Subject: stop solar farm to save endangered species
Date: Monday, November 23, 2020 4:10:42 AM

This area is a migratory bird path and one of the last nesting areas of the tri colored black birds. There are nesting owls and hawks that live theregolden eagleshorny toadswestern tangiers....there are many more animals that depend on that open space to hunt and live. It is sad that you would even consider destroying native animal habitat. So I am telling you do not put in this solar farm because its in the wrong location and it will kill endangered species . I live right next to the location and ride my bike past that area all the time to see all the wild life. So I know. STOP AND PROTECT WILD LIFE THE PLANET DEPENDS ON IT . YOUR CARING CITIZEN AND HOME OWNERRENEE ROSENBERG PLANET PROTECTOR
