Ms. Susan Harris

I live in Jacumba and I am appalled by the JVR Energy Park as described in the OCTOBER 2020 Draft Environmental Impact Report.

This project is not compatible with our small rural village nor land uses in the Mountain Empire Sub-Regional Plan. How anyone could think the placement of 300,000 solar cells on 643 acres of the best available real estate in Jacumba is an appropriate use, defies comprehension. Given the project is six times the size of our village, it will introduce equipment-generated noise into our quiet town and negatively impact property values, community character, and the natural environment. Please say no to 12-foot- high solar panels on both sides of scenic Old Highway 80, next to the Jacumba Airport, our senior center and park, and homes. If approved, this project will only accelerate the exodus of residents and businesses away from our community. **County Supervisors must vote for the NO Project Alternative.**
