Subject: CAMPO WIND PROJECT WITH BOULDER BRUSH FACILITIES DRAFT EIR- COMMENT SHEET
Date: Saturday, February 01, 2020 4:48:57 PM

We want to be sure you understand how much we OBJECT to this entire project!

We moved in to this area long before there were ANY turbines and had a 360 degree, beautiful view with the Laguna mountains to our north. Now we stare at flashing lights and spinning turbines.

We were lied to about the value of these machines, it turns out they are much more expensive and our costs for power only continues to increase.

We already deal with the noise and flashing red lights from the turbines that have been here for some time. They now want to place them even closer to our home, twice the size and 10 times as many. We have already lost property values, and with the new ones it will dramatically reduce our property value even more. The wild life has been greatly effected, and non of this includes how much of our views have been and will be destroyed by these turbines.

We also must say THERE IS NOTHING GREEN ABOUT THE TURBINES, if you watch them there is frequently oil running down them. They kill both song birds and birds of prey (we use to have golden eagles here but with the turbines none have been seen in years). When they break what do they do with the broken parts? The ones that are currently here came apart years ago and those broken blades and other parts laid on the ground around them like a graveyard for years, our understanding was that they are made out of hazardous material and the dumps would not accept them. We never did find out what happened with them. They only last 20-30 years, what will they do with them then?

We had to change the position of our bed so we don't have the flashing red lights keeping us awake at night, but will still take sleeping meds to get a nights rest! The information that is out there also indicates many other health issues that come from living close to the turbines.

We can go on and on about the negative effects these things have here. No one in this area wants these and there is no compensation for us. Many of our neighbors say, "if you want the turbine farms here just buy us out and then you can do what you want!" We personally moved here because we wanted the quiet peaceful neighborhood and wanted to enjoy the starry nights. These turbines are taking ALL of this away.

Teresa commuted 130 miles round trip every day for 15 years so we would have a nice retirement home, now that we are retired it is being destroyed by these turbines and power lines.

So please consider the many many people that live here in the back country and all of the wildlife and don't let them put in more!

Thank You
Andy and Teresa DeGroot
