

Dear Mrs. Harris

I'm a resident of Jacumba since 1993 and I object to the Solar project for the following reasons:

First reason is all about aesthetics.

We moved here from Chicago to appreciate nature's open Jacumba Wilderness.

The ridge lines have been blighted with High Voltage power lines that are of NO benefit to Jacumba. Do not take away our valley. Wild horses, deer and bobcats would forever be replaced with chainlink fences and barbed wire. I don't believe

that 35 years from now that the valley will be returned to nature. Not when they build large sub-stations, switch yards and battery towers.

Furthermore, I object to the size of the solar panels behind these fences.

At 15' tall and oscillating East to West the reflection will intensify the sunlight for us hikers. The heat island effect increasing temperatures

Our Jacumba Valley is so quiet it gets your attention. We comment on it as we're out and about enjoying our lives here. Humming noise is NOT what I want.

I120-5

I believe our property value will be affected. The only reason to live so far from the city is so you can breathe, walk/hike and enjoy the land, the views.

I120-6

This Solar project will NOT directly benefit Jacumba. This project should be built down in the low desert away from a community that is currently reinventing itself as a destination get away

I120-7

There are health consequences to us, the residents of Jacumba. Humming noise, magnetic field, high heat, blinding reflection, increased traffic and decreased home value.

I120-8

Sincerely
John Admeier
