

### **I17 Barbara Kennerly**

- I17-1** The comment states general opposition to the Campo Wind Project with Boulder Brush Facilities (Project) and Torrey Wind Project, as well as concerns regarding impacts to people; quality of life and economic wellbeing; public health and safety; community character; wildlife; pets; visual, biological, cultural, groundwater, and other resources; and sensitive receptors. The comment does not raise any specific issue regarding the adequacy of the analysis within the Draft Environmental Impact Report (EIR); therefore, no further response is required.
- I17-2** The comment expresses concerns about fires that could break out due to these projects and the safety of the public, firefighters, and law enforcement officers both in the air and on the ground. The comment further expresses concern for helicopters tangling in wires and electromagnetic interference. Chapter 2.5, Hazards and Hazardous Materials; Chapter 2.9, Wildfire; and the Fire Protection Plan for the Boulder Brush Facilities (Appendix I) of the Draft EIR provide an analysis of impacts associated with fire protection, fire risks, and wildfire hazards. The Draft EIR concluded that the Project could potentially create wildfire hazards during construction and decommissioning activities due to increased activity and ignition sources; however, it was determined that with the implementation of Fire Protection Plans for the Boulder Brush Facilities (mitigation measure M-WF-1) and the Campo Wind Facilities (M-BI-1[h]) impacts associated with wildfire risks would be less than significant. The Draft EIR concluded that the Project would not interfere with an adopted emergency response plan. The Project would also be in compliance with Federal Aviation Administration regulations, which would ensure that the Project would not result in significant risks to aviation activities. Please also refer to Global Response GR-7, Fire Protection Services and Wildfire, and Global Response GR-9, Aviation.
- I17-3** The comment contains concluding remarks to the comment letter and concern about long-term use of the site, such as abandonment of proposed facilities should the Campo Reservation fail to renew its lease. As outlined in Chapter 1, Project Description, of the Final EIR, the Developer would be responsible for the decommissioning of the Campo Wind Facilities. Prior to decommissioning, a decommissioning plan would be prepared consistent with the requirements of the Campo Lease. The decommissioning plan would be implemented after the Campo Lease term. The comment does not raise an issue regarding the adequacy of the analysis within the Draft EIR; therefore, no further response is required.
