MANAGEMENT SUMMARY

Red Tail Environmental (Red Tail) in conjunction with Chambers Group, Inc. (Chambers) conducted a cultural resources survey at a 20.2-acre project area comprised of three parcels for the proposed AES Fallbrook Project (Project). Archaeological and historical research included a records search, literature review, examination of historic maps, and a cultural resource survey of the property.

The cultural resources survey was conducted in accordance with the California Environmental Quality Act (CEQA) County of San Diego Guidelines for Determining Significance (County of San Diego 2007a), Report Format and Content Guidelines (County of San Diego 2007b), Resource Protection Ordinance (RPO), Section 21083.2 of the Public Resources Code, and the San Diego County CEQA Guidelines. The County of San Diego will serve as lead agency for the purposes of CEQA.

A pedestrian survey of the approximately 20.2-ac project area was conducted by Chambers Group archaeologists and architectural historian Justin Castells under Rachel Nixon, M.A., RPA on November 29, 2017. An additional pedestrian survey was completed by Chambers Group archaeologist Lauren DeOliveira and Luiseño Native American Monitor P.J. Stoneburner of Saving Sacred Sites on October 2, 2018 under the direction of Archaeology Principal Investigator (P.I.) Shelby Castells, M.A., RPA of Red Tail Environmental, and Historic Resources P.I. Douglas Mengers, M.A., RPA, DPPH of PanGIS, Inc, in order to update the current site conditions. Finalization of the report was made by Archaeology P.I. and primary author Shelby Castells, M.A., RPA, and Historic Resources P.I. Douglas Mengers, M.A., RPA, DPPH. The Project area is located within a previously tilled agricultural area with remnants of an orchard. Portions of the Project area have been improved with a single-family residence, detached garage, and paved areas.

One built environment resource, the single-family residence located at 1405 E. Mission Road (P-37-037636) and the associated orchard, was identified with the project area. No other cultural resources were identified. P-37-037636 consists of a one-story Ranch-style building constructed in 1956 and its associated features including an orchard. The significance of P-37-037636 was determined by applying the procedure and criteria for the California Register of Historical Resources (CRHR), the San Diego County Local Register of Historical Resources (Local Register), and the RPO. The historic single-family residence is not eligible for the CRHR, the Local Register, or the RPO and is, therefore, not a historic resource for the purposes of CEQA. No archaeological resources, Traditional Cultural Properties, or tribal cultural resources were observed within the Project area. The terrain throughout the entire Project area has been disturbed extensively by agricultural activities. However, monitoring of the initial ground disturbance by a qualified archaeologist and Native American monitor is recommended to mitigate for potential impacts to cultural resources, should subsurface cultural resources be present within the Project area.

Field notes, photographs, and reports are kept on file at Chambers, 5 Hutton Centre Drive, Suite 750, Santa Ana, CA, 92707. California Department of Parks and Recreation (DPR) forms for each resource documented are provided as an appendix to this report and have been submitted to the South Coastal Information Center (SCIC) of the California Historical Resources Information System (CHRIS) at San Diego State University (SDSU). The final report will be submitted to the SCIC for inclusion in the CHRIS database.
SECTION 1.0 – INTRODUCTION

1.1 PROJECT DESCRIPTION AND LOCATION

AES Energy Storage, LLC (AES) proposes to construct a battery energy storage facility on an approximately 20.2-acre area within Assessor’s Parcel Numbers (APN) 105-410-44, 105-410-1000, 105-410-1100, 105-410-1900. (Project area). The project would have a total capacity of 40 MW using batteries which would be housed in a single building of approximately 100 feet by 250 feet in size. Ancillary facilities such as a small 69kV substation, and parking for approximately two to three cars will also be constructed.

The 20.2-acre project area is located within the community of Fallbrook in San Diego County. It is located at 1405 E. Mission Road and 1309 E. Mission Road, Fallbrook, CA, within the United States Geological Survey (USGS) 7.5’ Temecula Quadrangle, Township 9 South, Range 3 West, Section 18 (Figures 1, 2, and 3).

The cultural resources survey was conducted in accordance with the California Environmental Quality Act (CEQA) County of San Diego Guidelines for Determining Significance (County of San Diego 2007a) and Report Format and Content Guidelines (County of San Diego 2007b), the RPO, Public Resources Code Section 21083.2, and the County of San Diego CEQA Guidelines. The County of San Diego will serve as lead agency for the purposes of CEQA.
1.2 EXISTING CONDITIONS

1.2.1 Environmental Setting

The Project area is located at 1405 E. Mission Road and 1309 E. Mission Road in Fallbrook, California, and is comprised of APNs 105-410-44, 105-410-1000, 105-410-1100, 105-410-1900. The Project area is bounded by E. Mission Road to the north, an access road, agricultural and industrial development to the west, residential development to the south, and agricultural and residential development to the east.

Natural Setting

The climate in the Fallbrook area is characterized as Mediterranean warm and consists of hot, dry summers and warm, moist winters. The temperature on average is about 85 degrees Fahrenheit (°F) in the summer, but with maximums that can occasionally reach the high 90s. Rainfall occurs primarily during the winter months and averages about 15 inches per year (Shaver et al. 2006).

The closest natural body of water to the Project area is De Luz Creek, located approximately 2,200 meters northwest of the Project area. A storm water outfall and channel is located within the northern portion of the Project area.

Prehistorically, the vegetation in the Fallbrook area was predominantly mixed sage and chaparral, with riparian zones along the rivers, creeks, and drainages. The chaparral vegetation community is characterized by chamise, manzanita, oak, wild lilac, and redshank (Pryde 1992). Riparian zones are composed of shrubs and trees such as sycamore, cottonwood, willow, and several types of rushes. This area provided the population with acorns, and a fairly wide variety of other edible plants and seeds. After European contact, activities such as agriculture, ranching, and development resulted in introduced plants such as grasses, mustard, and various shrubs. The Project area currently consists of citrus trees, non-native grasses and shrubs, and cultivated cactus (Shaver et al. 2006).

The fauna that was present to prehistoric populations in the region included mule deer, coyote, grey fox, and rabbits. There was also a wide variety of birds and reptiles in the area. Birds and rodent burrows were observed within the Project area.

The geology of the surrounding area consists primarily of Cretaceous plutonic rocks including granitic, dioritic, and gabbroic rocks of the batholith of southern California. Soils present within the Project area include Fallbrook sandy loam, Fallbrook-Vista sandy loams, and Placentia sandy loam (Shaver et al. 2006).

1.2.2 Cultural Setting

Prehistoric Period

A variety of syntheses of the prehistory of southern California have been proposed by such authors as Wallace (1955), Warren and Crabtree (1986), Schaefer (1994), and Reddy and Byrd (1997). Regional schema for San Diego County have been proposed by Rogers (1939, 1945), Meighan (1954), and True (1958, 1966, 1970). Human occupation in San Diego County has been documented for at least 9,000 years, although a handful of researchers has suggested a considerably earlier date for the initial occupation of the area (Carter 1957:369-373; Minshell 1976; Moriarty 1987; Moriarty and Minshell 1972), perhaps as
early as 40,000 years ago. The following is a brief summary of the major periods of human occupation of San Diego County.

**San Dieguito**

The earliest recognized occupation of the region, dating to 10,000-8,000 years before present (B.P.), is known as the San Dieguito complex (Rogers 1939, 1945). Assemblages from this occupation generally consist of flaked stone tools. Evidence of milling activities is rare for sites dating to this period. It is generally agreed that the San Dieguito complex shows characteristics of the Western Pluvial Lakes tradition, which was widespread in California during the early Holocene (Moratto 1984; Moratto et al. 1994). This reflects a generalized hunting economy.

**Archaic**

The following period, the Archaic (8,500-1,300 B.P.), is traditionally seen as encompassing both a coastal and an inland focus, with the coastal Archaic represented by the shell middens of the La Jolla complex and the inland Archaic represented by the Pauma complex (True 1980). Coastal settlement is also thought to have been significantly affected by the stabilization of sea levels around 4,000 years ago that led to a general decline in the productivity of coastal ecosystems. Nevertheless, recent research on Camp Pendleton has documented continued occupation along the coast well after this decline was in progress (Byrd 1996, 1998). Artifacts associated with this period include milling stones, unshaped manos, flaked cobbles tools, Pinto-like projectile points, and flexed inhumations.

**Late Prehistoric**

The Late Prehistoric period (1,300-200 B.P.) is marked by the appearance of small projectile points indicating the use of the bow and arrow, the common use of ceramics, and the replacement of inhumations with cremations, all characteristic of the San Luis Rey complex as defined by Meighan (1954). The San Luis Rey complex is divided temporally into San Luis Rey I and San Luis Rey II, with the latter distinguished mainly by the addition of ceramics. Along the coast of northern San Diego County, deposits containing significant amounts of Donax shell are now often assigned to the Late Prehistoric, based on a well-documented increase in the use of this resource at this time (e.g., Byrd and Reddy 1999). The inception of the San Luis Rey complex is suggested by True (1966; True et al. 1974) to mark the arrival of Takic speakers from regions farther inland. Waugh (1986) is in general agreement with True but suggests that the migration was probably sporadic and took place over a considerable period. Titus (1987) uses burials showing physical differences between pre- and post-1,300 B.P. remains to further support this contention. However, some researchers have suggested that these Shoshonean groups may have arrived considerably earlier, perhaps as early as 4,000 years ago. Vellanoweth and Altschul (2002:102-105) provide an excellent summary of the various avenues of thought on the Shoshonean Incursion.

**Ethnohistoric Period**

When the Spanish arrived in southern California, the Project area was occupied by Takic speaking Native Americans known to the Spanish as the Luiseño. Luiseño territory is thought to have comprised some 1,500 square miles (3,890 square kilometers) of coastal and interior southern California (White 1963). The Luiseño speak a language that is placed within the Cupan group of the Takic family of the Uto-Aztecan stock (Shipley 1978) also known as Southern California Shoshonean (Kroeber 1925:574). Kroeber (1925) estimated a population of only 5,000 pre-contact Luiseño. White (1963) and Shipek (1977) estimated that,
at the time of Spanish contact, there were on the order of 50 Luiseño rancherias with an average population of some 200 people, for a total Luiseño population of about 10,000. This number rapidly decreased after contact, with the introduction of new diseases for which the native population lacked immunity. The way these diseases spread is poorly understood. Preston (1996) documents known pathways of smallpox and other contagious diseases from their origin in central Mexico to southern Arizona and northern Baja California and points out that there was regular and frequent contact between these areas and southern California. Lightfoot and Simmons (1998), on the other hand, believe the effects of disease throughout much of native California during the Protohistoric period was limited. Like Preston, however, Lightfoot and Simmons note that the San Diego County region was particularly vulnerable to the introduction of pathogens both from ships arriving at San Diego Bay and by overland trade routes originating in Arizona and Mexico.

**Historic Period**

The historical context below provides a brief overview of the history of the Project area. It has been divided into time periods based on significant historical periods. These include the Spanish Period (1769–1822), the Mexican Period (1822–1848), and the American Period (1848–present). The section concludes with examinations of the history of Fallbrook and the Project area.

**Spanish**

The first significant European settlement of California began during the Mission Period (1769 to 1822) with the founding of the first mission in San Diego and lasted until 1833-1834 when the Mexican secularization laws effectively opened the area to social and economic growth. The establishment of the Mission San Diego de Alcalá in 1769, the Mission San Luis Rey de Francia in 1798, and the San Antonio de Pala Asistencia in 1816, had a number of impacts on the region, resulting in the abandonment of some areas and the agricultural and ranching development of other portions. The mission system was dismantled after Mexican governors introduced new secularization acts between 1822 and 1833, thus freeing the Indians from mission control.

**Mexican**

After secularization, the dominance of the large land grant ranchos became established. In 1810, the Spanish government granted the first rancho to Jose Antonio Yorba and his nephew Juan Pablo Peralta. The Mexican government granted ranchos throughout California to Spanish and Hispanic soldiers and settlers (Castillo 1978). Rancho San Onofre and Rancho Santa Margarita was granted to Pio and Andres Pico in 1841. Las Flores, which had been one of the few Indian pueblos established by the Mexican government, was acquired by the Pico brothers in 1844, thus creating the Rancho Santa Margarita y Flores. By 1862, the Picos had fallen into financial difficulties and they sold part of the rancho to their brother-in-law, Juan Forster, to avoid losing it to creditors. Forster, after undertaking a number of improvements, died in 1882, and the ranch eventually was transferred to James C. Flood and Richard O’Neill (Thurman 1960:104). During this period, the entire area was almost constantly involved in political and military revolts. The tense situation ended in 1847 when California gained independence from Mexico during the “Bear Flag” revolt. One year later, the United States gained control of the area as a result of the Mexican-American War.
American

Although California had been under the control of the United States since 1847, the American Period did not really begin in the study area until 1851, when the Land Act required rancho owners to confirm the ownership of their lands. Many rancho dons lacked funds and legal documents to confirm land ownership. Along with legal problems related to the Land Act and new taxes imposed by the United States, many second-generation dons experienced a disastrous two-year drought (McWilliams 1973:62). The combination of these hardships resulted in many rancho families losing their lands. A steady influx of Euro-Americans was brought in by the railroads. The Euro-Americans expanded commercial and land development primarily in farming and dairy endeavors. In the twentieth century, independent businesses began to dominate the economic strategy, much as they do today.

Fallbrook

The first permanent recorded settlement in the Fallbrook area was established in 1869 by the Vital Reche family. They named the new community Fall Brook after their former homestead in Pennsylvania. The presence of the railroad during the 1880s initiated a period of growth for the region and the town site was plotted in 1885 (Fallbrook Chamber of Commerce 2017). The economy of Fallbrook was primarily agricultural, with a particular emphasis on honey production as well as oats and barley (Moramarco 2012). In the early years, dry farming was common for the production of wheat and olives. As water systems were established in the region, avocado production became widespread. The growth of agriculture spurred the development of a railroad line between Fallbrook and the coast in 1890 which led to increased exports, growing demand, and the rapid rise of acreage under production (County of San Diego 2016). By the twentieth century olives became the primary agricultural product of the region followed closely by grapes and citrus. In 1912 the first recorded avocado trees in the area were planted by William Moore. By the 1920s the popularity of avocados had grown and farmers began to significantly increase the number of trees, including Raymond and Mary Waymen, who planted 250 acres of avocados and citrus between 1922 and 1932 near the community of Winterwarm. By 1945, avocado trees also covered acres of land in San Luis Rey Heights and Red Mountain Ranch as well as numerous smaller plots. In the mid-50’s the Olive Hill and Morro Hills areas were subdivided, by William Shaw and Jim Wayman respectively, and developed for growing avocados and some citrus. Once water was provided for the Pala Mesa area in the late 50’s, over 2,000 more acres were planted with avocados and citrus. The growing number of producing avocado trees led to a need for packing plants. The McDaniel Fruit Co. was started in 1968 and Del Rey Avocado Co. in 1969. By 1972, avocados had become Fallbrook’s number one crop (Moramarco 2012). Though the population of Fallbrook continues to increase at a moderate pace, the area remains largely rural and avocados remain the region’s primary crop (Fallbrook Chamber of Commerce 2017).

Project Area

Based on a review of historic aerials, small portions of the Project area were utilized as orchard land between 1938 and 1946, however the majority of the property appears to have been cleared but undeveloped. By 1953, the Project area was primarily used as orchard land. By 1964 the residence on the property had been constructed, and portions of the orchard land appear to have fallen into disuse. The area utilized as active orchard fluctuated between 1964 and 2002, but did not achieve the same coverage as prior to 1964 (NETR Online 2017). Research into available sources yielded little information regarding the previous residents of 1309 and 1405 E. Mission Road.
1.2.3 **Records Search Results**

A cultural resource literature and records search of the California Historical Resources Inventory System (CHRIS) was conducted on May 30, 2017, at the South Coastal Information Center (SCIC). The objective of the records search was to determine whether any prehistoric or historic-period resources had been previously recorded within or near the Project area. The scope of the records search included the Project area and all the land within a one-mile radius of the Project area. Results of this search indicate that 23 cultural resource investigations have been conducted within a one-mile radius of the Project area between 1973 and 2015 (Table 1). The Project area is included in three of these studies (SD-07458, SD-08860, and SD-12847).

1.3 1.3 APPLICABLE REGULATIONS

Resource importance is assigned to districts, sites, buildings, structures, and objects that possess exceptional value or quality illustrating or interpreting the heritage of San Diego County in history, architecture, archaeology, engineering, and culture. A number of criteria are used in demonstrating resource importance. Specifically, criteria outlined in CEQA, the Resource Protection Ordinance (RPO), and the San Diego County Local Register provide the guidance for making such a determination. The following section(s) details the criteria that a resource must meet in order to be determined important.

1.3.1 California Environmental Quality Act

According to CEQA (§15064.5a), the term “historical resource” includes the following:

(1) A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (Pub. Res. Code SS5024.1, Title 14 CCR. Section 4850 et seq.).

(2) A resource included in a local register of historical resources, as defined in section 5020.1(k) of the Public Resources Code or identified as significant in an historical resource survey meeting the requirements of section 5024.1(g) of the Public Resources Code, shall be presumed to be historically of culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.

(3) Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be an historical resource, provided the lead agency’s determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be “historically significant” if the resource meets the criteria for listing on the California Register of Historical Resources (Pub. Res. Code SS5024.1, Title 14, Section 4852) including the following:

(A) Is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage;

(B) Is associated with the lives of persons important in our past;

(C) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or

(D) Has yielded, or may be likely to yield, information important in prehistory or history.

(4) The fact that a resource is not listed in, or determined eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to section 5020.1(k) of the Public Resources Code), or identified in an historical resources survey (meeting the criteria in section 5024.1(g) of the Public Resource Code) does not preclude a lead agency
from determining that the resource may be an historical resource as defined in Public Resources Code section 5020.1(j) or 5024.1.

According to CEQA (§15064.5b), a project with an effect that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. CEQA defines a substantial adverse change as:

(1) Substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired.

(2) The significance of an historical resource is materially impaired when a project:

(A) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources; or

(B) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

(C) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by a lead agency for purposes of CEQA.

Section 15064.5(c) of CEQA applies to effects on archaeological sites and contains the following additional provisions regarding archaeological sites:

(1) When a project will impact an archaeological site, a lead agency shall first determine whether the site is an historical resource, as defined in subsection (a).

(2) If a lead agency determines that the archaeological site is an historical resource, it shall refer to the provisions of Section 21084.1 of the Public Resources Code, and this section, Section 15126.4 of the Guidelines, and the limits contained in Section 21083.2 of the Public Resources Code do not apply.

(3) If an archaeological site does not meet the criteria defined in subsection (a), but does meet the definition of a unique archaeological resource in Section 21083.2 of the Public Resources Code, the site shall be treated in accordance with the provisions of section 21083.2. The time and cost limitations described in Public Resources Code Section 21083.2 (c-f) do not apply to surveys and site evaluation activities intended to determine whether the project location contains unique archaeological resources.
(4) If an archaeological resource is neither a unique archaeological nor an historical resource, the
effects of the project on those resources shall not be considered a significant effect on the
environment. It shall be sufficient that both the resource and the effect on it are noted in the
Initial Study or EIR, if one is prepared to address impacts on other resources, but they need not
be considered further in the CEQA process.

Section 15064.5 (d) & (e) contain additional provisions regarding human remains. Regarding Native
American human remains, paragraph (d) provides:

(d) When an initial study identifies the existence of, or the probable likelihood, of Native American
human remains within the project, a lead agency shall work with the appropriate Native
Americans as identified by the Native American heritage Commission as provided in Public
Resources Code SS5097.98. The applicant may develop an agreement for treating or disposing of,
with appropriate dignity, the human remains and any items associated with Native American
burials with the appropriate Native Americans as identified by the Native American heritage
Commission. Action implementing such an agreement is exempt from:

(1) The general prohibition on disinterring, disturbing, or removing human remains from any
location other than a dedicated cemetery (Health and Safety Code Section 7050.5).

(2) The requirement of CEQA and the Coastal Act

1.3.2 San Diego County Local Register of Historical Resources

The County requires that resource importance be assessed not only at the State level as required by CEQA,
but at the local level as well. If a resource meets any one of the following criteria as outlined in the Local
Register, it will be considered an important resource.

(1) Is associated with events that have made a significant contribution to the broad patterns of San
Diego County’s history and cultural heritage;

(2) Is associated with the lives of persons important to the history of San Diego County or its
communities;

(3) Embodies the distinctive characteristics of a type, period, San Diego County region, or method of
construction, or represents the work of an important creative individual, or possesses high artistic
values; or

(4) Has yielded, or may be likely to yield, information important in prehistory or history.

1.3.3 San Diego County Resource Protection Ordinance

The County of San Diego’s RPO protects significant cultural resources. The PRO defines “Significant
Prehistoric or Historic Sites” as follows:

1. Any prehistoric or historic district, site, interrelated collection of features or artifacts, building,
structure, or object either:
(a) Formally determined eligible or listed in the National Register of Historic Places by the Keeper of the National Register; or

(b) To which the Historic Resource (“H” Designator) Special Area Regulations have been applied; or

2. One-of-a-kind, locally unique, or regionally unique cultural resources which contain a significant volume and range of data and materials; and

3. Any location of past or current sacred religious or ceremonial observances which is either:

   (a) Protected under Public Law 95-341, the American Indian Religious Freedom Act or Public Resources Code Section 5097.9, such as burial(s), pictographs, petroglyphs, solstice observatory sites, sacred shrines, religious ground figures or,

   (b) Other formally designated and recognized sites which are of ritual, ceremonial, or sacred value to any prehistoric or historic ethnic group.

The RPO does not allow non-exempt activities or uses damaging to significant prehistoric or historic lands on properties under County jurisdiction. The only exempt activity is scientific investigation authorized by the County. All discretionary projects are required to be in conformance with applicable County standards related to cultural resources, including the noted RPO criteria on prehistoric and historic sites. Noncompliance would result in a project that is inconsistent with County standards.

1.3.4 Traditional Cultural Properties / Tribal Cultural Resources

Federal and state laws mandate that consideration be given to the concerns of contemporary Native Americans with regard to potentially ancestral human remains, associated funerary objects, and items of cultural patrimony. Consequently, an important element in assessing the significance of the study site has been to evaluate the likelihood that these classes of items are present in areas that would be affected by the proposed project.

Potentially relevant to prehistoric archaeological sites is the category termed Traditional Cultural Properties (TCP) in discussions of cultural resource management (CRM) performed under federal auspices. According to Patricia L. Parker and Thomas F. King (1998), “Traditional” in this context refers to those beliefs, customs, and practices of a living community of people that have been passed down through the generations, usually orally or through practice. The traditional cultural significance of a historic property, then, is significance derived from the role the property plays in a community's historically rooted beliefs, customs, and practices.

The County of San Diego Guidelines (2007a) identify that cultural resources can also include TCPs, such as gathering areas, landmarks, and ethnographic locations in addition to archaeological districts. These guidelines incorporate both State and Federal definitions of TCPs. Generally, a TCP may consist of a single site, or group of associated archaeological sites (district; traditional cultural landscape), or an area of cultural/ethnographic importance.

The Traditional Tribal Cultural Places Bill of 2004 requires local governments to consult with Native American representatives during the project planning process. The intent of this legislation is to encourage
consultation and assist in the preservation of “Native American places of prehistoric, archaeological, cultural, spiritual, and ceremonial importance” (County of San Diego 2007a). It further allows for tribal cultural places to be included in open space planning. State Assembly Bill (AB) 52, in effect as of July 1, 2015, introduces the Tribal Cultural Resource (TCR) as a class of cultural resource and additional considerations relating to Native American consultation into CEQA. As a general concept, a TCR is similar to the federally-defined TCP; however, it incorporates consideration of local and state significance and required mitigation under CEQA. A TCR may be considered significant if included in a local or state register of historical resources; or determined by the lead agency to be significant pursuant to criteria set forth in PRC §5024.1; or is a geographically defined cultural landscape that meets one or more of these criteria; or is a historical resource described in PRC §21084.1, a unique archaeological resources described in PRC §21083.2, or a non-unique archaeological resource if it conforms with the above criteria.

In 1990, the NPS and Advisory Council for Historic Preservation introduced the term ‘TCP’ through National Register Bulletin 38 (Parker and King 1998). A TCP may be considered eligible based on “its association with cultural practices or beliefs of a living community that (a) are rooted in that community’s history, and (b) are important in maintaining the continuing cultural identity of the community” (Parker and King 1998:1). Strictly speaking, Traditional Cultural Properties are both tangible and intangible; they are anchored in space by cultural values related to community-based physically defined “property referents” (Parker and King 1998:3). On the other hand, TCPs are largely ideological, a characteristic that may present substantial problems in the process of delineating specific boundaries. Such a property's extent is based on community conceptions of how the surrounding physical landscape interacts with existing cultural values. By its nature, a TCP need only be important to community members, and not the general outside population as a whole. In this way, a TCP boundary, as described by Bulletin 38, may be defined based on viewscape, encompassing topographic features, extent of archaeological district or use area, or a community’s sense of its own geographic limits. Regardless of why a TCP is of importance to a group of people, outsider acceptance or rejection of this understanding is made inherently irrelevant by the relativistic nature of this concept.
SECTION 2.0 – GUIDELINES FOR DETERMINING SIGNIFICANCE

Section 15064.5(b) of the State CEQA Guidelines identifies adverse environmental impacts to historical resources. The County has prepared guidelines for determining the significance of environmental impacts to cultural resources, based on CEQA and the County RPO. Pursuant to the County of San Diego Guidelines for Determining Significance – Cultural Resources: Archaeological and Historical Resources (2007b), any of the following will be considered a significant impact to cultural resources:

1. The project, as designed, causes a substantial change in the significance of a historical resource as defined in §15064.5 of the State CEQA Guidelines. This shall include the destruction, disturbance or any alterations of characteristics or elements of a resource that cause it to be significant in the manner not consistent with the Secretary of Interior Standards.

2. The project, as designed, causes a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5 of the State CEQA Guidelines. This shall include the destruction or disturbance of an important archaeological site or any portion of an important archaeological site that contains the potential to contain information important to history or prehistory.

3. The project, as designed, disturbs any human remains, including those interred outside formal cemeteries.

4. The project proposes non-exempt activities or uses damaging to, and fails to preserve, significant cultural resources as defined by the Resource Protection Ordinance and fails to preserve those resources.

5. The project causes a substantial adverse change in the significance of a tribal cultural resource as defined under Public Resources Code §21074.

The Guidelines listed above are selected for the following reasons:

Guidelines 1 and 2 are derived directly from CEQA. Sections 21083.2 of CEQA and 15064.5 of the State CEQA Guidelines recommend evaluating historical and archaeological resources to determine whether or not a proposed action would have a significant effect on unique historical or archaeological resources. Guideline 3 is included because human remains must be treated with dignity and respect and CEQA requires consultation with the “Most Likely Descendant” as identified by the Native American Heritage Commission (NAHC) for any project in which human remains have been identified.

Guideline 4 was selected because the RPO requires that cultural resources be considered when assessing environmental impacts. Guideline 5 was select because CEQA Section 21074 requires that tribal cultural resources be identified and evaluated to determine whether a proposed action would have a significant effect. Any project that would have an adverse impact (direct, indirect, cumulative) on significant cultural resources as defined by the guidelines would be considered a significant impact.
SECTION 3.0 – ANALYSIS OF PROJECT EFFECTS

3.1 SURVEY METHODS

3.1.1 Survey Methods

A pedestrian survey of the approximately 20.2-acre Project area was conducted by Chambers archaeologists and architectural historian Justin Castells under Rachel Nixon on November 29, 2017. An additional archaeological survey to update the current site conditions was conducted by Chambers’ archaeologist Lauren DeOliveira and Luiseño Native American Monitor P.J. Stoneburner of Saving Sacred Sites on October 2, 2018, under the direction of P.I. Shelby Castells (Archaeology) and P.I. Douglas Mengers (Historic Resources). The Project area is located within a previously tilled agricultural area with remnants of an orchard. Portions of the Project area have been improved with a single-family residence, detached garage, and paved areas. Transects were spaced approximately 10-15 meters apart.

3.1.2 Native American Consultation

The Native American Heritage Commission (NAHC) was contacted on May 5, 2017, for a review of the Sacred Lands File (SLF), to determine if any known Native American cultural properties (e.g., traditional use or gathering areas, places of religious or sacred activity, etc.) are present within or adjacent to the Project area. The NAHC responded on May 8, 2017, noting that the SLF search failed to indicate the presence of Native American cultural resources in the immediate Project area. The NAHC requested that Native American individuals and organizations be contacted to elicit information and/or concerns regarding cultural resource issues related to the proposed Project. A letter describing the Project and asking these individuals and organizations for their input was sent via mail and electronic mail on December 12, 2017. A copy of the letters sent, the list of contacts, and responses received are included in Appendix C.

As of the date of this report, four responses have been received.

Agua Caliente Band of Cahuilla Indians:

Chambers Group Inc. sent out a request for consultation on December 12, 2017 and received a response from the tribe’s Cultural Resource Manager Katie Croft on January 4, 2018 stating that the project is not located in the tribe’s traditional use area and that the letter concludes their consultation efforts.

Iipay Nation of Santa Ysabel

Chambers Group Inc. sent out a request for consultation letter on December 12, 2017 and received a response from the tribe’s contact Clint Linton on December 15, 2017 stating that the tribe would defer to Cami Mojado at the San Luis Rey Band.

Pala Band of Mission Indians

Chambers Group Inc, sent out a request for consultation on December 12, 2017 and received a response from the tribe’s THPO Shasta Gaughen on December 13, 2017 stating that the project is within the tribe’s traditional use area and therefore, they request that documentation regarding the project be provided to them and archaeological monitoring be conducted.
Jamul Indian Village

Chambers Group Inc. sent out a request for consultation on December 12, 2017. Rachael Nixon of Chambers Group Inc. received a call from a representative of Jamul Indian Village stating that the tribe would be deferring to the Pala Band of Mission Indians.

Government-to-government consultation pursuant to Assembly Bill 52 is ongoing and is conducted by County staff. Seven tribes (Manzanita, Pala, Pechanga, Rincon, San Luis Rey, Santa Ysabel, and Soboba) were contacted on March 29, 2019 for the purpose of AB-52 consultation. Three tribes (Pechanga, Rincon, and San Luis Rey) have requested formal consultation. Consultation will be ongoing throughout the environmental processing of this project.

Native American correspondence documents and a table summarizing communication with Native American groups and/or individuals is located in Appendix C.

3.2 SURVEY RESULTS

No prehistoric cultural resources were identified within the Project area, however; one historic period resource consisting of a 1956 single-family residence and associated orchard (P-37-037636) was identified and recorded as 1405 E Mission Road. A DPR 523 Form was completed and submitted to the South Costal Information Center. Debris and trash were noted throughout the Project area, as was an irrigation system. The debris, trash, and irrigation system were all determined to be modern. Cultivated cactus and citrus trees were present south of the residence. The western most section of the Project area was recently burned. Soils consist of Fallbrook sandy loam, Fallbrook-Vista sandy loams, and Placentia sandy loam. Vegetation included non-native grasses and shrubs, remnants of a citrus orchard, and cultivated cactus. Ground visibility ranged between 10 to 100 percent on non-paved areas. The soil across the Project area has been disturbed due to agricultural activities and rodent activity. Several compacted dirt roads transect the Project area. On the north side of the Project area there is a small valley with a storm water channel.

The historic period resource consists of a single-family residence located at 1405 E. Mission Road. The residence is a one-story Ranch-style building constructed in 1956. The T-shaped building features a medium pitched cross-gabled roof with composite shingle. The roof extends into a car port supported by wood poles on the east elevation. The building is clad in horizontal composite siding with decorative brick along the base of the building. The primary entrance is centered on the east elevation and recessed under a porch. The entrance includes a wood door featuring glass windows. The south elevation features aluminum frame sliding windows with decorative faux shutters. The east elevation features an entrance door recessed beneath the car port. The west elevation features a brick chimney. The north elevation features a door centered on the façade and fixed windows. A detached garage with a medium pitched gabled roof and lateral wood siding is located on the property. The detached garage features a large sliding wood door and sliding aluminum windows.

The roof of the main house appears to be a modern replacement. Condition is good and the residence is currently unoccupied. The detached garage is of lower quality construction and is in fair condition with faded and peeling paint and some wood rot.

Portions of the orchard located adjacent to the building, which is comprised of citrus trees, may have been in use as early as 1953; however, much of the orchard appears to have been removed or replanted (NETR
An irrigation system is also present on the property; however, it appears to be modern and consist of modern PVC piping.

No tribal cultural resources were identified within the proposed project site during the archaeological survey. The Native American monitor did not identify any areas of concern.
Figure 4: Overview of building. View North East.

Figure 5: Overview of Project Area. View North
Figure 6: Overview of Project Area. View South
SECTION 4.0 – INTERPRETATION OF RESOURCE IMPORTANCE AND IMPACT IDENTIFICATION

The County of San Diego is the lead review agency for the Project. Accordingly, the built environment resource has been evaluated for eligibility for the CRHR under CEQA Guidelines as well as being evaluated for importance under the County Guidelines. While resources may be recommended as eligible or not eligible for listing on the CRHR, under the County Guidelines all resources are considered “important.” Under the County Guidelines, the “importance” of resources recommended as not eligible for listing on the CRHR can be exhausted through recordation and construction monitoring.

The single-family residence and associated orchard located at address 1405 E. Mission Road (P-37-037636) was identified during the cultural resources survey.

No archaeological sites were identified within the Project area either during the record search, archival research, or the pedestrian archaeological survey.

No information has been obtained through Native American consultation or communication with the Native American monitors during fieldwork that there are any culturally or spiritually significant sites within the Project area. No Traditional Cultural Properties that currently serve religious or other community practices are known to exist within the Project area. During the current archaeological survey, no artifacts or remains were identified or recovered that could be reasonably associated with such practices. No Tribal Cultural Resources were identified or reported from the Native American contacts.

4.1 RESOURCE IMPORTANCE

4.1.1 Native American Heritage Resources / Traditional Cultural Properties

No Native American Heritage Resources or Traditional Cultural Properties were identified within the Project area. Therefore, the Project will not have an effect on Native American Heritage Resources or Traditional Cultural Properties.

4.1.2 P-37-037636

The historical significance of the historic single-family residence located at 1405 E. Mission Road was evaluated by applying the procedure and criteria for the CRHR, the Local Register, and the RPO. The main house is a typical Ranch style, the most common residential building type from the mid-1950s through the 1970s in San Diego (City of San Diego 2007). Primary character-defining features include horizontal massing, single story, and low-sloped gable roof; secondary character-defining features include attached carport, wood shutters, wide brick chimney, and brick cladding below the windows (McAlester 2013).

CRHR Criterion 1/ Local Register Criterion 1: P-37-037636 does not meet CRHR/ Local Register Criterion 1 for association with events that have made a significant contribution to the broad patterns of California’s or San Diego County’s history and cultural heritage. The building located on the parcel is one of many Ranch-style residences constructed within southern California during the mid-twentieth century. The remaining area of P-37-037636 is comprised of active and former orchard land, and is one of many orchards located within Fallbrook and California. Research has yielded no information to suggest that this property is specifically associated with any historical events, including events related to the proliferation of orchard agriculture in the state or is associated with any notable agricultural innovations. Therefore,
this resource is recommended not eligible for the CRHR or the Local Register under Criterion 1.

**CRHR Criterion 2/ Local register Criterion 2:** P-37-037636 does not meet CRHR/ Local Register Criterion 2 for any direct association with lives of persons important in local, state, or national history or the history San Diego County or its communities. Research has yielded no information to suggest that this building is specifically associated with the productive lives of persons important to local, state, or national history. Little information regarding the previous owners or tenants of the property was identified. It is unlikely that persons associated with the property are historically significant or the actions by which they became historically significant are specifically associated with this property. Therefore, this resource is recommended not eligible for the CRHR or the Local Register under Criterion 2.

**CRHR Criterion 3/ Local Register Criterion 3:** P-37-037636 does not meet CRHR/ Local Register Criterion 3 for embodying the distinctive characteristics of a San Diego County region, type, period, and method of construction, or as the work of an important creative individual, or as having high artistic value. The building on the property is a common and unremarkable example of a Ranch style single family residence, and the associated orchard exhibits no indication that it is innovative in design. While the architect and builder of the property have not been identified, it is unlikely that the single-family residence is the work of a master. Therefore, this resource is recommended not eligible for the CRHR or the Local Register under Criterion 3.

**CRHR Criterion 4/ Local Register Criterion 4:** P-37-037636 does not meet CRHR/Local Register Criterion 4 since it is unlikely to yield information important to prehistory or history. This property does not have the potential to broaden our understanding of life in Fallbrook, California or in the region’s agricultural practices. Therefore, this resource is recommended not eligible for the CRHR or the Local Register under Criterion 4.

P-37-037636 does not qualify as a significant historic resource under the RPO. It is not formally determined eligible or listed in the National Register of Historic Places (NRHP), it has not been given an H designator, and is not a one-of-a-kind, locally unique, or regionally unique cultural resource that contains a significant volume and range of data or materials.

P-37-037636 does not meet any of the eligibility criteria for inclusion on the CRHR, the local register or the RPO and is, therefore, not a historic resource for the purposes of CEQA.

**4.2 IMPACT IDENTIFICATION**

P-37-037636 does not meet any of the eligibility criteria for inclusion on the CRHR, the local register, or the RPO and is, therefore, not a historic resource for the purposes of CEQA. No prehistoric or historic resources were identified during research or the field survey. No Tribal Cultural Resources have been identified within the Project area. Therefore, the proposed project has no potential to impact historic or cultural resources.
SECTION 5.0 – MANAGEMENT CONSIDERATIONS

5.1 SIGNIFICANT AND UNAVOIDABLE IMPACTS

No potentially significant prehistoric or historic-period cultural resources were identified during the cultural resource survey of the Project area. One potential resource, P-37-037636 located at 1405 E. Mission Road and the associated orchard, was identified within the project area but did not meet the eligibility criteria for inclusion on the CRHR, the Local Register, or the RPO and is, therefore, not a historic resource for the purposes of CEQA. No archaeological resources were identified during the survey and the terrain throughout the entire Project area has been disturbed extensively by agricultural activities. Consequently, there is little potential for the Project area to contain intact buried cultural deposits. Native American correspondence and the survey failed to identify tribal cultural resources within the Project area. Therefore, there are no unavoidable impacts to cultural or tribal resources associated with this Project.

5.2 MITIGABLE IMPACTS

Due to the poor ground surface visibility within portions of the Project area monitoring of the initial ground disturbance by an archaeologist and Luiseno Native American monitor is recommended to mitigate for potential impacts to cultural resources as outlined below.

Archaeological Monitoring

- Pre-Construction
  - Pre-construction meeting to be attended by the Project Archaeologist and Luiseno Native American monitor(s) to explain the monitoring requirements.

- Construction
  - Monitoring. Both the Project Archaeologist and Luiseno Native American monitor(s) are to be onsite during earth disturbing activities. The frequency and location of monitoring of native soils will be determined by the Project Archaeologist in consultation with the Luiseno Native American monitor(s). Both the Project Archaeologist and Luiseno Native American monitor(s) will evaluate fill soils to ensure that they are negative for cultural resources
  
  - If cultural resources are identified:
    - Both the Project Archaeologist and Luiseno Native American monitor(s) have the authority to divert or temporarily halt ground disturbance operations in the area of the discovery.
    - The Project Archaeologist shall contact the County Archaeologist.
    - The Project Archaeologist in consultation with the County Archaeologist and Luiseno Native American monitor(s) shall determine the significance of discovered resources.
    - Construction activities will be allowed to resume after the County Archaeologist has concurred with the significance evaluation.
Isolates and non-significant deposits shall be minimally documented in the field. Should the isolates and non-significant deposits not be collected by the Project Archaeologist, the Luiseno Native American monitor(s) may collect the cultural material for transfer to a Tribal curation facility or repatriation program.

If cultural resources are determined to be significant, a Research Design and Data Recovery Program shall be prepared by the Project Archaeologist in consultation with the Luiseno Native American monitor(s) and approved by the County Archaeologist. The program shall include reasonable efforts to preserve (avoid) unique cultural resources or Sacred Sites; the capping of identified Sacred Sites or unique cultural resources and placement of development over the cap if avoidance is infeasible; and data recovery for non-unique cultural resources. The preferred option is preservation (avoidance).

- Human Remains.
  - The Property Owner or their representative shall contact the County Coroner and the PDS Staff Archaeologist.
  - Upon identification of human remains, no further disturbance shall occur in the area of the find until the County Coroner has made the necessary findings as to origin. Should the human remains need to be taken offsite for evaluation, they shall be accompanied by a Luiseno Native American monitor.
  - If the remains are determined to be of Native American origin, the Most Likely Descendant (MLD), as identified by the Native American Heritage Commission (NAHC), shall be contacted by the Property Owner or their representative in order to determine proper treatment and disposition of the remains.
  - The immediate vicinity where the Native American human remains are located is not to be damaged or disturbed by further development activity until consultation with the MLD regarding their recommendations as required by Public Resources Code Section 5097.98 has been conducted.
  - Public Resources Code §5097.98, CEQA §15064.5 and Health & Safety Code §7050.5 shall be followed in the event that human remains are discovered.

- **Rough Grading**
  - Upon completion of Rough Grading, a monitoring report shall be prepared identifying whether resources were encountered. A copy of the monitoring report shall be provided to any culturally-affiliated tribe who requests a copy.

- **Final Grading**
  - A final report shall be prepared substantiating that earth-disturbing activities are completed and whether cultural resources were encountered. A copy of the final report shall be submitted to the South Coastal Information Center, and any culturally-affiliated tribe who requests a copy.
Cultural Material Conveyance

- The final report shall include evidence that all prehistoric materials have been curated at a San Diego curation facility or Tribal curation facility that meets federal standards per 36 CFR Part 79, or alternatively have been repatriated to a culturally affiliated tribe.

- The final report shall include evidence that all historic materials have been curated at a San Diego curation facility that meets federal standards per 36 CFR Part 79.

SECTION 7.0 – LIST OF PREPARERS AND PERSONS AND ORGANIZATIONS CONTACTED

7.1 LIST OF PREPARERS

Shelby Castells, MA, RPA, Red Tail Environmental, Director of Archaeology
Ms. Castells is a Secretary of the Interior Professional Qualified Archaeologist and is listed on the Register of Professional Archaeologists. She has a M.A. and over fourteen years of cultural resources management experience dealing with both prehistoric and historic sites. She is on the San Diego County CEQA Consultants list for Archaeological Resources.

Douglas Mengers, MA, RPA, DPPH, Pangis, Inc., Senior Archaeologist/Historian
Mr. Mengers is a Secretary of the Interior Professional Qualified Archaeologist and Historian and is listed on the Register of Professional Archaeologists and the Directory of Professionals in Public History. He has an M.A. in Anthropology, a B.A. in History, and over twelve years of cultural resource management experience including archaeology, history, and architectural history. He is on the San Diego County CEQA Consultants list for Archaeological Resources and Historical Resources.

Rachael Nixon, MA, RPA Managing Cultural Resources Specialist
Ms. Nixon is a Secretary of the Interior Professional Qualified Archaeologist and is listed on the Register of Professional Archaeologists. She has a M.A. and over fifteen years of cultural resources management dealing with both prehistoric and historic sites.

Justin Castells, MA, Project Cultural Resources Specialist/ Senior Architectural Historian
Mr. Castells is a Secretary of the Interior Professional Qualified Architectural Historian. He has a M.A. in History and over six years of professional experience in archaeological surveys, historic preservation, cultural resources management.

Lauren DeOliveira, Cultural Resources Specialist/Project Manager
Ms. DeOliveira is an archaeologist with Chambers Group.

P.J. Stoneburner, Native American Monitor
Mr. Stoneburner is a Luiseño Native American Monitor from Saving Sacred Sites.

**Property Type:** Single-Family residence and orchard  
**Applicable Criteria:** N/A  
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)  
The first significant European settlement of California began during the Mission Period (1769 to 1822) with the founding of the first mission in San Diego and lasted until 1833-1834 when the Mexican secularization laws effectively opened the area to social and economic growth. The establishment of San Gabriel and San Juan Capistrano missions in 1771 and 1776, respectively, had a number of impacts on the region, resulting in the abandonment of some areas and the agricultural and ranching development of other portions. The mission system was dismantled after Mexican governors introduced new secularization acts between 1822 and 1833, thus freeing the Indians from mission control.  
After secularization, the dominance of the large land grant ranchos became established. In 1810, the Spanish government granted the first ranch to Jose Antonio Yorba and his nephew Juan Pablo Peralta. The Mexican government granted ranchos throughout California to Spanish and Hispanic soldiers and settlers (Castillo 1978). Rancho San Orito and Rancho Santa Margarita was granted to Pio and Andres Pico in 1841. Las Flores, which had been one of the few Indian pueblos established by the Mexican government, was acquired by the Pico brothers in 1844, thus creating the Rancho Santa Margarita y Flores. By 1862, the Picos had fallen into financial difficulties and they sold part of the rancho to their brother-in-law, Juan Forster, to avoid losing it to creditors. Forster, after undertaking a number of improvements, died in 1882, and the rancho eventually was transferred to James C. Flood and Richard O'Neill (Thurman 1960:104). During this period, the entire area was almost constantly involved in political and military revolts. The tense situation ended in 1847 when California gained independence from Mexico during the “Bear Flag” revolt. One year later, the United States gained control of the area as a result of the Mexican-American War.

*Required Information
*B10. Significance (Continued):

Although California had been under the control of the United States since 1847, the American Period did not really begin in the study area until 1851, when the Land Act required rancho owners to confirm the ownership of their lands. Many rancho dons lacked funds and legal documents to confirm land ownership. Along with legal problems related to the Land Act and new taxes imposed by the United States, many second-generation dons experienced a disastrous two-year drought (McWilliams 1975:62). The combination of these hardships resulted in many rancho families losing their lands. A steady influx of Euro-Americans was brought in by the railroads. The Euro-Americans expanded commercial and land development primarily in farming and dairy endeavors. In the twentieth century, independent businesses began to dominate the economic strategy, much as they do today.

The first permanent recorded settlement in the Fallbrook area was established in 1869 by the Vital Reche family. They named the new community Fall Brook after their former homestead in Pennsylvania. The presence of the railroad during the 1880s initiated a period of growth for the region and the town site was platted in 1885 (Fallbrook Chamber of Commerce 2017). The economy of Fallbrook was primarily agricultural, with a emphasis on honey production as well as oats and barley (Moramarco 2012). In the early years, dry farming was common for the production of wheat and olives. As water systems were established in the region, avocado production became widespread. The growth of agriculture spurred the development of a railroad line between Fallbrook and the coast in 1890 which led to increased exports, growing demand, and the rapid rise of acreage under production (County of San Diego 2016). By the twentieth century olives became the primary agricultural product of the region followed closely by grapes and citrus. In 1912 the first recorded avocado trees in the area were planted by William Moore. By the 1920s the popularity of avocados had grown and farmers began to significantly increase the number of trees, including Raymond and Mary Wayman who planted 250 acres of avocados and citrus between 1922 and 1932 near the community of Winterwarm. By 1945, avocado trees also covered acres of land in San Luis Rey Heights and Red Mountain Ranch as well as numerous smaller plots. In the mid-50's the Olive Hill and Mormon Hills areas were subdivided, by William Shaw and Jan Wayman respectively, and developed for growing avocados and some citrus. Once water was provided for the Pala Mesa area in the late 50's, over 2,000 more acres were planted with avocados and citrus. The growing number of producing avocado trees led to a need for packing plants. The McDaniel Fruit Co. was started in 1968 and Del Rey Avocado Co. in 1969. By 1972, avocados had become Fallbrook's number one crop (Moramarco 2012). Though the population of Fallbrook continues to increase at a moderate pace, the area remains largely rural and avocados remain the regions' primary crop (Fallbrook Chamber of Commerce 2017).

Based on a review of historic aerials, small portions of the subject property were utilized as orchard land between 1938 and 1946, however the majority of the property appears to have been cleared but undeveloped. By 1953, the subject property was largely utilized as orchard land. By 1964 the residence on the property had been constructed, and portions of the orchard land appear to have fallen into disuse. The area utilized as active orchard fluctuated between 1964 and 2002, but appears to never have achieved the same coverage as prior to 1964 (NETR Online 2017). Research into available sources yielded little information regarding the previous residents of 1405 E. Mission Road.

CRHR and Local Register Evaluation

The historical significance of the subject property was determined by applying the procedure and criteria for the California Register of Historical Resources (CRHR) and the County of San Diego Local Register of Historical Resources (Local Register).

CRHR Criterion 1/Local Register Criterion 1: This resource does not meet CRHR/Local Register Criterion 1 for association with events that have made a significant contribution to the broad patterns of California's or San Diego County's history and cultural heritage. The building located on the parcel is one of many Ranch-style residences constructed within southern California during the mid-twentieth century. The remaining area of the 1405 E. Mission Road is comprised of active and former orchard land, and is one of many orchards located within Fallbrook and California. Research has yielded no information to suggest that this property is specifically associated with any historical events, including events related to the proliferation of orchard agriculture in the state or is associated with any notable agricultural innovations. Therefore, this resource is recommended not eligible for the CRHR or the Local Register under Criterion 1.
CRHR Criterion 2/ Local register Criterion 2: This resource does not meet CRHR/Local Register Criterion 2 for any direct association with lives of persons important in local, state, or national history or the history San Diego County or its communities. Research has yielded no information to suggest that this building is specifically associated with the productive lives of persons important to local, state, or national history. Little information regarding the previous owners or tenants of the property was identified, but it is unlikely that persons associated with the property are historically significant or the actions by which they became historically significant are specifically associated with this property. Therefore, this resource is recommended not eligible for the CRHR or the Local Register under Criterion 2.

CRHR Criterion 3/ Local Register Criterion 3: This resource does not meet CRHR/Local Register Criterion 3 for embodying the distinctive characteristics of a San Diego County region, type, period, and method of construction, or as the work of an important creative individual, or as having high artistic value. The building on the property is a common and unremarkable example of a Ranch style single family residence, and the associated orchard exhibits no indication that it is innovative in design. While the architect and builder of the property have not been identified, it is unlikely that the single-family residence is the work of a master. Therefore, this resource is recommended not eligible for the CRHR or the Local Register under Criterion 3.

CRHR Criterion 4/ Local Register Criterion 4: This resource does not meet CRHR/Local Register Criterion 4 since it is unlikely to yield information important to prehistory or history. It is unlikely that this property has the potential to broaden our understanding of life in Fallbrook, California or in the region’s agricultural practices. Therefore, this resource is recommended not eligible for the CRHR or the Local Register under Criterion 4.

This resource does not meet any of the eligibility criteria for inclusion on the CRHR or the local register and is, therefore, not a historic resource for the purposes of CEQA.
