Honorable Commission Members-My husband and I live in the Coastal Zone and I am involved in attempting to respond to the greatest threat to the quality of life in San Diego--climate change. As the most recent Intergovernmental Panel on Climate Change (IPCC) makes clear, extreme climate and a rise in sea levels is imminent, and in fact is already happening. For that reason, it is imperative that resilience efforts be implemented throughout the coastal zone of California. Because all residents of that zone are faced with a common threat, and are may be particularly interested in addressing the threats of climate change, it makes sense to include all of the coastal zone in one Supervisorial District.
