CIRCULATION ELEMENT EXPLANATORY NOTE

This is a Planning Map. It is a schematic representation of the Transportation Corridors and corridor widths required at ultimate development of the County. It is not a construction or financing program. This Plan does not set construction timing. The lines do not differentiate between roads which exist and roads that do not exist.

Line widths showing corridors are not drawn to scale but are exaggerated for ease of reading.

Corridors shown are for any of four degrees of precision of alignment:

- Centerline definitely set and not subject to further movement.
- Centerline set to within a few feet and subject only to final design changes.
- Centerline positioned only approximately by 200 scale feasibility study and subject to planning changes.
- Centerline not studied and shown only schematically to show a functional need.

Persons interested in more precise locations of specific Corridors should contact the Department of Public Works for more specific and detailed information before making planning decisions based on this map.

The Circulation Element maps also may depict routes located within the territories of incorporated cities. These incorporated areas are shown for informational purposes only. The route locations or classifications are not a part of the officially adopted County Circulation Element. County staff will attempt to obtain current information from the appropriate city and make appropriate revisions to the maps on a periodic basis. However, persons desiring accurate and current information are referred to the appropriate city.

The Flood Control Provisions Map (1" = 2 miles) is Sheet 8 of the Circulation Element of the San Diego County General Plan - 1990.
