High tide flooding days will increase fifty-fold in the next ten years due to sea level rise and storm surge. Cities are in serious need of guidance, policy support, and funding to tackle difficult questions around how to respond to rising seas. As our beaches disappear, San Diego needs a Coastal Supervisor to make our coastlines more resilient.

Sand is already scarce around the region and many cities spend a ton of time and effort looking for new sand sources. A Coastal Supervisor will help the region coordinate on sand management.

All of San Diego's watersheds flow towards the Pacific Ocean. A Coastal Supervisor can help manage the vast amounts of runoff that is collected throughout the County and ends up polluting our surf and swim spots.

Thank you, Lori Bryant
