

Attachment B
CULTURAL RESOURCES DATA
RECOVERY PROGRAM

DATA RECOVERY PROGRAM: [DPLU, PCC] [MA, GP, IP] [DPLU, FEE]

Intent: In order to mitigate for potential impacts to significant cultural resources pursuant to Section 15064.5 of the California Environmental Quality Act (CEQA), which are not determined to be significant pursuant to Section 86.602.o of the Resource Protection Ordinance (RPO), a data recovery program shall be implemented. **Description of Requirement:** Implement the research design detailed in the archaeological extended study "*Data Recovery Research Design for Mitigation of Prehistoric Archaeological Site SDI-9537/H*", prepared by Phil De Barros, dated June 15, 2009. The data recovery plan is an attachment to the Confidential Appendix to cultural report titled: "*Cultural Resources Survey and Evaluation of a 286-acre Parcel in Pauma Valley, the Shadow Run Ranch, North of State Route 76 San Diego County, California*". The implementation of the research design constitutes mitigation for the proposed destruction of archaeology site CA-SDI-9537/H. The data recovery program shall include the following:

- a. **Phase One:** The data recovery program shall comply with research design and performance standards that are in the approved data recovery program in the report referenced above.
- b. Upon completion a letter report shall be prepared, which evaluates the issues of site integrity, data redundancy, spatial and temporal patterning, features, and other relevant topics in order to assess the adequacy of the initial 0.8% percent sample. Based on this assessment, the letter report shall recommend the need for and scope of a second phase of field investigations, not to exceed a total site hand excavated sample of between 0.25% and 0.33% subsurface artifact concentrations. If no artifacts are found, then a phase two data recovery program is not required.
- c. **Phase Two:** Implement Phase Two fieldwork as necessary.
- d. **Phase Two:** For artifacts are found during the phase one and phase two data recovery referenced above, conduct an artifact analysis, which includes the following: lithics, ceramics, faunal, floral, assemblage, and radiocarbon dating as referenced in the report above.
- e. **Curation:** All archaeological materials recovered during both the significance testing and data recovery phases, shall be curated at a San Diego facility that meets federal standards per 36 CFR Part 79, and therefore would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including

title, to an appropriate curation facility within San Diego County, to be accompanied by payment of the fees necessary for permanent curation.

Documentation: Upon completion of the phase one data recovery referenced above, the applicant shall submit the letter report to the [DPLU, PCC] for review and approval. If a phase two data recovery program is required, the applicant shall provide a Final Technical Report from the Principal Investigator to the [DPLU, PCC]. The final report shall include a letter from the curation facility identifying that archaeological materials have been received and that all fees have been paid. **Timing:** Prior to the approval of any plan, issuance of any permit and prior to approval of any map, the data recovery program shall be completed. **Monitoring:** The [DPLU, PCC] shall review the phase one letter from the project archaeologist (PI) for compliance with this condition. If a phase two data recovery program is required, the [DPLU, PCC] shall review the final data recovery program report for compliance with this condition.
