions cannot be dissipated readily thus causing deterioration down to LOS F.
F	At this LOS, forced or breakdown of traffic flow occurs, although operations appear to be at capacity, queues form behind these breakdowns. Operations within queues are highly unstable, with vehicles experiencing brief periods of movement followed by stoppages.

Source: Highway Capacity Manual 2010

Roadway Segment Level of Service Standards and Thresholds

Roadway segment Level of Service standards and thresholds provide the basis for analysis of arterial roadway segment performance. The analysis of roadway segment Level of Service is based on the classification of the roadway, the maximum capacity, roadway geometrics, and Average Daily Traffic (ADT) volumes. **Table 2.2** displays the County's roadway segment capacity LOS standards.

Table 2.2 County of San Diego – Roadway Segment Daily Capacity and LOS Standards

No.	Travel Lanes	Design Speed	Road Classification	Level of Service (in ADT)				
				A	B	C	D	E
6.1	6	65 mph	Expressway	36,000	54,000	70,000	86,000	108,000
6.2	6	65 mph	Prime Arterial	22,200	37,000	44,600	50,000	57,000
4.1A	4	55 mph	Major Road with Raised Median	14,800	24,700	29,600	33,400	37,000
4.1B			Major Road with Intermittent Turn Lanes	13,700	22,800	27,400	30,800	34,200

State Highway Level of Service Standards and Thresholds

State Highway level of service and performance analysis is based upon procedures developed by Caltrans District 11. The procedure for calculating State Highway level of service involves estimating a peak hour volume to capacity (V/C) ratio. Peak hour volumes are estimated from the application of design hour ("K"), directional ("D") and truck ("T") factors to Average Daily Traffic (ADT) volumes. The base capacities utilized were 2,400 pc/h/ln for mainline and 1,200 pc/h/ln for auxiliary lane, respectively.

The resulting V/C is then compared to acceptable ranges of V/C values corresponding to the various levels of service for each facility classification, as shown in **Table 2.3**. The corresponding level of service represents an approximation of existing or anticipated future State Highway operating conditions in the peak direction of travel during the peak hour.

LOS D or better is used in this study as the threshold for acceptable operations based upon Caltrans and the SANDAG Regional Growth Management Strategy (RGMS) requirements. For the purposes of this study, all of the traffic adjustment factors utilized in the analysis of existing and future conditions were obtained from Caltrans.

Table 2.3 Caltrans District 11 State Highway Segment LOS

LOS	V/C	Congestion/Delay	Traffic Description
"A"	<0.30	None	Free flow.
"B"	0.30-0.50	None	Free to stable flow, light to moderate volumes.
"C"	0.50-0.71	None to minimal	Stable flow, moderate volumes, freedom to maneuver noticeably restricted.
"D"	0.71-0.89	Minimal to substantial	Approaches unstable flow, heavy volumes, very limited freedom to maneuver.
"E"	0.89-1.00	Significant	Extremely unstable flow, maneuverability and psychological comfort extremely poor.
"F"	>1.00	Considerable	Forced or breakdown flow. Delay measured in average travel speed (MPH). Signalized segments experience delays >60.0 seconds/vehicle.

Source: Caltrans Guide for the Preparation of Traffic Impact Studies, December 2002

2.3 Determination of Significant Impacts

This section outlines the thresholds for determination of significant project-related impacts to roadways in the County of San Diego, as well as along state highway facilities within Caltrans' jurisdiction.

Roadway Segments

Traffic volume increases from public or private projects that result in one or more of the following criteria will have a significant traffic volume or Level of Service traffic impact on a roadway segment, unless specific facts show that there are other circumstances that mitigate or avoid such impacts:

- The additional or redistributed ADT generated by the Proposed Project will significantly increase congestion on a Circulation Element Road or State Highway currently operating at LOS E or LOS F as identified in **Table 2.4** or will cause a Circulation Element Road or State Highway to operate at LOS E or LOS F as a result of the Proposed Project, or
- The additional or redistributed ADT generated by the Proposed Project will cause a residential street to exceed its design capacity.

Table 2.4 Measures of Significant Project Impacts to Congestion on Road Segments – Allowable Increases on Congested Road Segments

Level of Service	Two-Lane Road	Four-Lane Road	Six-Lane Road
LOS E	200 ADT	400 ADT	600 ADT
LOS F	100 ADT	200 ADT	300 ADT

Source: County of San Diego

Notes:

1. By adding Proposed Project trips to all other trips from a list of projects, this same table must be used to determine if total cumulative impacts are significant. If cumulative impacts are found to be significant, each project is responsible for mitigating its share of the cumulative impact.
2. The County may also determine impacts have occurred on roads even when a project's traffic or cumulative impacts do not trigger an unacceptable Level of Service, when such traffic uses a significant amount of remaining road capacity.

Two-Lane Highways with Signalized Intersection Spacing Over One Mile

Traffic volume increases from public or private projects that result in the following criteria will have a significant traffic volume or Level of Service traffic impact on a two-lane highway facility with signalized intersection spacing over one mile:

- The additional or redistributed ADT generated by the Proposed Project will significantly increase congestion on a two-lane highway segment currently operating at LOS E or LOS F, as identified in **Table 2.5**, or will cause a two-lane highway segment to operate at LOS E or LOS F as a result of the Proposed Project.

Table 2.5 Measures of Significant Project Impacts to Congestion – Allowable Increases on Two-Lane Highways with Signalized Intersection Spacing Over One Mile

LOS	LOS Criteria	Impact Significance Level
LOS E	> 16,200 ADT	> 325 ADT
LOS F	> 22,900 ADT	> 225 ADT

Source: County of San Diego

Note:

Where detailed data are available, the Director of Public Works may also accept a detailed Level of Service analysis based upon the two-lane highway analysis procedures provided in the Chapter 20 Highway Capacity Manual.

3.0 Proposed Project

Table 3.1 summarizes the 15 uses associated with the Proposed Project, specifies the key changes in the draft Zoning Ordinance update that would inform increases in traffic, and identifies the associated trip generation rates. The categories are grouped based on location (occur in the same zone as accessories to commercial agricultural uses), size (similar footprint restrictions), and trip generation (generate similar amount of vehicular trips). The proposed uses are grouped into the three categories below:

- Agricultural Tourism (Homestay);
- Alcoholic Beverages (Microbrewery, small and large and Winery, small, boutique, and wholesale); and
- Horticulture Retail and Food Production (Roadside Sales, Agricultural Store-small and large).

Farm Employee Housing, Animal Raising, Aquaponics/Fish Market, Roadside Sales, and Mobile Butchering are not a significant factor for traffic and would not add daily trips.

Table 3.1 Summary of Proposed Agricultural Land Use Enhancements

Group	Use	Zones Allowed	Maximum Building Size	Trip Generation Assumption
Agricultural Tourism	1. <i>Agricultural Tourism</i>	RR, A70, A72, S88, S90 and S92	N/A	No New Trips
	2. <i>Homestay</i>	RR, A70, A72, S90 or S92	500 sf if detached (opposed to part of farmhouse)	Resort Hotel: 8 trips/room
	3. <i>Farm Employee Housing</i>	RR, A70, A72, S90, S87, S88, S90, and S92	N/A	No New Trips
Alcoholic Beverages	4. <i>Microbrewery, Small</i>	Commercial Agriculture	2,000 sf – 0-2 acres 3,000 sf – 2-4 acres 5,000 sf – 4+ acres	High Turnover Restaurant: 160 trips / 1,000 sf
	5. <i>Microbrewery, Large</i>	Commercial Agriculture	3,000 sf – 0-2 acres 4,000 sf – 2-4 acres 5,000 sf – 4+ acres	
	6. <i>Winery, Small</i>	S92	1,000 sf – 0-1 acres	High Turnover Restaurant: 160 trips / 1,000 sf
	7. <i>Winery, Boutique</i>	S92	1,500 sf – 1-2 acres 2,000 sf – 2-4 acres	
	8. <i>Winery, Wholesale</i>	S92	5,000 sf – 4+ acres	
Horticulture Retail and Food Production	9. <i>Animal Raising</i>			No New Trips
	10. <i>Aquaponics/Fish Markets</i>	C31, C32, C34, C35, C36, C37, C40 or C42 or S88	N/A	No New Trips

3.1 Trip Generation

Table 3.2 displays the anticipated increase in trip generation, by agricultural parcel, associated with each land use enhancement. Trip generation rates were derived from the allowed building size and assumed trip generation rates, by land use enhancement type, outlined in Table 3.1.

Table 3.2 Land Use Enhancement Trip Generation - By Agricultural Parcel

Land Use Enhancement	Parcel Size	Trips/Parcel
Homestay	4+ Acres	24
Agriculture Store (Small)	2 - 4 Acres	60
Agriculture Store (Large)	4+ Acres	120
Creamery/Dairy ¹	0-1 Acres	32
	1 - 2 Acres	48
	2 - 4 Acres	64
	4+ Acres	80
Microbrewery	All	800
Winery	All	165

Source: Chen Ryan Associates; September 2016

Note:

¹Trip generation rates for Creameries/Dairies located on non-CE Roads would be cut in half, since there would unlikely be a commercial component (See trip generation rates in Table 3.1).

The potential trip generation associated with all land use enhancements was averaged across all parcels with similar zoning and sizes to develop an average trip generation rate for the group, as shown in **Table 3.3**. It was assumed that the commercial components of the proposed land use enhancements (Agriculture stores and the commercial components of Creameries) would not be sustainable along Non-ME roads due to their remote locations. Therefore, separate average trip generation rates, by parcel, are provided for parcels located along Mobility Element roadways and Non-Mobility Element Roadways.

It should be noted that due to the associated high trip generation rates and infrequent nature of brewery and winery development, the trips associated with these land use enhancements were not included in

average parcel trip generation rates outlined in Table 3.3. Trips associated with these uses were included in a separate step of the analysis as outlined in the subsequent section.

Table 3.3 Average Trip Generation Per Parcel – By Size and Zoning

Location	Size	Zone									
		A70	A72	M50	M52	M54	M58	RR	S88	S90	S92
Direct Access to an ME Road	0-1 Acres	32	32	32	32	32	32	0	0	32	32
	1 - 2 Acres	48	48	48	48	48	48	0	0	48	48
	2 - 4 Acres	62	62	64	64	64	64	60	60	62	62
	4+ Acres	69	69	64	64	64	64	72	72	69	69
No Direct Access to an ME Road	0-1 Acres	16	16	16	16	16	16	0	0	16	16

Breweries and Wineries

As noted previously, due to the associated high trip generation rates and infrequent nature of brewery and winery development, the trips associated with these land use enhancements were added into the analysis separately. To determine the number of new breweries and wineries that could potentially develop within the project study area, a density sampling of the areas with the highest population of breweries and wineries (per acre) within the state of California was used, as outlined below:

Breweries

The San Diego region has the highest density of breweries per acre within the state of California. There are currently 116 breweries (of all sizes) within the 2.7 million acre San Diego region. This gives an average density of 43 breweries per every 1 million acres (116 breweries / 2.7 million acres).

As displayed in Table 3.4, there is a total of 370,200 eligible acres within the project study area. Therefore, if the same brewery density within the San Diego region is applied to the project study area then a total of 16 new breweries would be developed with the Proposed Project (0.37 million acres X 43 breweries per million acres).

Wineries

The Sonoma County region has the highest density of wineries per acre within the state of California. There are currently 450 wineries (of all sizes) within the 1 million acre region. This gives an average density of 450 wineries per every 1 million acres (450 wineries / 1 million acres).

As displayed in Table 3.4, there is a total of 370,200 eligible acres within the project study area. Therefore, if the same winery density within the Sonoma County region is applied to the project study area then a total of 167 new wineries would be developed with the Proposed Project (0.37 million acres X 450 wineries per million acres).

The assumed new breweries and wineries were assigned to communities based on the eligible agricultural acreage (See Table 3.4). Traffic generated by the new breweries and wineries were then added to the total number of new trips generated within that community from the enhanced agricultural land uses, and revised community based trip generation rates were developed.

. To gain a better understanding of the rate in which eligible parcels will incorporate new improvements the *County of San Diego's Tiered Winery Ordinance*, adopted in August 2010, was used as a reference. Over the past five years (2010 to 2015), 249 out of 21,300 eligible parcels (1.2%) have applied for improvements allowed under the Tiered Winery Ordinance. If this 5-year trend is extrapolated over the next 30 years (horizon year of the plan), it would result in 7% of the total eligible parcels developing new improvements. Based on the aforementioned review of data from recent agricultural development, it was determined to not be realistic to assume that every eligible parcel within the County of San Diego will construct or incorporate the improvements that would be allowed by the Proposed Project. To develop a reasonable forecast of the number of parcels/acres that are anticipated to construct or implement improvements included in the Proposed Project, the 7% projection was applied to the total number of agriculturally zoned acres within the County of San Diego.

Trip Generation

To determine the total number of new trips associated with the Proposed Project, the trip generation rates displayed in Table 3.3 were applied to 7% of the eligible parcels within the County of San Diego. To develop a standard trip generation rate for each community the total number of new trips were then summed by community, and divided by the total number of eligible parcels within that community, as displayed in **Table 3.4**.

Table 3.4 Land Use Enhancement Trip Generation Rates

CPA	Ag Land Acres	Assumed Acres that will Improve ¹	New Ag Trip Gen	New Ag Trip Generation Rate Per Acre	Total CPA Trip Generation	Increase

Valley Center	15,195	1,064	4,894	4.6	218,402	2.2%
Total	341,028	23,871	26,157	1.1	4,008,480	0.7%

Source: Chen Ryan Associates; September 2016

Notes:

¹While there are 341,028 acres of land within the County of San Diego that are eligible for the program, it is not considered to be realistic to assume that every acre of land will implement these improvements based on data from recent agricultural development within the County of San Diego. Therefore, it is assumed that 7% of the eligible lands will construct/implement improvements by the horizon of this plan (30 years). Please see Section 3.1 for more information regarding this assumption.

Project Trip Assignment

The trip generation rates derived in the Table 3.4 were applied to the eligible agricultural land uses in each respective community using SANDAG's Series 12 Transportation Forecast Model, as described in the following section.

3.2 Traffic Modeling / Forecasting Process

Background

When the County of San Diego General Plan Update and its EIR were finalized in 2011, the County utilized the SANDAG Series 10 Transportation Forecast Model (Series 10 model). Since SANDAG is no longer able to run the Series 10 Model, County staff and the traffic engineering community are no longer able to evaluate future traffic conditions within the County of San Diego in a manner that is consistent with the current General Plan. Therefore, the Proposed Project can no longer use the Series 10 model to assign project traffic onto the roadway network. As a result, a hybrid approach using both the Series 10 model results and SANDAG Series 12 Transportation Forecast Model (Series 12 model) assignments was used. This method was employed to establish three different models.

Modeling Methodology

In order to provide consistency with the current Mobility Element assumptions and use the model as a tool to distribute and assign project trips, a hybrid model was developed to incorporate both the Series 10 and 12 models.

The new project land uses and their corresponding trip generation rates were first coded into SANDAG's Series 12 model creating a "With Project" model. The Series 12 "With Project" model results were then compared to SANDAG's Series 12 baseline model results, which was developed based on the currently adopted Land Use and Mobility Elements. The delta of these two model outputs would determine the

project trip assignments, i.e. the new trips associated with the Proposed Project. This process was conducted for the following scenarios:

1. **Year 2014 GPAs** – Includes the General Plan Amendments (GPAs) which were approved by the County Board of Supervisors in 2014. Land use information and model results for this scenario are provided in **Appendix A**. The addition of the traffic associated with the Year 2014 GPAs to the traffic volumes contained in the County’s Mobility Element make up the Current General Plan Scenario.
2. **County of San Diego GPAs in Process Model** - Includes the development projects within the County, currently in the discretionary permit process, that are seeking a GPA to request higher land uses densities than permitted in the County’s Land Use Element. Land use information and model results for this scenario are provided in **Appendix B**. The addition of the traffic associated with the GPAs in Process to the traffic volumes in the Current General Plan Scenario make up the Current General Plan Plus GPAs in Process Scenario.
3. **Agricultural Promotion Model** - Includes the increased trip generation associated with the enhanced agricultural land uses for all parcels identified to qualify for the program. The location of the enhanced land uses (By TAZ) and a unique trip generation rate (by CPA) were coded into the model. Model results for this scenario are provided in **Appendix C**. The traffic associated with the Proposed Project was added to the traffic volumes in the Current General Plan Scenario and the Current General Plan Plus GPAs in Process Scenario to identify Impacts to the General Plan that may be associated with the Proposed Project.

The project trip assignments were then added to the Series 10 volumes contained in the County’s Mobility Element to establish the final Hybrid “With Project” volumes.

1. **Current General Plan Buildout Volumes** – These volumes were developed by adding the new traffic assigned to the roadway network from the Year 2014 GPAs and the County’s Project Specific Requests to the traffic volumes contained in the County’s Mobility Element.
2. **Current General Plan Buildout Plus Project Volumes** – These volumes were developed by adding the new traffic assigned to the roadway network from the Agricultural Promotion Model to the Current General Plan Buildout volumes. This is the scenario in which Impacts to the General Plan were determined, as analyzed in Section 4.0.
3. **Current General Plan Buildout Plus GPAs in Process Volumes** – These volumes were developed by adding the new traffic assigned to the roadway network from the County of San Diego GPAs in Process Model to the Current General Plan Buildout Plus Project volumes. This is the scenario was only analyzed for informational purposes, as outlined in Section 5.0.

4.0 Current General Plan Buildout Plus Project Conditions

This section documents the projected traffic operations under buildout of the County General Plan with the implementation of the Proposed Project and identifies any Impacts to the General Plan that may be associated with the Proposed Project. The Mobility Element roadway segments projected to operate at LOS E or F, in which the Proposed Project is anticipated to assign additional traffic to, were identified as having an impact to the General Plan associated with the Proposed Project.

4.1 Buildout Comparison – County Roadways

This scenario assumes the buildout of both the Current General Plan land uses and the County's Mobility Element. **Table 4.1** displays the roadway segments identified as operating at LOS E or F under Buildout of the Current General Plan with the addition of the traffic associated with the Proposed Project. Daily roadway analysis sheets for all Mobility Element roadways within County are provided in **Appendix D**.

Table 4.1 Deficient Roadway Segments – Current General Plan Buildout Plus Project Conditions

Community	Road	From	To	ME Classification	Capacity	Total ADT	LOS	Project ADT	GP Accepted Deficient Roadway?
Fallbrook	Mission Road	Macadamia Drive	Live Oak Park Road	4.2B	25,000	32,500	F	308	Yes
	Mission Road	Live Oak Park Road	I-15 Ramps	4.2B	25,000	32,500	F	308	Yes
	Pala Mesa Drive	Daisy Lane	Wilt Road	2.2F	8,700	10,400	F	428	No
		Old Highway 395	Daisy Lane	2.2F	8,700	11,000	F	406	No
	Pankey Road	Pala Road	Pankey Place	2.1A	15,000	19,600	F	270	No
	North Pico Avenue	East Kalmia Street	Mission Road	2.2C	13,500	15,000	F	368	Yes
	Old Highway 395	Mission Road	Fallbrook/Rainbow CPA Boundary	2.1D	13,500	16,700	F	261	Yes
North County Metro	Mirar De Valle Road	Valley Center CPA Boundary	North Broadway	2.1D	13,500	20,600	F	220	Yes
Rainbow	Old Highway 395	Fallbrook/Rainbow CPA Boundary	5 th Street	2.1D	13,500	16,700	F	261	Yes
	Old Highway 395	5 th Street	Rainbow Valley Road	2.1D	13,500	16,700	F	261	No
Valley Center	Lilac Road	Valley Center Road	New Road 19	4.2B	25,000	34,900	F	280	Yes
	Mirar De Valle Road	Cypress Ridge Drive	North County Metro CPA Boundary	2.1D	13,500	25,400	F	310	Yes

Table 4.1 Deficient Roadway Segments – Current General Plan Buildout Plus Project Conditions

Community	Road	From	To	ME Classification	Capacity	Total ADT	LOS	Project ADT	GP Accepted Deficient Roadway?
Valley Center	Valley Center Road	Lilac Road	Road 17	4.2A	27,000	34,200	F	364	Yes

Source: Chen Ryan Associates; September 2016

As shown, the Proposed Project would have an impact to the General Plan on 13 roadway segments throughout the County of San Diego (11.3 total Centerline Miles). However, the County's Mobility Element has identified and accepted 9 of the 13 impacted segments as operating at LOS E or F under buildout of the County's General Plan. Therefore, the Proposed Project would be associated with a deficient LOS on 4 previously unidentified roadway segments (2.6 Centerline Miles).

4.2 Buildout Comparison - State Facilities

Table 4.2 displays the State Highway facilities that are projected to operate at LOS E or F under buildout of the Current General Plan with the addition of trips from the Proposed Project. As consistent with Caltrans LOS methods for State Highway facilities, roadway segment LOS was determined based on the anticipated peak hour roadway volume to capacity ratio, which was derived from the SANDAG Series 12 Model. As previously mentioned model results for this scenario are provided in Appendix C.

Table 4.2 Deficient State Highways – Current General Plan Buildout Plus Project Conditions

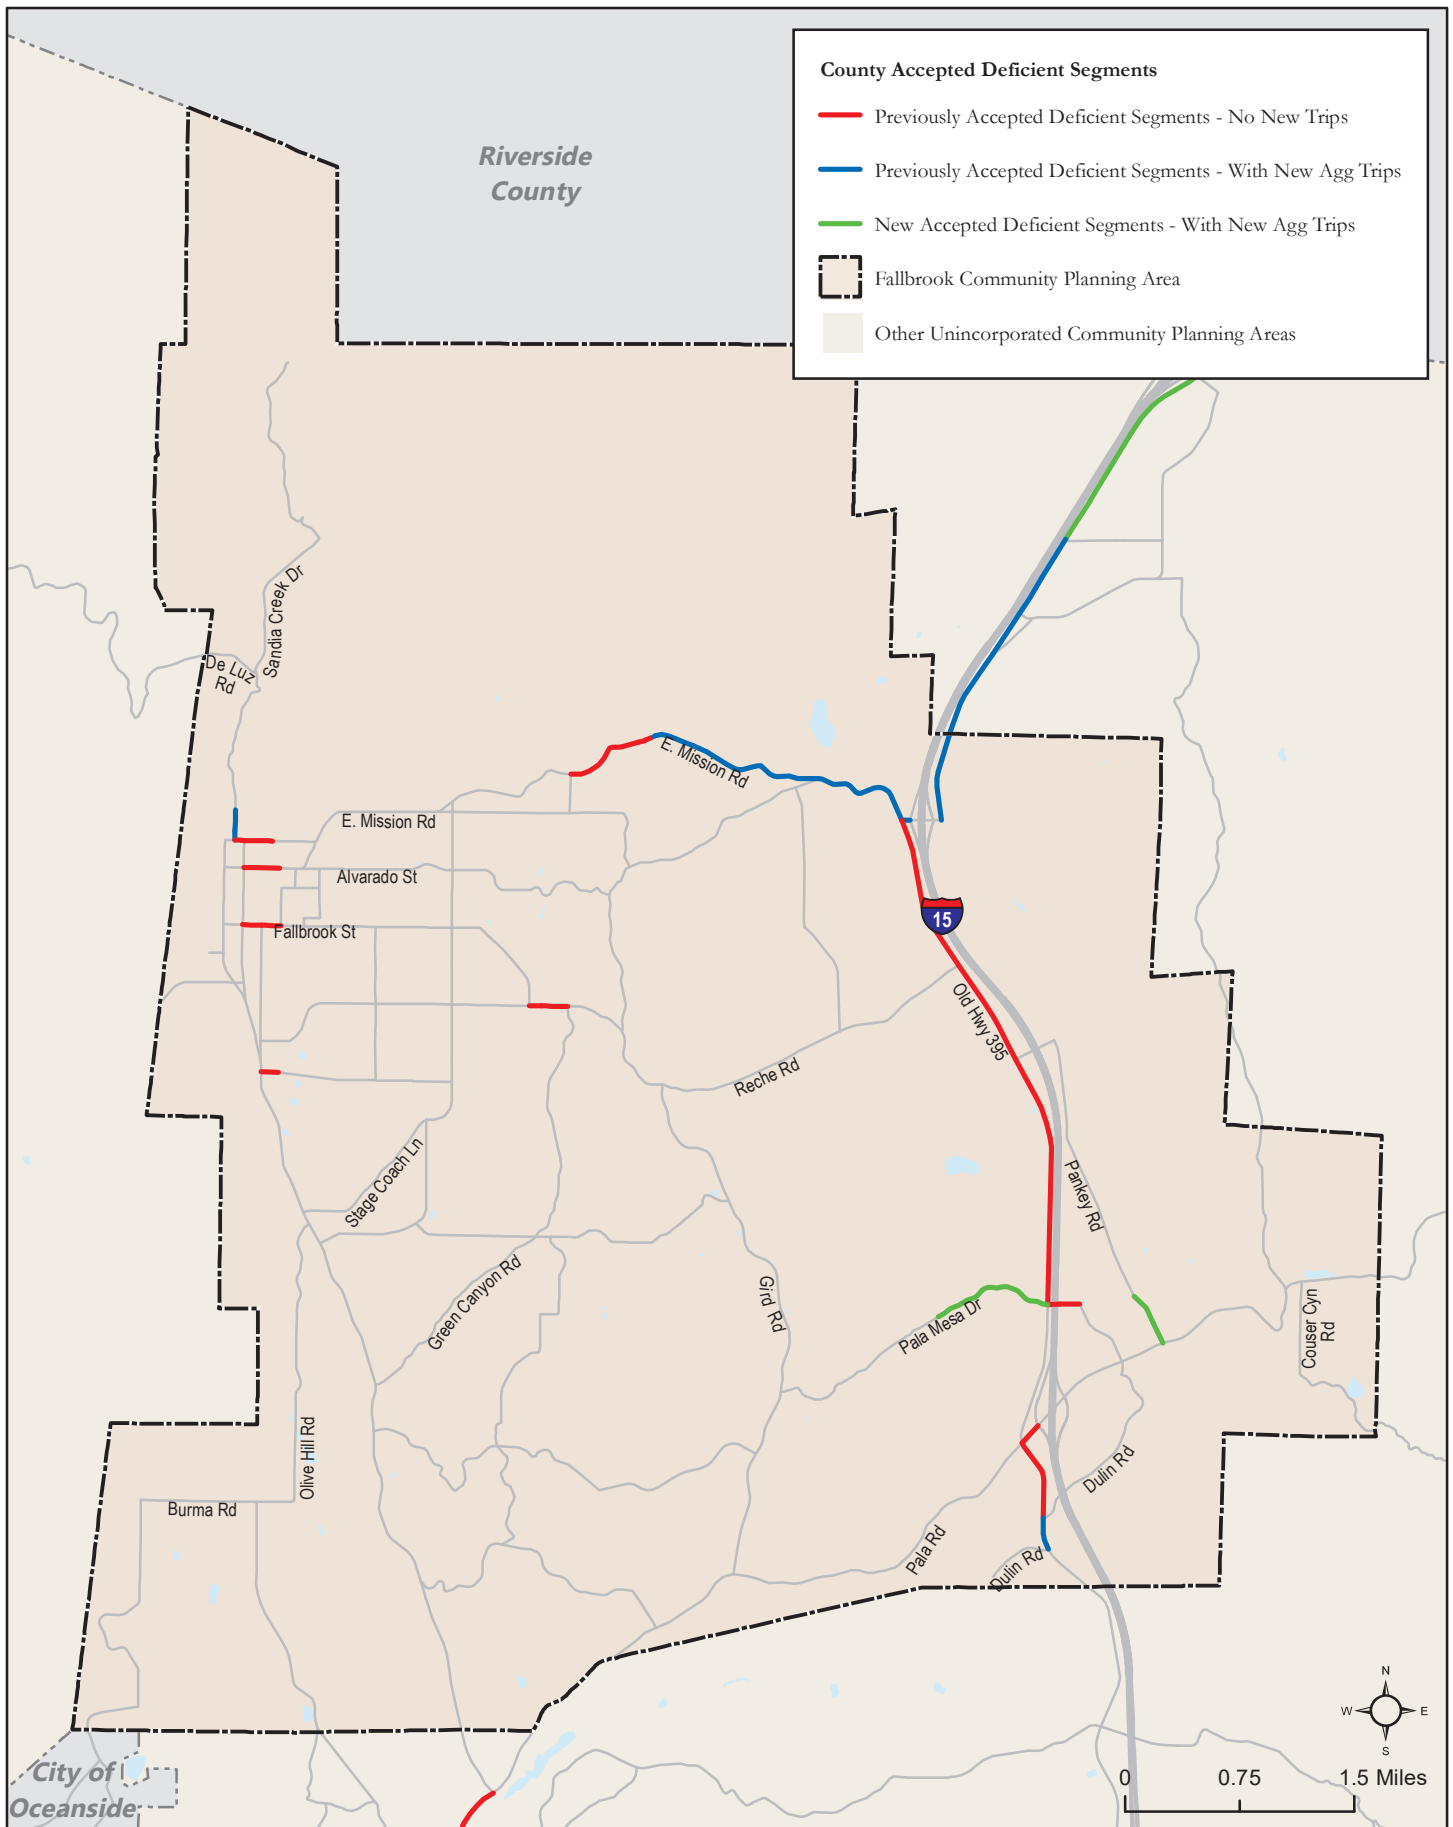

Community	Highway	To	From	ME Classification	LOS	Project ADT	GP Accepted Deficient Roadway?
Lakeside	SR-67	Willows Road	SR-67	4.1A	F	750	Yes

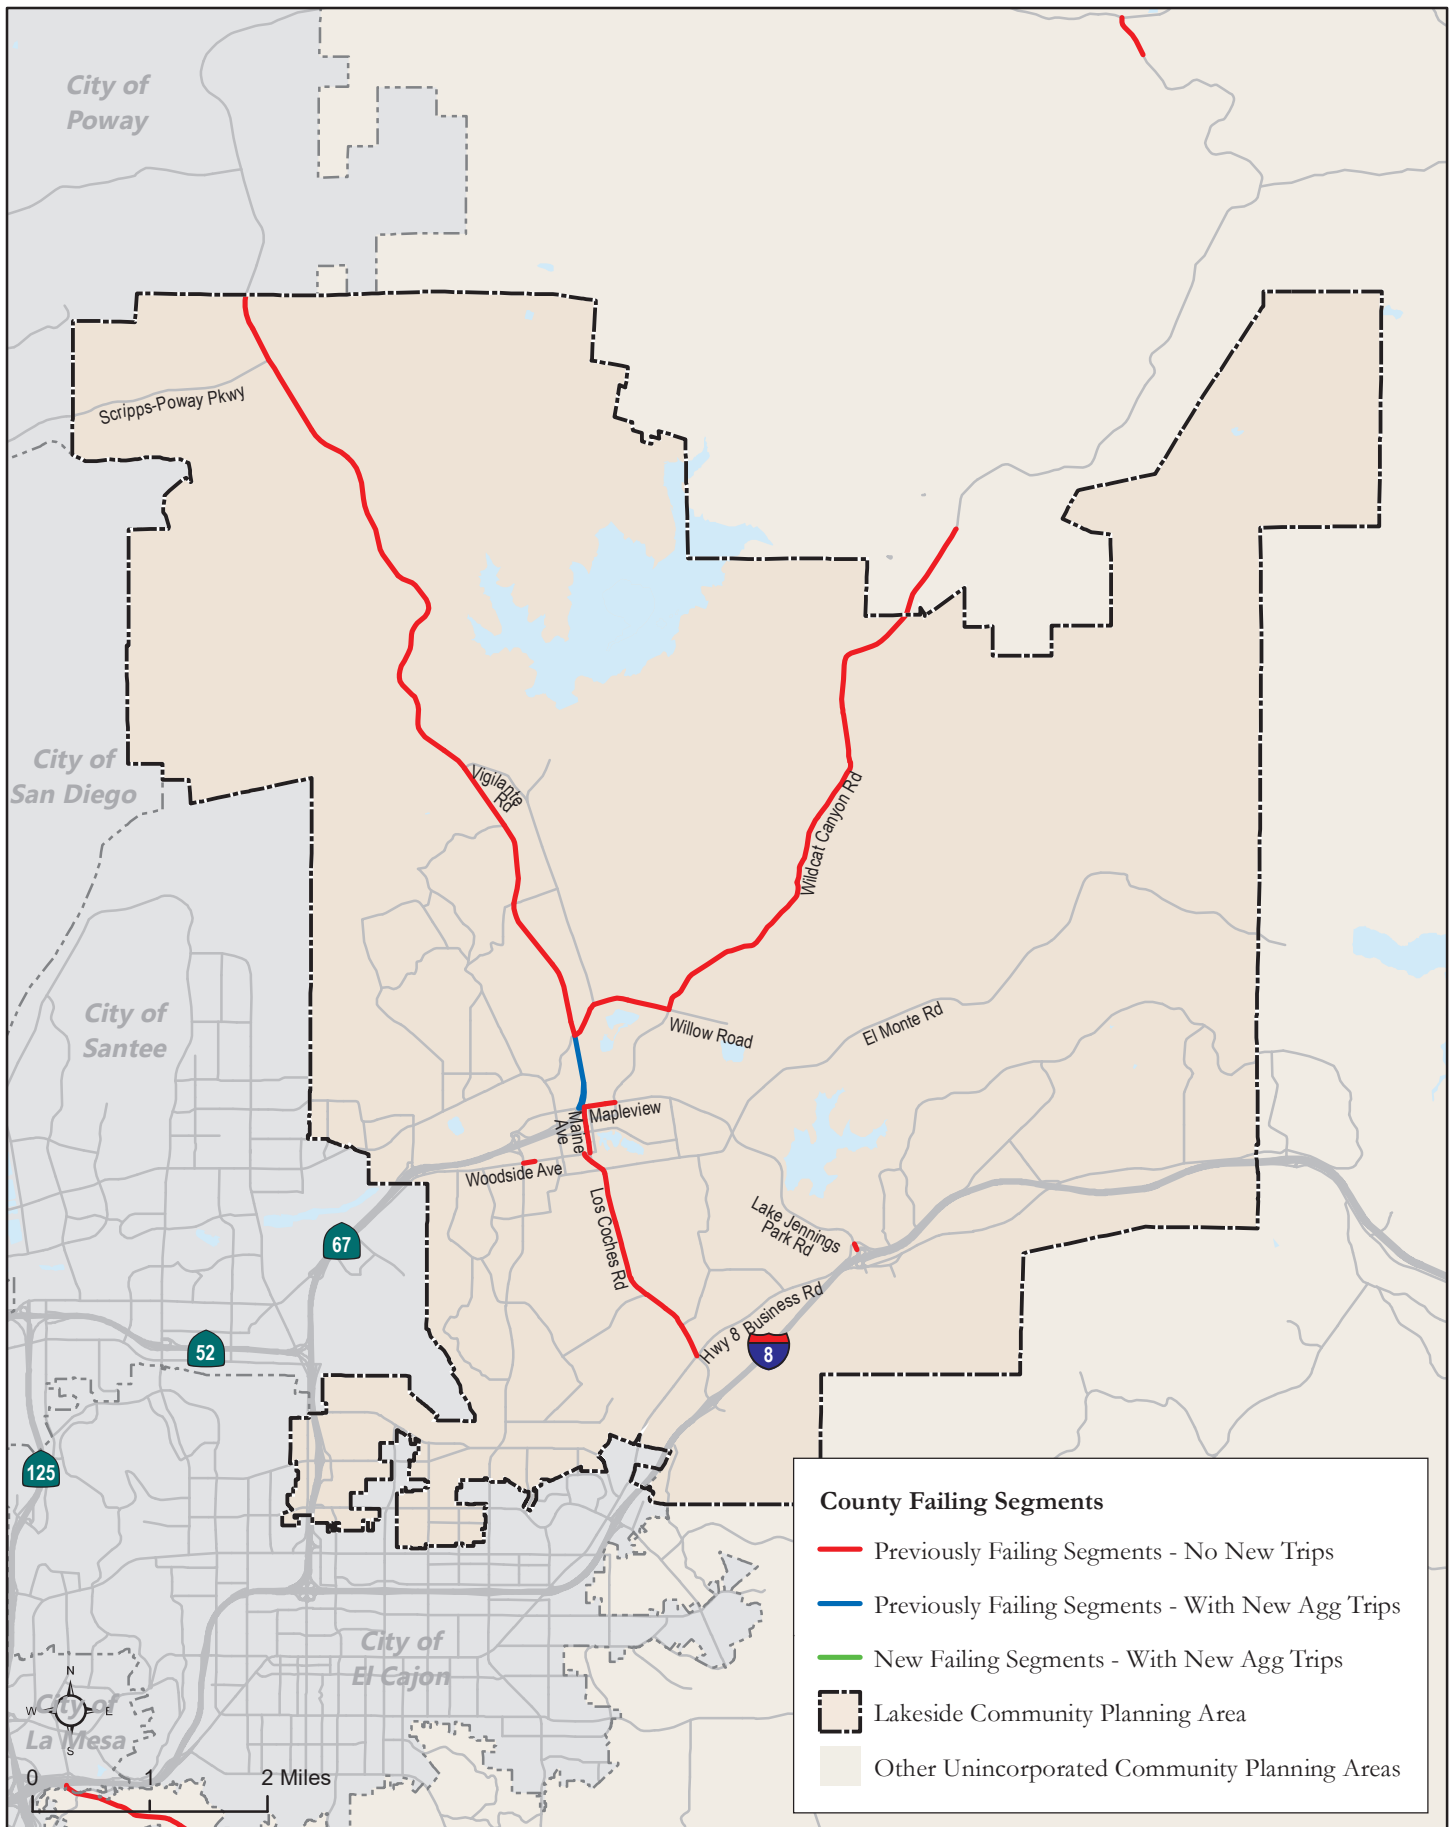

Source: Chen Ryan Associates; September 2016

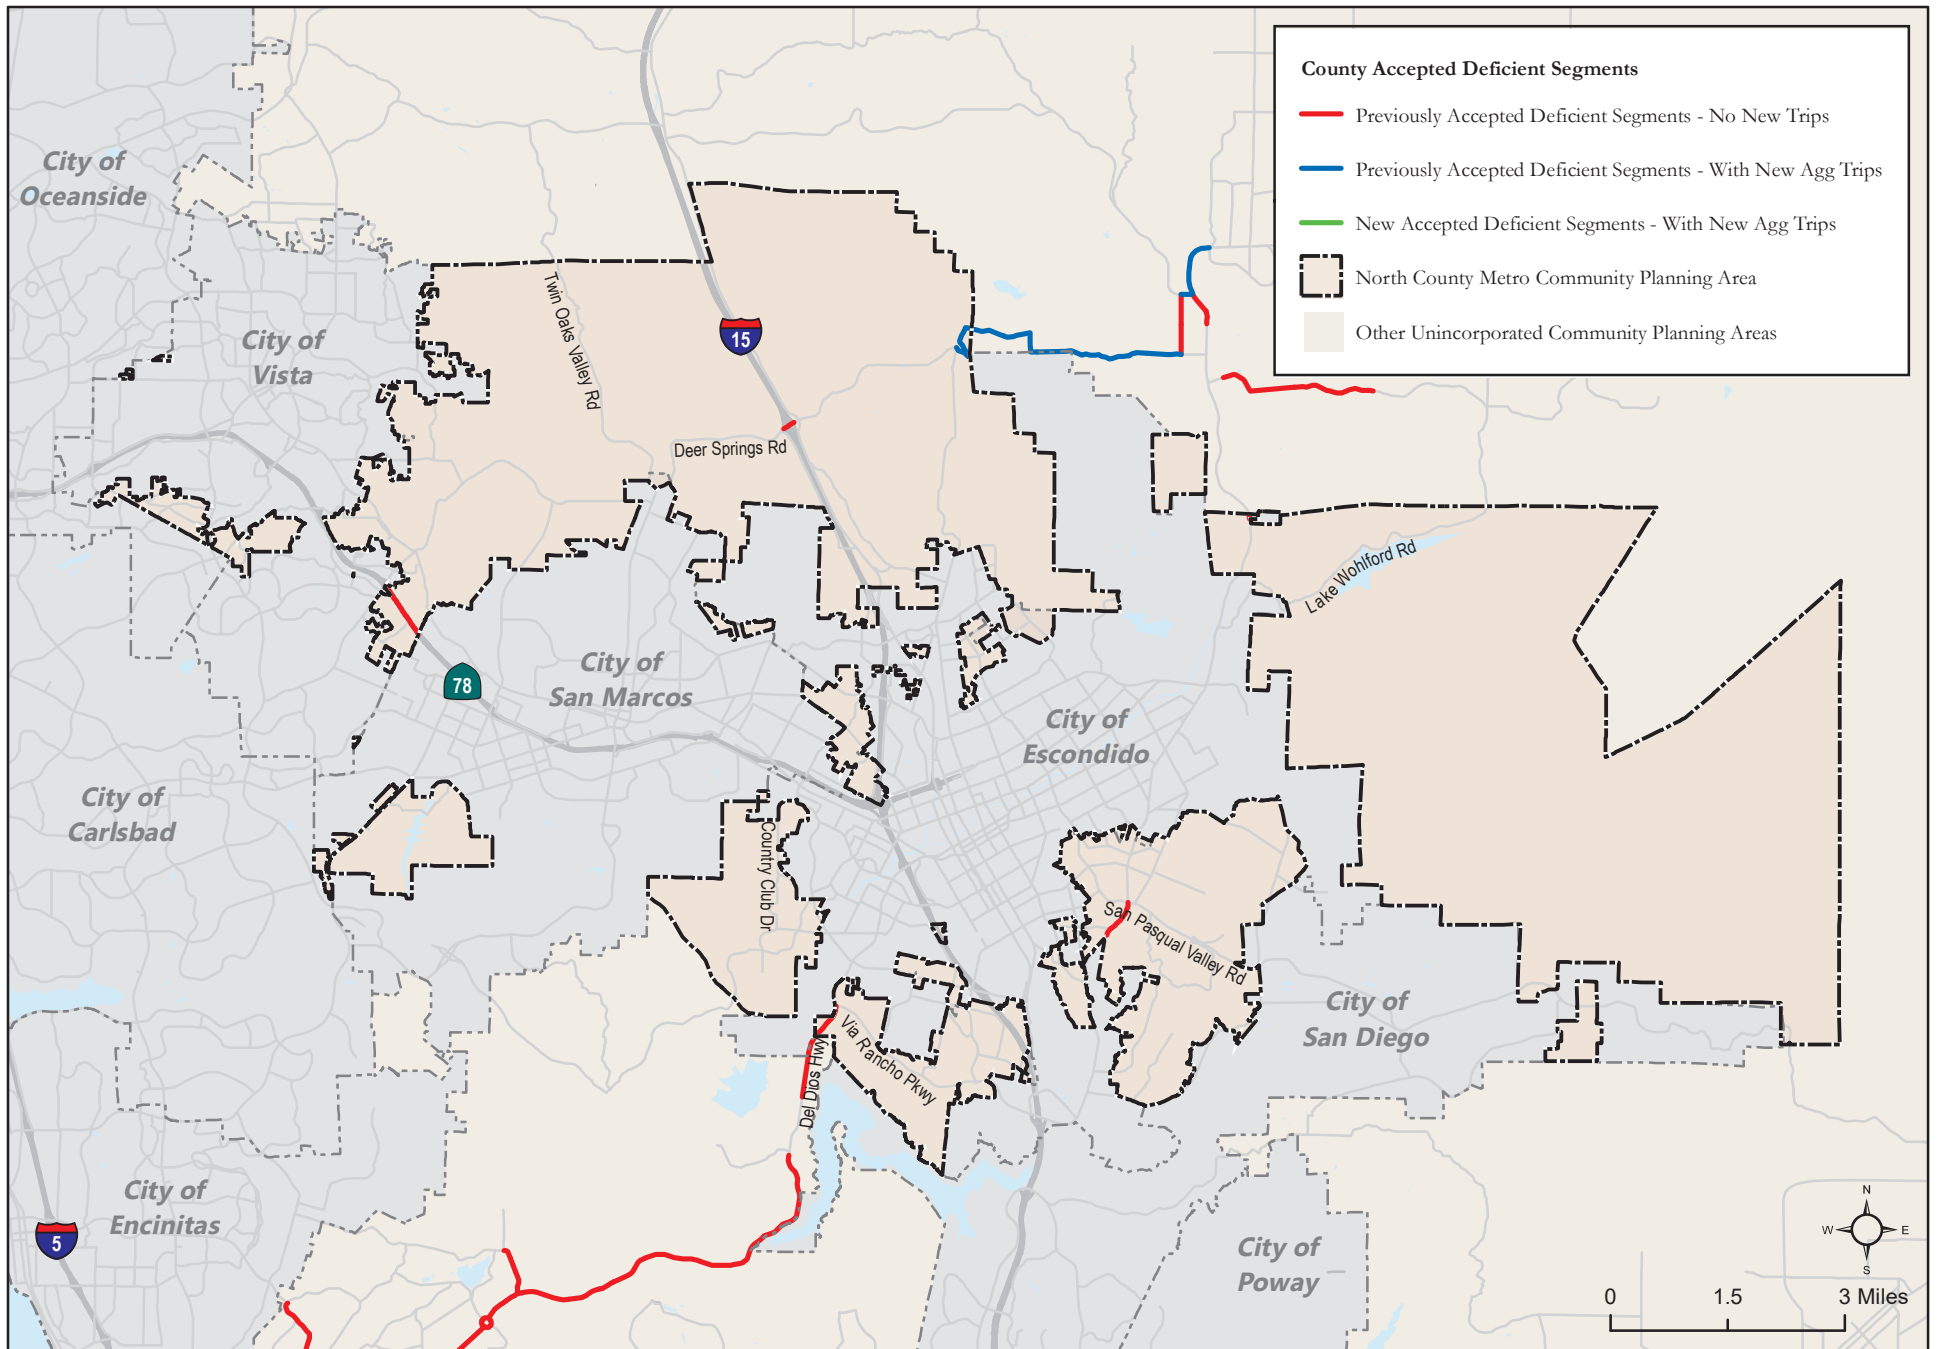

As shown, the Proposed Project would have an impact to the General Plan on 1 State Highway segments throughout the County (0.8 Centerline Miles). However, the County's Mobility Element has identified and accepted this segment as operating at F under buildout of the County's General Plan.

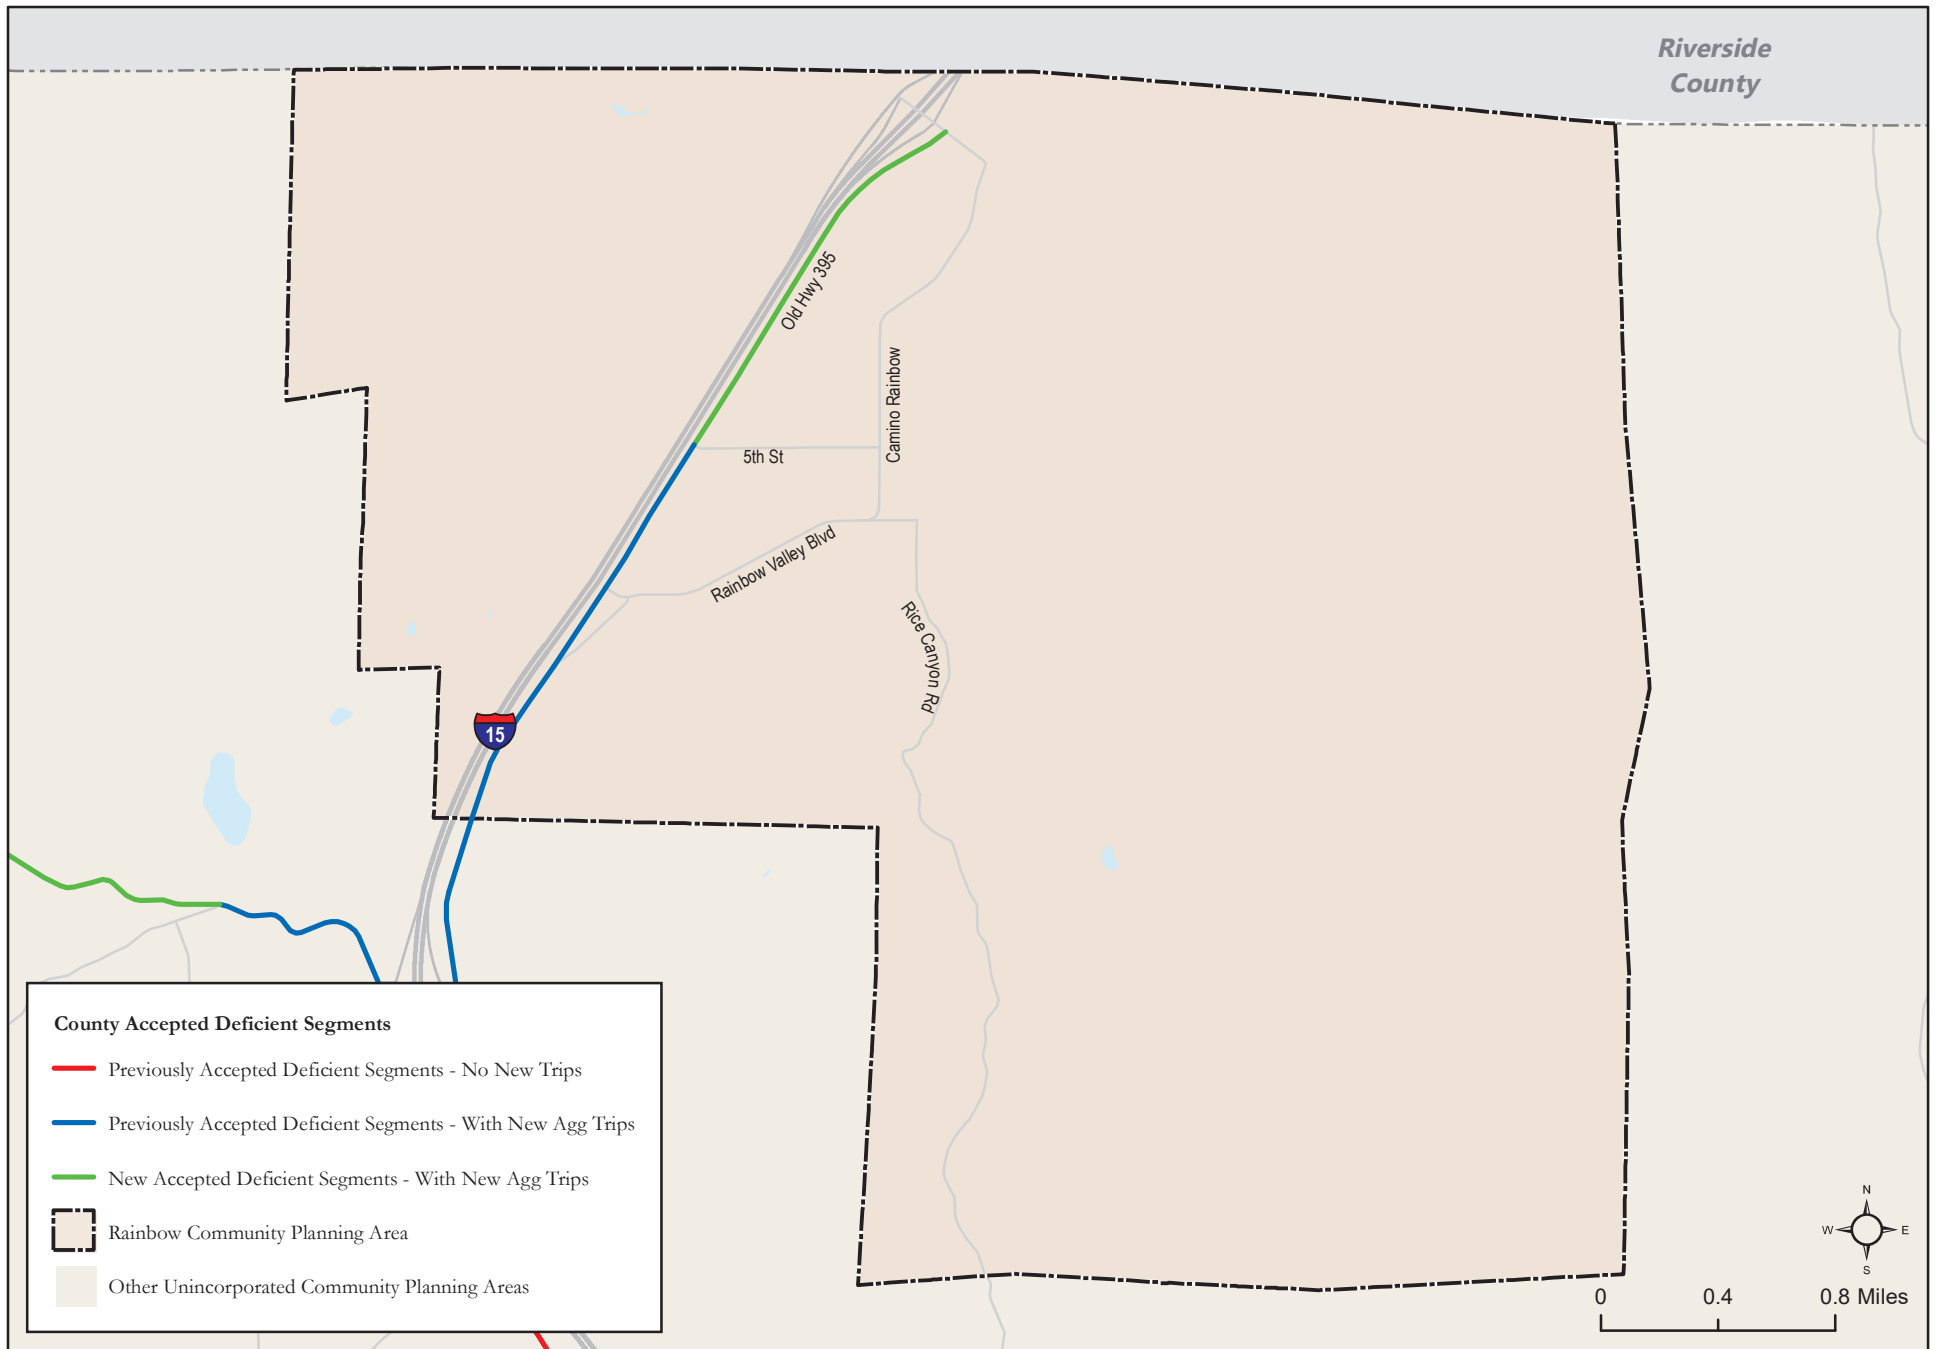

4.3 Impacts to the General Plan

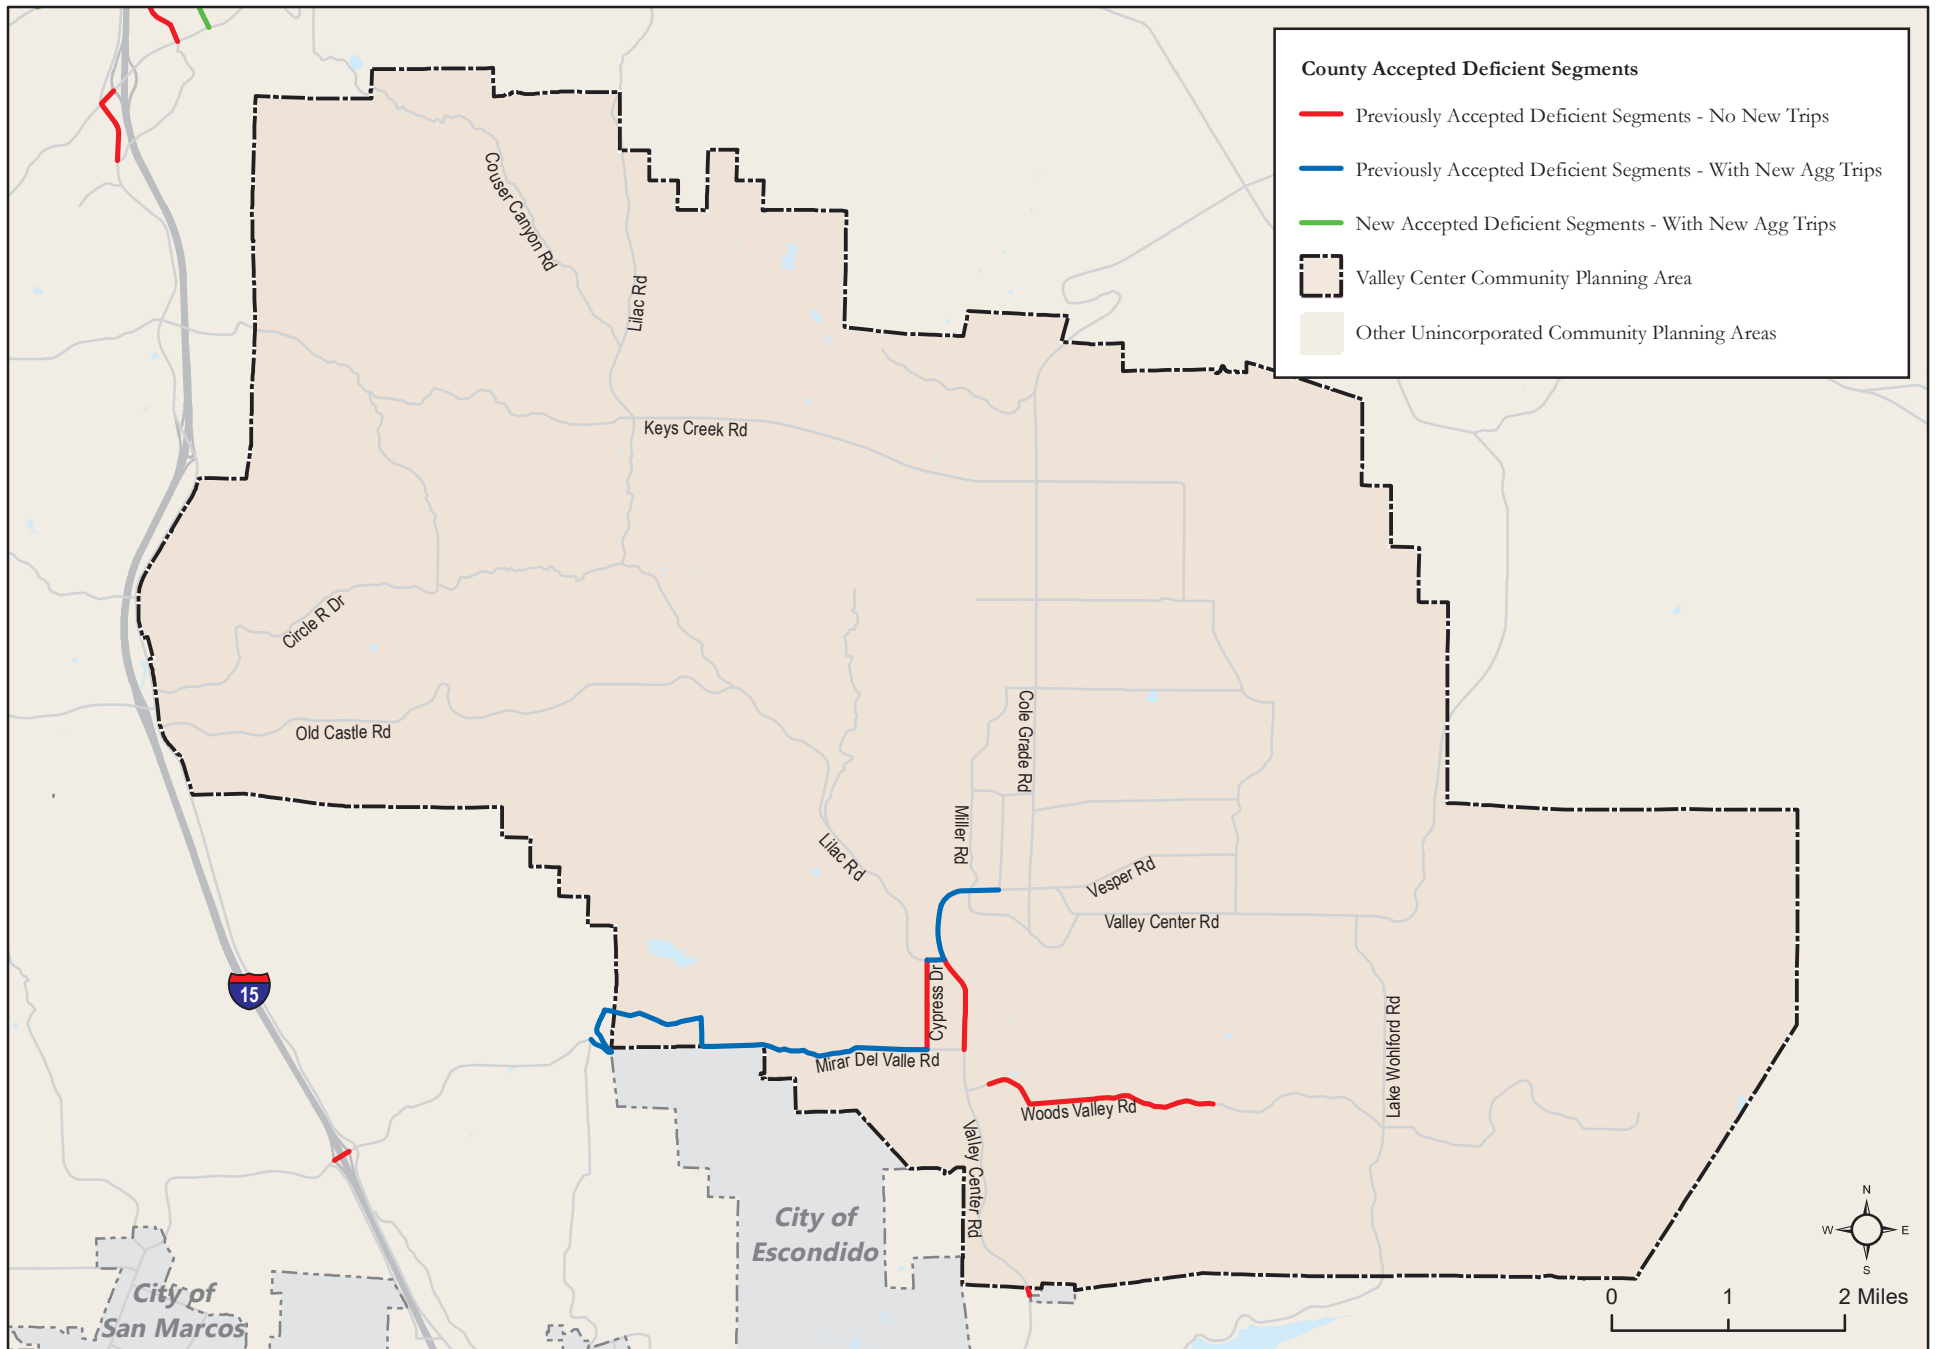

Roadway segments projected to operate at LOS E or F, in which the Proposed Project is anticipated to add traffic to were considered to be Impacts to the General Plan. It should be noted that the County's Mobility Element has already identified and accepted a list of LOS E or F roadway segments throughout the County. However, the Proposed Project will add additional traffic to these segments beyond what was originally anticipated when the deficient LOS on these segments were adopted. The segments in which the Mobility Element has identified and accepted as operating at a deficient LOS E and F, and the Proposed Project is projected to add traffic to, are identified separately below. **Figures 4-1a through 4-1d** display the locations of the impacted links

County Roadway Facilities

The Proposed Project would potentially have an impact to the General Plan on the following roadway segments in which the County's Mobility Element has not identified or accepted as operating at LOS E or F under buildout of the General Plan:

- Pala Mesa Drive, between Daisy Lane and Wilt Road;
- Pala Mesa Drive, between Old Highway 395 and Daily Lane;
- Pankey Road, between Pala Road and Pankey Place; and
- Old Highway 395, between 5th Street and Rainbow Valley Road.

The Proposed Project would potentially have an impact to the General Plan on the following roadway segments in which the County's Mobility Element has already identified and accepted as operating at LOS E or F under buildout of the General Plan:

- Mission Road, between Macadamia Drive and Live Oak Park Road;
- Mission Road, between Live Oak Park Road and I-15 Ramps;
- North Pico Avenue, between East Kalmia Street and Mission Road;
- Old Highway 395, between Mission Road and Fallbrook/Rainbow CPA Boundary;;
- Mirar De Valle Road, between Valley Center CPA Boundary and North Broadway;
- Old Highway 395, between Fallbrook/Rainbow CPA Boundary and 5th Street;
- Lilac Road, between Valley Center Road and New Road 19;
- Mirar De Valle, between Cypress Ridge Drive and the North County Metro CPA Boundary; and
- Valley Center Road, between Lilac Road and Road 17.

Table 4.3 displays the total number of Centerline Miles that are anticipated to be impacted by the Proposed Project.

Table 4.3 Impacted County Roadway Centerline Miles by Community

Community	ME Accepted as Deficient?		Total (Miles)
	No (Miles)	Yes (Miles)	
Fallbrook	1.2	2.7	3.9
North County Metro	0.0	0.6	0.6
Rainbow	1.4	1.5	2.9
Valley Center	0.0	3.9	3.9
Total	2.6	8.7	11.3

Source: Chen Ryan Associates; September 2016

As shown, the Proposed Project is anticipated to have an impact to the General Plan on 11.3 miles of County roadway facilities, 2.6 of which are not identified by the County's Mobility Element as operating at LOS E or F.

State Facilities

The Proposed Project would potentially have an impact to the General Plan on the following State Highways in which the County's Mobility Element has already identified and accepted as operating at LOS E or F under buildout of the General Plan:

- SR-67, between Willows Road and SR-67.

Table 4.4 displays the total number of Centerline Miles along State Highways that are anticipated to be impacted by the Proposed Project.

As shown, the Proposed Project is anticipated to have an impact to the General Plan on 0.8 miles of State Highway facilities.

Table 4.4 Impacted State Highway Centerline Miles by Community

Community	ME Accepted as Deficient?		Total (Miles)
	No (Miles)	Yes (Miles)	
Lakeside	0.0	0.8	0.8
Total	0.0	0.8	0.8

Source: Chen Ryan Associates; September 2016

4.4 Mitigation

Table 4.5 displays the roadway classification for each impacted roadway segment, listed above, that would be required to improve the daily roadway operations to LOS D or better. It should be noted that since the County does not have authority over State Highway facilities the implementation of proposed improvements cannot be insured on the facilities. Therefore, all impacts on State Highway facilities should be considered significant and unavoidable and no mitigation measures are proposed.

Table 4.5 Recommended Mitigation – Current General Plan Buildout Plus Project Conditions

Community	Road	From	To	ME Classification	Total ADT	Required Classification	Mitigated LOS	GP Accepted Deficient Roadway?
Fallbrook	Mission Road	Macadamia Drive	Live Oak Park Road	4.2B	32,500	4.1A	D	Yes
	Mission Road	Live Oak Park Road	I-15 Ramps	4.2B	32,500	4.1A	D	Yes

	Valley Center Road	Lilac Road	Road 17	4.2A	34,200	6.2	B	Yes

Source: Chen Ryan Associates; September 2016

It should be noted that this study did not performed a feasibility analysis for the proposed mitigation measures in the table above. The feasibility of the proposed mitigation measures will be determined by the project EIR.

5.0 Current General Plan Plus GPAs in Process Plus Project Conditions - Informational

There are currently several development projects within the County that are seeking a General Plan Amendments (GPA), to request higher land uses densities than currently permitted in the County's Land Use Element. At this time, it is unknown if these GPAs will be accepted as currently proposed, changed to provide lower densities or outright denied. It is also unknown how these projects will mitigate any new traffic related impacts associated with higher land use densities or if there will be associated changes to the County's Mobility Element. Therefore, true Impacts to the General Plan associated with the Proposed Project, assuming the addition to these GPAs in Process, cannot be accurately determined at this time. However, as a worst case scenario, this chapter evaluates the traffic operations under buildout of the Current General Plan plus the full development of all of the GPA projects currently in process, as well as the implementation of the Proposed Project. This section is provided for informational purposes only; therefore, no project specific impacts are identified.

5.1 Buildout Comparison – County Roadway Facilities

This scenario assumes the buildout of both the Current General Plan land uses, the buildout of the County's Mobility Element, as well as the land uses from all projects currently seeking a General Plan Amendment (GPA) from the County of San Diego. **Table 5.1** displays the roadway segments identified as operating at LOS E or F under Buildout of the Current General Plan with the addition of both the traffic associated with the Proposed Project as well as the proposed GPAs. Daily roadway analysis sheets for all Mobility Element roadways within County are provided in **Appendix E**.

Table 5.1 Deficient Roadway Segments – Current General Plan Buildout Plus GPAs in Process Plus Project Conditions

Source: Chen Ryan Associates; September 2016

Note:

Blue highlight indicates a segment that is projected to operate at LOS E or F under Current Plan Buildout Plus GPAs in Process Plus Project that was not identified to fail without the addition of the GPAs in Process.

As shown, the following additional 2 roadway segments (1.2 Centerline Miles) were identified as operating at LOS E or F under the Current Plan Buildout Plus GPAs in Process Plus Project scenario that were not identified as operating at LOS E or F under the Current Plan Buildout Plus Project scenario:

- Lilac Road, between Anthony Road and Couser Canyon Road; and
- W Lilac Road between Lilac Walk Road and Shirley Road.

5.2 Improvements Needed for Roadways to Operate at an Acceptable LOS

Table 5.2 displays the roadway classification for each roadway segment, projected to operate at LOS E or F under the Current Plan Buildout Plus GPAs in Process Plus Project scenario, that would be required to improve the daily roadway operations to LOS D or better.

Table 5.2 Roadway Improvements – Current General Plan Buildout Plus GPAs in Process Plus Project Conditions

Community	Road	From	To	ME Classification	Total ADT	Improved Classification	Improved LOS	ME Accepted as Deficient
Fallbrook	Mission Road	Macadamia Drive	Live Oak Park Road	4.2B	32,700	4.1A	C	Yes

Source: Chen Ryan Associates; September 2016

It should be noted that this study has not performed a feasibility analysis for the proposed improvement measures in the table above.

6.0 Hazards to Pedestrians and Bicyclists

Many roadways and intersections in the County do not currently have pedestrian or bicycle facilities. The roadways and intersections designed prior to adoption of current road standards may have conditions that could pose an increased risk if traffic volumes, pedestrian volumes, or bicycle volumes substantially increase along the road segment or at the intersection, as a result of the Proposed Project. Increased traffic generated or redistributed by a Proposed Project may cause a significant traffic operational impact to pedestrians or bicyclists. Therefore, it is necessary to evaluate potential hazards to pedestrians or bicyclists.

The determination of significant hazards to pedestrians or bicyclists shall be on a case-by-case basis, considering the following factors:

1. Design features/physical configurations on a road segment or at an intersection that may adversely affect the visibility of pedestrians or bicyclists to drivers entering and exiting the site, and the visibility of cars to pedestrians and bicyclists.
2. The amount of pedestrian activity at the project access points that may adversely affect pedestrian safety.
3. The preclusion or substantial hindrance of the provision of a planned bike lane or pedestrian facility on a roadway adjacent to the project site.
4. The percentage or magnitude of increased traffic on the road due to the Proposed Project that may adversely affect pedestrian and bicycle safety.
5. The physical conditions of the project site and surrounding area, such as curves, slopes, walls, landscaping or other barriers that may result in vehicle/pedestrian, vehicle/bicycle conflicts.
6. Conformance of existing and proposed roads to the requirements of the private or public road standards, as applicable.
7. The potential for a substantial increase in pedestrian or bicycle activity without the presence of adequate facilities.

Since the Proposed Project is only changing the County Zoning Ordinance, it will therefore not change any roadway, pedestrian or bicycle facilities within the County. Additionally, since this is a programmatic level analysis it is assumed that the Mobility Element will be fully built out and all roadways and intersections will be designed to County standards and will be able to accommodate the appropriate bicycle and pedestrian demand.

Potential impacts relating to pedestrian, bicycle and transit circulation would be considered significant if the proposed project would substantially increase hazards due to a design feature, or would conflict with the adopted policies, plans, or programs supporting alternative transportation, as outlined in Appendix G of the *California Environmental Quality Act (CEQA) Guidelines*. The project is not proposing to make any improvements to roadways or other transportation related facilities. Therefore, the proposed project would not conflict with or generate any significant impacts associated with existing pedestrian, bicycle or transit facilities, as well as the planned facilities and policies.

7.0 Summary of Findings

This chapter outlines and summarizes the findings of the report.

7.1 Current General Plan Buildout Plus Project Conditions

This Section outlines and documents the roadways facilities in which the Proposed Project would potentially have an impact to the General Plan, as well as the corresponding improvement needed to mitigate the impacts. County and State controlled facilities are summarized separately below.

County Facilities

Table 7.1 outlines the roadway segments in which the Proposed Project would potentially have an impact to the General Plan, as well as the corresponding improvement needed to mitigate the impact.

Table 7.1 Impacted Roadway Segments and Recommended Mitigation – Current General Plan Buildout Plus Project Conditions

Community	Road	From	To	ME Classification	Required Classification	GP Accepted Deficient Roadway?
Fallbrook	Mission Road	Macadamia Drive	Live Oak Park Road	4.2B	4.1A	Yes
	Mission Road	Live Oak Park Road	I-15 Ramps	4.2B	4.1A	Yes
	Pala Mesa Drive	Daisy Lane	Wilt Road	2.2F	2.2E	No

	Valley Center Road	Lilac Road	Road 17	4.2A	6.2	Yes

Source: Chen Ryan Associates; September 2016

It should be noted that this study did not performed a feasibility analysis for the proposed mitigation measures in the table above. The feasibility of the proposed mitigation measures will be determined by the project EIR.

State Facilities

The Proposed Project would potentially impact the General Plan on the following State Highways in which the County's Mobility Element has already identified and accepted as operating at LOS E or F under buildout of the adopted General Plan:

- SR-67, between Willows Road and SR-67.

It should be noted that since the County does not have authority over State Highway facilities the implementation of proposed improvements cannot be insured on the facilities. Therefore, all impacts on State Highway facilities should be considered significant and unavoidable and no mitigation measures are proposed.

7.2 Current General Plan Plus GPAs in Process Plus Project Conditions

As noted in Chapter 5.0 the true Impacts to the General Plan associated with the Proposed Project, assuming the addition to these GPAs in Process, cannot be accurately determined at this time. Therefore, the roadway analysis under this condition was provided for informational purposes only; therefore, no project specific impacts were identified.

Table 7.2 displays the roadway segments identified as operating at LOS E or F under Buildout of the Current General Plan with the addition of both the traffic associated with the Proposed Project as well as the proposed GPAs. The Table also provides the roadway classification that would be required for the roadway segment to operate at LOS D or better.

Table 7.2 Deficient Roadway Segments and Improvements – Current General Plan Buildout Plus GPAs in Process Plus Project Conditions

Community	Road	From	To	ME Classification	Improved Classification	ME Accepted as Deficient
Fallbrook	Mission Road	I-15 Ramps	Macadamia Drive	4.2B	4.1A	Yes

It should be noted that this study has not performed a feasibility analysis for the proposed improvement measures in the table above.

7.3 Bicycle and Pedestrian

Since the Proposed Project is only changing the County Zoning Ordinance, it will therefore not change any roadway, pedestrian or bicycle facilities within the County. Additionally, since this is a programmatic level analysis it is assumed that the Mobility Element will be fully built out and all roadways and intersections will be designed to County standards and will be able to accommodate the appropriate bicycle and pedestrian demand.

GPA = General Plan Amendment;

MUP = Major Use Permit;

REZ = Rezone;

SP = Specific Plan;

SPA = Specific Plan Amendment;

TM = Tentative Map;

TPM = Tentative Parcel Map

⁽¹⁾ Includes a Commercial or Industrial Component

(*) Denotes projects that, as of 2011, are no longer foreseeable due to disapproved or withdrawn permit applications. However, build-out of these projects was included in the cumulative impact analysis.

Notes: Communities with active projects having a total increase of less than 10 units were not included in the Cumulative Impacts Traffic Model. This table includes both approved and active projects that are inconsistent with the General Plan Update.
