Reference: Noise Evaluation for the Lilac Hills Ranch Specific Plan (RECON Number 6153)

Dear Mr. Rilling:

This technical letter summarizes the evaluation of the Noise Report for the Lilac Hills Ranch, San Diego County, California (2015 Noise Report), prepared by RECON Environmental, Inc. (RECON), June 2015 and the revised traffic data included in the Traffic Impact Study Addendum (TIS Addendum) prepared by Linscott, Law & Greenspan Engineers (LLG) (LLG 2018). The purpose of this evaluation is to determine if the previous findings are still valid based on the more recent traffic information.

Traffic Data

LLG prepared a TIS Addendum for the Lilac Hills Ranch Specific Plan due to the age of the previous study and requirements of the County of San Diego Guidelines For Determining Significance And Report Format And Content Requirements, Transportation and Traffic (County Traffic Guidelines). According to the County Traffic Guidelines, traffic analysis should “typically [be] based upon traffic counts that are less than two years old.” As the traffic counts in the July 2015 traffic report were conducted in 2012 and are now about five years old, LLG conducted new 2017 traffic counts at all project-affected intersections and segments.

In addition, several new development projects are now proposed within the project vicinity that changed the cumulative traffic conditions in the project area. Therefore, the traffic generated from these additional cumulative development projects was included in the updated analysis. This updated analysis was completed consistent with County Traffic Guidelines, as was the 2015 traffic study.

Traffic Volumes Comparison

The 2012 traffic volumes are compared to the 2017 traffic volumes in Table 1. These changes are not due to the project but rather are a change in the existing setting.

Table 1
Existing Traffic Volume Comparison

Roadway	Segment	Year 2012	Year 2017	Change in Noise Level (CNEL)
E. Dulin Road	Old Highway 395 to SR-76	1,830	920	-3.0
W. Lilac Road	Camino Del Rey to Camino Del Cielo	2,270	2,830	1.0
	Camino Del Cielo to Old Highway 395	2,140	2,260	0.2

CNEL = community noise equivalent level

I-15 = Interstate 15; SR-76 = State Route 76; SB = southbound; NB = northbound

The changes presented in Table 1 can affect the findings of the off-site noise impact analysis prepared for the project. However, the changes are not uniform, with some roadway segments showing a doubling or halving of traffic volumes. Due to the traffic volume changes, a simple evaluation of the volume changes does not provide sufficient information to determine if the changes in the existing condition have changed the findings of the 2015 Noise Report. Thus, to verify the findings in the 2015 Noise Report, the new traffic data was modeled for the roadways shown in Table 1.

Modeling and Methodologies

Existing Plus Project (Direct Impacts)

The revised noise modeling for the direct project impacts are summarized in Table 2. The off-site traffic noise impacts are based on the calculated change in noise levels due to the increase or decrease in traffic volumes from the existing condition.

As stated in the 2015 Noise Report, a substantial project-level noise increase is defined as an increase of 10 community noise equivalent level (CNEL) above existing conditions. In addition, the County Noise Guidelines include a statement that a “doubling of sound energy” is considered a significant impact at a “documented noisy site.” A doubling of sound energy is equivalent to a 3 CNEL increase. A documented noisy site is a location with a Noise Sensitive Land Use (NSLU) that is currently exposed to, or would in the future, noise levels in excess of the compatibility standard. Thus, a substantial increase is defined as a 10 CNEL increase, or greater over existing noise levels when existing and future noise levels are below the County’s CNEL standard for a specific land use, or a 3 CNEL increase when existing or future noise levels exceed the County’s standard.

Cumulative Plus Project (Cumulative Impacts)

Similar to direct traffic noise impacts, a cumulative traffic noise impact occurs when the noise level would exceed the applicable standard and a substantial noise level increase over existing noise occurs (Table 3). The difference between direct and cumulative traffic noise impacts is that the cumulative impacts are caused by project traffic in combination with traffic from other closely related past, present, and reasonably foreseeable future projects rather than project-only traffic. The project’s contribution to the future noise level is determined by comparing the future with project and no project conditions, and a determination is made whether the project’s contribution is “cumulatively considerable.” According to the County Noise Guidelines, a cumulative increase occurs along a roadway segment when cumulative noise levels result in a 10 CNEL increase, or greater over existing noise levels when existing and future noise levels are below the County’s CNEL standard for a specific land use, or a 3 CNEL increase when existing or future noise levels exceed the County’s standard. When the cumulative condition results in a substantial noise increase, a project’s contribution is not considered cumulatively considerable when the project’s contribution to a substantial increase is greater than 1 CNEL, which is defined as an increase that raises the noise level by 2 CNEL (County of San Diego 2009a; RECON 2015).

CNEL = community noise equivalent level; I-15 = Interstate 15; SR-76 = State Route 76; SB = southbound;
NB = northbound

Analysis of Effects

Based on Tables 2 and 3, the project would result in potentially substantial noise level increases over existing conditions on these segments:

- E. Dulin Road:
 - Old Highway 395 to State Route 76 (SR-76)
- West Lilac Road:
 - Old Highway 395 to West Main Street
 - West Main Street to East Main Street
 - Covey Lane to Circle R Drive
 - Circle R Drive to Lilac Road

As no additional traffic information was provided for the following segments, the project would continue to result in substantial increase along these roadway segments as identified in the 2015 Noise Report.

- Covey Lane
 - Eastern Project Boundary to West Lilac Road
- Mountain Ridge Road
 - Southern Project Boundary to Circle R Drive
- Lilac Hills Ranch Road
 - Between Phases 3 and 4

In addition, the following segments would no longer be exposed to substantial increases in noise levels.

- Old Highway 395
 - E. Dulin Road to West Lilac Road
 - West Lilac Road to Interstate 15 (I-15) NB Ramps

With the exception of the segment of West Lilac Road between Circle R Drive and Lilac Road, all affected segments that may be exposed to potentially substantial increases in noise levels were also identified in the 2015 Noise Report. Each of these segments is analyzed in detail in the following discussion.

E. Dulin Road

The potential noise level increases along E. Dulin Road were also identified in the 2015 Noise Report with a 4 CNEL increase and a noise level of 65 CNEL at the receiver. Based on the revised modeling, the predicted increase would be 1 CNEL higher than analyzed in the 2015 Noise Report; however, the predicted noise level at the receiver would be 2 CNEL lower than predicted in the 2015 Noise Report. Thus, even while the noise level increase would be 1 decibel higher, the noise level at the NSLU would be 1 CNEL lower than in the 2015 Noise Report. Therefore, noise levels at the NSLU areas, i.e., backyards, would range from 56 to 58 CNEL and future noise levels would not exceed the County's "acceptable" level for Category A land uses (60 CNEL), and the predicted 5 CNEL increase in traffic noise would be considered a less than substantial increase in ambient noise levels. Therefore, both direct and cumulative traffic noise impacts along E. Dulin Road would remain **less than significant**.

West Lilac Road

As stated in the 2015 Noise Report, two off-site NSLUs are located along West Lilac Road between Old Highway 395 and Main Street. One is a residence, 8269 West Lilac Road, located approximately 650 feet west of I-15 and approximately 250 feet south of West Lilac Road. The nearest exterior use area of the second, Kamp Kuper, is located approximately 890 feet east of I-15, adjacent to the east of the project site and approximately 340 feet south of West Lilac Road. At these particular locations noise levels are dominated by traffic noise from I-15 and noise levels from the I-15 traffic would be 69 and 67 CNEL at the residence and at Kamp Kuper, respectively, while noise levels from West Lilac Road would be 58 and 56 at the residence and Kamp Kuper, respectively. The project would not increase traffic noise levels associated

with the I-15 by a perceptible amount (< 1 decibel), and the predicted noise level increase from West Lilac Road would be **less than significant** as the direct and cumulative traffic noise generated by West Lilac Road would not affect the ambient noise level at the residence or at Kamp Kuper.

Substantial noise level increases would also occur along West Lilac Road between West Main Street and East Main Street, Covey Lane and Circle R Drive, and Circle R Drive to Lilac Road. However, as with other development in this area, due to the large residential lots located along West Lilac Road, substantial increases in noise levels may not result in significant impacts at existing NSLU locations, i.e., exterior use areas. The 2015 Noise Report conducted detailed modeling of the off-site receivers along West Lilac Road and determined the noise levels at the off-site NSLU along West Lilac Road would not exceed the County standard of 60 CNEL or actual increases would be less than 3 CNEL. Due to the potential impacts along West Lilac Road and the potential for a substantial increase along West Lilac Road between Lilac Road and West Main Street, a similar detailed traffic noise modeling exercise was conducted to determine the noise levels at surrounding NSLU, and also to determine the actual increase when including the consideration of affected roads in the immediate area. The modeling receiver locations are listed along with the noise level standard and assessor parcel number for identification purposes (Table 4).

CNEL = community noise equivalent level					

Table 5 provides the existing and Cumulative plus Project traffic noise levels and compares the noise levels to determine the noise level increases at these NSLU. Receiver locations are shown in Figures 1 through 9.

Based on the noise levels shown in Table 5, no NSLU would be exposed to a substantial cumulative noise level increase. That is, no NSLU along West Lilac Road between West Main Street and East Main Street, Covey Lane and Circle R Drive, and Circle R Drive to Lilac Road would be exposed to a 10 CNEL increase over existing noise levels, or where noise levels exceed the County's compatible noise level, noise level increases would not exceed 3 A-weighted decibels. Detailed modeling input and output data sheets are included in Attachment 1.

Table 5
Existing and Cumulative Plus Project Noise Levels at Off-Site Local Receiver Locations (CNEL)
