Introduction

The California Active Transportation Program (ATP) was created by Senate Bill 99 (Chapter 359, Statutes of 2013) and Assembly Bill 101 (Chapter 354, Statutes of 2013) to encourage increased use of active modes of transportation, such as biking and walking. The ATP consolidates various transportation programs, including the Federal Transportation Alternatives Program, State Bicycle Transportation Account, and Federal and State Safe Routes to School programs, into a single program to:

- Increase the proportion of biking and walking trips,
- Increase safety for non-motorized users,
- Increase mobility for non-motorized users,
- Advance the efforts of regional agencies to achieve greenhouse gas reduction goals,
- Enhance public health, including the reduction of childhood obesity through the use of projects eligible for Safe Routes to Schools Program funding,
- Ensure disadvantaged communities fully share in program benefits (25% of program), and
- Provide a broad spectrum of projects to benefit many types of active transportation users.

The **County of San Diego** is developing an **Active Transportation Plan (Plan)** to meet the requirements of the State Active Transportation Program and to compete for funding for infrastructure improvements.

As part of the **Plan**, an existing conditions analysis called the **Pedestrian Gap Analysis (PGA)** was conducted (bikeway conditions and plans are described in the main Plan document). This document explains the methodology of the **PGA** rankings and provides the resulting scores within each study area.

The County of San Diego maintains over 1,950 centerline miles of public road. There are over 400 miles of public maintained roadway included in the PGA field condition study, which equates to almost 800 miles of sidewalk or pathway to review. Each sidewalk segment, typically from intersection to intersection, is considered a study segment. In most cases, the intersection itself is also considered a study segment.

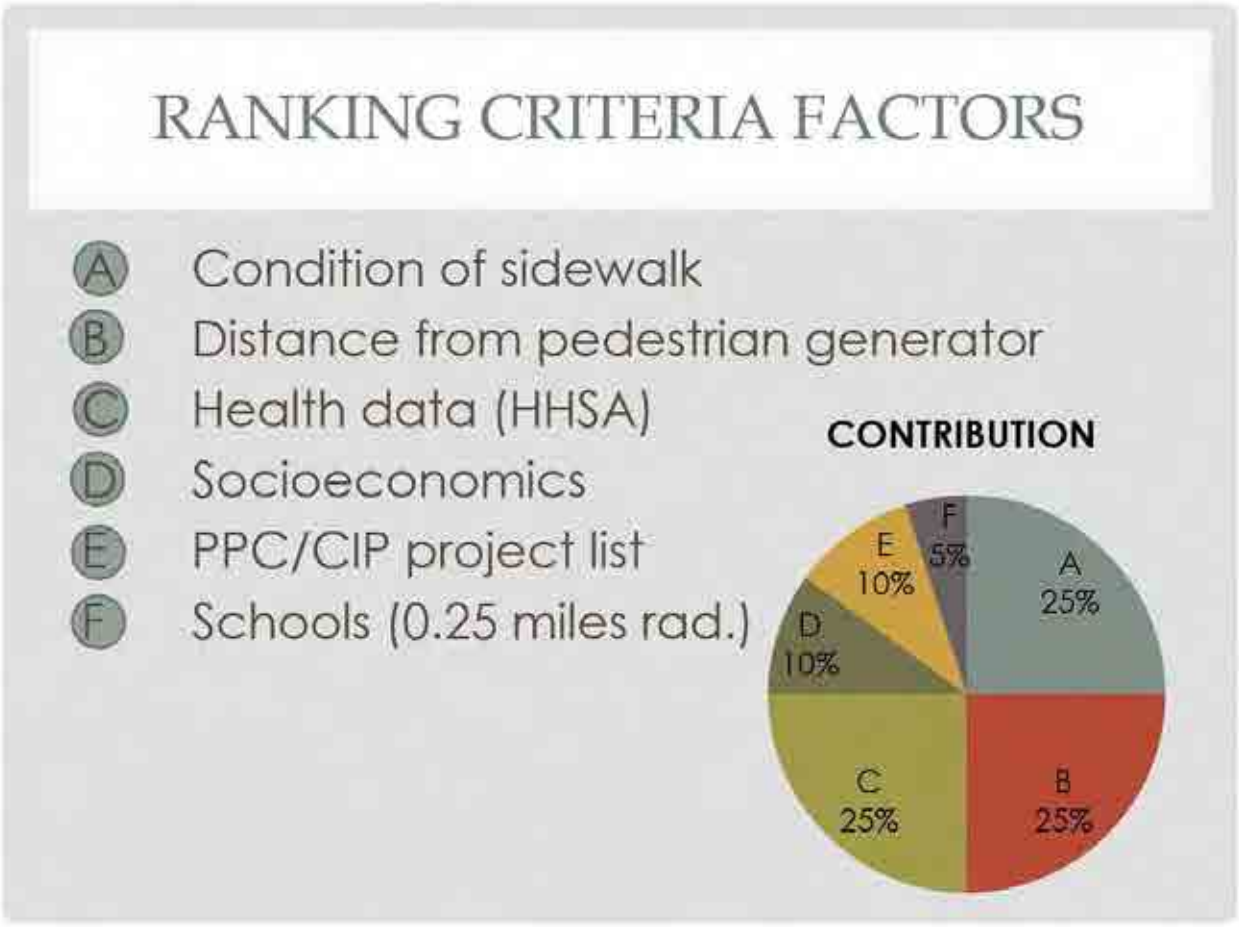

To meet the objectives of the State Program, the ATP/PGA criteria used to rank the segments include:

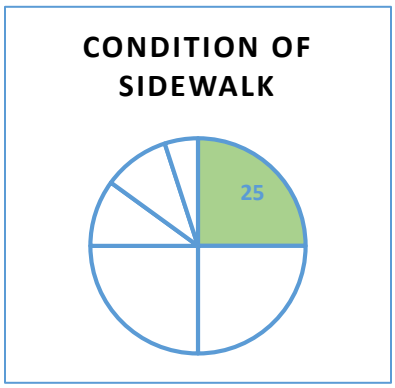

- Condition of sidewalk/pathway and associated characteristics such as obstructions, slope, grade, curb ramp configuration, and others,
- Distance from pedestrian generators,
- Health data (supplied by County Health and Human Services Agency),
- Socioeconomic data (supplied by County Health and Human Services Agency),
- County Public Works Project Planning/Capital Improvement project list, and
- School proximity.

Methodology

County staff in conjunction with the Michael Baker International consultant team created a point system by which individual segments of sidewalk could be ranked. This system was developed to assign points and develop a rank for comparison and eventual project priority. Each criterion is assigned a percentage of the overall pie (of points), which can be seen in the chart below. The point system was defined in order to allocate criteria weights to each of the study segments based on the relative importance to County maintenance, ATP goals of health, economic diversity, and a broad benefit to users (especially school children).

As developed for this exercise: 100% of the pie equates to 4000 points. The following sections describe how each criteria factor is applied to the study segments.

Condition of Sidewalk

The condition of the sidewalk accounts for 25%, or 1000 points, of the overall ranking criteria. The existing condition data was collected by field crews walking with GIS-enabled tablet computers and GPS tracking sensors that associated a geographic point with the input of collected existing features.

Typical Collection Devices

Field Training

Obstruction

The following data and information was collected utilizing County of San Diego GIS tablets and ArcGIS Collector software:

Sidewalk Data:

1. Surface Type:
   a. Non-existing
   b. Concrete
   c. Asphalt
   d. Brick / Pavers
   e. DG pathway
   f. Native - Goat path (Evidence of pedestrian activity)
   g. Native - No evidence of pedestrian activity detected
   h. Other / Comments:
2. Surface Width:
   a. 0' to 4'
   b. 4' to 10'
   c. > 10'
3. Sidewalk obstructions (report only if unobstructed portion of sidewalk / pathway is less than 5' in width except as noted below):
   a. Fixed Objects
      i. Power pole
      ii. Traffic Light Pole
      iii. Street Light Pole
      iv. Fire hydrant
      v. Utility box / cabinet
      vi. Mailbox
      vii. Traffic Sign / Post
      viii. Bus Stop Sign / Post
      ix. Bus Bench / Shelter (permanent fixture)

Sidewalk Data (continued)

      x. Other
         (1) Protrusion – bolt, rebar, sign post stub, abandoned guy wire anchor, etc. 1/4" or more above sidewalk surface
         (2) Pullbox / Utility Vault – ½" or more above or below sidewalk surface
         (3) Comment
   b. Movable Items
      i. Newspaper vending machine
      ii. Bus Bench (unattached)
      iii. Trash cans / bins
      iv. Portable commercial signs / banners
      v. Other / Comments:
   c. Vegetation
      i. Ground cover
      ii. Branches (0' to 7' above the sidewalk / pathway surface)
      iii. Comments:
4. Sidewalk Condition
   a. Good
   b. Moderate
   c. Needs improvement (indicate why)
      i. Cracked/Lifted sidewalk/uneven surface
      ii. Missing segments
      iii. Obstructions
      iv. Other (comment box)

Sidewalk Data (continued)

5. Sidewalk grade:
   a. 0% - 5%
   b. 5% - 8.3%
   c. 8.4% - 10%
   d. > 10%
6. Sidewalk cross slope:
   a. 0% - 2%
   b. 2.1% - 4%
   c. 4.1% - 6%
   d. Greater than 6%

Curb Ramp Data:

1. Curb Ramp Condition:
   a. Non-existing
   b. Asphalt curb ramp
   c. Concrete curb ramp
   d. COSD standard concrete curb ramp
   e. Other / Comments:
2. COSD Concrete Curb Ramp Type:
   a. Type A
   b. Type B
   c. Type C
   d. Type D
   e. Different
3. Is the curb ramp slope 8.33% or less:
   a. Yes
   b. No
4. Are the curb ramp side slopes 10.0% or less:
   a. Yes
   b. No
5. Does the landing pad meet all COSD design standards:
   a. Yes
   b. No
6. Does the truncated dome panel meet all COSD design standards:
   a. Yes
   b. No
   c. Non-existing
7. Does the curb ramp transitions smoothly with no lip present at the roadway surface.
   a. Yes
   b. No
8. Curb Ramp Obstructions:
   a. Utility pole
   b. Traffic Light Pole
   c. Fire hydrant
   d. Traffic Sign Post
   e. Drainage structure
   f. Other / Comments
   g. No Obstructions

Driveway Data:

1. Driveway Surface Type:
   a. Concrete
   b. Asphalt
   c. Brick / Pavers
   d. Decomposed granite
   e. Native material
   f. Other / Comments:

Driveway Data (continued)

2. SDRSC Concrete Driveway Type:
   a. Type G-14A
   b. Type G-14B
   c. Type G-14C
   d. Type G-14D
   e. Type G-14E
   f. Type G-14F
   g. Different
3. Sidewalk grade at driveway:
   a. 0% - 5%
   b. 5% - 8.3%
   c. 8.4% - 10%
   d. > 10.0%
   e. No Sidewalk
4. Sidewalk cross slope at driveway:
   a. 0% - 2%
   b. 2.1% - 4%
   c. 4.1% - 6%
   d. > 6.0%
   e. No Sidewalk
5. Sidewalk width at driveway:
   a. 0’ to 4'
   b. 4' to 10'
   c. > 10'
   d. No Sidewalk
6. Driveway Obstructions:
   a. Power pole
   b. Traffic Light Pole
   c. Street Light Pole
   d. Fire hydrant
   e. Utility pull box / cabinet
   f. Mailbox
   g. Protrusion – 1/4” or more above sidewalk surface (bolt, rebar, sign post stub, abandoned guy wire anchor, etc.)
   h. Other / Comments:
   i. No Obstructions

Intersection/Crosswalk Data:

1. Does a marked crosswalk exist at this location (intersection):
   a. Yes
   b. No.
2. Crosswalk Design Type:
   a. Uncontrolled crosswalk
   b. Midblock controlled crosswalk
   c. Stop controlled crosswalk
   d. Signalized controlled crosswalk
   e. No Marked Crosswalk
3. Type of crosswalk markings:
   a. White Parallel
   b. White Longitudinal
   c. White Diagonal
   d. Yellow Parallel
   e. Yellow Longitudinal
   f. Yellow Diagonal
   g. Unmarked Crosswalk
4. Mid-block crossing observed where no marked crosswalk is provided
   a. Yes
   b. No

A point system was allocated to the various conditions that were collected (details of point system available in Appendix 1). Each item in the list above received a certain number of points. The point total for each collected item was added to the street segments to which they belong. This resulted in each street segment having a total number of points associated with it.

Once the points were generated, the minimum and maximum values were analyzed and then reallocated to the 1000-point scale. For example, within one community the minimum total value may equal 100 and the max value may be 400. The maximum value was then divided into the maximum 1000-point scale (1000/400) to get a standard factor of 2.5. All street segment point totals within this community were then multiplied by 2.5. The reallocated point totals would range from 250 to 1000.

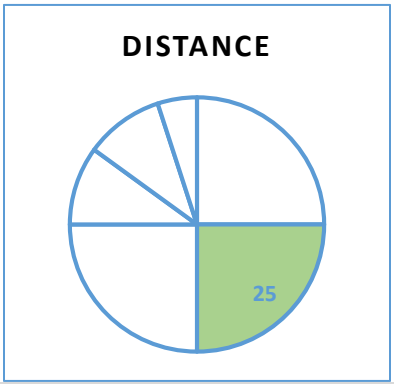

Map of Field Condition Scoring in Julian

Distance to Attractors

The distance from pedestrian attractors accounts for 25%, or 1000 points, of the overall ranking criteria. A common assumption of walk trips is that a reasonable comfortable walking distance to and from an attractor is a ¼ mile or 1,320 feet. The types of public attractors that were used to determine the study areas for the PGA include:

- Parks

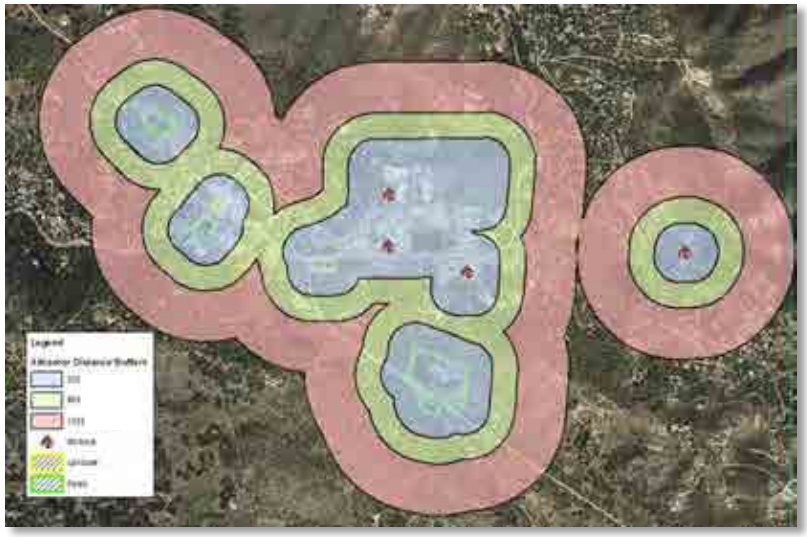

- Schools
- Libraries
- Land use, including:
  - Neighborhood shopping center
  - Community Shopping center
  - Regional shopping center
  - Government office/Civic center
  - Post office
  - Convention center

Buffers were generated at three intervals from each attractor based on the reasonable walking distance, and a weight was applied to study segments depending on the distance interval:

- 330 feet – 1000 points
- 660 feet – 500 points

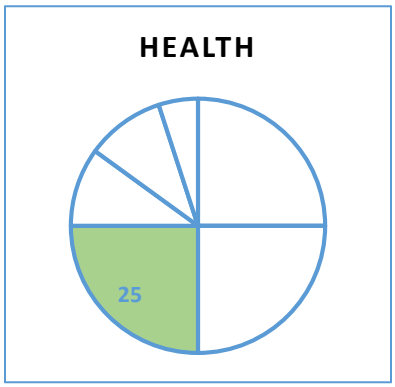

The points were then added to the total for each segment. After the addition of the distance points, each segment could potentially have 2000 points.

Map of distance buffers around attractors in Julian

Health

Increased public health through greater physical activity is a major goal of the State Active Transportation Program. Therefore, overall, health data accounts for 25%, or 1000 points, of the PGA ranking criteria. While there are a near infinite number of variables that could be selected to represent health in resident populations, the health portion of the pie chart is made up of diabetes data and pedestrian collision information. Of the 25% for health data, diabetes accounts for 40% and pedestrian collisions accounts for 60%.

Diabetes Data

The County Health and Human Services Agency provided a database[1] containing diabetes-related health factors, including hospitalization and death. The data is grouped in geographic areas called "Sub Regional Areas" (SRA). These are larger areas and, for this reason, the diabetes data is applied as a whole to all segments within an SRA.

The data attribute utilized was "Diabetes Hospital Rate," which is calculated based on per 100,000 people. The table here displays the hospital rates and total points. The factor was determined by dividing the total of 400 points by the highest hospitalization rate of 310.9. The factor of 1.3 (rounding for convenience) was then multiplied by each rate to come up with the point total.

Diabetes was chosen as a proxy health indicator because of its close association with obesity and chronic disease factors due to a lack of exercise and poor nutrition.

SRA	NAME	Diabetes Hospital Rate	Factor	Points
4	NATIONAL CITY	310.9	1.3	400
5	SOUTHEASTERN SAN DIEGO	252.5	1.3	325
14	NORTH SAN DIEGO	65.2	1.3	84
20	SWEETWATER	52.0	1.3	67
21	CHULA VISTA	260.1	1.3	335
30	JAMUL	137.3	1.3	177
31	SPRING VALLEY	171.0	1.3	220
32	LEMON GROVE	234.9	1.3	302
33	LA MESA	159.3	1.3	205
34	EL CAJON	147.5	1.3	190
35	SANTEE	162.6	1.3	209

63	ANZA-BORREGO SPRINGS	281.9	1.3	363

Diabetes Hospital Rates and Total Points

**An average rate of all communities was used since no data was provided for this community*

Pedestrian Collision Data

Collision data involving pedestrians was gathered from the California Transportation Injury Mapping System (TIMS) which utilizes the California Statewide Integrated Traffic Records System (SWITRS).

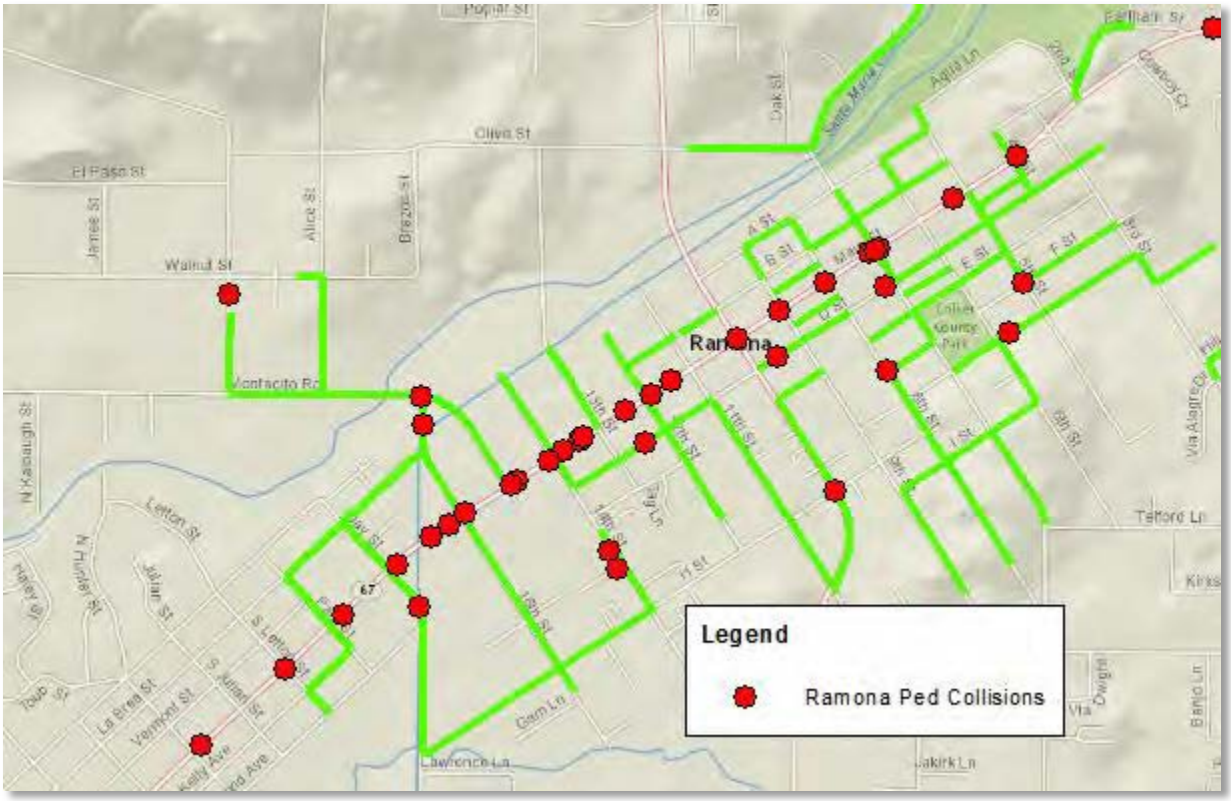

The Source for the TIMS data is http://tims.berkeley.edu/ (2008-2013)

> *"TIMS has been established by researchers at the Safe Transportation Research and Education Center (SafeTREC) at the University of California, Berkeley to provide data and mapping analysis tools and information for traffic safety related research, policy and planning."*

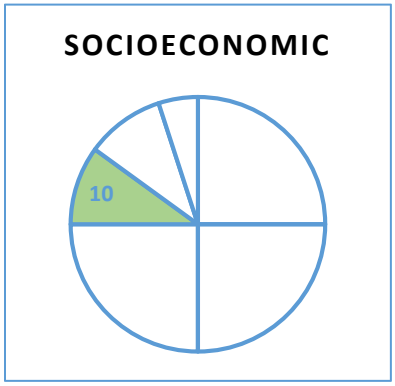

Each collision is represented by a geographic point. The points were applied to the study segment they fell in. One collision equals one point. Once all the points within a community were summed up for each segment, the points were reallocated to the appropriate scale. Pedestrian collision data accounts for 600 points of the overall ranking criteria.

[1] https://data.livewellsd.org/Non-Communicable-Chronic-Disease/Diabetes-Hospitalizations-2010-2013/nr2e-aev3

For a given community, 600 is divided by the highest point total for any segment, to come up with the factor. The factor is then multiplied by the collision point total for all segments within that community. After applying the health data, each segment could potentially have 3000 points.

Pedestrian related collisions in Ramona from 2008-2013

Socioeconomic

Socioeconomic data factors account for 10%, or 400 points, of the overall ranking criteria. The socioeconomic data came from County Health and Human Services in the same health data set.[2] Thus, it is also grouped by SRA and will be applied as a whole to all segments within each SRA. After applying the socioeconomic data, each segment could potentially have 3400 points.

Socioeconomic Category	Points
Lowest Income	400
Low Income	300
Moderately Low Income	200
Moderately High Income	0
High Income	0
Highest Income	0

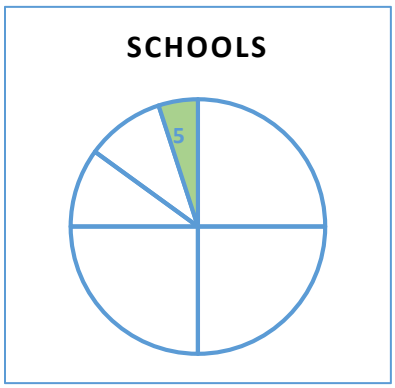

[2] https://data.livewellsd.org/Demographic-Profiles/2013-San-Diego-Demographics-Median-Income/wkg4-4w22

Project Priority List

The County's existing project priority list accounts for 10%, or 400 points, of the overall ranking criteria. The County Public Works Department maintains a list of priority projects that have been vetted by community input and analyzed extensively by engineering staff. The 33 projects on the list are associated with road corridors. These projects were geographically matched with the Pedestrian Gap Analysis study segments. Each segment that was also on the County project priority list received 400 points.

At this point, each segment could potentially have 3800 points.

Schools

The distance from schools accounts for 5%, or 200 points, of the overall ranking criteria. All segments within ¼ mile of a school receive 200 points.

The PGA methodology placed a priority on children walking to school and, thus, allocated additional points to study segments near schools to enhance their priority in the final PGA rankings.

¼ Mile School Buffers in Julian

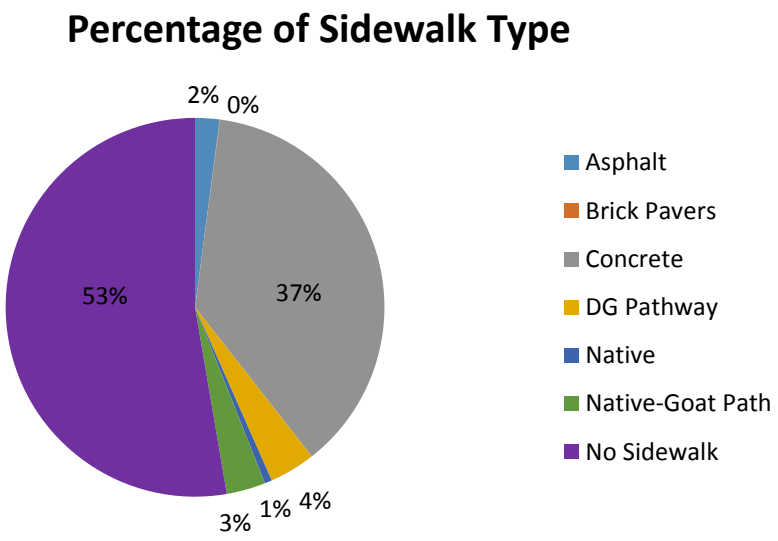

Once the final element of distance to schools is applied, each segment could potentially have 4000 points.

Results

Teams of student workers walked every mile of project study area with the collector tablet inputing GIS data points and sidewalk condition information of the pedestrian network. There are many details within the information collected such as condition of the sidewalk, ADA compliant curb ramps and slope at driveways. That information will inform future service work on the sidewalk network. While the following is a summary of the total pedestrian gap analysis results:

Sidewalk Type	Miles
Asphalt	15.86
Brick Pavers	0.22
Concrete	284.46
DG Pathway	30.00
Native	4.74
Native-Goat Path	25.37
No Sidewalk	401.61
Total	**762.25**

The chart below describes the type of sidewalk milage as a percentage of the total pedestrian gap analysis network:

The above chart is the total aggregate of the communities collected. The ranking (scores) of the evaluated sidewalk and pathway segments are included in Appendix 2. The results are organized and displayed by the 24 communities that were evaluated. It includes maps and key ranking criteria factors along with the resulting score.

Conclusion

The PGA was developed for the County's Active Transportation Plan and designed to meet the goals and objectives of the State Active Transportation Program. The results are a static snapshot based on the best available information collected at the time the document was produced. As this is intended to be a living document, it is understood that the analysis is subject to change and evolve as new information becomes available and as circumstances deem prudent to modify.

The point system used in the PGA assigns points to individual street segments within study areas to provide a ranking for comparison purposes of the relative need for pedestrian (sidewalk-related) improvements. The point system uses a weighted allocation system that assigns points to the individual street segments. Points were assigned to street segments based on six Ranking Criteria Factors: Condition of sidewalk; Distance from a pedestrian generator; Health data (HHSA); Social economic data; Listing as a priority project on the County's Project Planning Committee/Capital Improvement Plan; and close proximity to a school. The more points allocated to a street segment, the higher its priority for maintenance and improvement, based upon the ranking factors.

The total points allocated to each street segment are reflected by colors corresponding to the range of points allocated and applied on the Scoring Map. The range of colors are green to red, with green reflecting fewer points based on field data and the methodology data ranking factors, and red colored segments reflecting the higher total points of field and methodology data and identifying areas of potential priority. The scoring system, and the colors that reflect it, is only one of the factors that is used to identify future priority improvement projects found in the ATP document and on-going ADA Transition Plan and programmed capital improvements by the Department of Public Works.
