No one knows what the electrical charges or currents are generated from these massive sources generating electricity. When my daughter was in 6th grade, her science fair project was to measure the electromagnetic forces (EMF) emitted from electrical sources. My daughter and I checked out an instrument from SDG&E that measured the electromagnetic forces from all electrical sources. The dial of the instrument registered much higher wherever you put the instrument next to electrical poles, utility substations, electrical wires on telephone wires, etc. We don’t want those massive electromagnetic forces next to our homes.

Another issue creating a public and private nuisance directly to our homes and the community, are the winds. We frequently have wind gusts in excess of 60 mph in Boulevard. Those panels could fly off in the wind and damage our homes or injure people in the area.

Lastly, which company will compensate the property owners like ourselves that would suffer real economic harm from the substantial loss of value of our two properties after a project like this is built literally across the street from us – 50 feet away?

Thank you for your consideration and please do NOT approve these solar projects. The landowners in Boulevard do NOT want these massive industrial projects in their rural community. Projects like this would be best placed in the areas demanding the electricity – on rooftops, on parking garages, on buildings in the city demanding more electricity.
