DEAR Susan Harris-

I'm protesting the proposed
Solar Cell Installation project in
Jacumba, Ca.

We are working on developing
a town that reflects this history & unique
identity & once again we're being
threatened from doing so.

We have a spa that once was
the go to place of movie stars
& people the world over. Then a bypass
was put around the town & the town ~~was~~ lost
business. It really hasn't been the same
since then. But now I 80 highway -
Jacumba Airport - ~~the~~ plans already going
on have promised to bring back
Jacumba as a tourist attraction & place
to live -

Once again we are being threatened.
Some ~~foreign~~ ~~country~~ ^{over} people from
foreign country want to put up a
razor bar idea & once again
threaten our dreams -

Fencing - "Chain link fence" will
provide no eye sore - certainly not
complimenting our vision of what we want our
town to be -

Grounds water which we deposed
Construction will use 140 c /
Water from existing ~~ex~~ project
area wells then only needed to
wash panels 4 X's Annually.

There will be increase risk of
fire hazards for high power equipment -

Others potential for our town
Experiencing a sizeable increase of
maybe 36 degrees warmer. Its called
A potential "heat island effect"

Then there's noise - Humming
24 hours a day along with
panel motors noise & I can
only imagine how our dogs are going
to react to that God help us then!

There is so much wrong with this
Event being throw on our laps & it
seems like Jacumba is the dumping off
site of unsightly things - Organic farm
caused so many goats they actually stopped
the farming. Then they sent every
sexual peevs to Jacumba to live -

We can't seem to realize our dreams
of having our dream of having a really
great town - please stop this
project - let us build.
