

Mobile Source Emission Inventory -- Categories

This page last updated on March 2013

Category specific emissions estimates have been developed over the past several years in support of specific agency regulatory objectives. Documentation and emissions estimates are available through the regulatory process; this site provides links to available information for each rulemaking.

On-Road Motor Vehicles:

ARB has released EMFAC2011, which is ARB's official model for estimating emissions from on-road cars, trucks, and buses in California. The easiest way to access information is to start with new web-based databases that provide emissions and emission rate output at various levels of detail.

- [EMFAC2011 Emissions and Emission Rates \(UPDATED January 2013\)](#)
- [EMFAC2011 Idling Emission Rates](#)
- [More Information on EMFAC2011](#)

Over the past 8 years ARB has also developed emissions inventories for regulatory purposes. Historical documentation and methods are posted below. Staff is currently engaged in developing emissions estimates for the Advanced Clean Cars rulemaking.

On-Road Passenger Cars and Light Trucks:

- Advanced Clean Cars
 - [Rulemaking Page](#)

Off-Road Motor Vehicles:

In the past ARB released the OFFROAD model which calculated emissions from off-road sources. The OFFROAD model is now being replaced by category specific methods and inventory models that are being developed for specific regulatory support projects. The categories listed below have been or are being updated with new methods and data. Where available, new inventories and models are provided. If a category is not listed below, OFFROAD2007 is the current tool for estimating emissions. It is available [here](#).

Off-Road Diesel Equipment:

- In-Use Off-Road Equipment (Construction, Industrial, Ground Support and Oil Drilling)
 - **NEW** 2011 Inventory Model: [Instruction](#) and [Model](#)
 - Note: This version of the inventory model for In-Use Off-Road Equipment is identical to the one developed for the 2010 amendments but with activity, population, and average horsepower fields in the output.
