## Search the SDNHM Database of San Diego County Collected Plant Specimens

Version: March 2018

Select either or both databases to search: ([Two Databases?](#))

Plant Atlas  Herbarium  Both DBs

Include recently collected specimens, identification not yet verified. (Family column marked \*\*\*)

To search the database: (1) Enter one or more search criteria. Search must include at least one plant name part or a collector's last name. Do not use wildcards. (2) Select a sort order (3) Click the [Display the Search](#) button. Max records returned: 1000.

(3) To download an Excel spreadsheet or Word version of the data, click one of the [Download](#) buttons.

Note: To find the scientific name of a plant when you know the common name, use the [Plant Name Finder](#) in the Database Search menu list.

[Checklist?](#) To retrieve a checklist for one of the Atlas Squares, enter "checklist" in the Family text box and select the Atlas Square using the drop-down Ltr and Num lists. All other entries will be ignored.

This search page is for the San Diego County Plant Atlas project.

To search the complete botany database of the San Diego Natural History Museum use the [California Consortium of Herbaria](#) web site. Select SD Herbarium.

Search for: (select one or more criteria)

Family:  Genus:  Sp:

Collector last name:  Locality includes:

After:  Before:  (Date format mm/dd/yyyy as in 10/23/1978)

Atlas Square =  Ltr  Num  [Atlas Grid Map](#) Sort By:  Family
