Appendix E

Energy Appendix

Mt. Etna Community Plan Amendment and Rezone Project Energy Summary

Construction Fuel Consumption Summary

	gallons		
Year	Diesel	Gas	# Years
Total Compressed	66,442	23,610	1.75
Annual Average	37,967	13,491	

*Note: Mitigated and unmitigated construction emissions of CO₂ are identical

*Note: 10 years is used rather than 20 (buildout time) because the worst case scenario assumes 10% construction per year)

State Usage (2018)^{1,2}	3,073,917,507	15,517,383,271
Project % State	0.0012%	0.0001%
County Usage³	92,000,000	1,208,000,000
Project % County	0.0413%	0.0011%

Construction	Total Gallons	Annual Comp	
Onsite Equipment	39,369	22,497	diesel
Onsite Equipment	0	0	gasoline
Haul Trucks	7,336	4,192	diesel

Sources:

Electricity Intensity Factors - California Emissions Estimator Model (CalEEMod).

Estimated construction water use assumed to be generally equivalent to landscape irrigation, based on a factor of 20.94 gallons per year per square foot of

landscaped area within the Los Angeles area (Mediterranean climate), which assumes high water demand landscaping materials and an irrigation system efficiency of 85%.

Factor is therefore $(20.94 \text{ GAL/SF/year}) \times (43,560 \text{ SF/acre}) / (365 \text{ days/year}) / (0.85) = 2,940 \text{ gallons/acre/day}$, rounded up to 3,000 gallons/acre/day.

(U.S. Department of Energy, Energy Efficiency & Renewable Energy, Federal Energy Management Program. "Guidelines for Estimating Unmetered Landscaping Water Use." July 2010. Page 12, Table 4 - Annual Irrigation Factor – Landscaped Areas with High Water Requirements).

Mt. Etna Community Plan Amendment and Rezone Project - Statewide , Annual

**Mt. Etna Community Plan Amendment and Rezone Project
Statewide , Annual**

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Enclosed Parking with Elevator	0.00	Space	0.00	0.00	0
Parking Lot	404.00	Space	1.21	161,600.00	0
Apartments Mid Rise	404.00	Dwelling Unit	2.88	404,000.00	1281

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.6	Precipitation Freq (Days)	40
Climate Zone	7	Operational Year			2022

Utility Company San Diego Gas & Electric

CO2 Intensity (lb/MW/hr)	720.49	CH4 Intensity (lb/MW/hr)	0.029	N2O Intensity (lb/MW/hr)	0.006
---------------------------------	--------	---------------------------------	-------	---------------------------------	-------

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Adjusted windspeed andprecipitation for SD APCD

Land Use - Acreage adjusted for site area

Construction Phase - Based on client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Trips and VMT - Based on truck size of 12 CY provided by client

Demolition -

Grading - Client given inputs

Architectural Coating - See construction assumptions

Energy Use -

Construction Off-road Equipment Mitigation - Tier 4 Final Mitigation

3.1 Mitigation Measures Construction

- Use Cleaner Engines for Construction Equipment
- Use Soil Stabilizer
- Water Exposed Area
- Reduce Vehicle Speed on Unpaved Roads

3.2 Demolition - 2021

Unmitigated Construction On-Site

Mt. Etna Community Plan Amendment and Rezone Project - Statewide , Annual

Mt. Etna Community Plan Amendment and Rezone Project Statewide , Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Enclosed Parking with Elevator	0.00	Space	0.00	0.00	0
Parking Lot	404.00	Space	1.21	161,600.00	0
Apartments Mid Rise	404.00	Dwelling Unit	2.88	404,000.00	1281

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.6	Precipitation Freq (Days)	40
Climate Zone	7			Operational Year	2022

Utility Company San Diego Gas & Electric

CO2 Intensity (lb/MW/hr)	720.49	CH4 Intensity (lb/MW/hr)	0.029	N2O Intensity (lb/MW/hr)	0.006
---------------------------------	--------	---------------------------------	-------	---------------------------------	-------

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Changed for SD County

Land Use - Client given inputs

Vehicle Trips - Taken from TIA prepared by Chen+Ryan

Vehicle Emission Factors - EMFAC2017 Factors

Woodstoves - No wood fireplaces

Area Coating -

Energy Use -

Area Mitigation -

Water Mitigation -

Waste Mitigation - Based on SD Zero Waste Plan goal of 75% diversion by 2020
 Fleet Mix - EMFAC2017 fleet mix

F-2 CAP Checklist

CLIMATE ACTION PLAN CONSISTENCY CHECKLIST INTRODUCTION

In December 2015, the City adopted a Climate Action Plan (CAP) that outlines the actions that City will undertake to achieve its proportional share of State greenhouse gas (GHG) emission reductions. The purpose of the Climate Action Plan Consistency Checklist (Checklist) is to, in conjunction with the CAP, provide a streamlined review process for proposed new development projects that are subject to discretionary review and trigger environmental review pursuant to the California Environmental Quality Act (CEQA).¹

Analysis of GHG emissions and potential climate change impacts from new development is required under CEQA. The CAP is a plan for the reduction of GHG emissions in accordance with CEQA Guidelines Section 15183.5. Pursuant to CEQA Guidelines Sections 15064(h)(3), 15130(d), and 15183(b), a project's incremental contribution to a cumulative GHG emissions effect may be determined not to be cumulatively considerable if it complies with the requirements of the CAP.

This Checklist is part of the CAP and contains measures that are required to be implemented on a project-by-project basis to ensure that the specified emissions targets identified in the CAP are achieved. Implementation of these measures would ensure that new development is consistent with the CAP's assumptions for relevant CAP strategies toward achieving the identified GHG reduction targets. Projects that are consistent with the CAP as determined through the use of this Checklist may rely on the CAP for the cumulative impacts analysis of GHG emissions. Projects that are not consistent with the CAP must prepare a comprehensive project-specific analysis of GHG emissions, including quantification of existing and projected GHG emissions and incorporation of the measures in this Checklist to the extent feasible. Cumulative GHG impacts would be significant for any project that is not consistent with the CAP.

The Checklist may be updated to incorporate new GHG reduction techniques or to comply with later amendments to the CAP or local, State, or federal law.

¹ Certain projects seeking ministerial approval may be required to complete the Checklist. For example, projects in a Community Plan Implementation Overlay Zone may be required to use the Checklist to qualify for ministerial level review. See Supplemental Development Regulations in the project's community plan to determine applicability.

This page intentionally left blank

CAP CONSISTENCY CHECKLIST SUBMITTAL APPLICATION

- ❖ The Checklist is required only for projects subject to CEQA review.²
- ❖ If required, the Checklist must be included in the project submittal package. Application submittal procedures can be found in [Chapter 11: Land Development Procedures](#) of the City's Municipal Code.
- ❖ The requirements in the Checklist will be included in the project's conditions of approval.
- ❖ The applicant must provide an explanation of how the proposed project will implement the requirements described herein to the satisfaction of the Planning Department.

Application Information

Contact Information

Project No./Name: _____

Property Address: _____

Applicant Name/Co.: _____

Contact Phone: _____ Contact Email: _____

Was a consultant retained to complete this checklist? Yes No If Yes, complete the following

Consultant Name: _____ Contact Phone: _____

Company Name: _____ Contact Email: _____

Project Information

1. What is the size of the project (acres)? _____

2. Identify all applicable proposed land uses:

Residential (indicate # of single-family units): _____

Residential (indicate # of multi-family units): _____

Commercial (total square footage): _____

Industrial (total square footage): _____

Other (describe): _____

3. Is the project or a portion of the project located in a Transit Priority Area? Yes No

4. Provide a brief description of the project proposed:

² Certain projects seeking ministerial approval may be required to complete the Checklist. For example, projects in a Community Plan Implementation Overlay Zone may be required to use the Checklist to qualify for ministerial level review. See Supplemental Development Regulations in the project's community plan to determine applicability.

CAP CONSISTENCY CHECKLIST QUESTIONS

Step 1: Land Use Consistency

The first step in determining CAP consistency for discretionary development projects is to assess the project's consistency with the growth projections used in the development of the CAP. This section allows the City to determine a project's consistency with the land use assumptions used in the CAP.

Step 1: Land Use Consistency		
Checklist Item (Check the appropriate box and provide explanation and supporting documentation for your answer)	Yes	No
A. Is the proposed project consistent with the existing General Plan and Community Plan land use and zoning designations?; ³ <u>OR</u>		
B. If the proposed project is not consistent with the existing land use plan and zoning designations, and includes a land use plan and/or zoning designation amendment, would the proposed amendment result in an increased density within a Transit Priority Area (TPA) ⁴ and implement CAP Strategy 3 actions, as determined in Step 3 to the satisfaction of the Development Services Department?; <u>OR</u> ,	<input type="checkbox"/>	<input type="checkbox"/>
C. If the proposed project is not consistent with the existing land use plan and zoning designations, does the project include a land use plan and/or zoning designation amendment that would result in an equivalent or less GHG-intensive project when compared to the existing designations?		

If **"Yes,"** proceed to Step 2 of the Checklist. For question B above, complete Step 3. For question C above, provide estimated project emissions under both existing and proposed designation(s) for comparison. Compare the maximum buildout of the existing designation and the maximum buildout of the proposed designation.

If **"No,"** in accordance with the City's Significance Determination Thresholds, the project's GHG impact is significant. The project must nonetheless incorporate each of the measures identified in Step 2 to mitigate cumulative GHG emissions impacts unless the decision maker finds that a measure is infeasible in accordance with CEQA Guidelines Section 15091. Proceed and complete Step 2 of the Checklist.

³ This question may also be answered in the affirmative if the project is consistent with SANDAG Series 12 growth projections, which were used to determine the CAP projections, as determined by the Planning Department.

⁴ This category applies to all projects that answered in the affirmative to question 3 on the previous page: Is the project or a portion of the project located in a transit priority area.

Step 2: CAP Strategies Consistency

The second step of the CAP consistency review is to review and evaluate a project's consistency with the applicable strategies and actions of the CAP. Step 2 only applies to development projects that involve permits that would require a certificate of occupancy from the Building Official or projects comprised of one and two family dwellings or townhouses as defined in the California Residential Code and their accessory structures.⁵ All other development projects that would not require a certificate of occupancy from the Building Official shall implement Best Management Practices for construction activities as set forth in the [Greenbook](#) (for public projects).

Step 2: CAP Strategies Consistency			
Checklist Item (Check the appropriate box and provide explanation for your answer)	Yes	No	N/A
Strategy 1: Energy & Water Efficient Buildings			
<p>1. <i>Cool/Green Roofs.</i></p> <ul style="list-style-type: none"> • Would the project include roofing materials with a minimum 3-year aged solar reflection and thermal emittance or solar reflection index equal to or greater than the values specified in the voluntary measures under California Green Building Standards Code (Attachment A)?; <u>OR</u> • Would the project roof construction have a thermal mass over the roof membrane, including areas of vegetated (green) roofs, weighing at least 25 pounds per square foot as specified in the voluntary measures under California Green Building Standards Code?; <u>OR</u> • Would the project include a combination of the above two options? <p>Check "N/A" only if the project does not include a roof component.</p> <div style="border: 1px solid black; height: 150px; width: 100%; margin-top: 10px;"></div>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

⁵ Actions that are not subject to Step 2 would include, for example: 1) discretionary map actions that do not propose specific development, 2) permits allowing wireless communication facilities, 3) special events permits, 4) use permits or other permits that do not result in the expansion or enlargement of a building (e.g., decks, garages, etc.), and 5) non-building infrastructure projects such as roads and pipelines. Because such actions would not result in new occupancy buildings from which GHG emissions reductions could be achieved, the items contained in Step 2 would not be applicable.

2. *Plumbing fixtures and fittings*

With respect to plumbing fixtures or fittings provided as part of the project, would those low-flow fixtures/appliances be consistent with each of the following:

Residential buildings:

- Kitchen faucets: maximum flow rate not to exceed 1.5 gallons per minute at 60 psi;
- Standard dishwashers: 4.25 gallons per cycle;
- Compact dishwashers: 3.5 gallons per cycle; and
- Clothes washers: water factor of 6 gallons per cubic feet of drum capacity?

Nonresidential buildings:

- Plumbing fixtures and fittings that do not exceed the maximum flow rate specified in [Table A5.303.2.3.1 \(voluntary measures\) of the California Green Building Standards Code](#) (See Attachment A); and
- Appliances and fixtures for commercial applications that meet the provisions of [Section A5.303.3 \(voluntary measures\) of the California Green Building Standards Code](#) (See Attachment A)?

Check "N/A" only if the project does not include any plumbing fixtures or fittings.

Strategy 3: Bicycling, Walking, Transit & Land Use

3. *Electric Vehicle Charging*

- Multiple-family projects of 17 dwelling units or less: Would 3% of the total parking spaces required, or a minimum of one space, whichever is greater, be provided with a listed cabinet, box or enclosure connected to a conduit linking the parking spaces with the electrical service, in a manner approved by the building and safety official, to allow for the future installation of electric vehicle supply equipment to provide electric vehicle charging stations at such time as it is needed for use by residents?
- Multiple-family projects of more than 17 dwelling units: Of the total required listed cabinets, boxes or enclosures, would 50% have the necessary electric vehicle supply equipment installed to provide active electric vehicle charging stations ready for use by residents?
- Non-residential projects: Of the total required listed cabinets, boxes or enclosures, would 50% have the necessary electric vehicle supply equipment installed to provide active electric vehicle charging stations ready for use?

Check "N/A" only if the project is a single-family project or would not require the provision of listed cabinets, boxes, or enclosures connected to a conduit linking the parking spaces with electrical service, e.g., projects requiring fewer than 10 parking spaces.

Strategy 3: Bicycling, Walking, Transit & Land Use

(Complete this section if project includes non-residential or mixed uses)

4. *Bicycle Parking Spaces*

Would the project provide more short- and long-term bicycle parking spaces than required in the City's Municipal Code ([Chapter 14, Article 2, Division 5](#))?⁶

Check "N/A" only if the project is a residential project.

⁶ Non-portable bicycle corrals within 600 feet of project frontage can be counted towards the project's bicycle parking requirements.

5. *Shower facilities*

If the project includes nonresidential development that would accommodate over 10 tenant occupants (employees), would the project include changing/shower facilities in accordance with the voluntary measures under the [California Green Building Standards Code](#) as shown in the table below?

Number of Tenant Occupants (Employees)	Shower/Changing Facilities Required	Two-Tier (12" X 15" X 72") Personal Effects Lockers Required
0-10	0	0
11-50	1 shower stall	2
51-100	1 shower stall	3
101-200	1 shower stall	4
Over 200	1 shower stall plus 1 additional shower stall for each 200 additional tenant-occupants	1 two-tier locker plus 1 two-tier locker for each 50 additional tenant-occupants

Check "N/A" only if the project is a residential project, or if it does not include nonresidential development that would accommodate over 10 tenant occupants (employees).

6. *Designated Parking Spaces*

If the project includes a nonresidential use in a TPA, would the project provide designated parking for a combination of low-emitting, fuel-efficient, and carpool/vanpool vehicles in accordance with the following table?

Number of Required Parking Spaces	Number of Designated Parking Spaces
0-9	0
10-25	2
26-50	4
51-75	6
76-100	9
101-150	11
151-200	18
201 and over	At least 10% of total

This measure does not cover electric vehicles. See Question 4 for electric vehicle parking requirements.

Note: Vehicles bearing Clean Air Vehicle stickers from expired HOV lane programs may be considered eligible for designated parking spaces. The required designated parking spaces are to be provided within the overall minimum parking requirement, not in addition to it.

Check "N/A" only if the project is a residential project, or if it does not include nonresidential use in a TPA.

7. *Transportation Demand Management Program*

If the project would accommodate over 50 tenant-occupants (employees), would it include a transportation demand management program that would be applicable to existing tenants and future tenants that includes:

At least one of the following components:

- Parking cash out program
- Parking management plan that includes charging employees market-rate for single-occupancy vehicle parking and providing reserved, discounted, or free spaces for registered carpools or vanpools
- Unbundled parking whereby parking spaces would be leased or sold separately from the rental or purchase fees for the development for the life of the development

And at least three of the following components:

- Commitment to maintaining an employer network in the SANDAG iCommute program and promoting its RideMatcher service to tenants/employees
- On-site carsharing vehicle(s) or bikesharing
- Flexible or alternative work hours
- Telework program
- Transit, carpool, and vanpool subsidies
- Pre-tax deduction for transit or vanpool fares and bicycle commute costs
- Access to services that reduce the need to drive, such as cafes, commercial stores, banks, post offices, restaurants, gyms, or childcare, either onsite or within 1,320 feet (1/4 mile) of the structure/use?

Check "N/A" only if the project is a residential project or if it would not accommodate over 50 tenant-occupants (employees).

Step 3: Project CAP Conformance Evaluation (if applicable)

The third step of the CAP consistency review only applies if Step 1 is answered in the affirmative under option B. The purpose of this step is to determine whether a project that is located in a TPA but that includes a land use plan and/or zoning designation amendment is nevertheless consistent with the assumptions in the CAP because it would implement CAP Strategy 3 actions. In general, a project that would result in a reduction in density inside a TPA would not be consistent with Strategy 3. The following questions must each be answered in the affirmative and fully explained.

1. Would the proposed project implement the General Plan's City of Villages strategy in an identified Transit Priority Area (TPA) that will result in an increase in the capacity for transit-supportive residential and/or employment densities?

Considerations for this question:

- Does the proposed land use and zoning designation associated with the project provide capacity for transit-supportive residential densities within the TPA?
- Is the project site suitable to accommodate mixed-use village development, as defined in the General Plan, within the TPA?
- Does the land use and zoning associated with the project increase the capacity for transit-supportive employment intensities within the TPA?

2. Would the proposed project implement the General Plan's Mobility Element in Transit Priority Areas to increase the use of transit?

Considerations for this question:

- Does the proposed project support/incorporate identified transit routes and stops/stations?
- Does the project include transit priority measures?

3. Would the proposed project implement pedestrian improvements in Transit Priority Areas to increase walking opportunities?

Considerations for this question:

- Does the proposed project circulation system provide multiple and direct pedestrian connections and accessibility to local activity centers (such as transit stations, schools, shopping centers, and libraries)?
- Does the proposed project urban design include features for walkability to promote a transit supportive environment?

4. Would the proposed project implement the City of San Diego's Bicycle Master Plan to increase bicycling opportunities?

Considerations for this question:

- Does the proposed project circulation system include bicycle improvements consistent with the Bicycle Master Plan?
- Does the overall project circulation system provide a balanced, multimodal, "complete streets" approach to accommodate mobility needs of all users?

5. Would the proposed project incorporate implementation mechanisms that support Transit Oriented Development?

Considerations for this question:

- Does the proposed project include new or expanded urban public spaces such as plazas, pocket parks, or urban greens in the TPA?
- Does the land use and zoning associated with the proposed project increase the potential for jobs within the TPA?
- Do the zoning/implementing regulations associated with the proposed project support the efficient use of parking through mechanisms such as: shared parking, parking districts, unbundled parking, reduced parking, paid or time-limited parking, etc.?

6. Would the proposed project implement the Urban Forest Management Plan to increase urban tree canopy coverage?

Considerations for this question:

- Does the proposed project provide at least three different species for the primary, secondary and accent trees in order to accommodate varying parkway widths?
- Does the proposed project include policies or strategies for preserving existing trees?
- Does the proposed project incorporate tree planting that will contribute to the City's 20% urban canopy tree coverage goal?

Responses to San Diego CAP Checklist Step 3 Questions

The proposed Clairemont Mesa Community Plan Amendment is within a Transit Priority Area (TPA), allows for increased density affordable housing, and is consistent with assumptions in the CAP, as it implements CAP Strategy 3 actions, as demonstrated by the following response to Cap Checklist Section 3 questions:

- 1) **Would the proposed project implement the General Plan’s City of Villages strategy in an identified Transit Priority Area (TPA) that will result in an increase in the capacity for transit-supportive residential and/or employment densities?**

Yes. According to the City’s General Plan Land Use Element, the goal of the City of Villages strategy is to provide mixed-use villages located throughout the City connected by high-quality transit (City of San Diego 2015a). The project site is located in a TPA and proposes a Community Plan Amendment to the Clairemont Mesa Community Plan to allow for increased capacity for transit-supportive and affordable multifamily residential densities and 1,500 square feet of non-residential ground floor use. A total of 404 affordable multifamily residential units are proposed for future development on the 4.09-acre site of the former San Diego Sheriff’s Crime Lab site.

- 2) **Would the proposed project implement the General Plan’s Mobility Element in Transit Priority Areas to increase the use of transit?**

Yes. According to the City’s Planning Department, “transit priority area” means an area within one-half mile of a major transit stop that is existing or planned (City of San Diego 2019). The City’s General Plan Mobility Element encourages more people to live and work within walking distance of transit (City of San Diego 2015b). The General Plan supports transit through policies supportive of transit and pedestrian-oriented design, and implementation of transit priority measures. The proposed Community Plan Amendment would implement the General Plan Mobility Element in a TPA to increase the use of transit. A total of 404 affordable multifamily residential units are proposed for future development on the project site. Existing transit routes and stops are located within one mile of the project site, including MTS Bus Route 27 and 41. MTS Bus Route 27’s Balboa Avenue and Genesee Avenue bus stop and MTS Bus Route 41’s Genesee Avenue and Mt Etna Drive bus stop are both located within 400 feet of the project site. As detailed in the Community Plan Amendment Supplemental Development Regulation (SDR) 13, the proposed project’s transportation amenities would be intended to encourage alternative modes of transportation and facilitate non-vehicular access to everyday activities. Future improvements at the project site could include transit oriented improvements on street frontages or an on-site kiosk or information center with multi-modal wayfinding information

and transit information, as determined by the City Engineer.

3) **Would the proposed project implement pedestrian improvements in Transit Priority Areas to increase walking opportunities?**

Yes. The General Plan Mobility Element includes the following goals: for the City to have a complete, functional, and interconnected pedestrian network, that is accessible to pedestrians of all abilities; and to have greater walkability achieved through pedestrian-friendly street, site, and building design (City of San Diego 2015b). The streets immediately surrounding the project site all include sidewalks and all of the signalized intersections within the vicinity include striped crosswalks, pedestrian signal heads, and ADA-compliant ramps, where crossings are allowed. Pedestrian improvements and design guidelines are proposed with the Community Plan Amendment to facilitate efficient pedestrian movement in and around the project site and with existing and proposed adjacent land uses. As detailed in the Community Plan Amendment SDR 6, design guidelines include, but are not limited to, setback requirements, unobstructed and lighted ADA accessible paths, and sidewalk improvements along Mt. Etna Drive and Genesee Avenue.

4) **Would the proposed project implement the City of San Diego's Bicycle Master Plan to increase bicycling opportunities?**

Yes. The City of San Diego's Bicycle Master Plan includes the following goals: a city where bicycling is a viable travel choice, particularly for trips of less than five miles; a safe and comprehensive local and regional bikeway network; and environmental quality, public health, recreation and mobility benefits through increased bicycling (City of San Diego 2013). There are currently Class II bike lanes provided on both sides of Genesee Avenue. The Class II bike lane adjacent to the project site on the east has been painted green for high visibility as the lane approaches Genesee Avenue and Balboa Avenue intersection to the south and sits adjacent to the right turn pocket. The proposed Community Plan Amendment includes multi-modal mobility bicycle features to encourage bicycle riding and storage, including dedicated bicycle lanes and parking areas.

5) **Would the proposed project incorporate implementation mechanisms that support Transit Oriented Development?**

Yes. The Community Plan Amendment encourages transit oriented development. As detailed above, the project site is adjacent to existing transit routes and future residents would be encouraged to utilize available transit (as detailed in the Community Plan Amendment SDR 13). In addition, at least 1,500 square feet of non-residential ground floor use would be part of the future development, which would include employment opportunities within the TPA. The non-residential ground floor uses would facilitate multi-modal access and community connectivity (Community Plan Amendment SDR 9).

6) **Would the proposed project implement the Urban Forest Management Plan to increase urban tree canopy coverage?**

Yes. The City's Urban Forest Management Plan includes goals to establish and maintain optimal levels of tree cover, age, and species diversity to maximize ecosystem benefits provided by urban trees; and to incorporate street tree plans and urban forest management in community plan updates (City of San Diego 2015c). The Community Plan Amendment SDR 7 includes landscape and streetscape development standards and design guidelines to require tree planting to increase urban tree canopy coverage. Street trees would be planted and maintained along public street frontages to provide a shaded pedestrian environment and give a pedestrian character to the street.

As determined in the above Step 3 answers, the proposed Clairemont Mesa Community Plan Amendment is consistent with the CAP.

CLIMATE ACTION PLAN CONSISTENCY CHECKLIST

ATTACHMENT A

This attachment provides performance standards for applicable Climate Action Plan (CAP) Consistency Checklist measures.

Table 1 Roof Design Values for Question 1: Cool/Green Roofs supporting Strategy 1: Energy & Water Efficient Buildings of the Climate Action Plan				
Land Use Type	Roof Slope	Minimum 3-Year Aged Solar Reflectance	Thermal Emittance	Solar Reflective Index
Low-Rise Residential	≤ 2:12	0.55	0.75	64
	> 2:12	0.20	0.75	16
High-Rise Residential Buildings, Hotels and Motels	≤ 2:12	0.55	0.75	64
	> 2:12	0.20	0.75	16
Non-Residential	≤ 2:12	0.55	0.75	64
	> 2:12	0.20	0.75	16

Source: Adapted from the [California Green Building Standards Code \(CALGreen\)](#) Tier 1 residential and non-residential voluntary measures shown in Tables A4.106.5.1 and A5.106.11.2.2, respectively. Roof installation and verification shall occur in accordance with the CALGreen Code.

CALGreen does not include recommended values for low-rise residential buildings with roof slopes of ≤ 2:12 for San Diego's climate zones (7 and 10). Therefore, the values for climate zone 15 that covers Imperial County are adapted here.

Solar Reflectance Index (SRI) equal to or greater than the values specified in this table may be used as an alternative to compliance with the aged solar reflectance values and thermal emittance.

Table 2 Fixture Flow Rates for Non-Residential Buildings related to Question 2: Plumbing Fixtures and Fittings supporting Strategy 1: Energy & Water Efficient Buildings of the Climate Action Plan

Fixture Type	Maximum Flow Rate
Showerheads	1.8 gpm @ 80 psi
Lavatory Faucets	0.35 gpm @60 psi
Kitchen Faucets	1.6 gpm @ 60 psi
Wash Fountains	1.6 [rim space(in.)/20 gpm @ 60 psi]
Metering Faucets	0.18 gallons/cycle
Metering Faucets for Wash Fountains	0.18 [rim space(in.)/20 gpm @ 60 psi]
Gravity Tank-type Water Closets	1.12 gallons/flush
Flushometer Tank Water Closets	1.12 gallons/flush
Flushometer Valve Water Closets	1.12 gallons/flush
Electromechanical Hydraulic Water Closets	1.12 gallons/flush
Urinals	0.5 gallons/flush

Source: Adapted from the [California Green Building Standards Code \(CALGreen\)](#) Tier 1 non-residential voluntary measures shown in Tables A5.303.2.3.1 and A5.106.11.2.2, respectively. See the [California Plumbing Code](#) for definitions of each fixture type.

Where complying faucets are unavailable, aerators rated at 0.35 gpm or other means may be used to achieve reduction.

Acronyms:

gpm = gallons per minute

psi = pounds per square inch (unit of pressure)

in. = inch

Table 3 Standards for Appliances and Fixtures for Commercial Application related to Question 2: Plumbing Fixtures and Fittings supporting Strategy 1: Energy & Water Efficient Buildings of the Climate Action Plan

Appliance/Fixture Type	Standard	
Clothes Washers	Maximum Water Factor (WF) that will reduce the use of water by 10 percent below the California Energy Commissions' WF standards for commercial clothes washers located in Title 20 of the <i>California Code of Regulations</i> .	
Conveyor-type Dishwashers	0.70 maximum gallons per rack (2.6 L) (High-Temperature)	0.62 maximum gallons per rack (4.4 L) (Chemical)
Door-type Dishwashers	0.95 maximum gallons per rack (3.6 L) (High-Temperature)	1.16 maximum gallons per rack (2.6 L) (Chemical)
Undercounter-type Dishwashers	0.90 maximum gallons per rack (3.4 L) (High-Temperature)	0.98 maximum gallons per rack (3.7 L) (Chemical)
Combination Ovens	Consume no more than 10 gallons per hour (38 L/h) in the full operational mode.	
Commercial Pre-rinse Spray Valves (manufactured on or after January 1, 2006)	Function at equal to or less than 1.6 gallons per minute (0.10 L/s) at 60 psi (414 kPa) and <ul style="list-style-type: none"> • Be capable of cleaning 60 plates in an average time of not more than 30 seconds per plate. • Be equipped with an integral automatic shutoff. • Operate at static pressure of at least 30 psi (207 kPa) when designed for a flow rate of 1.3 gallons per minute (0.08 L/s) or less. 	

Source: Adapted from the [California Green Building Standards Code](#) (CALGreen) Tier 1 non-residential voluntary measures shown in Section A5.303.3. See the [California Plumbing Code](#) for definitions of each appliance/fixture type.

Acronyms:

L = liter

L/h = liters per hour

L/s = liters per second

psi = pounds per square inch (unit of pressure)

kPa = kilopascal (unit of pressure)

1 INTRODUCTION

Ninyo & Moore was retained by the County of San Diego, Department of General Services (herein referred to as the client) to perform a Phase I Environmental Site Assessment (ESA) of the subject property located at 5255 Mount (Mt.) Etna Drive in San Diego, California (hereinafter referred to as the site). The following sections discuss the purpose, the involved parties, the scope of services, and the limitations and exceptions associated with the Phase I ESA.

1.1 Purpose

In accordance with the ASTM International (ASTM) Standard Practice for ESAs on Commercial Real Estate E1527-13, the objective of the Phase I ESA is to identify recognized environmental conditions (RECs). The term recognized environmental conditions means “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions.”

Identification of RECs fall into the following three categories: existing RECs (as defined above); Historical RECs (HRECs); or Controlled RECs (CRECs). HRECs and CRECs are defined as follows:

- **HREC** – An HREC is defined as “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations [AULs], institutional controls, or engineering controls).” An HREC is an environmental condition, which in the past, would have been considered a recognized environmental condition, but currently may or may not be considered a recognized environmental condition. An example of an HREC may be a former gas station where a release of gasoline had occurred, but the site was cleaned up to an unrestricted land use standard.
- **CREC** – A CREC is defined as a “recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by a regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, AULs, institutional controls, or engineering controls).” An example of a CREC could be a former gas station where a release of gasoline has been cleaned up to a commercial use standard, but does not meet unrestricted residential cleanup criteria.

1.2 Scope of Services

Ninyo & Moore's scope of services for this Phase I ESA included the activities listed below.

- Reviewed physical setting and background information.
- Performed a site reconnaissance.
- Reviewed federal, state, tribal, and local regulatory agency databases for the site and for properties located within a specified radius of the site.
- Reviewed reasonably ascertainable local regulatory agency files for the site, as applicable.
- Reviewed historical information for the site, such as historical aerial photographs, historical topographic maps, reverse street directories, Sanborn fire insurance maps, and building department records.
- Reviewed user-provided information, as available.
- Interviewed the property owner regarding the environmental status of the site.
- Performed a preliminary vapor encroachment screen to evaluate the potential for vapor encroachment conditions.
- Prepared this Phase I ESA report, summarizing findings and providing opinions and conclusions regarding RECs at the site.

1.3 Significant Assumptions

Ninyo & Moore assumes the information sources from the third-party environmental database vendor, regulatory agencies, and interviewees utilized for this report provided adequate and accurate information. No other significant assumptions were made during the preparation of this report.

1.4 Limitations and Exceptions

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard of care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information or has questions regarding the content, interpretations presented, or completeness of this document.

The findings, opinions, and conclusions are based on an analysis of the observed site conditions and the referenced literature. It should be understood that the conditions of a site could change with time as a result of natural processes or the activities of man at the subject site or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control. Ninyo & Moore cannot warrant or guarantee that not finding indicators of any particular hazardous material means that this particular hazardous material or any other hazardous materials do not exist on the site. Additional research, including invasive testing, can reduce the uncertainty, but no techniques now commonly employed can eliminate the uncertainty altogether.

1.5 Special Terms and Conditions

This study did not include an evaluation of geotechnical conditions or potential geologic hazards. In addition, unless otherwise indicated in this report, this Phase I ESA did not include analysis of the following, which is not intended to be all-inclusive: asbestos-containing materials, methane gas, radon, lead-based paint, lead-containing surfaces, lead in drinking water, underground pipelines, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, mold, or high voltage power lines.

1.6 User Reliance

This report may be relied upon by, and is intended exclusively for, the client and its assigns. Any use or reuse of the findings, opinions, and/or conclusions of this report by parties other than the above-referenced client is undertaken at said parties' sole risk.

1.7 Involved Parties

Mr. Adrian Olivares, Senior Environmental Scientist conducted the site reconnaissance, property owner interviews, and performed historical research in March 2019. Mr. Randy Wheeler, Senior Geologist, performed project oversight and quality review.

2 SITE DESCRIPTION

The following table provides a general description of the subject site. Photographs taken during the site reconnaissance are provided in Appendix A.

General Site Setting	Description
Location	The site is located approximately 200 feet southwest of the Genesee Avenue and Mt. Etna Drive intersection (Figure 1).
Assessor Parcel Nos. (APNs)	760-103-6100 and 361-661-1200 (County of San Diego)
Property Owner	County of San Diego
Size (approximate)	4.1 acres
Structures / Site Use / Occupants	The site is developed with an approximately 66,000 square-foot single-story building, an attached 36,000 square-foot two-story warehouse building, and a 1,500 square-foot garage. The building was vacant and was formerly occupied by the County of San Diego Sheriff's Criminal Investigations Division (also referred to as Crime Lab).
Roads	Roads are not present on the site. The site is accessible via driveways along Genesee Avenue to the east and Mt. Etna Drive to the north.
Heating and Cooling Systems	The building was equipped with a combination of roof-mounted units and a cooling tower / boilers.
Electricity and Natural Gas Provider	San Diego Gas & Electric (SDG&E)
Sewer Disposal Provider	City of San Diego
Potable Water Provider	City of San Diego
Site Vicinity Description	The site vicinity is primarily comprised of single-family residences and commercial properties.

3 USER-PROVIDED INFORMATION

The User Questionnaire was submitted to the client; however, as of the date of this report, the completed questionnaire has not been received.

User's Responsibilities	User's Responses
Title Records	No response.
Environmental Liens or Activity and Use Limitations (AULs)	No response.
Specialized Knowledge	No response.
Commonly Known or Reasonably Ascertainable Information	No response.
Valuation Reduction for Environmental Issues	No response.
Reason for Performing Phase I ESA	No response.

4 RECORDS REVIEW

The following sections summarize records reviewed for the site.

4.1 Standard Environmental Record Source - Environmental Databases

A computerized, environmental information database search was performed by Environmental Data Resources, Inc. (EDR) on March 4, 2019. The search included federal, state, tribal, and local databases. A summary of the environmental databases searched, their corresponding search radii, and number of noted properties of potential environmental concern, is presented in the EDR report (Appendix C). The review was conducted to evaluate whether the site or properties within the site vicinity have been documented as having experienced significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects.

4.1.1 Geocoded (Mapped) Listings

The site was listed in several environmental databases searched. A summary of the site database listings is provided in the table below.

Table 3 – Environmental Database Listings – Site		
Former Occupants	Database	Summary
County Sheriff Crime Lab	ECHO FINDS LOP LUST RCRA-SQG SAM SWEEPS UST UST	The site was occupied by the Crime Lab from 1980 to 2018. The facility has a closed unauthorized release case (H14261-001) associated with a diesel fuel release that impacted soil only. The case was opened in September 1991 and closed in May 1995. The facility is also listed as a small quantity generator (SQG) of waste and is listed as having an active 1,000 gallon motor fuel underground storage tank (UST). Additional information regarding the unauthorized release case, UST, and hazardous waste generation are provided in Section 4.2.1.
Clairemont Hospital	Hist Cortese	Prior to the County's acquisition of the property, the site was occupied by Clairemont Hospital. The former occupant is listed in the database; however, no other information is provided.

Note:

- A complete description of each database is provided in the EDR Report (Appendix C).

Off-site properties within 1 mile of the site appeared on various regulatory agency databases. The following table lists ASTM standard environmental databases that were searched and the number of listings (excluding unmapped properties).

Table 4 – ASTM Standard Environmental Databases

Database Name	Search Radius (mile)	Number of Listings
FEDERAL DATABASES		
NPL (National Priority List)	1	0
Proposed NPL	1	0
NPL LIENS (Federal Superfund Liens)	site	0
Delisted NPL	1	0
FEDERAL FACILITY (Federal Facility Site Information listing)	0.5	0
SEMS (Superfund Enterprise Management System; formerly Comprehensive Environmental Response Compensation and Liability Information System)	0.5	0
SEMS-ARCHIVE (Superfund Enterprise Management System Archive)	0.5	0
CORRACTS (facilities subject to Corrective action under RCRA)	1	0
RCRA-TSDF (hazardous waste treatment, storage, or disposal facilities)	0.5	0
RCRA-LQG (large quantity generator)	0.25	1
RCRA-SQG (small quantity generator)	0.25	6
RCRA-CESQG (conditionally exempt SQG)	0.25	5
LAND USE CONTROL INFORMATION SYSTEM (LUCIS)	0.5	0
US ENGINEERING CONTROL (EC)	0.5	0
US INSTITUTIONAL CONTROL (IC)	0.5	0
ERNS (Emergency Notification System)	site	0
STATE/TRIBAL DATABASES		
RESPONSE (State Response Sites, State- and Tribal- equivalent NPL)	1	0
ENVIROSTOR (The DTSC's Site Mitigation and Brownfields Reuse Program; CERCLIS-equivalent)	1	4
SWF/LF (Solid Waste Information System)	0.5	0
San Diego County Site Assessment and Mitigation (SAM)	0.5	14
LUST (Geotracker's Leaking Underground Fuel Tank Report)	0.5	26
SLIC (Spills, Leaks, Investigation and Cleanup database by the California Regional Water Quality Control Board)	0.5	6
UST (registered underground storage tanks [USTs])	0.25	5
AST (registered aboveground storage tanks [ASTs])	0.25	1
FEMA UST (Underground Storage Tank Listing)	0.25	0
VCP (Voluntary Cleanup Program Properties)	0.5	0

Off-site properties/facilities listed in the database report were evaluated as to their potential to impact soil and/or groundwater at the site. To supplement the information in the EDR report, the State Water Resources Control Board (SWRCB) GeoTracker database and regulatory agency records from the County of San Diego, Department of Environmental Health (DEH) were reviewed. Supporting documentation is provided in Appendix D. The following properties/facilities were interpreted to represent a potential environmental concern to the site, based on their proximity to the site, the nature of the database on which they are listed, and/or the assumed direction of groundwater flow in the site vicinity (southwest).

Table 5 – Off-Site Facilities of Potential Concern

Facility Name / Address	Distance/ Direction from Site	Database	Summary
Rite Aid #5653 5270 Balboa Avenue	146 feet southeast	HAZNET RCRA-CESQG	The retail store and pharmacy is a conditionally exempt small quantity generator (CESQ) that generates pharmaceutical and photo-processing type wastes. DEH records were reviewed and consisted of compliance inspection reports for select years from 2007 to 2019. The inspection reports did not indicate evidence of a spill or release at the property. Based on type of business (retail) and the absence of spills or releases, this property is not a concern to the site at this time.
Mobil T0220 / Former Mobil Station 4302 Genesee Avenue	168 feet north-northeast	Hist Cortese LOP LUST San Diego SAM SWEEPS UST	The former gasoline station has a closed unauthorized release case (H13500-001), which was closed in October 1986. According to DEH closure documents, four USTs were removed in August 1986 and two soil samples were collected from the excavation bottoms at depths of 7 and 8 feet below ground surface (bgs). DEH correspondence indicated that petroleum hydrocarbon levels were below levels of concern [at the time] (1,000 milligrams per kilogram [kg/kg]) and the case was closed without further assessment or remediation. Based on the case status (closed), the medium affected (soil), and that the primary sources of the release were removed (USTs), this property does not represent an environmental concern to the site at this time.
Genesee Shell / Shell Oil Service Station / Cagles Genesee Shell 4303 Genesee Avenue	327 feet north-northeast	HAZNET Hist Cortese LOP LUST RCRA-CESQG San Diego SAM SLIC	The former gasoline service station located on the northeast corner of Genesee Avenue and Mt. Etna Drive has a closed unauthorized release case (H03207-001) associated with a UST release that impacted soil and groundwater. According to DEH records, four USTs were removed in March and October 1999. Contaminated soil was encountered during the UST removals and an unauthorized release case was opened. As part of the UST removals, approximately 500 tons of soil and 18,000 gallons of petroleum-impacted groundwater were removed. Subsequent assessment activities included the installation and monitoring of 20 groundwater monitoring wells from December 1999 to November 2013. Depth to groundwater was approximately 50 feet bgs and flowed east to northeast. According to reviewed reports, the majority of groundwater impacts were at the property and the adjacent property to the northeast, although based on the review of isoconcentration maps, the dissolved-phase benzene plume appears to extent to the intersection of Mt. Etna Drive and Genesee Avenue. A soil vapor extraction pilot test was performed; however, no significant vacuum was measured in the observation wells indicating the remedial alternative may not be effective in removing additional petroleum contamination. In January 2003, a soil vapor assessment was performed and building occupants were found to have minimal excess cancer risk (less than 1 and 1 million). The DEH closed the case in August 2018 with residual soil and groundwater contamination left in place under the SWRCB Low Threat UST Case Closure Policy.

Table 5 – Off-Site Facilities of Potential Concern

Facility Name / Address	Distance/ Direction from Site	Database	Summary
Circle K Stores 4360 Genesee Avenue	449 feet north	FINDS LUST SAM SLIC SWEEPS UST UST	The active gasoline station has a closed unauthorized release case (H29223-001) that was found during due diligence for a property transaction in April and May 2004. Assessment activities included the installation and monitoring of nine groundwater monitoring wells and three remedial wells. Groundwater reportedly flows to the southeast and the plume extends to the adjoining property to the south. According to the DEH case closure letter, there is no beneficial use of groundwater, the depth to groundwater is greater than 40 feet bgs, and there is no risk to receptors downgradient. Based on the case closure and distance from the site, this property is not a concern to the site at this time.
Chevron / Balboa Ave 5401 Balboa Avenue	489 feet east-southeast	ECHO EMI FINDS HMMD LOP LUST Hist UST Hist Cortese SAM SLIC SWEEPS UST UST	The former gasoline service station has four closed unauthorized release cases that impacted soil and groundwater (H12456-001 to -004). The first case was opened in August 1993 after contamination was encountered following a waste oil UST removal. The second case was opened following the removal of three gasoline USTs in September 1993. The two cases were combined into the third case (-003) in March 2009. Assessment activities included the installation and monitoring of 17 groundwater monitoring wells and 15 soil vapor probes. Depth to groundwater reportedly ranged from approximately 5 to 20 feet bgs and flowed to the west. A dissolved-phase plume extended to the west of the property (cross gradient from the site). Soil vapor monitoring indicated an excessive cancer risk to building occupants and remedial soil excavation was performed under the fourth case (-004). The DEH closed the Cases -003 and -004 in May 2012. Based on the case closed status, remediation performed, and the distance to the site, this property is not a concern to the site at this time.

Notes:

- Distances and direction provided by EDR
- A complete description of each database is provided in the EDR Report (Appendix C).

It is our opinion that there is a low likelihood that the remaining listings for off-site properties appearing in the database report represent a REC to the site at the current time. This opinion is based on one or more of the following factors:

1. The nature of the database(s) on which the property appears, and/or because the property did not appear on a database that reports unauthorized releases of hazardous substances;
2. Reported regulatory agency status (i.e., case closed);
3. Reported nature of the case (i.e., soil contamination only);
4. Reported distance of the property from the site; and/or
5. Location of the property in relation to the site with respect to topography or expected groundwater flow direction (generally assumed to be, based on topography, toward the southwest).

4.1.2 Non-Geocoded (Unmapped) Listings

This portion of the regulatory database report includes properties for which regulatory agencies did not report sufficient address information to be plotted by EDR. This portion of the regulatory database report includes properties for which regulatory agencies did not report sufficient address information to be plotted by EDR. Based on our review of the unmapped properties, it is our opinion that the unmapped properties are not a concern to the site based on the interpreted distance to the site.

4.2 Additional Environmental Record Sources

According to the ASTM Standard, “if the property or any of the adjoining properties is identified on one or more of the standard environmental record sources, pertinent regulatory files and/or records associated with the listing should be reviewed.” With the exception of the Rite Aid property (5270 Balboa Avenue), which was discussed in Section 4.1.1, adjoining properties were not listed in the database search and regulatory files were not requested. The review of regulatory agency records for the site is discussed in the following sections. Regulatory records for the site are provided in Appendix D.

4.2.1 County of San Diego Department of Environmental Health

According to a representative of the DEH on March 25, 2019, records for the site include compliance inspection reports from 1996 to 2019, UST compliance-related testing, UST permits, and technical reports / correspondence associated with a closed unauthorized release case. The DEH files are summarized below.

Compliance Inspections

Compliance inspection reports were reviewed and pertained to inspections related to hazardous materials and waste, biomedical waste, and UST compliance for the former Crime Lab. Generally, one or more of the following types of violations were issued during each inspection:

- Waste stored longer than the allowed timeframe (90 days) and waste manifests not available.
- Waste containers improperly labeled and waste storage areas not inspected weekly.
- Active EPA ID number not maintained.
- Employee training records not available.
- Hazardous materials business plan, site map, safety data sheets, and contingency plan not available.

- Medical waste management plan and updated medical waste disposal procedures not available.
- UST overfill protection not installed.
- UST monitoring/calibration records not available.
- UST operating permit expired.
- UST continuous monitoring system not certified annually and alarm not functioning properly.
- UST sensor in containment sump modified to avoid entering in alarm mode.
- UST spill bucket has fluid.
- UST written response plan and written monitoring procedures not available.

Return to compliance documentation was available for the majority of violations beginning in January 2007. According to the December 2018 compliance inspection report, the Crime Lab moved to a new facility in August 2018. The facility's hazardous and medical wastes were disposed of in August and November 2018. Hazardous materials were transferred to the new facility in August 2018. The UST will continue to be maintained. During the inspection, the DEH inspector noted three 55-gallon drums of water treatment chemicals and one cylinder each of acetylene and oxygen (capacities not specified). In January 2019, a UST inspection was performed and no violations were reported.

UST Records

Records were reviewed and were related to inspections, UST pipe replacement activities, and annual testing of the current UST system, which consists of a double-walled, 4,000-gallon UST containing diesel fuel, and a Veeder Root TLS-3000 leak monitoring system. The UST supplies a 500 gallon emergency generator. UST operating permits were on file from August 1998 to the present. The current permit expires in August 2022. During the review of UST testing, no failed tests were found or other evidence of a release.

UST Removal and Unauthorized Release Records

UST removal technical reports and DEH documentation associated with the removal of a 1,000 gallon diesel UST in September 1991 and a 500 gallon diesel UST in May 1992 by Clairemont Hospital were reviewed. During the removal of the 1,000 gallon UST, confirmation soil sampling found elevated levels of petroleum hydrocarbons in soil samples from the UST excavation and piping trench and an unauthorized release case (H14261-001) was opened by the DEH. Total petroleum hydrocarbons (TPH) were detected at maximum concentrations of 2,600 mg/kg in the UST excavation and 304 mg/kg in the

pipng trench. The excavation was backfilled with the excavated material. In November 1991, the area was re-excavated and additional soil samples were collected the sidewalls at depths ranging from 7 to 9 feet bgs and excavation bottom at a depth of approximately 15 feet bgs. Additional samples were also collected from the piping trench. Samples were analyzed for TPH and the sample with the highest concentration was also analyzed for benzene, toluene, ethylbenzene, and xylenes (BTEX). Only one sidewall sample collected from the western end of the excavation contained TPH at a concentration of 3,234 mg/kg. The sample did not contain BTEX above the laboratory reporting limit. Approximately 100 cubic yards of excavation spoils were disposed of at Miramar Landfill. The consultant recommended no further action and closure of the unauthorized release case (Law/Crandall, 2002a). In a letter dated December 22, 1993, the DEH requested the following information from Law/Crandall to facilitate case closure: 1) a site map with the location of the 1,000 gallon UST in relationship to the building and street, and 2) a registered professional's estimate of the groundwater depth, gradient, and flow direction.

According to response letter from Law/Crandall, which included a site plan, the groundwater table was estimated to be at least 80 feet bgs with localized areas of perched water. The groundwater flow direction is estimated to generally flow to the west (Law/Crandall, 1994). In a letter dated May 9, 1995, the DEH closed the unauthorized release case based on the current land use.

In May 1992, a 500 gallon diesel UST that serviced an emergency generator was removed and replaced with the current 4,000 gallon diesel UST. The UST was removed in the presence of a DEH inspector and soil samples were collected from the bottom of the UST at depths of approximately 6.5 and 8 feet bgs. Soil confirmation samples were analyzed for TPH and were below the laboratory reporting limit (Law/Crandall, 1992b).

4.2.2 San Diego County Air Pollution Control District

According to a representative of the San Diego County Air Pollution Control District (APCD) on March 26, 2019, the Crime Lab has an active permit to operate (PTO-910834) an emergency engine generator set. A notice to comply (NTC) was issued in February 1997, which required the Crime Lab to submit an application for a permit for two boilers or permanently eliminate the use of the liquid fuel for the boilers. The fuel line was disconnected from the boilers and the NTC was closed. In February 2018, an APCD inspector performed an inspection of the generator. No violations or NTCs were issued; however, the entry noted that Bay City, a service company, was coming to look at the engine.

4.2.3 Regional Water Quality Control Board, San Diego Region

According to a representative of the Regional Water Quality Control Board (RWQCB) on March 21, 2019, no files were found for the site.

4.2.4 City of San Diego Industrial Wastewater Control Program

According to a representative of the City of San Diego Industrial Wastewater Control Program (IWCP) on March 11, 2019, no records or permits were found for the site.

4.2.5 City of San Diego Fire-Rescue Department

According to a representative of the City of San Diego Fire-Rescue Department on April 4, 2019, a hazardous material permit was found to perform SB989 upgrades to an existing 1,000 gallon diesel UST dated May 2004. Ninyo & Moore notes that the upgrades were likely for the existing 4,000 gallon UST as UST removal permits were also on file to remove a 1,000 gallon diesel UST in August 1991 and a 500 gallon diesel UST in May 1992.

4.2.6 Online Regulatory Databases

Online regulatory databases were reviewed by Ninyo & Moore to supplement the environmental database search conducted by EDR. The following is a summary of pertinent information.

Online Database/Website	Findings
DTSC EnviroStor	The site and adjacent properties are not listed.
SWRCB GeoTracker	The site and several properties within 500 feet of the site are listed. The cases are discussed in Section 4.1.1.
California Department of Resources Recycling and Recovery (CalRecycle) Solid Waste Information System	Neither the site nor properties within 1,000 feet were listed.
United States Pipeline and Hazardous Materials Safety Administration, National Pipeline Mapping System Map Viewer	A natural gas transmission line operated by SDG&E is depicted within the parking lot adjacent to the west of the site.

4.3 Physical Setting

The following table summarizes topographic, geologic, and hydrogeologic conditions in the vicinity of the site, based upon the referenced documents review and/or our visual reconnaissance of the site.

Table 7 – Physical Setting

Physical Settings	Reference	Summary
Topography	A	The site is situated at an elevation of approximately 365 feet above mean sea level (MSL). The topography at the site is relatively flat and in the general vicinity slopes southwest toward Tecolote Canyon.
Site Geology	B	The site is underlain by very old paralic deposits, which are described as poorly sorted, moderately permeable, reddish-brown, interfingering strandline, beach, estuarine and colluvial deposits composed of siltstone, sandstone, and conglomerate.
Surface Water	A	No natural surface water bodies were observed on the site during the site reconnaissance. The nearest body of water is Tecolote Creek, located approximately 0.3 and 0.4 mile north and west of the site, respectively.
Groundwater	C	The site is located in the Tecolote Hydrologic Area (HA) within the Penasquitos Hydrologic Unit. The site is located within an area of the Tecolote HA (west of Highway 15) that is exempt from beneficial uses. According to information obtained on GeoTracker and the DEH records review of properties of properties in immediate site vicinity, groundwater is expected to be found at depths ranging from 5 to 20 feet bgs. Groundwater is expected to mimic topography and flow to the southwest. Groundwater levels, gradient, and flow direction can fluctuate due to seasonal variations, groundwater withdrawal or injection, changes in land use, and other factors.

4.4 Site Historical Use Information

Ninyo & Moore conducted a historical record search for the site. This included a review of city directories, historical fire insurance maps, historical aerial photographs, topographic maps, and building department records. The following sections summarize information obtained from the historical sources utilized for this assessment.

4.4.1 City Directories

Available historical reverse street directories from 1903 through 2014 were researched by EDR. Addresses along Mt. Etna Drive, Genesee Avenue, and Balboa Avenue were reviewed. The site was listed as Clairemont General (Community) Hospital from 1966 to 1985. From 2010 to 2014, the site was listed as the County of San Diego.

Properties of potential environmental concern in the immediate site vicinity were included historical gasoline service stations at 4299, 4302, and 4303 Genesee Avenue. The EDR City Directory Report is provided in Appendix E.

4.4.2 Sanborn® Fire Insurance Maps

Sanborn® fire insurance maps were requested from EDR; however, according to EDR's Certified Sanborn Map Report, there is no map coverage in the site vicinity (Appendix E).

4.4.3 Historical Aerial Photographs and Topographic Maps

Historical aerial photographs and topographic maps were provided by EDR for select years from 1903 through 2016. Additionally, aerial photographs were reviewed online using Google Earth. A listing of the sources reviewed and summary of notable observations from the historical review are provided in the table below. EDR-provided photographs and maps are included in Appendix E.

Table 8 – Aerial Photographs and Topographic Map Summary

Date - Source	Summary
1903 – B 1930 – B	The site and adjacent properties are depicted as undeveloped. An unpaved road is depicted to the south of the site.
1943 – B 1949 – A 1953 – A	According to the 1943 topographic map, the unpaved road to the south of the site has been reconfigured and is present to the north of the site and traverses the western portion of the site. In the 1949 and 1953 aerial photographs, the site appears vacant and several unpaved roads or trails cross the site. The surrounding area appears undeveloped.
1964 – A	The site is developed with a portion of the present-day single-story building on the western portion of the site. To the east of the building is a paved parking area and a vacant area on the southeastern portion of the site. To the north of the site is Mt. Etna Drive followed by a vacant lot. To the east is a vacant lot and Genesee Avenue. To the south of the site are two commercial structures, which appear to be under construction. To the west of the site is a vacant lot, which corresponds to the SDG&E natural gas easement, followed by single-family residences.
1966 – A 1967 – B 1970 – A	The site appears similar to the previous photograph. Three gasoline service stations are located on the northwest, northeast, and southeast corners of the Genesee Avenue and Mt. Etna Drive intersection. To the south of the site are a large parking lot, and three office or commercial buildings. Power transmission lines are depicted on the adjacent property to the west on the 1967 topographic map.
1975 – B 1979 – A	An addition to the southeastern portion of the single-story building at the site is visible. The southeastern portion of the site appears to be paved. Additional commercial development is visible on the east side of Genesee Avenue and two present-day office buildings are visible to the south of the site. The gasoline station on the southeastern corner of Genesee Avenue and Mt. Etna Drive is no longer visible.
1985 – A 1989 – A	The site appears similar to the previous photograph. The adjacent property to the east of the site is developed with an office building (4282 Genesee Avenue). The vacant lot to the west of the site is paved and appears to be a parking lot. In the 1989 photograph, the adjacent property to the north was developed with the present-day multi-tenant buildings (4310 and 4320 Genesee Avenue).
1990 – A 1994 – A	In the 1990 photograph, five canopies or trailers are visible at the site in the parking lot. In the 1994 photograph, they are no longer present. Also in 1994, the attached garage is present at the southwestern portion of the site.
1996 – A, B 2005 – A 2009 – A 2012 – A, B 2016 – A 2018 – C	The two-story warehouse portion of the site is visible in the photograph and the site resembles its current configuration. The site and vicinity are in their present day configuration.

Sources: A = EDR Aerial Photographs
B = EDR Topographic Maps
C = Google Earth

4.4.4 Building Department Records

Ninyo & Moore attempted to review building permits at the City of San Diego Development Services Department; however, were told that records for police/sheriff facilities were not available for public review. Ninyo & Moore also reviewed the County of San Diego Planning and Development Services Records online in April 2019. No records were found for the site address.

4.5 Previous Reports

The client provided correspondence related to the closed unauthorized release case from Law/Crandall and the DEH. The case was summarized in Section 4.2.1. The client also provided a DEH letter to the County Sheriff related to the sampling and analysis of the bullet tank water at the Crime Lab dated January 12, 2017. According to the letter, the bullet tank water was tested for metals to characterize for disposal. The results of the test indicate that the metal levels in the water samples were below hazardous waste thresholds and the pH level was near neutral. Based on the results of the sampling, the water tank would not be characterized as a hazardous waste. A copy of the letter is provided in Appendix B.

4.6 Adjacent Property History

Prior to the mid-1950s or early 1960s, the surrounding area was generally undeveloped. By 1964, Mt. Etna Drive, Genesee Avenue, and the SDG&E natural gas pipeline followed by single-family residences were present. Construction of commercial structures to the south of the site was also underway. By 1966, three gasoline service stations operated at the northwest, northeast, and southeast corners of the Mt. Etna Drive and Genesee Avenue intersection. In the 1970s, there was additional commercial development along Genesee Avenue. In the 1980s, the adjacent properties to the north and northwest of the site were developed with commercial / office buildings.

5 SITE RECONNAISSANCE

The objective of the site reconnaissance was to obtain information indicating the potential for RECs in connection with the site. Mr. Adrian Olivares conducted the reconnaissance on March 20, 2019. Mr. Olivares was accompanied by Mr. Marc Cass and Mr. David Timber with the County of San Diego. A site plan is provided as Figure 2 and photographic documentation is provided in Appendix A.

5.1 Methodology and Limiting Conditions

The site reconnaissance consisted of walking on the site and driving on adjacent roads (for viewing of adjacent/nearby properties). The reconnaissance included observations of accessible portions of the site. Areas where chemicals and petroleum products were present were viewed as well as select common areas, laboratories, offices, and the two-story warehouse building.

5.2 General Site Setting

At the time of the site reconnaissance, the site was vacant and was developed with an approximately 66,000 square-foot single-story building, an attached 36,000 square-foot two-story warehouse building, and a 1,500 square-foot garage. The Sheriff's Department ceased operations at the site and removed laboratory chemicals, hazardous materials, and controlled substances to the Sheriff's new facility. The warehouse portion of site was formerly used to store evidence. The majority of shelves and racks were removed. A hydraulic elevator was present on the western portion of the warehouse. Several refrigerated rooms were also present.

The Crime Lab portion of the site building (single-story building), generally consisted of: numerous laboratories for documents, fingerprints, firearms, forensic biology, forensic - blood/alcohol, controlled substances, and trace evidence; offices; storage rooms; conference rooms; and restrooms / locker rooms. The building was equipped with a diesel-powered emergency generator and associated 4,000-gallon UST near the south-central portion of the site. The building was also equipped with cooling towers, chillers, pumps, and a boiler room. On the southwestern portion of the site, two bullet trap units were present in an outdoor enclosed area.

Paved parking areas were located on the eastern portion of the site and were accessible from Mt. Etna Drive and along Genesee Avenue. The site was relatively flat. Surface runoff is expected to flow toward storm drain inlets located to the north and east of the site.

5.3 Adjacent Property Observations

Adjacent properties were observed from the site and from publicly accessible vantage points during the site reconnaissance. The properties adjacent to the site are as follows and as depicted on Figure 2:

- **North:** Mt. Etna Drive followed from north to northeast by a multi-tenant medical building (4320 Genesee Avenue) and multi-tenant commercial building (4310 Genesee Avenue).
- **East:** Clairemont Medical Center (4282 Genesee Avenue) and Genesee Avenue followed by commercial use properties.

- **South:** Rite Aid (5270 Balboa Avenue) and parking area.
- **West:** An SDG&E easement utilized for parking.

5.4 Site Observations

Ninyo & Moore evaluated the site for evidence of the following potential environmental concerns:

Table 9 – On-Site Observations		
Conditions	Observed or Noted	Comments
Hazardous Substances/Petroleum Products	X	Petroleum products observed include hydraulic fluid observed in the elevator equipment reservoir and diesel fuel associated with the backup generator. Hazardous substances include cooling tower chemicals and refrigerants used for the cooling system.
Waste Generation/Storage/Disposal		Not observed
ASTs		Not observed
Potential Evidence of USTs	X	Access covers associated with a 4,000-gallon UST were observed adjacent to the emergency generator. A Veeder Root monitoring system and emergency shut-off switch were observed within the chiller / pump room.
Potential PCB-Containing Equipment	X	A pad-mounted transformer was observed on the south-central portion of the site. No evidence of leaks was observed.
Chemical/Petroleum Odors		Not observed
Concrete Patches/Pads		Not observed
Pools of Liquid		Not observed
Sewage Discharge Pipes		Not observed
Floor Drains/Sumps	X	A sump and pump were observed in a landscaped area near the main entrance to the Crime Lab building.
Elevator	X	The warehouse portion of the site contained a hydraulic freight elevator. An elevator equipment enclosure was present on the first level. No leaks or staining were observed adjacent to the hydraulic reservoir.
Wells		Not observed
Drums	X	Three 55-gallon poly drums were observed adjacent to the cooling towers. One drum contained Aquacar 515, a microbiocide, and the second drum contained CT-535, for cooling water treatment. The label on the third drum was deteriorated and the content is unknown; however it is likely related to the cooling tower.
Unidentified Substance Containers	X	A drum was observed adjacent to the cooling towers had a deteriorated label. The drum likely contained a cooling water treatment chemical.
Stained Soil or Pavement		Not observed
Stressed Vegetation		Not observed
Pits, Ponds, or Lagoons		Not observed
Wastewater Discharges Disposal Systems		Not observed
Septic Systems/Cesspools		Not observed
Municipal Solid Waste Disposal Areas		Not observed

6 VAPOR ENCROACHMENT/INTRUSION

The purpose of the preliminary vapor encroachment screen is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of potential contaminants of concern (COC) vapors in subsurface soils at the site caused by the release of vapors from contaminated soil or groundwater either on or near the site. The potential for VECs beneath the site was evaluated using a Vapor Encroachment Screening Matrix (VESM) in accordance with ASTM E 2600-15 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. The VESM included performing a Search Distance Test to identify if there are any known or suspect contaminated properties surrounding or upgradient of the site within specific search radii, a COC Test (for those known or suspect contaminated sites identified within the Search Distance Test) to evaluate whether or not COCs are likely to be present, and a Critical Distance Test to evaluate whether or not COCs in a contaminated plume may be within the critical distance of the site (100 feet for non-petroleum hydrocarbon contaminants and 30 feet for petroleum hydrocarbon contaminants).

Based on the completion of the VESM, a VEC could not be ruled out based on the residual contamination associated with the onsite release. However, there is a low potential for a vapor intrusion risk because residual soil contamination did not contain volatiles (BTEX). Offsite properties of potential concern included several gasoline stations with closed unauthorized release cases that impacted groundwater in the site vicinity. Based on the distance from the site, case closed status, depth to groundwater (approximately 50 feet bgs), these properties of potential concern are not likely to pose a vapor intrusion risk to the site. A copy of the VESM is included in Appendix F.

7 INTERVIEWS

Interviews were conducted by Ninyo & Moore with the objective of obtaining information regarding potential RECs in connection with the site. Interviews with present owners, operators, and/or occupants of the site, as well as other knowledgeable parties as appropriate, is mandated by ASTM E 1527-13. A summary of the interviews conducted is provided in the table below.

Table 10 – Interviews

Representative	Summary
Property Owner	<p>Mr. David Timber, Project Manager with the County of San Diego Department of General Services, responded to a property background questionnaire on March 12, 2019. According to Mr. Timber, the site was used as a Sheriff’s Regional Crime Lab from 1980 to December 2018. Prior to the County’s acquisition of the property, the site was occupied by Clairemont Hospital. The current site consists of a 64,500 square-foot Crime Lab, a 1,500 square-foot garage, and 36,000 square-foot evidence warehouse. The garage was constructed in 1990 and the warehouse was constructed in 1994.</p> <p>The site formerly had a 500-gallon UST, which was removed around 1992, and replaced with a 4,000 gallon UST in the same general area. Mr. Timber provided Law/Crandall documents (see Section 4.2.1) related to the unauthorized release. Mr. Timber stated that lead material, associated with ballistics testing, may have been stored in containers at the site. Chemicals used at the site were associated with water treatment and possibly forensic science-related chemicals.</p>
Occupant	The site was unoccupied at the time of the site visit.
Past Owners	Past ownership entities were not made available to Ninyo & Moore during the preparation of this ESA. Therefore, interviews with past site owners were not conducted.

8 FINDINGS

Based upon the results of this Phase I ESA, the following findings are provided.

- The site is located approximately 200 feet southwest of the Genesee Avenue and Mt. Etna Drive intersection in San Diego, California. Based on a review of historical resources, sometime from 1953 to 1964, the site was developed with a portion of the present-day single-story building on the western portion of the site and occupied by Clairemont Hospital. The site was used as a Sheriff’s Regional Crime Lab from 1980 to 2018. The garage was constructed in 1990 and the warehouse was constructed in 1994.
- At the time of the site reconnaissance, the site was vacant and was developed with an approximately 66,000 square-foot single-story building, an attached 36,000 square-foot two-story warehouse building, and a 1,500 square-foot garage. The warehouse portion of site was formerly used to store evidence. The majority of shelves and racks were removed. A hydraulic elevator was present on the western portion of the warehouse. Several refrigerated rooms were also present. The Crime Lab portion of the site (single-story building), generally consisted of: numerous laboratories for documents, fingerprints, firearms, forensic biology, forensic - blood/alcohol, controlled substances, and trace evidence; offices; storage rooms; conference rooms; and restrooms / locker rooms. The building was equipped with a diesel-powered emergency generator and associated UST near the south-central portion of the site. The building was also equipped with cooling towers, chillers, pumps, and a boiler room. On the southwestern portion of the site, two bullet trap units were present in an outdoor enclosed area.
- Paved parking areas were located on the eastern portion of the site and were accessible from Mt. Etna Drive and along Genesee Avenue. The site was relatively flat. Surface flow is expected to flow toward storm drains located to the north and east of the site.

- Both the Clairemont Hospital and Crime Lab are listed in the environmental database report. The Crime Lab has a closed unauthorized release case (H14261-001) associated with a diesel fuel release that impacted soil only. The case was opened in September 1991 and closed in May 1995. The facility is also listed as a small quantity generator (SQG) of waste and is listed as having an active 1,000 gallon motor fuel underground storage tank (UST). Clairemont Hospital is listed in the Historical Cortese database: however, no other information is provided.
- DEH records for the site include compliance inspection reports from 1996 to 2019, UST compliance-related testing, UST permits, and technical reports / correspondence associated with a closed unauthorized release case. The DEH files are summarized below.
 - Compliance Inspections - Compliance inspection reports were reviewed and pertained to inspections related to hazardous materials and waste, biomedical waste, and UST compliance. Generally, one or more of the following types of violations were issued during each inspection:
 - Waste stored longer than the allowed timeframe (90 days) and waste manifests not available.
 - Waste containers improperly labeled and waste storage areas not inspected weekly.
 - Active EPA ID number not maintained.
 - Employee training records not available.
 - Hazardous materials business plan, site map, safety data sheets, and contingency plan not available.
 - Medical waste management plan and updated medical waste disposal procedures not available.
 - UST overfill protection not installed.
 - UST monitoring/calibration records not available.
 - UST operating permit expired.
 - UST continuous monitoring system not certified annually and alarm not functioning properly.
 - UST sensor in containment sump modified to avoid entering in alarm mode.
 - UST spill bucket has fluid.
 - UST written response plan and written monitoring procedures not available.

- Return to compliance documentation was available for the majority of violations beginning in January 2007. According to the December 2018 compliance inspection report, the Crime Lab moved to a new facility in August 2018. The facility's hazardous and medical wastes were disposed of in August and November 2018. Hazardous materials were transferred to the new facility in August 2018. The UST will continue to be maintained. During the inspection, the DEH inspector noted three 55-gallon drums of water treatment chemicals and one cylinder each of acetylene and oxygen (capacities not specified). In January 2019, a UST inspection was performed and no violations were reported.
- UST records were reviewed and were related to inspections, UST pipe replacement activities, and annual testing of the current UST system, which consists of a double-walled, 4,000 gallon UST containing diesel fuel, and a Veeder Root TLS-3000 leak monitoring system. The UST supplies a 500 gallon emergency generator. UST operating permits were on file from August 1998 to the present. The current permit expires in August 2022. During the review of UST testing, no failed tests were found or other evidence of a release.
- UST removal technical reports and DEH documentation associated with the removal of a 1,000 gallon diesel UST in September 1991 and a 500 gallon diesel UST in May 1992 by Clairemont Hospital were reviewed. During the removal of the 1,000 gallon UST, confirmation soil sampling found elevated levels of petroleum hydrocarbons in soil samples from the UST excavation and piping trench and an unauthorized release case (H14261-001) was opened by the DEH. TPH were detected at maximum concentrations of 2,600 mg/kg in the UST excavation and 304 mg/kg in the piping trench. The excavation was backfilled with the excavated material. In November 1991, the area was re-excavated and additional soil samples were collected the sidewalls at depths ranging from 7 to 9 feet bgs and excavation bottom at a depth of approximately 15 feet bgs. Additional samples were also collected from the piping trench. Samples were analyzed for TPH and the sample with the highest concentration was also analyzed for BTEX. Only one sidewall sample collected from the western end of the excavation contained TPH at a concentration of 3,234 mg/kg. The sample did not contain BTEX above the laboratory reporting limit. Approximately 100 cubic yards of excavation spoils were disposed of at Miramar Landfill. The consultant recommended no further action and closure of the unauthorized release case (Law/Crandall, 2002a). In a letter dated December 22, 1993, the DEH requested the following information from Law/Crandall to facilitate case closure: 1) a site map with the location of the 1,000 gallon UST in relationship to the building and street, and 2) a registered professional's estimate of the groundwater depth, gradient, and flow direction.
- According to response letter from Law/Crandall, which included a site plan, the groundwater table was estimated to be at least 80 feet bgs with localized areas of perched water. The groundwater flow direction is estimated to generally flow to the west (Law/Crandall, 1994). In a letter dated May 9, 1995, the DEH closed the unauthorized release case based on the current land use.
- In May 1992, a 500 gallon diesel UST that serviced an emergency generator was removed and replaced with the current 4,000 gallon diesel UST. The UST was removed in the presence of a DEH inspector and soil samples were collected from the bottom of the UST at depths of approximately 6.5 and 8 feet bgs. Soil confirmation samples were analyzed for TPH and were below the laboratory reporting limit (Law/Crandall, 1992b).

- According to APCD records, the Crime Lab has an active permit to operate (PTO-910834) an emergency engine generator set. A NTC was issued in February 1997, which required the Crime Lab to submit an application for a permit for two boilers or permanently eliminate the use of the liquid fuel for the boilers. The fuel line was disconnected from the boilers and the NTC was closed. In February 2018, an APCD inspector performed an inspection of the generator. No violations or NTCs were issued; however, the entry noted that Bay City, a service company, was coming to look at the engine.
- According to City of San Diego Fire-Rescue Department records, a hazardous material permit was found to perform SB989 upgrades to an existing 1,000 gallon diesel UST dated May 2004. Ninyo & Moore notes that the upgrades were likely for the existing 4,000 gallon UST as UST removal permits were also on file to remove a 1,000 gallon diesel UST in August 1991 and a 500 gallon diesel UST in May 1992.
- Site records were requested from the RWQCB and IWCP; however, no records were found.
- Based on the completion of the VESM, a VEC could not be ruled out based on the residual contamination associated with the onsite release. However, there is a low potential for a vapor intrusion risk because residual soil contamination did not contain volatiles (BTEX). Offsite properties of potential concern included several gasoline stations with closed unauthorized release cases that impacted groundwater in the site vicinity. Based on the distance from the site, case closed status, depth to groundwater (approximately 50 feet bgs), these properties of potential concern are not likely to pose a vapor intrusion risk to the site.
- Based on the age of the site structures, asbestos-containing materials (ACM) and lead based paint (LBP) may be present. ACM and LBP are outside the scope of a standard Phase I ESA and are not a REC.
- Based on the completion of the VESM, a VEC was not found.

9 OPINIONS

Our opinions and rationale for concluding whether the conditions listed in Section 8, above, represent RECs, HRECs, or CRECs (i.e., the presence or likely presence of hazardous substances or petroleum products on a property under conditions indicative of releases, past releases, or a material threat of a release of hazardous substances, pollutants, contaminants, and/or petroleum/petroleum products at the site) is provided below.

9.1 Evaluation of Recognized Environmental Conditions

The evaluation of RECs is provided below.

- It is our opinion that the diesel release from the former UST and piping is considered a CREC based on the case closure by the regulatory oversight agency (DEH) with residual contamination left in place. The case closure was based on the current land use of the site.

- It is our opinion that the former use of the site as a Crime Lab and use of hazardous chemicals and the current UST is considered a *de minimis* condition. The Crime Lab and UST system were regularly inspected by the DEH. NOVs were issued, however, corrective actions were performed and the facility returned to compliance. No evidence of a spill or release was found in the DEH documents, nor did the DEH request subsurface sampling.

9.2 Data Gaps

Data gaps encountered included not viewing all areas of the site buildings, including the garage area, and the absence of the User Questionnaire. It is our opinion the data gaps are not considered a significant data gap that would affect the ability of the environmental professional to identify conditions indicative of releases or threatened releases during this Phase I ESA based on the following rationale:

- There were no reported chemical use or maintenance activities performed in the garage.
- Review of the environmental database and regulatory agency records did not indicate that any maintenance activities were performed or waste associated with maintenance activities were generated at the site.
- Based on the completeness of the regulatory and historical records, and interview with other County staff, the absence of the User Questionnaire is not expected to alter the findings or conclusions of this report.

9.3 Additional Appropriate Investigation

It is our opinion that additional appropriate investigation to evaluate RECs at the site is not required.

10 CONCLUSIONS

We have performed a Phase I ESA, in conformance with the scope and limitations of the ASTM Practice E 1527-13, of the property located at 5255 Mt. Etna Drive in San Diego, California. Any exceptions to, or deletions from, this practice are described in Section 1.4 and in the body of this report. This assessment has revealed no evidence of RECs in connection with the property.

11 RECOMMENDATIONS

Based on the findings of this Phase I ESA and planned redevelopment, Ninyo & Moore recommends:

- In future site development, preparation and implementation of a soil management plan (SMP) to be used during construction activities near areas of known contamination (former UST and piping areas). For projects with known or suspected contamination, and where grading or other soil disturbance activities could encounter contaminated media, undocumented USTs, or other unknown contamination or hazards, implementation of a SMP provides protocols to address hazardous conditions, if encountered, in accordance with local, state, federal statutes, and regulations.
- If the existing UST is decommissioned, soil sampling should be performed at the time of the removal to evaluate whether an unauthorized release has occurred.
- Preparation and implementation of an appropriate worker health and safety plan.
- Asbestos-containing material and lead-based paint should be evaluated prior to razing of the site buildings. Surveys should be conducted by California Department of Public Health certified lead inspector/assessors, California Division of Occupational Safety and Health Certified Asbestos Consultants, and /or professionals appropriately qualified in their field in accordance with applicable local, state, and federal guidelines and regulations.

13 PROFESSIONAL STATEMENT

As required by 40 CFR §312.21(d) and Section 12.13 of ASTM 1527-13, the following statement is included:

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined by §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Adrian Olivares

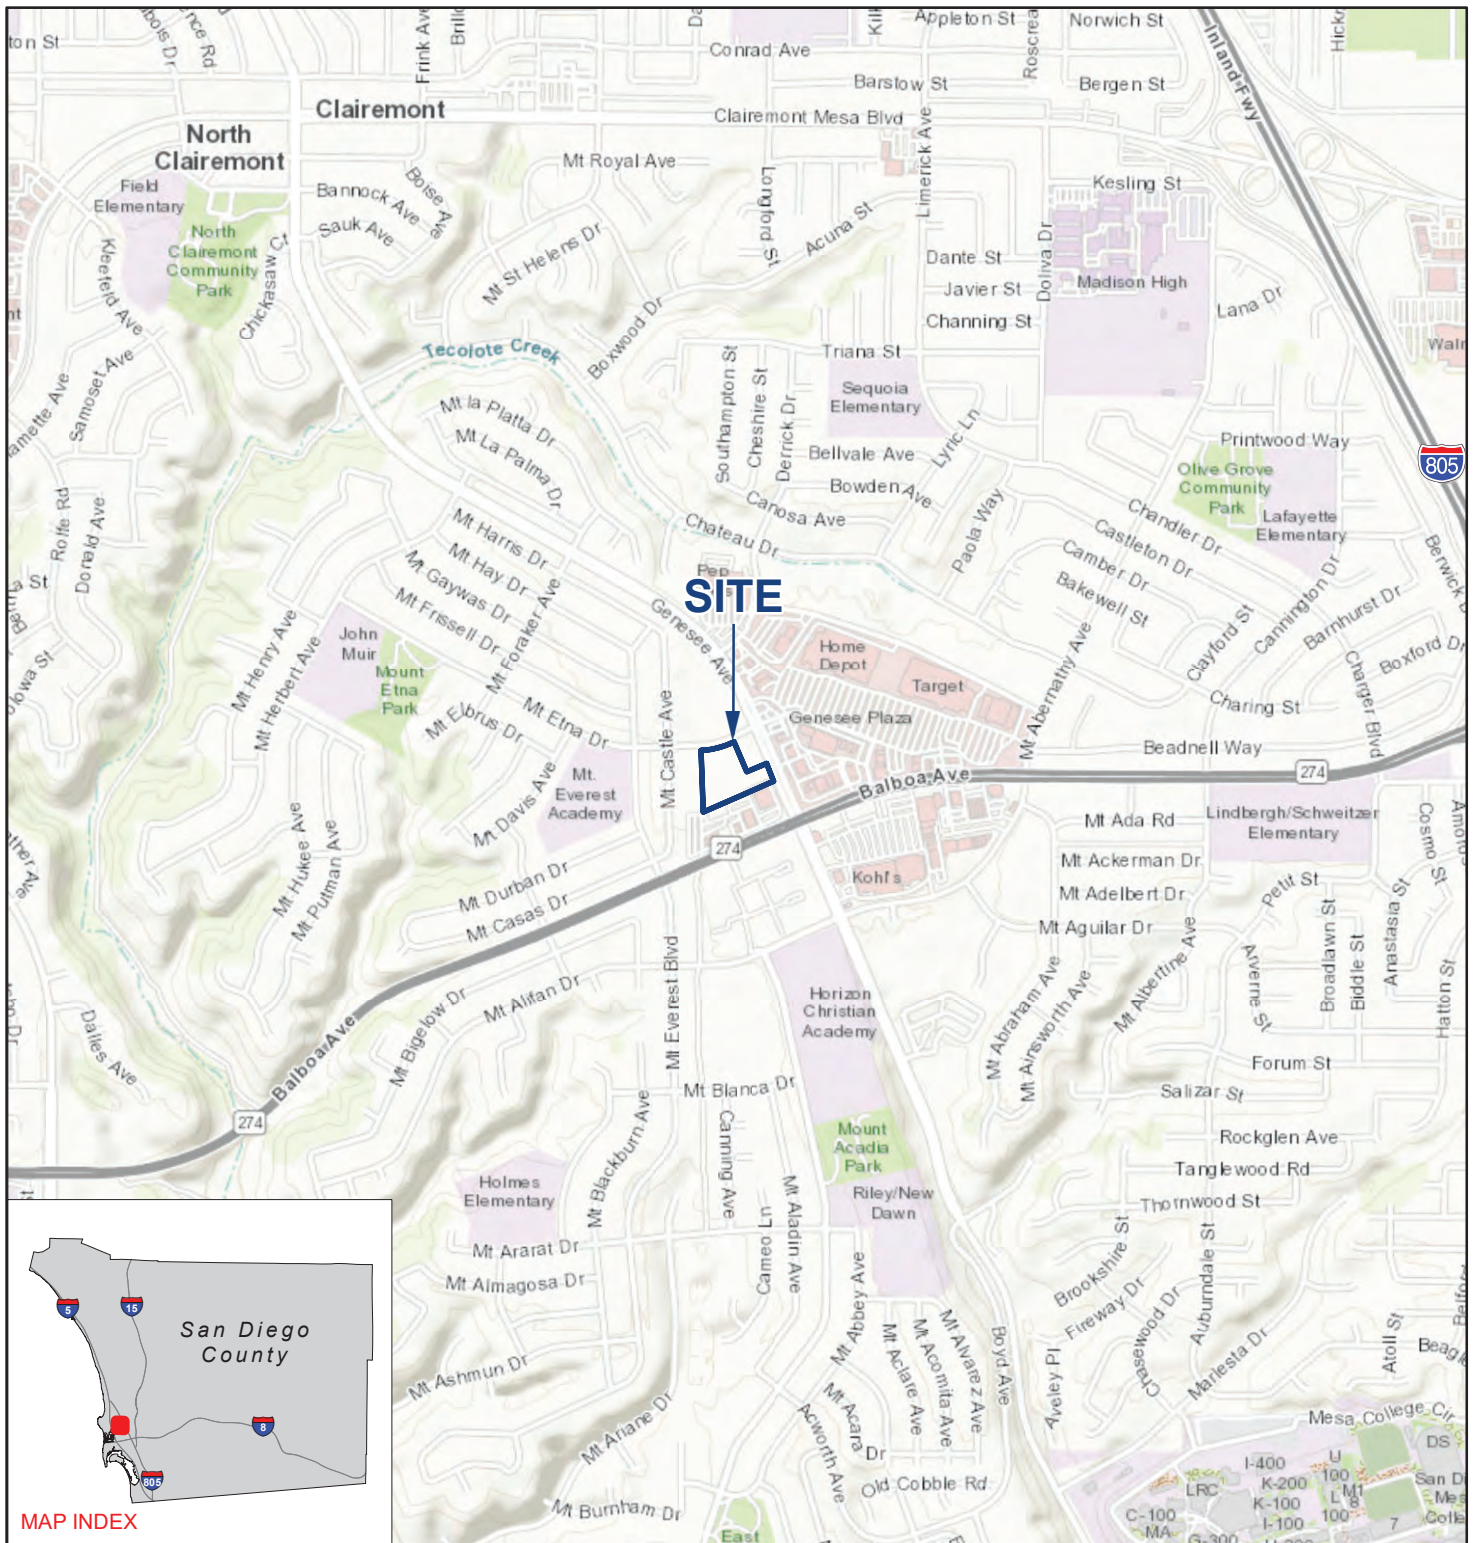

Senior Environmental Scientist

14 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL

Resumes, which document the professional qualifications, pursuant to 40 CFR §312.10(b)(2), of the persons that prepared and reviewed this report are provided as Appendix G.

APPENDIX B

User and Property Owner Provided Information

PROPERTY BACKGROUND INFORMATION QUESTIONNAIRE

5255 Mounty Etna Drive
San Diego, CA
APN: 361-661-1200

Ninyo & Moore Project Number 108768001

GENERAL ENVIRONMENTAL

1. Site was used as a Sheriff’s Regional Crime Lab from 1980 to December 2018. It was vacant as of Jan 1, 2019. The site acquired the site in 1990, at which time it had been operating as Clairemont Hospital. The hospital appears in historical photos from 1964 and 1966, and in a 1967 historical topo map, however when it was built is unclear.
2. The Crime Lab consists of three occupancies:

STRUCTURE	GSF
Crime Lab	64,500
Garage	1,500
Evidence Warehouse	36,000

After it acquired the site, the County added the garage and evidence warehouse.

3. Construction dates are as follows: crime lab date unknown, garage 1990, and warehouse 1994.
4. Historical use of site prior to Clairemont Hospital is unknown, however historical photos from 1953 and earlier appear to show the site as open land. We have the following documents for review:
 - a. Certified Sanborn Map Review
 - b. EDR Radius Map Report with Geotech
 - c. EDR Historical Map Review
 - d. EDR City Directory Abstract
5. A Law Crandall Engineering site plan indicates a 500-gal. UST was removed, possibly in 1992, and a 4,000 gal. tank then installed in the same general area. We have the following documents for review:
 - a. Law Crandall Responses to SAM Letter (1-11-94)
6. As far as I know, only one UST remains (4,000 gal. diesel for the emergency generator)
7. Unknown
8. See Law Crandall letter (1994)

PROPERTY BACKGROUND INFORMATION QUESTIONNAIRE, Concl.

9. No
10. Unknown
11. Possibly lead, stored in containers, from ballistic testing
12. Chemicals yes (e.g. water treatment, possibly forensic science chemicals)
13. Unknown
14. Not during County ownership, however unknown prior to County acquisition
15. Municipal sanitary (MS4) system
16. No
17. No
18. Unknown
19. Unknown
20. Unknown
21. Unknown
22. Unknown: Currently no, and probably not in the past
23. Unknown: Currently no, and probably not in the past
24. Unknown for all; however it's possible a gas station may have existed on an adjoining property
25. No known issues
26. Yes. Check with facility operations for UST registration, MSDS, safety plans, stormwater documents, risk assessments
27. No
28. No
29. No

For information regarding highlighted questions, maybe check with facility operations.

PROPERTY BACKGROUND INFORMATION QUESTIONNAIRE

Site Address:	5225 Mount Etna Drive San Diego, California APN: 361-661-1200	Project No.	108768001
----------------------	---	--------------------	------------------

***Please answer in good faith and to the best of your ability and elaborate as much as possible on any question answered “yes.”**

General Environmental

- 1) Describe the current uses of the site. How long has the site been used for these purposes?

- 2) Describe the structures previously present at the site and their usage/occupants and age.

- 3) When were the structures constructed, if known?

- 4) What is the historical land use of the site? Describe the past uses, owners, and operators of the site. (Be as detailed as possible and note approximate time periods, if known.)

- 5) Are there currently, or were there previously any underground storage tanks (USTs) at the site? If so, please describe their capacities and contents.

- 6) Have all USTs been removed from the site? If so, when?

- 7) Was associated underground piping associated with the USTs removed?

- 8) Was soil and/or groundwater sampling conducted at the time of UST removal? If so, please describe.

- 9) Are you aware of any environmental issues associated with the site or of potential soil and/or groundwater contamination?

Yes No

PROPERTY BACKGROUND INFORMATION QUESTIONNAIRE

Site Address:	5225 Mount Etna Drive San Diego, California APN: 361-661-1200	Project No.	108768001
----------------------	---	--------------------	------------------

10) Have fill soils been brought to the property?

Yes No Unknown

11) Has there been storage of hazardous materials or wastes on the property?

Yes No Unknown

12) Have any of the following items been stored on the site in containers greater than 5 gallons?

Paint Yes No Unknown

Chemicals Yes No Unknown

Pesticides/Herbicides Yes No Unknown

Automotive-Related Oils/Fuels Yes No Unknown

13) Have there been any spills or releases of chemicals, hazardous substances, or wastes on the property?

Yes No Unknown

14) Have any hazardous substances, petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or other waste materials been dumped aboveground, buried, or burned on the site?

Yes No Unknown

15) Is the site hooked up to a municipal sanitary sewer system or is there a septic tank/system?

Sanitary Sewer Septic

16) Are/were there any subsurface wastewater features, such as sumps, clarifiers, discharge systems, at the site?

Yes No Unknown

17) Does the site discharge wastewater, other than domestic wastewater or storm water, into the sewer or onto another property?

Yes No Unknown

18) Other than permission for domestic hookup, have any city, county, or other permits for wastewater discharge been issued to the site?

Yes No Unknown

PROPERTY BACKGROUND INFORMATION QUESTIONNAIRE

Site Address:	5225 Mount Etna Drive San Diego, California APN: 361-661-1200	Project No.	108768001
----------------------	---	--------------------	------------------

- 19) Is there a transformer, capacitor, or other equipment that may contain PCBs on the site?
- Yes No Unknown
- 20) Other than small quantities of legal pesticides used for landscape maintenance (e.g., Roundup), have pesticides, herbicides, or insecticides been applied on the site?
- Yes No Unknown
- 21) Are/were there any wells on the site (e.g., water supply wells, groundwater monitoring wells, etc.)
- Yes No Unknown
- 22) Are there currently, or were there previously, any pits, ponds, or lagoons on the site?
- Yes No Unknown
- 23) Are there currently, or were there previously, areas on the site with stained soil?
- Yes No Unknown
- 24) To your knowledge, have adjoining properties been used for industrial activities, such the following? (Please note that an adjoining property is a property that is contiguous with, or directly across the street from the site.)
- Gasoline Station Yes No Unknown
 - Printing Facility Yes No Unknown
 - Metal Plating/Manufacturing Yes No Unknown
 - Landfill Yes No Unknown
 - Auto Repair Facility Yes No Unknown
 - Dry Cleaners Yes No Unknown
 - Junkyard Yes No Unknown
 - Waste or Wastewater Treatment Yes No Unknown
 - Storage, Disposal, or Recycling Facility Yes No Unknown
- 25) Are there any known issues related to spills/contamination with adjoining or nearby properties?
- Yes No Unknown
- 26) Are you aware of any previously prepared documentation for the site, such as:
- environmental sampling, compliance audit, or assessment reports
 - environmental permits
 - registrations for aboveground or underground storage tanks
 - material safety data sheets (MSDS)
 - community right-to-know plans
 - safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans
 - geotechnical or hydrogeologic reports
 - storm water documents
 - risk assessments
- (If so, are they available for review?)

SAMPLING AND ANALYSIS OF BULLET TANK WATER: SHERIFF CRIME LABORATORY, 5255 MT. ETNA DRIVE, SAN DIEGO

SUMMARY

Subsequent to a request from Leonard Gonzales, Project Manager, Sheriff, the Occupational Health Program (OHP) collected samples of water from the bullet tank located at the Sheriff Crime Laboratory, 5255 Mt. Etna Drive in San Diego. The purpose of the sampling was to determine whether the water is considered hazardous or non-hazardous waste as defined by California regulations prior to disposal.

After review of the bullet tank process and talking with crime lab staff, a sampling strategy was developed to characterize the hazardous waste properties of the water for heavy metals and pH.

The results of the testing showed that all of the samples were below the hazardous waste limits for the various metals tested. Moreover, the pH testing of the water was approximately neutral. Based on these analytical results, the bullet tank water does not appear to be hazardous waste. However, the Sheriff should contact the appropriate wastewater agency to check if there are any permitting requirements prior to disposal of the water.

If the Sheriff becomes aware of conditions that may substantially change the make-up of the bullet tank water (that is, changes that make this analysis no longer representative), then the water must be reassessed and re-characterized.

For more detailed information, please see the DISCUSSION and RECOMMENDATIONS sections that follow.

DISCUSSION

The Sheriff Crime Laboratory is preparing to move to a new facility in the near future. The current facility, located at 5255 Mount Etna Drive, will be replaced by a new facility that is under construction at the County Operations Center. As part of this move, the existing bullet tank will be replaced by a new bullet tank. Mr. Gonzales requested that our program evaluate the water in the existing bullet tank for its potential hazardous waste properties prior to disposal of the water.

In order to develop a sampling strategy, I evaluated the existing bullet tank and process by speaking with crime lab staff, and reviewing information on the new bullet tank. Bullet tanks are used as tools for testing the ballistics of particular weapons used in crimes (see Attachment 1). The existing bullet tank is constructed of stainless steel and was installed approximately 6-7 years ago. According to crime lab staff, chemicals have not been added to water tank; even though the manufacturer (Cyber National) provides various pool type chemicals for inhibiting algae growth etc. The new proposed bullet tank is similar to the existing tank in use and function, and the manufacturer is the same.

The bullet tank is used on a weekly basis. When used, a weapon is shot through a small opening in the tank and the bullet is collected from the water for ballistic testing. Typically, each weapon is discharged 3-4 times, and the casings and any visible debris are collected during the process. The tank is used on a weekly basis. Prior to and during the shooting process ventilation is used over the headspace of the water to capture airborne particulate and move it away from the shooter. The water is also filtered during the process. According to crime lab staff, the tank is rarely drained and the filters (air and water) are disposed as hazardous waste.

Based on this information, a sampling strategy was developed to analyze the tank water for California Title 22 California Code of Regulations (CCR) metals and pH. The Title 22 metals are listed in Table II in Section 66261.24; [Title 22 CCR Metals-Table II](#). OHP reviewed the sampling strategy with the Hazardous Materials Division (HMD) who thought it was a reasonable approach.

Prior to collecting the water samples, the tank system was turned on to circulate the water. Three samples were collected for metal analysis and an additional three samples were collected for pH. The samples were delivered to EnviroMatrix Analytical Inc. for analysis. EnviroMatrix is an accredited hazardous waste laboratory. The results of the metals analysis were compared to the regulatory limits and all of the metals were below the respective California Title 22 threshold limits for each particular metal. Moreover, the pH for all of the samples was approximately neutral. A copy of the sampling results is provided as Attachment 2.

RECOMMENDATIONS

1. Based on the analytical results the bullet tank water is not considered a hazardous waste. Moreover, because the new proposed tank is made by the same manufacturer, is similar in type and the process, it seems reasonable that these results could be used for characterizing the new tank water once it is in use. However, if Sheriff becomes aware of conditions that may substantially change the waste stream (that is, changes that make this analysis no longer representative), the water must be reevaluated and re-characterized.
2. The Sheriff should keep records of the waste determination provided in this report.
3. The Sheriff should contact the appropriate wastewater agency to verify if there are any permitting requirements prior to disposal of the water from the old bullet tank, and if any requirements may be necessary for the installation of the new tank.

If you have any questions, please contact me.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

- QR-02 The RPD result exceeded the QC limits due to non-homogeneity of sample.
- HT-15 This sample was received outside of the EPA's recommended 15 minute holding time for this analysis. However, the sample was analyzed immediately upon receipt.
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CVS PHARMACY #7962 EPA ID:: CAR000229914	5685 BALBOA AVE	E 1/8 - 1/4 (0.230 mi.)	47	147

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are

EXECUTIVE SUMMARY

5 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/29/2018 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSTATES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 10 HIST CORTESE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

THRIFTY OIL CO	4386 GENESEE AVE	N 0 - 1/8 (0.111 mi.)	E33	92

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 4 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D006
. Waste name: CADMIUM

Violation Status: No violations found

Evaluation Action Summary:

Evaluation date: 12/23/2003
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State Contractor/Grantee

FINDS:

Registry ID: 110002939857

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D018
. Waste name: BENZENE

Historical Generators:

Date form received by agency: 05/06/2005
Site name: SHELL SERVICE STATION NO 135906
Classification: Small Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D018
. Waste name: BENZENE

Case Worker: EM
RB Case Number: 9UT3868
Local Agency: SAN DIEGO COUNTY LOP
File Location: Local Agency
Local Case Number: H03207-001
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Site History: This site is currently a vacant building and fenced off lot. This case was opened in March 1999 due to elevated soil samples noted during the removal of a 500 gallon used oil Underground Storage Tank (UST). On October 1999, the remaining USTs (Three 12,000-gallon gasoline USTs), dispensers and piping were all removed and the facility ceased operations as a service station. Approximately 500 tons of soil and 18,000 gallons of impacted water were removed during both UST removals. From December 1999 to November 2013, 20 groundwater monitoring wells were installed, at which time the groundwater plume was delineated. The majority of the groundwater impacts were limited to the site and the offsite area about 200 feet northeast, which is solely a large parking area for the adjacent shopping complex. Figures 8 and 9 from the May 2018 Corrective Action Plan Addendum and Request for Case Closure (CAPA) provide the most recent distribution of dissolved contamination levels at the site. In December 1999, a Soil Vapor Extraction (SVE) pilot test was performed. No significant vacuums were noted in observation wells located 20 feet away from the extraction wells. A soil vapor assessment in January 2003 revealed no excess cancer risks for occupants of the onsite building. Benzene was calculated to have an excess carcinogenic risk of 9.14×10^{-7} , which is less than the acceptable 1.0×10^{-6} excess carcinogenic risk. A June 2015 Corrective Action Plan (CAP) was submitted for monitored natural attenuation (MNA) followed by case closure when adequate plume stability had been determined via MNA. The CAP was approved by DEH and the 60-day notification period ended with one comment received from Mr. Max Younan, who identified himself as a nearby property owner on whose property at least one monitoring well was located. He asked if the CAP would affect him. AECOM informed Mr. Younan that the CAP described how groundwater monitoring for the case would continue as it had in the recent past. Mr. Younan was satisfied with the answer. Following two years of monitoring, the May 2018 CAPA was submitted. The CAPA proposed natural attenuation because: The plume is stable and decreasing. No Separate Phase Hydrocarbons remain on

the groundwater. There are no supply wells within a 1/4 mile of the site. Groundwater is designated as having no beneficial uses. All utilities are above the groundwater table, which is at an average of 50 feet bgs. There are no health risks based on the November 2003 soil vapor sampling report. Based on degradation analyses, it is estimated that benzene in groundwater will degrade to the Water Quality Objective (WQO) of 46 ug/l by 2069. Based on mass balance, the mass would reach zero kilograms of benzene by 2090. MtBE is currently below the primary WQO of 1,800 ug/l. Approximately 11,778 cubic yards of soil remain on site with concentrations over 100 mg/kg TPH. This soil is located in the southern (lower) and northern (former UST) portion of the property from 10 to 50 feet bgs, per Figures 12-15 of the May 7, 2018 TPHg in Soil document. ANY CONTAMINATED SOIL EXCAVATED AS PART OF SUBSURFACE CONSTRUCTION WORK MUST BE MANAGED IN ACCORDANCE WITH THE LEGAL REQUIREMENTS AT THAT TIME. DEH concurs with the consultants' conclusions and approves case closure. Permit #DEH2018-LMWP-003546 was issued by DEH for destruction of the 22 wells (including 3 SVE wells) associated with the site.

Local Agency: SAN DIEGO COUNTY LOP
File Location: Local Agency
Local Case Number: H29223-001
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Comments: The Site is an operating Circle K gasoline service station and minimart. The facility is bounded on the north and east by Genesee Avenue and by a parking lot and strip mall to the south and west. The above-ground structures at the Site consist of a single story building and two fuel dispensers under a single canopy. Below-ground structures consist of three underground storage tanks (USTs) and associated product piping. The Site is surrounded by commercial properties. In April and May 2004, six soil borings were advanced at the Site as part of a due diligence assessment during property transfer. The four direct-push borings hit refusal before reaching their target depths. Based on the results of the assessment, the Department of Environmental Health (DEH) opened Unauthorized Release Case H29223-001. Cumulative soil sample analytical data indicate residual hydrocarbon-impacted soil was present primarily beneath the former dispenser islands and from beneath the gasoline USTs. There is no residual soil contamination with concentrations greater than 100 milligrams per kilogram. Nine groundwater monitoring wells and three remedial wells have been installed at the Site. Groundwater was monitored between June 2006 and August 2013. Liquid-phase hydrocarbons (LPH) have never been present at the Site. Hydrocarbon impacted groundwater at the Site appears to be consistent with a release from the USTs, which have subsequently been upgraded. On-site dissolved-phase petroleum hydrocarbon concentrations generally appear to be stable to declining over time. The results from the recent installation of two groundwater monitoring wells (MW-8 and MW-9) suggest that the dissolved-phase MTBE plume has migrated offsite to the southeast; however since this area has no beneficial groundwater uses and the depth to groundwater is greater than 40 feet below grade, there is no risk to receptors downgradient. Dissolved-phase petroleum hydrocarbon concentrations in off-site well MW-9 suggest the MTBE and TBA concentrations migrating off-site attenuate with increased distance from the source area. A Corrective Action Plan (CAP) was submitted on January 26, 2010 requesting case closure. The CAP concluded that no active remediation is required to mitigate remaining hydrocarbon impacts beneath the Site. It was proposed that groundwater data be collected during the subsequent four semi-annual monitoring and sampling events to determine groundwater contaminant trends and distribution. The public participation process for the above-referenced CAP was completed. DEH received no public comments and concurred with the CAP. According to the environmental consultants registered professional, the Site presents no significant risk to human health and the environment. DEH concurs with this conclusion.

Case Worker:	EB
RB Case Number:	9UT2742
Local Agency:	SAN DIEGO COUNTY LOP
File Location:	Local Agency
Local Case Number:	H12456-003
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	This case was opened following the discovery of contaminated soil during the removal of a waste oil underground storage tank (UST) in August 1993 (Former case H12456-001) and the current case was opened following the discovery of contaminated soil during the removal of three gasoline USTs in September 1993. These two cases were combined into H12456-003 on March 19, 2009. Soil sample data indicated that gasoline contaminated soil was present in the vicinity of the former northern dispenser islands, in the vicinity of the southwestern dispenser island and the product piping lines that connected the two islands. Soil at the northern dispenser islands was impacted from near the surface to a depth of 25 feet and at the southwestern islands from the near surface to a depth of 10 feet. The consultant estimated the total volume of contaminated soil at the site at 748 cubic yards. Monitoring wells were installed at the site in 1997 and free product was detected in three wells (B2, B4 and EW1) at that time. A total of seventeen monitoring wells were associated with this site. Groundwater monitoring began in May 1997 and continued until April 2011. Two wells (B7 and B10) were destroyed and replaced with new wells in 2004. Free product was last observed in well EW1 in January 2010. According to the consultant utilities in the vicinity of the site include sewer and storm drain pipes, cable, gas and electrical, phone and water lines. In general, these lines are buried between one and one-half (1.5) and eight (8) feet below grade. Since the depth to groundwater at the site has been as shallow as five feet, the subsurface utilities could be a potential means of migration of contaminants in groundwater. According to the consultant, there has not been any evidence of migration along utility lines. Limited free-product recovery efforts were made between April 1999 and January 2003 resulting in a total of 1.82 gallons product recovered. In April 2001 a high-vacuum dual-phase

1000905571

extraction (HVDPE) pilot test was completed which removed an estimated 400 gallons of impacted groundwater and 7.8 pound of hydrocarbon vapors. Between April 2001 and April 2002 a total of seven 24-hour and one 72-hour two-phase extraction events (TPE) were completed. The consultant estimated the total mass of hydrocarbons removed through vapor extraction during these TPE events was 167 pounds. The consultant also reported that a total of 16,172 gallons of water were removed during the first five TPE events. An unknown quantity of groundwater was removed during the remaining events. In August 2008 both a step drawdown and constant discharge test was completed on well EW1 with a total of 80 gallons of water being removed. A feasibility test for multiphase extraction was conducted in January 2010 on EW1. An estimated seven pounds of hydrocarbon vapor and 30 gallons of water/free product were removed during this test. Free product was not observed in EW1 following the feasibility test. A human health risk assessment (HHRA) was conducted in 2006 and benzene concentrations in soil vapor exceeded the DEH excess cancer risk threshold of one-in-one million (1×10^{-6}) at five feet at three vapor probe locations (SV8, SV10, and SV15). This indicated that there was a potential health risk for future on-site development which would require additional mitigation and/or implementation of engineering controls. According to the consultant, there were no other sensitive receptors or surface water bodies with complete exposure pathways that could be impacted by the site. To mitigate the potential health risk the property owner/developer (owner) decided to proceed with active remediation as previously proposed in a Corrective Action Plan (CAP) dated March 1, 2010 that was rescinded by Chevron on March 17, 2010. This remedial activity was completed under VAP case H12456-004. Remedial soil excavation at the site was completed under VAP case H12456-004. A total of 3,857 tons of contaminated soil were excavated. A total of 2,550 tons were treated and recycled by Soil Safe of California - TPST in Adelanto and 1,307 tons were disposed at the Otay landfill in Chula Vista. In addition, 18,437 gallons of groundwater were removed during dewatering activities and transported to K-Pure Waterworks facility in Rancho Cucamonga. Following excavation, a soil vapor survey and human health risk assessment was conducted at the site. The estimated excess cancer risks of 2×10^{-8} and hazard values 4.89×10^{-5} were below the DEH threshold values. The consultant concluded that the remediation at the site was successful in eliminating the risks to human health from vapor intrusion. Prior to the excavation, the groundwater plume was delineated and the maximum concentrations were found at the locations where free product had previously been detected at the former product lines and dispenser areas. Outside of these areas, contaminant concentrations in groundwater were either low or not detected. According to the consultant the plume had high concentrations of contaminants in the impacted area, however the contaminant concentrations appeared to be stable and/or contracting. Groundwater beneath the site is classified as having no beneficial uses. There has not been free product detected at the site since January 2010. The contaminated soil has mostly been removed by excavation. The sources of free product have been removed from the site. The risks to human health from vapor intrusion have been eliminated by the remediation conducted under the VAP case. According to the consultant, the time for benzene to degrade to the maximum contaminant level (MCL) of 1 ug/l by natural attenuation could take up to 1,400 years, MTBE could take 130 years, and TBA could take 210

years, respectively, to reach the State notification level of 12 ug/l. Ethylbenzene is currently below the State MCL of 300 ug/l. A Revised CAP Addendum dated April 18, 2011 was submitted by Chevron which recommended remediation through natural attenuation and the use of engineering controls. DEH concurred with the Revised CAP Addendum on October 5, 2011 with conditions that soil remediation proposed by the owner was completed to mitigate the potential health risks to on-site development. As stated above, this work was accomplished under the VAP case H12456-004. The consultant stated that free product has not reoccurred at the site, that the site does not pose a risk to the environment or human health if engineering controls are used, and that the plume was stable and contracting. The consultant requested no further action on the case and DEH concurred with this recommendation with conditions. Remediation of the site has occurred under VAP case H12456-004 and DEH concurs with the recommendation to close this case.

Site History: The site was a former Chevron station. This case was opened after the Chevron rescinded the Revised Corrective Action Plan (CAP) dated March 1, 2010 that specified the remedial alternative would be excavation of contaminated soil. Chevron then submitted a Revised CAP Addendum dated April 18, 2011 for natural attenuation with the stipulation that engineering controls would be required due to potential risks from vapor intrusion of volatile organic compounds (VOCs), if the site were to be developed. This potential risk was due to residual soil impacts on the site. The property owner/developer of the property was concerned with the requirement of using engineering controls. On May 17, 2011 the current case was opened by the property owner/developer to proceed with the implementation of the proposed soil mitigation activities outlined in the Voluntarily Assistance Program Application prepared by SCS Engineers dated May 5, 2011 and the Revised Corrective Action Plan (CAP) dated March 1, 2010 that was prepared by Stantec, Inc. This mitigation plan was approved on June 24, 2011. It should be noted that this mitigation plan only addressed petroleum impacts to soil and not groundwater. Separately, Chevron submitted their Revised CAP Addendum dated April 18, 2011 which addressed groundwater impacts. That plan was approved by DEH on October 5, 2011 and was handled under case number H12456-003. Soil sample data previously collected by Chevron indicated that gasoline

contaminated soil was present in the vicinity of the former northern dispenser islands, in the vicinity of the southwestern dispenser island and the product piping lines that connected the two islands. Soil at the northern dispenser islands was impacted from near the surface to a depth of 25 feet and at the southwestern islands from the near surface to a depth of 10 feet. Chevrons consultant had estimated the total volume of contaminated soil at the site was 748 cubic yards. Remedial soil excavation at the site took place between August 18, 2011 and September 26, 2011. A total of 3,857 tons of contaminated soil were excavated. A total of 2,550 tons were treated and recycled by Soil Safe of California - TPST in Adelanto and 1,307 tons were disposed at the Otay landfill in Chula Vista. In addition, 18,437 gallons of groundwater were removed during dewatering activities and transported to K-Pure Waterworks facility in Rancho Cucamonga. Additional soil samples were collected by SCS Engineers during the remedial action to characterize the soil. Confirmation soil samples were collected from the sidewalls and bottom of the excavations. The consultant estimated that the amount of contaminated soil remaining on-site after the remedial excavation is approximately 443 cubic yards with approximately 192 cubic yards located in area 1 and 251 cubic yards located in area 2. Please refer to Figure 4 through 7 in the Corrective Action Report dated January 20, 2012 for the location of the remediation areas and confirmation results. Prior to implementation of remedial excavation, human health risk assessments were conducted by both Chevron and the owner/developers consultant. Both concluded that the benzene concentrations in soil vapor exceeded the DEH excess cancer risk threshold of one-in-one million (1×10^{-6}). Following excavation, a soil vapor survey and human health risk assessment was conducted at the site. The estimated excess cancer risk 2×10^{-8} and hazard values 4.89×10^{-5} were below the DEH threshold values. The consultant concluded that the remediation at the site was successful in eliminating the risks to human health from vapor intrusion. The consultant has recommended no further action for this case and DEH concurs with this recommendation.

Environmental Interest/Information System
HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D009
. Waste name: MERCURY

. Waste code: D016

Case Type: Cleanup Program Site
Case Worker: CF
Local Agency: SAN DIEGO COUNTY LOP
RB Case Number: Not reported
File Location: Local Agency
Potential Media Affected: Not reported
Potential Contaminants of Concern: Not reported
Site History: Staff of the County of San Diego, Department of Environmental Health (DEH), Site Assessment and Mitigation Program (SAM), reviewed file related to the above-referenced property and the status letter by Groundwater and Environmental Services, Inc. (GES) dated January 3, 2014. The letter provides a narrative of events related to redevelopment of a shopping plaza and potential worker exposure concerns related to an unauthorized release at a service station. The shopping plaza owner applied to DEHs Voluntary Assistance Program (VAP) case and requested DEH to concur with the consultant that the contamination at a service station adjoining the property was not a risk to plaza construction workers. A VAP case was opened for the Genesee Plaza Shopping Center on May 22, 2006. At the time, the shopping center, which is located on Balboa Avenue between Genesee Avenue and Mt. Abernathy Drive in San Diego, was slated for redevelopment. The plans entailed the demolition of selected buildings within the plaza, which were to be replaced with new construction and expanded parking areas. Upon review of the redevelopment plans, the City of San Diego Development Services Department (the City) noted that an unauthorized release case (#H05864-003) was open for a service station (addressed as 5790 Balboa Avenue) located adjacent to the plaza. The redevelopment planned for the immediate vicinity of the service station entailed the re-paving of parking areas and the reconstruction of sidewalks.

Demolition and building reconstruction activities were planned for plaza buildings located a minimum of 100 feet away from the service station. The City raised concerns with respect to potential health effects to construction workers from the unauthorized release at the service station. The VAP case was opened so that an appropriately-licensed consultant could provide the City with a letter stating that the release posed no health risk to workers on the redevelopment project. However, the project proceeded without the letter ever having been written. The unauthorized release case for the service station (#H05864-003) closed on January 10, 2007. In the above-referenced status letter, GES concluded that there was no risk of worker exposure to the unauthorized release at the time redevelopment work was performed at the shopping plaza and has recommended no further action and case closure. DEH concurs with these recommendations.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste name: CARBARYL (OR) 1-NAPHTHALENOL, METHYLCARBAMATE

Historical Generators:

Date form received by agency: 04/11/2011

Site name: TARGET STORE NO 2465

Classification: Small Quantity Generator

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002

. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D005

. Waste name: BARIUM

. Waste code: D008

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Contaminants of Concern: Not reported
Site History: This site is currently a vacant lot being developed into a tunnel car wash. There were two former Local Oversight Program (LOP) releases from the Mobil service station that was formally at this property, which was demolished in 2009. The first former LOP release (H12820-001) involved a gasoline release from USTs that were removed in August 1986. The case was closed August 8, 1994. The second LOP release (H12820-002) was discovered during a Phase II investigation in August 2009. The extent of soil contamination was further delineated with additional soil borings. All four tanks, piping and dispensers were removed in August 19, 2009 and all structures on site were demolished. Eight groundwater monitoring wells were installed at which time the groundwater plume was delineated. A Corrective Action Plan (CAP) was submitted. The suggested clean up method, natural attenuation, was approved. This VAP case was opened to evaluate the any risks from the former LOP cases or anything else discovered during the grading of the site for new car wash. A June 2017 Soil Mitigation Plan and Community Health & Safety Plan were submitted and approved. Excavation of the property occurred in June through August 2017. Grading and excavation took place from depths of two to ten feet. Soils with hydrocarbon impacts were noted in three locations based on Photo Ionization Detector (PID) monitoring Approximately 446 tons of contaminated soil was excavated and disposed of at appropriate facilities. No soil was reused off site. Due to shallow groundwater (noted at eight feet bgs), approximately 23,800 gallons of groundwater was pumped from two excavations and transported under manifest to appropriate facilities. Although none of the car wash footprint will be constructed over areas of former contamination, a Liquid Boot vapor barrier was installed. The consultant states that any onsite contamination remaining does not pose a significant threat to future occupants or to the environment. DEH concurs with these conclusions.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: 8/24/09 Phase II Site Assessment Report submitted by ETIC for ExxonMobil. Report showed elevated levels of benzene, toluene, xylene, MTBE and TBA in soil and groundwater. 8/31/09 DEH case H12820-002 opened. Groundwater assessment has indicated a shrinking plume. A 2013 CAP has suggested natural attenuation. DEH concurs.

Potential Contaminants of Concern: Gasoline
Site History: The Site is a former Texaco service station located on the southeast corner of Balboa Avenue and Mount Alifan Drive in San Diego. The Site is currently a Shell-Branded service station and consists of four dispensers, four underground storage tanks (USTs), a station building, and a detached carwash. In January 2002, during a routine Hazardous Material Division inspection, a sheen was observed on the water in the fill sumps. Water samples were collected from the fill

sumps and analyzed. Based on the laboratory results, the Department of Environmental Health (DEH) opened case H13176-002 on February 20, 2002. A brief summary of assessment and cleanup activities are presented below: Prior to case H13176-002 being opened, four monitoring wells were installed (P-1 through P-4) on September 3, 1997. These monitoring wells were later included in the groundwater monitoring and sampling program for this case; Between September 2004 and March 2012, three soil borings (SB-1, SB-3 and SB-4) were advanced and 11 monitoring wells (MW-01 through MW-11) were installed; On November 17, 2003, the product dispensers and piping were upgraded. On November 19, 2003, remedial excavation was conducted beneath dispenser D3 to a depth of 6 feet. SOIL Based on the analytical results from soil samples collected during the monitoring well installation, the soil boring advancement, and the product dispenser/piping upgrade activities, the consultant concludes that petroleum hydrocarbon impacted soil has been adequately defined and is limited to the Site. The consultant estimates that approximately 59 cubic yards of total petroleum hydrocarbon impacted soil greater than 100 milligrams per kilogram remains beneath the Site. GROUNDWATER The groundwater has been monitored and sampled between December 2004 and March 2013. A total of 15 monitoring wells were installed at the Site. Free product was not observed in the Sites monitoring well network. The consultant states that dissolved-phase concentrations of petroleum hydrocarbons and fuel oxygenates are decreasing or stable in all monitoring wells with the exception of TBA in MW-5. The consultant also states that dissolved-phase concentrations are below Water Quality Objectives for non-beneficial use basins. Based on the groundwater samples collected from the Sites monitoring well network, the consultant concludes that the dissolved-phase plume is adequately defined. A Corrective Action Plan (CAP) and CAP Addendum dated January 4, 2013 and July 19, 2013, respectively, was submitted to DEH. The CAP and CAP Addendum recommends No Further Action and Case Closure. Based on data obtained throughout the case history, Shell and their consultant concludes that Site conditions present no significant risk to human health, the environment, and nearby sensitive receptors. DEH concurs with these conclusions.

RB Case Number: 9UT3064
Local Agency: SAN DIEGO COUNTY LOP
File Location: Local Agency
Local Case Number: H15189-001
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Contamination was discovered on this site in 1993 and subsequently a case was opened to evaluate and assess the level of contamination. Free product removal has been ongoing with the site assessment. Additional groundwater monitoring wells are to be installed to help delineate the contamination on site. Please see the Environmental Data tab for additional site specific information.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/12/2018	Source: EPA
Date Data Arrived at EDR: 12/28/2018	Telephone: N/A
Date Made Active in Reports: 01/11/2019	Last EDR Contact: 02/15/2019
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/15/2019
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/12/2018

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/01/2018	Source: EPA
Date Data Arrived at EDR: 03/28/2018	Telephone: 800-424-9346
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 12/03/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 04/08/2019
	Data Release Frequency: Quarterly

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

UTM Y (Meters):	3631189.5
Elevation:	366 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5622824 LA JOLLA, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
LA JOLLA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
1	1/4 - 1/2 Mile East	SW
1G	1/4 - 1/2 Mile East	SW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CHESTERTON

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	18 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:
2	18 inches	33 inches	sandy clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:
3	33 inches	59 inches	indurated	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: CARLSBAD

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	20 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	Not reported	Max: Min:	Max: Min:
2	20 inches	38 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	Not reported	Max: Min:	Max: Min:
3	38 inches	50 inches	indurated	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	Not reported	Max: Min:	Max: Min:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: CHESTERTON

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

OPERATING CONDITIONS AND REQUIREMENTS FOR THE PERMIT TO OPERATE UNDERGROUND STORAGE TANKS

This permit is valid for 5 years pursuant to the California Health & Safety Code, Chapter 67, Section 25285 with an annual renewal fee per San Diego County Code, Title 6, Division 8, Chapter 9, Certified Unified Program Agency. Failure to comply with the following operating conditions and requirements for this permit to operate may cause the HMD to revoke, or modify this permit pursuant to Section 25285.1 of the California Health & Safety Code. NOTE: The owner and operator are subject to all applicable requirements of Chapters 6,7, and 6.75 of the California Health & Safety Code, and CCR Title 23 Division 3, Chapters 16 and 18.

The Underground Storage Tank Facility Owner/Operator shall provide and maintain the following:

1. Obtain appropriate permits from the Department of Environmental Health (DEH). Permits are required to install, operate, close, upgrade, or repair an underground storage tank system including associated piping.
2. A copy of this permit and all conditions and attachments must be kept at the underground storage tank location at all times. This permit must be renewed prior to the expiration date.
3. The permittee shall ensure that both the owner and the operator of the tank are provided with a copy of this permit. If the permittee is not the operator of the tank, then the permittee must:
 - a. Enter into a written agreement with the operator of the tank to monitor the tank system as set forth in this permit;
 - b. Provide the operator with a copy or summary of Section 25299 (attached); and
 - c. Notify the DEH of any change of operator.
4. Allow the DEH to inspect the facility, equipment, device or records pursuant to Section 68.903 of the San Diego County Code and HSC Chapter 6.7, Section 25289.
5. Monitor the underground storage tank using a monitoring method specified on the permit application. Monitoring, maintenance, and testing records shall be kept on site for at least 3 years, 6 ½ years for cathodic protection maintenance records, and 5 years for written performance claims pertaining to release detection systems, and calibration and maintenance records for such systems. Records of repairs, lining, and upgrades shall be maintained on site or at another approved location for the remaining life of the underground storage tank. These records shall be kept on site and made available upon request to the DEH or the State Water Board. Monitoring records shall include:
 - a. The date, and time of all monitoring or sampling;
 - b. Monitoring equipment calibration and maintenance records;
 - c. The results of any visual observations;
 - d. The results of all sample analysis performed in the laboratory or in the field, including laboratory data sheets and analysis used;
 - e. The logs of all readings of gauges or other monitoring equipment, ground water elevations, or other test results; and
 - f. The results of any inventory readings and daily inventory reconciliation.
6. A copy of the Designated Operator monthly inspection record with all attachments for the previous 12 months and a list of facility employees who have been trained by the designated operator (including dates of training and dates of hire) shall be kept on site.
7. Maintain on site and/or in CERS, an approved "Operating Permit Application - Facility Information" and the "Operating Permit Application - Tank Information", "Underground Storage Tank Monitoring Plan" (referenced in Title 23, Section 2632 (d)(1)), emergency response plan, and plot plan.
8. Maintain all equipment, devices and instruments in good repair. All monitoring and leak detection equipment shall be installed, calibrated, operated, and maintained in accordance with manufacturer's instructions, including routine maintenance and service checks (at least once per calendar year) for operating or running condition. All primary containment shall be product-tight.
9. Owners and operators shall use care to prevent releases due to spilling or overfilling. Before product is delivered, owners, operators, or their agents shall ensure that the space available in the tank is greater than the volume of product to be transferred to the tank and shall ensure that the transfer operation is monitored constantly to prevent overfilling and spilling. In addition, you must report and record all unauthorized releases (leaks) to the DEH within 24 hours [Phone Number (858) 505-6880].
10. Report and record all failed integrity tests or inconclusive SIR results to the DEH within 24 hours [Phone Number (858) 505-6880].
11. Submit a copy of all monitoring certification, spill bucket, integrity, and secondary containment test results to the DEH within 30 days after completion of the test. Submit a copy of enhanced leak detection results to the DEH within 60 days after completion of the test.
12. Notify the DEH in writing within 30 days of a change in ownership, operator, monitoring procedure, equipment, or tank usage.
13. Maintain adequate Pollution Liability Insurance (Financial Responsibility) pursuant to Article 3, Chapter 6.75 of the California Health & Safety Code.
14. Additional requirements may be imposed on the tank owner/operator for the permit to operate, should the State Water Resources Control Board (SWRCB) adopt new sections or amend the California Health & Safety Code or the California Code of Regulations, Title 23.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document installation, testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

Plan Check Number:

Permit Number: 114261

A. General Information

Facility Name: County of San Diego Lab

Bldg. No.:

Site Address: 5255 Mount Etha Dr.

City: San Diego

Zip: 92117-

Facility Contact Person: Mike Johnson

Contact Phone No.: (858) 694-3615 x

Make/Model of Monitoring System: Veeder-Root TLS-300C

Date of Testing/Servicing: 6-Jan-15

B. Inventory of Equipment Tested/Certified: Check the appropriate boxes to indicate specific equipment installed/ inspected serviced:

<p>Tank ID: Diesel 4,000</p> <p><input checked="" type="checkbox"/> In-Tank Gauging Probe Model: 847390-107</p> <p><input checked="" type="checkbox"/> Annular Space or Vault Sensor Model: 794390-420</p> <p><input checked="" type="checkbox"/> Piping Sump / Trench Sensor(s) Model: 794380-208</p> <p><input type="checkbox"/> Fill Sump Sensor(s) Model:</p> <p><input type="checkbox"/> Mechanical Line Leak Detector Model:</p> <p><input type="checkbox"/> Electronic Line Leak Detector Model:</p> <p><input checked="" type="checkbox"/> Tank Overfill / High-Level Sensor Model: 847390-107</p> <p><input type="checkbox"/> Other (specify equipment type and model in Section E on Page 2).</p>	<p>Tank ID:</p> <p><input type="checkbox"/> In-Tank Gauging Probe Model:</p> <p><input type="checkbox"/> Annular Space or Vault Sensor Model:</p> <p><input type="checkbox"/> Piping Sump / Trench Sensor(s) Model:</p> <p><input type="checkbox"/> Fill Sump Sensor(s) Model:</p> <p><input type="checkbox"/> Mechanical Line Leak Detector Model:</p> <p><input type="checkbox"/> Electronic Line Leak Detector Model:</p> <p><input type="checkbox"/> Tank Overfill / High-Level Sensor Model:</p> <p><input type="checkbox"/> Other (specify equipment type and model in Section E on Page 2).</p>

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. Certification - I certify that the equipment identified in this document was installed/inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report (check all that apply): Copy of the report System set-up Alarm history report

Technician Name (print): John Culver II

Signature:

Certification No.: A22531

License No.: 708231

Testing Company Name: Jauregui & Culver Inc.

Phone No.: (760) 743-0518 x

Testing Company Address: 959 W. Mission Ave. Escondido, Ca. 92025

Date of Testing/Servicing: 6-Jan-15

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

D. Results of Testing/Serviceing

Permit Number: 114261

Software Version Installed: 15.01

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shutdown? <i>(Check all that apply)</i> <input type="checkbox"/> Sump/Trench Sensors; <input type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shutdown due to leaks and sensor failure/disconnection? <input type="checkbox"/> Yes; <input type="checkbox"/> No.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90%
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was liquid found inside any secondary containment systems designed as dry systems? <i>(Check all that apply)</i> <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments (500 characters max. add additional sheets if needed):

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment:

Permit Number: 114261

- Check this box if tank gauging is used only for inventory control
- Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

Check this box if LLDs are not installed.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input type="checkbox"/> 3 g.p.h.; <input type="checkbox"/> 0.1 g.p.h.; <input type="checkbox"/> 0.2 g.p.h.
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

H. Comments (500 characters max. add additional sheets if needed):

I. Results of Vacuum/Pressure Monitoring Equipment Testing

This page should be used to document testing and servicing of vacuum and pressure interstitial sensors. A copy of this form must be included with the Monitoring System Certification Form, which must be provided to the tank system owner/operator. The owner/operator must submit a copy of the Monitoring System Certification Form to the local agency regulating UST systems within 30 days of test date.

	Model:	System Type: <input type="checkbox"/> Pressure; <input type="checkbox"/> Vacuum
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail	Interstitial Communication Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail	Interstitial Communication Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail	Interstitial Communication Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail	Interstitial Communication Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail	Interstitial Communication Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail	Interstitial Communication Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail	Interstitial Communication Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail	Interstitial Communication Test Result: <input type="checkbox"/> Pass; <input type="checkbox"/> Fail
How was interstitial communication verified?		
<input type="checkbox"/> Leak Introduced at Far End of Interstitial Space; ¹ <input type="checkbox"/> Gauge; <input type="checkbox"/> Visual Inspection; <input type="checkbox"/> Other (Describe in Sec. J, below)		
Was vacuum/pressure restored to operating levels in all interstitial spaces? <input type="checkbox"/> Yes <input type="checkbox"/> No (If no, describe in Sec. J, below)		

J. Comments (500 characters max. add additional sheets if needed): No Vac Sensors.

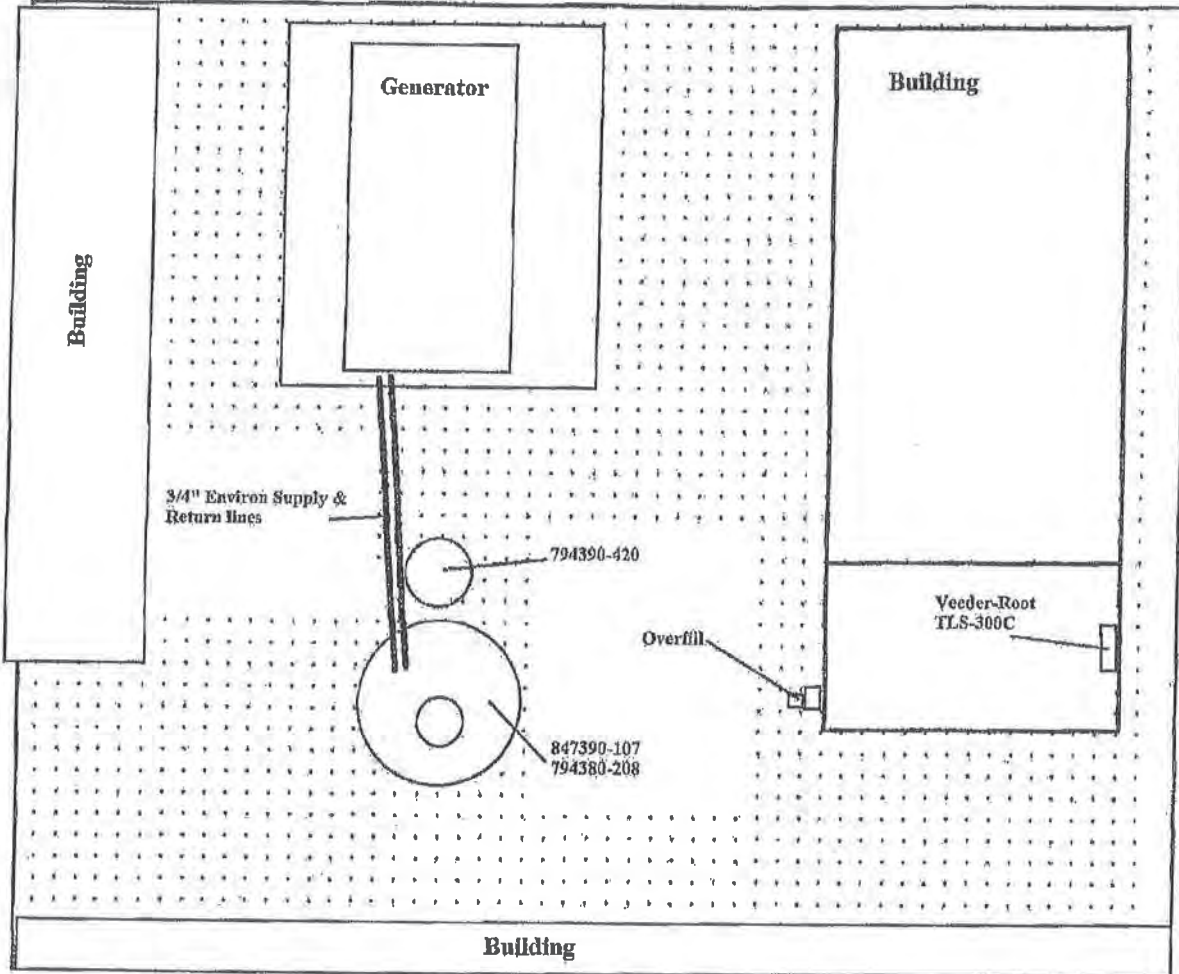

¹ If the sensor successfully detects a simulated vacuum/pressure leak introduced in the interstitial space at the furthest point from the sensor, vacuum/pressure has been demonstrated to be communicating throughout the interstice.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Permit Number:

UST Monitoring Site Plan

Site Address: **5255 Mt. Etha Rd. San Diego, CA**

Date map was drawn: 1-6-14

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name:	County of San Diego Lab	Date of Testing:	1-6-15

COMPLIANCE INSPECTION REPORT

BUSINESS NAME SD COUNTY SHERIFF'S CRIME LAB
ADDRESS 5255 MOUNT ETNA DR.
CITY/ZIP SAN DIEGO, 92117

On the above date an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

HEALTH PERMIT EXPIRES 2/28/98 APR 25 1996 Processed 5/22/96 HSE

Office Use Only

A ROUTINE INSPECTION WAS CONDUCTED WITH MR. RANDALL T. ROBINSON, SUPERVISING CRIMINALIST OF THE SAN DIEGO COUNTY SHERIFF'S DEPARTMENT CRIME LABORATORY.

INSPECTION CONDUCTED ON SEPTEMBER 28, 1994 BY HMMD STATED THAT ONLY THE UNDERGROUND STORAGE TANK (UST) STORING DIESEL FUEL FOR THE BACK UP GENERATOR WAS COMPLETED. PER MR. ROBINSON, THE CRIME LAB HAS BEEN IN OPERATION BETWEEN FOR APPROXIMATELY ONE YEAR. THE FOLLOWING WASTE STREAMS APPEAR TO BE GENERATED AT THIS TIME:

- (1) BIODANGEROUS WASTE (901.902)
- (2) MISCELLANEOUS CHEMICAL TRACE CONTAMINATED WASTE
- (3) ASBESTOS (occasionally) ?? (Probably mislabelled per Mr. Robinson)

A (CURRENT CHEMICAL INVENTORY LIST DATED AUGUST 1995) WAS PROVIDED TO THE HMMD AND WILL BE (SUBMITTED TO) THE FACILITY'S (MAIN FILE.)

REMARKS:

- FACILITY GENERATES > 200 POUNDS MEDICAL WASTE/MONTH OCCASIONALLY;
- HMLD REQUESTS AN UPDATED LIST OF SUSPECTED CARCINOGENS BE SUBMITTED AND THAT ADDITIONAL CHANGES (UPDATES) TO THE CHEMICAL INVENTORY LIST PROVIDED CARCINOGEN LIST AMENDMENTS BE SUBMITTED TO THE HMLD;
- COMPLETE MSDS LISTING PROVIDED IN MAIN LIBRARY OF FACILITY;
- DISPOSAL RECEIPTS FOR HAZARDOUS WASTE IN FILE, HOWEVER NOT READILY ACCESSIBLE PER ROSIE RODRIGUEZ. WITHIN 30 DAYS PROVIDE REQUESTED EASILY ACCESSIBLE FOR REVIEW. MAINTAIN ALL DISPOSAL RECEIPTS ON-SITE FOR 3 YEARS

COMPLIANCE INSPECTION REPORT

DATE 3/27/96

PAGE 5 OF 5

BUSINESS ADDRESS: 5255 MOUNT ETNA DR., SAN DIEGO 92117

VIOLATION REPORT: The items checked below refer to specific section numbers of Titles 19/22/23 of the California Code of Regulations (CCR), Chapters 6.5, 6.7, 6.95 of the Health and Safety Code (HSC), and/or the San Diego County Code (SDCC).

I HAZARDOUS WASTE REQUIREMENTS:

RECORD KEEPING

- Health Permit not obtained SDCC 88.905 V0108 W
No EPA Identification Number 86262.12 V0105 W
Waste Manifests/Receipts not on-site for 3 years 86262.40 V0118 W
Manifest not properly completed 86262.23 V0120 W
Manifest copy not sent to CAL-EPA 86262.23 V0115 W
TSDF signed-manifest not on-site 86262.40 V0121 W
Biennial report not sent to CAL-EPA 86262.41 V0122 W
LDR Documentation not available 86268.7 V0123 W
Exception Rpt. not filed with CAL-EPA 86262.42 V0116 W
Operating TSDF without authorization 25201 V0124 W

STORAGE AND HANDLING

- Waste stored longer than 90 days 86262.34 V0221 W
Waste container missing/improperly labeled 86262.34 V0222 W
Hazard Materials not properly labeled 25124 V0223 W
Waste container not kept closed 86265.173 V0202 W
Waste container in poor condition 86265.171 V0205 W
Waste container(s) not properly managed 86265.173 V0210 W
Damaged container not repackaged 86265.171 V0226 W
Container incompatible with waste 86265.172 V0207 W
Incompatibles in the same container 86265.177 V0224 W
Incompatibles not stored separately 86265.177 V0213 W
Ignitable Wastes less than 50 feet 86265.178 V0214 W
Ignitable Wastes not grounded 86265.31 V0215 W
Storage area not inspected weekly 86265.174 V0216 W

DISPOSAL AND TRANSPORTATION

- Unauth. disposal of waste to 25189.5 V0313 W
Waste determination not made 86262.11 V0319 W
Unlawful transport of haz. waste 25183 V0315 W
Waste transported without manifest 86262.20 V0316 W
No Extremely Haz. Waste Permit 87430.1 V0317 W

TRAINING, CONTINGENCY PLAN & EMERGENCY PROCEDURES

- Training records unavailable 86265.18 V0405 W
Training program not adequate 86265.16 V0406 W
Facility not designed to minimize release 86265.31 V0501 W
Spill control equip not available 86265.32 V0508 W
Aisle space is obstructed 86265.35 V0509 W
Contingency plan not prepared and/or on file 86265.51, 86265.53 V0609 W

MISCELLANEOUS

- Waste oil contaminated 25250.7 V0225 W
Used oil filters improperly managed 86268.130 V0701 W
Damaged batteries improperly managed 86268.81 V0702 W

II UNDERGROUND STORAGE TANK (UST) REQUIREMENTS:

GENERAL UST REQUIREMENTS

- Health Permit not obtained 88.1005, 25284 V3002 T
Repair/modify/close permit not obtained 88.1005 V3007 T
UST Permit Application not submitted 25288(a) V3010 T
Operating permit conditions violated 2712 V3011 T
Failed to notify HMMMD of changes 25284 V3012 T
No owner/operator agreement 25293 V3005 T
No records of financial coverage 25292.2 V3013 T
No maint/monit/calib records available 2712(b), 2841i V3001 T

MONITORING REQUIREMENTS (SINGLE WALL)

- Leak Detection Method does not meet performance standards 2843 V3014 T
Annual Integrity test not conducted 25292 V3015 T
Copy of tank test not submitted to HMMMD within 30 days 2843 V3016 T
Manual tank gauging (<2000 gal) 2845 not done properly V3017 T
Reconciliation not done properly 2848 V3018 T
Reconciliation not approved for facility 2848 V3019 T
Dispenser meter(s) not calib annually 2848 V3020 T
Improper liquid measurements 2848 V3021 T
Stick in poor condition 2848 V3022 T
Improper monthly reconciliation 2848 V3023 T
Failed to report excessive variation 2848 V3024 T
Pressurized Product Piping Leak Device not tested annually 25292 V3025 T

MONITORING REQUIREMENTS (DOUBLE WALL)

- Monitoring system not functional 2832 V3026 T
No written monitoring procedure 2832 V3027 T
Written response plan not available 2832 V3028 T
Spill/Overflow equip. not maintained or installed 2835 V3029 T

RELEASE REPORTING

- Failure to report an unauthorized release 25295 V3009 T
Release record log not available 2851, 2850 V3030 T
No leak report/investigation/action 2852 V3031 T

CLOSURE

- Temporary closure req. not completed 2871 V3006 T
Abandoned tank not properly closed 25298 V3032 T
Permanent closure req. not completed 2872 V3033 T

III HAZARDOUS MATERIALS BUSINESS PLAN REQUIREMENTS:

RECORD KEEPING

- Health Permit not obtained SDCC 88.1105 V2001 W
Business Plan not established/implemented 25503.5 V2002 W
Business Plan not submitted to HMMMD 25505 V2007 W
Business Plan not amended 25505 V2003 W
Personnel Training Records not available 2732 V2302 W

RELEASE REPORTING

- Failure to report a release/threatened release 25507 V2008 W

BUSINESS PLAN ELEMENTS

- Emergency Response Plan inadequate 25504 V2201 W
Emergency Contacts not provided/current 25509 V2203 W
Personnel Training Program inadequate 25504 V2301 W
Inventory is incomplete 25504 V2005 W
Site Map is not sufficient 25509 V2202 W
Acutely Haz. Mat. not registered 25533 V2009 W

An inspection summary report will be mailed shortly. All violations must be corrected. Please call (619) 338-2222 if you have any questions.

Handwritten signatures and titles for Establishment Representative and Supervisor.

SUPPLEMENTAL INSPECTION REPORT

Office Use Only

BUSINESS ADDRESS: 5255 MT ETNA DR SAN DIEGO ZIP CODE: 92117

- 2) CONT.
5 GAL GLASS/DEBRIS WASTE CONTAINER NOT LABELED.
LABEL ALL HAZARDOUS WASTE STORAGE CONTAINERS WITH COMPLETED HAZARDOUS WASTE LABELS THAT INDICATE THE FOLLOWING: CONTENTS/COMPOSITION, GENERATOR INFO, START ACCUMULATION DATE, HAZARDOUS PROPERTIES & PHYSICAL STATE.
- 3) EMPLOYEE TRAINING DOCUMENTATION IN HAZARDOUS MATERIALS MGMT AND IN EMERGENCY RESPONSE IS UNAVAILABLE. UPDATE THIS TRAINING YEARLY, AND USE EMPLOYEE SIGNATURES FOR DOCUMENTATION. MAINTAIN RECORDS ON SITE.
- 4) COMPLETE AND IMPLEMENT THE LST WRITTEN MONITORING PROCEDURE, AND WRITTEN RESPONSE PLAN. REFER TO FORMS PROVIDED. MAINTAIN PLANS ON SITE.
- 5) HAZARDOUS MATERIALS BUSINESS PLAN SITE MAP IS NOT SUFFICIENT. WITHIN 15 DAYS, COMPLETE AND SUBMIT AN ADEQUATE SITE MAP USING PROPER FORM & SYMBOLS TO THE ADDRESS BELOW. KEEP A COPY ON PREMISES.
- 6) OBSERVED TWO BIOHAZARDOUS SHARPS CONTAINERS MISSING GENERATOR LABELING.

COMPLIANCE INSPECTION REPORT

EST. NUMBER H 14261DATE 11/4/97PAGE 4 OF 5BUSINESS ADDRESS: 5255 MT PINA DR SAN DIEGO 92117-6912

VIOLATION REPORT: The items checked below refer to specific section numbers of Titles 19/22/23 of the California Code of Regulations (CCR), Chapters 6.5, 6.7, 6.95 of the Health and Safety Code (HSC), and/or the San Diego County Code (SDCC).

I HAZARDOUS WASTE REQUIREMENTS:

RECORD KEEPING

- Health Permit not obtained SDCC 68.905
- No EPA Identification Number 66262.12
- Waste Manifests/Receipts not on-site for 3 years 66262.40
- Manifest not properly completed 66262.23
- Manifest copy not sent to DTSC 66262.23
- TSDF signed-manifest not on-site 66262.40
- Biennial report not sent to DTSC 66262.41
- LDR Documentation not available 66268.7
- Exception Rpt. not filed with DTSC 66262.42
- Operating TSDF without authorization 25201

STORAGE AND HANDLING

- Waste stored longer than 90, 180, or 270 days 66262.34
- Failure to clean up hazwaste off of floor surface 66262.10b
- Waste container missing/improperly labeled 66262.34
- Haz Materials not properly labeled 25124
- Waste container not kept closed 66265.173
- Waste container in poor condition 66265.171
- Waste container(s) not properly managed 66265.173
- Damaged container not repackaged 66265.171
- Container incompatible with waste 66265.172
- Incompatibles in the same container 66265.177
- Incompatibles not stored separately 66265.177
- Ignitable Waste less than 50 feet 66265.176
- Ignitable Waste not grounded 66265.31
- Storage area not inspected weekly 66265.174

DISPOSAL AND TRANSPORTATION

- Unauth. disposal of waste to 25189.5
- Waste determination not made 66262.11
- Unlawful transport of haz. waste 25163
- Waste transported without manifest 66262.20
- Extremely Haz Waste Permit not obtained 25205.7

TRAINING, CONTINGENCY PLAN & EMERGENCY PROCEDURES

- Training records unavailable 66265.16
- Training program not adequate 66265.16
- Facility not designed to minimize release 66265.31
- Spill control equip not available 66265.32
- Aisle space is obstructed 66265.35
- Contingency plan not prepared and/or on file 66265.51, 66265.53

MISCELLANEOUS

- Waste oil contaminated 25250.7
- Used oil filters improperly managed 66266.130
- Damaged batteries improperly managed 66266.81
- Facility has failed to notify local CUPA and DTSC of onsite treatment of hazardous waste (tiered permitting)
- Onsite treatment of waste without authorization 25201

MEDICAL WASTE GENERATOR REQUIREMENTS

BUSINESS ADDRESS: 5255 MT BETNA DR SAN DIEGO ZIP: 92117-6912
VIOLATION REPORT: The items checked below refer to specific section numbers of the California Health and Safety Code Sections 25100 and 117600 et. al.; the San Diego County Code of Regulatory Ordinances Sections 68.1201 et. al.; and the California Code of Regulations, Title 22 Sections 65600 et. al. and 66262.10 et. al. All violations must be corrected. Please call (619) 338-2222 or your Inspector if you have any questions.

GENERAL REQUIREMENTS:

- [] An Environmental Health Permit as a medical waste generator has not been obtained. 68.1203, 68.1204, and 117705 V4101 W
[] Unlawful disposal of untreated medical waste to an unauthorized point. 118340 V4102 W
[] Improper treatment of medical waste using an unapproved method or procedure. 118215 V4103 W
[] Medical SOLID WASTE is not stored in a locked trash receptacle or enclosure so as to deny access to unauthorized persons. 68.1202 V4104 W
[] Improper clipping or cutting of sharps waste at the point of generation. 68.1205 V4105 W
[] Medical waste was not separated from other waste at the point of origin. 118275 V4106 W
[] Generator has not maintained reusable containers/bins for medical waste storage in a clean and sanitary manner. 118295 and 118305 V4107 W
[] Storage time exceeded for frozen medical waste, e.g. greater than 90 days. 118280 V4108 W
[] Generator did not clean-up a leak or spill of medical waste in an approved manner. 118300 V4109 W
[] Generator has not secured the enclosure or designated accumulation area for medical waste containers so as to deny access to unauthorized persons. 118310 V4110 W
[] Operator did not post an approved and legible biohazardous waste "warning sign" in English and Spanish at the waste storage area(s). 118310 V4111 W
[X] Generator did not store medical waste in approved and properly marked red bags (non-sharps). 118275 V4112 W
[X] Did not place a label with the generator's name, address, and phone number on the outside of the red bag and/or sharps container. 68.1201 and 68.1205 V4113 W 902
[] Generator did not store sharps waste in approved and properly marked sharps container. 118275 V4114 W
[] Transportation of medical waste without State Hauler Registration or without a limited-quantity hauling exemption from County HMMD. 118025 V4115 W
[] Generator did not have standardized written operating procedures for a steam sterilizer available onsite. 118215 V4116 W
[] Did not have recording thermometer checked for calibration annually. 118215 V4117 W
[] Generator did not maintain records of thermometer calibration checks for at least 3 years. 118215 V4118 W
[] Operator did not use heat-sensitive tape or other approved method for each load of medical waste treated onsite. 118215 V4119 W
[] Need to use a biological indicator or other approved method at least once a month to confirm proper disinfection conditions. 118215 V4120 W
[] Must tie-off red bags to prevent leakage or expulsion of contents during handling and storage. 118280 V4121 W
[] Did not containerize and place red bags in rigid, leak resistant, and covered containers or bins. 118280 V4122 W
[] Must have waste container/bin labeled on the lid and side so as to be clearly visible. 118280 V4123 W
[] Did not tape closed or tightly-lid a full sharps container ready for disposal, to preclude loss of contents. 118285 V4124 W

- [] Maximum holding time exceeded for non-putrescible medical waste, e.g. greater than 180 days. 68.1203 V4033 W

LARGE QUANTITY WASTE GENERATORS: (> 200 pounds of waste in a month)

- [] Medical Waste Management Plan has not been submitted to County HMMD (Annual Requirement). 117960 and 68.1206 V4034 W
[] Must maintain and show proof of "onsite" medical waste treatment records for 3 years. 118215 and 117975 V4035 W
[] Generator did not retain on file disposal receipts and/or tracking documents for waste shipped offsite for at least 3 years. 117975 V4036 W
[] Storage time exceeded for full sharps container(s), e.g. greater than 7 days at room temperature. 118285 V4037 W
[] Storage time exceeded for red bag waste, e.g. more than 7 days at room temperature. 118280 V4038 W

PATHOLOGY WASTE AND CHEMOTHERAPY WASTE HANDLING:

- [] Did not segregate chemotherapy waste from other medical waste. 118275 V4039 W
[] Generator did not label container holding chemotherapy waste with the words "chemotherapy waste" or other approved markings on the lid and sides. 118275 V4040 W
[] Did not segregate pathology waste from other medical waste. 118275 V4041 W
[] Generator did not label container holding pathology waste with the words "pathology waste" or other approved markings on the lid and side. 118275 V4042 W
[] Unlawful disposal of pathology waste or chemotherapy waste to an unauthorized point. 118340 V4043 W

PHARMACEUTICAL WASTE HANDLING:

- [] Generator did not segregate pharmaceutical waste from other medical waste. 118275g V4044 W
[] Generator did not label container holding pharmaceutical waste with the words "incineration only" or other approved markings on the lid and side. 118275g V4045 W
[] Storage time exceeded for pharmaceutical waste, e.g. more than 90 days. (> 10 pounds per calendar year generated) 118280e V4046 W
[] Very small quantity generator of pharmaceutical waste (e.g. < 10 pounds waste /calendar year) improperly storing waste for longer than one year. 118280e V4047 W
[] Unlawful disposal of pharmaceutical waste to an unauthorized point. 118340 and 118222 V4048 W

ON-SITE MEDICAL WASTE TREATMENT FACILITY REQUIREMENTS:

- [] Operator has not obtained an onsite medical waste treatment permit from the County. 117950, 118130, 118155, and CCR 65620 V4049 W
[] Must maintain an updated and complete copy of the medical waste treatment permit onsite and available for review. CCR 65621(f), 65623, 118165, and 118180 V4050 W
[] Did not comply with a condition of the medical waste treatment permit issued by the County. CCR 65623 V4051 W

PHOTOCHEMICAL and HAZARDOUS WASTE MGMT. AND DISPOSAL:

- [] Illegal disposal of photoprocessing/ hazardous waste to the sewer, trash, etc. 25189.5 V4052 W
[] Generator has not maintained waste disposal records, e.g. manifests/milk-run receipts. onsite for 3 years. 66262.40 V4053 W
[] Generator has not obtained an EPA Identification Number from the State DTSC for hazardous waste generation, e.g. photoprocessing/hazardous waste. 66262.12 V4054 W
[] Generator did not properly label the container holding hazardous waste. 66262.34 V4055 W
[] Generator did not maintain the container holding hazardous waste tightly closed except when adding or removing waste. 66265.173 V4056 W
[] Generator did not submit a notification to the County prior to treating photochemical waste onsite (e.g. > 10 gallons/month: tiered permitting). 25201.5 V4057 W

SMALL QUANTITY GENERATOR REQUIREMENTS: (< 200 pounds per month of waste)

- [] Medical Waste Management Plan has not been submitted to County HMMD (Annual Requirement) 68.1206 and 117935 V4025 W
[] Must maintain and show proof of "onsite" medical waste treatment records for 3 years. 118215 and 117943 V4026 W
[] Generator did not retain on file disposal receipts and/or tracking documents for waste shipped offsite for at least 2 years. 117945 V4027 W
[] Need to apply for and receive a limited-quantity hauling exemption for "self-hauled" medical waste (< 20 pounds of waste per week). 118030 and 118025 V4028 W
[] Did not renew a limited-quantity hauling exemption annually. 118030 V4029 W
[] Storage time exceeded for full sharps container(s), e.g. greater than 7 days at room temperatures (for > 20 pounds/month generator). 118285 V4030 W
[] Storage time exceeded for red bag waste, e.g. more than 7 days at room temperature (> 20 pounds/month generator). 118280 V4031 W
[] Very small quantity generator (e.g. < 20 pounds per month) improperly storing waste for greater than 30 days onsite at room temperature. 118280 V4032 W

GENERATION AND STORAGE OF BIOHAZARDOUS WASTE:

Describe below the type and quantity of biohazardous waste generated and managed at this facility. SEE SAMPLE PLAN AND ATTACHMENT FOR DEFINITION OF TERMS USED IN THIS PLAN

MEDICAL WASTE TYPE	QUANTITY (lbs/month)	STORAGE (container type)	TREATMENT/METHOD	ON-SITE	OFF-SITE	HAULER NAME*
BIOHAZARDOUS WASTE Sharp Waste Needles/syringes/slides	40	Sharps container	Steam Sterilization		X	BFI
Non-sharp Waste Articles containing Fluid Blood (gauze, bandages, tubing, etc.)	60	Biohazard bags	Steam Sterilization		X	BFI
Solids (cultures, lab waste, etc.)	N/A					
Liquids (cultures, urine, etc.)	40	Biohazard bags	Steam Sterilization		X	BFI PWN
Trace chemotherapy waste	N/A					
Contaminated animal carcasses	N/A					
Other						
MEDICAL SOLID WASTE Gloves, empty specimen containers, gauze with dry blood, treated biohazardous waste	N/A	Regular trash	N/A	N/A	N/A	Laidlaw

* If applicable, attach a copy of biohazardous waste hauler contract or Limited Quantity Hauler exemption.

Biohazardous WASTE STORAGE LOCATION: [Please check the appropriate box(es)].

Biohazardous Waste: Inside establishment in secured area Outside in posted, secure area
 Medical Solid Waste: Inside establishment Outside in Locked/secured dumpster

PERSONNEL TRAINING:

All personnel handling biohazardous waste have been trained in all aspects of this management plan. Training includes the legal definition of biohazardous waste, separation and proper storage, transportation, treatment, and disposal of biohazardous waste. Documentation for completed employee training will be kept onsite.

CERTIFICATION STATEMENT:

I certify that the above management plan is complete and accurate, and that this business will adhere to all aspects of the plan. I further understand that any violation of this plan or any applicable law or regulation may result in legal action.

UST Inspection
 Monitoring Certification FEB 04 2003

Observations - Violations - Corrective Action

1-9-03
 Faxed copy of
 CIR plus ERP
 and MONITORING
 PROCEDURE TO
 JIM Jordan 1/8/03
 (Signature)

- Operating Permit - UST, expired 8-6-2001
 A new one will be issued upon receipt of Monitoring Certification - completed on this day by Rene ~~Le~~ Le Mesnager.
- Monitoring System last certified 1-25-2000 by Clean Fuels.
 All monitoring systems must be certified on an annual basis.
 This was certified on this day by Rene L.
- Sensor in sump had been knotted up so as not to go in alarm. 6" of water measured in sump - and sensor should have been in alarm. The sensor must be kept in lowest part of sump.

This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.

COMPLIANCE INSPECTION REPORT

BUSINESS ADDRESS: 5255 Mt Ethna Dr ZIP: 92117

VIOLATION REPORT: The items checked below refer to specific section numbers of Title 23 of the California Code of Regulations (CCR), Chapters 6.7, of the Health & Safety Code (HSC) & the County Code of Regulatory Ordinances (SDCC). The following code sections are either in violation (V) with the Underground Storage Tank laws and regulations or Non-Applicable (N/A). All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use the Corrective Action Form to document your return to compliance. Your Specialist can provide these forms. Please call (619) 338-2222 or your Specialist if you have any questions.

SUPPLEMENTAL INSPECTION REPORT

BUSINESS ADDRESS: 5255 Mt Etna Dr. ZIP CODE: 92117

Office Use Only

- ③ Sump has approximately 6 inches of liquid - The sump must be clean and dry at all times.
Have contractor remove standing fluid and reposition sensors. Dispose of as hazardous waste.
- ④ Sump sensor not position properly.
Sensor should be placed in lowest part of sump - according to manufacturers specifications.
After standing water + diesel fluid mix has been removed from sump - reposition sensor accordingly.
- ⑤ Pollutert monitoring device has not been certified since 1/25/2000.
All monitoring systems must be certified annually. After above ^{violations} actions have been corrected and certification completed fax copy attn:
SUSAN HATHN @ 858. 694. 3705.
- ⑥ UST operating permit expired 2/2001 w/ a 90 day extension granted.
Within 60 days complete all above violations to have new permit issued.
If difficulties arise in completing the corrective action please contact HMD Supervisor Mike Vizzier @ 858. 694. 445. 5672
- ⑦ No monitoring procedure or emergency response plan available. Complete these within 60 days.

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; (check all that apply): System set-up Alarm history report

Technician Name (print): Rene LeMesnager Signature: Rene LeMesnager

Certification No.: 11660 License No.: 203029

Testing Company Name: LeMesnager Engineering Phone No.: (619) 917-8001

Shop Address: 3111 Santee Village Cir N Date of Testing/Servicing: 12/23/03
San Diego, CA 92127

D. Results of Testing/Serviceing

Software Version Installed: N/A

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
	<input checked="" type="checkbox"/> N/A	
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? (Check all that apply) <input type="checkbox"/> Sunip/Trench Sensors; <input type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? <input type="checkbox"/> Yes; <input type="checkbox"/> No
	<input checked="" type="checkbox"/> N/A	
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	For tank systems that utilize the monitoring system as the primary tank overflow warning device (i.e. no mechanical overflow prevention valve is installed), is the overflow warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger?
	<input checked="" type="checkbox"/> N/A	
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments: Section system for Emerg. Generator

F. In-Tank Gauging / SIR Equipment:

- Check this box if tank gauging is used only for inventory control.
- Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

- Check this box if LLDs are not installed.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input type="checkbox"/> 3 g.p.h.; <input type="checkbox"/> 0.1 g.p.h.; <input type="checkbox"/> 0.2 g.p.h.
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

H. Comments:

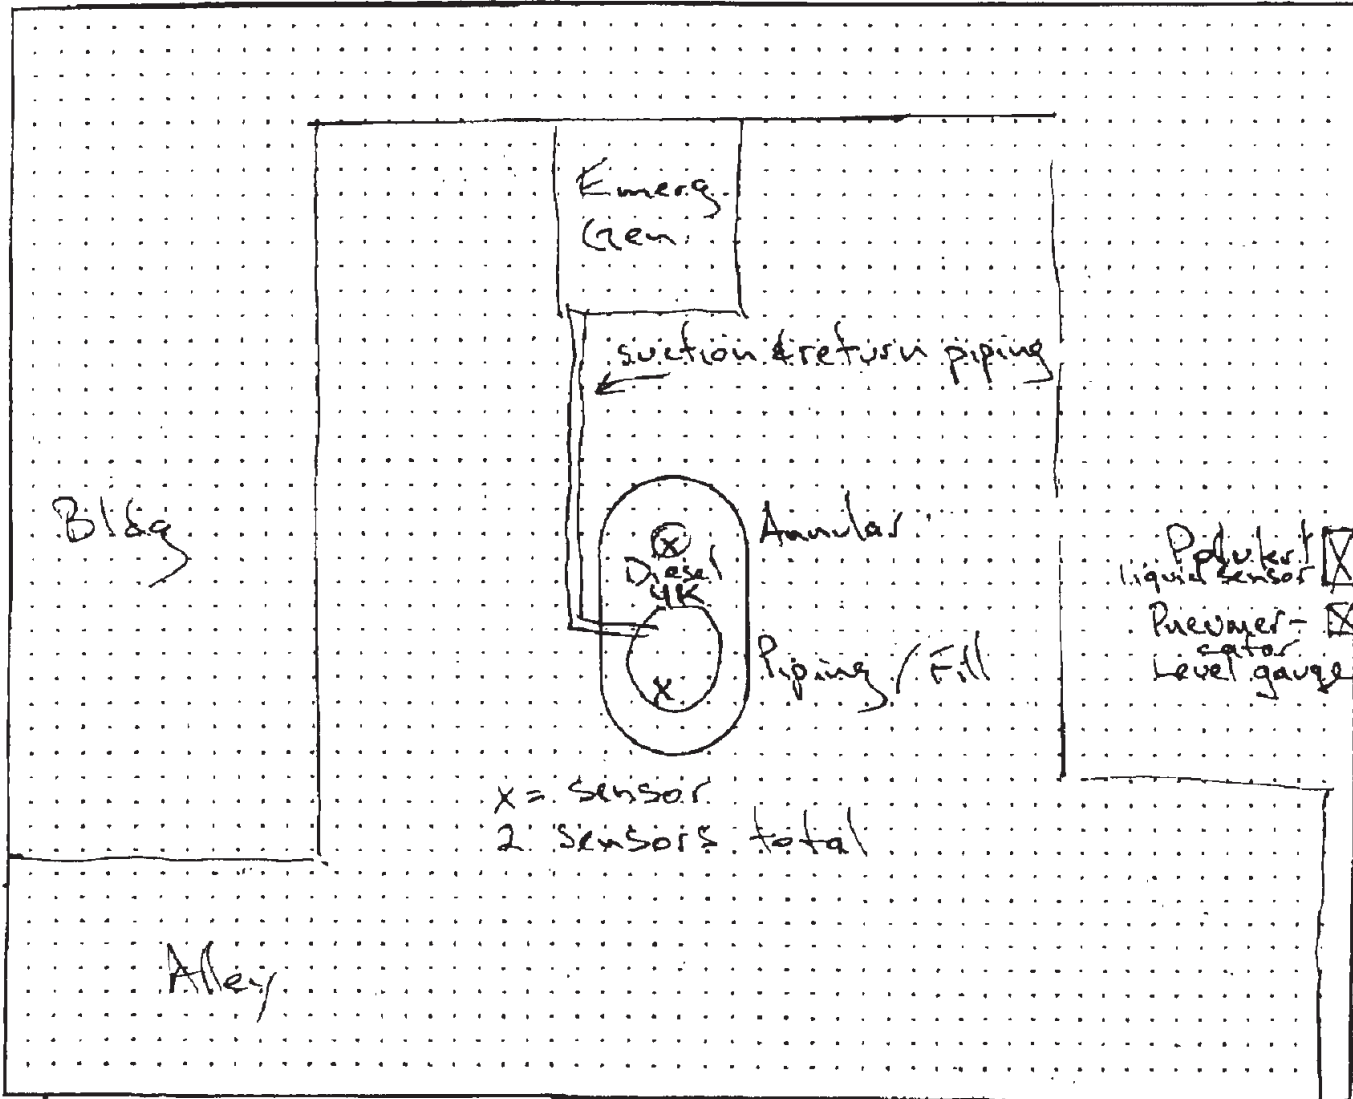

S.D. County Sheriff Crime Lab

Monitoring System Certification

UST Monitoring Site Plan

Site Address: 5255 Mt. Etna Dr.

Permit 114241

Date map was drawn: 12/23/03

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

COUNTY OF SAN DIEGO

OFFICIAL NOTICE - NOTICE OF VIOLATION

 CITY S.D. ZIP 92117
 OWNERS NAME County of SD PHONE _____
 OWNERS ADDRESS _____ CITY _____ ZIP _____

An inspection of your business was conducted, under the authority of Section 25185 of the California Health and Safety Code. This inspection was conducted with purpose of determining compliance with Chapters 6.5, 6.7, 6.95 in Division 20, of the California Health and Safety Code (H&S); Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following statements describe conditions which are violations of the law or that require further investigation. These observations require a formal response and/or immediate corrective action be taken. Failure to correct these violations or to provide information requested in a timely manner may be a factor in determining the course of further legal action.

FEB 18 2004

Site's UST operating permit expired 8-6-2001
 Site has not conducted secondary containment testing.
 Secondary containment testing was to have been
 conducted by 1/1/2003. State Water Resources Control
 Board recommended that UST facilities be granted up
 to a maximum of 120 days to repair and retest.
 Thus, this testing should have been completed by 5/1/2003.

A new operating permit will be issued upon completion
 and passing of secondary containment testing (SP989)

The UST system must pass secondary containment testing
 by 12/31/2003 or you must close the UST or
 cease operation, until the above conditions are met.

No person from General Services available to sign this NOV.
 (will fax to Mike Dick).

UST and HAZ Mat Routine Inspection

Mike Dick had been contacted and arranged for a UST inspection w/ Rene Lemesmager. He had indicated that somebody from General Services would be present, nobody from General Services was present. There was ~~somebody~~ a General Services mtg planned and James from General Services opened the room where monitor is to provide access, but did not stay for inspection. Copy of this report will be faxed to Mike Dick.

UST INSPECTION

#1 OPERATING permit expired 8-6-2001 : NOV issued.
 (HAZ MAT permit current)

#2 Containment sump had small amount of liquid in curvatures. Sensor not in alarm.

#3 secondary containment testing not conducted: NOV issued.

#4 Maintenance & Monitoring records not available.

This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored

SUPPLEMENTAL INSPECTION REPORT

Office Use Only

BUSINESS ADDRESS: 5255 Mt. Etna Dr ZIP CODE: 92117

HAZ MAT INSPECTION (w/ Carolyn Gannett)

① Many of the Hazardous Waste containers are labeled as hazardous waste w/ accumulation start date and waste contents, but does not have generator name + address.

Ensure all hazardous waste containers have generator information.

Also - satellite containers must also be labeled as HAZARDOUS w/ contents listed plus rate at which disposed, ie w/klly, monthly, etc.

Rooms 130, 131, 132

Also - potassium dichromate waste container not labeled properly

② Red Bags did not have generator label.

All small red bags did, but the larger ones they were placed in did not. These larger red bags also held waste not in smaller red bags.

Ensure all biohazardous / medical waste containers have generative name, address + phone number when first put into use

REMARKS:

Flammable chemical CS₂ was observed stored in a non-flammable refrigerator. This would be a FIRE HAZARD area (regulation) but is an area of concern / safety.

Within 30 days complete annual carcinogen list.

Recommend update Medical Waste Management Plan.

VIOLATION REPORT - The items checked below refer to specific section numbers of Title 23 of the California Code of Regulations (CCR), Chapters 6.7, of the Health & Safety Code (HSC) & the County Code of Regulatory Ordinances (SDCC). The following code sections are either in violation (V) with the Underground Storage Tank laws and regulations or Non-Applicable (N/A). All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use the Corrective Action Form to document your return to compliance. Your Specialist can provide these forms. Please call (619) 338-2222 or your Specialist if you have any questions.

REMARKS:

JUN 26 2003

* 2 Red biohazard bags not labeled w/ generator's name, address + phone #, in Trace Room. ~~These~~ These were labeled during inspection

• Inventory updated to include the following compressed gases: He, Air, H₂, + N₂ (g) + N₂ (l)

• Narcotic waste (phenel/chloroform) DOZZ added

• Site is large quantity generator (Biohazard waste)

* Hazardous waste label observed on Sharps container. Items inside are not haz waste - remove label + replace w/ generator label.

• UST not inspected on this day - previous inspection on UST conducted on 12/26/02 - NOV given today on no SB489 testing.

This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.

An inspection of your business was conducted, under the authority of Section 25185 of the California Health and Safety Code. This inspection was conducted with purpose of determining compliance with Chapters 6.5, 6.7, 6.95 in Division 20, of the California Health and Safety Code (H&S); Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following statements describe conditions which are violations of the law or that require further investigation. These observations require a formal response and/or immediate corrective action be taken. Failure to correct these violations or to provide information requested in a timely manner may be a factor in determining the course of further legal action.

SP 989 testing has not occurred, (Secondary containment)

This is in violation of CCR Title 23 2637 (a)
 This section states ~~that~~ secondary containment systems must be tested by Jan 1, 2003.

Within 15 days schedule this testing with a licensed tank tester - contact Susan A. Hahn @ 858. 694. 2875 w/ scheduled date.

Specialist will fax/contact Paco Esparza @ Sheriff's Dept and Jim Jordan @ General Services regarding this violation.
 5/1/03 pm - emailed Paco Esparza + Tim Jordan regarding this NOV.

CHIEF FINANCIAL OFFICER LETTER REGARDING FINANCIAL RESPONSIBILITY FOR UNDERGROUND STORAGE TANKS (UST) FOR THE FISCAL YEAR ENDED JUNE 30, 2003

The attached annual Chief Financial Officer letter demonstrating the County's financial responsibility for maintaining Underground Storage Tanks (UST) is submitted to the Department of Environmental Health pursuant to Title 40, Code of Federal Regulations (CFR), Part 280, Subpart H, Section 280.93.

The aforementioned federal regulations requires all owners and operators to show, through an approved method, their ability to pay for potential cleanup and third party damages resulting from accidental releases from their USTs. To demonstrate financial responsibility, the County of San Diego uses the approved local government financial test, pursuant to Title 40, CFR Section 280.105. In this regard, this report is submitted to your office in your capacity as the regulator in this area for the County of San Diego.

As shown in the attached report, the County currently owns and operates 30 underground tanks that are used to store gasoline and diesel fuel at various County facilities. Financial responsibility means that money will be available to meet potential cleanup costs or third party lawsuits resulting from leaking USTs.

The County successfully passed the test with a score of 0.298 (it must be greater than zero). Assumptions in the calculations, for which we received authorization from the Environmental Protection Agency, may include netting advance refundings of County debt and excluding certain Federal and State revenues with no matching local fund requirements.

As evidence that this procedure has been satisfactorily completed, copies of this letter are provided to the Department of General Services, Fleet Management, to post at all of the UST sites.

Chief Financial Officer Letter Regarding Financial
Responsibility for Underground Storage Tanks (UST)
for the Fiscal Year Ended June 30, 2003

MUNICIPAL FINANCIAL TEST DEMONSTRATING RESPONSIBILITY FOR UNDERGROUND TANKS – FISCAL YEAR ENDED JUNE 30, 2003

Pursuant to Federal Regulation 40 CFR 280.105 (c), this letter is in support of the use of the local governmental financial test to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by sudden accidental releases and/or nonsudden accidental releases in the amount of at least \$500,000 per occurrence and \$1 million annual aggregate arising from operating underground storage tanks (see worksheet for Municipal Financial Test, Attachment A).

A listing of underground storage tank facilities that are assured by this financial test is included on Attachment B.

The County of San Diego has not received an adverse opinion, or a disclaimer of opinion, from an independent auditor on its financial statements for the latest completed fiscal year.

If you have any questions, please contact Chris Gilmore, Deputy Controller, at (619) 531-5416.

COUNTY OF SAN DIEGO - UNDERGROUND STORAGE TANK SECONDARY CONTAINMENT TESTING REPORT FORM

This form is intended for use by contractors performing initial & periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), must be provided to the facility owner/operator for submittal to the County of San Diego Department of Environmental Health Hazardous Materials Division UST Group.

Establishment Number: 114261 **Plan Check Number:** RT 2787

1. FACILITY INFORMATION

Facility Name: County of San Diego Crime Lab	Date of Testing: 8/6/2004	
Facility Address: 5255 Mt. Etna Drive San Diego, CA 92111	Test Type:	
Facility Contact: Mike McNamara	Phone: (858) 694-4497	<input checked="" type="checkbox"/> Initial
Date Local Agency Was Notified of Testing: N/A	Permit Site - SB989 Upgrades	<input type="checkbox"/> 6 month
Name of Local Agency Inspector (if present during testing): None		<input type="checkbox"/> 36 month

	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

If hydrostatic testing was performed, describe what was done with the water after completion of tests:
 New sumps and spill bucket installed at the site. Sumps were rinsed and wiped clean prior to placing water in the system.
 Waste generated was bucketed and manifested under waste manifest #22721679.

CERTIFICATION OF TECHNICIAN RESPONSIBLE FOR CONDUCTING THIS TESTING
To the best of my knowledge, the facts stated in this document are accurate and in full compliance with legal requirements

Technician's Signature: *Keegan Slatten* Date: August 6, 2004

3. SECONDARY PIPE TESTING

Test Method Developed By:	<input type="checkbox"/> Piping Manufacturer	<input checked="" type="checkbox"/> Industry Standard	<input type="checkbox"/> Professional Engineer
	<input type="checkbox"/> Other (Specify)		
Test Method Used:	<input checked="" type="checkbox"/> Pressure	<input type="checkbox"/> Vacuum	<input type="checkbox"/> Hydrostatic
	<input type="checkbox"/> Other (Specify)		
Test Equipment Used: Dwyer 477-3 Digital Manometer	Equipment Resolution: +/- .5 f.s.		
	F.O. Supply	F.O. Return	
Piping Material:	Poly Pipe	Poly Pipe	
Piping Manufacturer:	Environ	Environ	
Piping Diameter:	¾" jacketed	¾" jacketed	
Length of Piping Run:	20'	20'	
Product Stored:	Diesel Fuel	Empty	
Method and location of piping-run isolation:	In turbine sump & looped back to sump	In turbine sump & looped back to sump	
Wait time between applying pressure/vacuum/water and starting test:	15 minutes	15 minutes	
Test Start Time:	9:06 am	9:06 am	
Initial Reading (R _I):	5.0 psi	5.0 psi	
Test End Time:	10:06 am	10:06 am	
Final Reading (R _F):	5.0 psi	5.0 psi	
Test Duration:	1 hour	1 hour	
Change in Reading (R _F -R _I):	0.00	0.00	
Pass/Fail Threshold or Criteria:	+/- 0.0 psi	+/- 0.0 psi	
Test Result:	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	

Comments – (include information on repairs made prior to testing, and recommended follow-up for failed tests)

Note: The pipe is tertiary contained. The 4" ducting is being used as a pulling chase only. The secondary pipe is the jacketed portion of the pipe. This line was looped above grade via a testing tube. One test was performed for both containment lines.

Test run while secondary tank was under vacuum.

6. PIPING SUMP TESTING

Test Method Developed By:	<input checked="" type="checkbox"/> Sump Manufacturer	<input checked="" type="checkbox"/> Industry Standard	<input type="checkbox"/> Professional Engineer
	<input type="checkbox"/> Other (<i>Specify</i>)		
Test Method Used:	<input type="checkbox"/> Pressure	<input type="checkbox"/> Vacuum	<input checked="" type="checkbox"/> Hydrostatic
	<input type="checkbox"/> Other (<i>Specify</i>)		
Test Equipment Used: Incon TS - STS	Equipment Resolution: +/- .0001		
	T-1, Diesel		
Sump Diameter:	42"		
Sump Depth:	24"		
Sump Material:	Fiberglass		
Height from Tank Top to Top of Highest Piping Penetration:	15" F.O.S.		
Height from Tank Top to Lowest Electrical Penetration:	9"		
Condition of sump prior to testing:	New		
Portion of Sump Tested ²	Approx. 90 %		
Does turbine shut down when sump sensor detects liquid (both product and water)?*	N/A – Suction Syst.		
Turbine shutdown response time	N/A		
Is system programmed for fail-safe shutdown?*	Yes		
Was fail-safe verified to be operational?*	Yes		
Wait time between applying pressure/vacuum/water and starting test: Water	Over 24 hours		
Test Start Time:	10:37am 10:54am		
Initial Reading (R _I):	5.5610 5.5605		
Test End Time:	10:52am 11:09am		
Final Reading (R _F):	5.5604 5.5606		
Test Duration:	15 Minutes X 2		
Change in Reading (R _F -R _I):	-.0006 +.0001		
Pass/Fail Threshold or Criteria:	+/- .0015		
Test Result:	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	<input type="checkbox"/> Pass <input type="checkbox"/> Fail	<input type="checkbox"/> Pass <input type="checkbox"/> Fail
Was sensor removed for testing?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
Was sensor properly replaced and verified functional after testing?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA

Comments – (include information on repairs made prior to testing, and recommended follow-up for failed tests)

There is only one sump atop this UFST. Water had been in sump for over 24 hours prior to commencement of test.

² If the entire depth of the sump is not tested, specify how much was tested. If the answer to any of the questions indicated with an asterisk (*) is "NO" or "NA", the entire sump must be tested. (See SWRCB LG-160)

7. UNDER-DISPENSER CONTAINMENT (UDC) TESTING

Test Method Developed By:	<input type="checkbox"/> UDC Manufacturer	<input type="checkbox"/> Industry Standard	<input type="checkbox"/> Professional Engineer
	<input type="checkbox"/> Other (<i>Specify</i>)		
Test Method Used:	<input type="checkbox"/> Pressure	<input type="checkbox"/> Vacuum	<input type="checkbox"/> Hydrostatic
	<input type="checkbox"/> Other (<i>Specify</i>)

 INSPECTION CONTACT/TITLE
Anthony DeMaria / Crim III/Safety
 PHONE 858-467-4600

On the above date, an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

A Routine Inspection was conducted this date with Criminalist III and Safety Officer, Anthony DeMaria. ^{JAN 06 2005}
 Walk-through consisted of above grade for UST, DNA Labs, Firearms, Narcotics, Fingerprinting, Forensic Alcohol, Trace Evidence, Photo Labs, and Hazardous Waste Storage Area.

REMARKS:

- A) The Crime Lab is possibly a large quantity generator of medical waste. Please do an audit of actual weights of medical waste disposal each month to determine if your level is at or above 200 pounds per month. If at or above this threshold, weekly medical waste pick-ups are required by the Medical Waste Management Act. ADDITIONALLY, because the Crime Lab is a generator of more than 20 lbs of medical waste per month, the medical wastes cannot be stored above 32 degrees Fahrenheit for more than 7 days. By 2/15/05, provide to this department an updated medical waste management plan describing management of medical wastes generated at this facility and the results of the 3-month study of weights you have proposed to complete.
- B) In the Narcotics Lab there are at least 3 containers labeled as Hazardous Waste for "CSA" (Controlled Substances Analysis). The accumulation date is labeled "Monthly" and the original accumulation start date is March 2003. Be advised, satellite accumulation requires that the wastes be kept on site for no more than one year TOTAL. Be sure the accumulation start date reflects accurately the satellite requirements and that wastes are removed from this facility at least every year.

This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.

<input type="checkbox"/>	V4215	Frozen (0C/32 F) MW stored >90 days. 118280
<input type="checkbox"/>	V4306	Full sharps container stored >7 days at room temp 118285
<input type="checkbox"/>	V4307	Red bag waste stored >7 days at room temperature (for generators of >20lbs/month). 118280
<input type="checkbox"/>	V4308	Red bag waste stored >30 days at room temperature (for generators of <20 lbs/month). 118280

TRANSPORTATION REQUIREMENTS

Viol #	VIOL	VIOLATION DESCRIPTION
<input type="checkbox"/>	V4260	Transportation of MW without State Hauler Registration or a (LQHE) from HMD. 118025
<input type="checkbox"/>	V4304	No LQHE for "self-hauled" MW (<20 pounds of waste/wk). 118030, 118025
<input type="checkbox"/>	V4305	LQHE not renewed annually as required. 118030
<input type="checkbox"/>	V4311	Medical Waste tracking documents not in vehicle transporting MW. 118040
<input type="checkbox"/>	V4312	MW tracking documents/logs not maintained for 3years for LQHE. 118040

SMALL QTY. GENERATORS ONLY (<200 lbs/mo) MW)

Viol #	VIOL	VIOLATION DESCRIPTION
<input type="checkbox"/>	V4301	Medical Waste Mgmt. Plan (MWMP) not submitted to HMD (initial/updates if onsite treatment). 117935
<input type="checkbox"/>	V4302	Did not maintain and show proof of "onsite" medical waste treatment records for 3 years. 118215, 117943
<input type="checkbox"/>	V4303	Did not retain on file disposal receipts/tracking documents for waste shipped offsite for 2 yrs. 117945
<input type="checkbox"/>	V4309	MWMP or equivalent information not onsite. 117945

REQUIREMENTS FOR LARGE QUANTITY GENERATORS ONLY (> 200 pounds of waste generated per month)

<input type="checkbox"/>	V4351	MWMP not submitted to HMD (initial/updates). 117950, 117960, 117970
<input type="checkbox"/>	V4352	Records of MW treatment not available for 3 years. 118215, 117975
<input type="checkbox"/>	V4353	Did not retain on file disposal receipts/tracking documents for at least 3 yrs. for waste shipped offsite. 117975

PATHOLOGY, CHEMOTHERAPY, PHARMAC. & HAZ. WASTE

<input type="checkbox"/>	V4401	Chemo waste not segregated from other MW. 118275
<input type="checkbox"/>	V4402	Chemo waste container not properly labeled. 118275
<input type="checkbox"/>	V4403	Illegal disposal of chemo waste. 118340
<input type="checkbox"/>	V4411	Pathology waste not segregated from other MW. 118275
<input type="checkbox"/>	V4412	Pathology waste container not properly labeled. 118275
<input type="checkbox"/>	V4413	Illegal disposal of pathology waste. 118340
<input type="checkbox"/>	V4421	Pharmwaste not segregated from other MW. 118275g
<input type="checkbox"/>	V4422	Pharmwaste not properly labeled. 118275(g)
<input type="checkbox"/>	V4423	Pharmwaste stored >90 days. (≥ 10 lbs/yr) 118280(e)
<input type="checkbox"/>	V4431	VSQG of pharmwaste (<10 lb/yr) stored >1yr. 118280(e)
<input type="checkbox"/>	V4432	Illegal disposal of pharmaceutical waste. 118340, 118222
<input type="checkbox"/>	V4441	Illegal disposal of photo/hazwaste to sewer/trash. 25189.5

ONSITE MW TREATMENT FACILITY REQUIREMENTS

<input type="checkbox"/>	V4501	Onsite MW treatment permit not obtained/renewed. 117950, 118130, 118155, 65620/65623.
<input type="checkbox"/>	V4502	Current copy of the MW treatment permit not available. 65621(f), 65623, 118165, 118180
<input type="checkbox"/>	V4503	Condition(s) of the MW treatmt. permit violated. 65623

TREATMENT AND DISPOSAL

<input type="checkbox"/>	V4251	MW treated by unapproved method/procedure. 118215
<input type="checkbox"/>	V4252	Standardized written operating procedures for steam sterilization not available. 118215
<input type="checkbox"/>	V4253	Recording thermometer not calibrated annually. 118215
<input type="checkbox"/>	V4254	No records of thermometer calibration checks onsite for at least the past 3 years. 118215
<input type="checkbox"/>	V4255	Heat-sensitive tape/other approved method not used for each load treated onsite. 118215
<input type="checkbox"/>	V4256	Monthly biological indicator or other approved method not used to confirm proper disinfection. 118215
<input type="checkbox"/>	V4257	Onsite Steam Sterilization did not reach 121°C/250 °F for 30 minutes. 118215
<input type="checkbox"/>	V4258	Treatment records/logs of dates, time and temperature not available for 3 yrs. 118215
<input type="checkbox"/>	V4259	Disposal of untreated MW to an unauthorized point. 118340

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

A. General Information

Facility Name: County of San Diego Crime Lab
Site Address: 5255 Mt Etna Drive, San Diego, CA ~~92109~~ 92117
Facility Contact Person: _____ Contact Phone No.: (619) _____
Make/Model of Monitoring System: Veeder-Root 300

Date of Testing/Servicing: 8/5/04

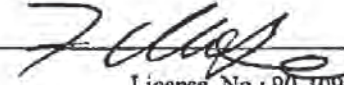

B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

Tank ID: #DSL <input checked="" type="checkbox"/> In-Tank Gauging Probe. Model: Mag Probe_104 <input checked="" type="checkbox"/> Annular Space or Vault Sensor. Model: 420 <input checked="" type="checkbox"/> Piping Sump / Trench Sensor(s). Model: 208 <input checked="" type="checkbox"/> Fill Sump Sensor(s). Dispenser ID: # _____ <input type="checkbox"/> Dispenser Containment Sensor(s). Model: _____ <input type="checkbox"/> Shear Valve(s). <input type="checkbox"/> Dispenser Containment Float(s) and Chain(s).

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; (check all that apply): System set-up Alarm history report

Technician Name (print): TIM MONTIJO Signature: 

Certification No.: 006-05-0344 License No.: 90-1090

Testing Company Name: MONTIJO TANK TECH Phone No.: (760)752-1989
Site Address: 5255 Mt. Etna

F. In-Tank Gauging / SIR Equipment:

* Check this box if tank gauging is used only for inventory control.
 Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

X Check this box if LLDs are not installed.

Complete the following checklist:

Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input type="checkbox"/> 3 g.p.h.; <input type="checkbox"/> 0.1 g.p.h.; <input type="checkbox"/> 0.2 g.p.h.
Yes	<input type="checkbox"/> No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

BUSINESS NAME SAN DIEGO COUNTY SHERIFF CRIME LAB
ADDRESS 5255 MT ETNA DRIVE
CITY/ZIP SAN DIEGO, 92117-6912

On the above date, an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

| <input type="checkbox"/> | All violations noted on this compliance inspection report were corrected during this inspection. | | | | |

Today a routine inspection was performed at the above facility with Rafaela Drummond. Anthony DeMaria escorted us through the different lab areas and provided records for hazardous materials, hazardous waste and medical waste. We walked through the individual labs and the accumulation area. Medical waste is stored inside a refrigerator at a temperature slightly above zero degrees Centigrade for a maximum of 30 days, then placed outside on the day of waste collection. The crime lab manages a large amount of non-biohazardous waste as biohazardous waste to ensure compliance. This site also has a regulated UST which requires inspection annually. This inspection is conducted with Mike Johnson, General Services designated UST operator. The following observations were made during inspection:

- Business/Contingency Plan was observed on-site.
- Employee Training on topics listed in the Business Plan is conducted annually.
- Medical Waste Management Plan was updated today.
- Hazardous Waste disposal manifests and medical waste disposal receipts were reviewed.
- Adequate aisle space is available and medical waste accumulation area signage is posted.

The following violations were observed and require documentation of return to compliance. Some violations were corrected during the inspection.

- V0207
RTC 12/29/05
- V0209
RTC 12/29/05
- Hazardous waste containers were observed missing labels in the following areas: dark room (fixer waste) and at trace evidence (acid, base, organic, oxidizer, salts/metals, pyridine, and one CS2 container). Properly label these containers expeditiously.
 - Hazardous waste accumulated longer than allowed. Satellite accumulation allows a maximum of one year accumulation. Immediately dispose of the following containers: CS2 dated 9/3/04 at trace evidence, phenol dated 7/9/04 at DNA, Iodine dated 2001 and de-stain dated 2002 at the Amplification Room.

Remarks

- OK
- OK
- Be advised that generators of 20 or more pounds of biohazardous waste per month require a weekly pickup of waste. There are exceptions for waste stored at zero degrees Centigrade or waste stored with written approval from the local enforcement agency.
 - Orange bags were observed with a biohazardous waste label. Be advised that red bags must be used for storage of biohazardous waste (except pharmaceuticals). Until further notice orange bags may continue to be used if they do not contain biohazardous waste or if the orange bags are only used for accumulation prior to placement in a biohazard container or storage area.
 - UST requires annual monitoring system certification for 2005. Secondary containment testing is also required prior to January 2006.

STORAGE AND LABELING

Viol #	VIOL	VIOLATION DESCRIPTION
<input type="checkbox"/>	V4201	UPF Permit not obtained. 117705, 68.905
<input type="checkbox"/>	V4202	Medical Waste (MW) not separated from other waste at point of origin. 118275
<input type="checkbox"/>	V4203	Enclosure or designated accumulation area for MW containers not secured. 118310
<input type="checkbox"/>	V4204	MW storage area not posted with an approved and legible biohazardous waste "warning sign" in English and Spanish. 118310
<input type="checkbox"/>	V4205	Medical SOLID WASTE not secured to deny access to unauthorized persons. 68.1211
<input type="checkbox"/>	V4206	Spill of MW not properly cleaned up. 118300
<input type="checkbox"/>	V4207	Sharps not stored in approved and properly marked sharps container. 118275
<input type="checkbox"/>	V4208	Full sharps container not taped closed or tightly-lidded to preclude loss of contents. 118285
<input type="checkbox"/>	V4209	Red bags/sharps container not labeled with generator's name, address, and phone number. 68.1205, 68.1206
<input checked="" type="checkbox"/>	V4210	MW not stored in approved and properly marked red bags. 118275
<input type="checkbox"/>	V4211	Red bags not tied off to prevent leakage/expulsion of contents during handling and storage. 118280
<input type="checkbox"/>	V4212	Red bags not containerized in rigid, leak resistant, and covered containers or bins. 118280
<input type="checkbox"/>	V4213	Waste container/bin not labeled on the lid and side so as to be clearly visible. 118280
<input type="checkbox"/>	V4214	Reusable containers/bins for MW storage not kept clean/sanitary. 118295, 118305
<input type="checkbox"/>	V4215	Frozen (0C/32 F) MW stored >90 days. 118280
<input type="checkbox"/>	V4306	Full sharps container stored >7 days at room temp 118285
<input type="checkbox"/>	V4307	Red bag waste stored >7 days at room temperature (for generators of >20lbs/month). 118280
<input type="checkbox"/>	V4308	Red bag waste stored >30 days at room temperature (for generators of <20 lbs/month). 118280

Remarks

TRANSPORTATION REQUIREMENTS

Viol #	VIOL	VIOLATION DESCRIPTION
<input type="checkbox"/>	V4260	Transportation of MW without State Hauler Registration or a (LQHE) from HMD. 118025
<input type="checkbox"/>	V4304	No LQHE for "self-hauled" MW (<20 pounds of waste/wk). 118030, 118025
<input type="checkbox"/>	V4305	LQHE not renewed annually as required. 118030
<input type="checkbox"/>	V4311	Medical Waste tracking documents not in vehicle transporting MW. 118040
<input type="checkbox"/>	V4312	MW tracking documents/logs not maintained for 3years for LQHE. 118040

SMALL QTY. GENERATORS ONLY (<200 lbs/mo) MW)

<input type="checkbox"/>	V4301	Medical Waste Mgmt. Plan (MWMP) not submitted to HMD (initial/updates if onsite treatment). 117935
<input type="checkbox"/>	V4302	Did not maintain and show proof of "onsite" medical waste treatment records for 3 years. 118215, 117943
<input type="checkbox"/>	V4303	Did not retain on file disposal receipts/tracking documents for waste shipped offsite for 2 yrs. 117945
<input type="checkbox"/>	V4309	MWMP or equivalent information not onsite. 117945

REQUIREMENTS FOR LARGE QUANTITY GENERATORS ONLY (> 200 pounds of waste generated per month)

<input type="checkbox"/>	V4351	MWMP not submitted to HMD (initial/updates). 117950, 117960, 117970
<input type="checkbox"/>	V4352	Records of MW treatment not available for 3 years. 118215, 117975
<input type="checkbox"/>	V4353	Did not retain on file disposal receipts/tracking documents for at least 3 yrs. for waste shipped offsite. 117975

PATHOLOGY, CHEMOTHERAPY, PHARMAC. & HAZ. WASTE

<input type="checkbox"/>	V4401	Chemo waste not segregated from other MW. 118275
<input type="checkbox"/>	V4402	Chemo waste container not properly labeled. 118275
<input type="checkbox"/>	V4403	Illegal disposal of chemo waste. 118340
<input type="checkbox"/>	V4411	Pathology waste not segregated from other MW. 118275
<input type="checkbox"/>	V4412	Pathology waste container not properly labeled. 118275
<input type="checkbox"/>	V4413	Illegal disposal of pathology waste. 118340
<input type="checkbox"/>	V4421	Pharmwaste not segregated from other MW. 118275g
<input type="checkbox"/>	V4422	Pharmwaste not properly labeled. 118275(g)
<input type="checkbox"/>	V4423	Pharmwaste stored >90 days. (≥ 10 lbs/yr) 118280(e)
<input type="checkbox"/>	V4431	VSQG of pharmwaste (<10 lb/yr) stored >1yr. 118280(e)
<input type="checkbox"/>	V4432	Illegal disposal of pharmaceutical waste. 118340, 118222
<input type="checkbox"/>	V4441	Illegal disposal of photo/hazwaste to sewer/trash. 25189.5

ONSITE MW TREATMENT FACILITY REQUIREMENTS

<input type="checkbox"/>	V4501	Onsite MW treatment permit not obtained/renewed. 117950, 118130, 118155, 65620/65623.
<input type="checkbox"/>	V4502	Current copy of the MW treatment permit not available. 65621(f), 65623, 118165, 118180
<input type="checkbox"/>	V4503	Condition(s) of the MW treatmt. permit violated. 65623

TREATMENT AND DISPOSAL

<input type="checkbox"/>	V4251	MW treated by unapproved method/procedure. 118215
<input type="checkbox"/>	V4252	Standardized written operating procedures for steam sterilization not available. 118215
<input type="checkbox"/>	V4253	Recording thermometer not calibrated annually. 118215
<input type="checkbox"/>	V4254	No records of thermometer calibration checks onsite for at least the past 3 years. 118215
<input type="checkbox"/>	V4255	Heat-sensitive tape/other approved method not used for each load treated onsite. 118215
<input type="checkbox"/>	V4256	Monthly biological indicator or other approved method not used to confirm proper disinfection. 118215
<input type="checkbox"/>	V4257	Onsite Steam Sterilization did not reach 121°C/250 °F for 30 minutes. 118215
<input type="checkbox"/>	V4258	Treatment records/logs of dates, time and temperature not available for 3 yrs. 118215
<input type="checkbox"/>	V4259	Disposal of untreated MW to an unauthorized point. 118340

Subject: Crime Lab inspection

Anthony,

Thanks for the help. Next time I'll come out when there are more people around to explain the work they do. The Crime Lab presents some unusual situations in regards to managing medical wastes. I have spent some time looking at the medical waste storage laws, however need to consult with my supervisor to see if there is industry guidance on the subject of the orange bags, what DNA extraction/amplification process waste is actually biohazardous, and if we can allow storage of the biohaz waste for 30 days in the refrigerator. Please notice the attached report says it is OK, until further notice, to continue to use orange bags for the DNA waste provided the waste is not biohazardous or is biohazardous, but is only accumulated and then eventually ends up in a biohazard container/ storage area. Notice also that to continue to store biohazardous waste over seven days the waste must be below 0 degrees Centigrade or you need written approval from the enforcement agency, HMD. I will see if we can grant approval. This would be a new one for me. I have a couple questions for you:

1. What is the temperature range on the refrigerator where your biohazard containers are stored?
2. What items end up in the orange bags at DNA?
3. I think I know the answer to this, but why does the crime lab not have weekly pickups of medical waste?

Call me if you have any questions,

UNDERGROUND STORAGE TANK SECONDARY CONTAINMENT TESTING REPORT FORM

Lean Wirschem

114261

This form is intended for use by contractors performing initial & periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), must be provided to the facility owner/operator for submittal to the County of San Diego Department of Environmental Health Hazardous Materials Division UST Group.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document installation, testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment: Permit Number: _____

- Check this box if tank gauging is used only for inventory control
- Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD): Check this box if LLDs are not installed.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input type="checkbox"/> 3 g.p.h.; <input type="checkbox"/> 0.1 g.p.h.; <input type="checkbox"/> 0.2 g.p.h.
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

UST Monitoring Site Plan

Site Address: Sheriff's Crime Lab 5255 Mt Edna

Date map was drawn: 1/23/06

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

COUNTY OF SAN DIEGO

COMPLIANCE INSPECTION REPORT

PAGE 1 of 1
 EST. NO. 114261
 DATE 1/23/06
 TIME START 0855 END 1055
 BUS. CODE K57 V70
 SPECIALIST Wirschem
 CONTACT Mike Johnson
 TITLE Mstr Plumber/UST Operator
 PHONE 858-694-3615

BUSINESS NAME SAN DIEGO COUNTY SHERIFF CRIME LAB
 ADDRESS 5255 MT ETNA DRIVE
 CITY/ZIP SAN DIEGO, 92117-6912

On the above date, an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

- | | | | | | |
|---|--------------------------|---|---|--------------------------|---------------------------------------|
| Y | N/A | | Y | N/A | |
| X | <input type="checkbox"/> | Unified Program Facility Permit current and available | | | Permit Expires on: <u>04 / 30/ 06</u> |
| X | <input type="checkbox"/> | Employee Training is adequate | X | <input type="checkbox"/> | Employee Training records available |
| X | <input type="checkbox"/> | Waste disposal records available for review | X | <input type="checkbox"/> | Waste containers kept closed |
| X | <input type="checkbox"/> | Emergency contacts current <input type="checkbox"/> Updated today | X | <input type="checkbox"/> | Waste containers kept labeled |
| X | <input type="checkbox"/> | Chemical inventory current <input type="checkbox"/> Updated today | X | <input type="checkbox"/> | Waste containers in good condition |

All violations noted on this compliance inspection report were corrected during this inspection.

Today a UST monitoring system certification was conducted with Lesmenager Engineering. This inspection is conducted with Mike Johnson, General Services designated UST operator. The following observations were made during inspection:

-Business/Contingency Plan was observed on-site dated July 2003. A more current plan is maintained by Anthony DeMaria. The following violations were observed. A re-inspection is required. Obtain the above records at the site for inspection within 30 days.

- V3158 1. UST operating permit, financial responsibility, monitoring procedures, emergency response plan, monthly inspections, monitoring, maintenance, repair, installation, training and testing records. I am currently working with Mike Johnson to obtain copies of these UST records for this site.
- V1011 2. Hazardous Materials Business Plan current inventory and annual training records.
- V0135 3. Hazardous Waste disposal receipts/manifests for past three years.
- V1006 4. MSDS for Micorbiocide Trident 7420 was not available. This must be added to the chemical inventory.
- V3252 5. UST Monitoring device lights are not working. The light must be in working condition. Replace bulbs within 30 days.

Remarks
 1. The boiler Room is emitting a mercaptan odor and should be checked for gas leaks or inadequate combustion. There does not appear to be a vent for this room.
 Please call me at 858-694-2473 if you have any questions.

ISSUED VIA EMAIL TO Mike Johnson on 1/24/06 at 1010 AM

Wirschem, Leon

From: DeMaria, Anthony [Sheriff]
Sent: Tuesday, January 03, 2006 11:02 AM
To: Wirschem, Leon
Subject: RE: Crime Lab inspection

Leon,

The following corrections have been made to violations observed during last weeks inspection:

Re: Hazardous Waste Compliance Inspection/Sheriff's Crime Laboratory
Date of Inspection: 12/28/05
Date of Correction: 12/29/05

Violation 1: Hazardous waste containers were observed missing labels in the following areas: dark room (fixer waste) and at trace evidence (acid, base, organic, oxidizer, salts/metals, pyridine, and one CS2 container). Properly label these containers expeditiously.

1. Proper hazardous waste labels have been placed on the acid waste, base waste, organic waste, oxidizer waste, salts/metals waste, pyridine waste, and CS2 waste containers in the Trace Evidence Section.
2. A hazardous waste label has been placed on the fixer waste container in the Trace Evidence Section darkroom.

Violation 2: Hazardous waste accumulated longer than allowed. Satellite accumulation allows a maximum of one year accumulation. Immediately dispose of the following containers: CS2 dated 9/3/04 at trace evidence, phenol dated 7/9/04 at DNA, Iodine dated 2001 and de-stain dated 2002 at the Amplification Room.

1. The CS2 hazardous waste container in the Trace Evidence Section has been disposed of and replaced with a new container.
2. The phenol hazardous waste container in the Forensic Biology Section has been disposed of and replaced with a new container.
3. The Iodine hazardous waste container in the Forensic Biology Section has been disposed of and replaced with a new container.
4. The destain reagent hazardous waste container in the Forensic Biology Section has been disposed of and replaced with a new container.

Thanks,

Anthony DeMaria

On the above date, an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (HSC) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

ROUTINE INSPECTION

REMARKS

- INVENTORY INCLUDES GASES: HELIUM, NITROGEN, HYDROGEN; WASTES: LAB (SOLVENTS, FLAMMABLES, CORROSIVES) AND MEDICAL WASTE; UNIVERSAL WASTE.
- HAULERS ARE ROMIC AND SPECTRUM
- LAB WASTE IS PROPERLY LABELED AND SEGREGATED FOR DISPOSAL IN A SECURE CONSOLIDATION AREA
- ENSURE ALL SHARPS & RED BAGS ARE PROPERLY LABELED
- TRAINING FOR HAZARDOUS MATERIALS/WASTE & MEDICAL WASTE IS CONDUCTED ANNUALLY
- NO OBSERVED VIOLATIONS

This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.

VIOLATION REPORT: The items checked below refer to specific section numbers of Title 23 of the California Code of Regulations (CCR), Chapters 6.7, of the Health & Safety Code (HSC) & the County Code of Regulatory Ordinances (SDCC). The following code sections checked are in violation (V) with the Underground Storage Tank laws and regulations. All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use the Corrective Action Form to document your return to compliance. Your Specialist can provide these forms. Please call (619) 338-2222 or your Specialist if you have any questions.

GENERAL UNDERGROUND STORAGE TANK (UST) REQUIREMENTS

VIOLATION DESCRIPTION				VIOLATION DESCRIPTION			
Viol # NOV	UST SYSTEM RECORDS	VIOL	V	Viol # NOV	FILE RECORDS	VIOL	V
	Current UPF permit not obtained/not available. 25284; 68.905, 68.1003, 68.1005	3101			Secondary containment testing not done at 6/36 months and/or not sent to CUPA within 30 days. 25284.1; 2637(a)&(e)	3114	
	Current Operating Permit not available at facility. 25284(a), 25286(a); 2712 (i); 68.1003	3102			Secondary containment testing not completed (passed) for all components &/or repairs to secondary containment components not completed. 25284.1, 25291(a)(2); 2637	3115	
	All permit operating conditions not met. 25284; 2712	3158			All releases not recorded and/or reported. 25294, 25295; 2650, 2651, 2652	3151	
	UST repair/modify/closure permit not obtained. 68.1004, 68.1005, 68.1009.5	3103			All maintenance/monitoring/calibration/ repair records not available. 25293; 2712 (b)	3152	
	CUPA UST form(s) A &/or B not available/completed/ submitted to HMD. 25286(a); 2711	3104			Monitoring Cert. not submitted to CUPA w/ 30 days. 2638(d)	3161	
	Current evidence of financial responsibility not available. 25292.2(a), 25299.33; 2809	3105			Facility employee(s) not trained; records incomplete/not onsite. 2715(f)	3193	
	Owner/operator agreement not available/ completed/ submitted to HMD. 25284(a)(3); 2620(b)	3106			Enhanced leak detection not performed as required. 25292.4; 2640(e)	3154	
/	Monitoring procedures not available/completed/ submitted to HMD. 2632(b)&(d), 2634(d), 2641(h), 2711(a)(9)	3107	✓		Contractor &/or technician not trained & certified as required. 25284.1(a)(5)(D); 2715	3162	
	Emergency Response Plan is not available/complete. 25289(b); 2632(b), 2634(e), 2641(h)	3108			Contractor did not have required license, i.e., Class A, C-10, C34, C36 and/or C61. 25284.1(a)(5)(D); 2715	3163	
	Scaled Plot plan showing tank, piping & equipment location not available/complete/ submitted to HMD. 2711(a)(8), 2632(d)(1)(C)	3109			Monitoring system disabled or tampered with and/or monitoring records falsified. 25299(f)	3157	
	Annual certification for ATG and/or sensors not completed (existing tank systems only). 2641(j), 2638	3110			All monitoring equipment not installed, calibrated, operated, and/or maintained per manufacturer's instructions. 2638(a), 2641(j)	3164	
	Annual certification for continuous monitoring system not completed (new tanks). 25284.1(a)(4)(C); 2630(d), 2638	3116			UST system repair(s) not completed properly. 25292.1(c); 2660 (a)(k)(l)(m)	3160	
	Designated Operator (DO) Notification/Change form not submitted &/or DO not ICC certified. 2715 (a)(b)	3191			Designated Operator monthly inspection not conducted, incomplete or DO inspection reports not onsite. 2715 (c)(d)(e)	3192	

UST SYSTEM INSPECTION

Requirements applicable for both, single & double walled systems

#	VIOLATION DESCRIPTION	TANK #		V	V	V	V
		NOV	VIOL				
	Monitor in alarm at beginning of inspection. Alarm not investigated, recorded or reported. 2632 (c)(2)(B), 2650(e)(3)&(4), 2630(d)						
	All audible and/or visual alarms not functioning properly. 2632(c)(2)(B), 2636(f)(1)						
	Sticker/tag not affixed to monitoring equipment at certification. 2638(f)						
	UST system does not have an approved overfill protection system. 2635(b)(2)						
	Spill container is not in good condition and/or liquid free. 2635 (b)(1), 2636(a)(1)						
	Fill box drain not functional and backup system is not available. 2635(b)(1)(C)						
	Secondary containment system components not liquid free. 2631(d)(4)						
	Sensors not placed adequately and/or at low point in sumps. 2641(a), 25291(a)(7)(C)						
	Dispenser containment currently required and not present. 25284.1(a)(5); 2636(g)						
	Dispenser containment not adequately monitored. 2636(f)(1) or (f)(5)(A)						
	Dispenser containment not maintained free of liquid. 2631(d)(4)						
	Secondary containment piping obstructed preventing drainage to sump. 2632						
	Monitoring system components &/or devices are not all functional. 2630, 2641(j), 2632						
	Spill containment not tested annually. 25284.2						
	UST system not operated to prevent spills and/or overfills. 25292.1 (a)						
	UST system not product tight (for tank installs on or after 7/1/03). 25290.1(c), 25290.2 (c)						
	UST system not continuously monitored using Vacuum/Pressure/Hydrostatic (VPH) system (for tank installs on or after 7/1/04). 25290.1 (d)&(e)						
CATHODIC PROTECTION							
	System not checked as required by tester (at 6 months/3yrs). 2635(a)(2)(A)						
	Impressed-current system not checked every 60 days. 2635(a)(2)(A)						
	Corrosion protection not adequate. 25292.1(b); 2635(a)(2), 2662(c)						
CLOSURE REQUIREMENTS							
	Temporary closure requirements not completed. 25298, 2671						
	Unused tank not properly closed. Permanent closure requirements not met. 25298, 2672

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document installation, testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

D. Results of Testing/Serviceing

Permit Number: H14261

Software Version Installed: 15.01

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? <i>(Check all that apply)</i> <input type="checkbox"/> Sump/Trench Sensors; <input type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? <input type="checkbox"/> Yes; <input type="checkbox"/> No.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? <u>90</u> %
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was liquid found inside any secondary containment systems designed as dry systems? <i>(Check all that apply)</i> <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments:

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment:

Permit Number:

 Check this box if tank gauging is used only for inventory control Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD): Check this box if LLDs are not installed.**Complete the following checklist:**

<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? <i>(Check all that apply)</i> Simulated leak rate: <input type="checkbox"/> 3 g.p.h.; <input type="checkbox"/> 0.1 g.p.h.; <input type="checkbox"/> 0.2 g.p.h.
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

UST Monitoring Site Plan

Site Address: Sheriff's Crime Lab 5255 Mt Edna

Date map was drawn: 1/25/07

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Council Certification #:	

NOTIFY THE LOCAL REGULATORY AGENCY WITHIN 30 DAYS OF ANY CHANGES TO THIS INFORMATION

I certify that, for the facility indicated at the top of this page, the individual(s) listed above will serve as Designated UST Operator(s). The individual(s) will conduct and document monthly facility inspections and annual facility employee training, in accordance with California Code of Regulations, Title 23, Sections 2715(c) - (f).
Furthermore, I understand and am in compliance with the requirements (statutes, regulations, and local ordinances) applicable to underground storage tanks.

**EMERGENCY RESPONSE PLAN
UNDERGROUND STORAGE TANK (UST) MONITORING PROGRAM**

Authority cited: title 23 CCR, Sections 2632 (d)(2), 2634 (e)(2), and 2641 (h)

California Underground Storage Tank (UST) Regulations require that facilities with USTs prepare a written response plan that describes how an unauthorized release will be handled. The plan must be approved by the County of San Diego, Hazardous Materials Division.

This monitoring program must be kept at the UST location at all times. The elements of this monitoring program constitute conditions of the UST operating permit. The permit holder **must** submit any changes to the San Diego County, Hazardous Materials Division, P.O. Box 129261, San Diego, CA 92112-9261, **within 30 days** of any changes to the monitoring program, unless required to obtain approval before making the change.

A. General Information

Facility Name: Sheriff Crime Lab
Site Address: 5255 Mt. Etna
City: SAN Diego Zip Code: 92117

B. Spill Control and Clean-up Methods

Note: This plan supplements the Emergency Response/Contingency Plan module in the facility's Hazardous Materials Business Plan (Business Plan).

If safe to do so, facility personnel will take immediate measures to control or stop the release (e.g. activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.

Any release to secondary containment will be pumped or otherwise removed from the secondary containment system within a time consistent with the ability of the secondary containment system to contain the hazardous substance, but not greater than 30 calendar days or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.

Absorbents will be used to contain and clean up manageable spills of hazardous materials. Absorbents may be reused until they become too saturated to be effective. At that point, they will be managed as hazardous waste. Used absorbents, whether reusable or waste, will be stored in a properly labeled and sealed container.

Facility personnel will determine whether or not any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste. In the case of petroleum, a visual check will usually suffice. If the water has a petroleum sheen (i.e. rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed of on the ground or to storm water systems.

C. Spill Control and Clean-up Equipment

Spill control and clean-up equipment kept on-site is listed in the Emergency Equipment Inventory Table in the Business Plan. This equipment is inspected at least monthly, and after each use, and supplies are replenished as needed.

**EMERGENCY RESPONSE PLAN
UNDERGROUND STORAGE TANK (UST) MONITORING PROGRAM**

Page 2 of 2

The following equipment is located off-site, but is available for use if needed:

Equipment	Location	Availability

If any spill control and clean-up equipment requires periodic maintenance, identify that equipment and describe the nature of maintenance and maintenance interval(s):

D. Responsible Persons

The following person(s) is/are responsible for authorizing any work necessary under this response plan:

Name	Title
Michael McNamara	Building Maintenance Supervisor
K. M. Johnson	Designated System Operator

E. Reporting and Record Keeping

A written report (i.e. Underground Storage Tank Unauthorized Release (Leak)/Contamination Site Report) will be submitted to the local agency within 5 working days of a spill or release outside of secondary containment.

Any spills, leaks, or water intrusion problems will be documented in the facility's monitoring records. Those records will include the date and time of the incident; the nature and cause of the incident; a description of how the incident was resolved; and the results of any analyses performed in a laboratory or in the field.

Monitoring records and written reports of unauthorized releases will be maintained on-site for at least 3 years. Hazardous waste shipping/disposal records will be maintained for at least 3 years from the date of shipment.

WRITTEN MONITORING PROCEDURES UNDERGROUND STORAGE TANK (UST) MONITORING PROGRAM

Authority cited: Title 23 CCR, Sections 2632 (d)(1), 2634 (d)(2), and 2641 (h)

This monitoring program must be kept at the UST location at all times. The elements of this monitoring program constitute conditions of the UST operating permit. The permit holder must submit any changes to the San Diego County, Hazardous Materials Division, P.O. Box 129261, San Diego, CA 92112-9261, within 30 days of any changes to the monitoring program, unless required to obtain approval before making the change.

A. General Information

Facility Name: County of San Diego Crime Lab
Facility Address: 5255 Mt. Etna S.D. 92117

- Tank and piping monitoring is identical for all UST's located at this facility; or
 This plan covers only the following tank(s): _____

- No electronic leak detection systems are used to monitor UST systems covered by this plan; or
 The following type of electronic monitoring system performs leak detection monitoring for UST systems covered by this plan (i.e.: Veeder Root TLS 350):

Manufacturer: Veeder Root Model # TLS 300
Manufacturer: _____ Model # _____

B. Tank Monitoring (refer to annual monitor certification for help)

- Continuous electronic monitoring of tank interstitial space or secondary containment:
Leak Sensor Manufacturer Veeder Root Sensor Model # 420

- Automatic Tank Gauging system used to monitor single-walled tank(s):
In-Tank Probe Manufacturer _____ Probe Model # _____
Frequency of Leak Tests: Continuous (i.e. CITLD, CSLD) Daily Weekly
 Monthly Other (Specify) _____

- Programmed Leak Threshold: 0.1gph 0.2gph
 Weekly Manual Tank Gauging. Testing Period: 36 hours 60 hours
 Statistical Inventory Reconciliation (SIR): Note: requires biennial tank integrity test
SIR Vendor: _____
 Tank Tightness Testing conducted: Annually Monthly Other (specify) _____
 Other Monitoring (specify): _____

C. Piping Monitoring (refer to annual monitor certification for help)

- Line Monitoring is performed using the following methods: (check all that apply)
 No product or remote-fill piping connected to UST
 Continuous electronic monitoring of piping sump and other secondary containment sumps:
Sensor Manufacturer Veeder Root Sensor Model # 208
Will piping leak alarm trigger automatic shutdown of pump? Yes No
Will failure/disconnection of monitoring system trigger automatic shutdown of pump? Yes No

- Mechanical line leak detector (performs 3.0 gph leak test & restricts or shuts off flow when leak is detected):
Manufacturer _____ Model # _____
 Electronic line leak detector (ELLD):
Manufacturer _____ Model # _____
Programmed line tightness test: 0.1gph annually 0.2gph monthly 3.0 gph
Will ELLD detection of a piping leak trigger automatic shutdown of pump? Yes No
Will failure or disconnection of the ELLD trigger automatic shutdown of pump? Yes No

- Line tightness testing conducted: Annually Every 3 years Other (specify) _____
 Piping is suction piping meeting all requirements for exemption from monitoring (23 CCR § 2636(a)(3))
 Dispensers are checked daily and "Suction Piping Daily Inspection Log" is completed
 Above ground visual monitoring daily
 Other (specify): _____

D. Dispenser Leak Detection (check all that apply)

- No Under Dispenser Containment (UDC): Dispenser housings are opened and fittings inspected daily
 No dispensers in system
 Float and chain assembly in under dispenser containment trips shear valve in case of leak
Assembly Manufacturer _____ Model # _____
 Continuous electronic monitoring of UDC

WRITTEN MONITORING PROCEDURES

Page 2 of 2

Leak sensor Manufacturer: _____ Model #: _____
Will leak trigger audible and visual alarms? Yes No
Will leak trigger automatic shutdown of turbine pump? Yes No
Will failure/disconnection of monitoring system trigger shutdown of pump? Yes No

Other (specify): _____

E. Overfill Protection

The following method is present to prevent overfilling the UST(s): (check all that apply)

- High Level Alarm alerts transfer operator when tank is 70 % capacity
- Ball Float Valve that activates at 95 % of tank capacity
- Automatic Shut-off device (flapper valve)
- Total secondary containment of piping including vent lines

F. Monitoring Locations

Attached to this monitoring plan is a site plan which shows the general tank and piping layouts and the location where monitoring is performed (i.e. locations of sumps, sensors, line leak detectors, control panels, etc.)

G. Personnel Responsibilities

The following facility personnel are responsible for performing UST monitoring activities and/or maintaining UST leak detection equipment: (include employee job title and specific UST monitoring responsibilities: i.e., inspection of equipment, reporting of alarms, arranging equipment testing & servicing, maintaining monitoring records, etc.)

Name: Kenneth M. Johnson Title: Sr. Plumber/D.S. Operator Area of Responsibility: monthly inspections
Name: _____ Title: _____
Name: _____ Title: _____

H. Reporting Format

Briefly describe the reporting format for monitoring: (i.e. SIR, in tank test, annual certification.)

I. Equipment Testing and Preventive Maintenance

State law requires that testing, preventive maintenance, and calibration (if applicable) of monitoring equipment (i.e. sensors, probes, line leak detectors, etc.) be performed in accordance with the equipment manufacturer's instructions or annually, whichever is more frequent. Qualified personnel must perform such work.

Monitor equipment is serviced: Annually Other (specify) _____

Describe the preventive maintenance schedule for the monitoring equipment: (List contractor performing repairs and or certifications, if known)

J. Training

Briefly describe the employee training necessary for the operation of UST system, including piping, and the monitoring equipment:

Emergency Response and Safety

Certification

I have reviewed this Underground Storage Tank Monitoring Plan and determined that it accurately describes monitoring of underground storage tank systems at this facility.

On the above date, an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (HCS) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

NOTE: Re-inspection fees will be charged if additional inspections are required to determine compliance.

Y N/A

Y N/A

- Unified Program Facility Permit current and available
- Hazardous Materials Business Plan available
- Employee Training is adequate
- Waste disposal records available for review
- Emergency contacts current Updated today
- Chemical inventory current Updated today

- Permit Expires on: 03/31/08
- Contingency Plan available
- Employee Training records available
- Waste containers kept closed
- Waste containers kept labeled
- Waste containers in good condition

A routine CUPA inspection covering the Underground Storage Tank (UST), medical waste, and hazardous waste/materials was conducted with Jeanne Redemen, Criminalist III, and Anthony Demaria, Supervising Criminalist. The annual monitoring certification for the 4,000 gallon diesel containing UST was performed by James Romero, Service Technician with LeMesnager Engineering (ICC# 5313873-UT). Kenneth M. Johnson, Designated Operator (DO), was present for the UST component of the inspection (ICC# 5248983-UC).

NOTICE TO COMPLY

RECEIVED JAN 29 2008

UST Violations:

- 1.) **Observation:** This facility's UST Operating permit (permit printed on blue paper) expired on 11/08/07.
Violation: Current Operating Permit not available at facility. 25284(a), 25286(a), 2712(i), 68.1003
Corrective Action: The UST Operating permit will be issued by the San Diego County Hazardous Materials Division (HMD) when the UST systems are in full compliance. Within 30 days of receiving this report, please submit documentation to HMD confirming all UST violations and remarks requesting action have been addressed.
- 2.) **Observation:** The annual UST Designated Operator (DO) training for 2007 needs to be completed for applicable personnel (those involved with, or expected to respond to, issues involving the UST monitoring system/emergency response).
Violation: Facility employee(s) not trained; records incomplete/not onsite. 2715(f)
Corrective Action: Complete required training and submit a copy of the DO training log to HMD within 30 days.

Hazardous Materials/Waste Violations:

- 3.) **Observation:** The Hazardous Materials Business Plan (HMBP), which includes a facility site map, employee training description and emergency response plan, is required to be kept on-site available to employees, as well as

BUSINESS NAME SD County Sheriff Crime Lab
 ADDRESS 5255 Mount Etna Drive
 CITY/ZIP San Diego, CA 92117-6912

on file with HMD. The HMBP should be reviewed and recertified annually which can be achieved by submitting a certification form to HMD (available online at www.sdcedeh.org under Forms & Applications, Hazardous Materials Division, and Business). The business plan located onsite was over 10 years old and needed to be updated. Some of the information (emergency response plan and employee training description) may be available online at this site, but it was not adequately demonstrated during the inspection.

Violation: HMBP is incomplete/inadequate/not amended to reflect changes 25504, 225505(a)(2) &/or 25509(a); 25505(b); 19 CCR 2729

Corrective Action: Please update the HMBP associated with this permit and submit a copy of the updated plan with a signed certification form to HMD within 30 days. It is recommended that outdated HMBP's be purged from your available records, as inaccurate plans may lead to confusion in an emergency. If online/paperless resources are used to help satisfy HMBP requirements please submit a description, or printed copy, of those items.

- 4.) **Observation:** As a small-quantity hazardous waste generator, a general 6-month accumulation time limit applies to hazardous waste. This time limit is extended to one year for wastes eligible for satellite accumulation (see form HM-9635 for more information). The following hazardous wastes were observed to be outside of allowed accumulation time limits during today's inspection: Phenol Chloroform in the DNA hood dated 12/5/06, a container of hazardous "biohazardous waste" in DNA dated 10/26/06, SNP/NaOH dated 1/2/07 in Narcotics hood, Sudan Black and ethanol mixture dated 12/12/06, DFO dated 10/26/06, methanol waste dated 11/08/06 all in the Wet Chemical Room, CS2 dated 10/28/05 and two containers of waste oil (presumed similar date) in the Trace Arson hood, and three waste containers dated 10/28/05 in the Spray Hood (acid waste, salts/metal waste, and organic waste).

Violation: Accumulated waste too long (>180 or 270 days). 66262.34(d) CFR 262.34(e) & (f)

Corrective Action: Within 30 days send evidence to HMD that the waste has been disposed of properly. Accurate start dates are imperative for gauging accumulation time limits.

- 5.) **Observation:** All containers should be labeled so that their contents are obvious upon visual inspection. Hazardous waste containers must be labeled with completed hazardous waste labels, including legible generator information, an accumulation start date, contents, physical state and hazards. Universal Waste containers can be labeled as Universal Waste, the specific type of waste (i.e. "waste batteries"), and have a start date marked on them. Previously used empty containers over 5 gallons should be marked "EMPTY" and dated. The following containers were found inadequately labeled today: waste acetone, gasoline, n-propyl alcohol, and high way fuses in the waste storage room flammable locker were missing hazardous waste labels. Two containers of used oil under the trace arson hood were missing hazardous waste labels, and numerous satellite accumulation containers were missing generator information, physical state, and hazards (partial labels are used on smaller, satellite accumulation containers throughout the facility, that show contents, and dates only). Containers of CSA debris found in DNA Narcotics were labeled as empty monthly and a start date. Monthly is not an option for transfer containers. All hazardous waste transfer containers should be labeled with hazardous waste labels marked "daily" or "weekly" as the accumulation start date depending on if they are emptied into final accumulation containers on a daily or weekly basis.

Violation: Failed to properly label/date hazardous waste container &/or tank. 66262.34(f)

Corrective Action: Label all containers properly and send documentation to HMD confirming this has been done within 30 days. It is recommended that Universal Waste labels be obtained for building maintenance as well as the lab.

Medical Waste Violations:

6.) **Observation:** This facility was a large quantity medical waste generator for multiple months in 2007 (generates over 200 pounds of medical waste in month). As a large-quantity generator, and/or a small-quantity generator that treats medical waste onsite, you must submit your MWMP to HMD, and keep a copy onsite. This should be done every time the MWMP is updated so that HMD continually has an accurate plan on file. An adequate MWMP was not located onsite during the inspection. A document was found on the computer but it was missing medical waste monthly quantity estimates.

Violation: MWMP not submitted to HMD (initial/updates). 117950, 117960, 117970

Corrective Action: By 2/24/07 submit an updated copy of your MWMP to HMD. Keep the original copy onsite. A blank MWMP can be obtained on HMD's website (added to Jeanne's favorites during the inspection).

REMARKS:

- ❖ Please ensure Universal Waste (fluorescent light bulbs, alkaline batteries, many electronics, non-empty aerosol cans, mercury-containing items and more) is disposed of properly. These items may not go into the regular trash in California. Universal Waste can be recycled, treated as hazardous waste, or otherwise managed to avoid being trashed. Visit www.dtsc.ca.gov for general information on Universal Waste, and www.ilacsd.org for possible disposal options. Currently, waste fluorescent bulbs and some batteries are transferred to the Juvenile location and then the COC for disposal. Universal waste electronics (CRT's, printers, a TV) were seen accumulating in a caged area outside, and wet with rain water. Universal waste should be protected from the elements and further damage. Reorganize the universal waste storage area/system so that all requirements are met.
- ❖ Please submit updated copies of UST Forms A and B to HMD within 30 days.
- ❖ The definition of medical waste (according to the Medical Waste Management Act) is being provided with this report for clarification.

	All audible and/or visual alarms not functioning properly. 2632(c)(2)(B), 2636(f)(1)		3252			
	Sticker/tag not affixed to monitoring equipment at certification. 2638(f)		3270			
	UST system does not have an approved overflow protection system. 2635(b)(2)		3254			
	Spill container is not in good condition and/or liquid free. 2635 (b)(1), 2636(a)(1)		3255			
	Fill box drain not functional and backup system is not available. 2635(b)(1)(C)		3256			
	Secondary containment system components not liquid free. 2631(d)(4)		3257			
	Sensors not placed adequately and/or at low point in sumps. 2641(a), 25291(a)(7)(C)		3258			
	Dispenser containment currently required and not present. 25284.1(a)(5); 2636(g)		3259			
	Dispenser containment not adequately monitored. 2636(f)(1) or (f)(5)(A)		3267			
	Dispenser containment not maintained free of liquid. 2631(d)(4)		3261			
	Secondary containment piping obstructed preventing drainage to sump. 2632		3262			
	Monitoring system components &/or devices are not all functional. 2630, 2641(j), 2632		3263			
	Spill containment not tested annually. 25284.2		3264			
	UST system not operated to prevent spills and/or overfills. 25292.1 (a)		3265			
	UST system not product tight (for tank installs on or after 7/1/03). 25290.1(c), 25290.2 (c)		3268			
	UST system not continuously monitored using Vacuum/Pressure/Hydrostatic (VPH) system (for tank installs on or after 7/1/04). 25290.1 (d)&(e)		3269			
CATHODIC PROTECTION						
	System not checked as required by tester (at 6 months/3yrs). 2635(a)(2)(A)		3301			
	Impressed-current system not checked every 60 days. 2635(a)(2)(A)		3302			
	Corrosion protection not adequate. 25292.1(b); 2635(a)(2), 2662(c)		3303			
CLOSURE REQUIREMENTS						
	Temporary closure requirements not completed. 25298, 2671		3322			
	Unused tank not properly closed. Permanent closure requirements not met. 25298, 2672		3324

COMPLIANCE INSPECTION REPORT Small and Large Quantity Generators of Hazardous Waste Handlers of Hazardous Materials

PERMIT # 114261
DATE 1/24/08
PAGE 5 OF 6

BUSINESS ADDRESS: 5255 Mt Etna Drive ZIP: 92117

VIOLATION REPORT: The items checked below refer to specific section numbers of Titles 19 & 22 of the California Code of Regulations (CCR), Chapters 6.5 & 6.95 of the Health and Safety Code, and/or the San Diego County Code (SDCC), Small Quantity Hazardous Waste Generator=(SQG); Large Hazardous Waste Quantity Generator=(LQG); Code 40 of Federal Regulations=(CFR). All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use the Corrective Action Form (HM-926) to document your return to compliance. Your Specialist can provide this form. Please call (619) 338-2222 or your Specialist if you have any questions.

HAZARDOUS MATERIALS REQUIREMENTS

Viol #	V	VIOLATION DESCRIPTION
	<input type="checkbox"/>	1001 UPF permit not obtained for hazardous materials. 68.905
	<input type="checkbox"/>	1002 HMBP not established/implemented. 25503.5(a)
	<input type="checkbox"/>	1004 HMBP not submitted to HMD. 25505(a)
	<input type="checkbox"/>	1005 Emergency contact not provided or current. 25509(a)(7)
	<input type="checkbox"/>	1007 Highly toxic gas (TLV≤10 ppm) not disclosed. 68.1113(b)
	<input type="checkbox"/>	1008 Annual carcinogen/reproductive toxin list not sent to HMD. 68.1113(c)
	<input type="checkbox"/>	1009 Site map is not sufficient or complete. 25509(a)(5) & 25505(a)(2)
	<input type="checkbox"/>	1010 Did not report release or threatened release. 25507(a), CCR 2703
	<input type="checkbox"/>	1013 Copy of HMBP not onsite for inspector's review. 25505(e)
3	<input checked="" type="checkbox"/>	1014 HMBP is incomplete/inadequate/not amended to reflect changes - 25504, 25505(a)(2) &/or 25509(a); 25505(b); 19 CCR 2729
	<input type="checkbox"/>	1015 Did not have adequate employee training program 2732 &/or 25504 (c)
	<input type="checkbox"/>	1016 Failure to have an adequate emergency response plan 25504 (b); 2731
	<input type="checkbox"/>	1017 Business Plan not certified annually. 25505(d) & (e)(2)
	<input type="checkbox"/>	1018 Inventory not amended for 100% increase of hazardous material onsite or inventory is incomplete. 25509, 25510

HAZWASTE REQUIREMENTS FOR LOGs & SOGs RECORDKEEPING

<input type="checkbox"/>	0131	Unified Program Facility (UPF) permit not obtained. SDCC 68.905
<input type="checkbox"/>	0132	Failed to obtain & maintain a valid EPA ID Number. 66262.12(a)
<input type="checkbox"/>	0133	Failed to send manifest copy to DTSC. 66262.23(a)(4)
<input type="checkbox"/>	0134	Failed to file Exception Report with DTSC. 66262.42
<input type="checkbox"/>	0135	Failed to keep waste manifests/receipts for 3 years available for inspection. 66262.40(a) & 25160.2(b)(3)
<input type="checkbox"/>	0136	Did not have records of battery disposal. 66266.81(a)(4)(B)
<input type="checkbox"/>	0137	Failed to complete manifest properly. 66262.23(a)
<input type="checkbox"/>	0138	Failed to have TSDf copy of manifest onsite. 66262.40(a)
<input type="checkbox"/>	0140	Failed to have LDR documentation onsite. 66268.7(a)(8)
<input type="checkbox"/>	0141	Failed to obtain approval for TSDf. 25201(a)
<input type="checkbox"/>	0142	Failed to notify CUPA for eligible onsite treatment. 25201(a)
<input type="checkbox"/>	0145	ERM reporting not submitted biennially &/or available. 25143.10
<input type="checkbox"/>	0146	Failed to have adequate records demonstrating claim of exemption for Excluded Recyclable Material (ERM). 25143.2(f) & 66261.2(g)
<input type="checkbox"/>	0147	Failed to keep universal waste record for 3 years for offsite shipment. SQH:66273.19(b)&(c)(2); LQH:66273.39(b)&(c)(2)
<input type="checkbox"/>	0148	Failed to keep copies of analytical results, waste analysis records, or waste determination results. (3 years) 66262.40(c)
<input type="checkbox"/>	0149	Failed to keep disposal receipts (3 years) for drained used oil filters and/or drained fuel filters. 25250.22 and 66266.130(c)(5)

DISPOSAL AND TRANSPORTATION

<input type="checkbox"/>	0301	Unauthorized disposal of hazardous waste. 25189.5(a) or 25189(d)
<input type="checkbox"/>	0302	Unlawful transportation of hazardous waste (HW). 25163(a)
<input type="checkbox"/>	0303	Did not use HW manifest for disposal. 66262.20(a), 25160.2(b)9
<input type="checkbox"/>	0304	Failed to make a proper waste determination. 66262.11 & 66260.200(c)
<input type="checkbox"/>	0305	Disposed of used oil illegally. 25250.5(a) and 25189.5(a)
<input type="checkbox"/>	0306	Disposed of latex paint illegally. 25217.1
<input type="checkbox"/>	0307	Disposal of universal waste to an unauthorized point. 25189.5(a); SQH:66273.11(a); LQH 66273.31(a)
<input type="checkbox"/>	0308	Impermissible dilution of hazardous waste. 66268.3(a)

HAZWASTE REQUIREMENTS FOR LOGs & SOGs

Viol #	V	VIOLATION DESCRIPTION
		STORAGE AND HANDLING
	<input type="checkbox"/>	0216 Failed to label hazardous materials within 10 days or less. 25124(b)(3)(A) & 66262.34(f)
	<input type="checkbox"/>	0217 Failed to repackage damaged/deteriorated hazardous material container within 96 hours. 25124(b)(3)(B) & 66262.34(f)
	<input type="checkbox"/>	0218 Failed to label &/or close drained <input type="checkbox"/> used oil filters &/or <input type="checkbox"/> used fuel filters. 25250.22 and 66266.130(c)(3)
	<input type="checkbox"/>	0219 Failed to properly segregate used oil &/or fuel drained from filters. 66266.130(c)(6) or 25250.22(b)(4)
	<input type="checkbox"/>	0220 Spent lead acid batteries not properly managed. 66266.81
	<input type="checkbox"/>	0221 Failed to comply with satellite regulations. 66262.34(e)
	<input type="checkbox"/>	0222 Failed to properly label ERM. 25143.9(a)
	<input type="checkbox"/>	0223 Failed to properly manage non-empty container or inner liner removed from a container. 66261.7 (b), (d) &/or (r)
	<input type="checkbox"/>	0224 Failed to mark date on empty container larger than 5 gallons and/or manage it within one year. 66261.7(e) & (f).

HAZWASTE REQUIREMENTS FOR SOGs ONLY

STORAGE AND HANDLING-Pursuant to 66262.34(d)

4	<input checked="" type="checkbox"/>	0225 Accumulated waste too long (>180 or 270 days). 66262.34(d), CFR 262.34(e) & (f), &/or 25201(a) (>90 days for an AHW waste)
	<input type="checkbox"/>	0226 Did not accumulate waste in container or tank. 66262.34(d)(2)
5	<input checked="" type="checkbox"/>	0227 Failed to properly label/date hazardous waste container &/or tank. 66262.34(f)
	<input type="checkbox"/>	0228 Failed to keep container closed. CFR 265.173
	<input type="checkbox"/>	0229 Failed to conduct weekly inspections. CFR 265.174
	<input type="checkbox"/>	0230 Failed to maintain aisle space. CFR 265.35
	<input type="checkbox"/>	0231 Failed to properly separate incompatible wastes. CFR 265.177
	<input type="checkbox"/>	0232 Waste accumulated in a container in poor condition. CFR 265.171
	<input type="checkbox"/>	0233 Failed to use a lined/compatible container. CFR 265.172.
	<input type="checkbox"/>	0234 Did not maintain &/or operate facility to prevent release or fire. CFR 265.31

TRAINING, CONTINGENCY PLAN & ER PROCEDURES

Pursuant to 66262.34(d)(2)

	<input type="checkbox"/>	0407 Employee training program not adequate. CFR 262.34(d)(5)(iii)
	<input type="checkbox"/>	0408 Failed to post ER plan by phone. CFR 262.34(d)(5)(ii)
	<input type="checkbox"/>	0409 Spill/fire control equip not available. CFR 265.32(c)
	<input type="checkbox"/>	0410 Failed to equip facility with internal communication or alarm. CFR 265.32(a) & (b)
	<input type="checkbox"/>	0411 Failed to carry out contingency plan during an emergency. CFR 262.34(d)(5)(iv)
	<input type="checkbox"/>	0412 Failed to have an emergency coordinator on call or available during emergency. CFR 262.34(d)(5)(i)

HAZARDOUS WASTE TANK SYSTEMS Pursuant to 66262.34(d)(2)

	<input type="checkbox"/>	1612 Hazardous waste improperly stored in a tank system that <input type="checkbox"/> leaks, <input type="checkbox"/> is corroded, or <input type="checkbox"/> failing. CFR 265.201(b)(2)
	<input type="checkbox"/>	1613 Failed to comply with tank standards which include: two feet of freeboard (where applicable), shut off for waste feed line, & daily and weekly inspections. CFR 265.201(b) & (c)
	<input type="checkbox"/>	1614 Failed to properly complete &/or document closure for a hazardous waste tank. CFR 265.201(d) & 67383.3
	<input type="checkbox"/>	1615 Failed to safely accumulate ignitable or reactive waste in a tank. CFR 265.201(e)
	<input type="checkbox"/>	1616 Failed to safely manage incompatible waste in a tank. CFR 265.201(f)

BUSINESS ADDRESS: 5255 Mt Etna Drive

ZIP: 92117

VIOLATION REPORT: *The items checked below refer to specific section numbers of the California Health and Safety Code Sections 25100 and 117600 et. al.; the San Diego County Code of Regulatory Ordinances Sections 68.1201 et. al.; and the California Code of Regulations, Title 22 Sections 65600 et. al.*

All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use the Corrective Action Form to document your return to compliance. Your Specialist can provide these forms. Please call (619) 338-2222 or your Specialist if you have any questions.

STORAGE AND LABELING

TRANSPORTATION REQUIREMENTS

Viol #	VIOL	VIOLATION DESCRIPTION
<input type="checkbox"/>	V4201	UPF Permit not obtained. 117705, 68.905
<input type="checkbox"/>	V4202	Medical Waste (MW) not separated from other waste at point of origin. 118275
<input type="checkbox"/>	V4203	Enclosure or designated accumulation area for MW containers not secured. 118307, 118310
<input type="checkbox"/>	V4204	MW designated accumulation area not posted with an approved and legible biohazardous waste "warning sign" in English and Spanish. 118310
<input type="checkbox"/>	V4205	Medical SOLID WASTE not secured to deny access to unauthorized persons. 68.1211
<input type="checkbox"/>	V4206	Spill of MW not properly cleaned up. 118300
<input type="checkbox"/>	V4207	Sharps not stored in approved and properly marked sharps container. 118285(a)(d)
<input type="checkbox"/>	V4208	Full sharps container not taped closed or tightly-lidded to preclude loss of contents. 118285(b)
<input type="checkbox"/>	V4209	Red bags/sharps container not labeled with generator's name, address, and phone number. 68.1205, 68.1206
<input type="checkbox"/>	V4210	MW not stored in approved and properly marked red bags. 118275
<input type="checkbox"/>	V4211	Red bags not tied off to prevent leakage/expulsion of contents during handling and storage. 118280(a)
<input type="checkbox"/>	V4212	Red bags not containerized in rigid, leak resistant, and covered containers or bins. 118280(b)
<input type="checkbox"/>	V4213	Waste container/bin not labeled on the lid and side so as to be clearly visible. 118280(b)
<input type="checkbox"/>	V4214	Reusable containers/bins for MW storage not kept clean/sanitary. 118295, 118305
<input type="checkbox"/>	V4215	Frozen (0C/32 F) MW stored >90 days. 118280(d)(2)
<input type="checkbox"/>	V4306	Full sharps container stored >30 days at >0°C. 118285(c)
<input type="checkbox"/>	V4307	Red bag waste stored >7 days at >0°C (for generators of >20lbs/month). 118280(d)(1)(A)
<input type="checkbox"/>	V4308	Red bag waste stored >30 days at >0°C (for generators of <20lbs/month). 118280(d)(1)(B)
<input type="checkbox"/>	V4309	MW interim storage area not marked with warning sign or a biohazard symbol legible from 5 ft. 118307, 118310
<input type="checkbox"/>	V4310	MW Interim storage area not properly secured. 118307

Viol #	VIOL	VIOLATION DESCRIPTION
<input type="checkbox"/>	V4260	Transportation of MW without State Hauler Registration or a (LQHE) from HMD. 118025
<input type="checkbox"/>	V4304	No LQHE for "self-hauled" MW (<20 pounds of waste/wk). 118025, 118030(a)(1)
<input type="checkbox"/>	V4305	LQHE not renewed annually as required. 118030(b)
<input type="checkbox"/>	V4311	Medical Waste tracking documents not in vehicle transporting MW. 118040(c)
<input type="checkbox"/>	V4312	MW tracking documents/logs not maintained for 3 years for LQHE. 118040(a)

SMALL QTY. GENERATORS ONLY (<200 lbs/mo) MW

<input type="checkbox"/>	V4301	Medical Waste Mgmt. Plan (MWMP) not submitted to HMD (initial/updates if onsite treatment). 117935
<input type="checkbox"/>	V4302	Did not maintain and show proof of "onsite" medical waste treatment records for 3 yrs. 117943, 118215(2)(E)
<input type="checkbox"/>	V4303	Did not retain on file disposal receipts/tracking documents for waste shipped offsite for 2 yrs. 117945(b)
<input type="checkbox"/>	V4309	MWMP or equivalent information not onsite. 117945

REQUIREMENTS FOR LARGE QUANTITY GENERATORS ONLY (≥ 200 pounds of waste generated per month)

<input checked="" type="checkbox"/>	6	V4351	MWMP not submitted to HMD (initial/updates). 117960, 117970	<input checked="" type="checkbox"/>
<input type="checkbox"/>		V4352	Records of MW treatment not available for 3 years. 117975, 118215(2)(E)	
<input type="checkbox"/>		V4353	Did not retain on file disposal receipts/tracking documents for at least 3yrs. for waste shipped offsite. 117975	

PATHOLOGY, CHEMOTHERAPY, PHARMAC. & HAZ. WASTE

<input type="checkbox"/>	V4401	Chemo waste not segregated from other MW. 118275(e)
<input type="checkbox"/>	V4402	Chemo waste container not properly labeled. 118275(e)
<input type="checkbox"/>	V4403	Illegal disposal of chemo waste. 118340
<input type="checkbox"/>	V4411	Pathology waste not segregated from other MW. 118275(f)
<input type="checkbox"/>	V4412	Pathology waste container not properly labeled. 118275(f)
<input type="checkbox"/>	V4413	Illegal disposal of pathology waste. 118340
<input type="checkbox"/>	V4421	Pharmwaste not segregated from other MW. 118275(g)
<input type="checkbox"/>	V4422	Pharmwaste not properly labeled. 118275(g)
<input type="checkbox"/>	V4423	Pharmwaste stored >90 days when container full, or stored longer than one year (max. allowable time). 118280(e)
<input type="checkbox"/>	V4432	Illegal disposal of pharmwaste. 118340, 118222(b)
<input type="checkbox"/>	V4441	Illegal disposal of photo/hazwaste to sewer/trash. 25189.5

TREATMENT AND DISPOSAL

ONSITE MW TREATMENT FACILITY REQUIREMENTS

<input type="checkbox"/>	V4251	MW treated by unapproved method/procedure. 118215
<input type="checkbox"/>	V4252	Standardized written operating procedures for steam sterilization not available. 118215(2)(A)
<input type="checkbox"/>	V4253	Recording thermometer not calibrated annually. 118215(2)(B)
<input type="checkbox"/>	V4254	No records of annual thermometer calibration checks onsite for at least the past 3 years. 118215(2)(B)
<input type="checkbox"/>	V4255	Heat-sensitive tape/other approved method not used for each load treated onsite. 118215(2)(C)
<input type="checkbox"/>	V4256	Monthly biological indicator or other approved method not used to confirm proper disinfection. 118215(2)(D)
<input type="checkbox"/>	V4257	Onsite steam sterilization did not reach 121°C/250 °F for 30 minutes. 118215(2)(B)
<input type="checkbox"/>	V4258	Treatment records/logs of dates, time and temperature not available for 3 yrs. 118215(2)(E)
<input type="checkbox"/>	V4259	Disposal of untreated MW to an unauthorized point. 118340

<input type="checkbox"/>	V4501	Onsite MW treatment permit not obtained/renewed. 117950, 118130, 118135, 65620, 65623
<input type="checkbox"/>	V4502	Current copy of the MW treatment permit not available. 65621(f), 65623, 118165, 118180
<input type="checkbox"/>	V4503	Condition(s) of the MW treatmt. permit violated. 65623

RE: Underground Tank Facility
5255 MT ETNA DR, SAN DIEGO, 92117-6912

The Hazardous Materials Division (HMD) of the Department of Environmental Health is the Certified Unified Program Agency (CUPA) in the County of San Diego. The HMD, as the CUPA, regulates the construction, installation, operation, repair and removal of underground storage tank (UST) systems. Recent changes in state regulations require owners and operators of UST systems to submit the new Unified Program Consolidated Forms developed by the State Water Resources Control Board. Completed forms must be submitted to the CUPA at the address above by August 31, 2008.

The changes to the UST regulations which went into effect on January 17, 2008, require UST owners and operators to use the new standardized forms to submit all required (current and new) registration information. All UST owners and operators must provide the CUPA with tank and facility information (including Monitoring Plan, Emergency Plan and Plot Plan*) on the new forms. The forms (listed below) are available in interactive format at www.sdcounty.ca.gov/hazmat/hmd_forms.html. Failure to submit these new forms will result in non-renewal of the UST Operating Permit. To prevent any delay to the renewal of your UST Operating Permit, submit these forms immediately. Copies of the completed forms must be maintained at the UST facility. If you manage more than one facility, a complete set of forms is required for each facility.

The new standardized forms will promote consistency in record keeping which will benefit HMD and UST owners and operators. If you have recently submitted the information on the new forms, please disregard this advisory.

July 10, 2008

If you have any questions about the information contained in this bulletin, please contact the Hazardous Materials Division Duty Specialist at (619) 338-2231.

Sincerely,

J. M. VIZZIER, Chief
Hazardous Materials Division

JMV/lms

Enclosures: UST Facility Page (HM-9715)
UST Tank Information Page (HM-9717)
UST Monitoring Plan (HM-9222A)
UST Emergency Plan (HM-9222B)
UST Plot Plan (HM-9222C)*

(*If you already have a diagram (Plot Plan) that shows the required information, include it with this submission.)

Date: 2/19/2008

**SAN DIEGO COUNTY DEPARTMENT OF ENVIRONMENTAL HEALTH
HAZARDOUS MATERIALS DIVISION
Annual Carcinogen and Reproductive Toxin Reporting List**

Business Name: San Diego Sheriff's Crime Laboratory

Business Address: 5255 Mount Etna Drive, San Diego, CA 92117-6912

Business Owner or Operator: San Diego Sheriff's Department

Please complete the following by entering the chemical name in the chemical name column and then place a check ✓ in the quantity column that most closely estimates the amount on hand. If measured by volume, check the appropriate gallon column(s). If measured by weight, check the appropriate pound column(s). If the chemical is a trade secret, you should check the trade secret box. For example, if you have one pint of benzene you would write benzene in the chemical name column and place a check ✓ in the <1-gallon column.

(PLEASE NOTE: the symbol < means less than).

HAZARDOUS MATERIALS DIVISION
Annual Carcinogen and Reproductive Toxin Reporting List**

Business Name: San Diego Sheriff's Crime Laboratory

Business Address: 5255 Mount Etna Drive, San Diego, CA 92117-6912

Business Owner or Operator: San Diego Sheriff's Department

Please complete the following by entering the chemical name in the chemical name column and then place a check ✓ in the quantity column that most closely estimates the amount on hand. If measured by volume, check the appropriate gallon column(s). If measured by weight, check the appropriate pound column(s). If the chemical is a trade secret, you should check the trade secret box. For example, if you have one pint of benzene you would write benzene in the chemical name column and place a check ✓ in the <1-gallon column.

(PLEASE NOTE: the symbol < means less than).

MONITORING PLAN (Page 1 of 2)**

TYPE OF ACTION 1. NEW PLAN 2. CHANGE OF INFORMATION 490-1

PLAN TYPE 1. MONITORING IS IDENTICAL FOR ALL USTs AT THIS FACILITY. 490-2

(Check one item only) 2. THIS PLAN COVERS ONLY THE FOLLOWING UST SYSTEM(S)(specify).

I. FACILITY INFORMATION

BUSINESS NAME (Same as FACILITY NAME or DBA-Doing Business As) ³ FACILITY ID #

3	7	0	0	0	1	1	4	2	6	1	1
---	---	---	---	---	---	---	---	---	---	---	---

County of San Diego Sheriff Crime Lab

BUSINESS SITE ADDRESS ¹⁰³ CITY ¹⁰⁴ ZIP CODE ¹⁰⁵
5255 Mt. ETNA San Diego CA 92117-

II. EQUIPMENT TESTING AND PREVENTIVE MAINTENANCE

Testing, preventive maintenance, and calibration of monitoring equipment (e.g., sensors, probes, line leak detectors, etc.) must be performed at the frequency specified by the equipment manufacturers' instructions, or annually, whichever is more frequent, and that such work must be performed by qualified personnel. (23 CCR §2632, 2634, 2638, 2641)

MONITORING EQUIPMENT IS SERVICED 1. ANNUALLY 99. OTHER (Specify): 490-3a
490-3b

III. MONITORING LOCATIONS

1. NEW SITE PLOT PLAN/MAP SUBMITTED WITH THIS PLAN. 490-4

2. SITE PLOT PLAN/MAP PREVIOUSLY SUBMITTED. (23 CCR §2632, 2634)

IV. TANK MONITORING IS PERFORMED USING THE FOLLOWING METHOD(S):

1. CONTINUOUS ELECTRONIC TANK MONITORING OF ANNULAR (INTERSTITIAL) SPACE(S) OR SECONDARY CONTAINMENT VAULT(S) WITH AUDIBLE AND VISUAL ALARMS (23 CCR §2632, 2634) 490-5

SECONDARY CONTAINMENT IS: a. DRY b. LIQUID FILLED c. PRESSURIZED d. UNDER VACUUM 490-6

PANEL MANUFACTURER: Veeder Root 490-7 MODEL #: TLS-300 490-8

LEAK SENSOR MANUFACTURER: Veeder Root 490-9 MODEL #(S): 794380-420 490-10

2. AUTOMATIC TANK GAUGING (ATG) SYSTEM USED TO MONITOR SINGLE WALL TANK(S) (23 CCR §2643) 490-11

PANEL MANUFACTURER: 490-12 MODEL #: 490-13

IN-TANK PROBE MANUFACTURER: 490-14 MODEL #(S): 490-15

LEAK TEST FREQUENCY: a. CONTINUOUS b. DAILY/NIGHTLY c. WEEKLY 490-16

d. MONTHLY e. OTHER (Specify): 490-17

PROGRAMMED TESTS: a. 0.1 g.p.h. b. 0.2 g.p.h. c. OTHER (Specify): 490-18
490-19

3. MONTHLY STATISTICAL INVENTORY RECONCILIATION (23 CCR §2646.1) 490-20

4. WEEKLY MANUAL TANK GAUGING (MTG) (23 CCR §2645): TESTING PERIOD: a. 36 HOURS b. 60 HOURS 490-21
490-22

5. TANK INTEGRITY TESTING (23 CCR §2643.1): 490-23

TEST FREQUENCY: a. ANNUALLY b. BIENNIALY c. OTHER (Specify): 490-24, 490-25

99. OTHER (Specify): 490-26, 490-27

V. PIPE MONITORING IS PERFORMED USING THE FOLLOWING METHOD(S) (Check all that apply)

1. CONTINUOUS MONITORING OF PIPE/ PIPING SUMP(S) AND OTHER SECONDARY CONTAINMENT WITH AUDIBLE AND VISUAL ALARMS (23 CCR §2636) 490-28

SECONDARY CONTAINMENT IS: a. DRY b. LIQUID FILLED c. PRESSURIZED d. UNDER VACUUM 490-29

PANEL MANUFACTURER: Veeder Root 490-30 MODEL #: TLS-300 490-31

LEAK SENSOR MANUFACTURER: Veeder Root 490-32 MODEL #(S): 794390-208 490-33

PIPING LEAK ALARM TRIGGERS AUTOMATIC PUMP (i.e., TURBINE) SHUTDOWN. a. YES b. NO 490-34

FAILURE/DISCONNECTION OF THE MONITORING SYSTEM TRIGGERS AUTOMATIC PUMP SHUTDOWN. a. YES b. NO 490-35

2. MECHANICAL LINE LEAK DETECTOR (MLLD) THAT ROUTINELY PERFORMS 3.0 g.p.h. LEAK TESTS AND RESTRICTS OR SHUTS OFF PRODUCT FLOW WHEN A LEAK IS DETECTED (23 CCR §2636) 490-36

MLLD MANUFACTURER(S): 490-37 MODEL #(S): 490-38

3. ELECTRONIC LINE LEAK DETECTOR (ELLD) THAT ROUTINELY PERFORMS 3.0 g.p.h. LEAK TESTS (23 CCR §2636) 490-39

ELLD MANUFACTURER(S): 490-40 MODEL #(S): 490-41

PROGRAMMED IN LINE LEAK TEST: 1. MINIMUM MONTHLY 0.2 g.p.h. 2. MINIMUM ANNUAL 0.1 g.p.h. 490-42

ELLD DETECTION OF A PIPING LEAK TRIGGERS AUTOMATIC PUMP (i.e., TURBINE) SHUTDOWN. a. YES b. NO 490-43

ELLD FAILURE/DISCONNECTION TRIGGERS AUTOMATIC PUMP (i.e., TURBINE) SHUTDOWN. a. YES b. NO 490-44

4. PIPE INTEGRITY TESTING: TEST FREQUENCY a. ANNUALLY b. EVERY 3 YEARS c. OTHER (Specify): 490-46, 490-47

5. VISUAL PIPE MONITORING: FREQUENCY a. DAILY b. WEEKLY c. MIN. MONTHLY & EACH TIME SYSTEM OPERATED* 490-48, 490-49

* Allowed for monitoring of unburied emergency generator fuel piping only per HSC §25281.5(b)(3)

6. SUCTION PIPING MEETS EXEMPTION CRITERIA [23 CCR §2636(a)(3)] 490-50

7. NO REGULATED PIPING PER HEALTH AND SAFETY CODE, DIVISION 20, CHAPTER 6.7 IS CONNECTED TO THE TANK SYSTEM 490-51

99. OTHER (Specify): 490-52, 490-53

**UNDERGROUND STORAGE TANK
MONITORING PLAN (Page 2 of 2)**

VI. UNDER DISPENSER CONTAINMENT (UDC) MONITORING

1. UDC MONITORING IS PERFORMED USING THE FOLLOWING METHOD: 490-54a
 1. CONTINUOUS ELECTRONIC MONITORING 490-54b
 4. NO DISPENSERS 99. OTHER (Specify): 2. FLOAT AND CHAIN ASSEMBLY 3. ELECTRONIC STAND-ALONE

PANEL MANUFACTURER: 490-55 MODEL #: 490-56

LEAK SENSOR MANUFACTURER: 490-57 MODEL #(S): 490-58

DETECTION OF A LEAK INTO THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS a. YES b. NO 490-59
 UDC LEAK ALARM TRIGGERS AUTOMATIC PUMP SHUTDOWN a. YES b. NO 490-60
 FAILURE / DISCONNECTION OF UDC MONITORING SYSTEM TRIGGERS AUTOMATIC PUMP SHUTDOWN a. YES b. NO 490-61
 UDC MONITORING STOPS THE FLOW OF PRODUCT AT THE DISPENSER a. YES b. NO 490-62

2. UDC CONSTRUCTION IS 1. SINGLE-WALLED 2. DOUBLE-WALLED 490-63
 IF DOUBLE WALLED: 490-64a
 UDC INTERSTITIAL SPACE IS MONITORED BY: 1. LIQUID 2. PRESSURE 3. VACUUM

A LEAK WITHIN THE SECONDARY CONTAINMENT OF THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS a. YES b. NO 490-64b

VII. PERIODIC SYSTEM TESTING

1. ELD TESTING: THIS FACILITY HAS BEEN NOTIFIED BY THE STATE WATER RESOURCES CONTROL BOARD THAT ENHANCED LEAK DETECTION (ELD) MUST BE PERFORMED. PERIODIC ELD IS PERFORMED EVERY 36 MONTHS AS REQUIRED. (23 CCR §2644.1) 490-65
 2. SECONDARY CONTAINMENT COMPONENTS ARE TESTED EVERY 36 MONTHS. 490-66
 3. SPILL BUCKETS ARE TESTED ANNUALLY. 490-67

VIII. RECORDKEEPING

The following monitoring/maintenance records are kept for this facility:

Alarm logs 490-68a Visual Inspection Records 490-68b
 Tank integrity testing results 490-68c SIR testing results (and supporting documentation records) 490-68d
 Tank gauging results (and supporting documentation records) 490-68e ATG Testing results (and supporting documentation records) 490-68f
 Corrosion Protection 60-day logs 490-68g Equipment maintenance and calibration records 490-68h

IX. TRAINING

Personnel with UST monitoring responsibilities are familiar with all of the following documents relevant to their job duties. 490-69a

REFERENCE DOCUMENTS MAINTAINED AT FACILITY (Check all that apply)

THIS UNDERGROUND STORAGE TANK MONITORING PLAN (Required) 490-69b
 OPERATING MANUALS FOR ELECTRONIC MONITORING EQUIPMENT (Required) 490-69c
 CALIFORNIA UNDERGROUND STORAGE TANK REGULATIONS 490-69d
 CALIFORNIA UNDERGROUND STORAGE TANK LAW 490-69e
 STATE WATER RESOURCES CONTROL BOARD (SWRCB) PUBLICATION: "HANDBOOK FOR TANK OWNERS - MANUAL AND STATISTICAL INVENTORY RECONCILIATION" 490-69f
 SWRCB PUBLICATION: "UNDERSTANDING AUTOMATIC TANK GAUGING SYSTEMS" 490-69g
 OTHER (Specify): 490-69h, 490-69i

This facility has a "Designated UST Operator" who has passed the California UST System Operator Exam administered by the International Code Council (ICC). The "Designated UST Operator" will train facility employees in the proper operation and maintenance of the UST systems annually, and within 30 days of hire. This training will include, but is not limited to, the following:

- Operation of the UST systems in a manner consistent with the facility's best management practices 490-70
- The facility employee's role with regard to the monitoring equipment as specified in this UST Monitoring Plan
- The facility employee's role with regard to spills and overfills as specified in the UST Response Plan
- Names of contact person(s) for emergencies and monitoring alarms

X. COMMENTS/ADDITIONAL INFORMATION

Provide additional comments here or indicate how many pages with additional information on specific monitoring procedures are attached to this plan. 490-71

XI. PERSONNEL RESPONSIBILITIES

The UST Owner/Operator is responsible for ensuring that: 1) the daily/routine UST monitoring activities and maintenance of UST leak detection equipment covered by this plan occurs, 2) all conditions that indicate a possible release are investigated, and 3) all monitoring records are maintained properly.

The following person(s) are responsible for performing the monitoring and equipment maintenance:

NAME 490-72	TITLE 490-73
NAME Mike Johnson 490-74	TITLE Senior Plumber/ DSO 490-75

The Designated Operator shall perform a monthly visual inspection of the facility, provide a report to the owner/operator, and inform the owner/operator of any conditions that need follow-up action.

XII. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

APPLICANT SIGNATURE [Signature] 490-76 DATE: 4-11-08 490-77

REPRESENTING: 1. Tank Owner/Operator 2. Facility Owner/Operator 3. Authorized Representative of Owner

APPLICANT NAME (print): K.M. Johnson 490-78 APPLICANT TITLE: Senior Plumber/ DSO 490-79

Local Agency Signature: _____

Date: 7 / 12 / 08

Comments or Special Conditions: _____

UST Monitoring Plan – Page 2 Instructions

Complete a separate UST Monitoring Plan for each UST monitoring system at the facility. This Monitoring Plan must be kept at the UST location at all times. The elements of this Monitoring Plan constitute conditions of the UST Operating Permit. This form must be submitted with your initial UST Operating Permit Application and within 30 days of changes in the information it contains. Please note that you are required to obtain approval prior to installing or modifying monitoring equipment. (Note: Numbering of these instructions follows the data element numbers on the form.)

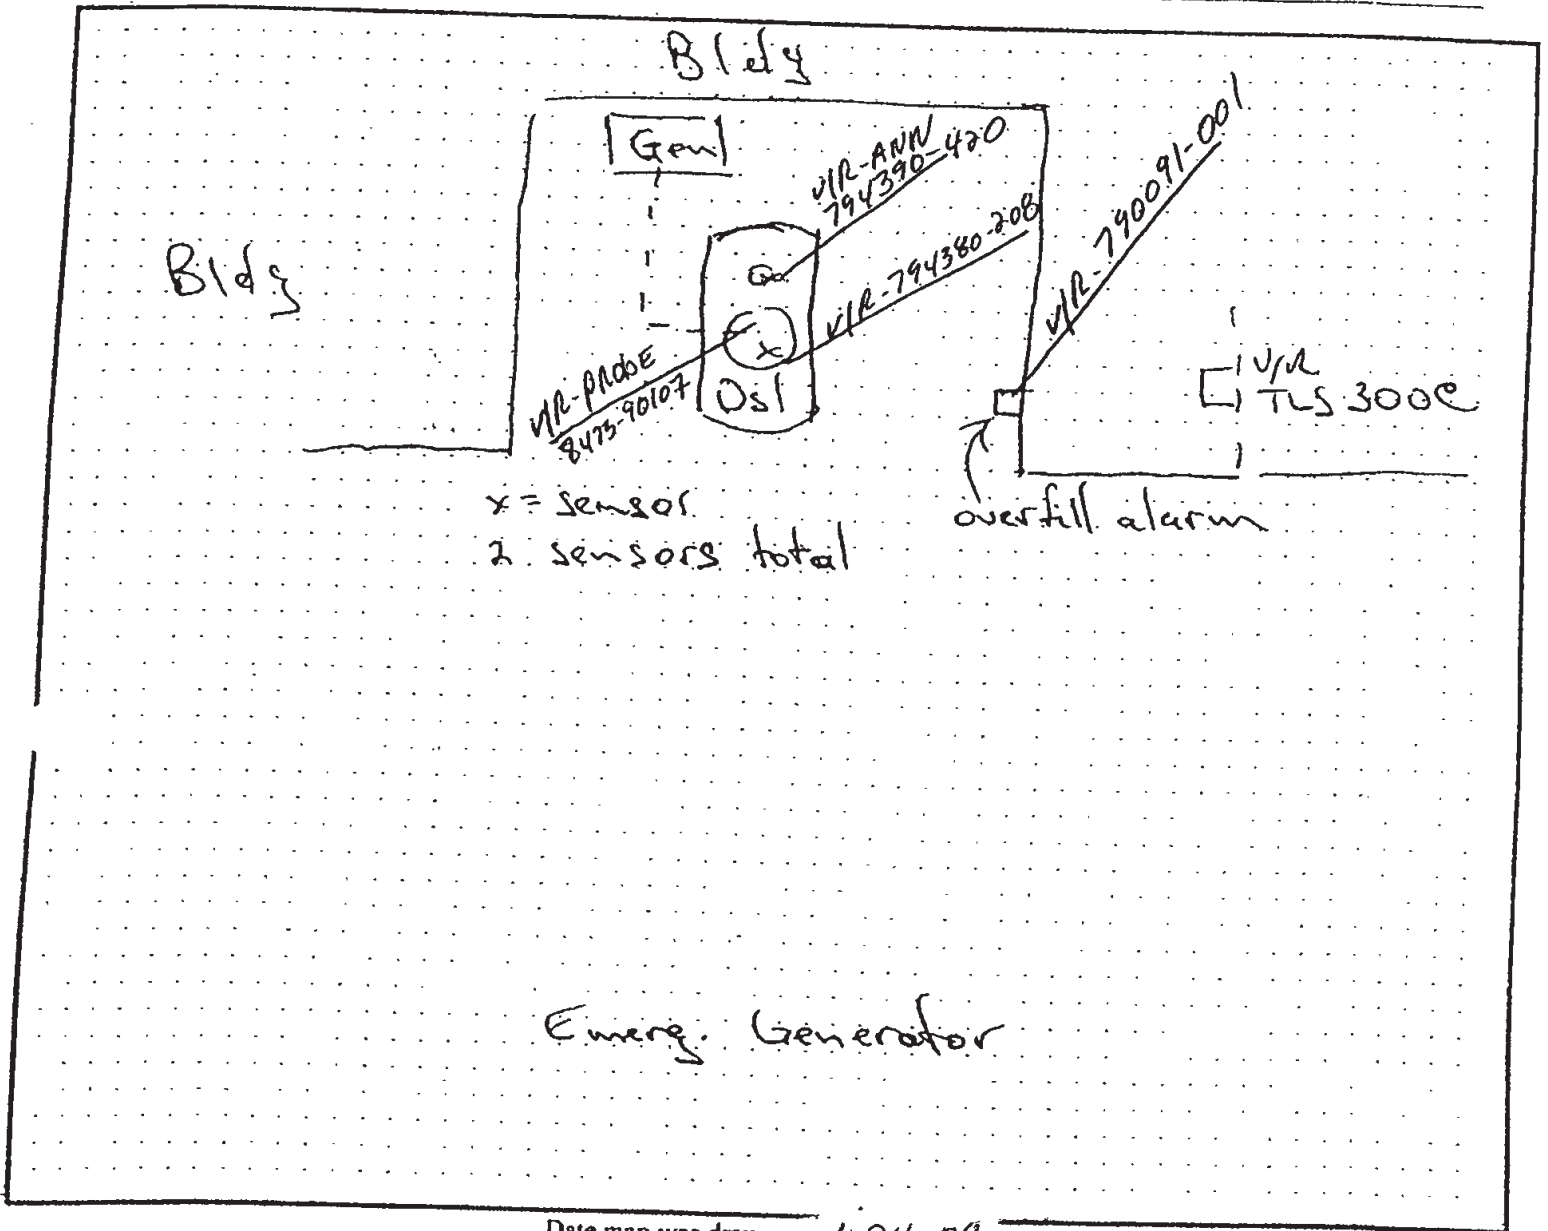

- 490-54a. MONITORING OF THE UNDER DISPENSER CONTAINMENT – Indicate the method used for UDC monitoring.
 490-54b. SPECIFY – If 99 "Other" is checked, describe other method used.
 If VI-1-1, VI-1-2 or VI-1-3 or VI-1-99 is checked, complete 490-55 to 490-64b.
- 490-55. PANEL MANUFACTURER – Enter the name of the manufacturer of the monitoring system control panel (console). If there is no control panel (e.g., only an electrical relay box is installed) leave this space blank.
 490-56. MODEL # – Enter the model number for the monitoring system control panel (console). If there is no control panel (e.g., only an electrical relay box is installed) leave this space blank.
- 490-57. LEAK SENSOR MANUFACTURER – Enter the name of the manufacturer of the sensor(s).
 490-58. MODEL #(S) – Enter the model number of the sensor(s) installed. If additional space is needed, use Section X.
 490-59. DETECTION OF A LEAK INTO THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS – Indicate Yes or No
 490-60. UDC LEAK ALARM TRIGGERS PUMP SHUTDOWN – Indicate Yes or No
 490-61. FAILURE/DISCONNECTION OF UDC MONITORING SYSTEM TRIGGERS AUTOMATIC PUMP SHUTDOWN – Indicate Yes or No
 490-62. UDC MONITORING STOPS THE FLOW OF PRODUCT AT THE DISPENSER – Indicate Yes or No.
 490-63. UDC CONSTRUCTION – Indicate if the construction of the UDC is single-walled, or double-walled.
 490-64a. DOUBLE-WALLED INTERSTITIAL SPACE MONITORING – Indicate what is used to monitor the interstitial space.
 490-64b. LEAK WITHIN THE SECONDARY CONTAINMENT OF UDC TRIGGERS AUDIBLE AND VISUAL ALARMS – Indicate Yes or No
 490-65. VII-1 ELD TESTING – Check the box if you have been notified by the State Water Resources Control Board (SWRCB) that the UST(s) covered by this plan is/are subject to Enhanced Leak Detection Requirements (i.e., UST has any single-wall component and is located within 1,000 feet of a public drinking water well).
 490-66. TESTING OF SECONDARY CONTAINMENT COMPONENTS EVERY 36 MONTHS - Check the box if you have secondary containment that requires testing.
 490-67. SPILL BUCKET TESTING - Check the box if you have spill buckets.
 490-68a-h. VIII RECORDKEEPING – Indicate which monitoring and equipment maintenance records are maintained for this facility.
 490-69a IX TRAINING STATEMENT – Check the box to verify that the statement is true.
 REFERENCE DOCUMENTS MAINTAINED AT FACILITY – Check the appropriate boxes to describe reference documents maintained at the facility.
 Note that the first two items on the list must be kept at the facility.
 490-69b. MONITORING PLAN – Indicate that this plan is kept as a reference document.
 490-69c. OPERATING MANUALS FOR ELECTRONIC EQUIPMENT – Indicate that this plan is kept as a reference document.
 490-69d. CA UST REGULATIONS – Indicate that this is kept as a reference document.
 490-69e. CA UST LAW – Indicate that this is kept as a reference document.
 490-69f. STATE WATER RESOURCES CONTROL BOARD (SWRCB) PUBLICATION – "HANDBOOK FOR TANK OWNERS - MANUAL AND STATISTICAL INVENTORY RECONCILIATION – Indicate that this is kept as a reference document.
 490-69g. SWRCB PUBLICATION: "UNDERSTANDING AUTOMATIC TANK GAUGING SYSTEMS" – Indicate that this is kept as a reference document.
 490-69h. OTHER – Indicate that other reference documents are kept.
 490-69i. SPECIFY-If "OTHER" is checked, enter a brief description of the other document(s) maintained at the facility. If additional space is needed, see Section X.
 490-70. DESIGNATED OPERATOR TRAINING – Check this box to verify that this statement is true.
 490-71. COMMENTS/ADDITIONAL INFORMATION – Make additional comments or you may attach and identify the number of additional pages of information to describe any additional UST system monitoring-related information (e.g., additional information required by your local agency). Attach any monitoring logs that you will be using for the monitoring of your tank system.
 490-72. NAME – Enter the name of the person who routinely conducts the monitoring and equipment maintenance under this plan.
 490-73. TITLE – Enter the title of the person.
 490-74. NAME – Enter the name of the second person, if applicable, who routinely conducts the monitoring and equipment maintenance under this plan.
 490-75. TITLE – Enter the title of the second person.
- OWNER/OPERATOR SIGNATURE – The tank owner/operator, facility owner/operator, or an authorized representative of the owner shall sign in the space provided. This signature certifies that the signer believes that all information submitted is true, accurate, and complete, and that the training program specified in Section IX has been implemented.
- 490-76. REPRESENTING – Check the appropriate box to indicate whether the signer is the UST owner/operator, the UST facility owner/operator, or an authorized representative of the owner.
 490-77. DATE – Enter the date the plan was signed.
 490-78. APPLICANT NAME – Print or type the name of the person signing the plan.
 490-79. APPLICANT TITLE – Enter the title of the person signing the plan.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Permit Number: 1501
H14261

UST Monitoring Site Plan

Site Address: Sheriff's Crime Lab 5255 Mt Edge

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan.

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within 24 hours of discovery. Recovered hazardous materials, unless suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
 1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
 2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
 3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: (Complete only if applicable)

EQUIPMENT	LOCATION	AVAILABILITY
R10	R20	R30
R11	R21	R31
R12	R22	R32
R13	R23	R33
R14	R24	R34
R15	R25	R35

IV. RESPONSIBLE PERSONS

THE FOLLOWING PERSON(S) IS/ARE RESPONSIBLE FOR AUTHORIZING ANY WORK NECESSARY UNDER THIS RESPONSE PLAN:

NAME	TITLE
	Building Maintenance Supervisor
Michael Johnson	Senior Plumber/ DSO

V. MONITORING INDICATORS

IF MONITORING INDICATES A POSSIBLE UNAUTHORIZED RELEASE, STEPS TO VERIFY THE RELEASE WILL BE MADE AS FOLLOWS:

R60

- Additional system testing or data collection Inspection by qualified persons Recalibration of equipment Other (specify):

1-800-253-9933**

**UNDERGROUND STORAGE TANK
RESPONSE PLAN – PAGE 2**

(One form per facility)

VI. REPORTING AND RECORD KEEPING

We will report/record any overflow, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overflow, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

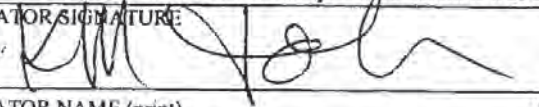

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

VII. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

OWNER/OPERATOR SIGNATURE: 	DATE 4-11-08 R70

Comments - (include information on repairs made prior to testing, and recommended follow-up for failed tests)

Monitoring System Certification

UST Monitoring Site Plan

Site Address: 5255 Mt Etna San Diego Ca.

Date map was drawn: 11/14/08

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Medical Waste Management Plan

Facility Information

Business Name: SAN DIEGO SHERIFF'S CRIME LAB Unified Program Facility Permit #: 114261

Type of Business: FORENSIC LAB Date: 02/19/08

Address: 5255 MOUNT ETNA DRIVE SANDIEGO CA 92117-6912

Street No. Street Name City State Zip Code

Person Responsible for implementing the Medical Waste Management Plan

Name: DON TAPPER

Title: ASST. DIRECTOR OF FORENSIC SERVICES Phone: (858) 467-4607 x

Types of wastes generated

- | | |
|--|---|
| <input checked="" type="checkbox"/> Sharps – needles, broken glass, blades.

Estimated monthly amount <u>50</u> lbs | <input checked="" type="checkbox"/> Blood or body fluids - liquid blood elements or other regulated body fluids, or articles contaminated with blood or body fluids.

Estimated monthly amount <u>250</u> lbs |
| <input type="checkbox"/> Laboratory wastes - specimens or microbiological cultures, stocks of infectious agents, live and attenuated vaccines, and culture media.

Estimated monthly amount <u> </u> lbs | <input type="checkbox"/> Isolation waste – waste contaminated with excretion, exudates, or secretions from humans or animals who are isolated due to highly communicable diseases.

Estimated monthly amount <u> </u> lbs |
| <input type="checkbox"/> Waste contaminated with fixatives or chemotherapeutic agents.

Estimated monthly amount <u> </u> lbs | <input type="checkbox"/> Surgical specimens – human or animal parts or tissues removed surgically or by autopsy.

Estimated monthly amount <u> </u> lbs |
| <input type="checkbox"/> Pathology waste – recognizable human anatomical parts.

Estimated monthly amount <u> </u> lbs | <input type="checkbox"/> Contaminated animals – animal carcasses, body parts, bedding materials.

Estimated monthly amount <u> </u> lbs |
| <input type="checkbox"/> Other (please specify): <u> </u>
Estimated monthly amount <u> </u> lbs | <input type="checkbox"/> Home Generated Sharps
Estimated monthly amount <u> </u> lbs |

Estimate of **TOTAL** monthly medical waste generated: 300 lbs

Method of treatment performed onsite (if applicable):

- Steam Autoclaving Other state approved alternative technology (please specify below):

Business Owner or Operator: San Diego Sheriff's Department

Please complete the following by entering the chemical name in the chemical name column and then place a check in the quantity column that most closely estimates the amount on hand. If measured by volume, check the appropriate gallon column(s). If measured by weight, check the appropriate pound column(s). If the chemical is a trade secret, you should check the trade secret box. For example, if you have one pint of benzene you would write benzene in the chemical name column and place a check in the <1-gallon column.

(PLEASE NOTE: the symbol < means less than).

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document installation, testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. Certification

 - I certify that the equipment identified in this document was installed/inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report (check all that apply):

Technician Name (print): James Lemer Signature: [Signature]

Certification No.: 1729899 License No.: 203029

Testing Company Name: Lemesnager Engineering Phone No.: (619) 917-8001

Site Address: _____ Date of Testing/Service: 1/24/2008

Software Version Installed: 15.01

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? (Check all that apply) <input type="checkbox"/> Sump/Trench Sensors; <input type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? <input type="checkbox"/> Yes; <input type="checkbox"/> No.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90 %
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments: Replaced TLS power Bulb.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment:

Permit Number: 114261

Check this box if tank gauging is used only for inventory control

Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

Check this box if LLDs are not installed.

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? <i>(Check all that apply)</i> Simulated leak rate: <input type="checkbox"/> 3 g.p.h.; <input type="checkbox"/> 0.1 g.p.h.; <input type="checkbox"/> 0.2 g.p.h.
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

UST Monitoring Site Plan

Site Address: Sheriff's Crime Lab 5255 Mt Edna

Date map was drawn: 1-24-08

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

114261

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

COUNTY OF SAN DIEGO

COMPLIANCE INSPECTION REPORT

BUSINESS NAME SD County Sheriff Crime Lab

ADDRESS 5255 Mount Etna Drive

CITY/ZIP San Diego / 92117-6912

PAGE <u>1</u> OF <u>4</u> DATE <u>1/23/2009</u>
PERMIT # <u>114261</u> BUS. CODE <u>K70</u>
TIME START <u>9:00</u> END <u>2:00</u>
SPECIALIST <u>Jessica Pearson</u>
INSPECTION CONTACT <u>Jeanne Redemen</u>
TITLE <u>Criminalist III</u>
PHONE <u>858-467-4600</u>

On the above date, the County inspected your business under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6. This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

Consent to inspect granted by: Inspection Contact Other: _____

A routine CUPA inspection covering onsite hazardous materials, hazardous waste, medical waste and underground storage tanks (USTs) was conducted with Mike Johnson, Designated Operator (DO), and Jeanne Redemen, Criminalist III. This facility is currently a large quantity generator of medical waste. The annual monitoring system certification for the 4,000-gallon diesel-containing UST, which powers an emergency generator, was performed during the inspection by James Romero, ICC-certified Service Technician for LeMesnager Engineering. This facility stores reportable quantities of hazardous materials onsite and generates hazardous waste through the laboratory analysis and testing of evidence from crime scenes.

RECEIVED FEB 10 2009

Notice to Comply:

- 1.) Observation:** Currently, this facility has medical waste hauled off site once a month. Red bags that are tied off prior to the monthly pick-up are stored in individual labs until the day before the pick-up at which point they are brought to the medical waste storage area. In the Blood Alcohol area, tied off red-bags are stored in a fridge that runs between 2-4 degrees Celsius prior to disposal. Under the current practice, tied off red bags are routinely exceeding the 7 day storage time limit that applies to generators of more than 20 lbs of red bags/month who do not store biohazardous waste at, or below, 0 degrees Celsius. *Violation: Red bag waste stored >7 days at >0 degrees C (for generators of >20 lbs/month). 118280 (d)(1)(A)* **Corrective Action:** Revise medical waste (specifically, red bag) disposal procedures so that storage time limits are met. Submit evidence of correction to the San Diego County Hazardous Materials Division (HMD) within 30 days.
- 2.) Observation:** The audible component of the UST overflow alarm was not working (produced no sound) during the inspection. *Violation: All audible/visual alarms not functioning properly. 2632(c)(2)(B), 2636(f)(1)* **Corrective Action:** Fix the audible component of the overflow alarm and submit evidence of completion to the HMD within 30 days.

This is an annual certification that the Hazardous Materials Business Plan (inventory & site map, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.

COUNTY OF SAN DIEGO

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

PERMIT # 114261

DATE 1/23/2009

PAGE 2 OF 4

BUSINESS ADDRESS: 5255 Mount Etna Drive

ZIP CODE: 92117-6912

Remarks:

Non-UST Remarks

- An unknown canister filter of some type was observed attached to the drain lines of a sink in the CSI Photo Room. The canister was filled with a green liquid and sediment. Ms. Redemen thought the system may have once been part of the old photo-processing system that has since been removed. **Within 30 days, submit documentation to the HMD describing the canister/contents. If the materials in the canister are hazardous, proof of proper management/disposal should be included.**
- The site map component of the Hazardous Materials Business Plan (HMBP) needs to be revised so that it clearly identifies the location of reportable quantities of hazardous materials and wastes. The UST needs to be shown as an underground not above ground tank and should be marked as 4,000 gallons in capacity. It is recommended that a second page be added to the map so that the first page can be used as an overview of this and surrounding facilities (i.e. Evidence storage etc.) and the second page show a more comprehensive view of the crime lab. **Within 30 days please submit a revised site map and HMBP Certification Form to the HMD.**
- All sharps containers observed during the inspection were properly labeled with state mandated biohazard labeling and county-mandated generator information. Proper generator labeling of red bags was less consistent. The majority of unlabeled red bags were found to not yet be holding waste, and those that had waste were labeled during the inspection. Ensure that red bags, in addition to sharps containers, are properly labeled as soon as waste is placed in them.
- Hazardous waste labels were applied to the four collection containers holding mixed wastes in the hazardous waste storage area. Many of the waste items had satellite labels, however, once these items are placed in the 180-day collection area they need to meet general accumulation labeling requirements. Please ensure that all hazardous waste labels in the 180-day area note the physical state and hazards of the waste they are identifying.
- Information on satellite accumulation and other topic related to hazardous waste can be obtained on the State Department of Toxic Substances Control website at www.dtsc.ca.gov under Fact Sheets, Publications, & Forms.
- Evidence of correction for two violations cited during the 1/24/08 HMD inspection (V0225 and V0227) was observed onsite today. Those violations will be closed in HMD files.

UST Remarks

- The Tank Page of the UST Operating Permit Application and the conditionally approved UST Monitoring Plan were updated during the inspection. **Submit a current copy of both documents to the HMD within 30 days.**
- Ensure that the most recent UST financial responsibility documents and a hard copy of the UST Operating Permit are available in facility records.
- The site map and emergency response components of the Hazardous Materials Business Plan (HMBP) were updated today. A copy of the site map was submitted to the HMD.

PERMIT#: 114261DATE: 01 1 23 09PAGE: 4 OF 4BUSINESS ADDRESS: 5255 Mount Etna Drive ZIP: 92117-6912

VIOLATION REPORT: The items checked below refer to specific section numbers of Title 23 of the California Code of Regulations (CCR), Chapters 6.7, of the Health & Safety Code (HSC) & the County Code of Regulatory Ordinances (SDCC). The following code sections checked are in violation (V) with the Underground Storage Tank laws and regulations. All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use the Corrective Action Form to document your return to compliance. Your Specialist can provide these forms. Please call (619) 338-2222 or your Specialist if you have any questions.

Medical Waste Management Plan

Facility Information

Business

Name: SAN DIEGO SHERIFF'S CRIME LAB

Unified Program Facility

Permit #: 114261

Type of Business: FORENSIC LAB

Date: 02/23/09

Address: 5255 MOUNTAIN DRIVE SAN DIEGO

CA 92117-6912

Street No. Street Name City State Zip Code

Person Responsible for Implementing the Medical Waste Management Plan

Name: SDON TAPPER

Title: ASST. DIRECTOR OF FORENSIC SERVICES Phone: (858) 467-4607 x

Types of wastes generated

Sharps - needles, broken glass, blades.

Estimated monthly amount 50 lbs

Blood or body fluids - liquid blood elements or other regulated body fluids, or articles contaminated with blood or body fluids.

Estimated monthly amount 250 lbs

Laboratory wastes - specimens or microbiological cultures, stocks of infectious agents, live and attenuated vaccines, and culture media.

Estimated monthly amount ___ lbs

Isolation waste - waste contaminated with excretion, exudates, or secretions from humans or animals who are isolated due to highly communicable diseases.

Estimated monthly amount ___ lbs

Waste contaminated with fixatives or chemotherapeutic agents.

Estimated monthly amount ___ lbs

Surgical specimens - human or animal parts or tissues removed surgically or by autopsy.

Estimated monthly amount ___ lbs

Pathology waste - recognizable human anatomical parts.

Estimated monthly amount ___ lbs

Contaminated animals - animal carcasses, body parts, bedding materials.

Estimated monthly amount ___ lbs

Other (please specify): _____

Estimated monthly amount ___ lbs

Home Generated Sharps

Estimated monthly amount ___ lbs

Estimate of **TOTAL** monthly medical waste generated: 300 lbs

Method of treatment performed onsite (if applicable):

Steam Autoclaving

Other state approved alternative technology (please specify below):

Medical Waste Management Plan

Registered Medical Waste Hauler used to remove untreated medical waste (if applicable):

Name: WASTE MANAGEMENT HEALTHCARE SOLUTIONS, INC.

COMPLIANCE INSPECTION REPORT WRITTEN RESPONSE

Notice to Comply:

1. **Observation:** Currently, this facility has medical waste hauled off site once a month. Red bags that are tied off prior to the monthly pick-up are stored in individual labs until the day before the pick-up at which point they are brought to the medical waste storage area. In the Blood Alcohol area, tied off red bags are stored in a fridge that runs between 2-4 degrees Celsius prior to disposal. Under the current practice, tied off red bags are routinely exceeding the 7-day storage time limit that applies to generators of more than 20 lbs of red bags/month who do not store biohazardous waste at, or below, 0 degrees Celsius. *Violation: Red bag waste stored >7 days at >0 degrees C (for generators of >20 lbs/month). 118280 (d)(1)(A).* **Corrective Action:** Revise medical waste (specifically, red bag) disposal procedures so that storage time limits are met. Submit evidence of correction to the San Diego County Hazardous Materials Division (HMD) within 30 days.

Response: Beginning February 5, 2009, the lab went to a weekly pickup schedule for medical waste. The company, Waste Management Healthcare Solutions (760.489.5009), now picks up our waste every Thursday.

2. **Observation:** The audible component of the UST overfill alarm was not working (produced no sound) during the inspection. *Violation: All audible/visual alarms not functioning properly. 2632(c)(2)(B), 2636(f)(1).* **Corrective Action:** Fix the audible component of the overfill alarm and submit evidence of completion to the HMD within 30 days.

Response: The overfill alarm was replaced by James Romero from LeMesnager Engineering Inc. on February 19, 2009.

Remarks:

Non-UST Remarks

- An unknown canister filter of some type was observed attached to the drain lines of a sink in the CSI Photo Room. The canister was filled with a green liquid and sediment. Ms. Redeman thought the system may have once been part of the old photo-processing system that has since been removed. **Within 30 days, submit documentation to the HMD describing the canister/contents. If the materials in the canister are hazardous, proof of proper management/disposal should be included.**

Response: The canisters are called dilution traps and existed in the facility prior to the lab moving here in 1995. These types of devices are typically used to dilute and neutralize chemicals that may be found in laboratory or industrial waste, but the actual purpose for the traps as used by the previous tenants of this facility (hospital) is unknown. The lab does not use these traps for this purpose and has placed no hazardous materials into them.

- The site map component of the Hazardous Materials Business Plan (HMBP) needs to be revised so that it clearly identifies the location of reportable quantities of hazardous

COMPLIANCE INSPECTION REPORT WRITTEN RESPONSE

materials and wastes. The UST needs to be shown as an underground, not above ground, tank and should be marked as 4,000 gallons in capacity. It is recommended that a second page be added to the map so that the first page can be used as an overview of this and surrounding facilities (i.e., Evidence Storage) and the second page show a more comprehensive view of the crime lab. **Within 30 days please submit a revised site map and HMBP Certification Form to the HMD.**

Response: Three new site maps have been created and included in the updated Hazardous Materials Business Plan. These maps identify the location of reportable quantities of hazardous materials and wastes and also show the capacity of the tank (4,000 gallons) and indicate that it is an underground tank. One map is an overview of the facility, and the other two show a more comprehensive view of the crime lab.

- All sharps containers observed during the inspection were properly labeled with the state mandated biohazard labeling and county-mandated generator information. Proper generator labeling of red bags was less consistent. The majority of unlabeled red bags were found to not yet be holding waste, and those that had waste were labeled during the inspection. Ensure that red bags, in addition to sharps containers, are properly labeled as soon as waste is placed in them.

Response: Lab personnel have been instructed to label red bags as soon as waste is placed in them.

- Hazardous waste labels were applied to the four collection containers holding mixed wastes in the hazardous waste storage area. Many of the waste items had satellite labels; however, once these items are placed in the 180-day collection area they need to meet general accumulation labeling requirements. Please ensure that all hazardous waste labels in the 180-day area note the physical state and hazards of the waste they are identifying.

Response: Criminalist III Jeanne Redeman, or designee, will ensure that all hazardous waste labels in the 180-day area note the physical state and hazards of the waste they are identifying.

- Information on satellite accumulation and other topic related to hazardous waste can be obtained on the State Department of Toxic Substances Control website at www.dtsc.ca.gov under Fact Sheets, Publications, & Forms.
- Evidence of correction for two violations cited during the 1/24/08 HMD inspection (V0225 and V0227) was observed onsite today. Those violations will be closed in HMD files.

UST Remarks

- The Tank Page of the UST Operating Permit Application and the conditionally approved UST Monitoring Plan were updated during the inspection. **Submit a current copy of both documents to the HMD within 30 days.**

COMPLIANCE INSPECTION REPORT WRITTEN RESPONSE

Response: General Services is the custodian of these records.

- Ensure that the most recent UST financial responsibility documents and a hard copy of the UST Operating Permit are available in facility records.

Response: General Services is the custodian of these records.

- The site map and emergency response components of the Hazardous Materials Business Plan (HMBP) were updated today. A copy of the site map was submitted to the HMD.

Monitoring Cent w/working overfill alarm.

Appendix VI

(Copies of Monitoring System Certification form and UST Monitoring Plot Plan available at <http://www.waterboards.ca.gov>.)

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test data.

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; (check all that apply): System set-up Alarm history report

Monitoring System Certification

UST Monitoring Site Plan

Site Address: 5255 Mt Etna San Diego Ca.

Date map was drawn: 11/14/08

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank shruter spaces, sumps, dispenser parts, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

HAZARDOUS MATERIALS BUSINESS PLAN CERTIFICATION

The California Health & Safety Code (H&SC), Division 20, Chapter 6.95, Section 25505 provides for the following:

The San Diego County, Department of Environmental Health, Hazardous Materials Division (HMD), as the administering agency, requires a business that handles hazardous materials to submit the hazardous materials inventory, a list of emergency contacts, and a site plan, in lieu of a complete Hazardous Materials Business Plan (HMBP), only after the initial submittal of a complete HMBP. The business must certify that a complete HMBP has been prepared and is maintained at the site where the hazardous materials are stored. A complete HMBP includes the items to be submitted to the HMD and an Emergency Response Plan and Employee Training Plan, as established in H&SC Section 25504. The business must also annually certify that the HMBP is current and maintained on site. See Back for instructions and further clarification.

I. IDENTIFICATION

FACILITY ID#	37000114261
BUSINESS NAME (Same as FACILITY NAME or DBA - Doing Business As)	SAN DIEGO SHERIFF'S CRIME LABORATORY
BUSINESS SITE ADDRESS	5255 MOUNT ETNA DRIVE
CITY	SAN DIEGO
STATE	CA
ZIP CODE	92117-6912

II. CERTIFICATION STATEMENT

CARCINOGEN/REPRODUCTIVE TOXIN ANNUAL RENEWAL WITHOUT CHANGES: This is an annual renewal to certify that the list of carcinogens and/or reproductive toxins last provided is a current list as specified in the San Diego County Code of Regulatory Ordinances Section 68.1113. **LIST ATTACHED**

Check only one of the following boxes:

INITIAL CERTIFICATION: This is to certify (H&SC Section 25505(e)(1)) that a complete HMBP, which includes the hazardous materials inventory, a list of emergency contacts, a site plan, emergency response plan, and employee training plan, has been prepared and is maintained at the site where the hazardous materials are stored.

ANNUAL CERTIFICATION WITHOUT CHANGES: This is an annual certification (H&SC Section 25505(d)&(e)(2)) that the HMBP, which includes the hazardous materials inventory, a list of emergency contacts, a site plan, emergency response plan, and employee training plan, is current and includes all the information required in H&SC Section 25504, and 25509, and is maintained at the site where the hazardous materials are stored.

CERTIFICATION OF CHANGES/REVISIONS: This is to certify that the HMBP has been reviewed (H&SC Section 25505(c) & 25510) and all necessary changes/revisions have been made. The HMBP is current and is maintained at the site where the hazardous materials are stored. Attached are changes to the hazardous materials inventory and/or list of emergency contacts. For site map revisions, submit only the pages that have a change or revision and attach to this certification. This submittal satisfies annual certification requirements specified in H&SC Section 25505(d)&(e)(2).

As an Authorized Representative, I certify under the penalty of law, that I have personally examined and am familiar with the information submitted and believe the information is true, accurate, and complete. By checking any of the boxes above I also certify that: a) The information contained in the hazardous materials inventory most recently submitted to the CUPA or Administrative Agency is complete, accurate, and up to date; b) There has been no change in the quantity of hazardous materials reported in the most recently submitted inventory; and c) All hazardous materials subject to inventory requirements are listed on the most recently submitted inventory.

Specialist's Signature: (only required for new plans or for changes to site maps, chemical inventory and/or emergency contacts)

J. P. [Signature]

REMARKS: _____

ATTENTION: HAZARDOUS MATERIALS HANDLER

Chapter 6.95 of the California Health & Safety Code (H&SC) establishes minimum standards for Hazardous Materials Business Plans (HMBP). Each business shall prepare a HMBP if that business uses, handles, or stores a hazardous material/waste in quantities greater than or equal to the following:

- 55 gallons of a liquid.
- 500 pounds of a solid substance.
- 200 cubic feet of compressed gas.
- A toxic compressed gas (TLV \leq 10 ppm) in any amount.
- Extremely hazardous substances in quantities equal to or greater than the Threshold Planning Quantities.

A complete HMBP consists of the following elements as established in H&SC Section 25504:

- Hazardous Materials Inventory
- Site Plan
- List of Emergency Contacts
- Emergency Response Plan
- Employee Training Plan

The San Diego County, Department of Environmental Health, Hazardous Materials Division (HMD), as the administering agency and with the concurrence of all the local fire jurisdictions, requires a business that handles hazardous materials to submit the hazardous materials inventory, a list of emergency contacts, and a site plan, in lieu of a complete HMBP, only after the initial submittal of a complete HMBP.

The business must certify that a complete HMBP has been prepared and is maintained at the site where the hazardous materials are stored and must also annually certify that the HMBP is current and maintained on site.

Substantial changes as listed below must be submitted to the HMD within 30 days of the change along with a certification that the HMBP is current and maintained on site:

- A 100% or greater increase or decrease in the quantity of any hazardous material on the inventory
- Addition or deletion of a hazardous material to the inventory
- Changes in the storage, location, or use of hazardous materials
- Any change in business name, ownership, or address
- Any change in Emergency Coordinator/Contact Information

Instructions for Completing the Hazardous Materials Business Plan Certification

Note: The numbering of the instructions follows the data element numbers that are on Statewide reporting forms. These data element numbers are used for electronic submission and are the same as the numbering used in 27 CCR, Appendix C.

1. FACILITY ID NUMBER - Enter the 6 character Permit Number from your Permit. If you do not have a Permit, leave this blank.
3. BUSINESS NAME - Enter the full legal name of the business. This is the same as the terms "Facility Name" or "DBA" - Doing Business As.
103. BUSINESS SITE ADDRESS - Enter the street address where the facility is located. No post office box numbers are allowed.
104. CITY - Enter the city or unincorporated area in which business site is located.
105. ZIP CODE - Enter the zip code of business site. The extra 4-digit zip may also be added.

CARCINOGEN/REPRODUCTIVE TOXIN ANNUAL RENEWAL WITHOUT CHANGES - Any business which is required to submit a HMBP and handles a material which is a carcinogen or reproductive toxin, is required to submit a list of each such material handled during the previous year to the Director of the Department of Environmental Health. The list must include all carcinogens and reproductive toxins handled in quantities less than 55 gallons or 500 pounds. The list of such materials handled shall be renewed each year. Check this box to certify that the information previously submitted is still correct and no changes, additions or deletions are necessary. See http://www.sdcounty.ca.gov/deh/hmd/forms_hmd.html and review HM-9243 (Disclosure of Hazardous Materials Information Bulletin) to find out if you are required to submit this list.

INITIAL CERTIFICATION: Check this box if you are submitting a new HMBP.

ANNUAL CERTIFICATION WITHOUT CHANGES: Check this box if you are submitting an annual certification on an existing plan.

CERTIFICATION OF CHANGES/REVISIONS: Check this box if you are submitting changes to the hazardous materials inventory, list of emergency contacts, or the site plan. All pages should include the new submittal date. For multi-page site maps, include all pages with new submittal date.

Annual Carcinogen and Reproductive Toxin Reporting List

Business Name: San Diego Sheriff's Crime Laboratory

Business Address: 5255 Mount Etna Drive, San Diego, CA 92117-6912

Business Owner or Operator: San Diego Sheriff's Department

Please complete the following by entering the chemical name in the chemical name column and then place a check ✓ in the quantity column that most closely estimates the amount on hand. If measured by volume, check the appropriate gallon column(s). If measured by weight, check the appropriate pound column(s). If the chemical is a trade secret, you should check the trade secret box. For example, if you have one pint of benzene you would write benzene in the chemical name column and place a check ✓ in the <1-gallon column.

(PLEASE NOTE: the symbol < means less than).

(Instructions on reverse side)

For State Use Only

CERTIFICATION OF FINANCIAL RESPONSIBILITY FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in California Code of Regulations (CCR), Title 23, Division 3, Chapter 18, Section 2807.

500,000 dollars per occurrence

1 million dollars annual aggregate

or

AND

or

1 million dollars per occurrence

2 million dollars annual aggregate

B. County of San Diego hereby certifies that it is in compliance with the requirements of Section 2807,
(Name of Tank Owner or Operator)

California Code of Regulations, Title 23, Division 3, Chapter 18, Article 3, Section 2807.

The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Comp
Government guarantee	1600 Pacific Hwy San Diego, CA 92101	N/A for this Mechanism	\$500K per occurrence \$1Mil annual aggregate	Annual	Yes	Yes
Chief Financial Officer Letter	1600 Pacific Hwy San Diego, CA 92101	N/A for this mechanism	\$500K per occurrence \$1Mil annual aggregate	Annual	Yes	Yes

Note:

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance and shall maintain compliance with all conditions for participation in the Fund. See instructions.

COUNTY OF SAN DIEGO

INTER-DEPARTMENTAL CORRESPONDENCE

January 6, 2009

TO: Gary W. Erbeck, Director
Department of Environmental Health

FROM: Donald F. Steuer
Chief Financial Officer

MUNICIPAL FINANCIAL TEST DEMONSTRATING FINANCIAL RESPONSIBILITY FOR UNDERGROUND STORAGE TANKS BASED ON THE COMPREHENSIVE ANNUAL FINANCIAL REPORT FOR THE FISCAL YEAR ENDED JUNE 30, 2008

Pursuant to Federal Regulation 40 CFR 280.105 (c), this letter is in support of the use of the local governmental financial test to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by sudden accidental releases and/or non-sudden accidental releases in the amount of at least \$500,000 per occurrence and \$1 million annual aggregate arising from operating underground storage tanks (see worksheet for Municipal Financial Test, Attachment A).

A listing of underground storage tank facilities that are assured by this financial test is included on Attachment B.

The County of San Diego has not received an adverse opinion, or a disclaimer of opinion, from an independent auditor on its financial statements for the latest completed fiscal year.

If you have any questions, please contact Shirley Carrero, Manager of Central Projects and Accounting Services at (619) 531-5050.

COUNTY OF SAN DIEGO

INTER-DEPARTMENTAL CORRESPONDENCE

January 6, 2009

TO: Gary W. Erbeck, Director
Department of Environmental Health

FROM: Donald F. Steuer
Chief Financial Officer

CHIEF FINANCIAL OFFICER LETTER REGARDING FINANCIAL RESPONSIBILITY FOR UNDERGROUND STORAGE TANKS (UST) BASED ON THE COMPREHENSIVE ANNUAL FINANCIAL REPORT FOR THE FISCAL YEAR ENDED JUNE 30, 2008

The attached annual Chief Financial Officer letter demonstrating the County's financial responsibility for maintaining Underground Storage Tanks (UST) is submitted to the Department of Environmental Health pursuant to Title 40, Code of Federal Regulations (CFR), Part 280, Subpart H, Section 280.93.

The aforementioned federal regulations requires all owners and operators to show, through an approved method, their ability to pay for potential cleanup and third party damages resulting from accidental releases from their USTs. To demonstrate financial responsibility, the County of San Diego uses the approved local government financial test, pursuant to Title 40, CFR Section 280.105. In this regard, this report is submitted to your office in your capacity as the regulator in this area for the County of San Diego.

As shown in the attached report, the County currently owns and operates 30 underground tanks that are used to store gasoline and diesel fuel at various County facilities. Financial responsibility means that money will be available to meet potential cleanup costs or third party lawsuits resulting from leaking USTs.

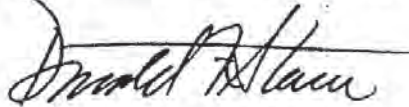

The County successfully passed the test with a score of 2.373 (it must be greater than zero). Assumptions in the calculations, for which we received authorization from the Environmental Protection Agency, may include netting advance refundings of County debt and excluding certain Federal and State revenues with no matching local fund requirements.

As evidence that this procedure has been satisfactorily completed, copies of this letter are provided to the Department of General Services, Fleet Management, to post at all of the UST sites.

Chief Financial Officer Letter Regarding Financial
Responsibility for Underground Storage Tanks (UST)
Based on the Comprehensive Annual Financial Report
for the Fiscal Year Ended June 30, 2008

Page Two
January 6, 2009

If you have any questions, please contact Shirley Carrero, Manager of Central Projects and
Accounting Services at (619) 531-5050.

**COUNTY OF SAN DIEGO
WORKSHEET FOR MUNICIPAL FINANCIAL TEST
Year Ended June 30, 2008
(in Thousands *)**

Part I: Basic Information

1. Total Revenues		
a. Revenues	4,411,934	*
b. Subtract interfund transfers	597,545	*
c. Total Revenues	3,814,389	*
2. Total Expenditures		
a. Expenditures	4,395,550	*
b. Subtract Interfund Transfers	597,996	*
c. Total Expenditures	3,797,554	*
3. Local Revenues		
a. Total Revenues (from 1c)	3,814,389	*
b. Subtract intergovernmental transfers	2,165,015	*
c. Local Revenues	1,649,374	*
4. Debt Service		
a. Interest and fiscal charges	69,471	*
b. Add debt retirement	207,713	*
c. Total Debt Service	277,184	*
5. Total Funds	1,586,176	*
6. Population	3,146	*

Part II: Application of Test

7. Total Revenues to Population		
a. Total Revenues (from 1c)	3,814,389	*
b. Population (from 6)	3,146	*
c. Divide 7a by 7b	1,212.457	
d. Subtract 417	795.457	
e. Divide by 5,212	0.153	
f. Multiply by 4.095	<u>0.625</u>	
8. Total Expenses to Population		
a. Total Expenses (from 2c)	3,797,554	*
b. Population (from 6)	3,146	*
c. Divide 8a by 8b	1,207.106	
d. Subtract 524	683.106	
e. Divide by 5,401	0.126	
f. Multiply by 4.095	<u>0.518</u>	
9. Local Revenues to Total Revenues		
a. Local Revenues (from 3c)	1,649,374	*
b. Total Revenues (from 1c)	3,814,389	*
c. Divide 9a by 9b	0.432	
d. Subtract .695	(0.263)	
e. Divide by .205	(1.281)	
f. Multiply by 2.840	<u>(3.638)</u>	
10. Debt Service to Population		
a. Debt Service (from 4c)	277,184	*
b. Population (from 6)	3,146	*
c. Divide 10a by 10b	88.107	
d. Subtract 51	37.107	
e. Divide by 1,038	0.036	
f. Multiply by -1.866	<u>(0.067)</u>	

11. Debt Service to Total Revenues		
a. Debt Service (from 4c)	277,184	*
b. Total Revenues (from 1c)	3,814,389	*
c. Divide 11a by 11b	0.073	
d. Subtract .068	0.005	
e. Divide by .259	0.018	
f. Multiply by -3.533	<u>(0.064)</u>	
12. Total Revenues to Total Expenses		
a. Total Revenues (from 1c)	3,814,389	*
b. Total Expenses (from 2c)	3,797,554	*
c. Divide 12a by 12b	1.004	
d. Subtract .910	0.094	
e. Divide by .899	0.105	
f. Multiply by 3.458	<u>0.363</u>	
13. Funds Balance to Total Revenues		
a. Total Funds (from 5)	1,586,176	*
b. Total Revenues (from 1c)	3,814,389	*
c. Divide 13a by 13b	0.416	
d. Subtract .891	(0.475)	
e. Divide by 9.156	(0.052)	
f. Multiply by 3.270	<u>(0.170)</u>	
14. Funds Balance to Total Expenses		
a. Total funds (from 5)	1,586,176	*
b. Total Expenses (from 2c)	3,797,554	*
c. Divide 14a by 14b	0.418	
d. Subtract .866	(0.448)	
e. Divide by 6.409	(0.070)	
f. Multiply by 3.270	<u>(0.229)</u>	
15. Total Funds to Population		
a. Total Funds (from 5)	1,586,176	*
b. Population (from 6)	3,146	*
c. Divide 15a by 15b	504.188	
d. Subtract 270	234.188	
e. Divide by 4,548	0.051	
f. Multiply by 1.866	<u>0.096</u>	
16. Add 7f + 8f + 9f + 10f + 11f + 12f + 13f + 14f + 15f + 4.937		
	2.373	

I hereby certify that the financial index shown on line 16 of the worksheet is greater than zero and that the wording of this letter is identical to the wording specified in 40 CFR Part 280.105(c) as such regulations were constituted on the date shown immediately below.

(Copies of Monitoring System Certification form and UST Monitoring Plot Plan available at <http://www.waterboards.ca.gov>.)

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

A. General Information

Facility Name: Crime Lab

Bldg. No.: _____

Site Address: 5255 Mi. Etna

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; (check all that apply): System set-up Alarm history report

Technician Name (print): James Romero

Signature: 

Certification No.: V/R A29899 Incon Cert#2053493760

License No.: 203029

Testing Company Name: Lemesnager Engineering

No.: (819) 300-8094

Testing Company Address: 8211 Santaluz Village Green N. San Diego Ca, 92127

Date of Testing/Service: 1/23/09

UST Monitoring Site Plan

Site Address: 5255 Mt Etna San Diego Ca.

Date map was drawn: 11/14/08

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

UNDERGROUND STORAGE TANK
OPERATING PERMIT APPLICATION - TANK INFORMATION

(One form per UST)

TYPE OF ACTION (Check one item only. For an UST permanent closure or removal, complete only this section and Sections I, II, III, IV, and IX below)
1. NEW PERMIT
2. TEMPORARY UST CLOSURE
3. RENEWAL PERMIT
4. CHANGE OF INFORMATION
5. UST PERMANENT CLOSURE ON SITE
6. UST REMOVAL
DATE UST PERMANENTLY CLOSED:
DATE EXISTING UST DISCOVERED:

I. FACILITY INFORMATION

BUSINESS NAME (Same as FACILITY NAME or DBA-Doing Business As)
County of San Diego, Sheriff Crime Lab
FACILITY ID # 37-000-114261
BUSINESS SITE ADDRESS
5255 Mt. Etna Drive
CITY San Diego
CA
ZIP CODE 92117-

II. TANK DESCRIPTION

TANK ID # 001
TANK MANUFACTURER Modern Welding
TANK CONFIGURATION: THIS TANK IS
1. A STAND-ALONE TANK
2. ONE IN A COMPARTMENTED UNIT.
DATE UST SYSTEM INSTALLED
TANK CAPACITY IN GALLONS 4,000
NUMBER OF COMPARTMENTS IN THE UNIT 1

III. TANK USE AND CONTENTS

TANK USE
1a. MOTOR VEHICLE FUELING
3. CHEMICAL PRODUCT STORAGE
6. OTHER GENERATOR FUEL
1b. MARINA FUELING
4. HAZARDOUS WASTE (Includes Used Oil)
95. UNKNOWN
1c. AVIATION FUELING
5. EMERGENCY GENERATOR FUEL [HSC #25281.5(c)]
99. OTHER (Specify):
CONTENTS
PETROLEUM:
1a. REGULAR UNLEADED
3. DIESEL
8. PETROLEUM BLEND FUEL
1b. MIDGRADE UNLEADED
5. JET FUEL
9. OTHER PETROLEUM (Specify):
1c. PREMIUM UNLEADED
6. AVIATION GAS
NON-PETROLEUM:
7. USED OIL
10. ETHANOL
11. OTHER NON-PETROLEUM (Specify):

IV. TANK CONSTRUCTION

TYPE OF TANK
1. SINGLE WALL
2. DOUBLE WALL
95. UNKNOWN
PRIMARY CONTAINMENT
1. STEEL
3. FIBERGLASS
95. UNKNOWN
6. INTERNAL BLADDER
7. STEEL + INTERNAL LINING
95. UNKNOWN
99. OTHER (Specify): steelclad w/rip
SECONDARY CONTAINMENT
1. STEEL
3. FIBERGLASS
95. UNKNOWN
6. EXTERIOR MEMBRANE LINER
7. JACKETED
90. NONE
99. OTHER (Specify):
OVERFILL PREVENTION
1. AUDIBLE & VISUAL ALARMS
2. BALL FLOAT
3. FILL TUBE SHUT-OFF VALVE
4. TANK MEETS REQUIREMENTS FOR EXEMPTION FROM OVERFILL PREVENTION EQUIPMENT

V. PRODUCT / WASTE PIPING CONSTRUCTION

PIPING CONSTRUCTION
1. SINGLE-WALLED
2. DOUBLE-WALLED
99. OTHER
SYSTEM TYPE
1. PRESSURE
2. GRAVITY
3. CONVENTIONAL SUCTION
4. SAFE SUCTION [23 CCR #2036(e)(3)]
PRIMARY CONTAINMENT
1. STEEL
4. FIBERGLASS
8. FLEXIBLE
10. RIGID PLASTIC
90. NONE
95. UNKNOWN
99. OTHER (Specify):
SECONDARY CONTAINMENT
1. STEEL
4. FIBERGLASS
8. FLEXIBLE
10. RIGID PLASTIC
90. NONE
95. UNKNOWN
99. OTHER (Specify):
PIPING/TURBINE CONTAINMENT SUMP TYPE
1. SINGLE WALL
2. DOUBLE WALL
90. NONE

VI. VENT, VAPOR RECOVERY (VR) AND RISER / FILL PIPE PIPING CONSTRUCTION

VENT PRIMARY CONTAINMENT
1. STEEL
4. FIBERGLASS
10. RIGID PLASTIC
90. NONE
99. OTHER (Specify)
VENT SECONDARY CONTAINMENT
1. STEEL
4. FIBERGLASS
10. RIGID PLASTIC
90. NONE
99. OTHER (Specify)
VR PRIMARY CONTAINMENT
1. STEEL
4. FIBERGLASS
10. RIGID PLASTIC
90. NONE
99. OTHER (Specify)
VR SECONDARY CONTAINMENT
1. STEEL
4. FIBERGLASS
10. RIGID PLASTIC
90. NONE
99. OTHER (Specify)
VENT PIPING TRANSITION SUMP TYPE
1. SINGLE WALL
2. DOUBLE WALL
90. NONE
RISER PRIMARY CONTAINMENT
1. STEEL
4. FIBERGLASS
10. RIGID PLASTIC
90. NONE
99. OTHER (Specify)
RISER SECONDARY CONTAINMENT
1. STEEL
4. FIBERGLASS
10. RIGID PLASTIC
90. NONE
99. OTHER (Specify)
FILL COMPONENTS INSTALLED
1. SPILL BUCKET
3. STRIKER PLATE/BOTTOM PROTECTOR
4. CONTAINMENT SUMP

VII. UNDER DISPENSER CONTAINMENT (UDC)

CONSTRUCTION TYPE
1. SINGLE WALL
2. DOUBLE WALL
3. NO DISPENSERS
90. NONE
CONSTRUCTION MATERIAL
1. STEEL
4. FIBERGLASS
10. RIGID PLASTIC
99. OTHER (Specify)

VIII. CORROSION PROTECTION

STEEL COMPONENT PROTECTION
2. SACRIFICIAL ANODE(S)
4. IMPRESSED CURRENT
6. ISOLATION

IX. APPLICANT SIGNATURE

CERTIFICATION: I certify that this UST system is compatible with the hazardous substance stored and that the information provided herein is true, accurate, and in full compliance with legal requirements.
APPLICANT SIGNATURE
DATE 1/23/2009
APPLICANT NAME (print) Kenneth M. Johnson
APPLICANT TITLE Senior Plumber / Dso

UST Operating Permit Application – Tank Information Instructions (Formerly SWRCB Permit Application Form B)

Complete a separate form for each UST for all new permits, permit changes, and any UST system information changes. This form must be submitted within 30 days of permit or UST system information changes, unless your local agency requires approval prior to making changes. For tanks that are part of a compartmentalized unit, each compartment is considered a separate tank and requires completion of a separate Tank Information form. For a UST permanent closure or removal, complete only TYPE OF ACTION and Sections I, II, III, IV, and IX. (Note: Numbering of these instructions matches the data element numbers on the form.)

430. TYPE OF ACTION – Check the appropriate box to indicate why this form is being submitted.
- 430a. DATE UST PERMANENTLY CLOSED – For reporting closure only: enter the date the UST was removed or closed on site.
- 430b. DATE EXISTING UST DISCOVERED – Enter the date this UST was discovered. Leave blank if installation date is known.
1. FACILITY ID NUMBER – This space is for agency use only.
3. BUSINESS NAME – Enter the complete facility name.
103. BUSINESS SITE ADDRESS – Enter the street address of the facility, including building number, if applicable. This address must be the physical location of the facility. Post office box numbers are not acceptable.
104. CITY – Enter the city or unincorporated area in which the facility is located.
105. ZIP CODE – Enter the zip code of business site. The zip + 4 may also be added.
432. TANK ID # – Applicant may enter the owner's tank identification number or leave this space blank. The Local Agency will assign the State tank identification number as the unique identifier for the tank.
433. TANK MANUFACTURER – Enter the name of the company that manufactured the tank.
434. TANK CONFIGURATION. Check the appropriate box to indicate if the tank is a stand-alone tank or one in a compartmented unit. A separate UST Operating Permit Application – Tank Information form must be submitted for each compartment.
435. DATE UST SYSTEM INSTALLED – Enter the date the local agency signed-off on installation of the UST system. This is the date of initial tank system installation, and does not include upgrades or retrofits which may have been performed later. If this is for a new installation, leave blank.
436. TANK CAPACITY IN GALLONS: Enter the tank capacity. For compartmentalized tanks, enter data for the compartment covered by this tank form only.
437. NUMBER OF COMPARTMENTS IN THE UNIT: If the tank is a compartment, enter the total number of compartments in the unit.
439. TANK USE – Check the type of tank usage.
- 439a. If you checked "Other" specify the type of tank usage in the space provided.
440. TANK CONTENTS – Check the specific petroleum or non-petroleum substance stored.
- 440a. If you checked "Other Petroleum" specify the common name of the substance in the space provided [i.e., the name used in the facility's Hazardous Materials Business Plan (HMBP) Inventory].
- 440b. If you checked "Other" under Non-petroleum, specify the common name of substance in the space provided (i.e., the name used in the HMBP inventory).
443. TYPE OF TANK – Check the box that identifies the type of tank.
444. TANK PRIMARY CONTAINMENT – Check the construction material of the primary containment (i.e., inner tank wall nearest the hazardous substance stored). If the tank material is not listed, check "Other" and specify the material in the space provided.
- 444a. If you checked "Other" specify the type of primary containment in the space provided.
445. TANK SECONDARY CONTAINMENT – Check the construction material of the secondary containment that provides containment external to, and separate from, the primary containment described above. If the tank is a single-wall tank, check "None." If the material is not listed, check "Other" and specify the material in the space provided (e.g., HDPE).
- 445a. If you checked "Other" specify the type of secondary containment in the space provided.
452. OVERFILL PREVENTION – Check the box(es) to describe the type(s) of overfill protection equipment installed.
458. PIPING SYSTEM TYPE – Check the type of product/waste piping installed in this tank system. "Safe suction" refers to piping systems meeting all requirements of 23 CCR §2836(a)(3) (also known as "European Suction" systems) (i.e., sloped suction piping systems with no valves or pumps below grade and only one check valve, located below and as close as practical to the suction pump). Title 23, California Code of Regulations is available online at www.calregs.com.
460. PIPING CONSTRUCTION – Indicate if the piping is single-walled or double-walled, or "other".
464. PIPING PRIMARY CONTAINMENT – Check the material(s) used to construct the primary (i.e., inner) underground product/waste piping.
- 464a. If you checked "Other" specify the type of primary containment in the space provided.
- 464b. PIPING SECONDARY CONTAINMENT – Check the material(s) used to construct the secondary containment system(s) (i.e., secondary piping, trench) provided for the product/waste piping. For single-wall piping systems, check "None."
- 464c. If you checked "Other" specify the type of secondary containment in the space provided.
- 464d. PIPING/TURBINE CONTAINMENT SUMP TYPE – Indicate the type of piping/turbine containment sump(s). Check "None" if not present.
- 464e-f1. VENT PRIMARY CONTAINMENT – Check the material(s) used to construct the primary (i.e., inner) vent piping. (Note: Address venting of the tank primary containment only.) Specify Other type of containment in the space provided.
- 464f-f1. VENT SECONDARY CONTAINMENT – Check the material(s) used to construct the secondary containment system(s) (e.g., secondary piping,) provided for the vent piping. For single-wall piping systems, check "None." (Note: Address venting of the tank primary containment only.) Specify Other type of containment in the space provided.
- 464g-g1. VR PRIMARY CONTAINMENT – Check the material(s) used to construct the primary (i.e., inner) vapor recovery piping. For tanks without vapor recovery piping (e.g., Diesel tanks), check "None." Specify Other type of containment in the space provided.
- 464h-h1. VR SECONDARY CONTAINMENT – Check the material(s) used to construct the secondary containment system(s) (e.g., secondary piping) provided for the vapor recovery piping. For single-wall piping systems, check "None." Specify Other type of containment in the space provided.
- 464i. VENT PIPING TRANSITION SUMP TYPE – Indicate type of transition sump(s). Check "None" if not present.
- 464j-j1. RISER PRIMARY CONTAINMENT – Check the material(s) used to construct the primary (i.e., inner) piping for all risers (not drop tubes) other than annular space risers (i.e., risers for filling or gauging of the primary tank). Specify Other type of containment in the space provided.
- 464k-k1. RISER SECONDARY CONTAINMENT – Check the material(s) used to construct secondary containment system(s) (i.e., secondary piping, sumps) provided for the riser piping. For risers without secondary containment, check "None." Specify Other type of containment in the space provided.
- 451a-c. FILL COMPONENTS INSTALLED – Check the appropriate boxes to show that spill containment, tank bottom protection, and fill containment sumps (if applicable) are installed.
- 469a. UDC CONSTRUCTION TYPE – Check the box to describe the type of dispenser containment system(s) (i.e., dispenser sumps or pans). If the system has no dispensers (e.g., standby generator tank system), check "No Dispensers." If the system has a dispenser, but no UDC, check "None."
- 469b. UDC CONSTRUCTION MATERIAL – Check the box to describe the materials used to construct the UDC.
- 469c. If you checked "Other" specify the construction material in the space provided.
448. STEEL COMPONENT PROTECTION – All systems contain some steel components. Check the appropriate box(es) to describe all corrosion protection methods used. "Isolation" means electrical isolation from soil, backfill, and groundwater. Examples include fiberglass cladding, non-metallic secondary containment systems which isolate steel components from the sub-surface environment, and insulating bushings.
- APPLICANT SIGNATURE – The same person who signs the UST Operating Permit Application – Facility Information Form shall sign in the space provided. This signature certifies that the signer believes that all information submitted is true and accurate, and that the UST system is compatible with the hazardous substance stored.
470. DATE – Enter the date the form was signed.
471. APPLICANT NAME – Print or type the name of the person signing the form.
472. APPLICANT TITLE – Enter the title of the person signing the form.

MONITORING PLAN (Page 1 of 2)**

TYPE OF ACTION <input checked="" type="checkbox"/> 1. NEW PLAN <input type="checkbox"/> 2. CHANGE OF INFORMATION		490-1
PLAN TYPE <input type="checkbox"/> 1. MONITORING IS IDENTICAL FOR ALL USTs AT THIS FACILITY. (Check one item only) <input checked="" type="checkbox"/> 2. THIS PLAN COVERS ONLY THE FOLLOWING UST SYSTEM(S)(specify):		490-2
I. FACILITY INFORMATION		
BUSINESS NAME (Same as FACILITY NAME or DBA-Doing Business As) County of San Diego Sheriff Crime Lab	FACILITY ID #	3 7 0 0 0 1 1 4 2 6 1
BUSINESS SITE ADDRESS 5255 Mt. ETNA	CITY San Diego	CA ZIP CODE 92117-
II. EQUIPMENT TESTING AND PREVENTIVE MAINTENANCE		
Testing, preventive maintenance, and calibration of monitoring equipment (e.g., sensors, probes, line leak detectors, etc.) must be performed at the frequency specified by the equipment manufacturers' instructions, or annually, whichever is more frequent, and that such work must be performed by qualified personnel. (23 CCR §2632, 2634, 2638, 2641)		
MONITORING EQUIPMENT IS SERVICED <input checked="" type="checkbox"/> 1. ANNUALLY <input type="checkbox"/> 99. OTHER (Specify):		490-3a 490-3b
III. MONITORING LOCATIONS		
<input checked="" type="checkbox"/> 1. NEW SITE PLOT PLAN/MAP SUBMITTED WITH THIS PLAN. <input type="checkbox"/> 2. SITE PLOT PLAN/MAP PREVIOUSLY SUBMITTED. (23 CCR §2632, 2634)		490-4
IV. TANK MONITORING IS PERFORMED USING THE FOLLOWING METHOD(S):		
<input checked="" type="checkbox"/> 1. CONTINUOUS ELECTRONIC TANK MONITORING OF ANNULAR (INTERSTITIAL) SPACE(S) OR SECONDARY CONTAINMENT VAULT(S) WITH AUDIBLE AND VISUAL ALARMS (23 CCR §2632, 2634)		490-5
SECONDARY CONTAINMENT IS: <input checked="" type="checkbox"/> a. DRY <input type="checkbox"/> b. LIQUID FILLED <input type="checkbox"/> c. PRESSURIZED <input type="checkbox"/> d. UNDER VACUUM		490-6
PANEL MANUFACTURER: Veeder Root	MODEL #: TLS-300	490-7 490-8
LEAK SENSOR MANUFACTURER: Veeder Root	MODEL #(S): 794380-420	490-9 490-10
<input type="checkbox"/> 2. AUTOMATIC TANK GAUGING (ATG) SYSTEM USED TO MONITOR SINGLE WALL TANK(S) (23 CCR §2643)		490-11
PANEL MANUFACTURER:	MODEL #:	490-12 490-13
IN-TANK PROBE MANUFACTURER:	MODEL #(S):	490-14 490-15
LEAK TEST FREQUENCY: <input type="checkbox"/> a. CONTINUOUS <input type="checkbox"/> b. DAILY/NIGHTLY <input type="checkbox"/> c. WEEKLY		490-16
	<input type="checkbox"/> d. MONTHLY <input type="checkbox"/> e. OTHER (Specify):	490-17
PROGRAMMED TESTS: <input type="checkbox"/> a. 0.1 g.p.h. <input type="checkbox"/> b. 0.2 g.p.h. <input type="checkbox"/> c. OTHER (Specify):		490-18 490-19
<input type="checkbox"/> 3. MONTHLY STATISTICAL INVENTORY RECONCILIATION (23 CCR §2646.1)		490-20
<input type="checkbox"/> 4. WEEKLY MANUAL TANK GAUGING (MTG) (23 CCR §2645); TESTING PERIOD: <input type="checkbox"/> a. 36 HOURS <input type="checkbox"/> b. 60 HOURS		490-21 490-22
<input type="checkbox"/> 5. TANK INTEGRITY TESTING (23 CCR §2643.1); TEST FREQUENCY: <input type="checkbox"/> a. ANNUALLY <input type="checkbox"/> b. BIENNIALLY <input type="checkbox"/> c. OTHER (Specify):		490-23 490-24, 490-25
<input type="checkbox"/> 99. OTHER (Specify):		490-26, 490-27
V. PIPE MONITORING IS PERFORMED USING THE FOLLOWING METHOD(S) (Check all that apply)		
<input checked="" type="checkbox"/> 1. CONTINUOUS MONITORING OF PIPE/ PIPING SUMP(S) AND OTHER SECONDARY CONTAINMENT WITH AUDIBLE AND VISUAL ALARMS (23 CCR §2636)		490-28
SECONDARY CONTAINMENT IS: <input checked="" type="checkbox"/> a. DRY <input type="checkbox"/> b. LIQUID FILLED <input type="checkbox"/> c. PRESSURIZED <input type="checkbox"/> d. UNDER VACUUM		490-29
PANEL MANUFACTURER: Veeder Root	MODEL #: TLS-300	490-30 490-31
LEAK SENSOR MANUFACTURER: Veeder Root	MODEL #(S): 794390-208	490-32 490-33
PIPING LEAK ALARM TRIGGERS AUTOMATIC PUMP (i.e., TURBINE) SHUTDOWN. <input type="checkbox"/> a. YES <input type="checkbox"/> b. NO		490-34
FAILURE/DISCONNECTION OF THE MONITORING SYSTEM TRIGGERS AUTOMATIC PUMP SHUTDOWN. <input type="checkbox"/> a. YES <input type="checkbox"/> b. NO		490-35
<input type="checkbox"/> 2. MECHANICAL LINE LEAK DETECTOR (MLLD) THAT ROUTINELY PERFORMS 3.0 g.p.h. LEAK TESTS AND RESTRICTS OR SHUTS OFF PRODUCT FLOW WHEN A LEAK IS DETECTED (23 CCR §2636)		490-36
MLLD MANUFACTURER(S):	MODEL #(S):	490-37 490-38
<input type="checkbox"/> 3. ELECTRONIC LINE LEAK DETECTOR (ELLD) THAT ROUTINELY PERFORMS 3.0 g.p.h. LEAK TESTS (23 CCR §2636)		490-39
ELLD MANUFACTURER(S):	MODEL #(S):	490-40 490-41
PROGRAMMED IN LINE LEAK TEST: <input type="checkbox"/> 1. MINIMUM MONTHLY 0.2 g.p.h. <input type="checkbox"/> 2. MINIMUM ANNUAL 0.1 g.p.h.		490-42
ELLD DETECTION OF A PIPING LEAK TRIGGERS AUTOMATIC PUMP (i.e., TURBINE) SHUTDOWN. <input type="checkbox"/> a. YES <input type="checkbox"/> b. NO		490-43
ELLD FAILURE/DISCONNECTION TRIGGERS AUTOMATIC PUMP (i.e., TURBINE) SHUTDOWN. <input type="checkbox"/> a. YES <input type="checkbox"/> b. NO		490-44
<input type="checkbox"/> 4. PIPE INTEGRITY TESTING: TEST FREQUENCY <input type="checkbox"/> a. ANNUALLY <input type="checkbox"/> b. EVERY 3 YEARS <input type="checkbox"/> c. OTHER (Specify):		490-46, 490-47
<input checked="" type="checkbox"/> 5. VISUAL PIPE MONITORING: FREQUENCY <input type="checkbox"/> a. DAILY <input type="checkbox"/> b. WEEKLY <input checked="" type="checkbox"/> c. MIN. MONTHLY & EACH TIME SYSTEM OPERATED*		490-48, 490-49
* Allowed for monitoring of unburied emergency generator fuel piping only per HSC §25281.5(b)(3)		
<input type="checkbox"/> 6. SUCTION PIPING MEETS EXEMPTION CRITERIA [23 CCR §2636(a)(3)]		490-50
<input type="checkbox"/> 7. NO REGULATED PIPING PER HEALTH AND SAFETY CODE, DIVISION 20, CHAPTER 6.7 IS CONNECTED TO THE TANK SYSTEM		490-51
<input type="checkbox"/> 99. OTHER (Specify):		490-52, 490-53

UST Monitoring Plan – Page 1 Instructions

Complete a separate UST Monitoring Plan for each UST monitoring system at the facility. This Monitoring Plan must be kept at the UST location at all times. The elements of this Monitoring Plan constitute conditions of the UST Operating Permit. This form must be submitted with your initial UST Operating Permit Application and within 30 days of changes in the information it contains. Please note that you are required to obtain approval prior to installing or modifying monitoring equipment. (Note: Numbering of these instructions follows the data element numbers on the form.)

- 490-1. TYPE OF ACTION – Check the appropriate box to indicate why this plan is being submitted.
- 490-2. PLAN TYPE – Check the appropriate box to indicate whether this plan covers all, or merely some, of the USTs at the facility. If the plan covers only some of the tanks, identify those tanks in the space provided (e.g., by using the Tank ID #(s) in Item 432 of the UST Operating Permit Application – Tank Information Form(s)).
1. FACILITY ID NUMBER – This space is for agency use only.
3. BUSINESS NAME – Enter the complete Facility Name.
103. BUSINESS SITE ADDRESS – Enter the street address where the facility is located, including building number, if applicable. Post office box numbers are not acceptable. This information must provide a means to locate the facility geographically.
104. CITY – Enter the city or unincorporated area in which the facility is located.
105. ZIP CODE – Enter the zip code of the UST site. The zip+4 may also be added.
- 490-3a. MONITORING EQUIPMENT IS SERVICED – Check the appropriate box to specify the frequency of monitoring equipment testing/certification.
- 490-3b. Specify Other frequency for monitoring equipment servicing.
- 490-4. SITE PLAN – Indicate if a site plan/map is submitted with this monitoring plan or if it was submitted previously and is current for the facility. Monitoring plans must include a Site Plot Plan/Map showing the tank and piping layouts and the locations where monitoring is performed (i.e., location of sensors, probes, line leak detectors, monitoring system control panel, etc.).
- 490-5. IV-1 CONTINUOUS ELECTRONIC MONITORING – Indicate if this monitoring method is being used to monitor the tanks.
- 490-6. SECONDARY CONTAINMENT – If IV-1 is checked, check the appropriate box to describe the environment inside the tank secondary containment.
- 490-7. PANEL MANUFACTURER – If IV-1 is checked, enter the name of the manufacturer of the monitoring system control panel (console).
- 490-8. MODEL # – If IV-1 is checked, enter the model number for the monitoring system control panel.
- 490-9. LEAK SENSOR MANUFACTURER – If IV-1 is checked, enter the name of the manufacturer of the sensor(s). If additional space is needed, use Section X.
- 490-10. MODEL #(S) – If IV-1 is checked, enter the model number for each type of sensor installed. If additional space is needed, use Section X.
- 490-11. IV-2 AUTOMATIC TANK GAUGING – Indicate if this method is used for monitoring the UST's.
- 490-12. PANEL MANUFACTURER – If IV-2 is checked, enter the name of the manufacturer of the monitoring system control panel (console).
- 490-13. MODEL # – If IV-2 is checked, enter the model number for the monitoring system control panel.
- 490-14. IN-TANK PROBE MANUFACTURER – If IV-2 is checked, enter the name of the manufacturer of the probe(s).
- 490-15. MODEL #(S) – If IV-2 is checked, enter the model number for each type of in-tank probe installed. If additional space is needed, use Section X.
- 490-16. LEAK TEST FREQUENCY – If IV-2 is checked, check the appropriate box to describe the in-tank leak test frequency.
- 490-17. SPECIFY – If 490-16a is checked, enter the frequency of programmed leak tests.
- 490-18. PROGRAMMED TESTS – If IV-2 is checked, check the appropriate box to describe the tests programmed into the ATG system.
- 490-19. SPECIFY – If 490-18c is checked, enter the frequency of in-tank leak testing.
- 490-20. IV-3 INVENTORY RECONCILIATION – Check the box if statistical inventory reconciliation is performed.
- 490-21. IV-4 WEEKLY MANUAL TANK GAUGING – Indicate if this method is used to monitor the tanks.
- 490-22. TESTING PERIOD – If IV-4 is checked, check the appropriate box to describe the MTG testing period.
- 490-23. IV-5 TANK INTEGRITY TESTING: Indicate if this method is used to monitor the tanks.
- 490-24. TEST FREQUENCY – If IV-5 is checked, check the appropriate box to describe the frequency of tank integrity testing.
- 490-25. OTHER: If 490-24c is checked, specify other test frequency.
- 490-26. IV-99 OTHER: Indicate if monitoring of the tanks occurs that is not indicated in any other category.
- 490-27. If IV-99 is checked, enter a brief description of the other tank monitoring method(s) used (e.g., vadose zone monitoring per 23 CCR §2647, groundwater monitoring per 23CCR §2648). Include the monitoring frequency (e.g., Continuous, Weekly). If additional space is needed, use Section X.
- 490-28. V-1 CONTINUOUS MONITORING OF PIPE/PIPING SUMP(S) AND OTHER SECONDARY CONTAINMENT WITH AUDIBLE AND VISUAL ALARMS: Indicate if this is the monitoring method used for the piping.
- 490-29. SECONDARY CONTAINMENT: If V-1 is checked, Check the appropriate box to describe the environment inside piping secondary containment.
- 490-30. PANEL MANUFACTURER – If V-1 is checked, enter the name of the manufacturer of the monitoring system control panel (console).
- 490-31. MODEL # – If V-1 is checked, enter the model number for the monitoring system control panel.
- 490-32. LEAK SENSOR MANUFACTURER – If V-1 is checked, enter the name of the manufacturer of the sensor(s).
- 490-33. MODEL #(S) – If V-1 is checked, enter the model number for each type of sensor installed. If additional space is needed, use Section X.
- 490-34. PIPING LEAK ALARM TRIGGERS AUTOMATIC PUMP SHUTDOWN – If V-1 is checked, check Yes or No.
- 490-35. FAILURE/DISCONNECTION OF THE MONITORING SYSTEM TRIGGERS AUTOMATIC PUMP SHUTDOWN – If V-1 is checked, check Yes or No.
- 490-36. V-2 PIPE MECHANICAL LINE LEAK DETECTORS PERFORM 3 GPH LEAK TESTS: Indicate if this monitoring method is used to monitor the pipelines.
- 490-37. MLLD MANUFACTURER(S) – If V-2 is checked, enter the name(s) of the manufacturer(s) of the mechanical line leak detector(s). If additional space is needed, use Section X.
- 490-38. MODEL #(s) – If V-2 is checked, Enter the model number for each type of mechanical line leak detector installed. If additional space is needed, use Section X.
- 490-39. V-3 PIPE ELECTRONIC LINE LEAK DETECTORS: Indicate if this monitoring method is used to monitor the pipelines.
- 490-40. ELLD MANUFACTURER – If V-3 is checked, Enter the name of the manufacturer of the electronic line leak detector(s).
- 490-41. MODEL #(S)n – If V-3 is checked, enter the model number for each type of electronic line leak detector installed. If additional space is needed, use Section X.
- 490-42. PROGRAMMED LINE INTEGRITY TESTS – If V-3 is checked, check the appropriate box to describe the type of tests programmed into the monitoring system.
- 490-43. ELLD DETECTION OF A PIPING LEAK ALARM TRIGGERS PUMP SHUTDOWN – If V-1 is checked, check Yes or No.
- 490-44. ELLD DETECTION OF A PIPING LEAK FAILURE/DISCONNECTION TRIGGERS PUMP SHUTDOWN. – If V-1 is checked, check Yes or No.
- 490-45. V-4 PIPE INTEGRITY TESTING - Indicate if this monitoring method is used to monitor the pipelines.
- 490-46. TEST FREQUENCY – If V-4 is checked, check the appropriate box to describe the frequency of pipe integrity testing.
- 490-47. SPECIFY – If 490-46-99 is checked, enter the frequency of pipe integrity testing.
- 490-48. V-5 VISUAL PIPE MONITORING - Indicate if this monitoring method is used to monitor the pipelines.
- 490-49. If V-5 is checked, check the appropriate box to describe the frequency of visual monitoring.
- 490-50. SUCTION PIPING MEETS EXEMPTION CRITERIA - Indicate if this monitoring method is used to monitor the pipelines.
- 490-51. NO REGULATED PIPING PER HEALTH AND SAFETY CODE, DIVISION 20, CHAPTER 6.7 IS CONNECTED TO THE TANK SYSTEM - Check this box if no piping in the tank system is regulated under the UST law, or there is no piping.
- 490-52. V-99 OTHER - Indicate if another method is used for pipeline monitoring.
- 490-53. SPECIFY – Enter a brief description of the other line monitoring method(s) used. If additional space is needed, see Section X. Be sure to clearly describe monitoring method(s) and frequency.

This monitoring plan must include a Site Plan showing the general tank and piping layouts and the locations where monitoring is performed (i.e., location of each sensor, line leak detector, monitoring system control panel, etc.). If you already have a diagram (e.g., current UST Monitoring Site Plan from a Monitoring System Certification form, Hazardous Materials Business Plan map, etc.) that shows all required information, include it with this plan.

**UNDERGROUND STORAGE TANK
 MONITORING PLAN (Page 2 of 2)**

VI. UNDER DISPENSER CONTAINMENT (UDC) MONITORING

1. UDC MONITORING IS PERFORMED USING THE FOLLOWING METHOD: 490-54a
 1. CONTINUOUS ELECTRONIC MONITORING 2. FLOAT AND CHAIN ASSEMBLY 3. ELECTRONIC STAND-ALONE 490-54b
 4. NO DISPENSERS 99. OTHER (Specify):

PANEL MANUFACTURER: 490-55 MODEL #: 490-56
 LEAK SENSOR MANUFACTURER: 490-57 MODEL #(S): 490-58

DETECTION OF A LEAK INTO THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS a. YES b. NO 490-59
 UDC LEAK ALARM TRIGGERS AUTOMATIC PUMP SHUTDOWN a. YES b. NO 490-60
 FAILURE / DISCONNECTION OF UDC MONITORING SYSTEM TRIGGERS AUTOMATIC PUMP SHUTDOWN a. YES b. NO 490-61
 UDC MONITORING STOPS THE FLOW OF PRODUCT AT THE DISPENSER a. YES b. NO 490-62

2. UDC CONSTRUCTION IS 1. SINGLE-WALLED 2. DOUBLE-WALLED 490-63
 IF DOUBLE WALLED: 490-64a
 UDC INTERSTITIAL SPACE IS MONITORED BY: 1. LIQUID 2. PRESSURE 3. VACUUM
 A LEAK WITHIN THE SECONDARY CONTAINMENT OF THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS a. YES b. NO 490-64b

VII. PERIODIC SYSTEM TESTING

1. ELD TESTING: THIS FACILITY HAS BEEN NOTIFIED BY THE STATE WATER RESOURCES CONTROL BOARD THAT ENHANCED LEAK DETECTION (ELD) MUST BE PERFORMED. PERIODIC ELD IS PERFORMED EVERY 36 MONTHS AS REQUIRED. (23 CCR §2644.1) 490-65
 2. SECONDARY CONTAINMENT COMPONENTS ARE TESTED EVERY 36 MONTHS. 490-66
 3. SPILL BUCKETS ARE TESTED ANNUALLY. 490-67

VIII. RECORDKEEPING

The following monitoring/maintenance records are kept for this facility:

<input type="checkbox"/> Alarm logs 490-68a	<input checked="" type="checkbox"/> Visual Inspection Records 490-68b
<input type="checkbox"/> Tank integrity testing results 490-68c	<input type="checkbox"/> SIR testing results (and supporting documentation records) 490-68d
<input type="checkbox"/> Tank gauging results (and supporting documentation records) 490-68e	<input type="checkbox"/> ATG Testing results (and supporting documentation records) 490-68f
<input type="checkbox"/> Corrosion Protection 60-day logs 490-68g	<input checked="" type="checkbox"/> Equipment maintenance and calibration records 490-68h

IX. TRAINING

Personnel with UST monitoring responsibilities are familiar with all of the following documents relevant to their job duties. 490-69a

REFERENCE DOCUMENTS MAINTAINED AT FACILITY (Check all that apply)

<input checked="" type="checkbox"/> THIS UNDERGROUND STORAGE TANK MONITORING PLAN (Required) 490-69b
<input checked="" type="checkbox"/> OPERATING MANUALS FOR ELECTRONIC MONITORING EQUIPMENT (Required) 490-69c
<input type="checkbox"/> CALIFORNIA UNDERGROUND STORAGE TANK REGULATIONS 490-69d
<input type="checkbox"/> CALIFORNIA UNDERGROUND STORAGE TANK LAW 490-69e
<input type="checkbox"/> STATE WATER RESOURCES CONTROL BOARD (SWRCB) PUBLICATION: "HANDBOOK FOR TANK OWNERS - MANUAL AND STATISTICAL INVENTORY RECONCILIATION" 490-69f
<input type="checkbox"/> SWRCB PUBLICATION: "UNDERSTANDING AUTOMATIC TANK GAUGING SYSTEMS" 490-69g
<input type="checkbox"/> OTHER (Specify): 490-69h, 490-69i

This facility has a "Designated UST Operator" who has passed the California UST System Operator Exam administered by the International Code Council (ICC). The "Designated UST Operator" will train facility employees in the proper operation and maintenance of the UST systems annually, and within 30 days of hire. This training will include, but is not limited to, the following: 490-70

- Operation of the UST systems in a manner consistent with the facility's best management practices
- The facility employee's role with regard to the monitoring equipment as specified in this UST Monitoring Plan
- The facility employee's role with regard to spills and overfills as specified in the UST Response Plan
- Names of contact person(s) for emergencies and monitoring alarms

X. COMMENTS/ADDITIONAL INFORMATION

Provide additional comments here or indicate how many pages with additional information on specific monitoring procedures are attached to this plan. 490-71

XI. PERSONNEL RESPONSIBILITIES

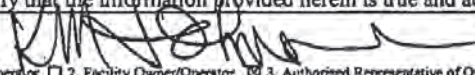

The UST Owner/Operator is responsible for ensuring that: 1) the daily/routine UST monitoring activities and maintenance of UST leak detection equipment covered by this plan occurs, 2) all conditions that indicate a possible release are investigated, and 3) all monitoring records are maintained properly.
 The following person(s) are responsible for performing the monitoring and equipment maintenance:

NAME 490-72	TITLE 490-73
NAME Mike Johnson 490-74	TITLE Senior Plumber/ DSO 490-75

The Designated Operator shall perform a monthly visual inspection of the facility, provide a report to the owner/operator, and inform the owner/operator of any conditions that need follow-up action.

XII. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

APPLICANT SIGNATURE  490-76 DATE: 1-23-09 490-77

REPRESENTING: 1. Tank Owner/Operator 2. Facility Owner/Operator 3. Authorized Representative of Owner 490-78

APPLICANT NAME (print): K.M. Johnson 490-78 APPLICANT TITLE: Senior Plumber/ DSO 490-79

(Agency Use Only)

UST Monitoring Plan – Page 2 Instructions

Complete a separate UST Monitoring Plan for each UST monitoring system at the facility. This Monitoring Plan must be kept at the UST location at all times. The elements of this Monitoring Plan constitute conditions of the UST Operating Permit. This form must be submitted with your initial UST Operating Permit Application and within 30 days of changes in the information it contains. Please note that you are required to obtain approval prior to installing or modifying monitoring equipment. (Note: Numbering of these instructions follows the data element numbers on the form.)

- 490-54a. MONITORING OF THE UNDER DISPENSER CONTAINMENT – Indicate the method used for UDC monitoring.
490-54b. SPECIFY – If 99 "Other" is checked, describe other method used.
If VI-1-1, VI-1-2 or VI-1-3 or VI-1-99 is checked, complete 490-55 to 490-64b.
- 490-55. PANEL MANUFACTURER – Enter the name of the manufacturer of the monitoring system control panel (console). If there is no control panel (e.g., only an electrical relay box is installed) leave this space blank.
490-56. MODEL # – Enter the model number for the monitoring system control panel (console). If there is no control panel (e.g., only an electrical relay box is installed) leave this space blank.
490-57. LEAK SENSOR MANUFACTURER – Enter the name of the manufacturer of the sensor(s).
490-58. MODEL #(S) – Enter the model number of the sensor(s) installed. If additional space is needed, use Section X.
490-59. DETECTION OF A LEAK INTO THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS – Indicate Yes or No
490-60. UDC LEAK ALARM TRIGGERS PUMP SHUTDOWN – Indicate Yes or No
490-61. FAILURE/DISCONNECTION OF UDC MONITORING SYSTEM TRIGGERS AUTOMATIC PUMP SHUTDOWN – Indicate Yes or No
490-62. UDC MONITORING STOPS THE FLOW OF PRODUCT AT THE DISPENSER – Indicate Yes or No.
490-63. UDC CONSTRUCTION – Indicate if the construction of the UDC is single-walled, or double-walled.
490-64a. DOUBLE-WALLED INTERSTITIAL SPACE MONITORING – Indicate what is used to monitor the interstitial space.
490-64b. LEAK WITHIN THE SECONDARY CONTAINMENT OF UDC TRIGGERS AUDIBLE AND VISUAL ALARMS – Indicate Yes or No
490-65. VII-1 ELD TESTING – Check the box if you have been notified by the State Water Resources Control Board (SWRCB) that the UST(s) covered by this plan is/are subject to Enhanced Leak Detection Requirements (i.e., UST has any single-wall component and is located within 1,000 feet of a public drinking water well).
490-66. TESTING OF SECONDARY CONTAINMENT COMPONENTS EVERY 36 MONTHS - Check the box if you have secondary containment that requires testing.
490-67. SPILL BUCKET TESTING - Check the box if you have spill buckets.
490-68a-h. VIII RECORDKEEPING – Indicate which monitoring and equipment maintenance records are maintained for this facility.
490-69a. IX TRAINING STATEMENT – Check the box to verify that the statement is true.
REFERENCE DOCUMENTS MAINTAINED AT FACILITY – Check the appropriate boxes to describe reference documents maintained at the facility.
Note that the first two items on the list must be kept at the facility.
490-69b. MONITORING PLAN – Indicate that this plan is kept as a reference document.
490-69c. OPERATING MANUALS FOR ELECTRONIC EQUIPMENT – Indicate that this plan is kept as a reference document.
490-69d. CA UST REGULATIONS – Indicate that this is kept as a reference document.
490-69e. CA UST LAW – Indicate that this is kept as a reference document.
490-69f. STATE WATER RESOURCES CONTROL BOARD (SWRCB) PUBLICATION – "HANDBOOK FOR TANK OWNERS - MANUAL AND STATISTICAL INVENTORY RECONCILIATION – Indicate that this is kept as a reference document.
490-69g. SWRCB PUBLICATION: "UNDERSTANDING AUTOMATIC TANK GAUGING SYSTEMS" – Indicate that this is kept as a reference document.
490-69h. OTHER – Indicate that other reference documents are kept.
490-69i. SPECIFY-If "OTHER" is checked, enter a brief description of the other document(s) maintained at the facility. If additional space is needed, see Section X.
490-70. DESIGNATED OPERATOR TRAINING – Check this box to verify that this statement is true.
490-71. COMMENTS/ADDITIONAL INFORMATION – Make additional comments or you may attach and identify the number of additional pages of information to describe any additional UST system monitoring-related information (e.g., additional information required by your local agency). Attach any monitoring logs that you will be using for the monitoring of your tank system.
490-72. NAME – Enter the name of the person who routinely conducts the monitoring and equipment maintenance under this plan.
490-73. TITLE – Enter the title of the person.
490-74. NAME – Enter the name of the second person, if applicable, who routinely conducts the monitoring and equipment maintenance under this plan.
490-75. TITLE – Enter the title of the second person.
- OWNER/OPERATOR SIGNATURE – The tank owner/operator, facility owner/operator, or an authorized representative of the owner shall sign in the space provided. This signature certifies that the signer believes that all information submitted is true, accurate, and complete, and that the training program specified in Section IX has been implemented.
- 490-76. REPRESENTING – Check the appropriate box to indicate whether the signer is the UST owner/operator, the UST facility owner/operator, or an authorized representative of the owner.
490-77. DATE – Enter the date the plan was signed.
490-78. APPLICANT NAME – Print or type the name of the person signing the plan.
490-79. APPLICANT TITLE – Enter the title of the person signing the plan.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document installation, testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

Plan Check Number:

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

D. Results of Testing/Serviceing

Permit Number:

Software Version Installed: *15.03*

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shutdown? <i>(Check all that apply)</i> <input type="checkbox"/> Sump/Trench Sensors; <input type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shutdown due to leaks and sensor failure/disconnection? <input type="checkbox"/> Yes; <input type="checkbox"/> No.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? <i>90%</i>
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was liquid found inside any secondary containment systems designed as dry systems? <i>(Check all that apply)</i> <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments (500 characters max. add additional sheets if needed):

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment:

Permit Number:

- Check this box if tank gauging is used only for inventory control
- Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

Check this box if LLDs are not installed.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input type="checkbox"/> 3 g.p.h.; <input type="checkbox"/> 0.1 g.p.h.; <input type="checkbox"/> 0.2 g.p.h.
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

H. Comments (500 characters max. add additional sheets if needed):

emergency generator location

Monitoring System Certification

UST Monitoring Site Plan

Site Address: 5255 Mt Etna San Diego Ca.

Date map was drawn: 11/14/08

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

BUSINESS NAME SD City Sheriff Crime Lab
 ADDRESS 5355 Mt. Etna Dr.
 CITY/ZIP San Diego / 92117

On the above date, the County inspected your business under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

Consent to inspect granted by: Inspection Contact Other:

Permission was granted today to conduct an annual monitoring System Certification of the 4000 gal diesel VST by Mike Johnson, DUSTO, James Romero, an ITC and veeder Root certified Technician for U Mesnager Engineering conducted the VST certification. Jeanne Redeman, Criminalist III for the Sheriff Crime Lab, was present during the site walk through and review of documentation.

RECEIVED JAN 27 2010

Observations/violations/Notice to Comply:

① Failed to properly label hazardous waste containers. All of the hazardous waste containers observed onsite were missing the ~~hazardous waste~~ ^{physical state} (solid/liquid) and ~~physical state~~ hazardous properties (flammable/toxic/reactive/corrosive/other) information on the hazardous waste labels. The hazardous waste accumulation area had labeled bins to accumulate hazardous waste containers based on their hazardous property. One bin was labeled as "general," contained individually packaged bottles of hazardous waste that were missing haz waste labels. Several containers of picric acid in the hazardous waste accumulation area were missing haz waste labels.

② Accumulated hazardous waste beyond the accumulation time limit of 90 days. Since your facility generates more than 1kg of acutely hazardous

This is an annual certification that the Hazardous Materials Business Plan (inventory & site map, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.

BUSINESS ADDRESS: 5255 Mt. Etna Dr.

ZIP CODE: 92117

waste per month, large quantity generator (LQG) regulations apply. Several liter sized glass bottles were observed to contain hazardous waste beyond accumulation time limits (date = 12/4/08). Under satellite accumulation, hazardous waste may not be accumulated onsite for more than 1 year. A container of DFO stock was also observed in the same area (Latent Prints) with an expiration date of 12/18/08. A 1/4 full 55 gal drum of phenol waste in the hazardous waste accumulation area had an accum start date of 8/29/08.

Corrective Action: Within 30 days, send proof to HMD that all containers of hazardous waste have been properly labeled and send proof hazardous waste has been properly managed within the accumulation time limits. Ensure employees are trained on these requirements to ensure future compliance.

Observations/remarks:

A) According to statements made by an employee in the Fire arms area, small amounts of acids and bases are used in serial number restoration on firearms. Be advised that benchtop treatment is limited to pH neutralization. Be sure to adhere to standardized SOPs maintain copies onsite. Ensure employees are adequately trained on the established SOPs. Maintaining logs onsite can help prove proper treatment/neutralization of waste. Be sure to make a proper waste determination of any waste generated, especially if it is suspected that any waste stream generated may also contain heavy metals.

B) Be sure to make proper waste classification for haz waste placed in the "general" box in the haz waste accumulation area to ensure incompatibles are not co-mingled and/or improperly labeled. The same scrutiny should apply toward hazardous materials, including the NaOH and acid observed today in the same compartment in the Controlled Substances Lab.

C) The following hazardous wastes were observed onsite today missing the haz. state & physical properties on the haz waste labels. Note that this is not a complete list and only represents less than 1/4 of the improperly labeled haz waste onsite: organic waste (~1L) in arson unit; DFO stock (~1L) missing label in Latent Prints unit; and in the haz waste accum. area: 5 gal "CSA Debris"; ~1L DuQuenois Reagent; chloroform waste; phenol waste; formaldehyde waste; etc. Copies of photos taken to demonstrate the inadequate labeling observed (violation # 1) will be provided.

FACILITY NAME SD Cnty Sheriff Crime Lab ADDRESS 5255 Mt. Etna Dr. CITY/ZIP San Diego / 92117

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6. This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

- NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance. Unified Program Facility Permit current, Hazardous Materials Business Plan available, Employee training is adequate, Waste disposal records available for review, Emergency contacts current, Chemical inventory/map current, Permit Expires on: 3/31/2011, Contingency Plan available, Employee training records available, Universal waste managed properly, Waste containers closed, Waste containers in good condition

Consent to inspect granted by: [X] Inspection Contact [] Other: Permission was granted today to conduct a routine annual Monitoring System Certification of the 4000 UST of diesel fuel by Anthony Demaria, Safety Manager, and Mike Johnson, DUSTO. Rene Le Mesurier of Jameson Engineering conducted the UST monitoring system testing and certification. Anthony DeMaria was present for the site walkthrough and review of paperwork.

UST Observations / Remarks:

- A) All components of the UST Monitoring System tested today passed and were certified, including the spill bucket. RECEIVED FEB 24 2011
B) The Annual DUSTO-Employee training occurred on 8/25/10
C) The next Secondary Containment testing is due by 11/14/2011.
D) The Current letter of Financial Responsibility needs to be added to the UST binder; the letter observed today was dated 1/14/2010

The following areas were inspected today: Maintenance, Controlled Substances, Forensic Biology, Forensic Alcohol, Latent Fingerprint Development, Crime Scene Investigation Unit, Cooling Tower chemical storage, Hazardous Waste accumulation area and the dumpsters.

This is an annual certification that the Hazardous Materials Business Plan (inventory & site map, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored. SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

Hazardous Materials/Waste and Medical Waste Observations/Remarks:
BUSINESS ADDRESS: 5255 Mt. Etna Dr. ZIP CODE: 92117

A) The majority of containers onsite were observed to be properly labeled. Any ~~violations~~ labeling violations observed were corrected onsite during today's walkthrough including: One red bag, two sharps containers, and 2-1gal containers of vinyl flat paint. Mr. DeMaria stated that each area/unit has ~~an assigned~~ an assigned compliance/safety person who conducts routine visual inspections to verify containers are properly labeled, closed, and managed. A yearly inventory of the site is conducted to ensure chemicals are not kept beyond expiration dates.

B) Be sure to properly manage any empty containers larger than 5gal by adding the date emptied, the word "empty," and properly manage them within a year. 11 - empty 5gal containers were observed accumulating by the cooling tower. Also make proper waste determinations of any chemicals in this area. If any are unusable and/or are waste, ensure they are managed according to requirements if hazardous.

C) If any paint related ^{hazardous} waste is generated from building maintenance, ensure it is immediately labeled and managed properly. Do not transport any hazardous waste to another site. A registered hazardous waste hauler must always be used and must be transported to an authorized treatment, storage, and disposal facility (TSDF).

D) If your facility has more than 500 pounds of ammunition onsite, then it should be included on your HMD permit inventory.

E) Be sure to recertify your Hazardous Materials Business Plan (HMBP) and Carcinogen/Reproductive toxin list annually, even if no changes are made. Both were recertified today (last previous date was 2/23/2009). Any other changes to these forms or to the Medical Waste Management Plan (MUMP) must be submitted and recertified with HMD within 30 days of the changes made.

HAZARDOUS MATERIALS BUSINESS PLAN CERTIFICATION

The California Health & Safety Code (H&SC), Division 20, Chapter 6.95, Section 25505 provides for the following:

The San Diego County, Department of Environmental Health, Hazardous Materials Division (HMD), as the administering agency, requires a business that handles hazardous materials to submit the hazardous materials inventory, a list of emergency contacts, and a site plan, in lieu of a complete Hazardous Materials Business Plan (HMBP), only after the initial submittal of a complete HMBP. The business must certify that a complete HMBP has been prepared and is maintained at the site where the hazardous materials are stored. A complete HMBP includes the items to be submitted to the HMD and an Emergency Response Plan and Employee Training Plan, as established in H&SC Section 25504. The business must also annually certify that the HMBP is current and maintained on site. See Back for instructions and further clarification.

CARCINOGEN/REPRODUCTIVE TOXIN ANNUAL RENEWAL WITHOUT CHANGES: This is an annual renewal to certify that the list of carcinogens and/or reproductive toxins last provided is a current list as specified in the San Diego County Code of Regulatory Ordinances Section 68.1113.

Check only one of the following boxes:

INITIAL CERTIFICATION: This is to certify (H&SC Section 25505(e)(1)) that a complete HMBP, which includes the hazardous materials inventory, a list of emergency contacts, a site plan, emergency response plan, and employee training plan, has been prepared and is maintained at the site where the hazardous materials are stored.

ANNUAL CERTIFICATION WITHOUT CHANGES: This is an annual certification (H&SC Section 25505(d)&(e)(2)) that the HMBP, which includes the hazardous materials inventory, a list of emergency contacts, a site plan, emergency response plan, and employee training plan, is current and includes all the information required in H&SC Section 25504, and 25509, and is maintained at the site where the hazardous materials are stored.

CERTIFICATION OF CHANGES/REVISIONS: This is to certify that the HMBP has been reviewed (H&SC Section 25505(e) & 25510) and all necessary changes/revisions have been made. The HMBP is current and is maintained at the site where the hazardous materials are stored. Attached are changes to the hazardous materials inventory and/or list of emergency contacts. For site map revisions, submit only the pages that have a change or revision and attach to this certification. This submittal satisfies annual certification requirements specified in H&SC Section 25505(d)&(e)(2).

As an Authorized Representative, I certify under the penalty of law, that I have personally examined and am familiar with the information submitted and believe the information is true, accurate, and complete. By checking any of the boxes above I also certify that : a) The information contained in the hazardous materials inventory most recently submitted to the CUPA or Administrative Agency is complete, accurate, and up to date; b) There has been no change in the quantity of hazardous materials reported in the most recently submitted inventory; and c) All hazardous materials subject to inventory requirements are listed on the most recently submitted inventory.

SIGNATURE OF OWNER/OPERATOR OR DESIGNATED REPRESENTATIVE	DATE

MUNICIPAL FINANCIAL TEST DEMONSTRATING FINANCIAL RESPONSIBILITY FOR UNDERGROUND STORAGE TANKS BASED ON THE COMPREHENSIVE ANNUAL FINANCIAL REPORT FOR THE FISCAL YEAR ENDED JUNE 30, 2010

Pursuant to Federal Regulation 40 CFR 280.105 (c), this letter is in support of the use of the local governmental financial test to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by sudden accidental releases and/or non-sudden accidental releases in the amount of at least \$500,000 per occurrence and \$1 million annual aggregate arising from operating underground storage tanks (See Worksheet for Municipal Financial Test, Attachment A).

A listing of underground storage tank facilities that are assured by this financial test is included on Attachment B.

The County of San Diego has not received an adverse opinion, or a disclaimer of opinion, from an independent auditor on its financial statements for latest completed fiscal year.

If you have any questions, please contact Tracy Drager, Deputy Controller at (619) 531-5338.

CHIEF FINANCIAL OFFICER LETTER REGARDING FINANCIAL RESPONSIBILITY FOR UNDEGROUND STORAGE TANKS (UST) BASED ON THE COMPREHENSIVE ANNUAL FINANCIAL REPORT FOR THE FISCAL YEAR ENDED JUNE 30, 2010

The attached annual Chief Financial Officer letter demonstrating the County's financial responsibility for maintaining Underground Storage Tanks (UST) is submitted to the Department of Environmental Health pursuant to Title 40, Code of Federal Regulations (CFR), Part 280, Subpart H, Section 280.93.

The aforementioned federal regulations requires all owners and operators to show, through an approved method, their ability to pay for potential cleanup and third party damages resulting from accidental releases from their USTs. To demonstrate financial responsibility, the County of San Diego uses the approved local government financial test, pursuant to Title 40, CFR Section 2880.105. In this regard, this report is submitted to your office in your capacity as the regulator in this area for the County of San Diego.

As shown in the attached report, the County currently owns and operates 29 underground tanks that are used to store gasoline and diesel fuel at various County facilities. Financial responsibility means that money will be available to meet potential cleanup costs or third party lawsuits resulting from leaking USTs.

The County successfully passed the test with a score of 1.713 (it must be greater than zero). Assumptions in the calculations, for which we received authorization from the Environmental Protection Agency, may include netting advance refunding of County debt and excluding certain Federal and State revenues with no matching local fund requirements.

As evidence that this procedure has been satisfactorily completed, copies of this letter are provided to the Department of General Services, Fleet Management, to post at all of the UST sites.

If you have any questions, please contact Tracy Drager, Deputy Controller at (619) 531-5338.

DONALD F. STEUER
Chief Financial Officer

Appendix VI

(Copies of Monitoring System Certification form and UST Monitoring Plot Plan available at <http://www.waterboards.ca.gov/>)

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

A. General Information

Facility Name: Crime Lab Bldg. No.: _____
 Site Address: 5255 Mt. Etna City: San Diego Zip: _____
 Facility Contact Person: Mike Johnson Contact Phone No.: (_858_) 694-3615 _____
 Make/Model of Monitoring System: Veeder Root TLS-300C Date of Testing/Servicing: 2/4/11

B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

Tank ID: <u>Diesel 4,000 Emergency Gen</u> <input checked="" type="checkbox"/> In-Tank Gauging Probe. Model: <u>847390-107</u> <input checked="" type="checkbox"/> Annular Space or Vault Sensor. Model: <u>794390-420</u> <input checked="" type="checkbox"/> Piping Sump / Trench Sensor(s). Model: <u>794380-208</u> <input type="checkbox"/> Fill Sump Sensor(s). Model: _____ <input type="checkbox"/> Mechanical Line Leak Detector. Model: _____ <input type="checkbox"/> Electronic Line Leak Detector. Model: _____ <input checked="" type="checkbox"/> Tank Overfill / High-Level Sensor. Model: <u>V/R 790091-001</u> <input type="checkbox"/> Other (specify equipment type and model in Section E on Page 2).	Tank ID: _____ <input type="checkbox"/> In-Tank Gauging Probe. Model: _____ <input type="checkbox"/> Annular Space or Vault Sensor. Model: _____ <input type="checkbox"/> Piping Sump / Trench Sensor(s). Model: _____ <input type="checkbox"/> Fill Sump Sensor(s). Model: _____ <input type="checkbox"/> Mechanical Line Leak Detector. Model: _____ <input type="checkbox"/> Electronic Line Leak Detector. Model: _____ <input type="checkbox"/> Tank Overfill / High-Level Sensor. Model: _____ <input type="checkbox"/> Other (specify equipment type and model in Section E on Page 2).
Tank ID: _____ <input type="checkbox"/> In-Tank Gauging Probe. Model: _____ <input type="checkbox"/> Annular Space or Vault Sensor. Model: _____ <input type="checkbox"/> Piping Sump / Trench Sensor(s). Model: _____ <input type="checkbox"/> Fill Sump Sensor(s). Model: _____ <input type="checkbox"/> Mechanical Line Leak Detector. Model: _____ <input type="checkbox"/> Electronic Line Leak Detector. Model: _____ <input type="checkbox"/> Tank Overfill / High-Level Sensor. Model: _____ <input type="checkbox"/> Other (specify equipment type and model in Section E on Page 2).	Tank ID: _____ <input type="checkbox"/> In-Tank Gauging Probe. Dispenser ID: _____ <input type="checkbox"/> Dispenser Containment Sensor(s). Model: _____ <input type="checkbox"/> Shear Valve(s) <input type="checkbox"/> Dispenser Containment Float(s) and Chain(s).	Dispenser ID: _____ <input type="checkbox"/> Dispenser Containment Sensor(s). Model: _____ <input type="checkbox"/> Shear Valve(s) <input type="checkbox"/> Dispenser Containment Float(s) and Chain(s).

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility

C. Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; (check all that apply): System set-up Alarm history report

Technician Name (print): Rene LeMesnager Signature: Rene LeMesnager
 Certification No.: V/R A239143 License No.: 203029
 Testing Company Name: LeMesnager Engineering No.: (_619_) 917-8001
 Testing Company Address: 9450 Mira Mesa Blvd, Suite C#229, San Diego, CA 92126 Date of Testing/Servicing: 2/4/11

F. In-Tank Gauging / SIR Equipment:

X Check this box if tank gauging is used only for inventory control.
 Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

Yes	No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
Yes	No*	Were all tank gauging probes visually inspected for damage and residue buildup?
Yes	No*	Was accuracy of system product level readings tested?
Yes	No*	Was accuracy of system water level readings tested?
Yes	No*	Were all probes reinstalled properly?
Yes	No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

X Check this box if LLDs are not installed.

Complete the following checklist:

Yes	No* N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: 3 g p.h.; 0.1 g p.h.; 0.2 g p.h.
Yes	No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
Yes	No*	Was the testing apparatus properly calibrated?
Yes	No* N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
Yes	No* N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
Yes	No* N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
Yes	No* N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
Yes	No* N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
Yes	No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

H. Comments:

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name:	Crime Lab	Date of Testing: 2/4/2011
Facility Address:	5255 Mt. Etna San Diego Ca,	
Facility Contact:	Mike Johnson	Phone: 858.694.3615
Date Local Agency Was Notified of Testing :		
Name of Local Agency Inspector (if present during testing): Sonja Ingmanson		

2. TESTING CONTRACTOR INFORMATION

Company Name:	LeMesnager Engineering		
Technician Conducting Test	Rene LeMesnager		
Credentials ¹ :	<input checked="" type="checkbox"/> CSLB Contractor	<input checked="" type="checkbox"/> ICC Service Tech.	<input type="checkbox"/> SWRCB Tank Tester <input type="checkbox"/> Other (Specify) _____
License Number(s):	203029		

3. SPILL BUCKET TESTING INFORMATION

Comments – (include information on repairs made prior to testing, and recommended follow-up for failed tests)

CERTIFICATION OF TECHNICIAN RESPONSIBLE FOR CONDUCTING THIS TESTING

I hereby certify that all the information contained in this report is true, accurate, and in full compliance with legal requirements.

Technician's Signature: Rene LeMesnager

Date: 2/4/11

¹ State laws and regulations do not currently require testing to be performed by a qualified contractor. However, local requirements may be more stringent.

UST Monitoring Site Plan

Site Address: 5255 Mt Etna San Diego Ca.

Date map was drawn: 11/14/08

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

D. Results of Testing/Serviceing

Permit Number:

Software Version Installed: 15.01

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shutdown? (Check all that apply) <input type="checkbox"/> Sump/Trench Sensors; <input type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shutdown due to leaks and sensor failure/disconnection? <input type="checkbox"/> Yes; <input type="checkbox"/> No.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overflow warning device (i.e. no mechanical overflow prevention valve is installed), is the overflow warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90%
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments (500 characters max. add additional sheets if needed):

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment:

Permit Number:

- Check this box if tank gauging is used only for inventory control
- Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

Check this box if LLDs are not installed.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input type="checkbox"/> 3 g.p.h.; <input type="checkbox"/> 0.1 g.p.h.; <input type="checkbox"/> 0.2 g.p.h.
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

H. Comments (500 characters max. add additional sheets if needed):

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

¹ State laws and regulations do not currently require testing to be performed by a qualified contractor. However, local requirements may be more stringent.

Monitoring System Certification

UST Monitoring Site Plan

Site Address: 5255 Mt Etna San Diego Ca.

Date map was drawn: 11/14/08

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser parts, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

HAZARDOUS MATERIALS BUSINESS PLAN CERTIFICATION

The California Health & Safety Code (H&SC), Division 20, Chapter 6.95, Section 25505 provides for the following:

The County of San Diego, Department of Environmental Health, Hazardous Materials Division (HMD), as the administering agency, requires a business that handles hazardous materials to submit the hazardous materials inventory, a list of emergency contacts, and a site plan, **in lieu of a complete Hazardous Materials Business Plan (HMBP)**, only after the initial submittal of a complete HMBP. A complete HMBP includes the items to be submitted to the HMD and an Emergency Response Plan and Employee Training Plan, as established in H&SC Section 25504. The business must annually certify that a complete HMBP has been prepared, is current and is maintained at the site where the hazardous materials are stored. See *Back* for instructions and further clarification

II. CERTIFICATION STATEMENT

CARCINOGEN/REPRODUCTIVE TOXIN ANNUAL RENEWAL WITHOUT CHANGES: This is an annual renewal to certify that the list of carcinogens and/or reproductive toxins last provided is a current list as specified in the San Diego County Code of Regulatory Ordinances Section 68.1113.

Check only ONE of the following boxes:

INITIAL CERTIFICATION: This is to certify (H&SC Section 25505(e)(1)) that a complete HMBP, which includes the hazardous materials inventory, a list of emergency contacts, a site plan, emergency response plan, and employee training plan, has been prepared and is maintained at the site where the hazardous materials are stored.

ANNUAL CERTIFICATION WITHOUT CHANGES: This is an annual certification (H&SC Section 25505(d) & (e)(2)) that the HMBP, which includes the hazardous materials inventory, a list of emergency contacts, a site plan, emergency response plan, and employee training plan, is current and includes all the information required in H&SC Section 25504, and 25509, and is maintained at the site where the hazardous materials are stored.

CERTIFICATION OF CHANGES/REVISIONS: This is to certify that the HMBP has been reviewed (H&SC Section 25505(c) & 25510) and all necessary changes/revisions have been made. The HMBP is current and is maintained at the site where the hazardous materials are stored. Attached are changes to the hazardous materials inventory and/or list of emergency contacts. For site map revisions, submit only the pages that have a change or revision and attach to this certification. This submittal satisfies annual certification requirements specified in H&SC Section 25505(d) & (e)(2).

As an Authorized Representative, I certify, under the penalty of law, that I have personally examined and am familiar with the information submitted and believe the information is true, accurate, and complete. By checking any of the boxes above I also certify that: a) The information contained in the hazardous materials inventory most recently submitted to the CUPA or Administering Agency is complete, accurate, and up to date; b) There has been no change in the quantity of hazardous materials reported in the most recently submitted inventory; and c) All hazardous materials subject to inventory requirements are listed on the most recently submitted inventory.

Total Number of Operating Permitted Tanks: 1

PEH 2002-44950-114261

**OPERATING CONDITIONS AND REQUIREMENTS
FOR THE PERMIT TO OPERATE UNDERGROUND STORAGE TANKS**

This permit is valid for 5 years pursuant to the California Health & Safety Code, Chapter 6.7, Section 25285 with an annual renewal fee per San Diego County Code, Title 6, Division 8, Chapter 9, Certified Unified Program Agency. Failure to comply with the following operating conditions, 1998 U.S.T. Upgrading Requirements, and requirements for this permit to operate may cause the HMD to revoke, or modify this permit pursuant to Section 25285.1 of the California Health & Safety Code. NOTE: The owner and operator are subject to all applicable requirements of Chapters 6.7 and 6.75 of the California Health and Safety Code, and CCR Title 23 Division 3, Chapters 16 and 18.

The Underground Storage Tank Facility Owner/Operator shall provide and maintain the following:

1. Obtain appropriate permits from the Department of Environmental Health (DEH). Permits are required to install, operate, close, upgrade or repair an underground storage tank system including associated piping.
2. A copy of this permit and all conditions and attachments, including a copy of the "Operating Permit Application - Facility Information" and the "Operating Permit Application - Tank Information", must be kept at the underground storage tank location at all times. This permit must be renewed prior to the expiration date.
3. The permittee shall ensure that both the owner and the operator of the tank are provided with a copy of this permit. If the permittee is not the operator of the tank, then the permittee must:
 - a. Enter into a written agreement with the operator of the tank to monitor the tank system as set forth in this permit;
 - b. Provide the operator with a copy or summary of Section 25299 (attached); and
 - c. Notify the DEH of any change of operator.
4. Allow the DEH to inspect the facility, equipment, device or records pursuant to Section 68.903 of the San Diego County Code and HSC Chapter 6.7, Section 25289.
5. Monitor the underground storage tank using a monitoring method specified on the permit application. Monitoring, maintenance and testing records shall be kept on site for at least 3 years, 6 1/2 years for cathodic protection maintenance records, and 5 years for written performance claims pertaining to release detection systems, and calibration and maintenance records for such systems. Records of repairs, lining, and upgrades shall be maintained on site or at another approved location for the remaining life of the underground storage tank. These records shall be kept on site and made available upon request to the DEH or the State Water Board. Monitoring records shall include:
 - a. The date and time of all monitoring or sampling;
 - b. Monitoring equipment calibration and maintenance records;
 - c. The results of any visual observations;
 - d. The results of all sample analysis performed in the laboratory or in the field, including laboratory data sheets and analysis used;
 - e. The logs of all readings of gauges or other monitoring equipment, ground water elevations, or other test results; and
 - f. The results of any inventory readings and daily inventory reconciliation.
6. A copy of the Designated Operator monthly inspection record with all attachments for the previous 12 months and a list of facility employees who have been trained by the designated operator (including dates of training and dates of hire) shall be kept on site.
7. A copy of the written approved "Underground Storage Tank Monitoring Plan" (referenced in Jan. 17, 2008 Title 23, Section 2632 (d)(1)), emergency response plan, and plot plan shall be kept on site.
8. Maintain all equipment, devices and instruments in good repair. All monitoring and leak detection equipment shall be installed, calibrated, operated, and maintained in accordance with manufacturer's instructions, including routine maintenance and service checks (at least once per calendar year) for operating or running condition. All primary containment shall be product-tight.
9. Owners and operators shall use care to prevent releases due to spilling or overfilling. Before product is delivered, owners, operators, or their agents shall ensure that the space available in the tank is greater than the volume of product to be transferred to the tank and shall ensure that the transfer operation is monitored constantly to prevent overfilling and spilling. In addition, you must report and record all unauthorized releases (leaks) to the DEH within 24 hours [(Phone Number (858) 505-6880)].
10. Report and record all failed integrity tests or inconclusive SIR results to the DEH within 24 hours [Phone Number (858) 505-6880].
11. Submit a copy of all monitoring certification, spill bucket, integrity and secondary containment test results to the DEH within 30 days after the completion of the test. Submit a copy of enhanced leak detection results to the DEH within 60 days after the completion of the test.
12. Notify the DEH in writing within 30 days of a change in ownership, operator, monitoring procedure, equipment or tank usage.
13. Maintain adequate Pollution Liability Insurance (Financial Responsibility) pursuant to Article 3, Chapter 6.75 of the California Health & Safety Code.
14. Additional requirements may be imposed on the tank owner/operator for the permit to operate should the State Water Resources Control Board (SWRCB) adopt new sections or amend the California Health & Safety Code or the California Code of Regulations, Title 23.

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

ROUTINE INSPECTION

RECEIVED FEB 07 2012

The annual monitoring system certification for the 4,000 gallon diesel underground storage tank (UST) was conducted today with Mike Johnson, DUSTO, and ICC Certified Service Technician Peter Jauregui, from Jauregui and Culver Testing. The Sheriff Crime Lab was also inspected today with Lauren Sautkulis, Criminalist II. Consent for both inspections was granted.

NOTICE TO COMPLY:

1) VIOLATION (3193) FACILITY EMPLOYEE(S) NOT TRAINED; RECORDS INCOMPLETE/NOT ONSITE

OBSERVATION: The last documented Designated Underground Storage Tank Operator (DUSTO) training of employees at this facility was conducted on 8/25/2010. Mike Johnson is the DUSTO for this site and stated he had been unable to complete the employee training in 2011 due to work load.

CORRECTIVE ACTION: Immediately conduct employee training provided by the primary DUSTO or one of the alternate designees. This is an annual requirement for operators of USTs and is past due. Submit evidence to Hazardous Material Division (HMD) within 30 days this violation has been corrected.

<input type="checkbox"/> This is an annual certification that the Hazardous Materials Business Plan (inventory & site map, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are	Initials of Facility Representative

COUNTY OF SAN DIEGO

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

PERMIT # 114261
DATE 1/18/2012
PAGE 2 OF 4

FACILITY ADDRESS: 5255 Mt. Etna Drive

ZIP CODE: 92117

By July 1, 2005, and every twelve months thereafter, the designated UST operator(s) shall train facility employees for which he or she is responsible in the proper operation and maintenance of the underground storage tank system.

(1) The training for facility employees must include, but is not limited to:

- (A) The operation of the underground storage tank system in a manner consistent with the facility's best management practices.
(B) The facility employee's role with regard to the monitoring equipment as specified in the facility's monitoring plan.
(C) The facility employee's role with regard to spills and overfills as specified in the facility's response plan.
(D) The name of the contact person(s) for emergencies and monitoring equipment alarms.

(2) At least one of the facility employees present during operating hours shall have current training in accordance with subdivision (f)(1). For facilities that are not routinely staffed, the designated UST operator shall implement a facility employee training program approved by the local agency.

(3) A list of facility employees who have been trained by the designated UST operator(s), shall be maintained on-site or off-site at a readily available location, if approved by the local agency. The list shall be provided to the local agency upon request. The list shall include the dates of training for all facility employees, and the hiring dates for all facility employees hired on or after July 1, 2005.

REMARKS:

THE FOLLOWING AREAS WERE INCLUDED IN TODAY'S INSPECTION: 4,000 GALLON DIESEL UST, MAINTENANCE SHOP, FORENSIC LABS, CHEMICAL WASTE STORAGE ROOM, FIREARMS ANALYSIS UNIT, CRIME SCENE INVESTIGATIONS, AND CHEMICAL STORAGE ROOM.

A) All components of the UST system were tested and passed. The monitoring plan, response plan, plot plan, CFO/CFR letter, facility page, tank page, monthly DUSTO reports, and DUSTO letter of designation was reviewed. A copy of the UST operating permit could not be located. It is recommended a copy of the permit be obtained and placed in the UST binder and be made available for inspection.

B) SB 989 testing was conducted on 10/25/2011 and is due by 10/25/2014.

C) The Medical Waste Management Plan (MWMP) dated 2/23/2009 was reviewed. This site is a large quantity generator of medical waste.

D) This site has in use 2 separate EPA ID numbers. One is used for P/E (CAR000077289) and the other (CAL000146074) is used for the labs. Manifest copies for 2011 indicate all hazardous waste generated at this site

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6. This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

- NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.**

DEH 2002 - HUPFP- 114261

ROUTINE INSPECTION

The annual monitoring system certification for the 4,000 gallon diesel underground storage tank (UST) was conducted today with Mike Johnson, DUSTO, and ICC Certified Service Technician Peter Jauregui, from Jauregui and Culver Testing. The Sheriff Crime Lab was also inspected today with Lauren Sautkulis, Criminalist II. Consent for both inspections was granted.

NOTICE TO COMPLY:

1) VIOLATION (3252) ALL AUDIBLE AND/OR VISUAL ALARMS NOT FUNCTIONING PROPERLY

OBSERVATION: The audible alarm associated with the tank overfill alert device failed to function during the test. Upon inspection by the Service Technician, it was discovered a bad relay in the electrical box was causing the audible alarm to malfunction.

CORRECTIVE ACTION: Schedule the repairs to be made to the audible alarm system. Keep the repair records onsite, available for inspection. Submit evidence to Hazardous Material Division (HMD) within 30 days this violation has been corrected.

<input checked="" type="checkbox"/> This is an annual certification that the Hazardous Materials Business Plan (inventory & site map, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are	(15) Initials of Facility Representative

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

PERMIT # 114261
DATE 1/7/2013
PAGE 2 OF 3

FACILITY ADDRESS: 5255 Mt. Etna Drive

ZIP CODE: 92117

REMARKS:

THE FOLLOWING AREAS WERE INCLUDED IN TODAY'S INSPECTION: 4,000 GALLON DIESEL UST, MAINTENANCE SHOP, FORENSIC LABS, CHEMICAL WASTE STORAGE ROOM, FIREARMS ANALYSIS UNIT, CRIME SCENE INVESTIGATIONS, AND CHEMICAL STORAGE ROOM.

- A) All components of the UST system were tested and passed except the overfill audible alarm. The monitoring plan, response plan, plot plan, CFO/CFR letter, facility page, tank page, monthly DUSTO reports, and DUSTO letter of designation was reviewed.
B) SB 989 testing was conducted on 10/25/2011 and is due by 10/25/2014.
C) The Medical Waste Management Plan (MWMP) dated 2/23/2009 was reviewed. This site is a large quantity generator of medical waste.
D) This site has in use 2 separate EPA ID numbers. One is used for P/E (CAR000077289) and the other (CAL000146074) is used for the labs. If for tracking purposes both numbers are used to segregate shipments of hazardous waste, ensure the correct EPA ID number is used for shipments. In addition, ensure all generator copies of hazardous waste manifests are sent to Department Of Toxic Substance Control (DTSC) within 30 days of shipping the hazardous waste.
E) The Hazardous Material Business Plan (HMBP) was reviewed. Annual employee training on the HMBP is current. Remember to re certify your HMBP and annual carcinogen and toxicity report annually even if there have been no changes.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

D. Results of Testing/Serviceing

Permit Number:

Software Version Installed: 15.01

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes; which sensors initiate positive shutdown? (Check all that apply) <input type="checkbox"/> Sump/Trench Sensors; <input type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shutdown due to leaks and sensor failure/disconnection? <input type="checkbox"/> Yes; <input type="checkbox"/> No.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90%
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments (500 characters max. add additional sheets if needed): The Timer on the Overfill alarm was repaced on 1-XX-2013, in order to finnish the site Monitoring Cert.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment:

Permit Number:

- Check this box if tank gauging is used only for inventory control
- Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

Check this box if LLDs are not installed.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input type="checkbox"/> 3 g.p.h.; <input type="checkbox"/> 0.1 g.p.h. ; <input type="checkbox"/> 0.2 g.p.h.
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

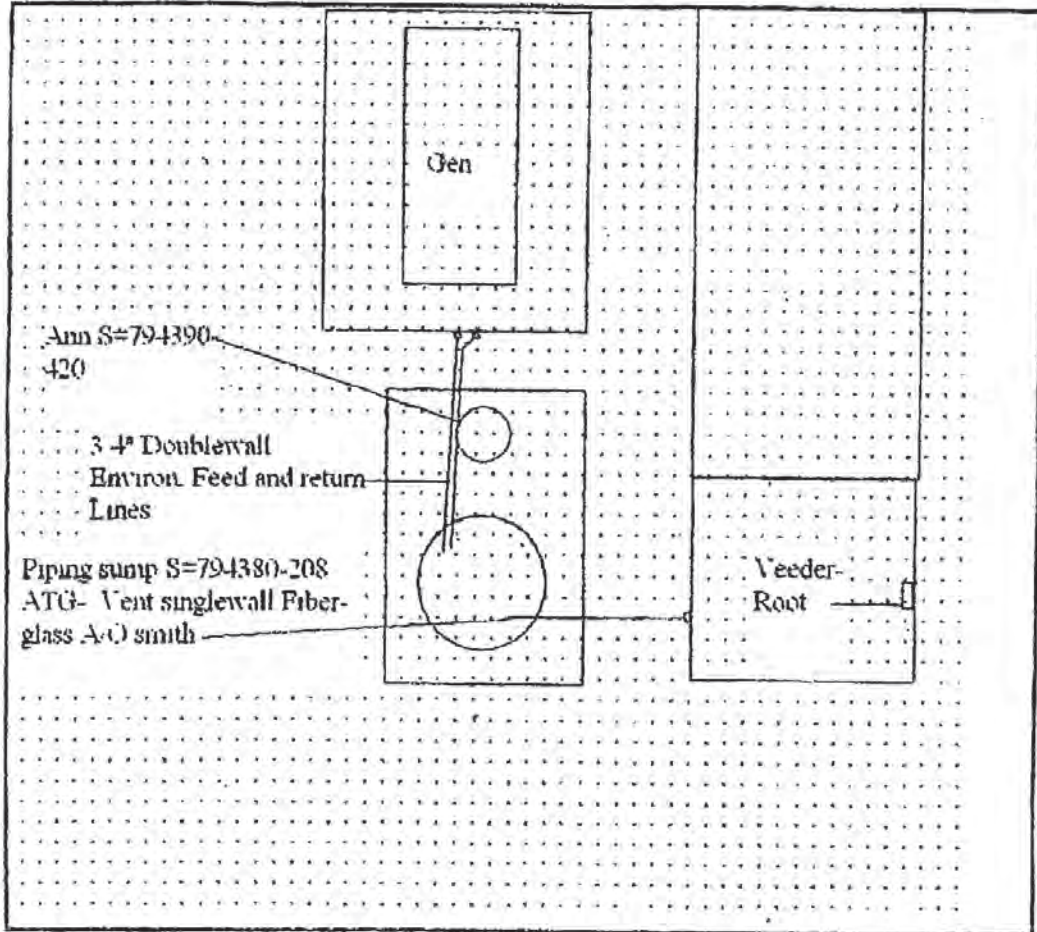

H. Comments (500 characters max. add additional sheets if needed): The Overfill alarm timer(witch Controls the Buzzer)

Was bad at the time of the inspection and was replaced on 2-4-2013.

Monitoring System Certification

UST Monitoring Site Plan

Site Address: 5255 Mt Etna San Diego Ca.

Date map was drawn: 11/14/08

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser parts, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name: San Diego Crime Lab	Date of Testing: 1-7-2013
Facility Address: 5255 Mt. Etna Dr.

MUNICIPAL FINANCIAL TEST DEMONSTRATING FINANCIAL RESPONSIBILITY FOR UNDERGROUND STORAGE TANKS BASED ON THE COMPREHENSIVE ANNUAL FINANCIAL REPORT FOR THE FISCAL YEAR ENDED JUNE 30, 2012

Pursuant to Federal Regulation 40 CFR 280.105 (c), this letter is in support of the use of the local governmental financial test to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by sudden accidental releases and/or non-sudden accidental releases in the amount of at least \$500,000 per occurrence and \$1 million annual aggregate arising from operating underground storage tanks (See Worksheet for Municipal Financial Test, Attachment A).

A listing of underground storage tank facilities that are assured by this financial test is included on Attachment B.

The County of San Diego has not received an adverse opinion, or a disclaimer of opinion, from an independent auditor on its financial statements for the latest completed fiscal year.

If you have any questions, please contact Tracy Drager, Deputy Controller at (858) 694-2324.

TO: Jack Miller, Director
Department of Environmental Health

FROM: Tracy M. Sandoval
General Manager/Auditor & Controller

CHIEF FINANCIAL OFFICER LETTER REGARDING FINANCIAL RESPONSIBILITY FOR UNDEGROUND STORAGE TANKS (UST) BASED ON THE COMPREHENSIVE ANNUAL FINANCIAL REPORT FOR THE FISCAL YEAR ENDED JUNE 30, 2012

The attached annual Chief Financial Officer letter demonstrating the County's financial responsibility for maintaining Underground Storage Tanks (UST) is submitted to the Department of Environmental Health pursuant to Title 40, Code of Federal Regulations (CFR), Part 280, Subpart H, Section 280.93.

The aforementioned federal regulations requires all owners and operators to show, through an approved method, their ability to pay for potential cleanup and third party damages resulting from accidental releases from their USTs. To demonstrate financial responsibility, the County of San Diego uses the approved local government financial test, pursuant to Title 40, CFR Section 280.105. In this regard, this report is submitted to your office in your capacity as the regulator in this area for the County of San Diego.

As shown in the attached report, the County currently owns and operates 42 underground tanks that are used to store gasoline and diesel fuel at various County facilities. Financial responsibility means that money will be available to meet potential cleanup costs or third party lawsuits resulting from leaking USTs.

The County successfully passed the test with a score of 2.821 (it must be greater than zero). Assumptions in the calculations, for which we received authorization from the Environmental Protection Agency, may include netting advance refunding of County debt and excluding certain Federal and State revenues with no matching local fund requirements.

As evidence that this procedure has been satisfactorily completed, copies of this letter are provided to the Department of General Services, Fleet Management, to post at all of the UST sites.

If you have any questions, please contact Tracy Drager, Deputy Controller at (858) 694-2324.

TRACY M. SANDOVAL
General Manager/Auditor & Controller

5. Total Funds	2,440,031	*	
6. Population	3,143	*	

Part II: Application of Test

7. Total Revenues to Population			
a. Total Revenues (from 1c)	3,943,693	*	
b. Population (from 6)	3,143	*	
c. Divide 7a by 7b	1,254.754		
d. Subtract 417	837.754		
e. Divide by 5,212	0.161		
f. Multiply by 4.095	<u>0.658</u>		
8. Total Expenses to Population			
a. Total Expenses (from 2c)	3,853,821	*	
b. Population (from 6)	3,143	*	
c. Divide 8a by 8b	1,226.160		
d. Subtract 524	702.160		
e. Divide by 5,401	0.130		
f. Multiply by 4.095	<u>0.532</u>		
9. Local Revenues to Total Revenues			
a. Local Revenues (from 3c)	1,614,755	*	
b. Total Revenues (from 1c)	3,943,693	*	
c. Divide 9a by 9b	0.409		
d. Subtract .695	(0.286)		
e. Divide by .205	<u>(1.393)</u>		
f. Multiply by 2.840	(3.956)		
10. Debt Service to Population			
a. Debt Service (from 4c)	197,792	*	
b. Population (from 6)	3,143	*	
c. Divide 10a by 10b	62.931		
d. Subtract 51	11.931		
e. Divide by 1,038	0.011		
f. Multiply by -1.866	<u>(0.021)</u>		

11. Debt Service to Total Revenues		
a. Debt Service (from 4c)	197,792	*
b. Total Revenues (from 1c)	3,943,693	*
c. Divide 11a by 11b	0.050	
d. Subtract .068	(0.018)	
e. Divide by .259	(0.069)	
f. Multiply by -3.533	<u>0.243</u>	
12. Total Revenues to Total Expenses		
a. Total Revenues (from 1c)	3,943,693	*
b. Total Expenses (from 2c)	3,853,821	*
c. Divide 12a by 12b	1.023	
d. Subtract .910	0.113	
e. Divide by .899	<u>0.126</u>	
f. Multiply by 3.458	0.436	
13. Funds Balance to Total Revenues		
a. Total Funds (from 5)	2,440,031	*
b. Total Revenues (from 1c)	3,943,693	*
c. Divide 13a by 13b	0.619	
d. Subtract .891	(0.272)	
e. Divide by 9.156	<u>(0.030)</u>	
f. Multiply by 3.270	(0.097)	
14. Funds Balance to Total Expenses		
a. Total funds (from 5)	2,440,031	*
b. Total Expenses (from 2c)	3,853,821	*
c. Divide 14a by 14b	0.633	
d. Subtract .866	(0.233)	
e. Divide by 6.409	<u>(0.036)</u>	
f. Multiply by 3.270	(0.119)	
15. Total Funds to Population		
a. Total Funds' (from 5)	2,440,031	*
b. Population (from 6)	3,143	*
c. Divide 15a by 15b	776.338	
d. Subtract 270	506.338	
e. Divide by 4,548	<u>0.111</u>	
f. Multiply by 1.866	0.208	
16. Add 7f + 8f + 9f + 10f + 11f + 12f + 13f + 14f + 15f + 4.937		
	2.821	

I hereby certify that the financial index shown on line 16 of the worksheet is greater than zero and that the wording of this letter is identical to the wording specified in 40 CFR Part 280.105(c) as such regulations were constituted on the date shown immediately below.

UST Monitoring Site Plan

Site Address: 5255 Mt Etna San Diego, Ca.

Date map was drawn: 11/14/08

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan.

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within 24 hours of discovery. Recovered hazardous materials, unless suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
 1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
 2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
 3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: (Complete only if applicable)

EQUIPMENT	LOCATION	AVAILABILITY
R10	R20	R30
R11	R21	R31

**UNDERGROUND STORAGE TANK
RESPONSE PLAN – PAGE 2**

(One form per facility)

VI. REPORTING AND RECORD KEEPING

We will report/record any overflow, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overflow, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

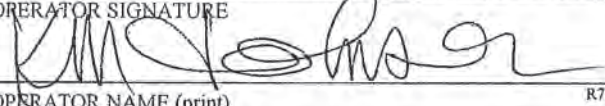

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

MUNICIPAL FINANCIAL TEST DEMONSTRATING FINANCIAL RESPONSIBILITY FOR UNDERGROUND STORAGE TANKS BASED ON THE COMPREHENSIVE ANNUAL FINANCIAL REPORT FOR THE FISCAL YEAR ENDED JUNE 30, 2012

Pursuant to Federal Regulation 40 CFR 280.105 (c), this letter is in support of the use of the local governmental financial test to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by sudden accidental releases and/or non-sudden accidental releases in the amount of at least \$500,000 per occurrence and \$1 million annual aggregate arising from operating underground storage tanks (See Worksheet for Municipal Financial Test, Attachment A).

A listing of underground storage tank facilities that are assured by this financial test is included on Attachment B.

The County of San Diego has not received an adverse opinion, or a disclaimer of opinion, from an independent auditor on its financial statements for the latest completed fiscal year.

If you have any questions, please contact Tracy Drager, Deputy Controller at (858) 694-2324.

December 14, 2012

TO: Jack Miller, Director
Department of Environmental Health

FROM: Tracy M. Sandoval
General Manager/Auditor & Controller

CHIEF FINANCIAL OFFICER LETTER REGARDING FINANCIAL RESPONSIBILITY FOR UNDEGROUND STORAGE TANKS (UST) BASED ON THE COMPREHENSIVE ANNUAL FINANCIAL REPORT FOR THE FISCAL YEAR ENDED JUNE 30, 2012

The attached annual Chief Financial Officer letter demonstrating the County's financial responsibility for maintaining Underground Storage Tanks (UST) is submitted to the Department of Environmental Health pursuant to Title 40, Code of Federal Regulations (CFR), Part 280, Subpart H, Section 280.93.

The aforementioned federal regulations requires all owners and operators to show, through an approved method, their ability to pay for potential cleanup and third party damages resulting from accidental releases from their USTs. To demonstrate financial responsibility, the County of San Diego uses the approved local government financial test, pursuant to Title 40, CFR Section 280.105. In this regard, this report is submitted to your office in your capacity as the regulator in this area for the County of San Diego.

As shown in the attached report, the County currently owns and operates 42 underground tanks that are used to store gasoline and diesel fuel at various County facilities. Financial responsibility means that money will be available to meet potential cleanup costs or third party lawsuits resulting from leaking USTs.

The County successfully passed the test with a score of 2.821 (it must be greater than zero). Assumptions in the calculations, for which we received authorization from the Environmental Protection Agency, may include netting advance refunding of County debt and excluding certain Federal and State revenues with no matching local fund requirements.

As evidence that this procedure has been satisfactorily completed, copies of this letter are provided to the Department of General Services, Fleet Management, to post at all of the UST sites.

If you have any questions, please contact Tracy Drager, Deputy Controller at (858) 694-2324.

TRACY M. SANDOVAL
General Manager/Auditor & Controller

BUSINESS NAME (Same as FACILITY NAME or DBA – Doing Business As) R02

County of San Diego Sheriff Crime Lab

BUSINESS SITE ADDRESS R03 CITY R04 ZIP CODE R05
 5255 Mt. Etna Drive San Diego CA 92117-

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan.

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within 24 hours of discovery. Recovered hazardous materials, unless suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
 1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
 2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
 3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: (Complete only if applicable)

EQUIPMENT	LOCATION	AVAILABILITY
R10	R20	R30
R11	R21	R31
R12	R22	R32
R13	R23	R33
R14	R24	R34
R15	R25	R35

IV. RESPONSIBLE PERSONS

THE FOLLOWING PERSON(S) IS/ARE RESPONSIBLE FOR AUTHORIZING ANY WORK NECESSARY UNDER THIS RESPONSE PLAN:

NAME	R40	TITLE	R50
James Parks		Building Maintenance Supervisor	
NAME	R41	TITLE	R51
NAME	R42	TITLE	R52
Michael Johnson		Senior Plumber/ DSO	
NAME	R43	TITLE	R53

V. MONITORING INDICATORS

IF MONITORING INDICATES A POSSIBLE UNAUTHORIZED RELEASE, STEPS TO VERIFY THE RELEASE WILL BE MADE AS FOLLOWS: R60
 Additional system testing or data collection Inspection by qualified persons Recalibration of equipment Other (specify):

1-800-253-9933**

**UNDERGROUND STORAGE TANK
RESPONSE PLAN – PAGE 2**

(One form per facility)

VI. REPORTING AND RECORD KEEPING

We will report/record any overflow, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overflow, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

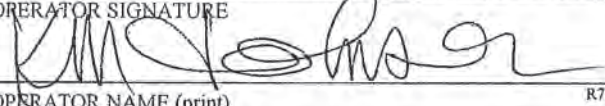

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

VII. OWNER/OPERATOR SIGNATURE

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in California Code of Regulations (CCR), Title 23, Division 3, Chapter 18, Section 2807,

500,000 dollars per occurrence

1 million dollars annual aggregate

1 million dollars per occurrence

AND

2 million dollars annual aggregate

B. County of San Diego hereby certifies that it is in compliance with the requirements of Section 2807,

(Name of Tank Owner or Operator)

California Code of Regulations, Title 23, Division 3, Chapter 18, Article 3, Section 2807.

The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Comp
Government guarantee	1600 Pacific Hwy San Diego, CA 92101	N/A for this Mechanism	\$500K per occurrence \$1Mil annual aggregate	Annual	Yes	Yes
Chief Financial Officer Letter	1600 Pacific Hwy San Diego, CA 92101	N/A for this mechanism	\$500K per occurrence \$1Mil annual aggregate	Annual	Yes	Yes

Note:

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance and shall maintain compliance with all conditions for participation in the Fund. See instructions.

D. Facility Name	Facility Address

FACILITY NAME SD County Sheriff Crime Lab

ADDRESS 5255 Mt. Etna Drive

CITY/ZIP San Diego, CA / 92117

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

Y*	N/A*	NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.	Y*	N/A*

Consent to inspect granted by: Inspection Contact Other: _____

ROUTINE INSPECTION

The annual monitoring system certification for the 4,000 gallon diesel underground storage tank (UST) was conducted today with Mike Johnson, DUSTO, and ICC Certified Service Technician Andrew Jauregui, from Jauregui and Culver Testing. The Sheriff Crime Lab was also inspected today with Lauren Sautkulis, Criminalist II. Consent for both inspections was granted.

NOTICE TO COMPLY:

1) VIOLATION: BUSINESS PLAN NOT CERTIFIED ANNUALLY

OBSERVATION: As of January 1, 2013, all permitted businesses are required to submit business plan information electronically using the California Environmental Reporting System (CERS). This business has failed to submit site business plan information electronically and has failed to certify the business plan annually.

CORRECTIVE ACTION: The CERS ID for this facility is 10386706. Go to the CERS homepage and set up the account for this business. Once access has been granted for this ID, submit all required elements for regulator review. Complete the CERS submittal by February 6, 2014 as evidence this violation has been corrected.

The Hazardous Materials Business Plan (inventory & site map, emergency contacts, emergency response plan, and employee training plan) is required by law to be certified online through the California Environmental Reporting System (CERS). For additional information about hazardous materials business plans and CERS, go to: <http://www.sdcounty.ca.gov/deh/hazmat/hmd-cers-info.html>

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

RECORD ID #	DEH2002-HUPFP-
114261	
DATE	1/6/2014

FACILITY ADDRESS: 5255 Mt. Etna Drive

ZIP CODE: 92117

REMARKS:

THE FOLLOWING AREAS WERE INCLUDED IN TODAY'S INSPECTION: 4,000 GALLON DIESEL UST, MAINTENANCE SHOP, FORENSIC LABS, CHEMICAL WASTE STORAGE ROOM, FIREARMS ANALYSIS UNIT, CRIME SCENE INVESTIGATIONS, AND CHEMICAL STORAGE ROOM.

- A) All components of the UST system were tested and passed. The monitoring plan, response plan, plot plan, CFO/CFR letter, facility page, tank page, monthly DUSTO reports, DUSTO employee training, and DUSTO letter of designation were reviewed.
- B) SB 989 testing was conducted on 10/25/2011 and is due by 10/25/2014.
- C) This site is a large quantity generator of medical waste. Be sure to upload the Medical Waste Management Plan (MWMP) in CERS.
- D) Three (3) years worth of hazardous waste shipping documents were reviewed during the inspection. Three (3) years worth of medical waste shipping documents were reviewed during the inspection.
- E) Remember to re certify your Hazardous Material Business Plan (HMBP) and annual carcinogen and toxicity report annually even if there have been no changes.

COMPLIANCE INSPECTION REPORT Small and Large Quantity Generators of Hazardous Waste Handlers of Hazardous Materials

PERMIT # 114261

DATE 1/6/2014

PAGE 3 OF 3

FACILITY ADDRESS: 5255 ML Etna Drive

ZIP: 92117

VIOLATION REPORT: The items checked below refer to specific section number of Title 19, 22 & 27 of the California Code of Regulations (CCR), Chapters 65, 66 & 69 of the Health and Safety Code, and/or the San Diego County Code (SDCC). Small Quantity Hazardous Waste Generator - (SQGW); Large Hazardous Waste Quantity Generator - (LQGW); Code 49 of Federal Regulations - (CFR). All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use the Corrective Action Form (HM-926) to document your return to compliance. Your Specialist can provide this form. Please call (858) 585-6888 or your Specialist if you have any questions.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document installation, testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

Permit Number:

Software Version Installed: 15.01

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shutdown? (Check all that apply) <input type="checkbox"/> Sump/Trench Sensors; <input type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shutdown due to leaks and sensor failure/disconnection? <input type="checkbox"/> Yes; <input type="checkbox"/> No.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90%
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments (500 characters max. add additional sheets if needed): **The Overfill alarm did not go off during testing. R1-Relay in Veeder Root was bad. I moved overfill to R2-relay and reprogramed, then tested while inspector was on site. All tested out good.**

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment:

Permit Number:

- Check this box if tank gauging is used only for inventory control
- Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

Check this box if LLDs are not installed.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input type="checkbox"/> 3 g.p.h.; <input type="checkbox"/> 0.1 g.p.h. ; <input type="checkbox"/> 0.2 g.p.h.
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In Section H below, describe how and when these deficiencies were or will be corrected.

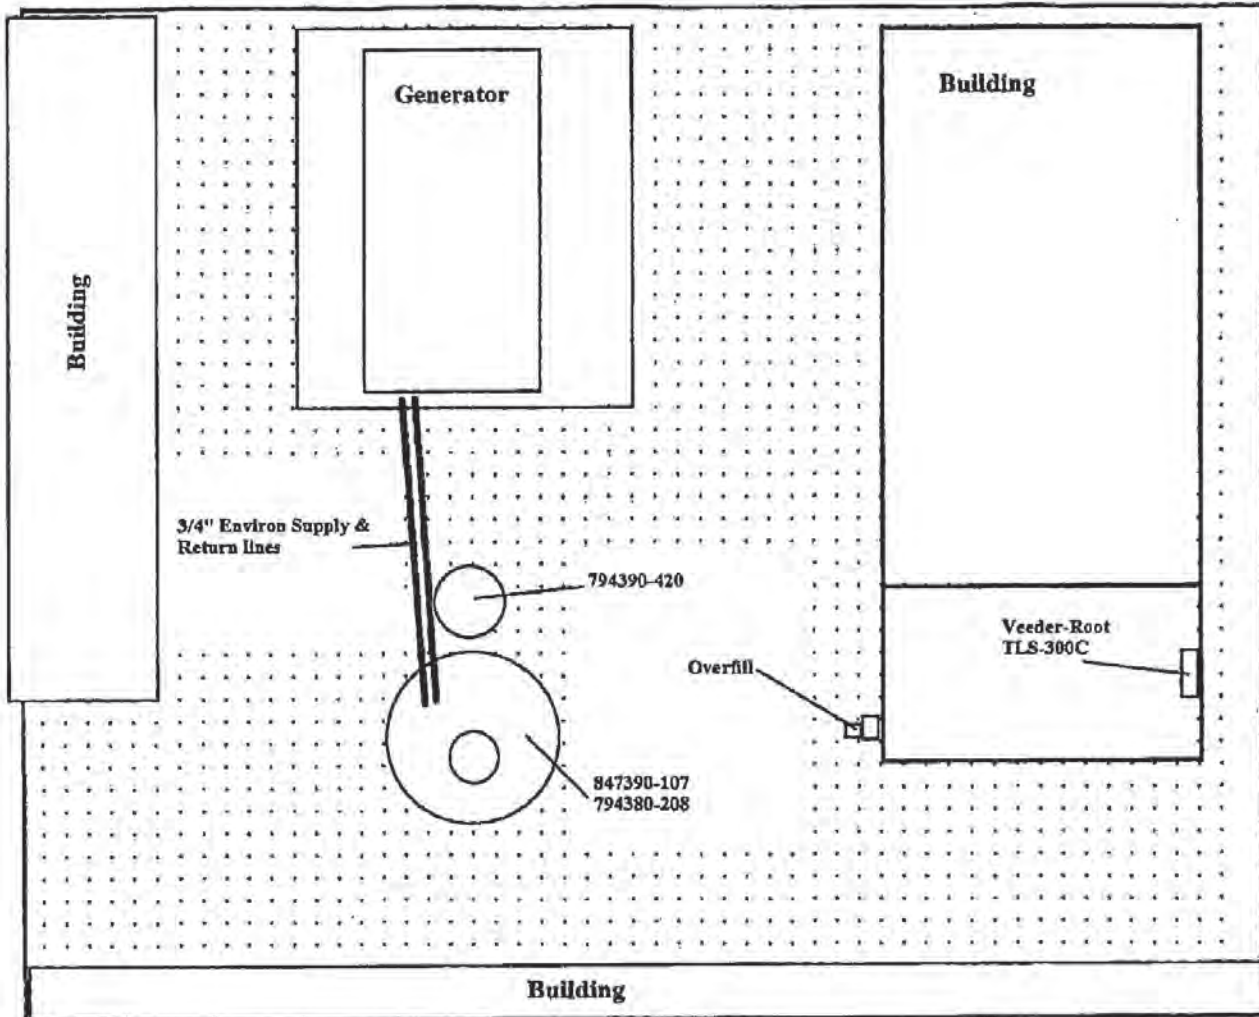

H. Comments (500 characters max. add additional sheets if needed):

UST Monitoring Site Plan

Site Address: **5255 Mt. Etha Rd. San Diego, CA**

Date map was drawn: **01-06-2014**

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

For State Use Only

CERTIFICATION OF FINANCIAL RESPONSIBILITY FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in California Code of Regulations (CCR), Title 23, Division 3, Chapter 18, Section 2807,

500,000 dollars per occurrence

1 million dollars annual aggregate

1 million dollars per occurrence

AND

2 million dollars annual aggregate

B. County of San Diego hereby certifies that it is in compliance with the requirements of Section 2807,

(Name of Tank Owner or Operator)

California Code of Regulations, Title 23, Division 3, Chapter 18, Article 3, Section 2807.

The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Comp
Government guarantee	1600 Pacific Hwy San Diego, CA 92101	N/A for this Mechanism	\$500K per occurrence \$1Mil annual aggregate	Annual	Yes	Yes
Chief Financial Officer Letter	1600 Pacific Hwy San Diego, CA 92101	N/A for this mechanism	\$500K per occurrence \$1Mil annual aggregate	Annual	Yes	Yes

Note:

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance and shall maintain compliance with all conditions for participation in the Fund. See instructions.

JACK MILLER
ASSISTANT DIRECTOR

Medical Waste Management Plan

The San Diego County Department of Environmental Health, Hazardous Materials Division is the local agency designated by the California Department of Public Health to implement the Medical Waste Management Act. This law governs the generation, handling, storage, transportation, treatment and disposal of medical waste to protect the public and the environment from potential infectious exposure to disease causing agents.

The Medical Waste Management Plan is a document that describes the types and amount of medical waste generated at a specific location, and indicates how wastes are managed to ensure proper treatment and disposal. All Large Quantity Generators (LQGs generate **≥200 lbs.** of medical waste per month) and those Small Quantity Generators (SQGs generate **<200 lbs.** of medical waste per month) that treat their medical waste onsite are required to complete a Medical Waste Management Plan on the forms prepared by the enforcement agency. [Authority cited California Health and Safety Code §117600 et seq.]

Small Quantity Generators of medical waste that do not treat their medical waste onsite are not required to complete and submit this form to the local enforcement agency. They are, however, responsible for maintaining on file at their office a document stating how they contain, store, treat, and dispose of any medical waste generated. Completing a Medical Waste Management Plan and keeping at their office can satisfy this requirement.

Attached is a "blank" Medical Waste Management Plan form for your use. Please complete and sign the form and mail the original to the address listed above. Retain a copy for your records. If there are changes in any of the information on your Medical Waste Management Plan, submit a revised form to the address listed above within 30 days of changes. Annual submittal of the Medical Waste Management Plan is not required.

If you have any questions, please contact your area inspector or the Hazardous Materials Division Duty Desk at (619) 338-2231.

"Environmental and public health through leadership, partnership and science"

MEDICAL WASTE – DEFINITION OF TERMS

MEDICAL WASTE means biohazardous waste or sharps waste that has been generated during the diagnosis, treatment or immunization of human beings or animals, in research pertaining thereto, in the production or testing of biologicals, or which may contain infectious agents, those organisms classified as Biosafety Level II, III, or IV by the federal Centers for Disease Control and Prevention and may pose a substantial threat to health. Medical waste includes trauma scene waste. Medical waste does not include hazardous waste, radioactive waste, medical solid waste or household waste.

BIOHAZARDOUS WASTE means any of the following:

- (a) Laboratory waste, including, but not limited to, all of the following:
 - (1) Human or animal specimen cultures from medical and pathology laboratories.
 - (2) Cultures and stocks of infectious agents from research and industrial laboratories.
 - (3) Wastes from the production of bacteria, viruses, spores, discarded live and attenuated vaccines used in human health care or research, discarded animal vaccines, including Brucellosis and Contagious Ecthyma, as identified by the department, and culture dishes and de-vices used to transfer, inoculate, and mix cultures.
- (b) Human surgery specimens or tissues removed at surgery or autopsy, which are suspected by the attending physician and surgeon or dentist of being contaminated with infectious agents known to be contagious to humans.
- (c) Animal parts, tissues, fluids, or carcasses suspected by the attending veterinarian of being contaminated with infectious agents known to be contagious to humans.
- (d) Waste, which at the point of transport from the generator's site, at the point of disposal, or thereafter, contains recognizable fluid blood, fluid blood products, containers or equipment containing blood that is fluid, or blood from animals known to be infected with diseases which are highly communicable to humans.
- (e) Waste containing discarded materials contaminated with excretion, exudate, or secretions from humans or animals that are required to be isolated by the infection control staff, the attending physician and surgeon, the attending veterinarian, or the local health officer, to protect others from highly communicable diseases or diseases of animals that are highly communicable to humans.
- (f)
 - (1) Waste which is hazardous only because it is comprised of human surgery specimens or tissues which have been fixed in formaldehyde or other fixatives, or only because the waste is contaminated through contact with, or having previously contained, chemotherapeutic agents, including, but not limited to, gloves, disposable gowns, towels, and intravenous solution bags and attached tubing which are empty. A biohazardous waste which meets the conditions of this paragraph is not subject to Chapter 6.5 (commencing with Section 25100) of Division 20.
 - (2) For purposes of this subdivision, "chemotherapeutic agent" means an agent that kills or prevents the reproduction of malignant cells.
 - (3) For purposes of this subdivision, a container, or inner liner removed from a container, which previously contained a chemotherapeutic agent, is empty if the container or inner liner removed from the container has been emptied by the generator as much as possible, using methods commonly employed to remove waste or material from containers or liners, so that the following conditions are met:
 - (A) If the material which the container or inner liner held is pourable, no material can be poured or drained from the container or inner liner when held in any orientation, including, but not limited to, when tilted or inverted.
 - (B) If the material which the container or inner liner held is not pourable, no material or waste remains in the container or inner liner that can feasibly be removed by scraping.
- (g) Waste that is hazardous only because it is comprised of pharmaceuticals, as defined in Section 117747. Notwithstanding subdivision (a) of Section 117690, medical waste includes biohazardous waste that meets the conditions of this subdivision. Biohazardous waste that meets the conditions of this subdivision is not subject to Chapter 6.5 (commencing with Section 25100) of Division 20.

SHARPS CONTAINERS are leakproof, rigid, puncture-resistant containers which when sealed cannot be reopened without great difficulty. These containers must be labeled with the words "Sharps Waste" or with the international Biohazard symbol and the word "BIOHAZARD." These containers must be labeled with the Generator's name, address, and phone number in a conspicuous location on the container when first used. Needles and syringes shall not be clipped prior to disposal. All sharps containers must be managed as MEDICAL WASTE.

"BIOHAZARD BAG" means a disposable red bag which is impervious to moisture and has strength sufficient to preclude ripping, tearing, or bursting under normal conditions of usage and handling of a waste-filled bag. A Biohazard bag shall be constructed of material of sufficient single thickness strength to pass the 165-gram dropped dart impact resistance test as prescribed by Standard D 1709-91 of the American Society for Testing and Materials and certified by the bag manufacturer. The bags shall be securely tied so as to prevent leakage or expulsion of solid or liquid wastes during future storage, handling, or transport. The bags shall be **RED** in color and conspicuously labeled with the international biohazard symbol and the "Biohazard." The bags shall be labeled with the Generator's name, address, and phone number in a conspicuous location on the bag when first used. If the waste is to be autoclaved, the outer bag may be colorless as long as the inner bag is red and both bags meet the stated strength criteria. All waste in red biohazard bags must be managed as MEDICAL WASTE.

STORAGE AREA WARNING SIGN is: A sign posted at a designated accumulation area used to store medical waste which must read in English, "CAUTION—BIOHAZARDOUS WASTE STORAGE AREA—UNAUTHORIZED PERSONS KEEP OUT" and in Spanish, "CUIDADO-ZONA DE RESIDUOS—BIOLOGICOS PELIGROSOS—PROHIBIDA LA ENTRADA A PERSONAS NO AUTORIZADAS" or in another language determined to be appropriate.

Intermediate storage areas shall be marked with the international biohazardous symbol or the signage noted above. These warning signs shall be readily legible from a distance of five feet.

Types of wastes generated

Sharps – needles, broken glass, blades.

Blood or body fluids - liquid blood elements or other regulated body fluids, or articles contaminated with blood or body fluids.

Estimated monthly amount 50 lbs

Estimated monthly amount 250 lbs

Laboratory wastes - specimens or microbiological cultures, stocks of infectious agents, live and attenuated vaccines, and culture media.

Isolation waste – waste contaminated with excretion, exudates, or secretions from humans or animals who are isolated due to highly communicable diseases.

Estimated monthly amount _____ lbs

Estimated monthly amount _____ lbs

Waste contaminated with fixatives or chemotherapeutic agents.

Surgical specimens – human or animal parts or tissues removed surgically or by autopsy.

Estimated monthly amount _____ lbs

Estimated monthly amount _____ lbs

Pathology waste – recognizable human anatomical parts.

Contaminated animals – animal carcasses, body parts, bedding materials.

Estimated monthly amount _____ lbs

Estimated monthly amount _____ lbs

Other (please specify): _____

Home Generated Sharps

Estimated monthly amount _____ lbs

Estimated monthly amount _____ lbs

Estimate of **TOTAL** monthly medical waste generated: 300 lbs

Method of treatment performed onsite (if applicable):

Steam Autoclaving

Other state approved alternative technology (please specify below):

Medical Waste Management Plan

SPECIALIST <u>Kasprovich</u>
INSPECTION CONTACT <u>Lauren Sautkulis</u>
TITLE <u>Criminalist</u>
PHONE <u>(858) 467-4605</u>

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

Y*	N/A*	NOTE: <u>Reinspection fees will be charged if additional inspections are required to determine compliance.</u>	Y*	N/A*	Permit Expires on: <u>3/31/2015</u>

Consent to inspect granted by: Inspection Contact Other: _____

ROUTINE INSPECTION

The annual monitoring system certification for the 4,000 gallon diesel underground storage tank (UST) was conducted today with Melvin Zamora, DUSTO, and ICC Certified Service Technician John Culver, from Jauregui and Culver Testing. The Sheriff Crime Lab was also inspected today with Lauren Sautkulis, Criminalist II. Consent for both inspections was granted.

REMARKS:

THE FOLLOWING AREAS WERE INCLUDED IN TODAY'S INSPECTION: 4,000 GALLON DIESEL UST, MAINTENANCE SHOP, FORENSIC LABS, CHEMICAL WASTE STORAGE ROOM, FIREARMS ANALYSIS UNIT, CRIME SCENE INVESTIGATIONS, AND CHEMICAL STORAGE ROOM.

A) All components of the UST system were tested and passed. The monitoring plan, response plan, plot plan, CFO/CFR letter, facility page, tank page, monthly DUSTO reports, DUSTO employee training, and DUSTO letter of designation were reviewed.

B) SB 989 testing was conducted on 10/24/2014 and is due by 10/24/2017.

The Hazardous Materials Business Plan (inventory & site map, emergency contacts, emergency response plan, and employee training plan) is required by law to be certified online through the California Environmental Reporting System (CERS). For additional information about hazardous materials business plans and CERS, go to: <http://www.sdcounty.ca.gov/deh/hazmat/hmd-cers-info.html>

TITLE OF FACILITY REPRESENTATIVE

**SAN DIEGO COUNTY DEPARTMENT OF ENVIRONMENTAL HEALTH
HAZARDOUS MATERIALS DIVISION
Annual Carcinogen and Reproductive Toxin Reporting List**

Business Name: San Diego Sheriff's Crime Laboratory

Business Address: 5255 Mount Etna Drive, San Diego, CA 92117-6912

Business Owner or Operator: San Diego Sheriff's Department

Please complete the following by entering the chemical name in the chemical name column and then place a check ✓ in the quantity column that most closely estimates the amount on hand. If measured by volume, check the appropriate gallon column(s). If measured by weight, check the appropriate pound column(s). If the chemical is a trade secret, you should check the trade secret box. For example, if you have one pint of benzene you would write benzene in the chemical name column and place a check ✓ in the <1-gallon column.

(PLEASE NOTE: the symbol < means less than).

Monitoring System Certification

UST Monitoring Site Plan

Site Address: 5255 Mt Etna San Diego, Ca.

Date map was drawn: 11/14/08

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

For State Use Only

CERTIFICATION OF FINANCIAL RESPONSIBILITY FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in California Code of Regulations (CCR), Title 23, Division 3, Chapter 18, Section 2807,

500,000 dollars per occurrence

1 million dollars annual aggregate

1 million dollars per occurrence

AND

2 million dollars annual aggregate

B. County of San Diego hereby certifies that it is in compliance with the requirements of Section 2807,

(Name of Tank Owner or Operator)

California Code of Regulations, Title 23, Division 3, Chapter 18, Article 3, Section 2807.

The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Comp
Government guarantee	1600 Pacific Hwy San Diego, CA 92101	N/A for this Mechanism	\$500K per occurrence \$1Mil annual aggregate	Annual	Yes	Yes
Chief Financial Officer Letter	1600 Pacific Hwy San Diego, CA 92101	N/A for this mechanism	\$500K per occurrence \$1Mil annual aggregate	Annual	Yes	Yes

Note:

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance and shall maintain compliance with all conditions for participation in the Fund. See instructions.

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan.

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within 24 hours of discovery. Recovered hazardous materials, unless suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
 1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
 2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
 3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: (Complete only if applicable)

EQUIPMENT	LOCATION	AVAILABILITY
R10	R20	R30
R11	R21	R31
R12	R22	R32
R13	R23	R33
R14	R24	R34
R15	R25	R35

IV. RESPONSIBLE PERSONS

**UNDERGROUND STORAGE TANK
RESPONSE PLAN – PAGE 2**

(One form per facility)

VI. REPORTING AND RECORD KEEPING

We will report/record any overflow, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overflow, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

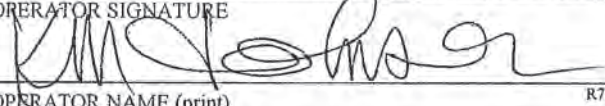

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

VII. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

CHIEF FINANCIAL OFFICER LETTER REGARDING FINANCIAL RESPONSIBILITY FOR
UNDERGROUND STORAGE TANKS (UST) BASED ON THE COMPREHENSIVE ANNUAL
FINANCIAL REPORT FOR THE FISCAL YEAR ENDED JUNE 30, 2015

The attached annual Chief Financial Officer letter demonstrating the County's financial responsibility for maintaining Underground Storage Tanks (UST) is submitted to the Department of Environmental Health pursuant to Title 40, Code of Federal Regulations (CFR), Part 280, Subpart H, Section 280.93.

The aforementioned federal regulations requires all owners and operators to show, through an approved method, their ability to pay for potential cleanup and third party damages resulting from accidental releases for their USTs. To demonstrate financial responsibility, the County of San Diego uses the approved local government financial test, pursuant to Title 40, CFR Section 280.105. In this regard, this report is submitted to your office in your capacity as the regulator in this area for the County of San Diego.

As shown in the attached report, the County currently owns and operates 44 underground tanks that are used to store gasoline and diesel fuel at various County facilities. Financial responsibility means that money will be available to meet potential cleanup costs or third party lawsuits resulting from leaking USTs.

The County successfully passed the test with a score of 2.776 (it must be greater than zero). Assumptions in the calculations, for which we received authorization from the Environmental Protection Agency, may include netting advance refunding of County debt and excluding certain Federal and State revenues with no matching local fund requirements.

MUNICIPAL FINANCIAL TEST DEMONSTRATING FINANCIAL RESPONSIBILITY FOR
UNDERGROUND STORAGE TANKS BASED ON THE COMPREHENSIVE ANNUAL
FINANCIAL REPORT FOR THE FISCAL YEAR ENDED JUNE 30, 2015

Pursuant to Federal Regulation 40 CFR 280.105 (c), this letter is in support of the use of the local governmental financial test to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by sudden accidental releases and/or non-sudden accidental releases in the amount of at least \$500,000 per occurrence and \$1 million annual aggregate arising from operating underground storage tanks (See Worksheet for Municipal Financial Test, Attachment A).

A listing of underground storage tank facilities that are assumed by this financial test is included on Attachment B.

The County of San Diego has not received an adverse opinion, or a disclaimer of opinion, from an independent auditor on its financial statements for the latest completed fiscal year.

If you have any questions, please contact Blanca Miller, Manager, Auditor & Controller at (858) 694-2323.

f. Multiply by 4.095	<u>0.697</u>	
8. Total Expenses to Population		
a. Total Expenses (from 2c)	4,102,922	*
b. Population (from 6)	3,227	*
c. Divide 8a by 8b	1,271.435	
d. Subtract 524	747.435	
e. Divide by 5,401	0.138	
f. Multiply by 4.095	<u>0.567</u>	
9. Local Revenues to Total Revenues		
a. Local Revenues (from 3c)	1,692,389	*
b. Total Revenues (from 1c)	4,208,286	*
c. Divide 9a by 9b	0.402	
d. Subtract .695	(0.293)	
e. Divide by .205	(1.429)	
f. Multiply by 2.840	<u>(4.057)</u>	
10. Debt Service to Population		
a. Debt Service (from 4c)	296,194	*
b. Population (from 6)	3,227	*
c. Divide 10a by 10b	91.786	
d. Subtract 51	40.786	
e. Divide by 1,038	0.039	
f. Multiply by -1.866	<u>(0.073)</u>	

11. Debt Service to Total Revenues		
a. Debt Service (from 4c)	296,194	*
b. Total Revenues (from 1c)	4,208,286	*
c. Divide 11a by 11b	0.070	
d. Subtract .068	0.002	
e. Divide by .259	0.009	
f. Multiply by -3.533	<u>(0.033)</u>	
12. Total Revenues to Total Expenses		
a. Total Revenues (from 1c)	4,208,286	*
b. Total Expenses (from 2c)	4,102,922	*
c. Divide 12a by 12b	1.026	
d. Subtract .910	0.116	
e. Divide by .899	<u>0.129</u>	
f. Multiply by 3.458	0.445	
13. Funds Balance to Total Revenues		
a. Total Funds (from 5)	2,983,885	*
b. Total Revenues (from 1c)	4,208,286	*
c. Divide 13a by 13b	0.709	
d. Subtract .891	(0.182)	
e. Divide by 9.156	<u>(0.020)</u>	
f. Multiply by 3.270	(0.065)	
14. Funds Balance to Total Expenses		
a. Total Funds (from 5)	2,983,885	*
b. Total Expenses (from 2c)	4,102,922	*
c. Divide 14a by 14b	0.727	
d. Subtract .866	(0.139)	
e. Divide by 6.409	<u>(0.022)</u>	
f. Multiply by 3.270	(0.071)	
15. Total Funds to Population		
a. Total Funds (from 5)	2,983,885	*
b. Population (from 6)	3,227	*
c. Divide 15a by 15b	924.662	
d. Subtract 270	654.662	
e. Divide by 4,548	<u>0.144</u>	
f. Multiply by 1.866	0.269	
16. Add 7f + 8f + 9f + 10f + 11f + 12f + 13f + 14f + 15f + 4.937	2.616	

I hereby certify that the financial index shown on line 16 of the worksheet is greater than zero and that the wording of this letter is identical to the wording specified in 40 CFR Part 280.105(c) as such regulations were constituted on the date shown immediately below.

Tracy Drager

Business Owner or Operator: San Diego Sheriff's Department

Please complete the following by entering the chemical name in the chemical name column and then place a check ✓ in the quantity column that most closely estimates the amount on hand. If measured by volume, check the appropriate gallon column(s). If measured by weight, check the appropriate pound column(s). If the chemical is a trade secret, you should check the trade secret box. For example, if you have one pint of benzene you would write benzene in the chemical name column and place a check ✓ in the <1-gallon column.

(PLEASE NOTE: the symbol < means less than).

JACK MILLER
ASSISTANT DIRECTOR

Medical Waste Management Plan

The San Diego County Department of Environmental Health, Hazardous Materials Division is the local agency designated by the California Department of Public Health to implement the Medical Waste Management Act. This law governs the generation, handling, storage, transportation, treatment and disposal of medical waste to protect the public and the environment from potential infectious exposure to disease causing agents.

The Medical Waste Management Plan is a document that describes the types and amount of medical waste generated at a specific location, and indicates how wastes are managed to ensure proper treatment and disposal. All Large Quantity Generators (LQGs generate **≥200 lbs.** of medical waste per month) and those Small Quantity Generators (SQGs generate **<200 lbs.** of medical waste per month) that treat their medical waste onsite are required to complete a Medical Waste Management Plan on the forms prepared by the enforcement agency. [Authority cited California Health and Safety Code §117600 et seq.]

Small Quantity Generators of medical waste that do not treat their medical waste onsite are not required to complete and submit this form to the local enforcement agency. They are, however, responsible for maintaining on file at their office a document stating how they contain, store, treat, and dispose of any medical waste generated. Completing a Medical Waste Management Plan and keeping at their office can satisfy this requirement.

Attached is a "blank" Medical Waste Management Plan form for your use. Please complete and sign the form and mail the original to the address listed above. Retain a copy for your records. If there are changes in any of the information on your Medical Waste Management Plan, submit a revised form to the address listed above within 30 days of changes. Annual submittal of the Medical Waste Management Plan is not required.

If you have any questions, please contact your area inspector or the Hazardous Materials Division Duty Desk at (619) 338-2231.

"Environmental and public health through leadership, partnership and science"

MEDICAL WASTE – DEFINITION OF TERMS

MEDICAL WASTE means biohazardous waste or sharps waste that has been generated during the diagnosis, treatment or immunization of human beings or animals, in research pertaining thereto, in the production or testing of biologicals, or which may contain infectious agents, those organisms classified as Biosafety Level II, III, or IV by the federal Centers for Disease Control and Prevention and may pose a substantial threat to health. Medical waste includes trauma scene waste. Medical waste does not include hazardous waste, radioactive waste, medical solid waste or household waste.

BIOHAZARDOUS WASTE means any of the following:

- (a) Laboratory waste, including, but not limited to, all of the following:
 - (1) Human or animal specimen cultures from medical and pathology laboratories.
 - (2) Cultures and stocks of infectious agents from research and industrial laboratories.
 - (3) Wastes from the production of bacteria, viruses, spores, discarded live and attenuated vaccines used in human health care or research, discarded animal vaccines, including Brucellosis and Contagious Ecthyma, as identified by the department, and culture dishes and de-vices used to transfer, inoculate, and mix cultures.
- (b) Human surgery specimens or tissues removed at surgery or autopsy, which are suspected by the attending physician and surgeon or dentist of being contaminated with infectious agents known to be contagious to humans.
- (c) Animal parts, tissues, fluids, or carcasses suspected by the attending veterinarian of being contaminated with infectious agents known to be contagious to humans.
- (d) Waste, which at the point of transport from the generator's site, at the point of disposal, or thereafter, contains recognizable fluid blood, fluid blood products, containers or equipment containing blood that is fluid, or blood from animals known to be infected with diseases which are highly communicable to humans.
- (e) Waste containing discarded materials contaminated with excretion, exudate, or secretions from humans or animals that are required to be isolated by the infection control staff, the attending physician and surgeon, the attending veterinarian, or the local health officer, to protect others from highly communicable diseases or diseases of animals that are highly communicable to humans.
- (f)
 - (1) Waste which is hazardous only because it is comprised of human surgery specimens or tissues which have been fixed in formaldehyde or other fixatives, or only because the waste is contaminated through contact with, or having previously contained, chemotherapeutic agents, including, but not limited to, gloves, disposable gowns, towels, and intravenous solution bags and attached tubing which are empty. A biohazardous waste which meets the conditions of this paragraph is not subject to Chapter 6.5 (commencing with Section 25100) of Division 20.
 - (2) For purposes of this subdivision, "chemotherapeutic agent" means an agent that kills or prevents the reproduction of malignant cells.
 - (3) For purposes of this subdivision, a container, or inner liner removed from a container, which previously contained a chemotherapeutic agent, is empty if the container or inner liner removed from the container has been emptied by the generator as much as possible, using methods commonly employed to remove waste or material from containers or liners, so that the following conditions are met:
 - (A) If the material which the container or inner liner held is pourable, no material can be poured or drained from the container or inner liner when held in any orientation, including, but not limited to, when tilted or inverted.
 - (B) If the material which the container or inner liner held is not pourable, no material or waste remains in the container or inner liner that can feasibly be removed by scraping.
- (g) Waste that is hazardous only because it is comprised of pharmaceuticals, as defined in Section 117747. Notwithstanding subdivision (a) of Section 117690, medical waste includes biohazardous waste that meets the conditions of this subdivision. Biohazardous waste that meets the conditions of this subdivision is not subject to Chapter 6.5 (commencing with Section 25100) of Division 20.

SHARPS CONTAINERS are leakproof, rigid, puncture-resistant containers which when sealed cannot be reopened without great difficulty. These containers must be labeled with the words "Sharps Waste" or with the international Biohazard symbol and the word "BIOHAZARD." These containers must be labeled with the Generator's name, address, and phone number in a conspicuous location on the container when first used. Needles and syringes shall not be clipped prior to disposal. All sharps containers must be managed as MEDICAL WASTE.

"BIOHAZARD BAG" means a disposable red bag which is impervious to moisture and has strength sufficient to preclude ripping, tearing, or bursting under normal conditions of usage and handling of a waste-filled bag. A Biohazard bag shall be constructed of material of sufficient single thickness strength to pass the 165-gram dropped dart impact resistance test as prescribed by Standard D 1709-91 of the American Society for Testing and Materials and certified by the bag manufacturer. The bags shall be securely tied so as to prevent leakage or expulsion of solid or liquid wastes during future storage, handling, or transport. The bags shall be **RED** in color and conspicuously labeled with the international biohazard symbol and the "Biohazard." The bags shall be labeled with the Generator's name, address, and phone number in a conspicuous location on the bag when first used. If the waste is to be autoclaved, the outer bag may be colorless as long as the inner bag is red and both bags meet the stated strength criteria. All waste in red biohazard bags must be managed as MEDICAL WASTE.

STORAGE AREA WARNING SIGN is: A sign posted at a designated accumulation area used to store medical waste which must read in English, "CAUTION—BIOHAZARDOUS WASTE STORAGE AREA—UNAUTHORIZED PERSONS KEEP OUT" and in Spanish, "CUIDADO-ZONA DE RESIDUOS—BIOLOGICOS PELIGROSOS—PROHIBIDA LA ENTRADA A PERSONAS NO AUTORIZADAS" or in another language determined to be appropriate.

Intermediate storage areas shall be marked with the international biohazardous symbol or the signage noted above. These warning signs shall be readily legible from a distance of five feet.

Types of wastes generated

 Sharps – needles, broken glass, blades.Estimated monthly amount 50 lbs **Blood or body fluids** - liquid blood elements or other regulated body fluids, or articles contaminated with blood or body fluids.Estimated monthly amount 250 lbs **Laboratory wastes** - specimens or microbiological cultures, stocks of infectious agents, live and attenuated vaccines, and culture media.

Estimated monthly amount _____ lbs

 Isolation waste – waste contaminated with excretion, exudates, or secretions from humans or animals who are isolated due to highly communicable diseases.

Estimated monthly amount _____ lbs

 Waste contaminated with fixatives or chemotherapeutic agents.

Estimated monthly amount _____ lbs

 Surgical specimens – human or animal parts or tissues removed surgically or by autopsy.

Estimated monthly amount _____ lbs

 Pathology waste – recognizable human anatomical parts.

Estimated monthly amount _____ lbs

 Contaminated animals – animal carcasses, body parts, bedding materials.

Estimated monthly amount _____ lbs

 Other (please specify): _____

Estimated monthly amount _____ lbs

 Home Generated Sharps

Estimated monthly amount _____ lbs

Estimate of **TOTAL** monthly medical waste generated: 300 lbs

Method of treatment performed onsite (if applicable):

 Steam Autoclaving **Other state approved alternative technology** (please specify below):

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

CONSENT TO CONDUCT INSPECTION GRANTED BY: Lauren Sautkulis

TITLE: Assistant Safety Manager

INTRODUCTION:

Annual UST monitoring certification and routine hazardous materials/hazardous waste/medical waste inspection conducted today to verify compliance with unified program facility permit regulations. Derek Perkins, technician for J&C Inc (ICC & VR certifications current) performed the UST tests and Mike Johnson, Senior Plumber/DSO was also present for the monitoring certification. Lauren Sautkulis assisted with the lab walk-through.

At the time of inspection, this facility is a large quantity generator of medical waste, stores hazardous materials above HMBP thresholds, and is also a small quantity generator of hazardous waste.

INSPECTION REMARKS:

Action Items to be completed online in the California Environmental Reporting System (CERS):

- Submittal dated 9/24/15 was not accepted because it was missing the most recent copy of the CFO letter was not included in the submittal. A copy was found on site in the UST compliance binder, and per Mike Johnson (Designated Operator) it was uploaded to CERS but he does not have the permission rights to actually submit it. Please have Connie Milton or another lead user for this site submit and ensure the most recent copy of the CFO letter (Dated 12/2/15) is included in the next submittal.
- The Hazardous Materials Inventory submittal dated 9/24/15 was also not accepted due to the reporting units used for liquid nitrogen. Please update the units to match the units in which it is stored (gallons) and resubmit by 2/6/15 (within 30 days).

UST Inspection Summary:

- Facility has one suction system Diesel UST for the emergency generator.
- All liquid sensors tested and passed.
- overflow tested and passed
- no line leak detectors required for the suction system.
- no UDC monitoring required for the suction system.
- Spill bucket tested with water for one hour and passed.
- Online records reviewed: CERS submittal last received on 9/24/15 including tank information, monitoring plan, plot plan, owner/operator compliance documentation, CFR/CFO letter (see above remark), and response plans.
- On-site UST records reviewed and in order including past monitoring certification and test records, maintenance records, alarm history/system set up, monthly DUSTO inspections, SB989 (10/24/14) and DUSTO training records (12/16/15)

COUNTY OF SAN DIEGO

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

INSPECTION DATE: **01/06/2016** PAGE **2** OF **2**
RECORD ID #: **DEH2002-HUPFP-114261**

Hazardous Materials/Hazardous Waste/Medical Waste Inspection Summary:

- All waste containers observed today were properly labeled and stored.
- waste receipts reviewed.
- Waste storage room is well-kept and observed to be in compliance.
- Medical Waste Management Plan (MWMP) is up-to-date and last submitted in CERS on 9/24/15.
- Hazardous Materials Business Plan (HMBP) just needs a minor edit (see remarks above).

Monitoring System Certification

UST Monitoring Site Plan

Site Address: 5255 Mt Etna San Diego, Ca.

Date map was drawn: 11/14/08

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

State of California
 State Water Resources Control Board
 Division of Financial Assistance
 P.O. Box 944212
 Sacramento, CA 94244-2121

(Instructions on reverse side)

For State Use Only

CERTIFICATION OF FINANCIAL RESPONSIBILITY FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in California Code of Regulations (CCR), Title 23, Division 3, Chapter 18, Section 2807,

500,000 dollars per occurrence
 or
 1 million dollars per occurrence

AND

1 million dollars annual aggregate
 or
 2 million dollars annual aggregate

B. County of San Diego hereby certifies that it is in compliance with the requirements of Section 2807,

(Name of Tank Owner or Operator)

California Code of Regulations, Title 23, Division 3, Chapter 18, Article 3, Section 2807.

The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Comp
Government guarantee	1600 Pacific Hwy San Diego, CA 92101	N/A for this Mechanism	\$500K per occurrence \$1Mil annual aggregate	Annual	Yes	Yes
Chief Financial Officer Letter	1600 Pacific Hwy San Diego, CA 92101	N/A for this mechanism	\$500K per occurrence \$1Mil annual aggregate	Annual	Yes	Yes

Note:

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance and shall maintain compliance with all conditions for participation in the Fund. See instructions.

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan.

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within 24 hours of discovery. Recovered hazardous materials, unless suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
 1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
 2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
 3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: (Complete only if applicable)

EQUIPMENT	LOCATION	AVAILABILITY
R10	R20	R30
R11	R21	R31
R12	R22	R32
R13	R23	R33
R14	R24	R34
R15	R25	R35

IV. RESPONSIBLE PERSONS

THE FOLLOWING PERSON(S) IS/ARE RESPONSIBLE FOR AUTHORIZING ANY WORK NECESSARY UNDER THIS RESPONSE PLAN:

NAME	R40	TITLE	R50
James Parks		Building Maintenance Supervisor	
NAME	R41	TITLE	R51
NAME	R42	TITLE	R52
Michael Johnson		Senior Plumber/ DSO	
NAME	R43	TITLE	R53

V. MONITORING INDICATORS

IF MONITORING INDICATES A POSSIBLE UNAUTHORIZED RELEASE, STEPS TO VERIFY THE RELEASE WILL BE MADE AS FOLLOWS: R60
 Additional system testing or data collection Inspection by qualified persons Recalibration of equipment Other (specify):

**UNDERGROUND STORAGE TANK
RESPONSE PLAN – PAGE 2**

(One form per facility)

VI. REPORTING AND RECORD KEEPING

We will report/record any overflow, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overflow, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

VII. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

OWNER/OPERATOR SIGNATURE 	DATE 6-19-12

Conditions	
#	Name Description
1	C40239 The engine shall be operated exclusively during emergencies as defined in Rule 69.4.1 or Rule 12 or 17CCR93115 as applicable, or for maintenance and testing.
2	C40907 This engine shall not be used as a part of a non-emergency Demand Response Program (DRP). This condition shall not apply to engines operating pursuant to the rolling blackout reduction program as defined in 17 CCR 93115 and operating in accordance with 17 CCR 93115.6(c). (17 CCR 93115)
3	C28691 Engine operation for maintenance and testing purposes shall not exceed 20 hours per calendar year. (17 CCR 93115, Rule 1200, NSR)
4	C28412 This engine shall only use CARB diesel fuel. (Rule 12, Rule 69.4.1, 17 CCR 93115, 40 CFR 60 Subpart IIII)
5	C28413 Visible emissions including crank case smoke shall comply with Air Pollution Control District Rule 50. (Rule 50)
6	C28414 The equipment described above shall not cause or contribute to a public nuisance. (Rule 51)
7	C43430 This engine is located at an area source that is a Commercial, Institutional, or Residential facility as defined in 40 CFR 63.6675. If this location no longer qualifies as a Commercial, Institutional, or Residential facility, then an application for permit modification to include applicable NESHAP requirements shall be submitted to the Air Pollution Control District. (40 CFR 63 Subpart ZZZZ)
8	C28415 This engine shall not operate for non-emergency use during the following periods, as applicable: (a) whenever there is any school sponsored activity, if engine is located on school grounds or (b) between 7:30am and 3:30pm on days when school is in session, if the engine is located within 500 feet of, but not on, school grounds. This condition shall not apply to an engine located at or near any school grounds that also serve as the students' place of residence. (17 CCR 93115)
9	C28560 Engine operation in response to notification of an impending rotating outage shall be subject to all the following restrictions: (a) the utility distribution company has ordered rotating outages in the control area where the engine is located, (b) the engine is operated no more than 30 minutes prior to the time when the utility distribution company officially forecasts a rotating outage in the cited control area, and (c) the engine operation is terminated immediately after the utility distribution company advises that a rotating outage is no longer in effect. This condition shall not apply to engines operating pursuant to the rolling blackout reduction program as defined in 17 CCR 93115 and operating in accordance with 17 CCR 93115.6(c). (17 CCR 93115)

- 10 C28419 A non-resettable engine hour meter shall be installed on this engine, maintained in good working order, and used for recording engine operation hours. If a meter is replaced, the Air Pollution Control District's Compliance Division shall be notified in writing within 10 calendar days. The written notification shall include the following information:
 (a) old meter's hour reading,
 (b) replacement meter's manufacturer name, model and serial number if available and current hour reading on replacement meter, and
 (c) copy of receipt of new meter or of installation work order.
 A copy of the meter replacement notification shall be maintained onsite and made available to the Air Pollution Control District upon request. (Rule 12, Rule 69.4.1, 17 CCR 93115, 40 CFR 60 Subpart III, 40 CFR 63 Subpart ZZZZ)
- 11 C28417 The owner or operator of this engine shall conduct periodic maintenance of the engine and add-on control equipment, if any, as recommended by the engine and control equipment manufacturers or as specified by the engine servicing company's maintenance procedures. The periodic maintenance shall be conducted at least once each calendar year. (Rule 12, Rule 69.4.1)
- 12 C43078 The owner or operator of the engine shall maintain the following records on site for at least the same period of time as the engine to which the records apply is located at the site:
 (a) documentation shall be maintained identifying the fuel as CARB diesel, and
 (b) manual of recommended maintenance provided by the manufacturer, or maintenance procedures specified by the engine servicing company. (Rule 12, Rule 69.4.1, 17 CCR 93115, 40 CFR 63 Subpart ZZZZ)
- 13 C43431 The owner or operator of this engine shall maintain a monthly operating log containing, at a minimum, the following:
 (a) dates and times of engine operation; whether the operation was for maintenance and testing purposes or emergency use; and the nature of the emergency, if known;
 (b) records of periodic engine maintenance shall include the date and a description of the maintenance that was performed; and
 (c) hours of operation for all uses other than those specified above and identification of the nature of that use. (Rule 12, Rule 69.4.1, 17 CCR 93115, 40 CFR 60 Subpart III, 40 CFR 63 Subpart ZZZZ)
- 14 C43432 All records required by this permit shall be maintained on site and readily available for District inspection for a minimum of 36 months from their date of creation unless otherwise indicated by the conditions of this permit. (Rule 12, Rule 69.4.1, 40 CFR 60 Subpart III)

Dear Responsible Parties:

UNAUTHORIZED RELEASE H03207-002
FORMER GENESEE SHELL STATION
4303 GENESEE AVENUE, SAN DIEGO, CA 92117

This letter confirms the completion of a site investigation and corrective action for the underground storage tanks formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tanks is greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tanks site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code, and that no further action related to the petroleum release at the site is required.

Claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code. Please contact Ewan Moffat, at (858) 505-6856, if you have questions regarding this matter.

Sincerely,

ELISE ROTHSCHILD, REHS
Director, Department of Environmental Health

Conceptual Site Model: The GeoTracker CSM Report is attached.

Closure Criteria Met: The GeoTracker Low-Threat Case Closure Policy [LTCP] Checklist is attached.

Optional Site maps: Six figures are attached.

Additional Information:

<p><u>Comments:</u></p> <p>This site is currently a vacant building and fenced off lot. This case was opened in March 1999 due to elevated soil samples noted during the removal of a 500 gallon used oil Underground Storage Tank (UST). On October 1999, the remaining USTs (Three 12,000-gallon gasoline USTs), dispensers and piping were all removed and the facility ceased operations as a service station. Approximately 500 tons of soil and 18,000 gallons of impacted water were removed during both UST removals.</p> <p>From December 1999 to November 2013, 20 groundwater monitoring wells were installed, at which time the groundwater plume was delineated. Approximately 308 gallons of impacted groundwater and Separate Phase Hydrocarbons (SPH) have been removed by bailing during this time. The majority of the groundwater impacts were limited to the site and the offsite area about 200 feet northeast, which is solely a large parking area for the adjacent shopping complex. The attached Figures 8 and 9 from the May 2018 Corrective Action Plan Addendum and Request for Case Closure (CAPA) provide the most recent distribution of dissolved contamination levels at the site.</p>

UST Case Closure Summary Form

Additional Information:

Date: August 10, 2018

H03207-001

Comments (Continued):

In December 1999, a Soil Vapor Extraction (SVE) pilot test was performed. No significant vacuums were noted in observation wells located 20 feet away from the extraction wells.

A soil vapor assessment in January 2003 revealed no excess cancer risks for occupants of the onsite building. Benzene was calculated to have an excess carcinogenic risk of 9.14×10^{-7} , which is less than the acceptable 1.0×10^{-6} excess carcinogenic risk.

A June 2015 Corrective Action Plan (CAP) was submitted for monitored natural attenuation (MNA) followed by case closure when adequate plume stability had been determined via MNA. The CAP was approved by DEH and the 60-day notification period ended with one comment received from Mr. Max Younan, who identified himself as a nearby property owner on whose property at least one monitoring well was located. He asked if the CAP would affect him. AECOM informed Mr. Younan that the CAP described how groundwater monitoring for the case would continue as it had in the recent past. Mr. Younan was satisfied with the answer. Following two years of monitoring, the May 2018 CAPA was submitted. The CAPA proposed natural attenuation because:

- The plume is stable and decreasing.
- No SPH remains on the groundwater.
- There are no supply wells within a ½ mile of the site.
- Groundwater is designated as having no beneficial uses.
- All utilities are above the groundwater table, which is at an average of 50 feet bgs
- There are no health risks based the November 2003 soil vapor sampling report.
- Based on degradation analyses, it is estimated that benzene in groundwater will degrade to the Water Quality Objective (WQO) of 46 ug/l by 2069. Based on mass balance, the mass would reach zero kilograms of benzene by 2090.
- MtBE is currently below the primary WQO of 1,800 ug/l.

The following tables provide the maximum and residual concentrations of the contaminants of concern (COCs) historically reported at the site

Maximum Concentrations	SPH (Feet)	TPH-g	Benzene	Toluene	Ethyl benzene	Total Xylenes	MTBE	DIPE	TBA
Groundwater (ug/l)	0.06'	780,000	180,000	170,000	11,000	95,000	1,900	2,100	10,000
Soil (mg/kg)		16,000	170	640	190	1,100	12*	<0.01	2.8

Residual Concentrations	SPH (Feet)	TPH-g	Benzene	Toluene	Ethyl benzene	Total Xylenes	MTBE	DIPE	TBA
Groundwater (ug/l)	0.0'	110,000	19,000	18,000	2,700	14,000	1,700	1,300	6,300
Soil (mg/kg)		16,000	170	640	190	1,100	12*	<0.01	2.8

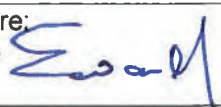

*EPA Method 8021

Approximately 11,778 cubic yards of soil remain on site with concentrations over 100 mg/kg TPH. This soil is located in the southern (lower) and northern (former UST) portion of the property from 10 – 50 feet bgs, per the attached Figures 12 – 15 of the May 7, 2018 TPHg in Soil document. DEH concurs with the consultant's conclusions and approves case closure.

ANY CONTAMINATED SOIL EXCAVATED AS PART OF SUBSURFACE CONSTRUCTION WORK MUST BE MANAGED IN ACCORDANCE WITH THE LEGAL REQUIREMENTS AT THAT TIME.

Permit #DEH2018-LMWP-003546 was issued by DEH for destruction of the 22 wells (including 3 SVE wells) associated with the site.

SITE HISTORY

This site is currently a vacant building and fenced off lot. This case was opened in March 1999 due to elevated soil samples noted during the removal of a 500 gallon used oil underground storage tank (UST). dispensers and piping were all removed and the facility ceased operations as a service station. Approximately 500 tons of soil and 18,000 gallons of impacted water were removed during both UST removals. From December 1999 to November 2013, 20 groundwater monitoring wells were installed, at which time the groundwater plume was delineated. The majority of the groundwater impacts were limited to the site and the offsite area about 200 feet northeast, which is solely a large parking area for the adjacent shopping complex. Figures 8 and 9 from the May 2018 Corrective Action Plan Addendum and Request for Case Closure (CAPA) provide the most recent distribution of dissolved contamination levels at the site. In December 1999, a Soil Vapor Extraction (SVE) pilot test was performed. No significant vacuums were noted in observation wells located 20 feet away from the extraction wells. A soil vapor assessment in January 2003 revealed no excess cancer risks for occupants of the onsite building. Benzene was calculated to have an excess carcinogenic risk of 9.14 x 10⁻⁷, which is less than the acceptable 1 x 10⁻⁶ excess carcinogenic risk. A June 2015 Corrective Action Plan (CAP) was submitted for monitored natural attenuation (MNA) followed by case closure when adequate plume stability had been determined via MNA. The CAP was approved by DEH and the 60-day notification period ended with one comment received from Mr. Max Younan, who identified himself as a nearby property owner on whose property at least one monitoring well was located. He asked if the CAP would affect him. AECOM informed Mr. Younan that the CAP described how groundwater monitoring for the case would continue as it had in the recent past. Mr. Younan was satisfied with the answer. Following two years of monitoring, the May 2018 CAPA was submitted. The CAPA proposed natural attenuation because:

- The plume is stable and decreasing.
- No Separate Phase Hydrocarbons remain on the groundwater.
- There are no supply wells within a 1/2 mile of the site.
- Groundwater is designated as having no beneficial uses.
- All utilities are above the groundwater table, which is at an average of 50 feet bgs.
- There are no health risks based the November 2003 soil vapor sampling report.
- Based on degradation analyses, it is estimated that benzene in groundwater will degrade to the Water Quality Objective (WQO) of 46 ug/l by 2069. Based on mass balance, the mass would reach zero kilograms of benzene by 2090.
- MIBE is currently below the primary WQO of 1,800 ug/l.

Approximately 11,778 cubic yards of soil remain on site with concentrations over 100 mg/kg TPH. This soil is located in the southern (lower) and northern (former UST) portion of the property from 10 - 50 feet bgs, per Figures 12 - 15 of the May 7, 2018 TPHg in Soil document.

ANY CONTAMINATED SOIL EXCAVATED AS PART OF SUBSURFACE CONSTRUCTION WORK MUST BE MANAGED IN ACCORDANCE WITH THE LEGAL REQUIREMENTS AT THAT TIME.

DEH concurs with the consultant's conclusions and approves case closure.

Permit #DEH2018-LMWP-003546 was issued by DEH for destruction of the 22 wells (including 3 SVE wells) associated with the site.

THIS PROJECT WAS LAST MODIFIED BY EWAN MOFFAT ON 8/10/2018 12:42:03 PM - HISTORY

CLOSURE POLICY THIS VERSION IS FINAL AS OF 8/10/2018 CHECKLIST INITIATED ON 3/2/2018 CLOSURE POLICY HISTORY

General Criteria - The site satisfies the policy general criteria - CLEAR SECTION ANSWERS

- a. Is the unauthorized release located within the service area of a public water system? YES NO
 Name of Water System:
- b. The unauthorized release consists only of petroleum (info) YES NO
- c. The unauthorized ("primary") release from the UST system has been stopped YES NO
- d. Free product has been removed to the maximum extent practicable (info) YES NO
- e. A conceptual site model that assesses the nature, extent, and mobility of the release has been developed (info) YES NO
- f. Secondary source has been removed to the extent practicable (info) YES NO
- g. Soil or groundwater has been tested for MTBE and results reported in accordance with Health and Safety Code Section 25296.15 YES NO
- h. Does a nuisance exist, as defined by Water Code section 13050. YES NO

1. Media-Specific Criteria: Groundwater - The contaminant plume that exceeds water quality objectives is stable or decreasing in areal extent, and meets all of the additional characteristics of one of the five classes of sites listed below. - CLEAR SECTION ANSWERS YES NO

- EXEMPTION - Soil Only Case (Release has not Affected Groundwater - Info) YES NO
- Does the site meet any of the Groundwater specific criteria scenarios? YES NO
- 1.5 - The regulatory agency determines, based on an analysis of site specific conditions, that the site under current and reasonably anticipated near-term future scenarios, the contaminant plume poses a low threat to human health and safety and to the environment and water quality objectives will be achieved within a reasonable time frame. YES NO

2. Media Specific Criteria: Petroleum Vapor Intrusion to Indoor Air - The site is considered low-threat for the vapor-intrusion-to-air pathway if site-specific conditions satisfy items 2a, 2b, or 2c - CLEAR SECTION ANSWERS YES NO

- EXEMPTION - Active Commercial Petroleum Fueling Facility YES NO
- Does the site meet any of the Petroleum Vapor Intrusion to Indoor Air specific criteria scenarios? YES NO
- 2b - Petroleum Vapor Intrusion to Indoor Air - A site-specific risk assessment for the vapor intrusion pathway has been prepared that demonstrates human health is protected to the satisfaction of the regulatory agency. YES NO

3. Media Specific Criteria: Direct Contact and Outdoor Air Exposure - The site is considered low-threat for direct contact and outdoor air exposure if it meets 1, 2, or 3 below. - CLEAR SECTION ANSWERS YES NO

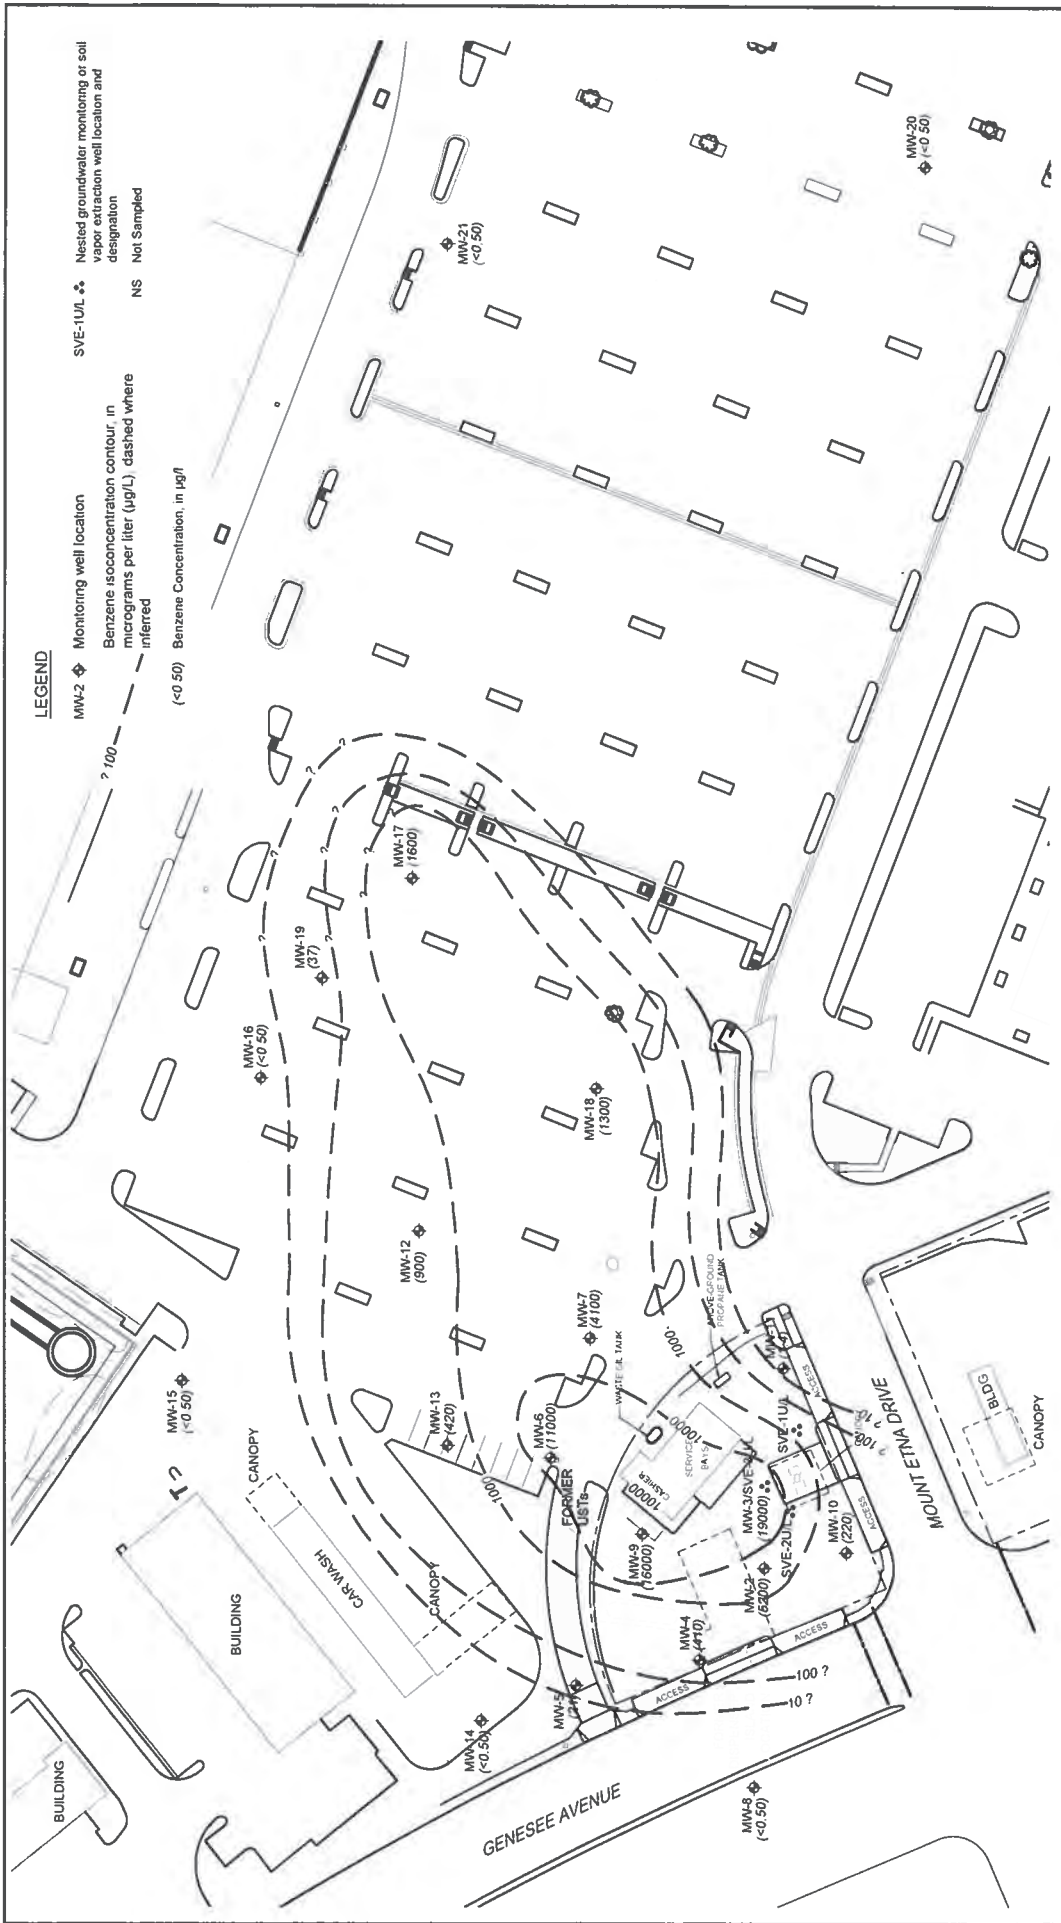

- EXEMPTION - The upper 10 feet of soil is free of petroleum contamination YES NO
- Does the site meet any of the Direct Contact and Outdoor Air Exposure criteria scenarios? YES NO
- 3(a) - Maximum concentrations of petroleum constituents in soil are less than or equal to those listed in the following table (LINK) for the specified depth below ground surface. YES NO

Additional Information

- This case should be kept OPEN in spite of meeting policy criteria. YES NO
- Has this LTCP Checklist been updated for FY 18/19? YES NO

Dear Responsible Parties:

UNDERGROUND STORAGE TANK (UST) CASE #H29223-001
CIRCLE K STORE NO. 5095
4360 GENESEE AVENUE, SAN DIEGO, CALIFORNIA

This letter confirms the completion of a site investigation and corrective action for the underground storage tanks formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tanks is greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tanks site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code, and that no further action related to the petroleum release at the site is required.

Claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code. Please contact James Clay, at (858) 505-6969, if you have questions regarding this matter.

Sincerely,

JACK MILLER, Director
Department of Environmental Health
Site Assessment and Mitigation Program

Enclosure

Leaking Underground Fuel Storage Tank Program

III. RELEASE AND SITE CHARACTERIZATION INFORMATION (Continued)

H29223-001

Comments:

The Site is an operating Circle K gasoline service station and minimart. The facility is bounded on the north and east by Genesee Avenue and by a parking lot and strip mall to the south and west. The above-ground structures at the Site consist of a single story building and two fuel dispensers under a single canopy. Below-ground structures consist of three underground storage tanks (USTs) and associated product piping. The Site is surrounded by commercial properties.

In April and May 2004, six soil borings were advanced at the Site as part of a due diligence assessment during property transfer. The four direct-push borings hit refusal before reaching their target depths. Based on the results of the assessment, the Department of Environmental Health (DEH) opened Unauthorized Release Case H29223-001.

Cumulative soil sample analytical data indicate residual hydrocarbon-impacted soil was present primarily beneath the former dispenser islands and from beneath the gasoline USTs. There is no residual soil contamination with concentrations greater than 100 milligrams per kilogram.

Nine groundwater monitoring wells and three remedial wells have been installed at the Site. Groundwater was monitored between June 2006 and August 2013. Liquid-phase hydrocarbons (LPH) have never been present at the Site. Hydrocarbon impacted groundwater at the Site appears to be consistent with a release from the USTs, which have subsequently been upgraded. On-site dissolved-phase petroleum hydrocarbon concentrations generally appear to be stable to declining over time.

The results from the recent installation of two groundwater monitoring wells (MW-8 and MW-9) suggest that the dissolved-phase MTBE plume has migrated offsite to the southeast; however since this area has no beneficial groundwater uses and the depth to groundwater is greater than 40 feet below grade, there is no risk to receptors downgradient. Dissolved-phase petroleum hydrocarbon concentrations in off-site well MW-9 suggest the MTBE and TBA concentrations migrating off-site attenuate with increased distance from the source area.

A Corrective Action Plan (CAP) was submitted on January 26, 2010 requesting case closure. The CAP concluded that no active remediation is required to mitigate remaining hydrocarbon impacts beneath the Site. It was proposed that groundwater data be collected during the subsequent four semi-annual monitoring and sampling events to determine groundwater contaminant trends and distribution. The public participation process for the above-referenced CAP was completed. DEH received no public comments and concurred with the CAP.

According to the environmental consultant's registered professional, the Site presents no significant risk to human health and the environment. DEH concurs with this conclusion.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes – No beneficial uses

Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes – No beneficial uses

Does corrective action protect public health for current land use? Yes

Case oversight completed based upon the following site use: Gasoline station

Site Management Requirements:

Any contaminated soil excavated as part of subsurface construction work must be managed in accordance with the legal requirements at that time.

Should corrective action be reviewed if land use changes? Yes

Monitoring Wells Decommissioned: No

Number Decommissioned: 0

Number Retained: 12

List Actions Taken: Notice Of Reimbursement/Local

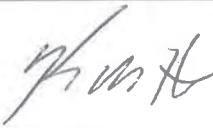

List Enforcement Actions Rescinded: None

V. LOCAL AGENCY REPRESENTATIVE DATA

Dear Responsible Parties:

UNDERGROUND STORAGE TANK (UST) CASE #H12456-003
FORMER CHEVRON STATION NO. 9-0896 5401 BALBOA AVENUE, SAN DIEGO, CA

This letter confirms the completion of a site investigation and corrective action for the underground storage tanks formerly located at the above described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tanks is greatly appreciated.

Based on information in the above referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation carried out at your underground storage tanks site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code, and that no further action related to the petroleum release at the site is required.

Claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

Responsible Parties

May 7, 2012

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code. Please contact Ellen Beacon at (858) 505-6983, if you have questions regarding this matter.

Sincerely,

A handwritten signature in black ink, appearing to read "Jack Miller". The signature is fluid and cursive, with the first name "Jack" and last name "Miller" clearly distinguishable.

JACK MILLER, Director
Department of Environmental Health
Site Assessment and Mitigation Program

Case Closure Summary

Leaking Underground Fuel Storage Tank Program

III. RELEASE AND SITE CHARACTERIZATION INFORMATION (Continued)

H12456-003

Comments:

This case was opened following the discovery of contaminated soil during the removal of a waste oil underground storage tank (UST) in August 1993 (Former case H12456-001) and the current case was opened following the discovery of contaminated soil during the removal of three gasoline USTs in September 1993. These two cases were combined into H12456-003 on March 19, 2009.

Soil sample data indicated that gasoline contaminated soil was present in the vicinity of the former northern dispenser islands, in the vicinity of the southwestern dispenser island and the product piping lines that connected the two islands. Soil at the northern dispenser islands was impacted from near the surface to a depth of 25 feet and at the southwestern islands from the near surface to a depth of 10 feet. The consultant estimated the total volume of contaminated soil at the site at 748 cubic yards.

Monitoring wells were installed at the site in 1997 and free product was detected in three wells (B2, B4 and EW1) at that time. A total of seventeen monitoring wells were associated with this site. Groundwater monitoring began in May 1997 and continued until April 2011. Two wells (B7 and B10) were destroyed and replaced with new wells in 2004. Free product was last observed in well EW1 in January 2010.

According to the consultant utilities in the vicinity of the site include sewer and storm drain pipes, cable, gas and electrical, phone and water lines. In general, these lines are buried between one and one-half (1.5) and eight (8) feet below grade. Since the depth to groundwater at the site has been as shallow as five feet, the subsurface utilities could be a potential means of migration of contaminants in groundwater. According to the consultant, there has not been any evidence of migration along utility lines.

Limited free-product recovery efforts were made between April 1999 and January 2003 resulting in a total of 1.82 gallons product recovered. In April 2001 a high-vacuum dual-phase extraction (HVDPE) pilot test was completed which removed an estimated 400 gallons of impacted groundwater and 7.8 pound of hydrocarbon vapors. Between April 2001 and April 2002 a total of seven 24-hour and one 72-hour two-phase extraction events (TPE) were completed. The consultant estimated the total mass of hydrocarbons removed through vapor extraction during these TPE events was 167 pounds. The consultant also reported that a total of 16,172 gallons of water were removed during the first five TPE events. An unknown quantity of groundwater was removed during the remaining events. In August 2008 both a step drawdown and constant discharge test was completed on well EW1 with a total of 80 gallons of water being removed. A feasibility test for multiphase extraction was conducted in January 2010 on EW1. An estimated seven pounds of hydrocarbon vapor and 30 gallons of water/free product were removed during this test. Free product was not observed in EW1 following the feasibility test.

A human health risk assessment (HHRA) was conducted in 2006 and benzene concentrations in soil vapor exceeded the DEH excess cancer risk threshold of one-in-one million (1×10^{-5}) at five feet at three vapor probe locations (SV8, SV10, and SV15). This indicated that there was a potential health risk for future on-site development which would require additional mitigation and/or implementation of engineering controls. According to the consultant, there were no other sensitive receptors or surface water bodies with complete exposure pathways that could be impacted by the site.

To mitigate the potential health risk the property owner/developer (owner) decided to proceed with active remediation as previously proposed in a Corrective Action Plan (CAP) dated March 1, 2010 that was rescinded by Chevron on March 17, 2010. This remedial activity was completed under VAP case H12456-004.

Remedial soil excavation at the site was completed under VAP case H12456-004. A total of 3,857 tons of contaminated soil were excavated. A total of 2,550 tons were treated and recycled by Soil Safe of California - TPST in Adelanto and 1,307 tons were disposed at the Otay landfill in Chula Vista. In addition, 18,437 gallons of groundwater were removed during dewatering activities and transported to K-Pure Waterworks facility in Rancho Cucamonga. Following excavation, a soil vapor survey and human health risk assessment was conducted at the site. The estimated excess cancer risks of 2×10^{-5} and hazard values 4.89×10^{-5} were below the DEH threshold values. The consultant concluded that the remediation at the site was successful in eliminating the risks to human health from vapor intrusion.

Prior to the excavation, the groundwater plume was delineated and the maximum concentrations were found at the locations where free product had previously been detected at the former product lines and dispenser areas. Outside of these areas, contaminant concentrations in groundwater were either low or not detected. According to the consultant the plume had high concentrations of contaminants in the impacted area, however the contaminant concentrations appeared to be stable and/or contracting. Groundwater beneath the site is classified as having no beneficial uses. There has not been free product detected at the site since January 2010. The contaminated soil has mostly been removed by excavation. The sources of free product have been removed from the site. The risks to human health from vapor intrusion have been eliminated by the remediation conducted under the VAP case.

According to the consultant, the time for benzene to degrade to the maximum contaminant level (MCL) of 1 ug/l by natural attenuation could take up to 1,400 years, MTBE could take 130 years, and TBA could take 210 years, respectively, to reach the State notification level of 12 ug/l. Ethylbenzene is currently below the State MCL of 300 ug/l.

A Revised CAP Addendum dated April 18, 2011 was submitted by Chevron which recommended remediation through natural attenuation and the use of engineering controls. DEH concurred with the Revised CAP Addendum on October 5, 2011 with conditions that soil remediation proposed by the owner was completed to mitigate the potential health risks to on-site development. As stated above, this work was accomplished under the VAP case H12456-004. The consultant stated that free product has not reoccurred at the site, that the site does not pose a risk to the environment or human health if engineering controls are used, and that the plume was stable and contracting. The consultant requested no further action on the case and DEH concurred with this recommendation with conditions. Remediation of the site has occurred under VAP case H12456-004 and DEH concurs with the recommendation to close this case.

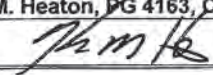

Case Closure Summary

Leaking Underground Fuel Storage Tank Program

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes – Please see VAP case H12456-004.		
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes – Please see VAP case H12456-004.		
Does corrective action protect public health for current land use? Yes		
Case oversight completed based upon the following site use: Commercial		
Site Management Requirements: Any Contaminated Soil Excavated As Part Of Subsurface Construction Work Must Be Managed In Accordance With The Legal Requirements At That Time.		
Should corrective action be reviewed if land use changes? Yes		
Monitoring Wells Decommissioned: Yes	Number Decommissioned: 17 Monitoring Wells 15 Vapor Probes	Number Retained: 0
List Actions Taken: Notice Of Reimbursement/Local		
List Enforcement Actions Rescinded: NONE		

V. LOCAL AGENCY REPRESENTATIVE DATA

Name: Kevin M. Heaton, PG 4163, CHg 163	Title: Senior Hydrogeologist

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1903 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.
