Subject: The JVR Solar Project
Date: Friday, November 20, 2020 2:43:32 PM

Hi Susan,

My name is Sarah Misquez and I am a resident of Jacumba Hot Springs who opposes the JVR Solar Project as it is or it's amended mitigations at this time.

I102-1

It will negatively impact our community in a multitude of ways: I feel they/the:

1. They create dirty electricity that ultimately radiates EMF radiation into the home.

I102-2

2. The natural environment habitats and wetlands will substantially change both for people and species.

I102-3

3. Property values will drastically diminish and have already begun as people list for sale and are offered less because their properties are being

I102-4

sought out & bought for storage purposes.

4. We would have localized warming. It is typically 2-3 degrees warmer near a solar farm.

I102-5

5. There can be fires started by the solar farm when there is a malfunction. As this is proposed less than a 1/4 acre on 2 1/2 sides to the community of homes

I102-6

with families and elderly retirees, this is an unacceptable project in its current form, if at all in this location.

6. At certain times there will be a glare off of them that is harsh on the eyes. The proposed panels, although we are assured they would be fenced would still

I102-7

be close enough to the tops of fences for all to see the glare over the fences from our windows since this farm wants to encircle our community on 2 1/2 sides.

In short, I am not against a smaller version of the type of field that lets our community have a natural rural breathing space that we moved here for!

Much larger buffer zones needed, as in 1/2 to 1 acre to shield the community and preserve our aesthetics' of ruralness and help with the

I102-8

watershed/wetlands/ habitats issues.

Better/Updated County fire prevention guidelines could help with #5

Smothering and Killing off our community is not the way to go...

Respectfully,

Sarah Misquez
