The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ninyo & Moore were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Ninyo & Moore (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

APPENDIX F

Vapor Encroachment Screening Matrix

Phase I ESA Vapor Encroachment Conditions (VEC) matrix includes a (1) Search Radius Test, (2) Chemicals of Concern Test (COC), and (3) a Critical Distance Test [1].

(1) Search Radius Test: Are there any known or suspect contaminated properties in the primary area of concern within the corresponding search radii?

Yes No If **No**, then screening for a VEC is complete and no VEC *currently* exists, go to #4. If **Yes**, then:

(2) Chemicals of Concern Test: Are COC likely to be present within the area of concern for those known or suspect contaminated sites identified based on the Search Distance Test?

Yes No If **No**, then screening for a VEC is complete and no VEC *currently* exists, go to #4. If **Yes**, then:

(3) Critical Distance Test: A plume test to determine whether or not COC in the contaminated plume(s) may be within the critical distance.

Yes No (3a) Is information related to the contaminated(s) plume available (i.e., isoconcentration maps, site drawings, etc.)?

(3b) If **No**, then a VEC cannot be ruled out; check **Yes** in #4 below indicating it is likely a VEC exists. If **Yes**, then:

Yes No (3c) Is the site less than 100 feet to the nearest edge of a contaminated [non-petroleum hydrocarbon] plume(s)? If **Yes**, then check **Yes** in #4 below indicating it is likely a VEC exists.

Yes No (3d) Is the site less than 30 feet to the nearest edge of a dissolved petroleum hydrocarbon plume(s)? If **Yes**, then check **Yes** in #4 below indicating it is likely a VEC exists.

If the distance from the nearest edge of a contaminated plume to the nearest existing or planned structure on the site is less than 100 feet for non-petroleum hydrocarbon COC, or less than 30 feet for dissolved petroleum hydrocarbons, then it is presumed that a VEC *currently* exists beneath the site. If the distance from the nearest edge of the contaminated plume is greater than or equal to 100 feet for non-petroleum hydrocarbons, or 30 feet for dissolved petroleum hydrocarbon chemicals of concern, then it is presumed unlikely that a VEC *currently* exists beneath the site.

(4) Is it likely that a VEC *currently* exists beneath the site?

Yes No If **No**, then the VEC screening is complete and no further investigation is recommended at this time. If **Yes**, Ninyo & Moore recommends performing additional assessment, such as a Tier 2 VEC assessment according to ASTM E 2600-15.

[1] Based on guidance presented in the ASTM E 2600-15 Standard.

Professionals

As a Senior Project Environmental Scientist for Ninyo & Moore, Mr. Olivares manages and conducts Phase I and Phase II Environmental Site Assessments (ESAs), underground storage tank unauthorized release case investigations, human health risk assessments, indoor air quality studies, Caltrans Initial Site Assessments (ISAs), and California Environmental Quality Act (CEQA) hazardous materials technical studies (HMTS) for Environmental Impact Reports (EIRs). Mr. Olivares performs all phases of environmental investigations, coordinates and observes subsurface drilling activities, conducts investigations of subsurface contamination and logging of exploratory borings, conducts groundwater monitoring utilizing a variety of methods, authors reports, and interfaces with regulatory agencies.

REPRESENTATIVE PROJECT EXPERIENCE

City of San Diego, As-Needed Environmental Services Site Assessment and Mitigation Process Contract, San Diego, California: Project Manager for two, five-year contracts awarded to Ninyo & Moore, which includes conducting environmental site assessments at contaminated, City-owned properties throughout the County of San Diego. Scope of services include: work plan and health and safety plan preparation, field investigations (drill, sample, analytical testing), remediation, human health risk assessments, groundwater monitoring and sampling, and report preparation including corrective action plans and site conceptual models. The purpose of the contract is to assist the City of San Diego in obtaining regulatory agency closure of its properties that have been affected by unauthorized releases from underground storage tanks (USTs).

City of San Diego, Successor Agency to the Redevelopment Agency, As-Needed Environmental Consulting Services, Brownfields Assessment Project, San Diego, California: Project Manager for this three year contract awarded to Ninyo & Moore, which includes conducting Phase I and II ESAs at various brownfield sites within redevelopment areas of City Heights, Central Imperial, and Southeastern San Diego. Work was performed as part of a United States Environmental Protection Agency (USEPA) community-wide grant program. Ninyo & Moore's scope of services included developing a program-level Quality Assurance Project Plan (QAPP) and site-specific, Phase I ESAs, Field Sampling Plans, Phase II ESAs, human health risk assessments, and participating in community outreach efforts. The contract also includes preparation of remedial plans and estimates. The purpose of the contract is to assist the City and other stake holders with assessment of brownfield sites to support redevelopment efforts in the community.

County of San Diego, Cedar and Kettner Development Project, San Diego, California: Project Manager for the Cedar and Kettner Development Project, which was performed as part of a five-year contract awarded to Ninyo & Moore by the County of San Diego DGS. The site was historically occupied by Hercules Oil Refining Company and an automotive repair facility. Scope of services included: pre-characterization of soil; preparation of a Soil and Groundwater Management Plan (SGMP), Community and Contractor Health and Safety Plans; and construction field support involving implementation of the SGMP, community monitoring, and worker monitoring.

Cajon Valley Union School District, Magnolia Elementary School, El Cajon, California: Project Manager performed an indoor air quality (IAQ) study, soil vapor survey, and human health risk assessment at Magnolia Elementary School located in El Cajon, California. The project was initiated in response to concerns that indoor air may be impacted with chlorinated hydrocarbons as a result of groundwater contaminants from an adjacent aerospace/electronics facility migrating into the school buildings via the vapor intrusion pathway. The Department of Toxic Substances Control (DTSC) provided regulatory oversight.

REPRESENTATIVE PROJECT EXPERIENCE (continued)

City of Chula Vista, Sweetwater Union High School District Property, Chula Vista, California: Project Manager for this Phase II ESA project, which was performed as part of a USEPA community-wide grant program. Ninyo & Moore's scope of services included: preparation of a sampling and analysis plan; collection of soil and soil vapor samples to evaluate contaminants associated with underground storage tanks (USTs) and fueling areas, maintenance areas, and a paint shop; and preparation of a Phase II ESA report. The purpose of the project was to assist the City and District with the assessment of a brownfield site to support redevelopment efforts.

Miramar Pipeline Relocation, 17 Miles from Naval Base Point Loma to Marine Corps Air Station Miramar, San Diego, California: Project Environmental Scientist for an environmental assessment related to the relocation of portions of an existing 17-mile fuel pipeline. Ninyo & Moore's scope included: 1) preparation of an HMTS to document potential releases of hazardous materials or wastes from historical activities along the project alignment; 2) preparation of an SGMP to assist the contractor in the excavation, notification, monitoring, segregation, characterization, handling, and reuse and/or disposal of waste that may be encountered during earthwork activities; and 3) soil sampling and analytical testing to provide a screening evaluation of the environmental condition of existing soils along the proposed alignment.

City of San Diego, Southeastern San Diego Community Plan Update, San Diego, California: Project Manager for the preparation of an HMTS for the comprehensive update of the Southeastern San Diego Community Plan. The purpose of the HMTS was to document the presence of properties, which may have been impacted by hazardous materials or wastes, and to document the significance of impacts from the project area with respect to CEQA, and to discuss measures that can be implemented to reduce or mitigate the potential impacts.

Otay Truck Route, San Diego, California: Project Manager prepared an ISA for the Otay Truck Route Improvement Project in San Diego County, California. The area evaluated for this ISA was generally bounded by Siempre Viva Road to the north, Customhouse Court to the east, the international border to the south, and Britannia Boulevard to the west in the community of Otay Mesa. The purpose of the project was to provide the construction of additional travel lanes to the existing truck route for truck traffic entering the Otay Mesa Border Crossing Port of Entry and to provide a travel lane for Border Patrol and emergency vehicles. The ISA involved evaluation of properties within the boundaries of the project area and off-site properties, which have the potential to negatively impact the project area.

Metropolitan Transit System, 13th Street Light Rail Vehicle Maintenance Facility and Newton Avenue Taxi Inspection Facility San Diego, California: Project Manager for the implementation of the facility's Storm Water Pollution Prevention Plan (SWPPP). The project included monthly inspections, sampling, an annual inspection for the comprehensive site compliance evaluation for potential pollutant sources, and reporting to comply with the facility's Regional Water Quality Control Board industrial storm water permit requirements.

NCTD Sorrento Valley Double Track Project, ISA, San Diego, California: Project Environmental Scientist for an ISA for the Sorrento Valley Double Track Project. The project consists of construction of a second rail track extending the railroad double tracks from Sorrento Valley Station at MP 248.9 northwest approximately 1 mile to MP 247.8. The purpose of the ISA was to document potential environmental concerns related to hazardous materials and/or hazardous wastes including oil/water separators, waste oil, polychlorinated biphenyls, asbestos-containing material, lead-based paint, aerially-deposited lead, and railroad related hazards.

University Avenue Pipeline, San Diego, California: Project Environmental Scientist performed an HMTS for the University Avenue Pipeline Replacement Project located in San Diego, California. The purpose of the HMTS was to document the presence of properties and areas of potential environmental concern, which may have been impacted by releases of hazardous materials and/or wastes within the project area, which have the potential to impact the project, in order to assist with project planning and preliminary design.

West Vista Way Sewer Project, Vista California: Project Environmental Scientist for an environmental and geotechnical evaluation for the West Vista Way Sewer project in Vista, California. The project included the installation of a 15- to 16-inch diameter sewer pipeline along West Vista Way and a 12-inch diameter sewer pipeline from Huff Street to Grapevine Road. Of particular concern was a section of sewer crossing beneath Emerald Drive where a shallow groundwater table and potential contamination was suspected due to the presence of nearby unauthorized releases from several gas stations.

EXPERIENCE HIGHLIGHTS

Santa Clara Valley Water District
USEPA Brownfield Assessments
Bridge District Infrastructure Project
Former Sugar Processing Facility
Former Union Pacific Redevelopment Property
Multiple Commercial Property Transfer
City of West Sacramento RDA

PROFESSIONAL AFFILIATIONS

Association of Environmental Professionals - Superior California Chapter

As Senior Geologist, Mr. Wheeler conducts Phase I Environmental Site Assessments and assists with the planning and implementation of Phase II soil, soil gas, and groundwater investigations. Past project types have included single-family residential developments, large-scale commercial and industrial facilities, city redevelopment areas, and large scale agricultural lands.

REPRESENTATIVE PROJECT EXPERIENCE

Santa Clara Valley Water District (SCVWD), Linear Phase I Environmental Site Assessments, Santa Clara County, California: Ninyo & Moore provided environmental services as a subconsultant to Overland, Pacific & Cutler, Inc. on behalf of the SCVWD. As Senior Project Manager, provided project coordination and implementation, field reconnaissance oversight, report preparation and oversight, project invoicing and client interactions. The project consists of conducting Phase I ESAs of approximately 140 properties along Upper Llagas Creek, which the SCVWD is proposed to purchase portions of for implementing flood protection measures.

Former Union Pacific Redevelopment Property, West Sacramento, California: Project Manager for a Phase I Site Assessment of an 8.8-acre Union Pacific Railroad property. The intent of the investigation was to support the redevelopment of the property into residential development known as Ironworks at the Triangle. Components of the Phase I Site Assessment included characterization of the former railroad tracks, including the removal of the railroad slag ballast, and metals contaminated soil associated with the railroad tracks.

Port of Sacramento Collateral Property West Sacramento, California: Managed and conducted a Phase I Site Assessment on 240 acres of partially developed/undeveloped land for the City of West Sacramento Redevelopment Agency. The developed portions of the site included the W.G. Stone navigational Locks, Government owned land, and waterfront areas. The Stone Lock District consists of over 200 acres of publicly-owned waterfront property with 4 miles of continuous, direct waterfront. The investigation was conducted as part of a due diligence study on behalf of the Redevelopment Agency.

Former Speckles Sugar Facility, Woodland, California: Project Manager for the completion of a Phase I Environmental Site Assessment of a former sugar processing facility. The investigation was conducted as part of a due diligence to identify environmental liabilities prior to purchasing the property. Planned redevelopment activities included reclaiming several acres of the waste lime fields and demolishing portions of the processing facility. Mr. Wheeler compiled a list of Recognized Environmental Conditions that warranted resolution or further assessment. Two of these issues related to the prior use, and questionable abandonment, of seven previous fuel underground storage tanks. A Phase II subsurface assessment of the former UST area was completed and identified residual petroleum hydrocarbon impacts to soil and groundwater. Further Phase II assessment activities of the former UST areas were completed. A No Further Action Report was submitted to the Regional Water Quality Control Board for closure.

Stockton Waterfront Brownfield Redevelopment, Stockton, California: Managed the Phase I Environmental Site Assessment of a former industrial property for a local developer. The assessment identified several areas of potential contamination. The resulting follow up investigations are being managed by the City of Stockton under the direction of the California Regional Water Quality Control Board. Site assessment and remediation activities are being coordinated under U.S. EPA grant funding.

REPRESENTATIVE PROJECT EXPERIENCE (continued)

Brownfields Assessment Grant Study, City of West Sacramento, California: Managed and conducted assessments on over 290 parcels located in the City's central corridor, West Capitol Avenue, as part of the City's revitalization efforts of this area. The resulting Area Wide Assessment report has won the praise of both the Client and the USEPA for its format, content, and layout that documented the environmental conditions of these parcels. The City established as a priority updating the current land uses and perceived image of West Capitol Avenue from an outdated and outmoded highway commercial boulevard to a vibrant and modern central business district.

Bridge District Grant Program, West Sacramento, California: Managed the environmental work of this project, which was part of a \$23 million Proposition 1C Infill Incentive Grant awarded to the City of West Sacramento. Services included conducting an Environmental Conditions Assessment (ECA), Phase II soil sampling, and reviewing various soil/groundwater/dust management plans that were used by follow-on contractors during the roadway construction activities. This waterfront redevelopment area encompasses 125 net developable acres bounded by the Sacramento River on the east, former S.R. 275 on the north and U.S.50/Business 80 Capital City Freeway on the south. The purpose of the ECA was to evaluate the proposed Bridge District street alignment corridors for possible surface and/or subsurface contamination that may have impacted the proposed street alignments. Based on the results of the ECA, follow up Phase II investigations were recommended at six areas. The purpose of the Phase II sampling was to provide a screening-level assessment of potentially contaminated soil and/or groundwater sites identified during the ECA that may be encountered during construction of infrastructure improvements. Phase II soil sampling was conducted in six areas. Results of the Phase II sampling resulted in Area-specific cleanup goals for the contaminants of concern. A detailed Soil and Dust Management Plan was prepared for two of the six areas.

Community-Wide Assessment West Capitol Avenue – West End: Project Manager for the implementation of the Community Wide Assessment for West Capitol Avenue. Responsibilities included managing and implementing a USEPA Brownfield Assessment Grant, which included conducting a Community Wide Assessment of approximately 133 individual parcels within the study area. Services included compiling a list of street addresses provided by the City of West Sacramento, cross referencing the provided addresses with their respective Assessor's Parcel Number (APN), and the APN-listed property address for the respective parcel number, in order to identify which parcels were within the "Study Area" boundary. The parcel inventory database was the basis for conducting the Community Wide Assessment. Based on the parcel inventory, Mr. Wheeler conducted the Community Wide Assessment and performed all site reconnaissance fieldwork, historical research, agency database research, and color photography of each parcel. Site-specific data, along with historical research information was compiled into various data tables. Specific sites were ranked according to redevelopment potential, degree of suspected contamination, and environmental condition.

422-424 C Street, West Sacramento, California: Project Manager for the completion of a Phase I Environmental Site Assessment/All Appropriate Inquires Report (AAI) of the 422-424 C Street property for the City of West Sacramento Grants and Community Development Department. Results of the AAI report revealed the site was initially developed for use as residential property and then re-developed for use as an automobile service station sometime prior to 1950. The AAI also noted that four USTs were removed from the site in 1987. Although the site is considered "closed" by Yolo County, no soil or groundwater samples were collected at the time the USTs were removed. Given the historical use of the site as an automotive repair facility, a Phase II environmental site assessment was conducted to assess the soil and groundwater from beneath the removed USTs, investigate two existing automobile lifts to assess if the soil beneath and around the lifts has been impacted by hydraulic fluid contamination, and, collect soil samples from beneath and around an oil/water separator to evaluate the presence of waste oil contamination. The Phase II sampling was conducted in accordance with an approved Sampling and Analysis Plan (SAP). The results of the Phase II investigation indicated detectable levels of petroleum hydrocarbons, and metals below regulatory limits. Based on these findings, no further action was recommended.

TRAFFIC NOISE ANALYSIS TOOL

Project Name: SD Crime Lab Affordable Housing
Project Number: D150334.00
Analysis Scenario: Haul Trucks
Source of Traffic Volumes:

Roadway Segment	Ground Type	Distance from Roadway to Receiver (feet)	Speed (mph)			Peak Hour Volume			Peak Hour Noise Level (Leq(h) dBA)
			Auto	MT	HT	Auto	MT	HT	
Genessee Avenue									
Trips on Genessee Avenue	Hard	45	45	40	35	21	10	0	55.7
Trips on Balboa Avenue	Hard	45	45	40	35	21	10	0	55.7

Model Notes:

The calculation is based on the methodology described in FHWA Traffic Noise Model Technical Manual (1998).

The peak hour noise level at 50 feet was validated with the results from FHWA Traffic Noise Model Version 2.5.

Accuracy of the calculation is within ± 0.1 dB when comparing to TNM results.

Noise propagation greater than 50 feet is based on the following assumptions:

For hard ground, the propagation rate is 3 dB per doubling the distance.

For soft ground, the propagation rate is 4.5 dB per doubling the distance.

Vehicles are assumed to be on a long straight roadway with cruise speed.

Roadway grade is less than 1.5%.

Model Notes:

The calculation is based on the methodology described in FHWA Traffic Noise Model Technical Manual (1998).

The peak hour noise level at 50 feet was validated with the results from FHWA Traffic Noise Model Version 2.5.

Accuracy of the calculation is within ±0.1 dB when comparing to TNM results.

Noise propagation greater than 50 feet is based on the following assumptions:

For hard ground, the propagation rate is 3 dB per doubling the distance.

For soft ground, the propagation rate is 4.5 dB per doubling the distance.

Vehicles are assumed to be on a long straight roadway with cruise speed.

Roadway grade is less than 1.5%.

e/o I-805 Northbound Ramps	Hard	45	45	40	40	4,256	88	44	74.6

Model Notes:

The calculation is based on the methodology described in FHWA Traffic Noise Model Technical Manual (1998).

The peak hour noise level at 50 feet was validated with the results from FHWA Traffic Noise Model Version 2.5.

Accuracy of the calculation is within ±0.1 dB when comparing to TNM results.

Noise propagation greater than 50 feet is based on the following assumptions:

For hard ground, the propagation rate is 3 dB per doubling the distance.

For soft ground, the propagation rate is 4.5 dB per doubling the distance.

Vehicles are assumed to be on a long straight roadway with cruise speed.

Roadway grade is less than 1.5%.

Executive Summary

ES.1 Study Purpose and Project Description

The purpose of this Transportation Impact Study (TIS) is to identify and document potential transportation related impacts associated with the proposed county-initiated Clairemont Mesa Community Plan Amendment and Zone Change (Proposed Project), as well as to recommend mitigation measures, as necessary.

The Proposed Project would allow for the redevelopment the existing County's Crime Lab site, located at 5255 Mt Etna Drive, San Diego, CA 92117, into a maximum of 448 multi-family units of which 100 percent would be affordable. In addition, a minimum of 1,500 square foot portion of the Proposed Project is expected to allow for community support services would also be permitted under the Clairemont Mesa Community Plan Amendment (CPA) and Zone Change Project. Additionally, the community support services could potentially be used for retail, so 10,000 square feet of neighborhood supporting retail was included in the analysis. While it's likely that the retail would not be built to that full extent, it provides a more conservative analysis, and the transportation impacts might be slightly overstated. Demolition of the existing and vacated Crime Lab building and associated landscaping and utilities is a part of the Proposed Project, as is rough grading of the project site following demolition. The project requires a CPA to re-designate the site from Community Commercial to Residential-High (45-73 dwelling units/acre) and propose a zone change from CO-1-2 to RM-3-9. This TIS presents a worst-case analysis of a future residential development project that would be allowed by the Community Plan Amendment and Zone Change.

Although currently unknown, the project is expected to take access via a single driveway located along Mt Etna Drive.

ES.2 Project Trip Generation, Distribution and Study Methodology

The Proposed Project trip generation estimates were derived utilizing the trip generation rates outlined in *Table 1* of the *City of San Diego Land Development Code – Trip Generation Manual 2003*. Due to the commercial component of the Project, the driveway rates and cumulative rates were both used to derive the Project's total trip generation to reflect the commercial's pass-by trips. The driveway rate for the commercial use was applied to the project driveway, as well as roadways and intersections immediately adjacent to the project site (i.e. intersections 6 and 7 in Figure 1-2). Cumulative rates were applied to all other study roadways and intersections.

Additionally, trip reductions from the City's Traffic Impact Study Manual were applied to the residential trip estimates:

Mixed-Use Land Uses Reductions

For developments that include several different types of land use, such as the Proposed Project that has residential units and community supporting retail, it is likely that a resident would utilize the retail uses in lieu of leaving the site, resulting in a reduction in trips generated. Furthermore, the Project site is located immediately adjacent to the largest commercial retail center in

Clairemont Mesa. Large businesses such as Target, Kohls, Sprouts, and Walgreens as well as restaurant dining and banking are all located within walking distance (i.e. less than ¼ a mile) of the project site location. A mixed-use reduction, also known as trip internalization, would reduce the number of trips to the site compared to the trips generated by uses in an isolated situation.

Given the Project's mixed uses and the extremely close proximity to other mixed-use developments, the following reductions were applied:

- Daily = 10%
- AM Peak Hour = 8%
- PM Peak Hour = 10%

Transit Reductions

The Project is located in a Transit Oriented Development (TOD) area, with high frequency transit services immediately adjacent to the site on Genesee Avenue. Bus Route # 41 is serviced along Genesee Avenue operating with 15-minute headways during peak hours and bus route #27 is serviced along Balboa Avenue operating with 30-minutes headways during peak hours. Transit stops for Bus Routes #41 and #27 are each within 400 feet of the Project site. Consequently, the following transit reductions were applied to account for residents using transit in lieu of driving:

- Daily = 5%
- AM Peak Hour = 9%
- PM Peak Hour = 6%

The Proposed Project is anticipated to generate a total of 3,485 daily trips, including 228 (65-in / 163-out) AM peak hour trips and 335 (207-in / 128-out) PM peak hour trips using driveway rates. These estimates were added onto the project driveway, as well as the roadways and intersections immediately adjacent to the project driveway.

The Proposed Project is anticipated to generate a total of 3,005 daily trips, including 209 (53-in / 156-out) AM peak hour trips and 283 (181-in / 102-out) PM peak hour trips using cumulative rates. These estimates were added to the study roadways and intersections within in the study area, not immediately adjacent to the project driveway.

Based on Traffic Impact Study Guidelines for the City of San Diego, a Select Zone analysis is required for trip distribution if the Proposed Project generates more than 2,400 average daily trips. Since the Proposed Project is anticipated to generate more than 2,400 daily trips, the trip distribution for the Proposed Project was developed based on a SANDAG Series 13 Transportation Forecast Select Zone Assignment. This model was developed and is being used for the on-going Clairemont Community Plan Update. Additionally, the Project's traffic analysis zone (TAZ) land use was updated to include the proposed land uses.

Based on the project trip assignment and the standards set by the City of San Diego's Traffic Impact Study Guidelines, the facilities included within the Project's key study area are listed below:

The following 20 key study area roadway segments were analyzed in this study:

1. Genesee Avenue between Appleton Street & Clairemont Mesa Boulevard;
2. Genesee Avenue between Clairemont Mesa Boulevard & Bannock Avenue;
3. Genesee Avenue between Bannock Avenue & Chateau Drive;

-
4. Genesee Avenue between Chateau Drive & Mount Herbert Avenue;
 5. Genesee Avenue between Mount Herbert Avenue & Derrick Drive;
 6. Genesee Avenue between Derrick Drive & Mount Etna Drive;
 7. Genesee Avenue between Mount Etna Drive & Balboa Avenue;
 8. Genesee Avenue between Balboa Avenue & Mount Alifan Drive;
 9. Genesee Avenue between Mount Alifan Drive & Genesee Court;
 10. Mount Everest Boulevard between Mount Etna Drive & Balboa Avenue;
 11. Mount Etna Drive between Mount Everest Boulevard & Genesee Avenue;
 12. Balboa Avenue between Clairemont Drive & Mount Everest Boulevard;
 13. Balboa Avenue between Mount Everest Boulevard & Genesee Avenue;
 14. Balboa Avenue between Genesee Avenue & Shopping Center Driveway;
 15. Balboa Avenue between Shopping Center Driveway & Mount Abernathy Avenue;
 16. Balboa Avenue between Mount Abernathy Avenue & Cannington Drive;
 17. Balboa Avenue between Cannington Drive & Charger Boulevard;
 18. Balboa Avenue between Charger Boulevard & I-805 Southbound Ramps;
 19. Balboa Avenue between I-805 Southbound & I-805 Northbound Ramps; and
 20. Balboa Avenue between I-805 Northbound Ramps and Ruffner Street.

The following eighteen (18) key study area intersections were analyzed in the study:

1. Genesee Avenue & Clairemont Mesa Boulevard (Signal);
2. Genesee Avenue & Bannock Avenue (Signal);
3. Genesee Avenue & Chateau Drive (Signal);
4. Genesee Avenue & Mt Herbert Avenue (Signal);
5. Genesee Avenue & Derrick Drive (Signal);
6. Mt Everest Boulevard & Mt Etna Drive (All-Way Stop Controlled);
7. Genesee Avenue & Mt Etna Drive (Signal);
8. Clairemont Drive & Balboa Avenue (Signal);
9. Mt Everest Boulevard & Balboa Avenue (Signal);
10. Genesee Avenue & Balboa Avenue (Signal);
11. Shopping Center Driveway & Balboa Avenue (Signal);
12. Mt Abernathy Avenue & Balboa Avenue (Signal);
13. Cannington Drive & Balboa Avenue (Signal);
14. Charger Boulevard & Balboa Avenue (Signal);
15. I-805 Southbound Ramps & Balboa Avenue (Signal);
16. I-805 Northbound Ramps & Balboa Avenue (Signal);
17. Genesee Avenue & Mt Alifan Drive (Signal); and
18. Project Driveway & Mt Etna Drive (Side-Street Stop Controlled).

It should be noted that the Proposed Project would not contribute enough traffic (150 peak hour trips in a single direction) to require analysis of Interstate 805 (I-805) freeway.

ES.3 Project Impacts and Mitigation Measures

Based on the significance criteria contained in the *City of San Diego Significance Determination Thresholds*, (January 2011), the timing of the required mitigation measures associated with the development of the Proposed Project was analyzed under the following three scenarios:

- Existing Plus Project Conditions
- Near-Term Base (Year 2021) Plus Project Conditions
- Horizon Year 2050 Base Plus Project Conditions

Existing Plus Project

Under this scenario, the Proposed Project's traffic volumes were added to the existing traffic volumes. This scenario is required for the environmental assessment of substantive land use or roadway network modifications and provides decision-makers and the public with development impacts referenced to an "observable" baseline.

This hypothetical scenario isolates the potential impacts of the Project by eliminating the impacts from both ambient growth and other Proposed Projects. Therefore, the Existing Plus Project analysis is presented for informational purposes only.

Near-Term Year 2021 Plus Project (Direct Impacts)

Based upon the significance criteria presented in Section 2.5 of this report, the addition of project traffic would cause a significant direct impact to three (3) roadway segments, four (4) intersections, and no ramp meters under Near-Term Year 2021 (project opening year) Plus Project conditions. The following mitigation measures would be required to mitigate the project impact to less than significant:

Roadways:

These roadways are currently built to their ultimate classifications (classification designation in the adopted Community Plan) and anticipated to operate at LOS E or F with the addition of the Proposed Project's trips. The arterial level of service and/or the connecting intersections of these segments are also anticipated to operate at unacceptable LOS E or F conditions. Consequently, the following three (3) roadways are considered to have a significant direct impact:

Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue

- Provide additional right-of-way and widen the roadway from a 2-Lane Collector to a 2-Lane Collector with a Continuous-Left-Turn-Lane (or construct left turn pocket where needed) prior to the project's total trip generation of 2,077 ADT.

This roadway is along the Project's frontage, so providing a separate left-turn lane into the Project site would provide additional capacity and would fully mitigate the significant traffic impact associated with the Proposed Project. However, this roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the classification of this roadway, additional right-of-way would be required to implement this measure; therefore, this impact would remain *significant and unavoidable*.

Balboa Avenue, between Cannington Drive and Charger Boulevard

- Reclassify the roadway from a 6-Lane Major Arterial to a 6-Lane Primary Arterial prior to the project's total trip generation of 1,811 ADT.

The significant traffic impact associated with the Proposed Project along this roadway would be fully mitigated with the implementation of this measure. However, this roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the existing land use fronting this roadway (i.e. residential and school uses) as well as the right-of-way constraints, a classification upgrade would not be feasible. Therefore, this impact would remain *significant and unavoidable*.

Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps

- Reclassify the roadway from a 6-Lane Major Arterial to a 6-Lane Expressway prior to the project's total trip generation of 1,561 ADT.

The significant traffic impact associated with the Proposed Project along this roadway would be fully mitigated with the implementation of this measure. However, this roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the planned classification of this roadway, additional right-of-way would be required to implement this measure. Therefore, this impact would remain *significant and unavoidable*.

Intersections:

The traffic generated by the Proposed Project is anticipated to create a direct impact at the following four (4) intersections:

1. *Genesee Avenue & Clairemont Mesa Boulevard* – Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway prior to the project's total trip generation of 2,100 ADT.

The City of San Diego's *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this would mitigate the impact, and the project applicant would coordinate with the City to define the fees for the implementation of this improvement. Therefore, this impact would be reduced to *less than significant*.

8. *Clairemont Drive & Balboa Avenue* - Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway prior to the project's total trip generation of 2,700 ADT.

The City of San Diego's *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this would mitigate the impact, and the project applicant would coordinate with the City to define the fees for the implementation of this improvement. Therefore, this impact would be reduced to *less than significant*.

9. *Mt Everest Boulevard & Balboa Avenue* – Restripe the northbound and southbound approaches on Mt Everest Boulevard to provide an exclusive left-turn lane and a shared through-right turn lane, then convert the northbound and southbound approaches from split phasing to protected left-turn phasing. This improvement must be implemented prior to the project's total trip generation of 300 ADT. Implementing this improvement could be done within the existing right-of-way and would reduce intersection delays to pre-Project conditions. However, the County of San Diego cannot guarantee improvements to an intersection under the jurisdiction of the City of San Diego; therefore, this impact would remain *significant and unavoidable*.

14. *Charger Boulevard & Balboa Avenue* – Restripe the northbound shared through-left turn lane into an exclusive through lane and convert the northbound and southbound signal from split phasing to protective phasing prior to the project's total trip generation of 1,850 ADT. Implementing this improvement would reduce intersection delays to pre-Project conditions. However, the County of San Diego cannot guarantee improvements to an intersection under the jurisdiction of the City of San Diego; therefore, this impact would remain *significant and unavoidable*.

Ramp Meters:

No identified impacts. Therefore, not mitigation is required.

Horizon Year 2050 Base Plus Project

Based upon the significance criteria presented in Section 2.5 of this report, the addition of project traffic would cause significant cumulative impact to three (3) roadway segments, five (5) intersections, and no ramp meters under Horizon Year 2050 Plus Project conditions. The following mitigation measures would be required to mitigate the project impact to less than significant:

Roadways:

These roadways are anticipated to operate at LOS E or F with the addition of the Proposed Project's trips. The arterial level of service and/or the connecting intersections of these segments are also anticipated to operate at unacceptable LOS E or F conditions. Consequently, the following three (3) roadways are considered to have a significant cumulative impact:

Mt Everest Boulevard, between Mt Etna Drive and Balboa Avenue

- Provide additional right-of-way and widen the roadway from a 2-Lane Collector to a 2-Lane Collector with a Continuous-Left-Turn-Lane (or construct left turn pocket where needed) prior to the project's total trip generation of 2,852 of ADT.

The significant traffic impact associated with the Proposed Project along this roadway would be fully mitigated with the implementation of this measure. However, this roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the planned classification of this roadway, additional right-of-way would be required to implement this measure. Therefore, this impact would remain *significant and unavoidable*.

Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue

- Provide additional right-of-way and widen the roadway from a 2-Lane Collector to a 2-Lane Collector with a Continuous-Left-Turn-Lane (or construct left turn pocket where needed) prior to the project's total trip generation of 1,399 ADT.

This roadway is along the Project's frontage, so providing a separate left-turn lane into the Project site would provide additional capacity and would fully mitigate the significant traffic impact associated with the Proposed Project. However, this roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the classification of this roadway, additional right-of-way would be required to implement this measure; therefore, this impact would remain *significant and unavoidable*.

Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps

- Reclassify the roadway from a 6-Lane Major Arterial to a 6-Lane Expressway prior to prior to the project's total trip generation of 1,561 ADT.

The significant traffic impact associated with the Proposed Project along this roadway would be fully mitigated with the implementation of this measure. However, this roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the planned classification of this roadway, additional right-of-way would be required to implement this measure. Therefore, this impact would remain *significant and unavoidable*.

Intersections:

The following mitigation measures are requirement to mitigate the project intersection impact to less than significant:

1. Genesee Avenue & Clairemont Mesa Boulevard – Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway prior to the project's total trip generation of 800 ADT.

The City of San Diego's *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this would mitigate the impact, and the project applicant would coordinate with the City to define the fees for the implementation of this improvement. Therefore, this impact would be reduced to *less than significant*.

8. Clairemont Drive & Balboa Avenue - Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway prior to the project's total trip generation of 1,300 ADT.

The City of San Diego's *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this would mitigate the impact, and the project applicant would coordinate with the City to define the fees for the implementation of this improvement. Therefore, this impact would be reduced to *less than significant*.

9. Mt Everest Boulevard & Balboa Avenue – Restripe the northbound and southbound approaches on Mt Everest Boulevard to provide an exclusive left-turn lane and a shared through-right turn lane, then convert the northbound and southbound approaches from split phasing to protected left-turn phasing. This improvement must be implemented prior to the project's total trip generation of 725 ADT. Implementing this improvement could be done within the existing right-of-way and would reduce intersection delays to pre-Project conditions. However, the County of San Diego cannot guarantee improvements to an intersection under the jurisdiction of the City of San Diego; therefore, this impact would remain *significant and unavoidable*.
10. Genesee Avenue & Balboa Avenue – Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway prior to the project's total trip generation of 600 ADT.

The City of San Diego's *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this would mitigate the impact, and the project applicant would coordinate with the City to define

the fees for the implementation of this improvement. Therefore, this impact would be reduced to *less than significant*.

14. Charger Boulevard & Balboa Avenue – Restripe the northbound shared through-left turn lane into an exclusive through lane and convert the northbound and southbound signal from split phasing to protective phasing prior to the project’s total trip generation of 1,050 ADT. Implementing this improvement would reduce intersection delays to pre-Project conditions. However, the County of San Diego cannot guarantee improvements to an intersection under the jurisdiction of the City of San Diego; therefore, this impact would remain *significant and unavoidable*.

Ramp Meters:

No identified impacts. Therefore, not mitigation is required.

ES.4 On-Site Circulation, Access and Parking

Although currently unknown, the Proposed Project is expected to take access via a single driveway on Mt Etna Drive. The driveway would be side-street stop-controlled, and would operate at acceptable LOS A under all project study scenarios.

The Proposed Project must provide the appropriate amount of parking per the City’s municipal code (Article 2, Division 5 Parking Regulations, Table 142-05D). However, the City of San Diego’s *Proposed Parking Regulatory Reform for Multifamily Residential Development in Transit Priority Areas (TPAs)* (March 2019) project was recently approved by City Council on March 4, 2019. This study recommended that residential developments within TPAs are given zero minimum parking requirements. The ordinance was approved by the City Council in March 2019.

ES.5 Active Transportation and Transit Impacts

Potential impacts relating to pedestrian, bicycle and transit circulation would be considered significant if the Proposed Project would substantially increase hazards due to a design feature, or would conflict with the adopted policies plans, or programs supporting alternative transportation, as outlined in Appendix G of the *California Environmental Quality Act (CEQA) Guidelines*. Based on an initial review of the project site plan, the Proposed Project would not generate any significant impacts associated with pedestrian, bicycle or transit facilities.

ES.6 Travel Demand Management

Implementation of a travel demand management (TDM) plan could lead to vehicle trip reduction, increased use of alternative modes, and better traffic management in the Project area. The following TDM measures are recommended:

1. Provide wayfinding signage to guide residents/retail patrons to/from bus stops on Genesee Avenue and Balboa Avenue. Exact signage location and type to be determine with coordination with City staff.
2. Provide secure bicycle parking within the Project site. Parking racks should

accommodate U-locks.

3. Designate a Transportation Coordinator (such as a board member of the homeowner's association, a consultant, or a property management company representative) to monitor the TDM Program. The Transportation Coordinator will be responsible for developing, marketing, implementing, and evaluating the proposed TDM measures included in this Plan.
4. Provide Electric Vehicle (EV) charging stations.
5. Implement raised crosswalks and curb extensions at the Genesee Avenue and Balboa Avenue intersection.

ES.7 Vehicle Miles Traveled (VMT)

Transportation is a major contributor to GHG emissions and a direct result of population and employment growth, which generates vehicle trips to move goods, provides public services, and connects people with work, school, shopping, and other activities. Growth in travel (especially vehicle travel) is due in large part to urban development patterns (i.e., the built environment). A performance measure used to quantify the amount of travel is Vehicle Miles Traveled (VMT).

The VMT estimates were derived from the SANDAG Series 13 travel demand (TDF) model that was prepared for the current adopted Community Plan Update, and was used in this analysis to estimate the Project's trip distribution and to develop the Horizon Year 2050 traffic volumes. According to the model, the regional average daily VMT per capita for residents and employees is 14.3 and 21.3, respectively. The Proposed Project's VMT would be 12.7 and 17.2 for residents and employees, respectively, which is both lower than the regional average. Given that the City has not yet adopted a significance criterion for the impending SB 743, the VMT analysis is used solely for informational purposes and not used to identify impacts.

1.0 Introduction

1.1 Purpose of the Report

The purpose of this Transportation Impact Study (TIS) is to identify and document potential transportation related impacts associated with the proposed Clairemont Mesa Community Plan Amendment and Zone Change project, as well as to recommend mitigation measures, as necessary, for any identified transportation related impacts of the Proposed Project.

1.2 Study Area and Project Background

The Proposed Project would allow for the redevelopment the existing County's Crime Lab site, located at 5255 Mt Etna Drive, San Diego, CA 92117, into a maximum of 448 multi-family units of which 100 percent would be affordable. In addition, a minimum of 1,500 square foot portion of the Proposed Project is expected to allow for community support services would also be permitted under the Clairemont Mesa Community Plan Amendment (CPA) and Zone Change Project. Additionally, the community support services could potentially be used for retail, so 10,000 square feet of neighborhood supporting retail was included in the analysis. While it's likely that the retail would not be built to that full extent, it provides a more conservative analysis, and the transportation impacts might be slightly overstated. Demolition of the existing and vacated Crime Lab building and associated landscaping and utilities is a part of the Proposed Project, as is rough grading of the project site following demolition. The project requires a CPA to re-designate the site from Community Commercial to Residential-High (45-73 dwelling units/acre) and propose a zone change from CO-1-2 to RM-3-9. This TIS presents a worst-case analysis of a future residential development project that would be allowed by the Community Plan Amendment and Zone Change.

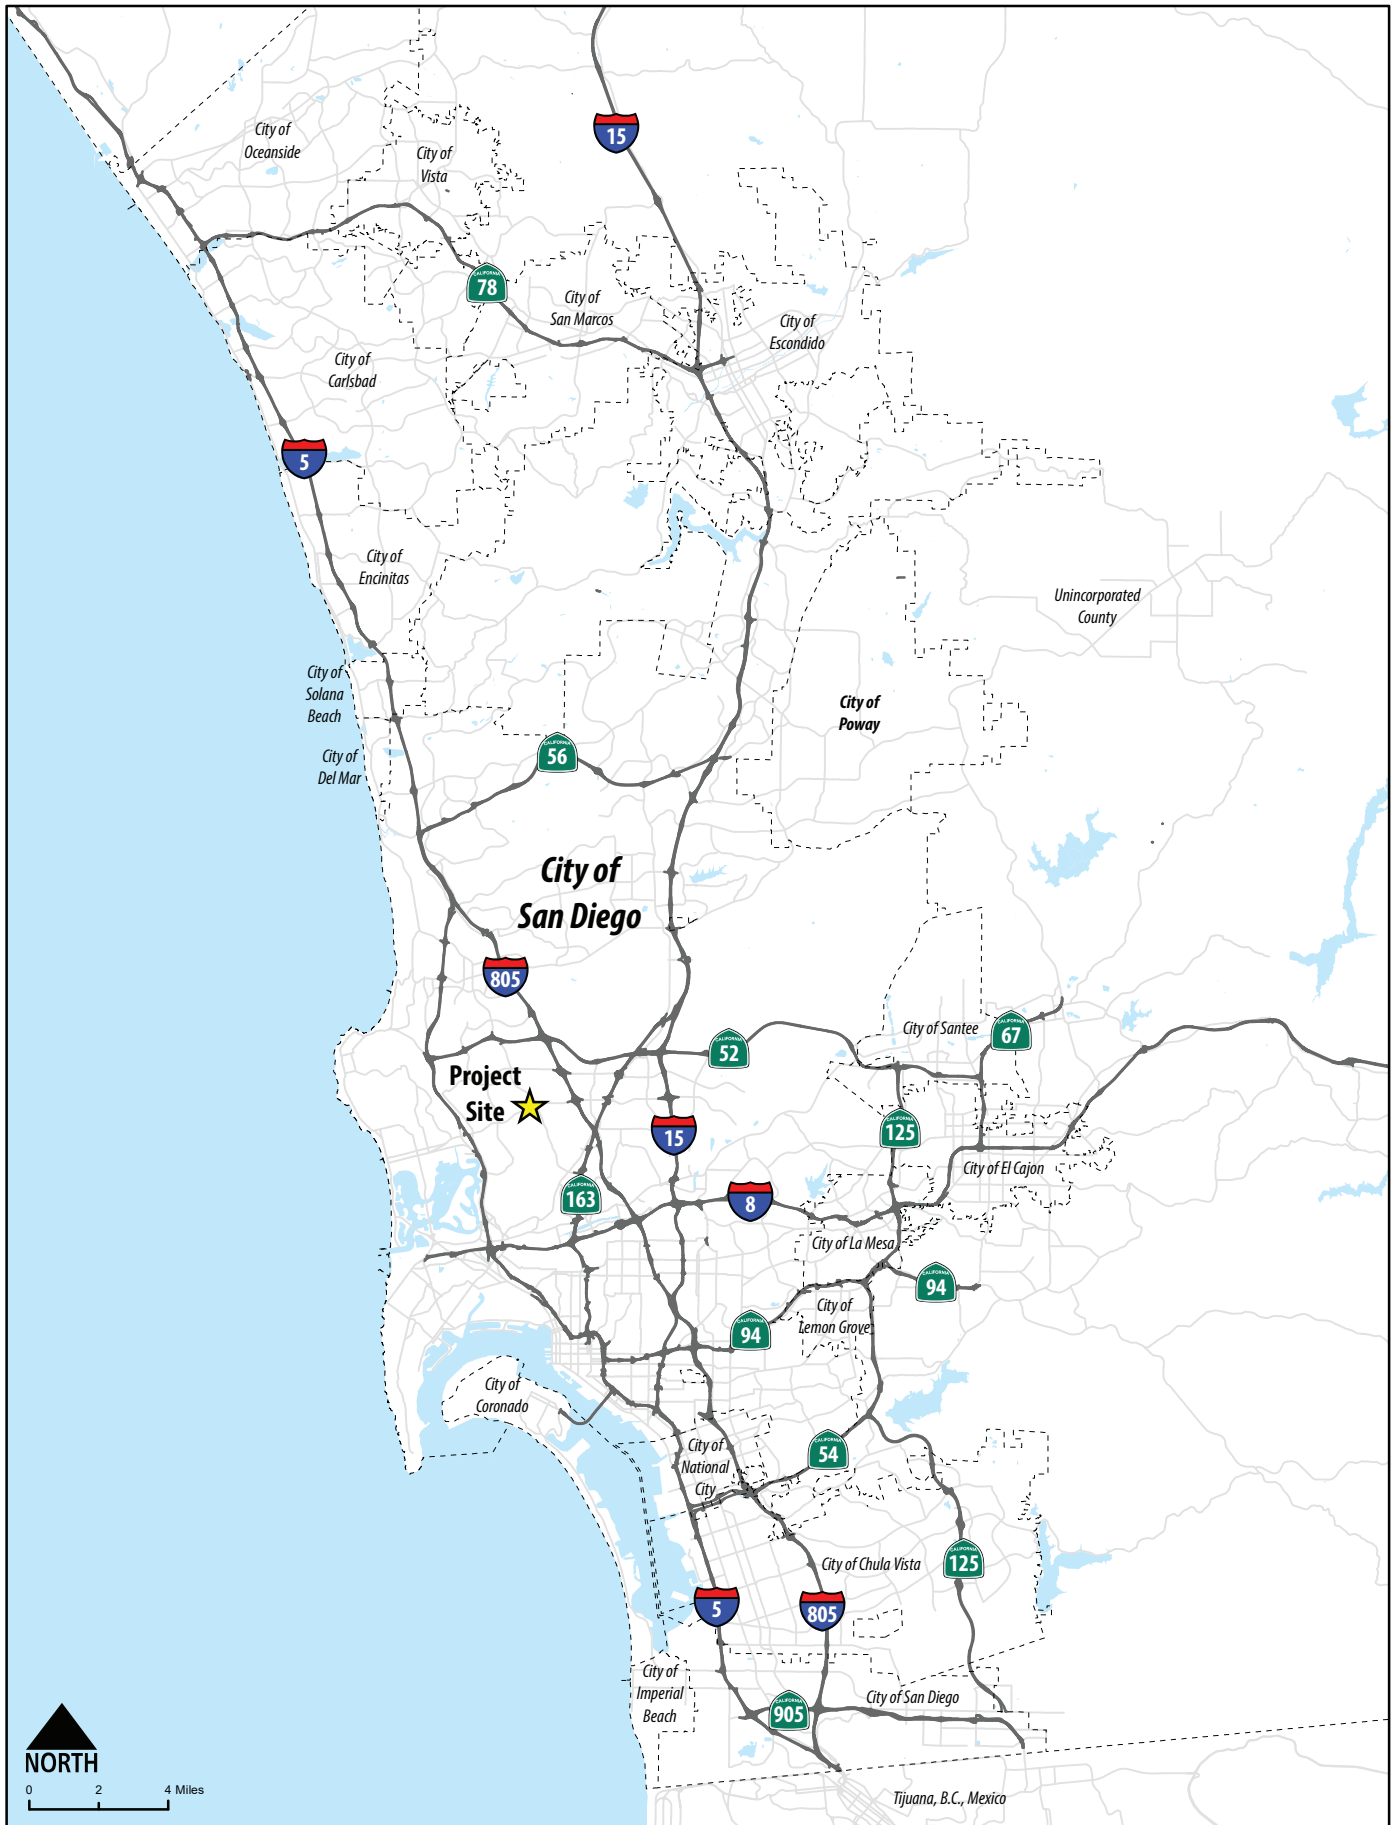

Although currently unknown, the project is expected to take access via a single driveway located along Mt Etna Drive.

Figure 1-1 displays the project regional location and **Figure 1-2** illustrates the project study area.

Six (6) scenarios were analyzed in this study, including:

- Existing Conditions – utilized to establish the existing baseline traffic operations within the project study area.
- Existing Plus Project Conditions – represents existing traffic conditions with the addition of the traffic from the Proposed Project.
- Near-Term Base (Year 2021) Conditions – establishes a near-term baseline against which traffic generated by the Proposed Project can be compared. Base conditions include traffic generated from nearby developing projects that are expected to be constructed and occupied before the Proposed Project. The Year 2021 represents the proposed opening year for the Proposed Project.

-
- Near-Term Base (Year 2021) Plus Project Conditions – represents 2021 baseline traffic conditions with the addition of traffic generated by the Proposed Project.
 - Horizon Year 2050 Base Conditions – represents projected long-range baseline traffic conditions for the Year 2050. Volumes for Year 2050 Base conditions would be derived from the currently Clairemont Mesa Adopted Community Plan.
 - Horizon Year 2050 Base Plus Project Conditions – represents Year 2050 base traffic conditions with the addition of traffic generated by the Proposed Project.

**Clairemont Mesa Community Plan Amendment
and Zone Change - Transportation Impact Study**

*Figure 1-1
Project Location*

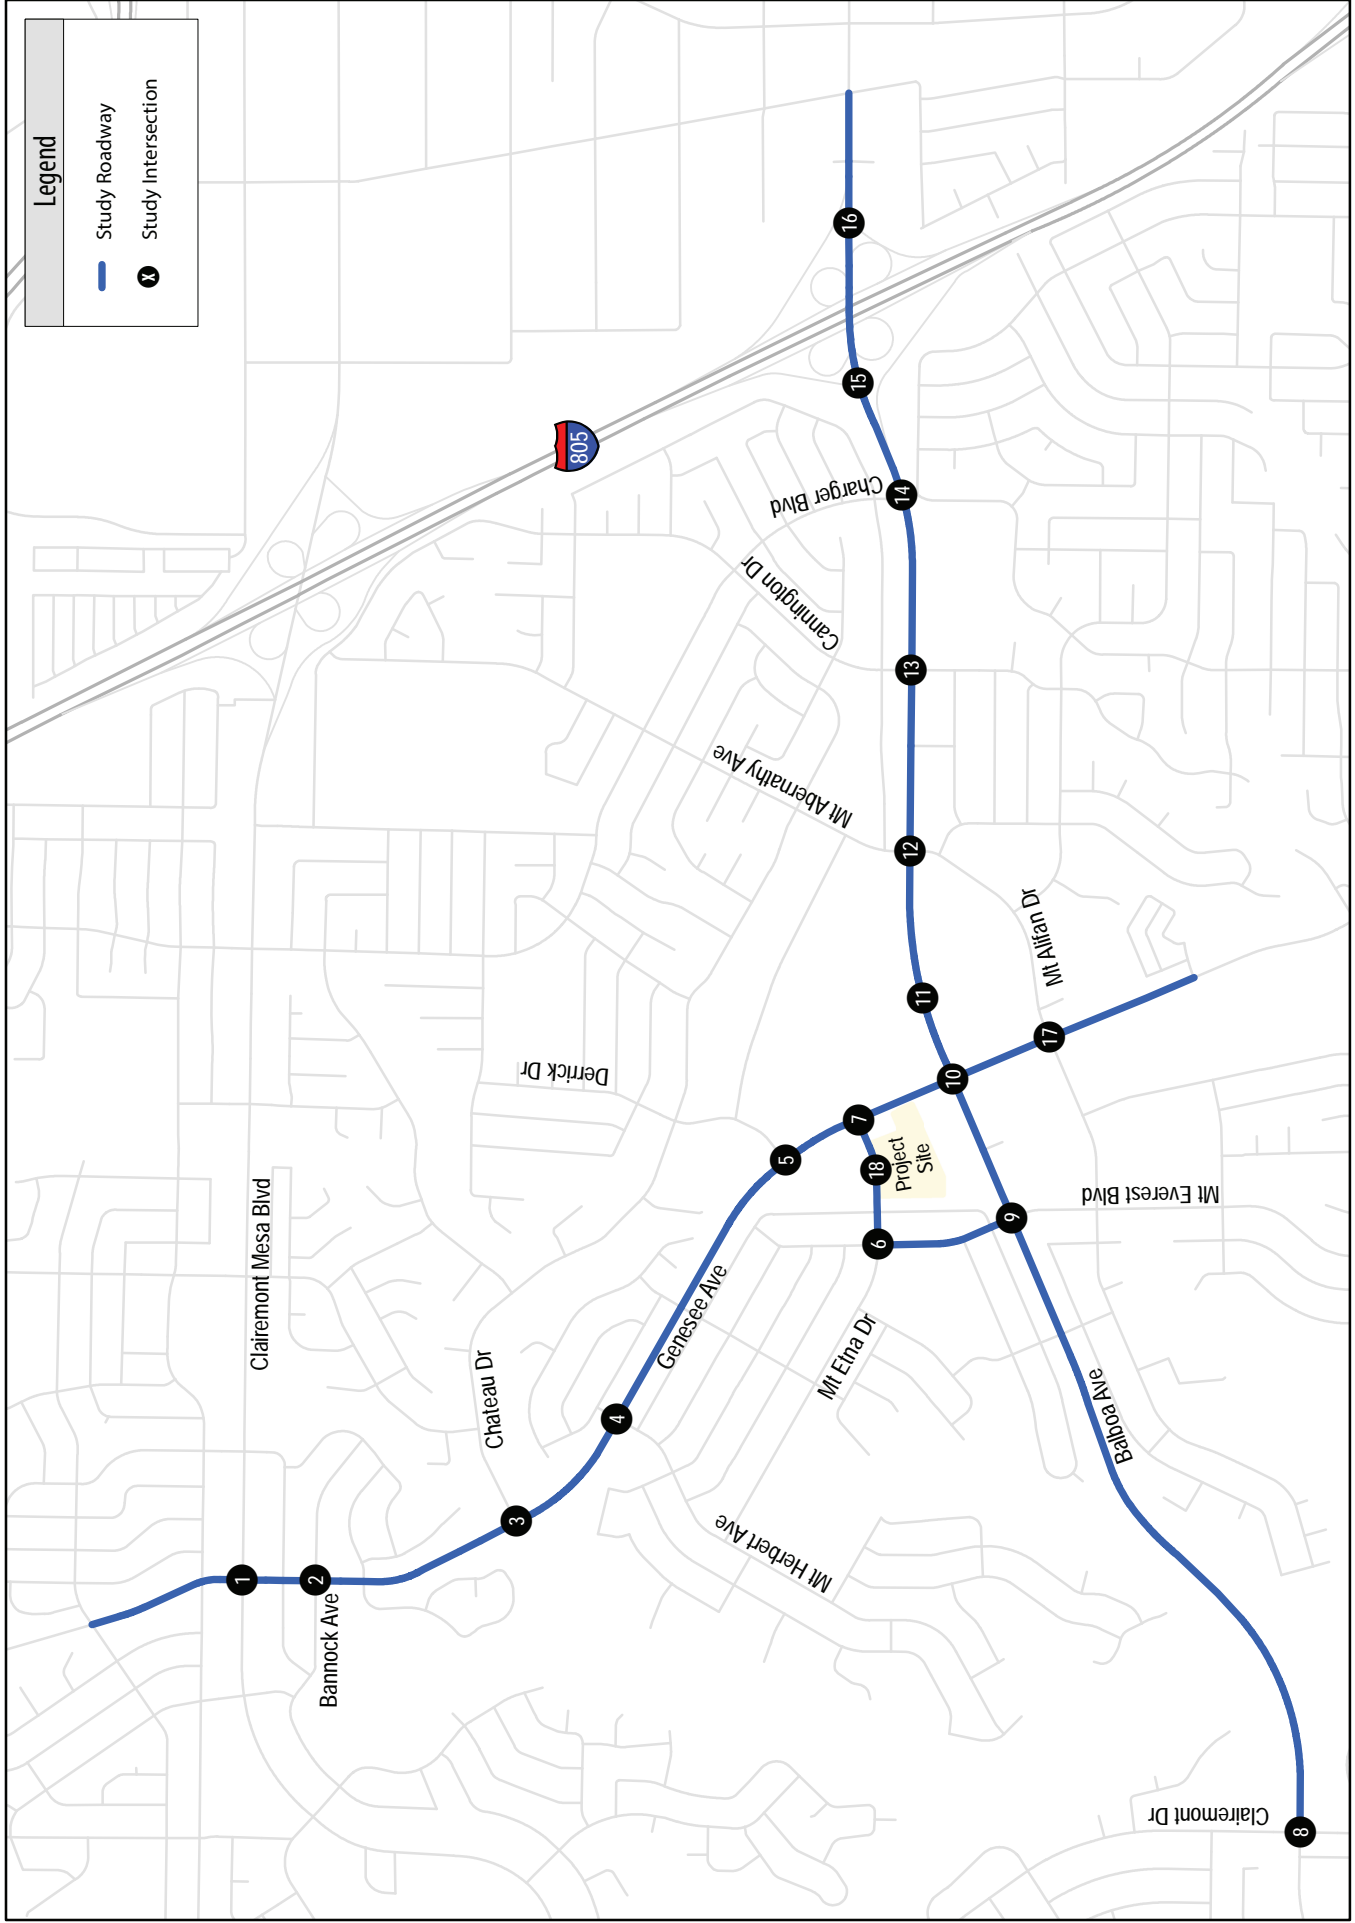

Figure 1-2
Project Study Area

Clairemont Mesa Community Plan Amendment
and Zone Change - Transportation Impact Study

This traffic analysis was performed in accordance with *City of San Diego (City) Traffic Impact Study Manual, July 1998* (TIS Manual). The City of San Diego guidelines require that the defined study area include roadway segments, and intersections where the Proposed Project would add 50 or more peak hour trips in either direction, any metered freeway ramps where the project would add 20 or more peak hour trips, as well as all freeway segments where the Proposed Project would add 150 or more peak hour trips in either direction.

The proposed Clairemont Mesa Community Plan Amendment and Zone Change project would not contribute more than 150 peak hour trips on Interstate 5 (I-5) or Interstate 805 (I-805). Therefore, freeway impact analyses, as specified in the City's TIS Manual, were not conducted.

Mitigation measures and required site access improvements to maintain acceptable transportation operations were also documented as part of this analysis. The roadway segment analyses included herein are based upon the Level of Service (LOS) criteria outlined in the City's TIS Manual. The City's LOS standards are included in Chapter 2.

1.3 Report Organization

Following this Introduction chapter, this report is organized into the following chapters:

- 2.0 Analysis Methodology – This chapter describes the methodologies and standards utilized to analyze roadway and intersection traffic conditions.
- 3.0 Project Description – This chapter describes the Proposed Project including project traffic generation, trip distribution patterns, and project trip assignments.
- 4.0 Existing Conditions – This chapter describes the existing transportation network within the study area and provides analysis results for existing traffic conditions.
- 5.0 Existing Plus Project Conditions – This chapter describes the existing traffic network with the addition of the Proposed Project. Mitigation measures, if necessary, for project-related impacts are also identified.
- 6.0 Near-Term Base (Year 2021) Traffic Conditions – This chapter describes near-term developments anticipated to generate additional study area trips by Year 2021, the Proposed Project opening year. Analysis results are provided for the Year 2021 Base and Year 2021 Base Plus Project conditions, along with recommended mitigation measures (if necessary).
- 7.0 Horizon Year 2050 Traffic Conditions – This chapter describes projected long-range future cumulative traffic conditions. Traffic analysis results are presented for the Year 2050 Base and Year 2050 Base Plus Project conditions. Mitigation measures for project-related impacts are identified for Horizon Year 2050 Base Plus Project Conditions (if necessary).
- 8.0 On-Site Circulation and Parking – This chapter addresses access to the project site by all modes, and on-site circulation based on the proposed site plan. This section also discusses the required and provided parking within the project site.

-
- 9.0 Other Modes – This chapter describes active transportation facilities and transit facilities within the project study area.
 - 10.0 Travel Demand Management (TDM) – This chapter describes potential Travel Demand Management measures that could be implemented by the Proposed Project to reduce Project related vehicle trips.
 - 11.0 Vehicle Miles Travelled (VMT) – This chapter describes the Proposed Project’s VMT in comparison to the regional average VMT.

2.0 Analysis Methodology

This TIS was performed in accordance with the requirements of the *City of San Diego Traffic Impact Study Manual, July 1998* and the *City of San Diego Significance Determination Thresholds, January 2011*. Detailed information on roadway segment and intersection analysis methodologies, standards, and thresholds are discussed in the following sections.

2.1 Level of Service Definition

Level of Service (LOS) is a quantitative measure describing operational conditions within a traffic stream, and the motorist's and/or passengers' perception of operations. A LOS definition generally describes these conditions in terms of such factors as delay, speed, travel time, freedom to maneuver, interruptions in traffic flow, queuing, comfort, and convenience. **Table 2.1** describes generalized definitions of the various LOS categories (A through F) as applied to roadway operations.

Table 2.1 Level of Service Definitions

LOS Category	Definition of Operation
A	This LOS represents a completely free-flow condition, where the operation of vehicles is virtually unaffected by the presence of other vehicles and only constrained by the geometric features of the highway and by driver preferences.
B	This LOS represents a relatively free-flow condition, although the presence of other vehicles becomes noticeable. Average travel speeds are the same as in LOS A, but drivers have slightly less freedom to maneuver.
C	At this LOS the influence of traffic density on operations becomes marked. The ability to maneuver within the traffic stream is clearly affected by other vehicles.
D	At this LOS, the ability to maneuver is notably restricted due to traffic congestion, and only minor disruptions can be absorbed without extensive queues forming and the service deteriorating.
E	This LOS represents operations at or near capacity. LOS E is an unstable level, with vehicles operating with minimum spacing for maintaining uniform flow. At LOS E, disruptions cannot be dissipated readily thus causing deterioration down to LOS F.
F	At this LOS, forced or breakdown of traffic flow occurs, although operations appear to be at capacity, queues form behind these breakdowns. Operations within queues are highly unstable, with vehicles experiencing brief periods of movement followed by stoppages.

Source: Highway Capacity Manual 2010

2.2 Roadway Segment Level of Service Standards and Thresholds

Roadway segment LOS standards and thresholds provide the basis for analysis of arterial roadway segment performance. The analysis of roadway segment LOS is based on the functional classification of the roadway, the maximum capacity, roadway geometrics, and existing or forecast Average Daily Traffic (ADT) volumes. **Table 2.2** presents the roadway segment capacity and LOS standards utilized to analyze roadways evaluated in this report. The actual capacity of a roadway facility varies according to its physical attributes. LOS D is considered acceptable within the City of San Diego. Typically, the performance and level of service of a roadway segment is heavily influenced by the ability of the arterial intersections to accommodate peak hour volumes.

Table 2.2 City of San Diego - Roadway Classifications and LOS Standards

Roadway Functional Classification	Lanes	Level of Service				
		A	B	C	D	E
Freeway	8	60,000	84,000	120,000	140,000	150,000
Freeway	6	45,000	63,000	90,000	110,000	120,000
Freeway	4	30,000	42,000	60,000	70,000	80,000
Expressway	6	30,000	42,000	60,000	70,000	80,000
Prime Arterial	8	35,000	50,000	70,000	75,000	80,000
Prime Arterial	6	25,000	35,000	50,000	55,000	60,000
Major Arterial	7	22,500	31,500	45,000	50,000	55,000
Major Arterial	6	20,000	28,000	40,000	45,000	50,000
Major Arterial	5	17,500	24,500	35,000	40,000	45,000
Major Arterial	4	15,000	21,000	30,000	35,000	40,000
Major Arterial	3	11,250	15,750	22,500	26,250	30,000
Major Arterial	2	7,500	10,500	15,000	17,500	20,000
Major Arterial (one-way)	3	12,500	16,500	22,500	25,000	27,500
Major Arterial (one-way)	2	10,000	13,000	17,500	20,000	22,500
Collector (w/ two-way Left-Turn lane)	4	10,000	14,000	20,000	25,000	30,000
Collector (w/ two-way Left-Turn lane)	3	7,500	10,500	15,000	18,750	22,500
Collector (w/ two-way Left-Turn lane)	2	5,000	7,000	10,000	13,000	15,000
Collector (w/o two-way Left-Turn lane)	4	5,000	7,000	10,000	13,000	15,000
Collector (w/o two-way Left-Turn lane)	3	4,000	5,000	7,500	10,000	11,000
Collector (w/o two-way Left-Turn lane)	2	2,500	3,500	5,000	6,500	8,000
Collector (w/o two-way Left-Turn lane) – no fronting property	2	4,000	5,500	7,500	9,000	10,000
Collector (one-way)	3	11,000	14,000	19,000	22,500	26,000
Collector (one-way)	2	7,500	9,500	12,500	15,500	17,500
Collector (one-way)	1	2,500	3,500	5,000	6,500	7,500
Sub-Collector (single-family)	2	-	-	2,200	-	-

Source: City of San Diego Traffic Impact Study Manual (1998)
Updated with input from City of San Diego Planning Department Mobility Staff (2017)

These standards are generally used as long-range planning guidelines to determine the functional classification of roadways. The actual capacity of a roadway facility varies according to its physical attributes. Typically, the performance and LOS of a roadway segment is heavily influenced by the ability of its intersections to accommodate peak hour traffic volumes. For the purposes of this traffic analysis, LOS D is considered acceptable for circulation element roadway segments.

2.3 Peak Hour Intersection Level of Service Standards and Thresholds

This section presents the methodologies used to perform peak hour intersection capacity analysis, including both signalized and unsignalized intersections. The following assumptions were utilized in conducting all intersection level of service analyses:

- *Heavy Vehicle Factor:* A 2% heavy vehicle factor was assumed for all intersections within the study area.

- **Signal Timing:** Based on existing signal timing plans (as of March 2019), provided in **Appendix A.**

Signalized Intersection Analysis

The analysis of signalized intersections utilized the operational analysis procedures as outlined in the *2010 Highway Capacity Manual (HCM)*. This method defines LOS in terms of delay, or more specifically, average stopped delay per vehicle. Delay is a measure of driver and/or passenger discomfort, frustration, fuel consumption and lost travel time. This technique uses 1,900 vehicles per hour per lane (VPHPL) as the maximum saturation volume of an intersection. This saturation volume is adjusted to account for lane width, on-street parking, pedestrians, traffic composition (i.e., percentage trucks) and shared lane movements (i.e. through and right-turn movements originating from the same lane). The LOS criteria used for this technique are described in **Table 2.3**. The computerized analysis of intersection operations was performed utilizing the *SYNCHRO 10.0* traffic analysis software.

Table 2.3 Signalized Intersection Level of Service Criteria

Average Stopped Delay Per Vehicle (seconds)	Level of Service (LOS) Characteristics
<10.0	<i>LOS A</i> describes operations with very low delay. This occurs when progression is extremely favorable, and most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.
10.1 – 20.0	<i>LOS B</i> describes operations with generally good progression and/or short cycle lengths. More vehicles stop than for <i>LOS A</i> , causing higher levels of average delay.
20.1 – 35.0	<i>LOS C</i> describes operations with higher delays, which may result from fair progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant at this level, although many still pass through the intersection without stopping.
35.1 – 55.0	<i>LOS D</i> describes operations with high delay, resulting from some combination of unfavorable progression, long cycle lengths, or high volumes. The influence of congestion becomes more noticeable, and individual cycle failures are noticeable.
55.1 – 80.0	<i>LOS E</i> is considered the limit of acceptable delay. Individual cycle failures are frequent occurrences.
>80.0	<i>LOS F</i> describes a condition of excessively high delay, considered unacceptable to most drivers. This condition often occurs when arrival flow rates exceed the <i>LOS D</i> capacity of the intersection. Poor progression and long cycle lengths may also be major contributing causes to such delay.

Source: Highway Capacity Manual 2000, TRB Special Report 209

Unsignalized Intersection Analysis

Unsignalized intersections, including two-way and all-way stop controlled intersections, were analyzed using the 2010 Highway Capacity Manual (Chapter 19 & Chapter 20) unsignalized intersection analysis methodology. The *SYNCHRO 10.0* Traffic Analysis software supports this methodology and was utilized to produce LOS results. The LOS for a two-way stop controlled (TWSC) intersection is determined by the computed control delay and is defined for each minor movement. **Table 2.4** summarizes the LOS criteria for unsignalized intersections. The City of San Diego considers LOS D or better during the AM and PM peak hours to be acceptable for intersection LOS.

Table 2.4 Unsignalized Intersection Level of Service Criteria

Average Control Delay (sec/veh)	Level of Service (LOS)
≤10	A
>10 and ≤15	B
>15 and ≤25	C
>25 and ≤35	D
>35 and ≤50	E
>50	F

Source: Highway Capacity Manual 2010

2.4 Ramp Metering Analysis

Ramp metering analysis was conducted to calculate delays and queues at the study area freeway on-ramps. Within the project study area, the I-805 northbound on-ramp at Balboa Avenue and the I-805 southbound on-ramp at Balboa Avenue have activated ramp meters. The demand per hour per lane was calculated using the following equation:

$$D_{vol} = \frac{(P_{vol} - H_{vol})}{N}$$

- D_{vol} (Demand Volume per hour per Lane): total peak hour demand expected to use the on-ramp (non-HOV lane only);
- P_{vol} (Peak Hour Ramp Volume): sum of all peak hour volumes using the on-ramp;
- H_{vol} (HOV lane volume): based on field observation, approximately 20% of the P_{vol} utilized the HOV lane; and
- N : number of non-HOV lanes at the on-ramp.

2.5 Determination of Significant Impacts

The *City of San Diego Significance Determination Thresholds* defines project impact thresholds by facility type. These thresholds are generally based upon an acceptable increase in the Volume / Capacity (V/C) ratio for roadway and freeway segments, and upon increases in vehicle delays for intersections and ramps.

In the City of San Diego, LOS D is considered acceptable for roadway and intersection operations. A project is considered to have a significant impact if it degrades the operations of a roadway or intersection from an acceptable LOS (D or better) to an unacceptable LOS (E or F), or if it adds additional delay to a facility already operating an unacceptable level. **Table 2.5** summarizes the impact significant thresholds as identified by the City of San Diego beyond which mitigation measures are required.

Table 2.5 Measure of Significant Project Traffic Impacts

Level of Service (LOS) with Project*	Allowable Change Due to Impact**					
	Freeways		Roadway Segments		Intersections	Ramp Metering
	V/C	Speed (mph)	V/C	Speed (mph)	Delay (sec)	Delay (min.)
LOS E (or ramp meter delays > 15 min.)	0.010	1.0	0.02	1.0	2.0	2.0
LOS F (or ramp meter delays > 15 min.)	0.005	0.5	0.01	0.5	1.0	1.0

Source: City of San Diego, Significance Determination Thresholds (January 2011)

Note 1: The allowable increase in delay at a ramp meter with more than 15 minutes of delay and freeway LOS E is 2 minutes.

Note 2: The allowable increase in delay at a ramp meter with more than 15 minutes of delay and freeway LOS F is 1 minute.

* All level of service (LOS) measurements are based upon HCM procedures for peak-hour conditions. However, vehicle to capacity (V/C) ratios for roadway segments may be estimated on an ADT/24-hour traffic volume basis (using Table 2.1 or a similar LOS chart for each jurisdiction). The acceptable LOS for freeways, roadways, and intersections is generally "D" ("C" for undeveloped or not densely developed locations per jurisdiction definitions). For metered freeway ramps, LOS does not apply. However, ramp meter delays above 15 minutes are considered excessive.

** If a Proposed Project's traffic causes the values shown in the table to be exceeded, the impacts are determined to be significant. These impact changes may be measured from appropriate computer programs or expanded manual spreadsheets. The project applicant shall then identify feasible mitigation (within the Traffic Impact Study report) that would maintain the traffic facility at an acceptable LOS. If the LOS with the Proposed Project becomes unacceptable (see above * note), or if the project adds a significant amount of peak-hour trips to cause any traffic queues to exceed on- or off-ramp storage capacities, the project applicant shall be responsible for mitigating significant impact changes.

3.0 Project Description and Trip Generation, Distribution, and Assignment

This section describes the Proposed Project, including land uses and estimated trip generation, trip distribution, and trip assignment.

3.1 Project Description

The Proposed Project would allow for the redevelopment the existing County’s Crime Lab site, located at 5255 Mt Etna Drive, San Diego, CA 92117, into a maximum of 448 multi-family units of which 100 percent would be affordable. In addition, a minimum of 1,500 square foot portion of the Proposed Project is expected to allow for community support services would also be permitted under the Clairemont Mesa Community Plan Amendment (CPA) and Zone Change Project. Additionally, the community support services could potentially be used for retail, so 10,000 square feet of neighborhood supporting retail was included in the analysis. While it’s likely that the retail would not be built to that full extent, it provides a more conservative analysis, and the transportation impacts might be slightly overstated. Demolition of the existing and vacated Crime Lab building and associated landscaping and utilities is a part of the Proposed Project, as is rough grading of the project site following demolition. The project requires a CPA to re-designate the site from Community Commercial to Residential-High (45-73 dwelling units/acre) and propose a zone change from CO-1-2 to RM-3-9. This TIS presents a worst-case analysis of a future residential development project that would be allowed by the Community Plan Amendment and Zone Change.

Although currently unknown, the project is expected to take access via a single driveway located along Mt Etna Drive.

Figure 3-1 illustrates the Proposed Project site plan.

3.2 Project Trip Generation Rate, Trip Generation, Distribution, and Assignment

Project Trip Generation

The Proposed Project trip generation estimates were derived utilizing the trip generation rates outlined in *Table 1* of the *City of San Diego Land Development Code – Trip Generation Manual 2003*. Due to the commercial component of the Project, the driveway rates and cumulative rates were both used to derive the Project’s total trip generation to reflect the commercial’s pass-by trips. The driveway rates for the commercial use were applied to the project driveway, as well as roadways and intersections immediately adjacent to the project site (i.e. intersections 6 and 7 shown in Figure 1-2). Cumulative rates were applied to all other study roadways and intersections. Since the existing Crime Lab site was vacant during traffic count collection for existing conditions, no additional adjustments were required for project trip generation.

Figure 3-1
Project Site Plan

Additionally, trip reductions from the City's Traffic Impact Study Manual were applied to the residential trip estimates:

Mixed-Use Land Uses Reductions

For developments that include several different types of land use, such as the Proposed Project that has residential units and neighborhood supporting retail, it is likely that a resident would utilize the retail uses in lieu of leaving the site, resulting in a reduction in trips generated. Furthermore, the Project site is located immediately adjacent to the largest commercial retail center in Clairemont Mesa. Large businesses such as Target, Kohls, Sprouts, and Walgreens as well as restaurant dining and banking are all located within walking distance (i.e. less than ¼ a mile) of the project site location. A mixed-use reduction, also known as trip internalization, would reduce the number of trips to the site compared to the trips generated by uses in an isolated situation. Given the Project's mixed uses and the extremely close proximity to other mixed-use developments, the following reductions were applied:

- Daily = 10%
- AM Peak Hour = 8%
- PM Peak Hour = 10%

Transit Reductions

The Project is located in a Transit Oriented Development (TOD) area, with high frequency transit services immediately adjacent to the site on Genesee Avenue. Bus Route # 41 is serviced along Genesee Avenue operating with 15-minute headways during peak hours and bus route #27 is serviced along Balboa Avenue operating with 30-minutes headways during peak hours. Transit stops for Bus Routes #41 and #27 are each within 400 feet of the Project site. Consequently, the following transit reductions were applied to account for residents using transit in lieu of driving:

- Daily = 5%
- AM Peak Hour = 9%
- PM Peak Hour = 6%

Table 3.1 displays the projected daily, as well as AM and PM peak hour Project trip generation using the driveway vehicle rates. **Table 3.2** displays the Project trip generation using cumulative vehicle rates.

Table 3.1 Project Trip Generation – Driveway Rates

Land Use	Units	Trip Rate	% Daily	ADT	AM Peak Hour					PM Peak Hour				
					%	Trips	Split	In	Out	%	Trips	Split	In	Out
Residential – Multi - Family	448 Units	6 / Unit	-	2,688	8%	216	(2:8)	43	173	9%	242	(7:3)	169	73

Total				3,485	-	228	-	65	163	-	335	-	207	128

Source: City of San Diego Land Use Code, Driveway Rate – Trip Generation Manual, May 2003

*Reductions applied from City of San Diego Traffic Impact Study Manual (July 1998)

As shown in Table 3.1, the Proposed Project is anticipated to generate a total of 3,485 daily trips, including 228 (65-in / 163-out) AM peak hour trips and 335 (207-in / 128-out) PM peak hour trips using driveway rates. These estimates were added onto Project driveway, as well as the roadways and intersections immediately adjacent to the Project driveway.

Table 3.2 Project Trip Generation – Cumulative Rates

Land Use	Units	Trip Rate	% Daily	ADT	AM Peak Hour					PM Peak Hour				
					%	Trips	Split	In	Out	%	Trips	Split	In	Out
Residential – Multi - Family	448 Units	6 / Unit	-	2,688	8%	216	(2:8)	43	173	9%	242	(7:3)	169	73
Residential Reduction due to Transit Stations*	-	-	5%	-134	9%	-19	(2:8)	-4	-5	6%	-15	(7:3)	-11	-4

Total				3,005	-	209	-	53	156	-	283	-	181	102

Source: City of San Diego Land Use Code, Cumulative Rate – Trip Generation Manual, May 2003

*Reductions applied from City of San Diego Traffic Impact Study Manual (July 1998)

As shown in Table 3.2, the Proposed Project is anticipated to generate a total of 3,005 daily trips, including 209 (53-in / 156-out) AM peak hour trips and 283 (181-in / 102-out) PM peak hour trips using cumulative rates. These estimates were added to the study roadways and intersections within the study area, not immediately adjacent to the Project driveway.

Project Trip Distribution

Based on Traffic Impact Study Guidelines for the City of San Diego, a Select Zone analysis is required for trip distribution if the Proposed Project generates more than 2,400 average daily trips. Since the Proposed Project is anticipated to generate more than 2,400 daily trips, the trip distribution for the Proposed Project was developed based on a SANDAG Series 13 Transportation Forecast Select Zone Assignment shown in **Appendix B**. This model was developed and is being used for the on-going Clairemont Community Plan Update. Additionally, the Project's traffic analysis zone (TAZ) land use was updated to include the proposed land use. **Figure 3-2** displays the trip distribution patterns associated with the Proposed Project.

Project Trip Assignment

Based upon the assumed Project trip distribution, daily and AM/PM peak hour Project trips were assigned to the adjacent roadway network, as displayed in **Figure 3-3**.

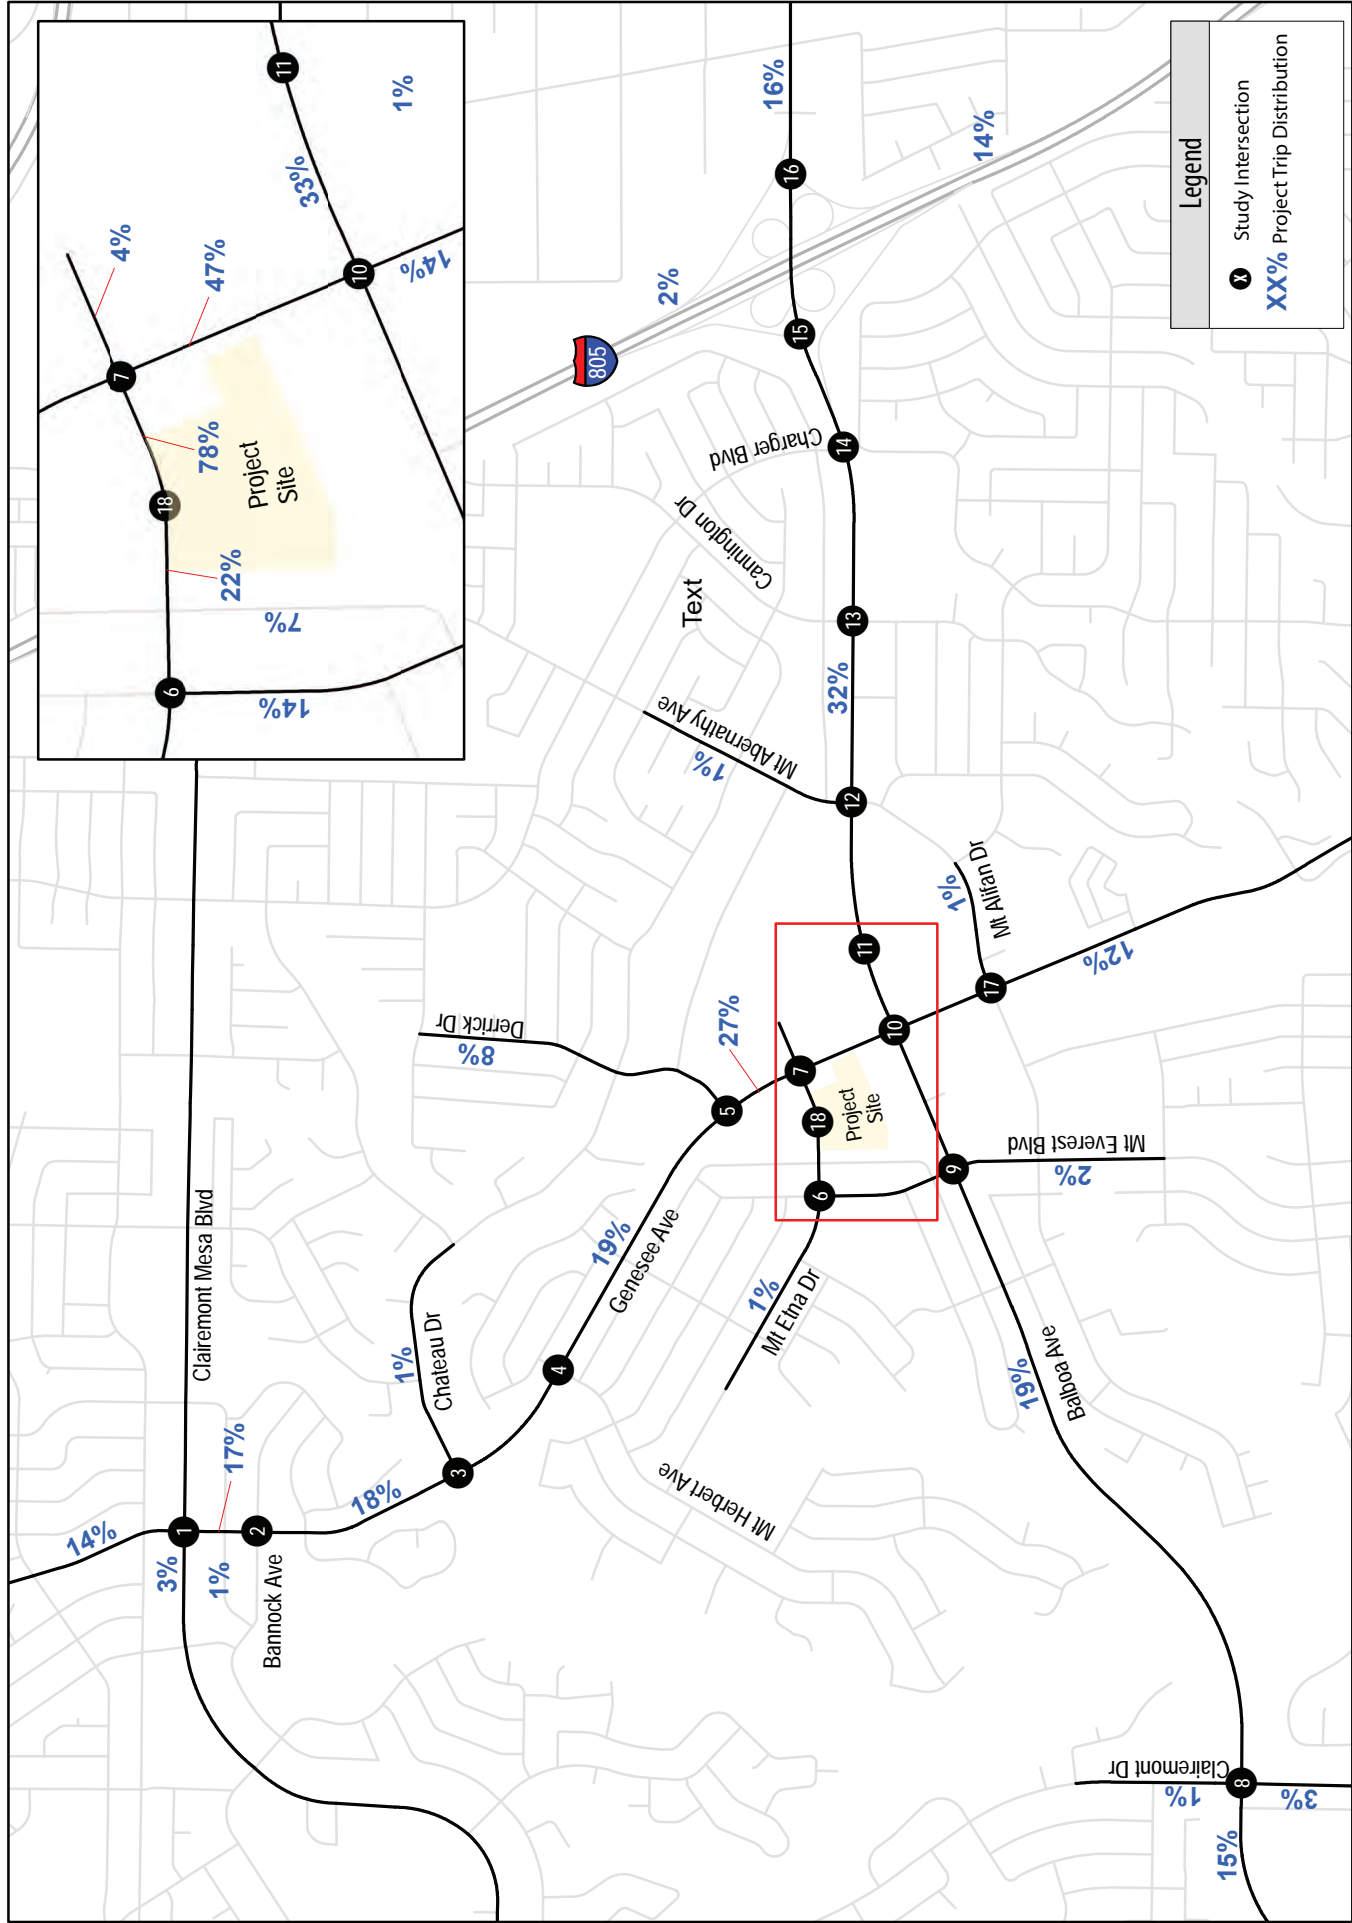

Figure 3-2
Project Trip Distribution

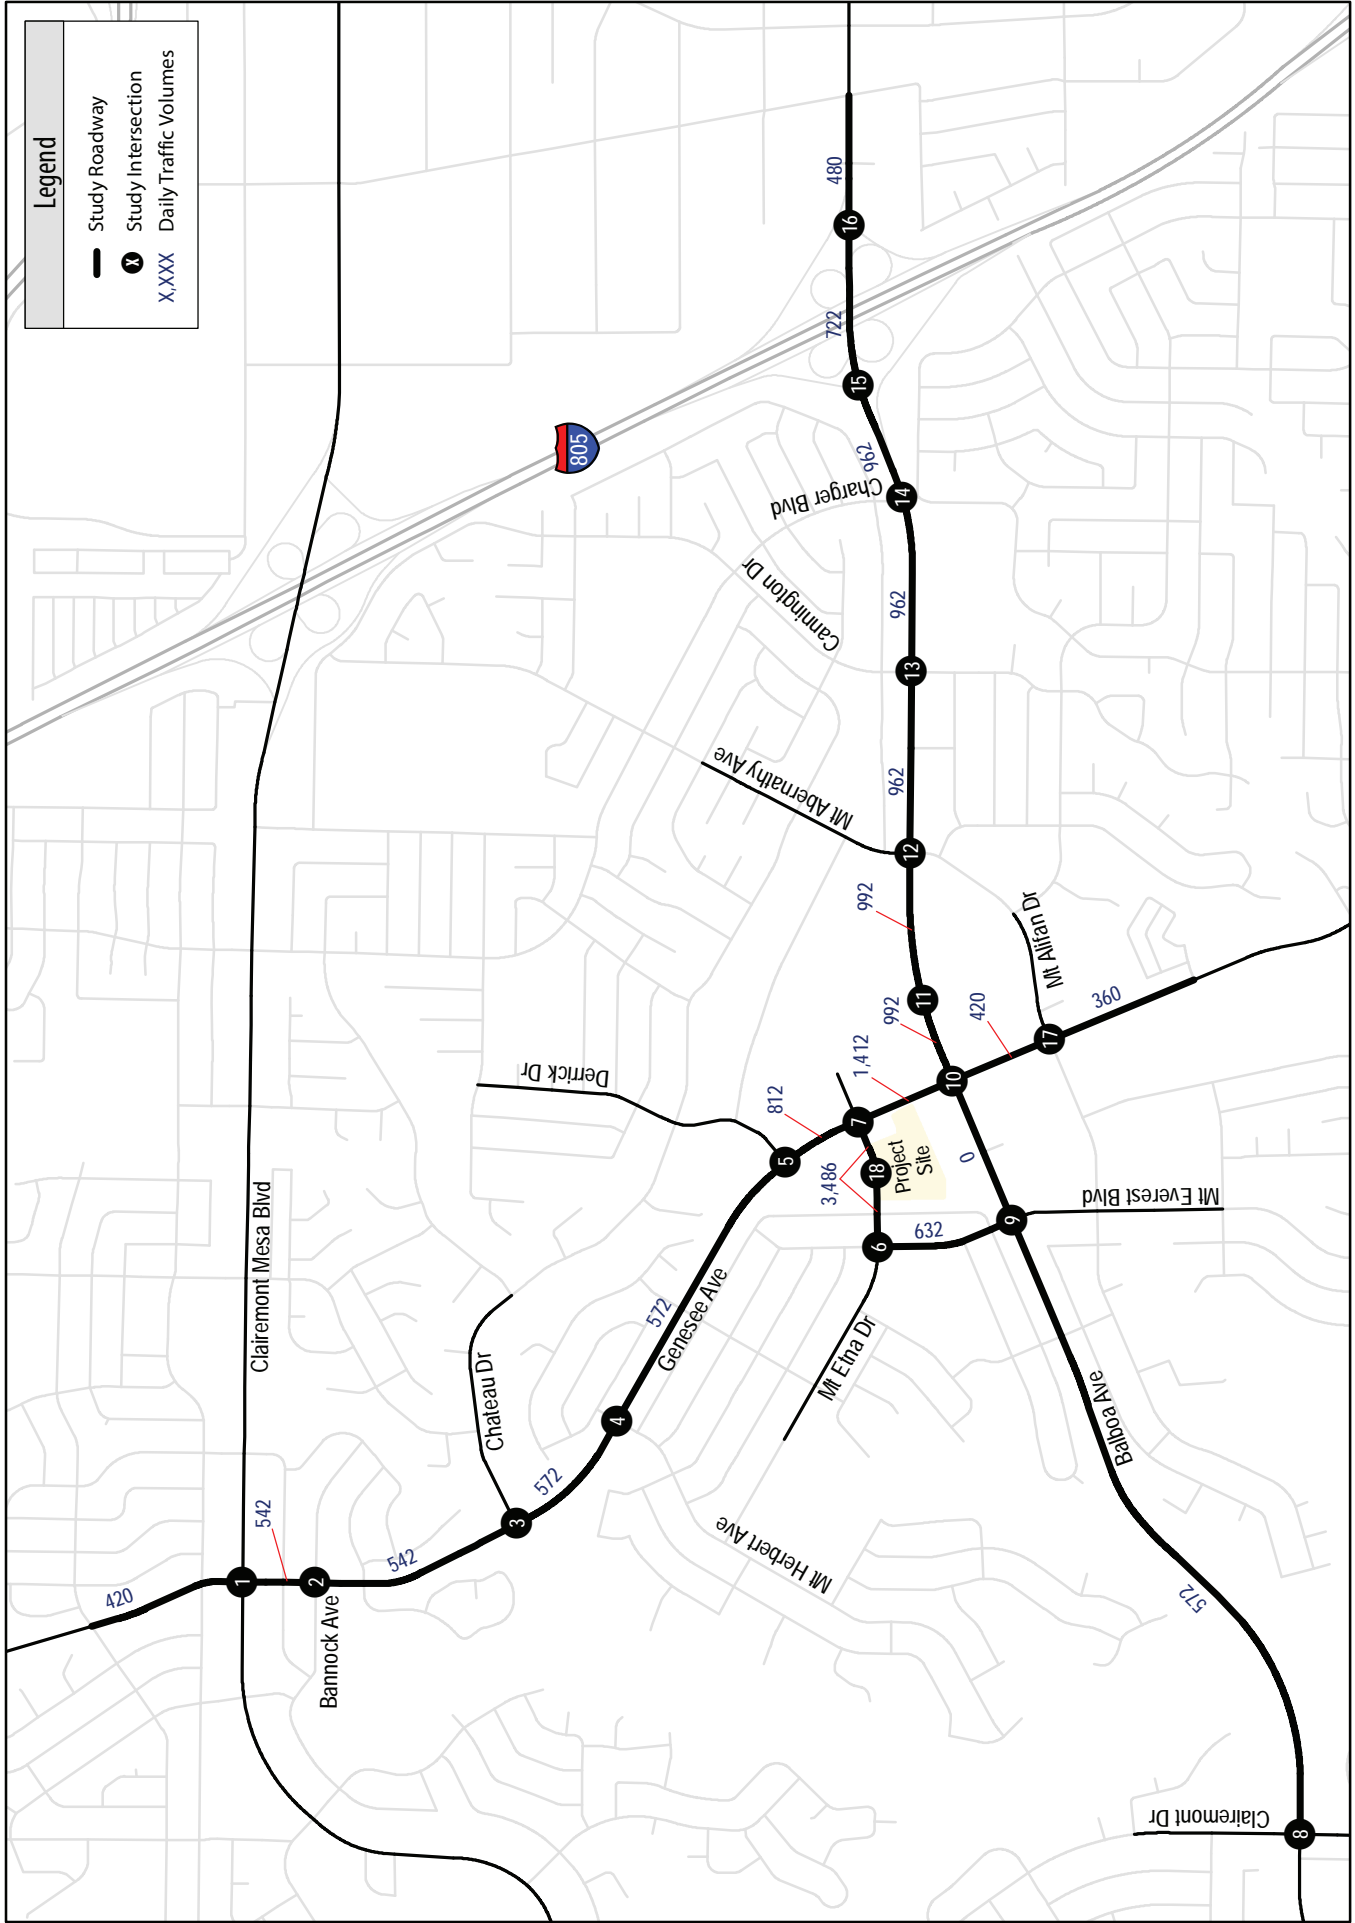

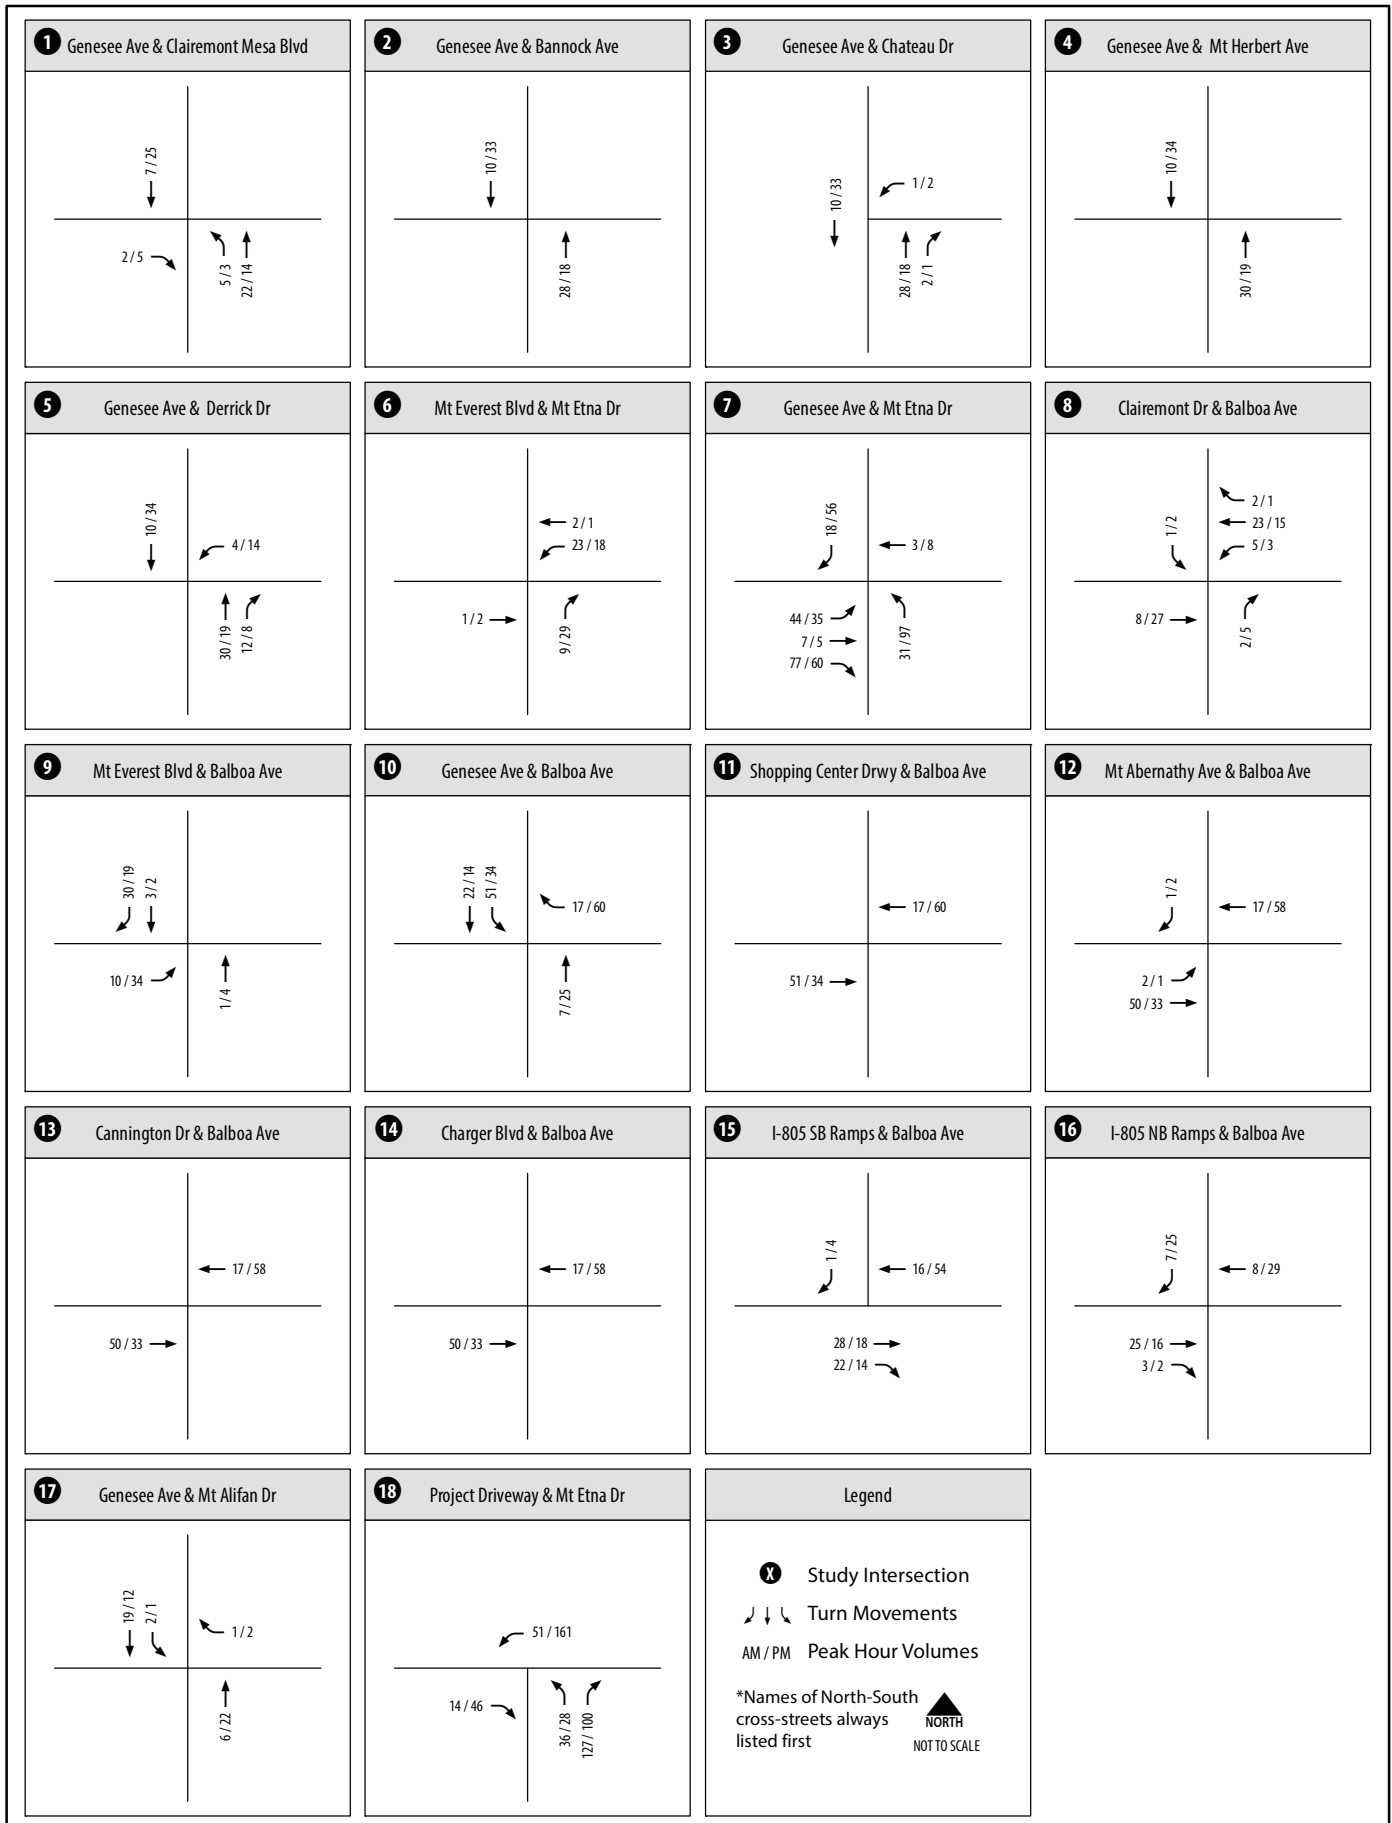

Figure 3-3
Project Trip Assignment

Clairemont Mesa Community Plan Amendment and Zone Change - Transportation Impact Study

Figure 3-3
Project Trip Assignment

4.0 Existing Conditions

This section describes key roadway segments and intersections, existing daily roadway and peak hour intersection traffic volume information, and LOS analysis results under Existing conditions.

4.1 Existing Roadway Network

Six (6) regionally and locally significant roadways traverse the study area. Each of the key roadways, as well as the associated study intersections within the study area are discussed below.

North-South Facilities

Interstate 805 (I-805) is a north-south freeway that is located approximately one and a half miles east of the Project site. Access from I-805 to the study area is taken from the Balboa Avenue interchange. Since the Proposed Project would contribute less than 150 peak hour trips to I-805, freeway analysis was not conducted.

Genesee Avenue – Genesee Avenue is a 4-lane roadway that widens to 6 lanes between Derrick Drive and Mt Etna Drive, transitions to 5 lanes between Mt Etna Drive to Mt Alifan, and narrows again back to 4 lanes after Mt Alifan. Genesee Avenue has a raised median throughout the study area with exception to the roadway segment between Clairemont Mesa Boulevard and Bannock Avenue. The posted speed limit along Genesee Avenue is 35 mph with exception to the roadway segment between Sauk Avenue and Derrick Drive which is 40 mph. Sidewalks are present on both sides of the roadway within the Project study area. On-street parallel parking is allowed along Genesee Avenue on segments south of Mt Alifan Drive and north of Sauk Avenue within the study area. Also, within the study area, Genesee Avenue has class II bike lanes throughout with exception of the class III bike route between Sauk Avenue and Appleton Street. The Clairemont Mesa Community Plan classifies this roadway as a 4-Lane Major Arterial. San Diego MTS Bus Route 41 is serviced along Genesee Avenue.

Mt Everest Boulevard – Mt Everest Boulevard is a 2-lane undivided roadway with sidewalks and on-street parallel parking present on both sides of the roadway. There are no bicycle facilities along Mt Everest within the Project study area. Mt Everest Boulevard has a posted speed limit of 25 mph within the Project study area. The Clairemont Mesa Community Plan classifies Mt Everest Boulevard, south of Balboa Avenue as a 2-lane Collector. There are not transit routes that run along Mt Everest Boulevard; however, transit stops exist for bus route #27 at the Balboa Avenue and Mt Everest Boulevard intersection.

East-West Facilities

Balboa Avenue – Balboa Avenue is currently constructed as a four to six-lane roadway within the Clairemont Mesa community. San Diego MTS Bus Route 27 is serviced along Balboa Avenue. Within the Project study area, Balboa Avenue has a posted speed limit of 45 mph with the following geometric features:

-
- 4-lane roadway with a raised median between Clairemont Drive and Genesee Avenue, sidewalks are located intermittently on the northern side of the roadway. Class II bike lanes are present on both side of the roadway. On-street parking is prohibited along this segment. The Clairemont Mesa Community Plan classifies this segment as a 4-Lane Major Arterial.
 - 6-lane roadway with a raised median between Genesee Avenue and east of I-805. Sidewalk and Class II bike lanes are present on both side of the roadway. On-street parking is prohibited along this segment. The Clairemont Mesa Community Plan classifies this segment as a 6-Lane Major Arterial.

Mt Etna Drive – Mt Etna Dive is a 2-lane undivided roadway with sidewalks on both sides without bicycle facilities. On-street parallel parking is allowed throughout the segment with exception to the commercial fronting property extending 430 feet west of Genesee Avenue. The posted speed limit is 25 mph, between Genesee Avenue and 500 feet west of Genesee Avenue where the posted speed limit of 15 mph per hour begins paired with roadway speed bumps. There are no transit routes that run along Mt Etna Drive; however, transit stops exist for bus route #41 at the Genesee Avenue & Mt Etna Drive intersection.

Study Intersections

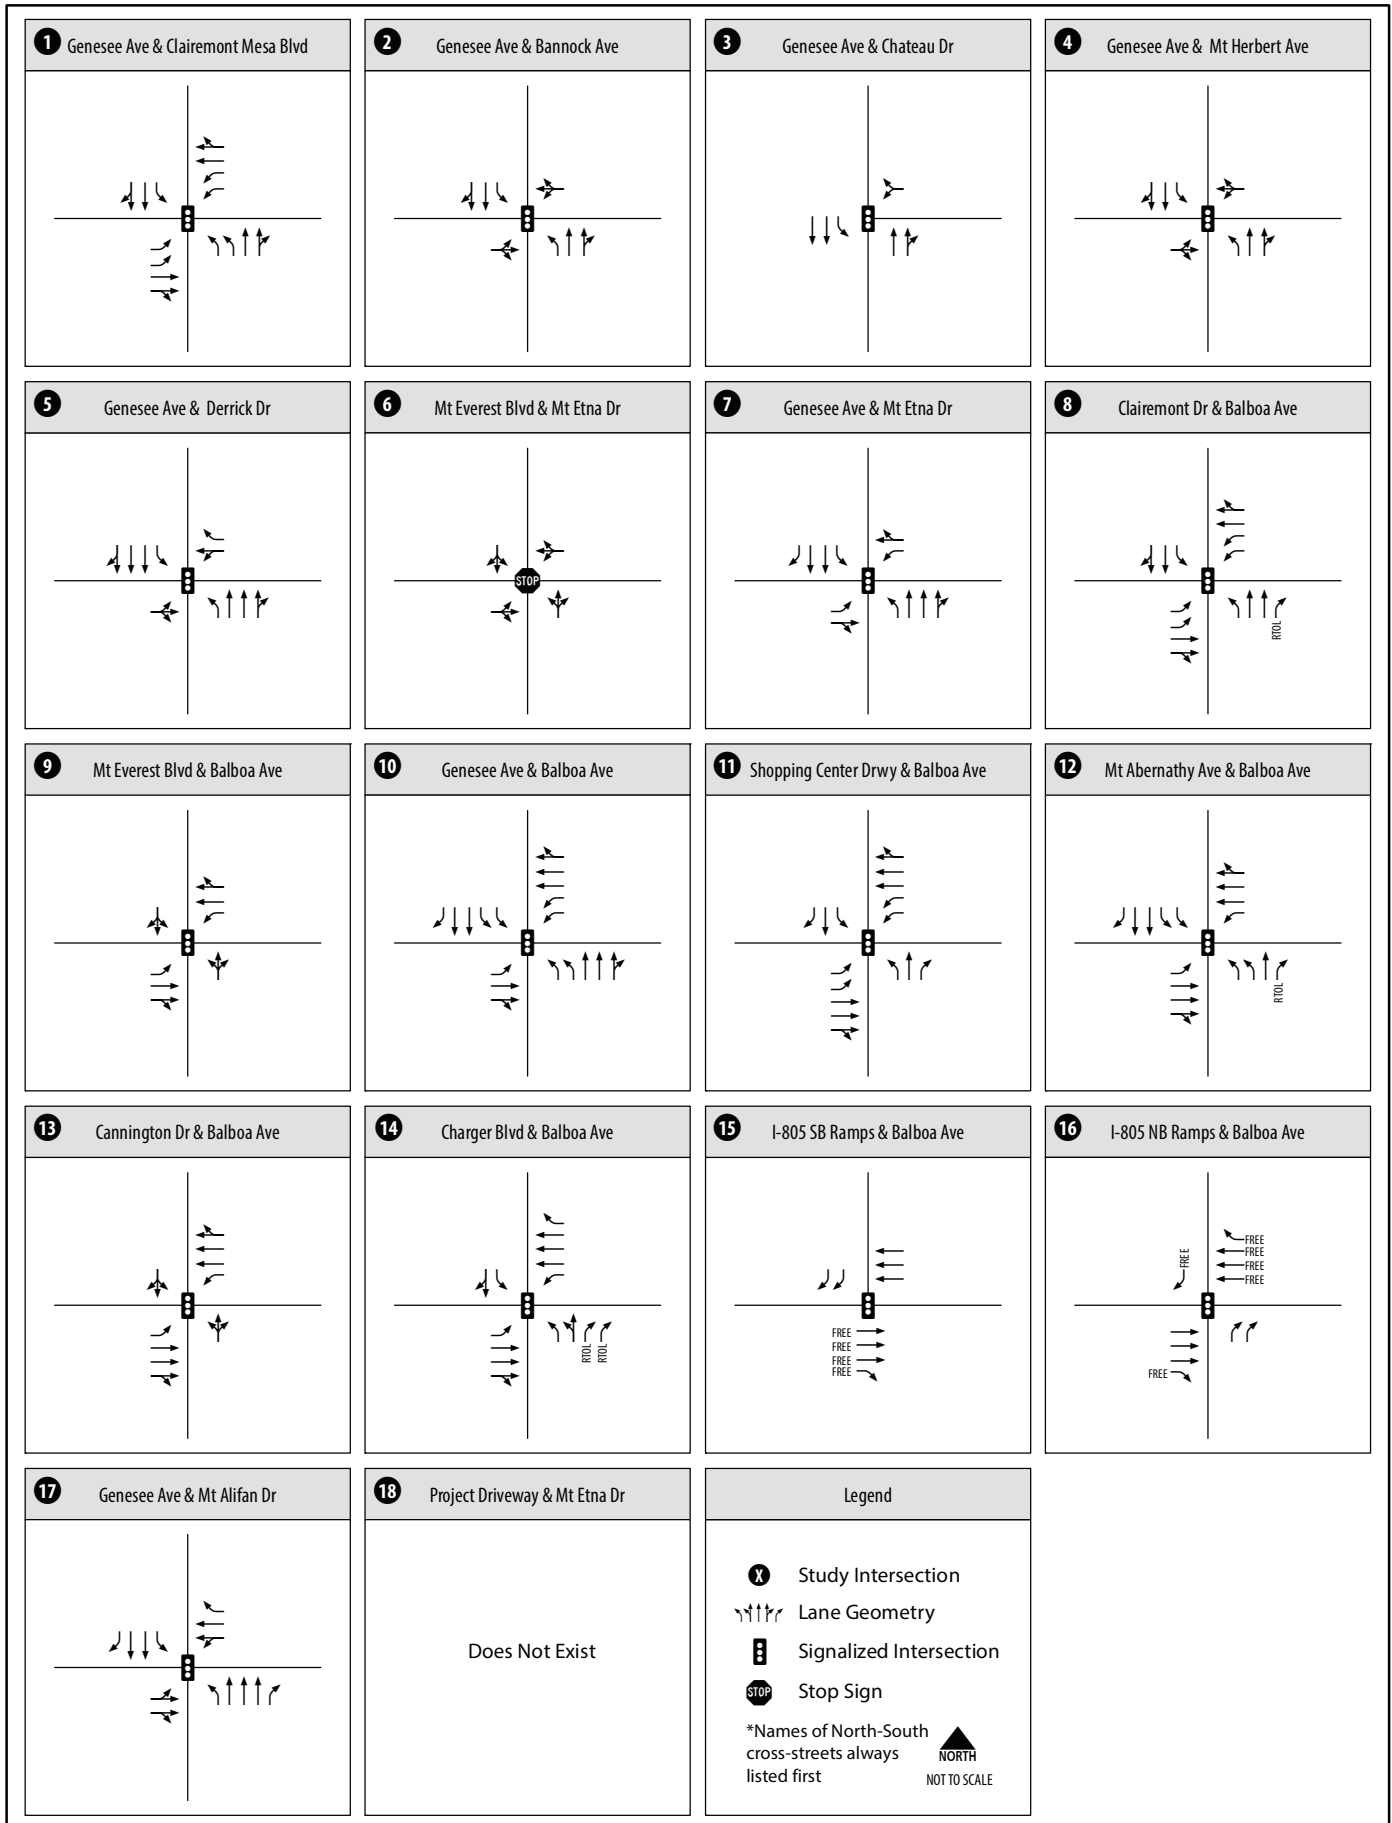

The following nineteen (18) key study area intersections were included within the key study area:

1. Genesee Avenue & Clairemont Mesa Boulevard (Signal);
2. Genesee Avenue & Bannock Avenue (Signal);
3. Genesee Avenue & Chateau Drive (Signal);
4. Genesee Avenue & Mt Herbert Avenue (Signal);
5. Genesee Avenue & Derrick Drive (Signal);
6. Mt Everest Boulevard & Mt Etna Drive (All-Way Stop Controlled);
7. Genesee Avenue & Mt Etna Drive (Signal);
8. Clairemont Drive & Balboa Avenue (Signal);
9. Mt Everest Boulevard & Balboa Avenue (Signal);
10. Genesee Avenue & Balboa Avenue (Signal);
11. Shopping Center Driveway & Balboa Avenue (Signal);
12. Mt Abernathy Avenue & Balboa Avenue (Signal);
13. Cannington Drive & Balboa Avenue (Signal);
14. Charger Boulevard & Balboa Avenue (Signal);
15. I-805 Southbound Ramps & Balboa Avenue (Signal);
16. I-805 Northbound Ramps & Balboa Avenue (Signal);
17. Genesee Avenue & Mt Alifan Drive (Signal); and
18. Mt Etna Drive & Project Driveway (Side-Street Stop Controlled).

It should be noted that the Proposed Project would not contribute enough traffic (150 peak hour trips in a single direction) to require analysis of Interstate 805 (I-805) freeway. The existing roadway and intersection geometrics are shown in **Figure 4-1**.

4.2 Existing Intersection and Roadway Volumes

Figure 4-2 shows both the existing daily traffic volumes for study area roadway segments and the AM/PM peak hour traffic volumes for the key study area intersections. The roadway segment and study area intersection traffic counts were conducted in January 2019 when all schools were in session and the weather was dry and normal. The count sheets are provided in Appendix C.

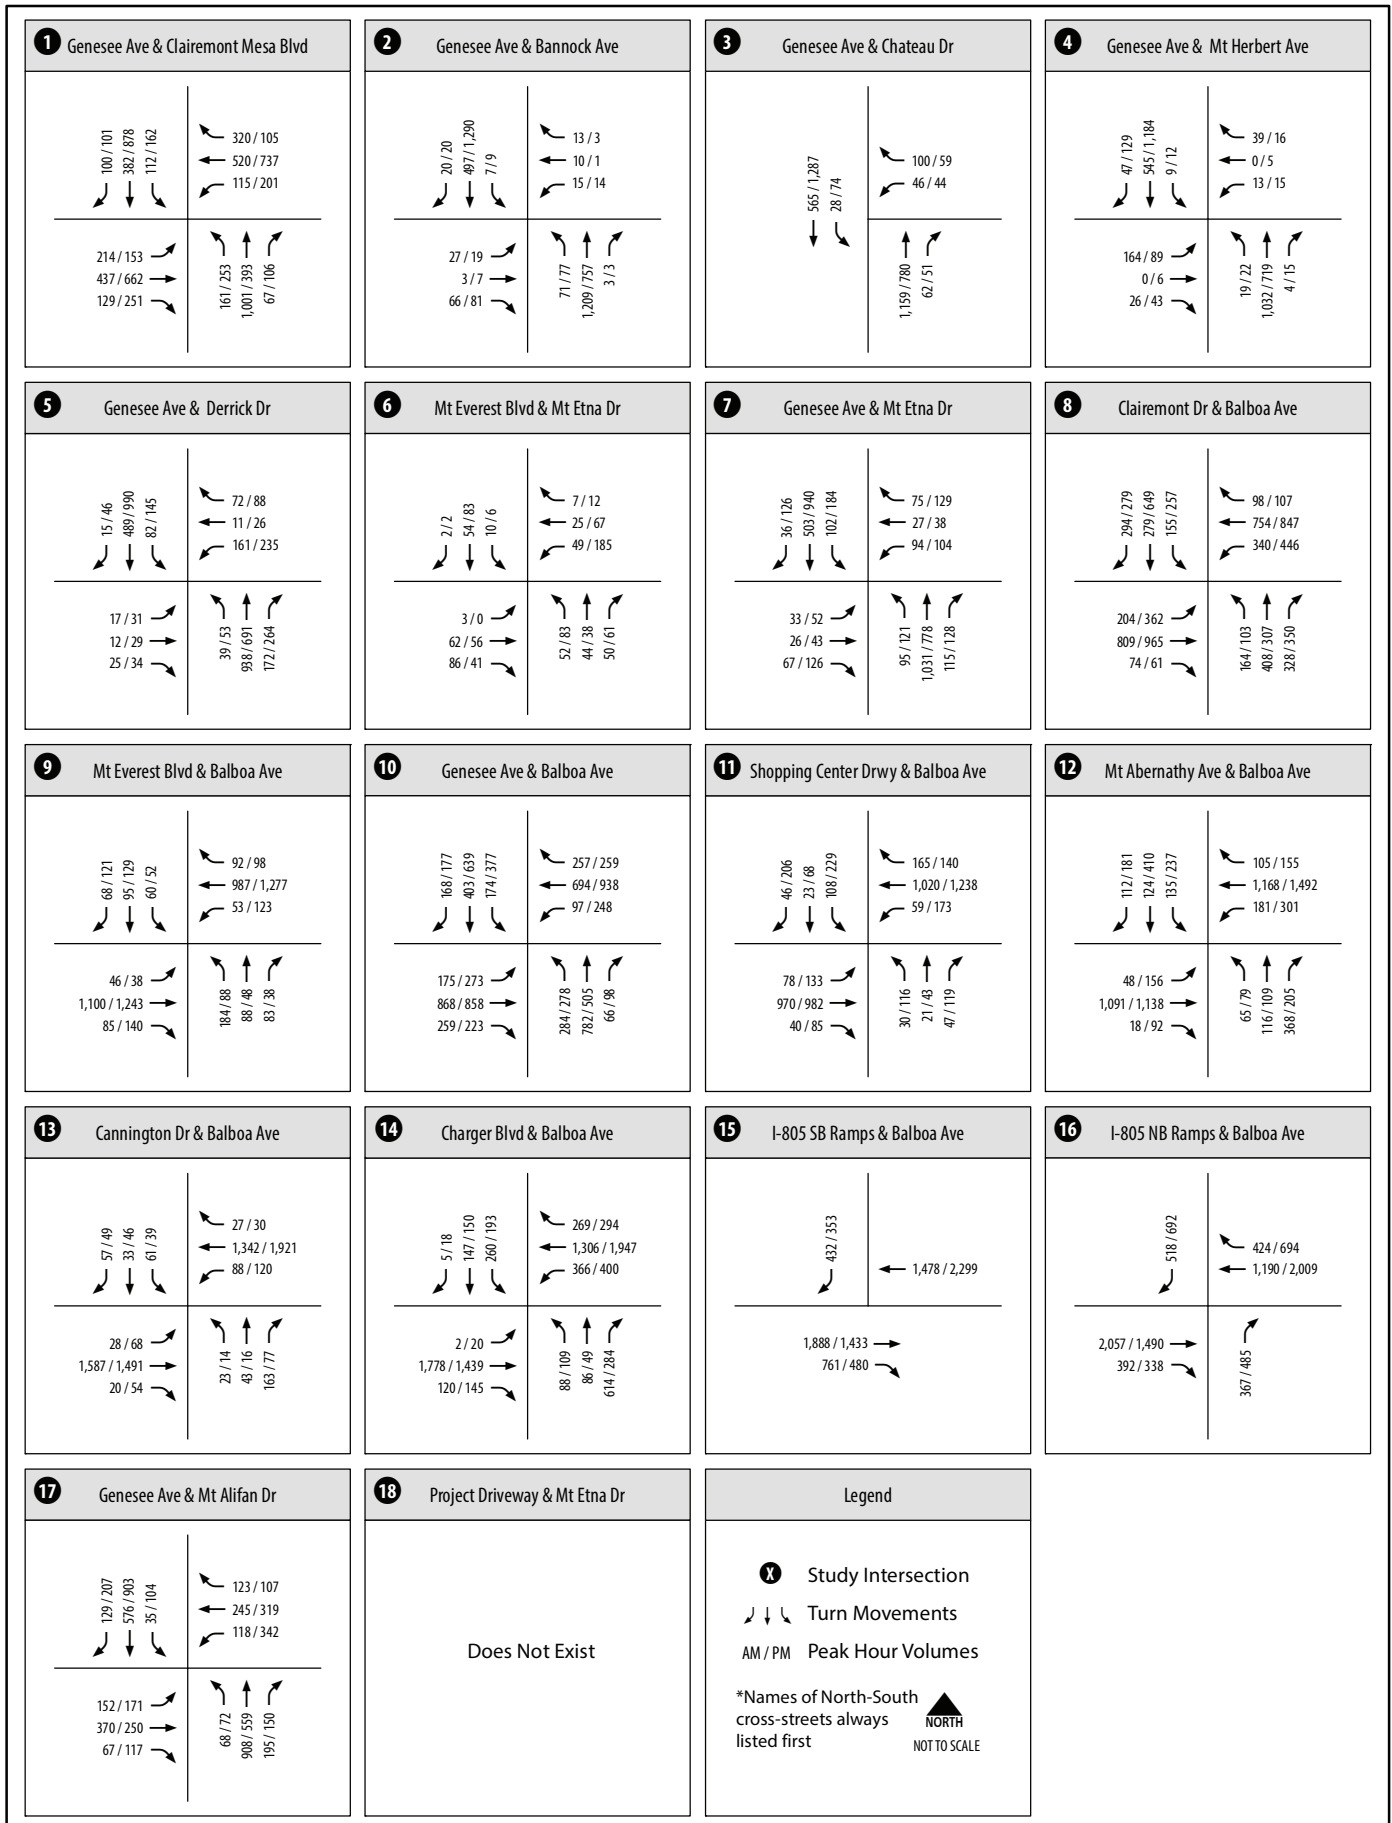

Clairemont Mesa Community Plan Amendment
and Zone Change - Transportation Impact Study

Figure 4-1
Roadway and Intersection Geometrics -
Existing Conditions

Figure 4-2
Traffic Volumes - Existing Conditions

4.3 Existing Level of Service Analysis

Level of service analyses under Existing conditions were conducted using the methodologies described in Chapter 2.0. Roadway segment and intersection level of service, as well as freeway ramp meter analysis results are discussed separately below.

Roadway Segment Analysis

Table 4.1 displays the LOS analysis results for key study area roadway segments under Existing conditions.

As shown in Table 4.1, all of the key study area roadway segments are currently operating at acceptable LOS D or better, with the exception of the following five (5) roadway segments:

- Balboa Avenue, between Clairemont Drive and Mt Everest Boulevard (LOS E);
- Balboa Avenue, between Mt Abernathy Avenue and Cannington Drive (LOS E);
- Balboa Avenue, between Cannington Drive and Charger Boulevard (LOS E);
- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps (LOS F); and
- Balboa Avenue, between I-805 Northbound Ramps and Ruffner Street (LOS F).

Intersection Analysis

Table 4.2 displays intersection level of service and average vehicle delay results for the key study area intersections under Existing conditions. Level of service calculation worksheets for Existing conditions are provided in **Appendix D**.

As shown in the Table 4.2, all of the study area intersections are currently operating at acceptable LOS D or better during both the AM and PM peak hours, with the exception of the following four (4) intersections:

- Genesee Avenue & Clairemont Mesa Boulevard – LOS E during the PM peak hour, primarily due to the heavy volume in the southbound through direction;
- Clairemont Drive & Balboa Avenue – LOS E during the PM peak hour, primarily due to the southbound left movement which experiences a particularly high delay compared to all other movements at the intersection;
- Mt Everest Boulevard & Balboa Avenue – LOS E during the AM and PM peak hours, primarily due to the high delay from the northbound and southbound directions, each serviced by a single lane in the respective directions; and
- Genesee Avenue & Balboa Avenue – LOS E during the PM peak hour primarily due to the heavy volumes on all approaches of the intersection.

Table 4.1 Roadway Segment Level of Service Results - Existing Conditions

Roadway	Segment	Functional Classification	Cross-Section	ADT	Capacity (LOS E)	V/C	LOS
Genesee Avenue	Between Appleton Street & Clairemont Mesa Boulevard	4-Ln Major Arterial	Raised Median	23,097	40,000	0.577	C
	Between Clairemont Mesa Boulevard & Bannock Avenue	4-Ln Major Arterial	Undivided	24,483	40,000	0.612	C
	Between Bannock Avenue & Chateau Drive	4-Ln Major Arterial	Raised Median	25,244	40,000	0.631	C
	Between Chateau Drive & Mt Herbert Avenue	4-Ln Major Arterial	Raised Median	24,958	40,000	0.624	C
	Between Mt Herbert Avenue & Derrick Drive	4-Ln Major Arterial	Raised Median	23,242	40,000	0.581	C
	Between Derrick Drive & Mt Etna Drive	6-Ln Major Arterial	Raised Median	25,645	50,000	0.513	B
	Between Mt Etna Drive & Balboa Avenue	5-Ln Major Arterial	Raised Median	27,743	45,000	0.617	C
	Between Balboa Avenue & Mt Alifan Drive	5-Ln Major Arterial	Raised Median	23,259	45,000	0.517	B
	Between Mt Alifan Drive & Genesee Court	4-Ln Major Arterial	Raised Median	23,742	40,000	0.594	C
Mt Everest Boulevard	Between Mt Etna Drive & Balboa Avenue	2-Ln Collector w/o CLTL	Undivided	4,206	8,000	0.526	C
Mt Etna Drive	Between Mt Everest Boulevard & Genesee Avenue	2-Ln Collector w/o CLTL	Undivided	4,090	8,000	0.511	C
Balboa Avenue	Between Clairemont Drive & Mt Everest Boulevard	4-Ln Major Arterial	Raised Median	35,014	40,000	0.875	E
	Between Mt Everest Boulevard & Genesee Avenue	4-Ln Major Arterial	Raised Median	32,421	40,000	0.811	D
	Between Genesee Avenue & Shopping Center Driveway	6-Ln Major Arterial	Raised Median	32,231	50,000	0.645	C
	Between Shopping Center Driveway & Mt Abernathy Avenue	6-Ln Major Arterial	Raised Median	35,984	50,000	0.720	C
	Between Mt Abernathy Avenue & Cannington Drive	6-Ln Major Arterial	Raised Median	47,147	50,000	0.943	E
	Between Cannington Drive & Charger Boulevard	6-Ln Major Arterial	Raised Median	49,421	50,000	0.988	E
	Between Charger Boulevard & I-805 Southbound Ramps	6-Ln Major Arterial	Raised Median	61,846	50,000	1.237	F
	Between I-805 Southbound Ramps & I-805 Northbound Ramps*	8-Ln Prime Arterial	Raised Median	49,153	80,000	0.614	B
	Between I-805 Northbound Ramps & Ruffner Street	6-Ln Major Arterial	Raised Median	51,228	50,000	1.025	F

Source: NDS, Chen Ryan Associates; March 2019

Notes:

*The Balboa Ave segment between the I-805 ramps are classified as a 6-lane major according to the Clairemont Community Plan; however, the actual roadway cross-section includes eight lanes (two of which are auxiliary ramp lanes).

Bold letter indicates unacceptable LOS E or F.

ADT = Average Daily Traffic.

V/C = Volume to Capacity Ratio.

LOS = Level of Service.

Ln = Lane.

CLTL = Continuous Left-Turn Lane.

Table 4.2 Peak Hour Intersection Level of Service Results - Existing Conditions

Intersection	Control	AM Peak Hour		PM Peak Hour	
		Avg. Delay (sec.)	LOS	Avg. Delay (sec.)	LOS

- AWSC = All-Way Stop Controlled.
- SSSC = Side-Street Stop Controlled.
- DNE = Does Not Exist.

Ramp Metering Analysis

Table 4.3 summarizes the freeway ramp metering analysis results under Existing conditions.

Table 4.3 Ramp Metering Analysis – Existing Conditions

On-Ramp	# of Lanes		Peak Hour	Demand ¹ (veh/hr) per lane	Meter Rate ² (veh/hr) per lane	Excess Demand ³ (veh/hr) per lane	Delay ⁴ (min)	Queue ⁵ (ft)	Storage Length (ft)	Excess Queue (ft)
	SOV	HOV								
I-805 SB On-Ramp @ Balboa Ave EB	1	1	PM	384	423	0	0	0	1,000	0
I-805 NB Ramp @ Balboa Ave EB	1	1	AM	314	511	0	0	0	410	0

Source: Chen Ryan Associates; March 2019

Notes:

SOV = Single Occupancy Vehicle; HOV = High Occupancy Vehicle.

¹ Demand is the peak hour demand expected to use the on-ramp.

² Meter Rate is the peak hour capacity expected to be processed through the ramp meter. This value was obtained from Caltrans.

³ Excess Demand = (Demand) – (Meter Rate) or zero, whichever is greater.

⁴ Delay = (Excess Demand / Meter Rate) X 60 min/hr.

⁵ Queue = (Excess Demand) X 29 ft/veh.

As shown in the table, the anticipated peak hour demand does not exceed the average meter rate at either of the study ramp meter locations.

5.0 Existing Plus Project Conditions

This section provides an analysis of existing traffic conditions with the addition of the Proposed Project. Under this scenario, the Proposed Project’s traffic volumes were added to the existing traffic volumes. This scenario is required for the environmental assessment of substantive land use or roadway network modifications and provides decision-makers and the public with development impacts referenced to an “observable” baseline.

This hypothetical scenario isolates the potential impacts of the Project by eliminating the impacts from both ambient growth and other Proposed Projects. Therefore, the Existing Plus Project analysis is presented for informational purposes only.

5.1 Existing Plus Project Roadway Network and Traffic Volumes

Roadway and intersection geometrics under Existing Plus Project conditions were assumed to be identical to the Existing conditions geometrics, as previously shown in Figure 4-1.

Existing Plus Project traffic volumes were derived by combining the existing traffic volumes (displayed in Figure 4-2) and the Project trip assignment volumes (displayed in Figure 3-4). Daily roadway and peak hour intersection volumes for this scenario are displayed in **Figures 5-1**.

5.2 Existing Plus Project Traffic Conditions

Analyses were conducted using the methodologies described in Chapter 2.0. Roadway segment and intersection level of service, as well as freeway ramp meter analysis results are discussed separately below.

Roadway Segment Analysis

Table 5.1 displays the LOS analysis results for key roadway segments under Existing Plus Project conditions.

As shown in Table 5.1, all of the study area roadway segments are projected to operate at an acceptable LOS with the addition Project traffic, with the exception of the following six (6) roadway segments:

- Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue (LOS E);
- Balboa Avenue, between Clairemont Drive and Mt Everest Boulevard (LOS E);
- Balboa Avenue, between Mt Abernathy Avenue and Cannington Drive (LOS E);
- Balboa Avenue, between Cannington Drive and Charger Boulevard (LOS F);
- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps (LOS F); and
- Balboa Avenue, between I-805 Northbound Ramps and Ruffner Street (LOS F).

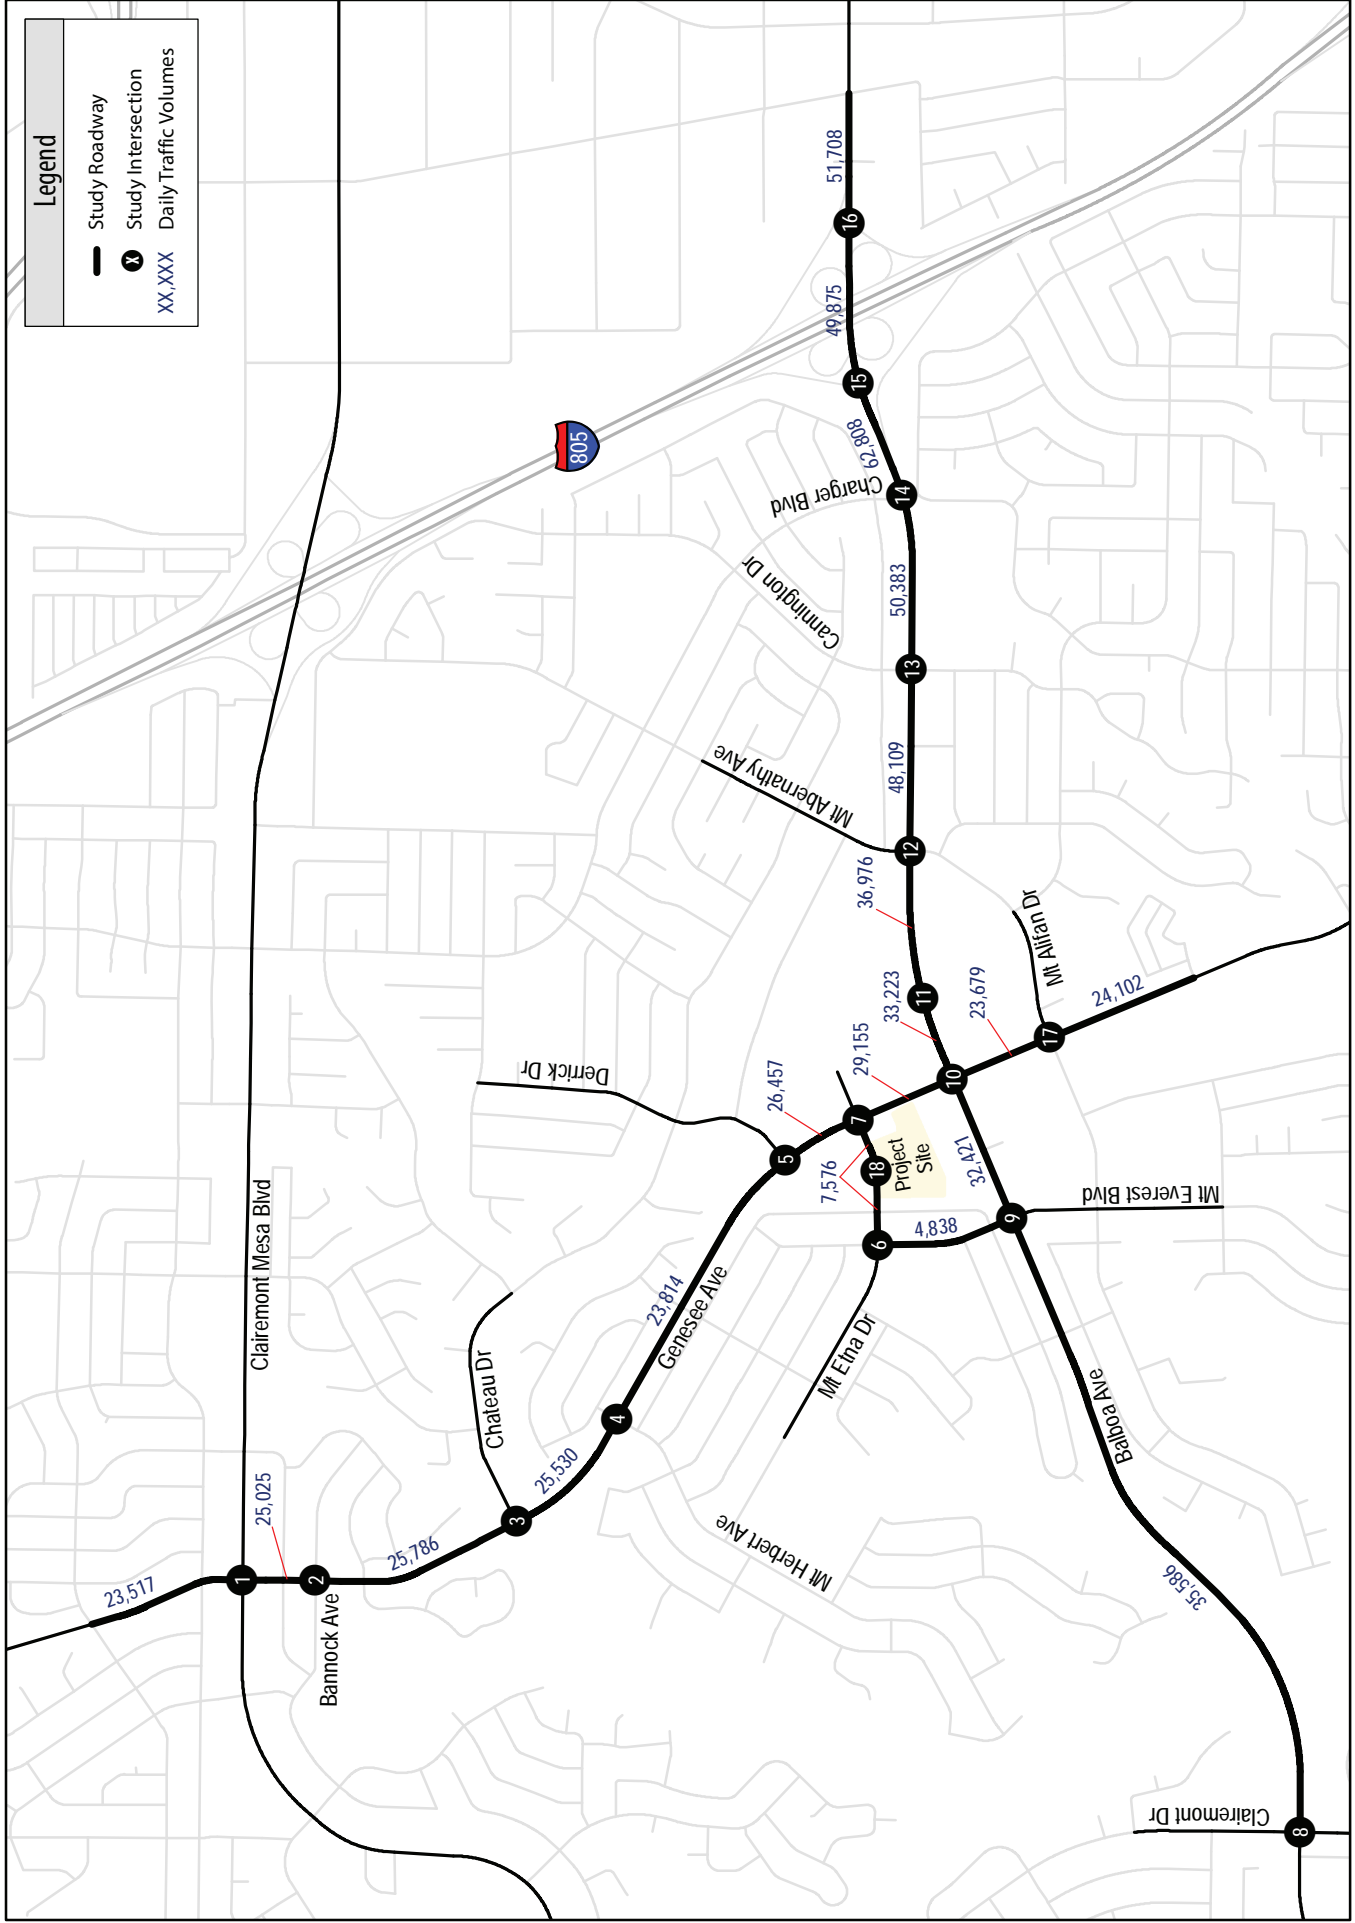

Figure 5-1

Source: Chen Ryan Associates; March 2019

Notes:

*The Balboa Ave segment between the I-805 ramps are classified as a 6-lane major according to the Clairemont Community Plan; however, the actual roadway cross-section includes eight lanes (two of which are auxiliary ramp lanes).

Bold letter indicates unacceptable LOS E or F.

ADT = Average Daily Traffic.

V/C = Volume to Capacity Ratio.

LOS = Level of Service.

Ln = Lane.

CLTL = Continuous Left-Turn Lane.

S? = Indicates if change in V/C ratio is significant.

Δ = Change in V/C Ratio.

Of the six (6) roadway segments projected to operate at substandard level of service E or F under Existing Plus Project conditions, the following three (3) could potentially result in a significant impact based on the significance criteria outlined in Section 2.5. As noted in section 2.2, daily roadway LOS is typically used only at the planning level and does not necessarily indicate true roadway operations. Therefore, to determine if the identified roadway segments operate at acceptable levels during peak times (worst case), peak hour aerial analyses and peak hour intersection analyses were conducted to better understand the actual travel flow along the roadways. Roadway segments in which are built to their ultimate classification, the peak hour arterial LOS, and the intersections at either end of the segment are projected to operate at acceptable LOS D or better are not considered to have a significant impact, since the actual travel flow along the segment is consider to be acceptable.

- Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue – LOS E. The Proposed Project would add 3,486 daily trips, resulting in an increase of 0.436 in V/C ratio. Therefore, the following additional analyses were conducted to determine if the roadway segment would be significantly impacted:
 - The arterial level of service analysis identifies this roadway segment to operate at LOS E in the EB and WB directions during both the AM and PM peak hours;
 - The intersections of Mt Everest Boulevard/Mt Etna Drive and Genesee Avenue/Mt Etna Drive are projected to operate at LOS C or better during both AM and PM peak hours;
 - Therefore, the Proposed Project **would result** in a significant impact to this roadway segment.

- Balboa Avenue, between Cannington Drive and Charger Boulevard – LOS F. The Proposed Project would add 962 daily trips, resulting in an increase of 0.019 in V/C ratio. Therefore, the following additional analyses were conducted to determine if the roadway segment would be significantly impacted:
 - The arterial level of service analysis identifies this roadway segment to operate at LOS E and LOS D in the EB and WB directions, respectively, during the AM peak hour, and LOS F and LOS D in the EB and WB directions, respectively, during the PM peak hour;
 - The intersections of Mt Albertine Avenue/Cannington Drive/Balboa Avenue and Eckstrom Avenue/Charger Boulevard/Balboa Avenue are projected to operate at LOS D or better during both AM and PM peak hours;
 - Therefore, the Proposed Project **would result** in a significant impact to this roadway segment.

- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps – The Proposed Project would add 962 daily trips, resulting in an increase of 0.019 in V/C ratio. Therefore, the following additional analyses were conducted to determine if the roadway segment would be significantly impacted:

-
- The arterial level of service analysis identifies this roadway segment to operate at LOS B and LOS C in the EB and WB directions, respectively, during the AM peak hour, and LOS B and LOS D in the EB and WB directions, respectively, during the PM peak hour;
 - The intersections of Eckstrom Avenue/Charger Boulevard/Balboa Avenue and I-805 Southbound Ramps/Balboa Avenue are projected to operate at LOS D or better during both AM and PM peak hours;
 - Therefore, the Proposed Project **would not result** in a significant impact to this roadway segment.

Intersection Analysis

Table 5.2 displays intersection LOS and average vehicle delay results under Existing Plus Project conditions. Level of service calculation worksheets for the Existing Plus Project conditions are provided in **Appendix E**.

As shown in Table 5.2, all of the study area intersections would continue to operate at acceptable LOS D or better, during both the AM and PM peak hours, with the addition of Project traffic, with the exception of the following four (4) intersections:

- Genesee Avenue & Clairemont Mesa Boulevard – LOS E during the PM peak hour;
- Clairemont Drive & Balboa Avenue – LOS E during the PM peak hour;
- Mt Everest Boulevard & Balboa Avenue – LOS F during the AM peak hour and LOS E during the PM peak hour; and
- Genesee Avenue & Balboa Avenue – LOS E during the PM peak hour.

Based on the City of San Diego Significance Criteria, outlined in Section 2.5, the traffic associated with the Proposed Project would cause a significant impact to the following three (3) intersections:

- Genesee Avenue & Clairemont Mesa Boulevard;
- Clairemont Drive & Balboa Avenue; and
- Mt Everest Boulevard & Balboa Avenue.

Table 5.2 Peak Hour Intersection Level of Service Results - Existing Plus Project Conditions

Intersection	Control	AM Peak Hour		PM Peak Hour		Delay w/o Project (sec) AM/PM	LOS w/o Project AM/PM	Change in Delay (sec) AM/PM	Significant Impact? AM/PM

AWSC = All-Way Stop Controlled.

SSSC = Side-Street Stop Controlled.

Ramp Metering Analysis

Table 5.3 summarizes the freeway ramp metering analysis results under Existing Plus Project conditions.

Table 5.3 Ramp Metering Analysis – Existing Plus Project Conditions

On-Ramp	# of Lanes		Peak Hour	Demand ¹ (veh/hr) per lane	Meter Rate ² (veh/hr) per lane	Excess Demand ³ (veh/hr) per lane	Delay ⁴ (min)	Queue ⁵ (ft)	Storage Length (ft)	Excess Queue (ft)	Delay w/o Project (min)	Δ Delay (min)	S?
	SOV	HOV											
I-805 SB On-Ramp @ Balboa Ave EB	1	1	PM	395	423	0	0	0	1,000	0	0	0.0	No
I-805 NB Ramp @ Balboa Ave EB	1	1	AM	316	511	0	0	0	410	0	0	0.0	No

Source: Chen Ryan Associates; March 2019

Notes:

SOV = Single Occupancy Vehicle; HOV = High Occupancy Vehicle.

Based upon field observation it is estimated that 20% of the vehicles at these ramp meters use the HOV lane when available.

Since the majority of trips existing the school during the PM Peak hour would be parents picking up students, it is assumed that 90% of the Proposed Project trips during the PM peak hours would use the HOV lane.

¹ Demand is the peak hour demand expected to use the on-ramp.

² Meter Rate is the peak hour capacity expected to be processed through the ramp meter. This value was obtained from Caltrans.

³ Excess Demand = (Demand) – (Meter Rate) or zero, whichever is greater.

⁴ Delay = (Excess Demand / Meter Rate) X 60 min/hr.

⁵ Queue = (Excess Demand) X 29 ft/veh.

As shown in the table, the anticipated peak hour demand would not exceed the average meter rate at either of the study ramp meter locations. Based upon the significance criteria presented in Section 2.5 of this report, the addition of Project traffic would not cause a significant impact to any of the study ramp meter locations.

5.3 Impact Significance and Mitigation

As mentioned previously in this section, Existing Plus Project is a hypothetical scenario, therefore, the mitigation measures described below are presented for informational purposes only.

Based upon the significance criteria presented in Section 2.5 of this report, the addition of Project traffic would cause a significant impact to two (2) roadway segments, three (3) intersections, and no ramp meters under Existing Plus Project conditions. The following mitigation measures would be required to mitigate the Project impact to less than significant:

Roadways:

The traffic generated by the Proposed Project is anticipated to create an impact at the following two (2) roadway segments:

-
- Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue Provide additional right-of-way and widen the roadway from a 2-Lane Collector to a 2-Lane Collector with a Continuous-Left-Turn-Lane (or construct left turn pocket where needed) prior to the project's total trip generation of 2,077 ADT. This roadway is along the Project's frontage, so providing a separate left-turn lane into the Project site would provide additional capacity and would fully mitigate the significant traffic impact associated with the Proposed Project. However, this roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the classification of this roadway, additional right-of-way would be required to implement this measure; therefore, this impact would remain *significant and unavoidable*.
 - Balboa Avenue, between Cannington Drive and Charger Boulevard – Reclassify the roadway from a 6-Lane Major Arterial to a 6-Lane Primary Arterial prior to the project's total trip generation of 1,811 ADT. The significant traffic impact associated with the Proposed Project along this roadway would be fully mitigated with the implementation of this measure. However, this roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the existing land use fronting this roadway (i.e. residential and school uses) as well as the right-of-way constraints, a classification change would not be feasible. Therefore, this impact would remain *significant and unavoidable*.

Intersections:

The traffic generated by the Proposed Project is anticipated to create an impact at the following three (3) intersections:

1. Genesee Avenue & Clairemont Mesa Boulevard – Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway prior to the project's total trip generation of 900 ADT.

The City of San Diego's *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this would mitigate the impact, and the project applicant would coordinate with the City to define the fees for the implementation of this improvement. Therefore, this impact would be reduced to *less than significant*.

8. Clairemont Drive & Balboa Avenue - Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway prior to the project's total trip generation of 900 ADT.

The City of San Diego's *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this would mitigate the impact, and the project applicant would coordinate with the City to define the fees for the implementation of this improvement. Therefore, this impact would be reduced to *less than significant*.

9. Mt Everest Boulevard & Balboa Avenue – Restripe the northbound and southbound approaches on Mt Everest Boulevard to provide an exclusive left-turn lane and a shared through-right turn lane, then convert the northbound and southbound approaches from split phasing to protected left-turn phasing. This improvement must be implemented prior to the project's total trip generation of 650 ADT. Implementing this improvement could be done within the existing right-of-way and would reduce intersection delays to pre-Project conditions. However, the County of San Diego cannot guarantee improvements to an intersection under the jurisdiction of the City of San Diego. Therefore, this impact would remain *significant and unavoidable*.

Table 5.4 displays intersection LOS and average vehicle delay results under Existing Plus Project with Mitigation conditions. The trigger analysis worksheets and level of service calculation worksheets for the Existing Plus Project with Mitigation conditions are provided in **Appendix F**.

Table 5.4 Peak Hour Intersection Level of Service Results - Existing Plus Project with Mitigation Conditions

Intersection	Control	AM Peak Hour		PM Peak Hour		Delay w/o Project (sec) AM/PM	LOS w/o Project AM/PM	Change in Delay (sec)	M?
		Avg. Delay (sec)	LOS	Avg. Delay (sec)	LOS				
1. Genesee Avenue & Clairemont Mesa Boulevard	Signal	39.9	D	50.8	D	42.6 / 59.9	D / E	-2.7 / -9.1	Y
8. Clairemont Drive & Balboa Avenue	Signal	37.9	D	55.1	E	37.7 / 60.1	D / E	0.2 / -5.0	Y
9. Mt Everest Boulevard & Balboa Avenue	Signal	38.7	D	25.4	C	73.7 / 58.7	E / E	-35.0 / -33.3	Y

Source: Chen Ryan Associates; March 2019

Notes:

Bold letter indicates unacceptable LOS E or F.

AWSC = All-Way Stop Controlled.

SSSC = Side-Street Stop Controlled.

M? = Impact Mitigated?

As shown in Table 5.4, the proposed mitigation measures would either reduce the Proposed Project impact to less than significant or mitigated the Proposed Project impact to better than pre-Project conditions. However, the Genesee Avenue/Clairemont Mesa Boulevard and Clairemont Drive/Balboa Avenue intersections are considered to have significant and unavoidable impacts since these intersections are under the City's jurisdiction, so implementation of the mitigation is not under the control of the Project.

Ramp Meters:

No impacts were identified. Therefore, no mitigation is required.

6.0 Near-Term Base (Year 2021)

This section provides an analysis of Year 2021, which is the opening year of the Project, traffic conditions both with and without the Proposed Project. The scenarios analyzed in this section include:

- Near-Term Year 2021 Base
- Near-Term Year 2021 Base Plus Project

6.1 Near-Term Base (Year 2021) Roadway Network and Traffic Volumes

Based on review of the City’s “Open DSD” website (last accessed on January 23, 2019), and consultation with City staff, six projects were identified to potentially add traffic to the Project study area. **Table 6.1** displays all cumulative projects used to develop Near-Term Year 2021 Base Volumes.

Table 6.1 Cumulative Projects

Project ID	Project	Address	Project Description
327976	Jefferson Pacific Beach	4275 Mission Bay Drive	Demolish 36,000 square feet of retail space and construction of 3-stories of residential units over ground floor retail and underground parking. Per developer site, 172 apartment units and 14,000 sq. feet of retail space.
-	HTH Clairemont	5331 Mt Alifan Drive	High Tech High is proposing to provide educational services to a maximum of 1,110 students in grades TK-12.
388165	Mt Acadia CUP TPM	3560 Mt Acadia Boulevard	Demolish an existing commercial building and construct a 59,472 sq. ft residential care facility and a 5,672 sq. ft retail building.
489476	The Summit at MB – EOT	3139 Clairemont Drive	Develop approximately 499 residential units which would replace an existing 323-unit apartment complex.
530427	Fairfield Marriott Suites CDP	4345 Mission Bay Drive	Demolish existing buildings and develop a 106-unit hotel
-	Lindbergh-Schweitzer Elementary School	4133 Mt Albertine Avenue	Relocate existing Kavod Charter School from Cubberley Elementary School to the existing Schweitzer Campus

Source: City of San Diego Open DSD, Accessed January 23, 2019

Cumulative project trips were generated using *City of San Diego Land Development Code - Trip Generation Manual 2003* and Chula Vista High Tech High trip generation rates derived for trip generation study conducted by Chen Ryan Associates in June 2017. **Table 6.2** displays the trip generation of all cumulative projects shown in Table 6.1.

Table 6.2 Cumulative Project Trip Generation

Land Use	Units	Trip Rate	ADT	AM Peak Hour					PM Peak Hour

Notes:

* HTH Trip Estimates based on rates from Chula Vista High Tech High study

** Existing residential units for The Summit were removed as trip credits

Roadway and intersection geometrics under Near-Term Year 2021 Base conditions were assumed to be identical to the Existing conditions, as shown in Figure 4-1 previously.

Figure 6-1 displays average daily roadway and peak hour intersection volumes for the study roadway segments and intersections under the Near-Term Year 2021 Base conditions.

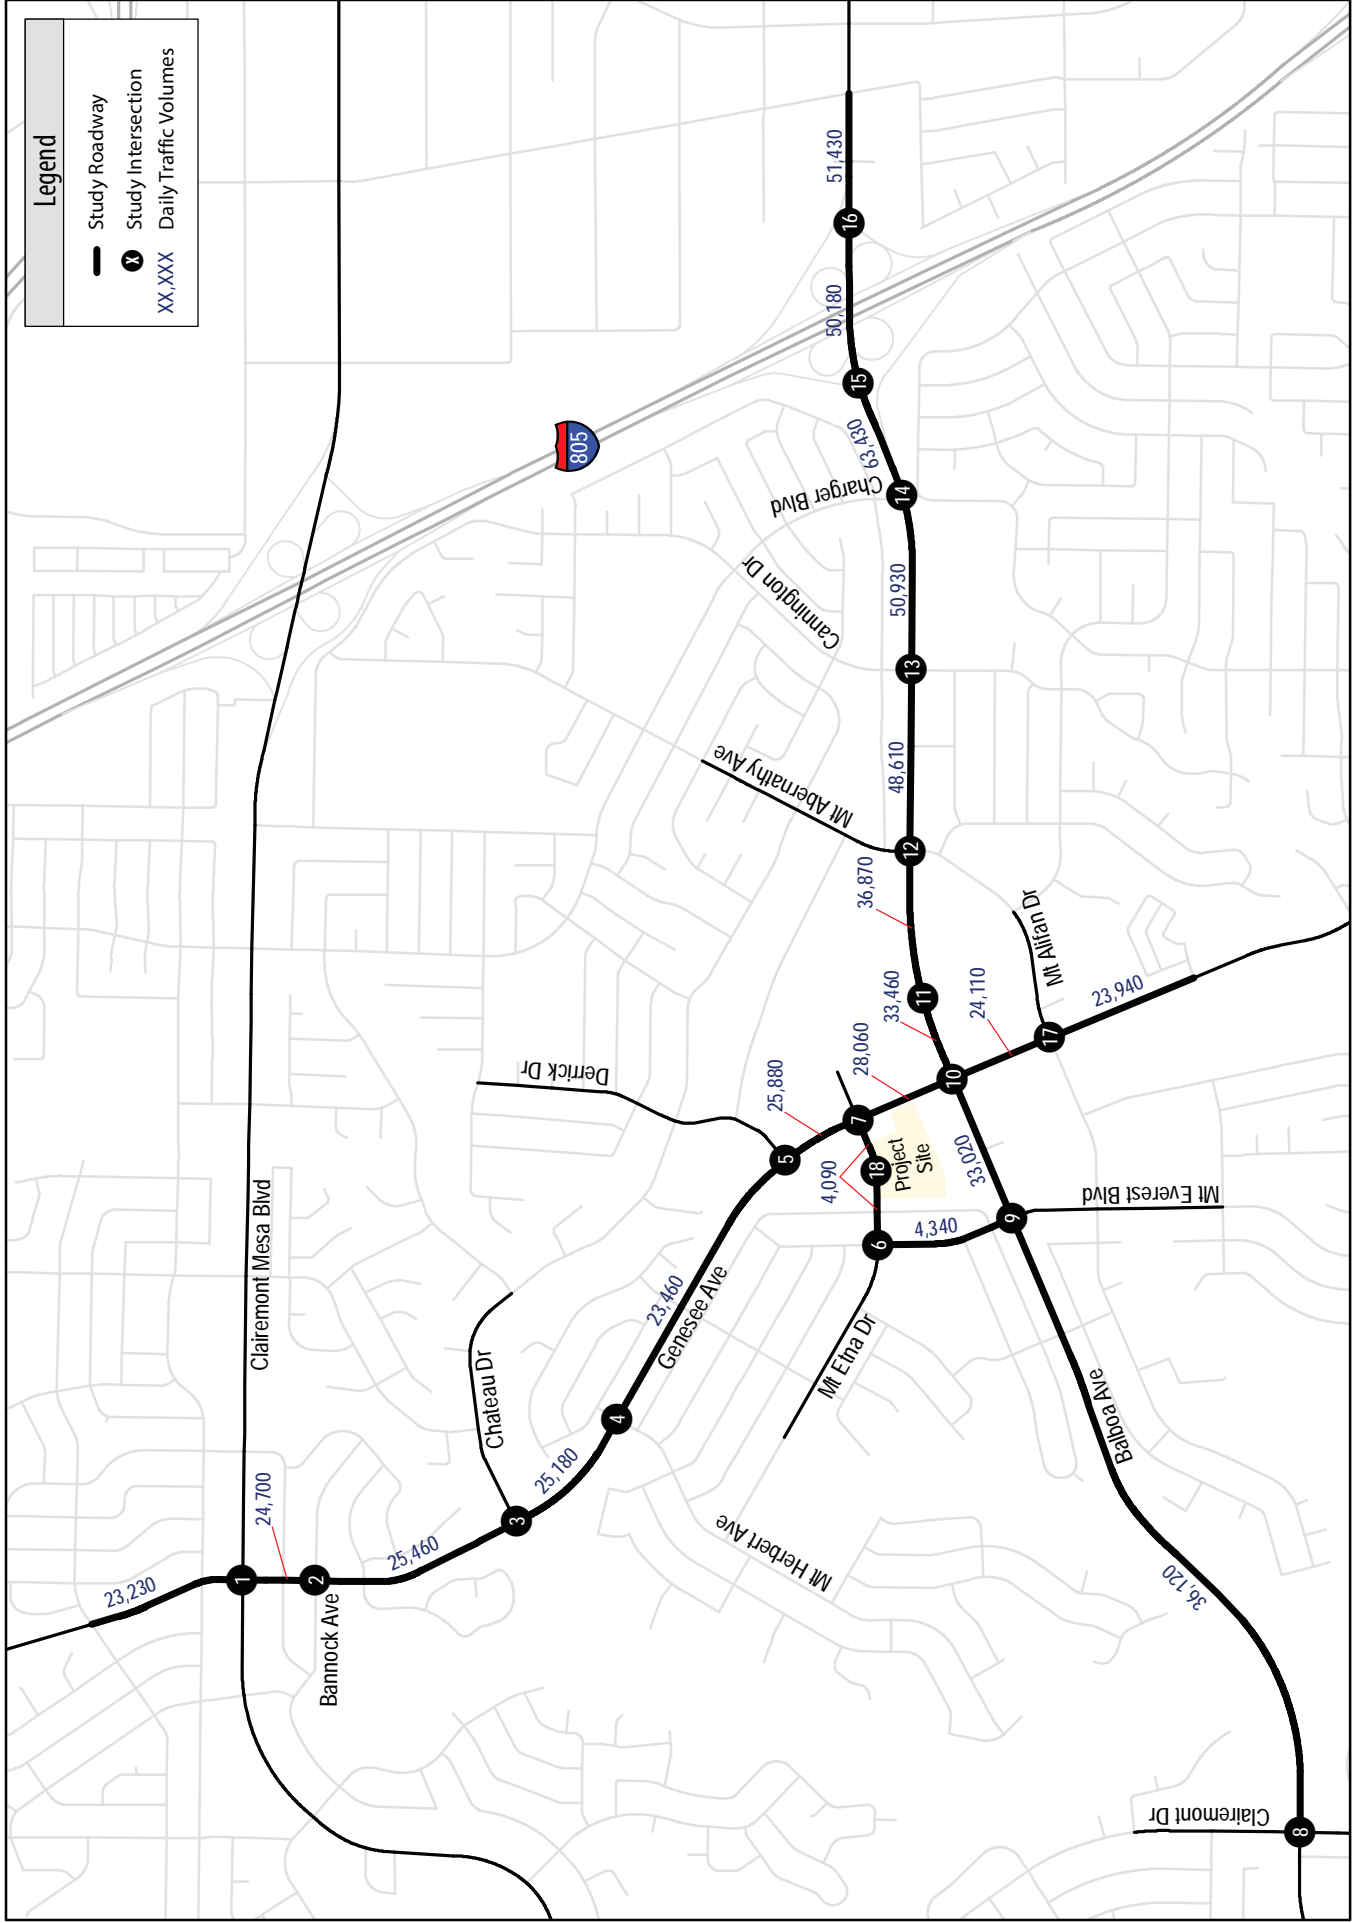

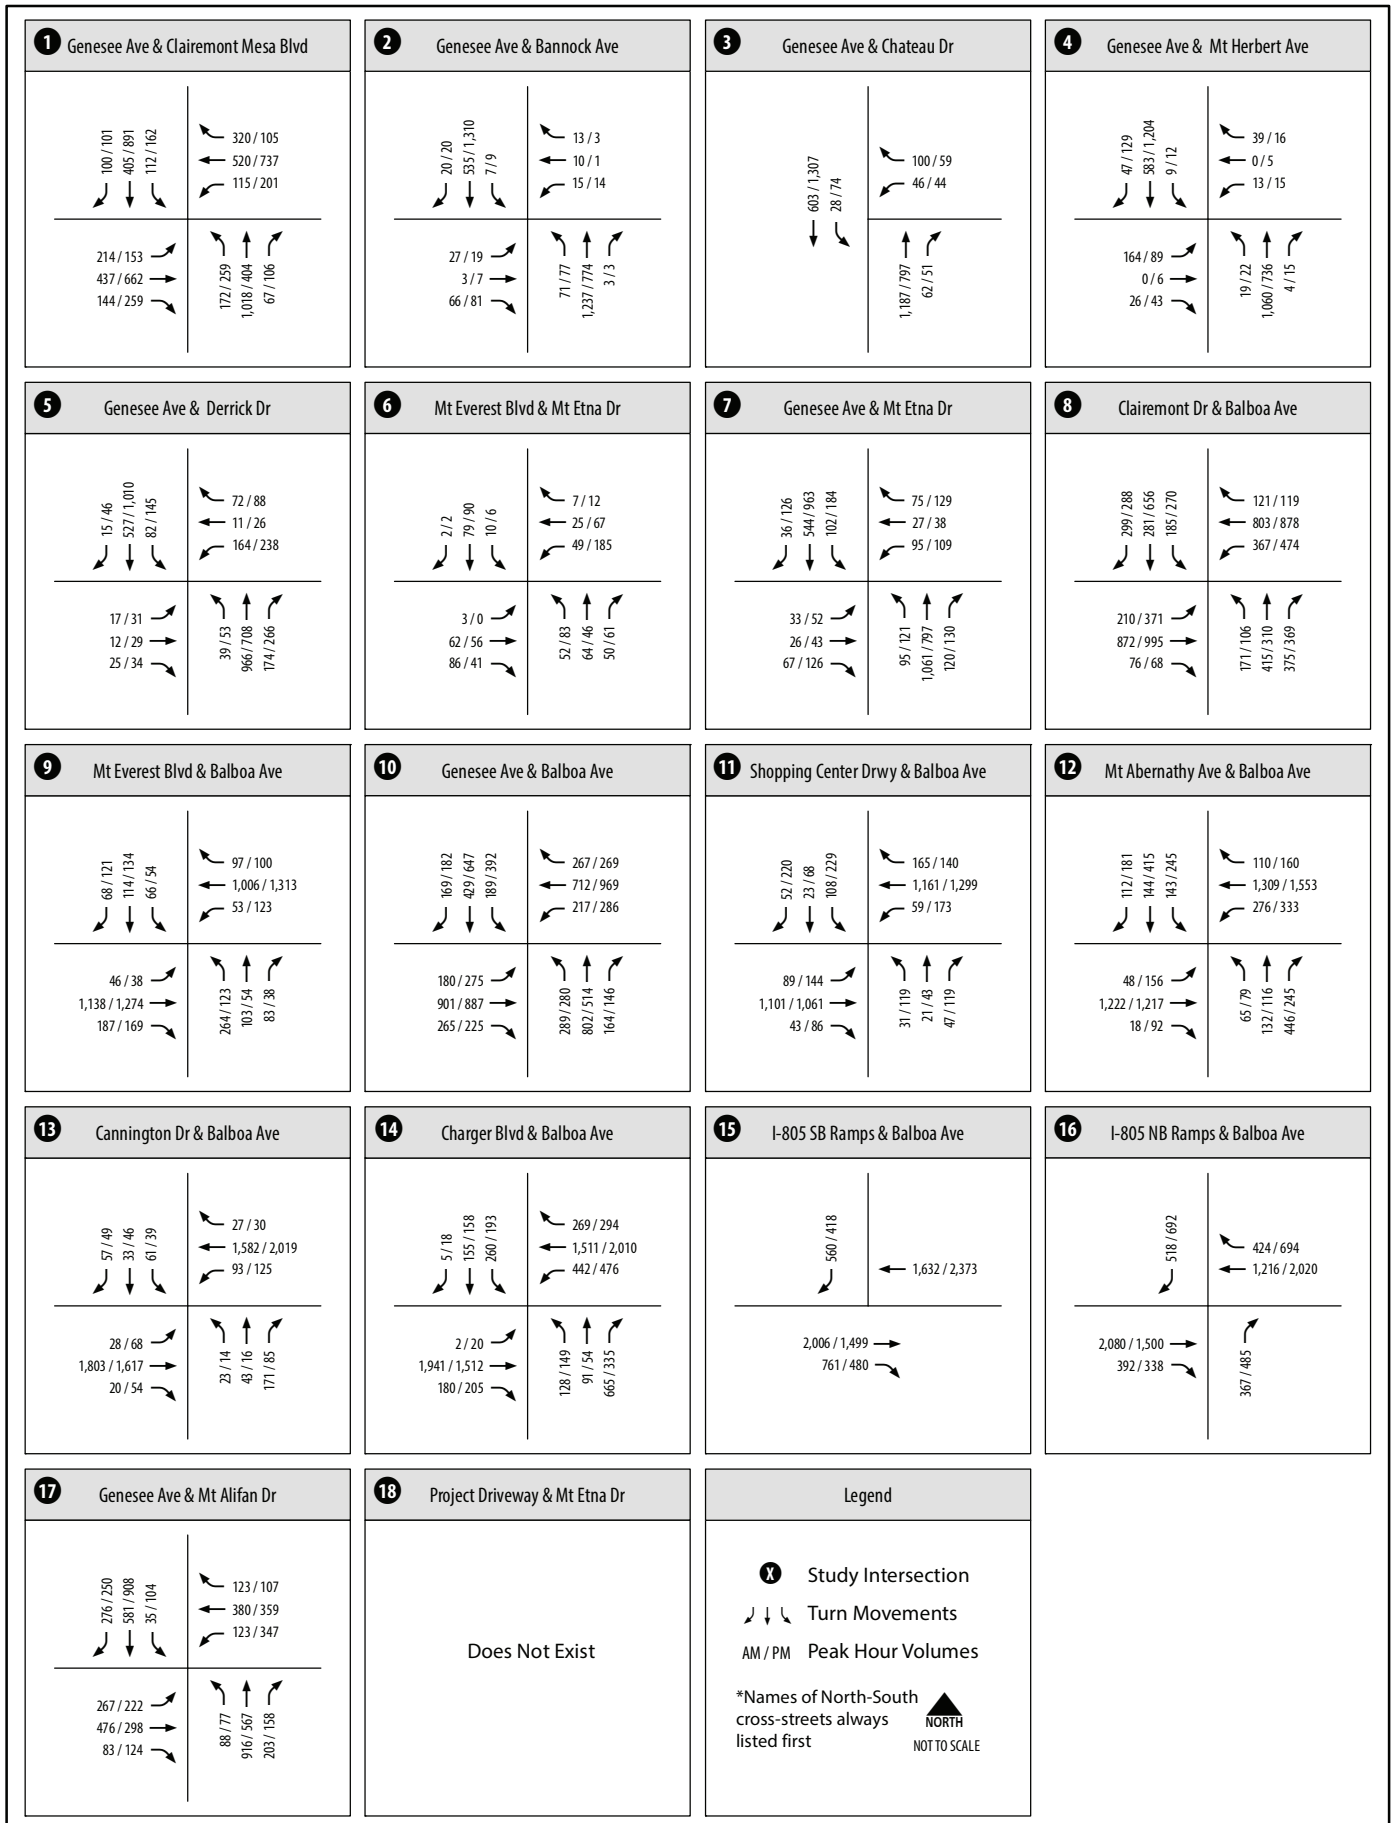

Figure 6-1
 Traffic Volumes - Near-Term Year 2021
 Base Conditions

6.2 Near-Term Base (Year 2021) Traffic Conditions

LOS analyses for the Near-Term Year 2021 Base conditions were conducted using the methodologies described in Chapter 2.0. Roadway segment and intersection level of service, as well as freeway ramp meter analysis results for Near-Term Year 2021 Base conditions are discussed separately below.

Roadway Segment Analysis

Table 6.3 displays the Level of Service analysis results for key roadway segments under Near-Term Year 2021 Base conditions. As shown in Table 6.3, all of the study area roadway segments are projected to operate at an acceptable LOS under the Near-Term Year 2021 Base conditions with the exception of the following five (5) roadway segments:

- Balboa Avenue, between Clairemont Drive and Mt Everest Boulevard (LOS E);
- Balboa Avenue, between Mt Abernathy Avenue and Cannington Drive (LOS E);
- Balboa Avenue, between Cannington Drive and Charger Boulevard (LOS F);
- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps (LOS F); and
- Balboa Avenue, between I-805 Northbound Ramps and Ruffner Street (LOS F).

Table 6.3 Roadway Segment Level of Service Results – Near-Term Year 2021 Base Conditions

Roadway	Segment	Functional Classification	Cross-Section	ADT	Capacity (LOS E)	V/C	LOS
Genesee Avenue	Between Appleton Street & Clairemont Mesa Boulevard	4-Ln Major Arterial	Raised Median	23,230	40,000	0.581	C
	Between Clairemont Mesa Boulevard & Bannock Avenue	4-Ln Major Arterial	Undivided	24,700	40,000	0.618	C
	Between Bannock Avenue & Chateau Drive	4-Ln Major Arterial	Raised Median	25,460	40,000	0.637	C
	Between Chateau Drive & Mt Herbert Avenue	4-Ln Major Arterial	Raised Median	25,180	40,000	0.630	C
	Between Mt Herbert Avenue & Derrick Drive	4-Ln Major Arterial	Raised Median	23,460	40,000	0.587	C
	Between Derrick Drive & Mt Etna Drive	6-Ln Major Arterial	Raised Median	25,880	50,000	0.518	B
	Between Mt Etna Drive & Balboa Avenue	5-Ln Major Arterial	Raised Median	28,060	45,000	0.624	C
	Between Balboa Avenue & Mt Alifan Drive	5-Ln Major Arterial	Raised Median	24,110	45,000	0.536	B
	Between Mt Alifan Drive & Genesee Court	4-Ln Major Arterial	Raised Median	23,940	40,000	0.599	C
Mt Everest Boulevard	Between Mt Etna Drive & Balboa Avenue	2-Ln Collector w/o CLTL	Undivided	4,340	8,000	0.543	C
Mt Etna Drive	Between Mt Everest Boulevard & Genesee Avenue	2-Ln Collector w/o CLTL	Undivided	4,090	8,000	0.511	C
Balboa Avenue	Between Clairemont Drive & Mt Everest Boulevard	4-Ln Major Arterial	Raised Median	36,120	40,000	0.903	E
	Between Mt Everest Boulevard & Genesee Avenue	4-Ln Major Arterial	Raised Median	33,020	40,000	0.826	D
	Between Genesee Avenue & Shopping Center Driveway	6-Ln Major Arterial	Raised Median	33,460	50,000	0.669	C
	Between Shopping Center Driveway & Mt Abernathy Avenue	6-Ln Major Arterial	Raised Median	36,870	50,000	0.737	C
	Between Mt Abernathy Avenue & Cannington Drive	6-Ln Major Arterial	Raised Median	48,610	50,000	0.972	E
	Between Cannington Drive & Charger Boulevard	6-Ln Major Arterial	Raised Median	50,930	50,000	1.019	F
	Between Charger Boulevard & I-805 Southbound Ramps	6-Ln Major Arterial	Raised Median	63,430	50,000	1.269	F
	Between I-805 Southbound Ramps & I-805 Northbound Ramps*	8-Ln Prime Arterial	Raised Median	50,180	80,000	.627	C
	Between I-805 Northbound Ramps & Ruffner Street	6-Ln Major Arterial	Raised Median	51,430	50,000	1.029	F

Source: Chen Ryan Associates; March 2019

Notes:

*The Balboa Ave segment between the I-805 ramps are classified as a 6-lane major according to the Clairemont Community Plan; however, the actual roadway cross-section includes eight lanes (two of which are auxiliary ramp lanes).

Bold letter indicates unacceptable LOS E or F.

ADT = Average Daily Traffic.

V/C = Volume to Capacity Ratio.

LOS = Level of Service.

Ln = Lane.

CLTL = Continuous Left-Turn Lane.

Intersection Analysis

Table 6.4 displays intersection LOS and average vehicle delay results under Near-Term Year 2021 Base conditions. Level of service calculation worksheets for the Near-Term Year 2021 Base conditions are provided in **Appendix G**.

Table 6.4 Peak Hour Intersection Level of Service Results - Near-Term Year 2021 Base Conditions

Intersection	Control	AM Peak Hour		PM Peak Hour	
		Avg. Delay (sec.)	LOS	Avg. Delay (sec.)	LOS
1. Genesee Avenue & Clairemont Mesa Boulevard	Signal	43.0	D	61.5	E

18. Mt Etna Drive & Project Driveway #1	DNE	-	-	-	-

Source: Chen Ryan Associates; March 2019

Notes:

Bold letter indicates unacceptable LOS E or F.

AWSC = All-Way Stop Controlled.

SSSC = Side-Street Stop Controlled.

DNE = Does Not Exist.

As shown, all of the study area intersections are projected to operate at acceptable LOS D or better during both the AM and PM peak hours, under Near-Term Year 2021 Base conditions with the exception of the following six (6) intersections:

- Genesee Avenue & Clairemont Mesa Boulevard – LOS E during the PM peak hour;
- Clairemont Drive & Balboa Avenue – LOS E during the PM peak hour;
- Mt Everest Boulevard & Balboa Avenue – LOS F during the AM peak hour and LOS E during the PM peak hour;
- Genesee Avenue & Balboa Avenue – LOS E during the PM peak hour;
- Charger Boulevard & Balboa Avenue – LOS E during the AM peak hour; and
- Genesee Avenue & Mt Alifan Drive – LOS E during both the AM and PM peak hours.

Ramp Metering Analysis

Table 6.5 summarizes the freeway ramp metering analysis results under Near-Term Year 2021 Base Conditions.

Table 6.5 Ramp Metering Analysis - Near-Term Year 2021 Base Conditions

On-Ramp	# of Lanes		Peak Hour	Demand ¹ (veh/hr) per lane	Meter Rate ² (veh/hr) per lane	Excess Demand ³ (veh/hr) per lane	Delay ⁴ (min)	Queue ⁵ (ft)	Storage Length (ft)	Excess Queue (ft)
	SOV	HOV								
I-805 SB On-Ramp @ Balboa Ave EB	1	1	PM	384	423	0	0	0	1,000	0
I-805 NB Ramp @ Balboa Ave EB	1	1	AM	314	511	0	0	0	410	0

Source: Chen Ryan Associates; March 2019

Notes:

SOV = Single Occupancy Vehicle; HOV = High Occupancy Vehicle.

¹ Demand is the peak hour demand expected to use the on-ramp.

² Meter Rate is the peak hour capacity expected to be processed through the ramp meter. This value was obtained from Caltrans.

³ Excess Demand = (Demand) – (Meter Rate) or zero, whichever is greater.

⁴ Delay = (Excess Demand / Meter Rate) X 60 min/hr.

⁵ Queue = (Excess Demand) X 29 ft/veh.

As shown in Table 6.5, the anticipated peak hour demand is not anticipated to exceed the meter rate at either of the study ramp meter locations.

6.3 Near-Term Base (Year 2021) Plus Project Roadway Network and Traffic Volumes

Roadway and intersection geometrics under Near-Term Year 2021 Base Plus Project conditions were assumed to be identical to Existing and Near-Term Year 2021 Base Conditions geometrics, as shown in Figure 4-1.

Near-Term Year 2021 Base Plus Project traffic volumes were derived by combining the Near-Term Year 2021 Base traffic volumes (displayed in Figure 6-3) and the Project trip assignment with (displayed in Figure 5-2). Daily and peak hour intersection volumes for this scenario are displayed in Figure 6-2.

6.4 Near-Term Base (Year 2021) Plus Project Traffic Conditions

Analyses were conducted using the methodologies described in Chapter 2.0. Roadway segment and intersection level of service, as well as freeway ramp meter analysis results are discussed in the following sections.

Roadway Segment Analysis

Table 6.6 displays the Level of Service analysis results for key roadway segments under Near-Term Year 2021 Base Plus Project conditions.

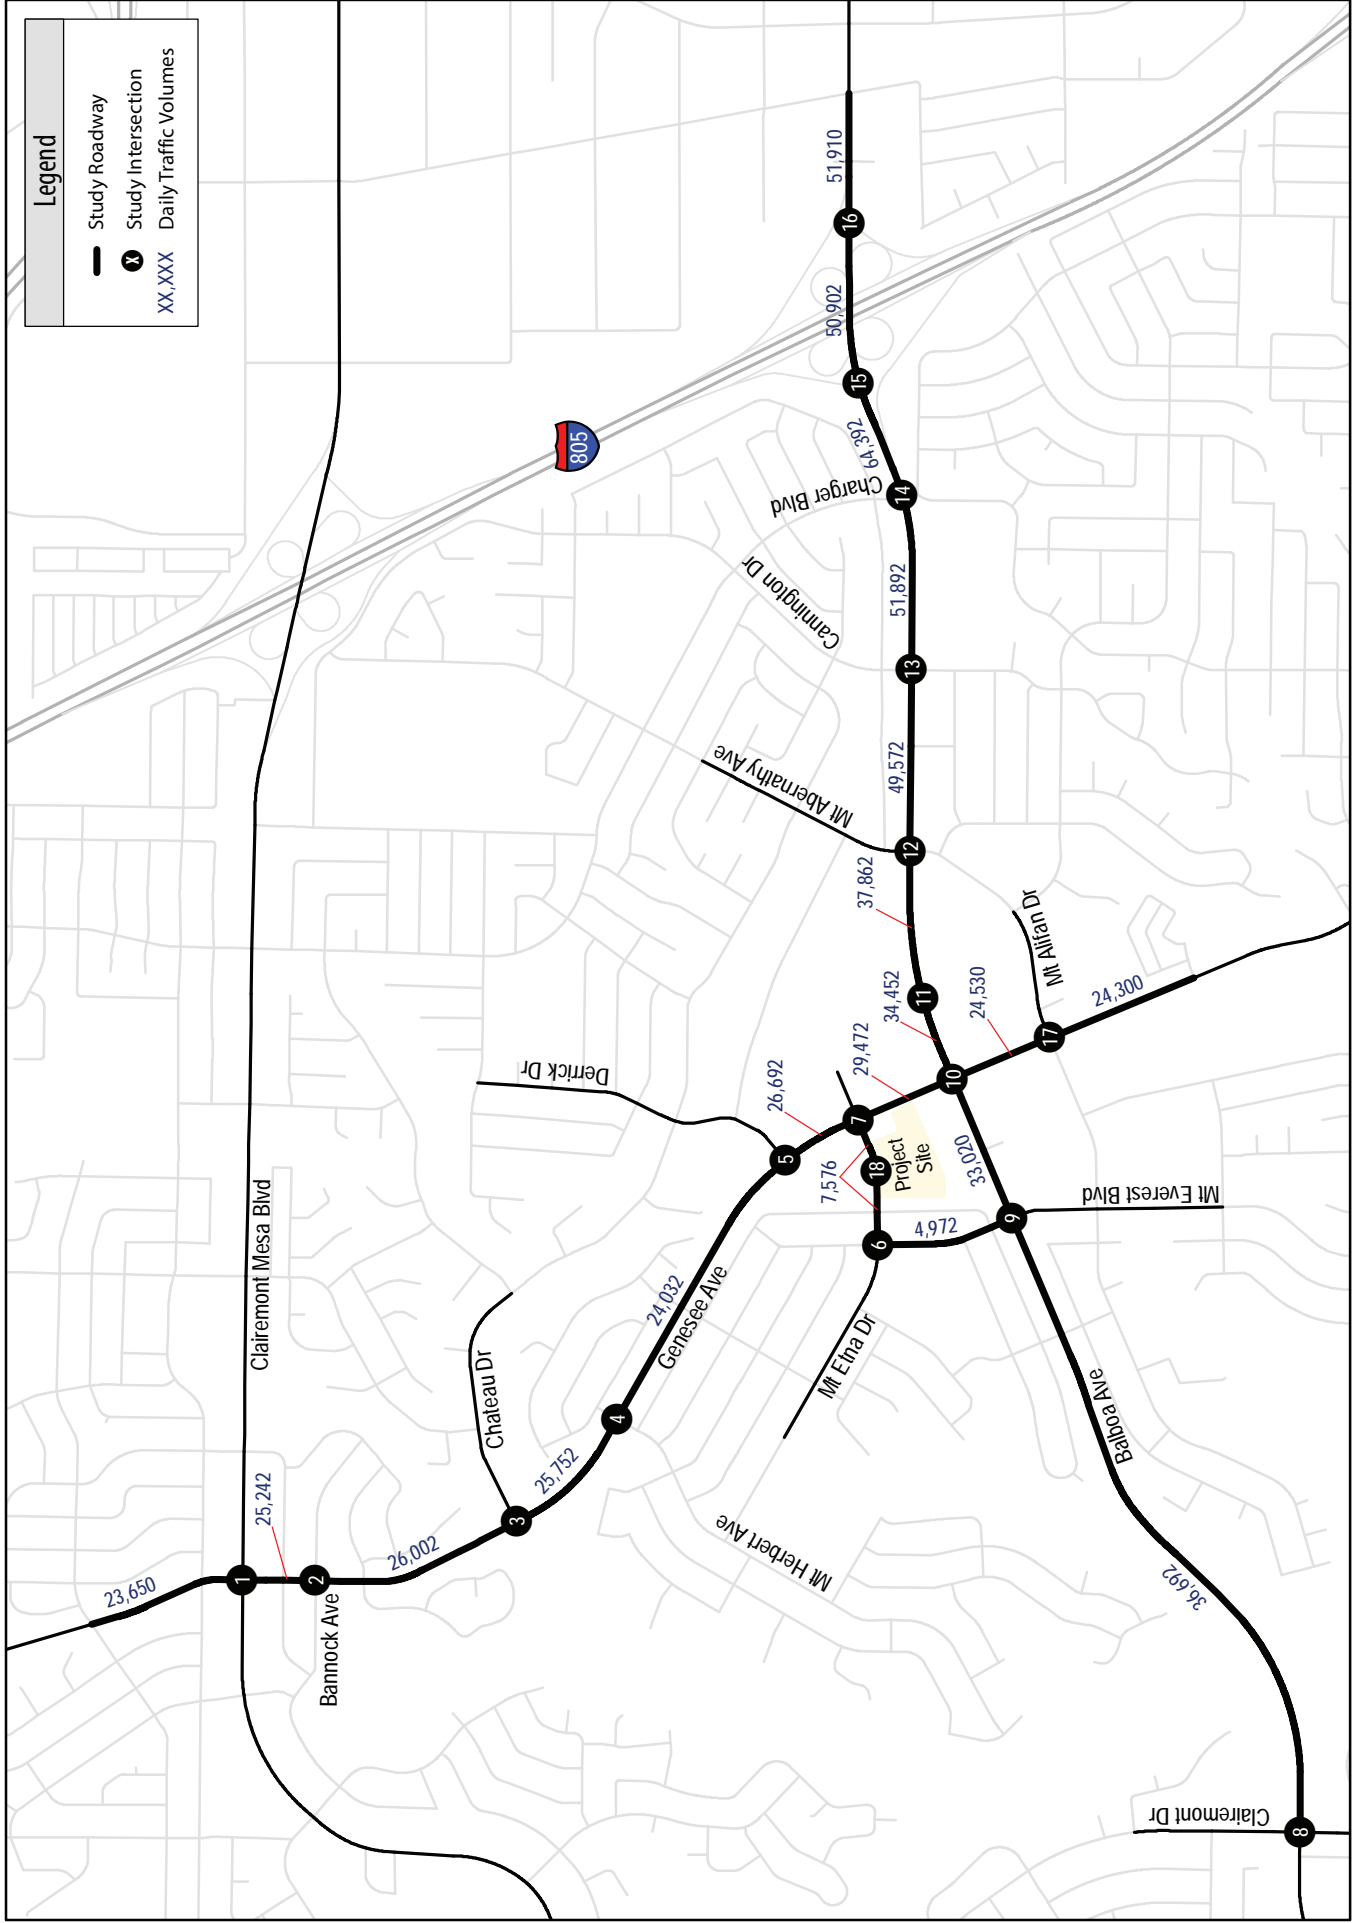

Figure 6-2
 Traffic Volumes - Near-Term Year 2021 Base
 Plus Project Conditions

Table 6.6 Roadway Segment Level of Service Results - Near-Term Year 2021 Base Plus Project Conditions

Roadway	Segment	Functional Classification	Cross-Section	ADT	Capacity (LOS E)	With Project				Base			S?

	Between I-805 Northbound Ramps & Ruffner Street	6-Ln Major Arterial	Raised Median	51,910	50,000	1.038	F	1.029	F	0.01	N

Source: Chen Ryan Associates, March 2019

Notes:

*The Balboa Ave segment between the I-805 ramps are classified as a 6-lane major according to the Clairmont Community Plan; however, the actual roadway cross-section includes eight lanes (two of which are auxiliary ramp lanes).

Bold letter indicates unacceptable LOS E or F.

ADT = Average Daily Traffic.

V/C = Volume to Capacity Ratio.

LOS = Level of Service.

Ln = Lane.

CLTL = Continuous Left-Turn Lane.

S? = Indicates if change in V/C ratio is significant.

Δ = Change in V/C Ratio.

As shown in the Table 6.6 all of the study area roadway segments are projected to continue operating at acceptable LOS D or better under Near-Term Year 2021 Base Plus Project conditions with the exceptions of the following six (6) roadway segments:

- Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue (LOS E);
- Balboa Avenue, between Clairemont Drive and Mt Everest Boulevard (LOS E);
- Balboa Avenue, between Mt Abernathy Avenue and Cannington Drive (LOS E);
- Balboa Avenue, between Cannington Drive and Charger Boulevard (LOS F);
- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps (LOS F); and
- Balboa Avenue, between I-805 Northbound Ramps and Ruffner Street (LOS F).

Of these six (6) roadway segments, the following three (3) could potentially result in a significant impact based on the significance criteria outlined in Section 2.5. As noted in section 2.2, daily roadway LOS is typically used only at the planning level and does not necessarily indicate true roadway operations. Therefore, to determine if the identified roadway segments operate at acceptable levels during peak times (worst case) peak hour aerial analyses and peak hour intersection analyses were conducted to better understand the actual travel flow along the roadways. Roadway segments in which are built to their ultimate classification, the peak hour arterial LOS, and the intersections at either end of the segment are projected to operate at acceptable LOS D or better are not considered to have a significant impact, since the actual travel flow along the segment is consider to be acceptable.

- Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue – LOS E. The Proposed Project would add 3,486 daily trips, resulting in an increase of 0.436 in V/C ratio. Therefore, the following additional analyses were conducted to determine if the roadway segment would be significantly impacted:
 - The arterial level of service analysis identifies this roadway segment to operate at LOS E in the EB and WB directions during both the AM and PM peak hours;
 - The intersections of Mt Everest Boulevard/Mt Etna Drive and Genesee Avenue/Mt Etna Drive are projected to operate at LOS C or better during both AM and PM peak hours;
 - Therefore, the Proposed Project **would result** in a significant impact to this roadway segment.
- Balboa Avenue, between Cannington Drive and Charger Boulevard – LOS F. The Proposed Project would add 962 daily trips, resulting in an increase of 0.019 in V/C ratio. Therefore, the following additional analyses were conducted to determine if the roadway segment would be significantly impacted:
 - The arterial level of service analysis identifies this roadway segment to operate at LOS E and LOS D in the EB and WB directions, respectively, during the AM peak hour, and LOS F and LOS D in the EB and WB directions, respectively, during the PM peak hour;

- The intersections of Mt Albertine Avenue/Cannington Drive/Balboa Avenue and Eckstrom Avenue/Charger Boulevard/Balboa Avenue are projected to operate at LOS D or better during both AM and PM peak hours;
 - Therefore, the Proposed Project **would result** in a significant impact to this roadway segment.
- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps – The Proposed Project would add 962 daily trips, resulting in an increase of 0.019 in V/C ratio. Therefore, the following additional analyses were conducted to determine if the roadway segment would be significantly impacted:
 - The arterial level of service analysis identifies this roadway segment to operate at LOS B and LOS C in the EB and WB directions, respectively, during the AM peak hour, and LOS B and LOS D in the EB and WB directions, respectively, during the PM peak hour;
 - The intersection of Eckstrom Avenue/Charger Boulevard/Balboa Avenue is projected to operate at LOS E in the AM peak hour and LOS D in the PM peak hour, and the I-805 Southbound Ramps/Balboa Avenue is projected to operate at LOS B or better during both AM and PM peak hours;
 - Therefore, the Proposed Project **would result** in a significant impact to this roadway segment.

Intersection Analysis

Table 6.7 displays intersection Level of Service and average vehicle delay results under Near-Term Year 2021 Base Plus Project conditions. Level of Service calculation worksheets for the Year 2021 Base Plus Project conditions are provided in **Appendix H**.

As shown in Table 6.7, all of the study area intersections are projected to operate at acceptable LOS D or better during both the AM and PM peak hours under Near-Term Year 2021 Base Plus Project conditions, with the exception of the following six (6) intersections:

- Genesee Avenue & Clairemont Mesa Boulevard – LOS E during the PM peak hour;
- Clairemont Drive & Balboa Avenue – LOS E during the PM peak hour;
- Mt Everest Boulevard & Balboa Avenue – LOS F during the AM peak hour and LOS E during the PM peak hour;
- Genesee Avenue & Balboa Avenue – LOS E during the PM peak hour;
- Charger Boulevard & Balboa Avenue – LOS E during the AM peak hour; and
- Genesee Avenue & Mt Alifan Drive – LOS E during both the AM and PM peak hours.

Based on the City of San Diego Significance Criteria, outlined in Section 2.5, the traffic associated with the Proposed Project would cause a significant impact to the following four (4) study intersections:

- Genesee Avenue & Clairemont Mesa Boulevard;
- Clairemont Drive & Balboa Avenue;
- Mt Everest Boulevard & Balboa Avenue; and
- Charger Boulevard & Balboa Avenue.

Table 6.7 Peak Hour Intersection Level of Service Results - Near-Term Year 2021 Base Plus Project Conditions

Intersection	Control	AM Peak Hour		PM Peak Hour		Delay w/o Project (sec) AM/PM	LOS w/o Project AM/PM	Change in Delay (sec) AM/PM	Significant Impact? AM/PM

Ramp Metering Analysis

Table 6.8 summarizes the freeway ramp metering analysis results under Near-Term Year 2021 Base Plus Project conditions.

Table 6.8 Ramp Metering Analysis – Near-Term Year 2021 Base Plus Project Conditions

On-Ramp	# of Lanes		Peak Hour	Demand ¹ (veh/hr) per lane	Meter Rate ² (veh/hr) per lane	Excess Demand ³ (veh/hr) per lane	Delay ⁴ (min)	Queue ⁵ (ft)	Storage Length (ft)	Excess Queue (ft)	Delay w/o Project (min)	Δ Delay (min)	S?
	SOV	HOV											
I-805 SB On-Ramp @ Balboa Ave EB	1	1	PM	395	423	0	0	0	1,000	0	0	0.0	No
I-805 NB Ramp @ Balboa Ave EB	1	1	AM	316	511	0	0	0	410	0	0	0.0	No

Source: Chen Ryan Associates; March 2019

Notes:

Based upon field observation it is estimated that 20% of the vehicles at these ramp meters use the HOV lane when available. Since the majority of trips existing the school during the PM Peak hour would be parents picking up students, it is assumed that 90% of the Proposed Project trips during the PM peak hours would use the HOV lane.

SOV = Single Occupancy Vehicle; HOV = High Occupancy Vehicle.

¹ Demand is the peak hour demand expected to use the on-ramp.

² Meter Rate is the peak hour capacity expected to be processed through the ramp meter. This value was obtained from Caltrans.

³ Excess Demand = (Demand) – (Meter Rate) or zero, whichever is greater.

⁴ Delay = (Excess Demand / Meter Rate) X 60 min/hr.

⁵ Queue = (Excess Demand) X 29 ft/veh.

As shown in Table 6.8, the anticipated peak hour demand is not anticipated to exceed the anticipated meter either of the study ramp meter locations.

Based on the City of San Diego Significance Criteria, outlined in Section 2.5, the traffic associated with the Proposed Project would not cause a significant impact to any of the study ramp meter locations.

6.5 Impact Significance and Mitigation

Based upon the significance criteria presented in Section 2.5 of this report, the addition of project traffic would cause a significant direct impact to three (3) roadway segments, four (4) intersections, and no ramp meters under Near-Term Year 2021 (project opening year) Plus Project conditions. The following mitigation measures would be required to mitigate the project impact to less than significant:

Roadways:

These roadways are currently built to their ultimate classifications (classification designation in the adopted Community Plan) and anticipated to operate at LOS E or F with the addition of the Proposed Project’s trips. The arterial level of service and/or the connecting intersections of these segments are also anticipated to operate at unacceptable LOS E or F conditions. Consequently, the following three (3) roadways are considered to have a significant direct impact:

- Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue – Provide additional right-of-way and widen the roadway from a 2-Lane Collector to a 2-Lane Collector with a Continuous-Left-Turn-Lane (or construct left turn pocket where needed) prior to the

project's total trip generation of 2,077 ADT. This roadway is along the Project's frontage, so providing a separate left-turn lane into the Project site would provide additional capacity and would fully mitigate the significant traffic impact associated with the Proposed Project. However, this roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the classification of this roadway, additional right-of-way would be required to implement this measure. Therefore, this impact would remain *significant and unavoidable*.

- Balboa Avenue, between Cannington Drive and Charger Boulevard – Reclassify the roadway from a 6-Lane Major Arterial to a 6-Lane Primary Arterial Provide prior to the project's total trip generation of 1,811 ADT. The significant traffic impact associated with the Proposed Project along this roadway would be fully mitigated with the implementation of this measure. However, this roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the existing land use fronting this roadway (i.e. residential and school uses) as well as the right-of-way constraints, a classification upgrade would not be feasible. Therefore, this impact would remain *significant and unavoidable*.
- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps – Reclassify the roadway from a 6-Lane Major Arterial to a 6-Lane Expressway prior to the project's total trip generation of 1,561 ADT. The significant traffic impact associated with the Proposed Project along this roadway would be fully mitigated with the implementation of this measure. However, this roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the planned classification of this roadway, additional right-of-way would be required to implement this measure. Therefore, this impact would remain *significant and unavoidable*.

Intersections:

The traffic generated by the Proposed Project is anticipated to create an impact at the following four (4) intersections:

1. Genesee Avenue & Clairemont Mesa Boulevard – Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway prior to the project's total trip generation of 2,100 ADT.

The City of San Diego's *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this would mitigate the impact, and the project applicant would coordinate with the City to define the fees for the implementation of this improvement. Therefore, this impact would be reduced to *less than significant*.

-
8. Clairemont Drive & Balboa Avenue - Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway prior to the project's total trip generation of 2,700 ADT.

The City of San Diego's *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this would mitigate the impact, and the project applicant would coordinate with the City to define the fees for the implementation of this improvement. Therefore, this impact would be reduced to *less than significant*.

9. Mt Everest Boulevard & Balboa Avenue – Restripe the northbound and southbound approaches on Mt Everest Boulevard to provide an exclusive left-turn lane and a shared through-right turn lane, then convert the northbound and southbound approaches from split phasing to protected left-turn phasing. This improvement must be implemented prior to the project's total trip generation of 300 ADT. Implementing this improvement could be done within the existing right-of-way and would reduce intersection delays to pre-Project conditions. However, the County of San Diego cannot guarantee improvements to an intersection under the jurisdiction of the City of San Diego. Therefore, this impact would remain *significant and unavoidable*.
14. Charger Boulevard & Balboa Avenue – Restripe the northbound shared through-left turn lane into an exclusive through lane and convert the northbound and southbound signal from split phasing to protective phasing prior to the project's total trip generation of 1,850 ADT. Implementing this improvement would reduce intersection delays to pre-Project conditions. However, the County of San Diego cannot guarantee improvements to an intersection under the jurisdiction of the City of San Diego. Therefore, this impact would remain *significant and unavoidable*.

Table 6.9 displays intersection LOS and average vehicle delay results under Near-Term Base (Year 2021) Plus Project with Mitigation conditions. The trigger analysis worksheets and level of service calculation worksheets for the Near-Term Base (Year 2021) Plus Project with Mitigation conditions are provided in **Appendix I**.

Table 6.9 Peak Hour Intersection Level of Service Results – Near-Term Base (Year 2021) Plus Project with Mitigation Conditions

Intersection	Control	AM Peak Hour		PM Peak Hour		Delay w/o Project (sec) AM/PM	LOS w/o Project AM/PM	Change in Delay (sec)	M?
		Avg. Delay (sec)	LOS	Avg. Delay (sec)	LOS				
1. Genesee Avenue & Clairemont Mesa Boulevard	Signal	40.2	D	51.4	D	43.0 / 61.5	D / E	-2.8 / -10.1	Y
8. Clairemont Drive & Balboa Avenue	Signal	47.9	D	67.8	E	48.0 / 68.2	D / E	-0.1 / -0.4	Y
9. Mi Everest Boulevard & Balboa Avenue	Signal	66.7	E	28.0	C	116.5 / 64.7	F / E	-49.8 / -36.7	Y
14. Charger Boulevard & Balboa Avenue	Signal	53.9	D	51.4	D	64.7 / 42.9	E / D	-10.8 / 8.5	Y

Source: Chen Ryan Associates; March 2019

Notes:

Bold letter indicates unacceptable LOS E or F.

AWSC = All-Way Stop Controlled.

SSSC = Side-Street Stop Controlled.

M? = Impact Mitigated?

As shown in Table 6.9, the proposed mitigation measures would either reduce the Proposed Project impact to less than significant or mitigated the Proposed Project impact to better than pre-Project conditions. However, the Genesee Avenue/Clairemont Mesa Boulevard and Clairemont Drive/Balboa Avenue intersections are considered to have significant and unavoidable impacts since these intersections are under the City’s jurisdiction, so implementation of the mitigation is not under the control of the Project.

Ramp Meters:

No impacts were identified. Therefore, no mitigation is required.

7.0 Horizon Year 2050 Base

This section provides a description of Horizon Year 2050 Cumulative Traffic conditions both with and without the Proposed Project. Scenarios analyzed in this section include the following:

- Horizon Year 2050 Base Conditions
- Horizon Year 2050 Base Plus Project Conditions

7.1 Horizon Year 2050 Base Roadway Network and Traffic Volumes

Roadway and intersection geometrics under Horizon Year 2050 Base conditions were assumed to be identical to Existing and Near-Term Year 2021 Base Conditions geometrics, as shown in Figure 4-1.

Similar to the Select Zone analysis that was used for the Project's trip distribution, the forecast model for the Clairemont Mesa Community Plan Update was used to develop the Horizon Year 2050 volumes. The peak hour intersection turning movements were developed by comparing existing and forecasted Year 2050 ADTs, as well as peak hour approach and departure volumes, then applying the respective growth factors. Manual adjustments were also made to ensure that traffic volumes among adjacent intersections are reasonably balanced. **Figure 7-1** displays average daily roadway and peak hour intersection volumes for the study roadway segments and intersections under the Horizon Year 2050 Base Conditions.

7.2 Horizon Year 2050 Base Traffic Conditions

Level of service analyses for Horizon Year 2050 Base conditions were conducted using the methodologies described in Chapter 2.0. Roadway segment and intersection level of service, as well as freeway ramp meter analysis results for Horizon Year 2050 Base conditions are discussed separately below.

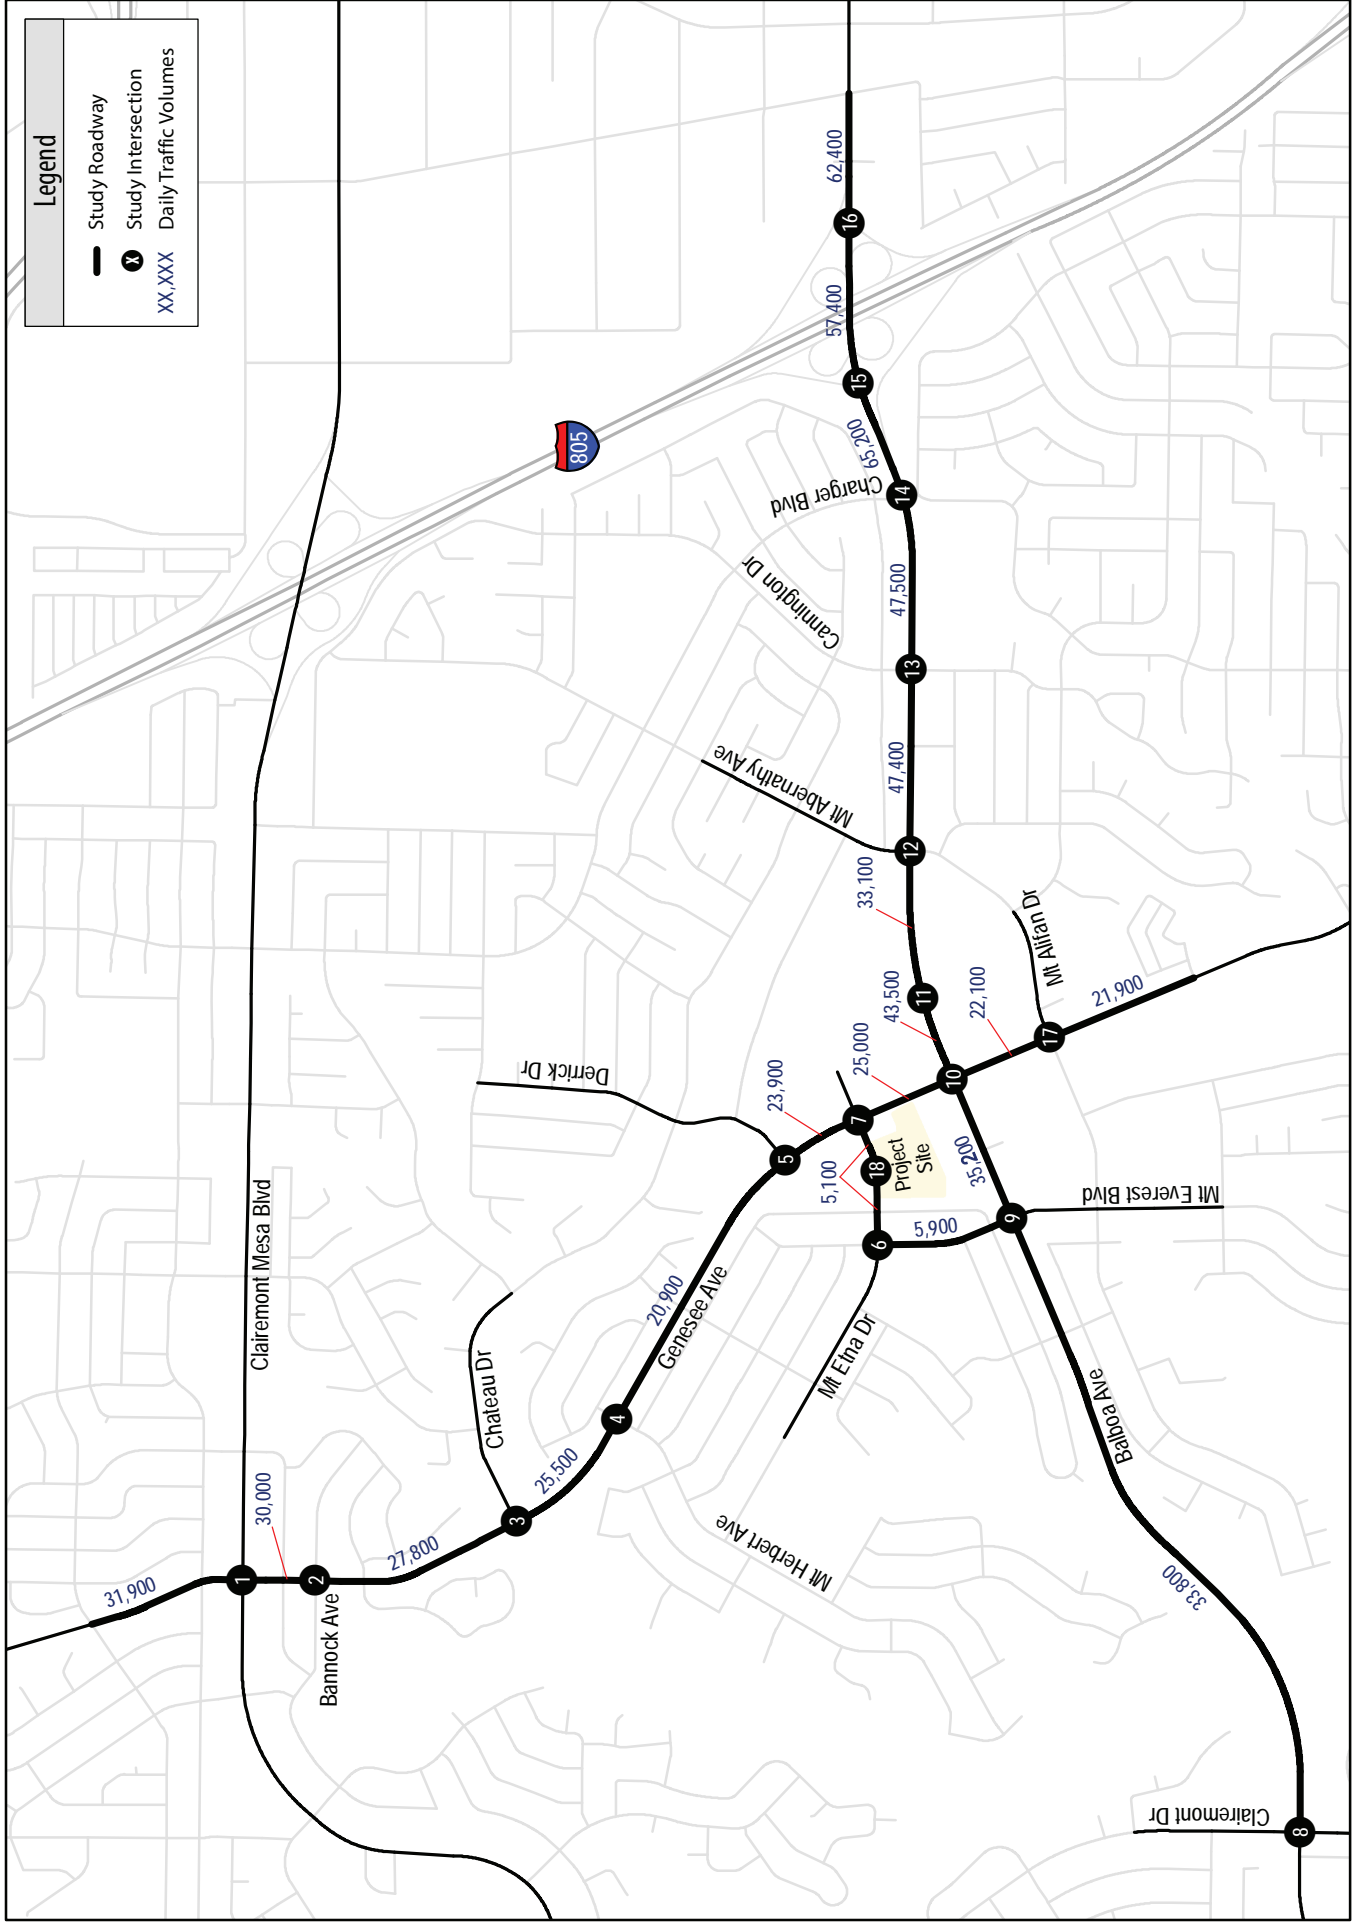

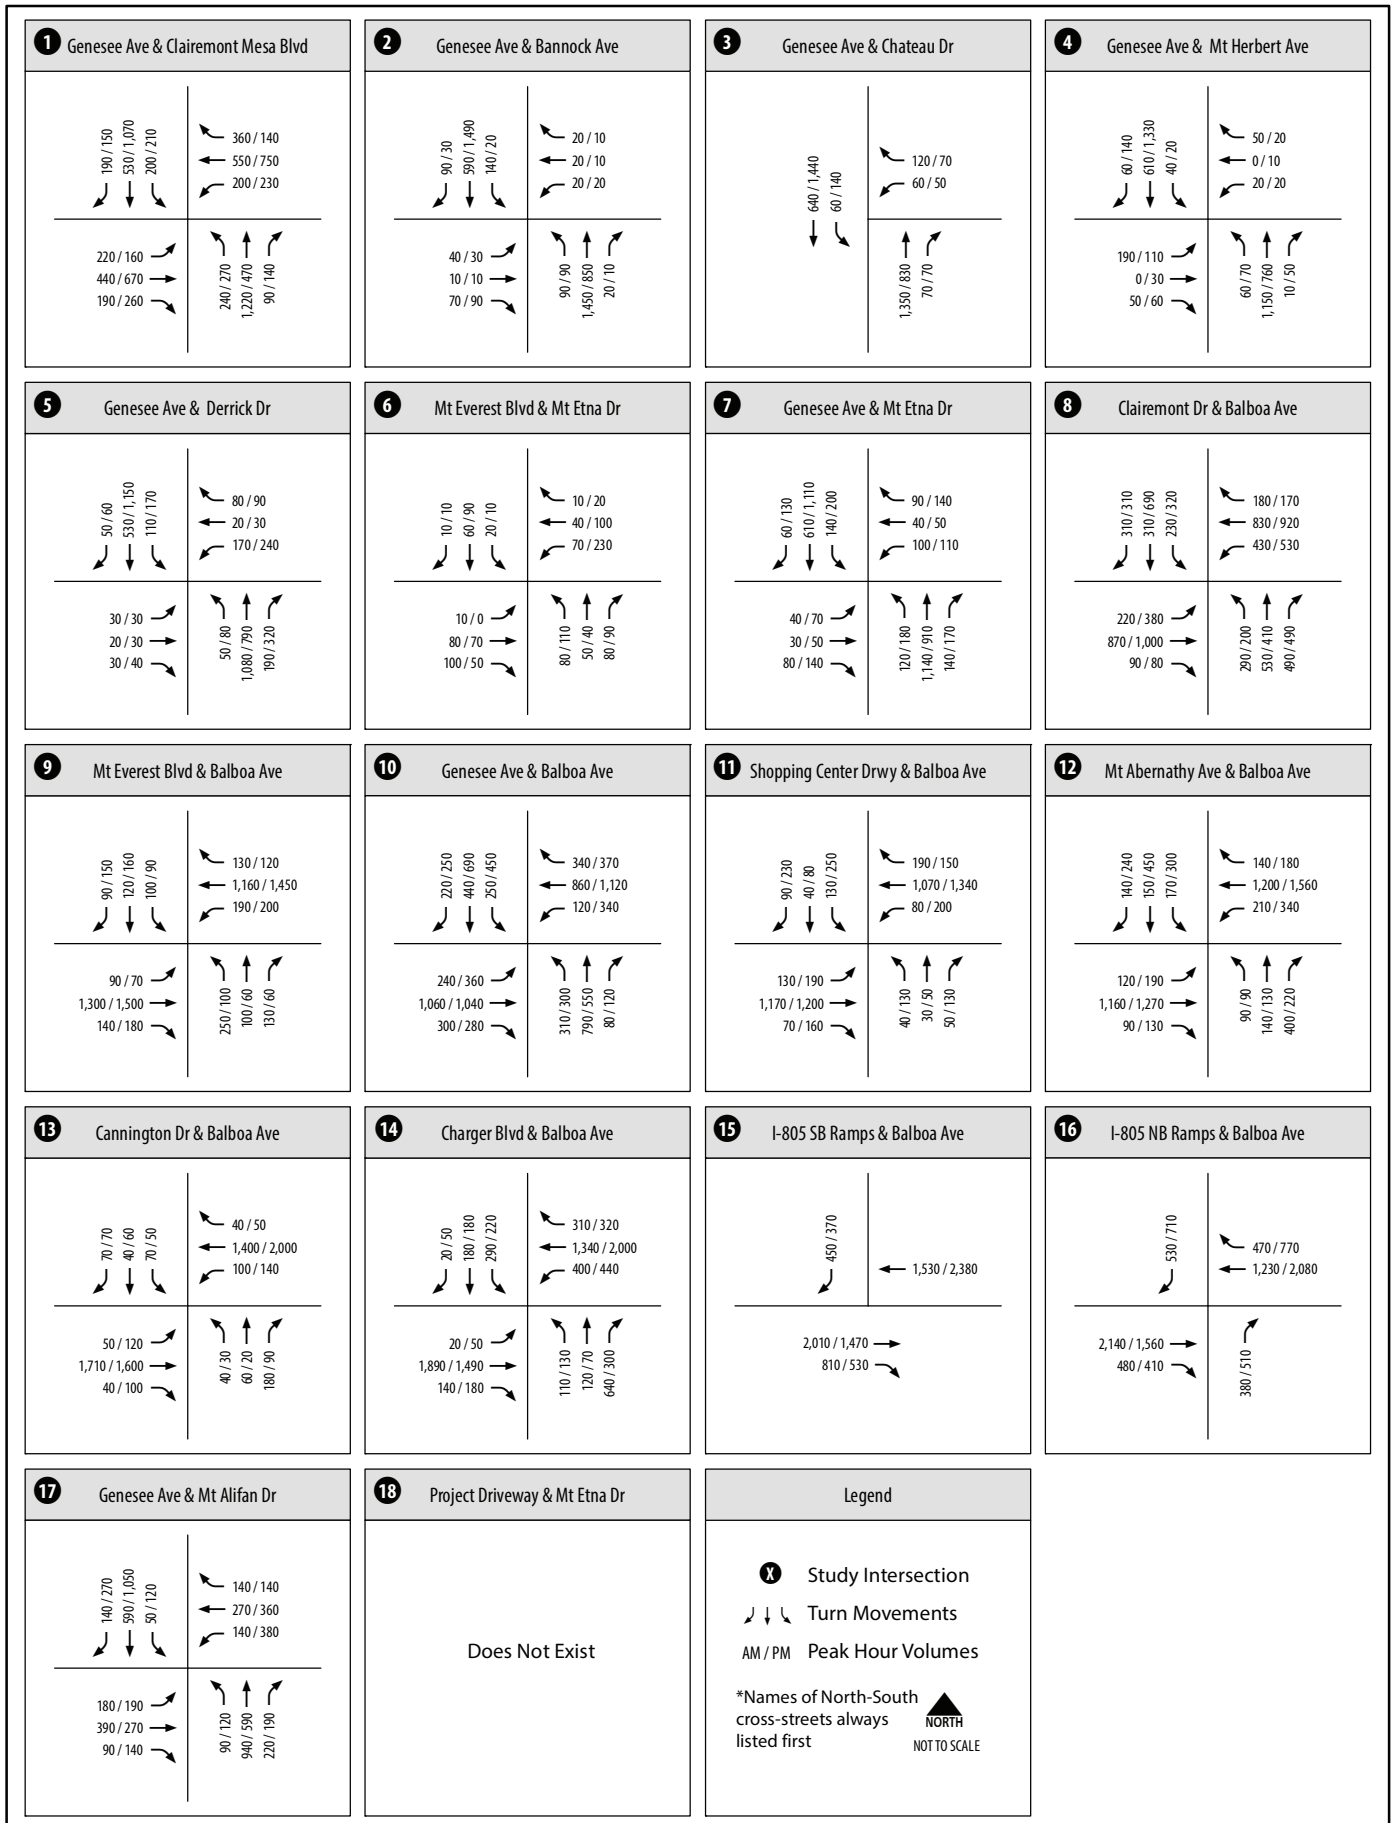

Figure 7-1
 Traffic Volumes - Horizon Year 2050
 Base Conditions

Roadway Segment Analysis

Table 7.1 displays the Level of Service analysis results for key roadway segments under the Horizon Year 2050 Base conditions.

As shown, all of the study area roadway segments are projected to continue operating at acceptable LOS D or better under Horizon Year 2050 Base conditions with the exception of the following five (5) roadway segments:

- Balboa Avenue, between Mt Everest Boulevard and Genesee Avenue (LOS E);
- Balboa Avenue, between Mt Abernathy Avenue and Cannington Drive (LOS E);
- Balboa Avenue, between Cannington Drive and Charger Boulevard (LOS E);
- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps (LOS F); and
- Balboa Avenue, between I-805 Northbound Ramps and Ruffner Street (LOS F).

Table 7.1 Roadway Segment Level of Service Results - Horizon Year 2050 Base Conditions

Roadway	Segment	Functional Classification	Cross-Section	ADT	Capacity (LOS E)	V/C	LOS
Genesee Avenue	Between Appleton Street & Clairemont Mesa Boulevard	4-Ln Major Arterial	Raised Median	31,900	40,000	0.798	D
	Between Clairemont Mesa Boulevard & Bannock Avenue	4-Ln Major Arterial	Undivided	30,000	40,000	0.750	C
	Between Bannock Avenue & Chateau Drive	4-Ln Major Arterial	Raised Median	27,800	40,000	0.695	C
	Between Chateau Drive & Mt Herbert Avenue	4-Ln Major Arterial	Raised Median	25,500	40,000	0.638	C
	Between Mt Herbert Avenue & Derrick Drive	4-Ln Major Arterial	Raised Median	20,900	40,000	0.523	B
	Between Derrick Drive & Mt Etna Drive	6-Ln Major Arterial	Raised Median	23,900	50,000	0.478	B
	Between Mt Etna Drive & Balboa Avenue	5-Ln Major Arterial	Raised Median	25,000	45,000	0.556	C
	Between Balboa Avenue & Mt Alifan Drive	5-Ln Major Arterial	Raised Median	22,100	45,000	0.491	B
	Between Mt Alifan Drive & Genesee Court	4-Ln Major Arterial	Raised Median	21,900	40,000	0.548	C
Mt Everest Boulevard	Between Mt Etna Drive & Balboa Avenue	2-Ln Collector w/o CLTL	Undivided	5,900	8,000	0.738	D
Mt Etna Drive	Between Mt Everest Boulevard & Genesee Avenue	2-Ln Collector w/o CLTL	Undivided	5,100	8,000	0.638	D
Balboa Avenue	Between Clairemont Drive & Mt Everest Boulevard	4-Ln Major Arterial	Raised Median	33,800	40,000	0.845	D
	Between Mt Everest Boulevard & Genesee Avenue	4-Ln Major Arterial	Raised Median	35,200	40,000	0.880	E
	Between Genesee Avenue & Shopping Center Driveway	6-Ln Major Arterial	Raised Median	43,500	50,000	0.870	D
	Between Shopping Center Driveway & Mt Abernathy Avenue	6-Ln Major Arterial	Raised Median	33,100	50,000	0.662	C
	Between Mt Abernathy Avenue & Cannington Drive	6-Ln Major Arterial	Raised Median	47,400	50,000	0.948	E
	Between Cannington Drive & Charger Boulevard	6-Ln Major Arterial	Raised Median	47,500	50,000	0.950	E
	Between Charger Boulevard & I-805 Southbound Ramps	6-Ln Major Arterial	Raised Median	65,200	50,000	1.304	F
	Between I-805 Southbound Ramps & I-805 Northbound Ramps*	8-Ln Prime Arterial	Raised Median	57,400	80,000	0.718	C
	Between I-805 Northbound Ramps & Ruffner Street	6-Ln Major Arterial	Raised Median	62,400	50,000	1.248	F

Source: Chen Ryan Associates; March 2019

Notes:

*The Balboa Ave segment between the I-805 ramps are classified as a 6-lane major according to the Clairemont Community Plan; however, the actual roadway cross-section includes eight lanes (two of which are auxiliary ramp lanes).

Bold letter indicates unacceptable LOS E or F.

ADT = Average Daily Traffic.

V/C = Volume to Capacity Ratio.

LOS = Level of Service.

Ln = Lane.

CLTL = Continuous Left-Turn Lane.

Intersection Analysis

Table 7.2 displays intersection Level of Service and average vehicle delay results under Horizon Year 2050 Base conditions. Level of Service calculation worksheets are provided in **Appendix J**.

Table 7.2 Peak Hour Intersection Level of Service Results - Horizon Year 2050 Base Conditions

Intersection	Control	AM Peak Hour		PM Peak Hour	
		Avg. Delay (sec.)	LOS	Avg. Delay (sec.)	LOS

Source: Chen Ryan Associates; March 2019

Notes:

Bold letter indicates unacceptable LOS E or F.

AWSC = All-Way Stop Controlled

SSSC = Side-Street Stop Controlled.

DNE = Does Not Exist.

As shown in the table, all of the study area intersections are projected to operate at acceptable LOS D or better during the AM and PM peak hours under Horizon Year 2050 Base conditions, with exception of the following five (5) locations:

- Genesee Avenue & Clairemont Mesa Boulevard – LOS E during the AM peak hour and LOS F during the PM peak hour;
- Clairemont Drive & Balboa Avenue - LOS E during the AM peak hour and LOS F during the PM peak hour;
- Mt Everest Boulevard & Balboa Avenue – LOS F during both the AM and PM peak hours;
- Genesee Avenue & Balboa Avenue – LOS F during the PM peak hour; and
- Genesee Avenue & Mt Alifan Drive – LOS E during the PM peak hour.

Ramp Metering Analysis

Table 7.3 summarizes the freeway ramp metering analysis results under Horizon Year 2050 Base Conditions.

Table 7.3 Ramp Metering Analysis – Horizon Year 2050 Base Conditions

On-Ramp	# of Lanes		Peak Hour	Demand ¹ (veh/hr) per lane	Meter Rate ² (veh/hr) per lane	Excess Demand ³ (veh/hr) per lane	Delay ⁴ (min)	Queue ⁵ (ft)	Storage Length (ft)	Excess Queue (ft)
	SOV	HOV								
I-805 SB On-Ramp @ Balboa Ave EB	1	1	PM	424	423	1	0.1	29	1,000	0
I-805 NB Ramp @ Balboa Ave EB	1	1	AM	384	511	0	0	0	410	0

Source: Chen Ryan Associates; March 2019

Notes:

SOV = Single Occupancy Vehicle; HOV = High Occupancy Vehicle.

¹ Demand is the peak hour demand expected to use the on-ramp.

² Meter Rate is the peak hour capacity expected to be processed through the ramp meter. This value was obtained from Caltrans.

³ Excess Demand = (Demand) – (Meter Rate) or zero, whichever is greater.

⁴ Delay = (Excess Demand / Meter Rate) X 60 min/hr.

⁵ Queue = (Excess Demand) X 29 ft/veh.

As shown the Table 7.3, the anticipated peak hour demand is anticipated to exceed the anticipated meter rate at the I-805 Southbound On-Ramp @ Balboa Avenue EB by 29 feet.

7.3 Horizon Year 2050 Base Plus Project Roadway Network and Traffic Volumes

Roadway and intersection geometrics under Horizon Year 2050 Base Plus Project conditions were assumed to be identical to Existing and Near-Term Year 2021 Base Conditions geometrics, as shown in Figure 4-1.

Horizon Year 2050 Base Plus Project traffic volumes were derived by combining the Horizon Year 2050 Base traffic volumes (displayed in Figure 7-1) and the Project trip assignment (displayed in Figure 5-2). Daily and peak hour intersection volumes for this scenario are displayed in **Figure 7-2**.

7.4 Horizon Year 2050 Base Plus Project Traffic Conditions

Level of service analyses for Horizon Year 2050 Base Plus Project conditions were conducted using the methodologies described in Chapter 2.0. Roadway segment and intersection level of service, as well as freeway ramp meter analysis results for Horizon Year 2050 Base Plus Project conditions are discussed separately below.

Roadway Segment Analysis

Table 7.4 displays the Level of Service analysis results for key roadway segments under Horizon Year 2050 Base Plus Project conditions.

As shown in the Table 7.4 all of the study area roadway segments are projected to continue operating at acceptable LOS D or better under Horizon Year 2050 Base Plus Project conditions with the exception of the following seven (7) roadway segments:

- Mt Everest Boulevard, between Mt Etna Drive and Balboa Avenue (LOS E);
- Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue (LOS F);
- Balboa Avenue, between Mt Everest Boulevard and Genesee Avenue (LOS E);
- Balboa Avenue, between Mt Abernathy Avenue and Cannington Drive (LOS E);
- Balboa Avenue, between Cannington Drive and Charger Boulevard (LOS E);
- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps (LOS F); and
- Balboa Avenue, between I-805 Northbound Ramps and Ruffner Street (LOS F).

ADT = Average Daily Traffic.

V/C = Volume to Capacity Ratio.

LOS = Level of Service.

Ln = Lane.

CLTL = Continuous Left-Turn Lane.

S? = Indicates if change in V/C ratio is significant.

Δ = Change in V/C Ratio.

Of these six (6) roadway segments, the following three (3) could potentially result in a significant impact based on the significance criteria outlined in Section 2.5. As noted in section 2.2, daily roadway LOS is typically used only at the planning level and does not necessarily indicate true roadway operations. Therefore, to determine if the identified roadway segments operate at acceptable levels during peak times (worst case) peak hour aerial analyses and peak hour intersection analyses were conducted to better understand the actual travel flow along the roadways. Roadway segments in which are built to their ultimate classification, the peak hour arterial LOS, and the intersections at either end of the segment are projected to operate at acceptable LOS D or better are not considered to have a significant impact, since the actual travel flow along the segment is consider to be acceptable.

- Mt Everest Boulevard, between Mt Etna Drive and Balboa Avenue – LOS E. The Proposed Project would add 632 daily trips, resulting in an increase of 0.079 in V/C ratio. Therefore, the following additional analyses were conducted to determine if the roadway segment would be significantly impacted:
 - The arterial level of service analysis identifies this roadway segment to operate at LOS F in the SB direction during both the AM and PM peak hours;
 - The intersections of Mt Everest Boulevard/Mt Etna Drive and Mt Everest is projected to operate at LOS C or better during both AM and PM peak hours, but the intersection of Mt Everest Boulevard/Balboa Avenue is projected to operate at LOS E or F during the AM and PM peak hours.
 - Therefore, the Proposed Project **would result** in a significant impact to this roadway segment.
 -
- Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue – LOS E. The Proposed Project would add 3,486 daily trips, resulting in an increase of 0.436 in V/C ratio. Therefore, the following additional analyses were conducted to determine if the roadway segment would be significantly impacted:
 - The arterial level of service analysis identifies this roadway segment to operate at LOS E in the EB and WB directions during both the AM and PM peak hours;
 - The intersections of Mt Everest Boulevard/Mt Etna Drive and Genesee Avenue/Mt Etna Drive are projected to operate at LOS C or better during both AM and PM peak hours;
 - Therefore, the Proposed Project **would result** in a significant impact to this roadway segment.
- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps – The Proposed Project would add 962 daily trips, resulting in an increase of 0.019 in V/C ratio. Therefore, the following additional analyses were conducted to determine if the roadway segment would be significantly impacted:
 - The arterial level of service analysis identifies this roadway segment to operate at LOS B and LOS C in the EB and WB directions, respectively, during the AM peak

-
- hour, and LOS B and LOS D in the EB and WB directions, respectively, during the PM peak hour;
 - The intersection of Eckstrom Avenue/Charger Boulevard/Balboa Avenue is projected to operate at LOS E in the AM peak hour and LOS D in the PM peak hour, and the I-805 Southbound Ramps/Balboa Avenue is projected to operate at LOS B or better during both AM and PM peak hours;
 - Therefore, the Proposed Project **would result** in a significant impact to this roadway segment.

Intersection Analysis

Table 7.5 displays intersection Level of Service and average vehicle delay results under Horizon Year 2050 Base Plus Project conditions. Level of Service calculation worksheets for this scenario are provided in **Appendix K**.

As shown in Table 7.5, all of the study area intersections would continue to operate at acceptable LOS D or better during the AM and PM peak hours under Horizon Year 2050 Base Plus Project conditions, except for the following six (6) intersections:

- Genesee Avenue & Clairemont Mesa Boulevard – LOS E during the AM peak hour and LOS F during the PM peak hour;
- Clairemont Drive & Balboa Avenue – LOS E during the AM peak hour and LOS F during the PM peak hour;
- Mt Everest Boulevard & Balboa Avenue – LOS F during both the AM and PM peak hours;
- Genesee Avenue & Balboa Avenue – LOS F during the PM peak hour;
- Charger Boulevard & Balboa Avenue – LOS E during the AM peak hour; and
- Genesee Avenue & Mt Alifan Drive – LOS E during the PM peak hour.

Based upon the impact significance criteria presented in Section 2.5, the addition of the Proposed Project traffic would result in a cumulative impact to the following five (5) study intersections:

- Genesee Avenue & Clairemont Mesa Boulevard;
- Clairemont Drive & Balboa Avenue;
- Mt Everest Boulevard & Balboa Avenue;
- Genesee Avenue & Balboa Avenue; and
- Charger Boulevard & Balboa Avenue.

Ramp Metering Analysis

Table 7.6 summarizes the freeway ramp metering analysis results under Horizon Year 2050 Base Plus Project conditions.

Table 7.5 Peak Hour Intersection Level of Service Results - Horizon Year 2050 Base Plus Project Conditions

Intersection	Control	AM Peak Hour		PM Peak Hour		Delay w/o Project (sec) AM/PM	LOS w/o Project AM/PM	Change in Delay (sec) AM/PM	Significant Impact? AM/PM
		Avg. Delay (sec)	LOS	Avg. Delay (sec)	LOS				
1. Genesee Avenue & Clairemont Mesa Boulevard	Signal	68.2	E	100.0	F	65.9 / 95.9	E / F	2.3 / 4.1	Y / Y

Source: Chen Ryan Associates; March 2019

Notes:

Bold letters indicate unacceptable LOS E or F operations.

AWSC = All-Way Stop Controlled.

SSSC = Side-Street Stop Controlled.

DNE = Does Not Exist.

Table 7.6 Ramp Metering Analysis – Horizon Year 2050 Base Plus Project Conditions

On-Ramp	# of Lanes		Peak Hour	Demand ¹ (veh/hr) per lane	Meter Rate ² (veh/hr) per lane	Excess Demand ³ (veh/hr) per lane	Delay ⁴ (min)	Queue ⁵ (ft)	Storage Length (ft)	Excess Queue (ft)	Delay w/o Project (min)	Δ Delay (min)	S?
	SOV	HOV											
I-805 SB On-Ramp @ Balboa Ave EB	1	1	PM	435	423	12	1.7	348	1000	0	0.1	1.6	No
I-805 NB Ramp @ Balboa Ave EB	1	1	AM	386	511	0	0	0	410	0	0	0.0	No

Source: Chen Ryan Associates; March 2019

Notes:

Based upon field observation it is estimated that 20% of the vehicles at these ramp meters use the HOV lane when available. Since the majority of trips existing the school during the PM Peak hour would be parents picking up students, it is assumed that 90% of the Proposed Project trips during the PM peak hours would use the HOV lane.

SOV = Single Occupancy Vehicle; HOV = High Occupancy Vehicle.

¹ Demand is the peak hour demand expected to use the on-ramp.

² Meter Rate is the peak hour capacity expected to be processed through the ramp meter. This value was obtained from Caltrans.

³ Excess Demand = (Demand) – (Meter Rate) or zero, whichever is greater.

⁴ Delay = (Excess Demand / Meter Rate) X 60 min/hr.

⁵ Queue = (Excess Demand) X 29 ft/veh.

As shown in the table, the anticipated peak hour demand is anticipated to exceed the anticipated meter rate at the I-805 Southbound Ramp @ Balboa Avenue EB during the PM peak hour by 12 vehicles and result in a queue length of 348 feet.

Based on the City of San Diego Significance Criteria, outlined in Section 2.5, the traffic associated with the Proposed Project would not cause a significant impact to any of the study ramp meter since the change in delay is less than 2 minutes under Horizon Year 2050 Base Plus Project conditions.

7.5 Impact Significance and Mitigation

Based upon the significance criteria presented in Section 2.5 of this report, the addition of project traffic would cause a significant cumulative impact to three (3) roadway segments, five (5) intersections, and no ramp meters under Horizon Year 2050 Base Plus Project conditions. The following mitigation measures would be required to mitigate the project impact to less than significant:

Roadways:

The traffic generated by the Proposed Project is anticipated to create an impact at the following three (3) roadway segments:

- Mt Everest Boulevard, between Mt Etna Drive and Balboa Avenue – Provide additional right-of-way and widen the roadway from a 2-Lane Collector to a 2-Lane Collector with a Continuous-Left-Turn-Lane (or construct left turn pocket where needed) prior to the

project's total trip generation of 2,852 ADT. The significant traffic impact associated with the Proposed Project along this roadway would be fully mitigated with the implementation of this measure. However, this roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the planned classification of this roadway, additional right-of-way would be required to implement this measure. Therefore, this impact would remain *significant and unavoidable*.

- Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue – Provide additional right-of-way and widen the roadway from a 2-Lane Collector to a 2-Lane Collector with a Continuous-Left-Turn-Lane (or construct left turn pocket where needed) prior to the project's total trip generation of 1,399 ADT. This roadway is along the Project's frontage, so providing a separate left-turn lane into the Project site would provide additional capacity and would fully mitigate the significant traffic impact associated with the Proposed Project. However, this roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the classification of this roadway, additional right-of-way would be required to implement this measure. Therefore, this impact would remain *significant and unavoidable*.
- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps – Reclassify the roadway from a 6-Lane Major Arterial to a 6-Lane Expressway prior to the project's total trip generation of 1,561 ADT. The significant traffic impact associated with the Proposed Project along this roadway would be fully mitigated with the implementation of this measure. However, this roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the planned classification of this roadway, additional right-of-way would be required to implement this measure. Therefore, this impact would remain *significant and unavoidable*.

Intersections:

The traffic generated by the Proposed Project is anticipated to create an impact at the following five (5) intersections:

1. Genesee Avenue & Clairemont Mesa Boulevard – Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway prior to the project's total trip generation of 800 ADT. The City of San Diego's *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this would mitigate the impact, and the project applicant would coordinate with the City to define

the fees for the implementation of this improvement. Therefore, this impact would be reduced to *less than significant*.

8. Clairemont Drive & Balboa Avenue - Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway prior to the project's total trip generation of 1,300 ADT. The City of San Diego's *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this would mitigate the impact, and the project applicant would coordinate with the City to define the fees for the implementation of this improvement. Therefore, this impact would be reduced to *less than significant*.

9. Mt Everest Boulevard & Balboa Avenue – Restripe the northbound and southbound approaches on Mt Everest Boulevard to provide an exclusive left-turn lane and a shared through-right turn lane, then convert the northbound and southbound approaches from split phasing to protected left-turn phasing. This improvement must be implemented prior to the project's total trip generation of 725 ADT. Implementing this improvement could be done within the existing right-of-way and would reduce intersection delays to pre-Project conditions. However, the County of San Diego cannot guarantee improvements to an intersection under the jurisdiction of the City of San Diego. Therefore, this impact would remain *significant and unavoidable*.

10. Genesee Avenue & Balboa Avenue – Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway prior to the project's total trip generation of 600 ADT. The City of San Diego's *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this would mitigate the impact, and the project applicant would coordinate with the City to define the fees for the implementation of this improvement. Therefore, this impact would be reduced to *less than significant*.

14. Charger Boulevard & Balboa Avenue – Restripe the northbound shared through-left turn lane into an exclusive through lane and convert the northbound and southbound signal from split phasing to protective phasing prior to the project's total trip generation of 1,050 ADT. Implementing this improvement would reduce intersection delays to pre-Project conditions. However, the County of San Diego cannot guarantee improvements

to an intersection under the jurisdiction of the City of San Diego. Therefore, this impact would remain *significant and unavoidable*.

Table 7.7 displays intersection LOS and average vehicle delay results under Horizon Year 2050 Base Plus Project with Mitigation conditions. The trigger analysis worksheets and level of service calculation worksheets for the Horizon Year 2050 Base Plus Project with Mitigation conditions are provided in **Appendix L**.

Table 7.7 Peak Hour Intersection Level of Service Results – Horizon Year 2050 Base Plus Project with Mitigation Conditions

Intersection	Control	AM Peak Hour		PM Peak Hour		Delay w/o Project (sec) AM/PM	LOS w/o Project AM/PM	Change in Delay (sec)	M?
		Avg. Delay (sec)	LOS	Avg. Delay (sec)	LOS				
1. Genesee Avenue & Clairemont Mesa Boulevard	Signal	46.1	D	60.6	E	65.9 / 95.9	E / F	-19.8 / -35.3	Y
8. Clairemont Drive & Balboa Avenue	Signal	64.4	E	97.5	F	65.4 / 100.6	E / F	-1.0 / -3.1	Y
9. Mt Everest Boulevard & Balboa Avenue	Signal	104.3	F	59.4	E	107.9 / 110.4	F / F	-3.6 / -51.0	Y
10. Genesee Avenue & Balboa Avenue	Signal	41.4	D	77.5	E	42.1 / 80.2	D / F	-0.7 / -2.7	Y
14. Charger Boulevard & Balboa Avenue	Signal	47.1	D	48.0	D	54.3 / 48	E / D	-7.2 / 0.0	Y

Source: Chen Ryan Associates; March 2019

Notes:

- Bold letter indicates unacceptable LOS E or F.
- AWSC = All-Way Stop Controlled.
- SSSC = Side-Street Stop Controlled.
- M? = Impact Mitigated?

As shown in Table 7.7 the proposed mitigation measures would either reduce the Proposed Project impact to less than significant or mitigated the Proposed Project impact to better than pre-Project conditions. However, the Genesee Avenue/Clairemont Mesa Boulevard, Clairemont Drive/Balboa Avenue, and Genesee Avenue/Balboa Avenue intersections are considered to have significant and unavoidable impacts since these intersections are under the City’s jurisdiction, so implementation of the mitigation is not under the control of the Project.

Ramp Meter:

No identified impacts. Therefore, not mitigation is required.

8.0 On-Site Circulation and Parking

This chapter addresses access to the project site by all modes, on-site circulation based on the proposed site plan, and access to on-site parking that would be provided by the Proposed Project.

8.1 Site Access and On-Site Circulation

Although currently unknown, the Proposed Project is expected to take access via a single driveway located along Mt Etna Drive. The driveway would be side street stop-controlled intersection. No changes have been provided/indicated to restriping to create exclusive left-turn lanes/pocket right-turn lanes. The driveway would operate at acceptable LOS A for all project study scenarios.

8.2 Parking

Per City municipal code (Article 2, Division 5 Parking Regulations, Table 142-05D) regarding affordable housing land uses, the following parking requirement would be applicable to the Proposed Project:

Affordable Housing Dwelling Units Parking Ratios – Family Housing

STUDIO:

High Parking Demand: 0.5 spaces/dwelling unit
Medium Parking Demand: 0.2 spaces/dwelling unit
Low Parking Demand: 0.1 spaces/dwelling unit

1 BEDROOM:

High Parking Demand: 1.0 spaces/dwelling unit
Medium Parking Demand: 0.6 spaces/dwelling unit
Low Parking Demand: 0.33 spaces/dwelling unit

2 BEDROOMS:

High Parking Demand: 1.3 spaces/dwelling unit
Medium Parking Demand: 1.1 spaces/dwelling unit
Low Parking Demand: 0.5 spaces/dwelling unit

3 BEDROOMS:

High Parking Demand: 1.75 spaces/dwelling unit
Medium Parking Demand: 1.4 spaces/dwelling unit
Low Parking Demand: 0.75 spaces/dwelling unit

The City of San Diego's *Proposed Parking Regulatory Reform for Multifamily Residential Development in Transit Priority Areas (TPAs)* (March 2019) project was recently approved by City Council on March 4, 2019. This project recommended that residential developments within TPAs are given zero minimum parking requirements. The ordinance was approved by the City Council in March 2019.

9.0 Other Modes

This chapter discusses the project's potential impacts to active transportation modes (bicycling and walking) and transit.

9.1 Active Transportation Facilities and Connectivity

Pedestrians

Sidewalks are provided on both sides of Mt Etna Drive along the project frontage. The sidewalk along Mt Etna Drive on the north side of fronts commercial plaza across from the project site. Heading west, the sidewalk then continues to the nearby residential neighborhoods. A single continental crosswalk is currently provided on the west leg of the Genesee Avenue and Mt Etna Drive intersection less than 150 feet northeast from the project site and a standard crosswalk for all other legs.

Mt Etna Drive provides east/west connectivity from the Proposed Project site to nearby residential neighborhoods, as well as to nearby commercial shopping centers such as the Genesee Plaza Shopping Center and the Liberty Park Plaza shopping center. To improve pedestrian walkability along Mt Etna Drive, a posted speed limit of 15 mph is posted as you enter the residential neighborhood accompanied by road speed bumps that end at the Mt Everest and Mt Etna Drive all ways stop intersection.

The streets immediately surrounding the project site all include sidewalks. All of the signalized intersections within the project study area include striped crosswalks, pedestrian signal heads, and American with Disabilities Act (ADA)-compliant ramps, where crossings are allowed, with the exception of the following:

Pedestrian crossing is not allowed at the following locations:

- The south leg of Genesee Avenue & Chateau Drive
- The west leg of Cannington Drive and Balboa Avenue
- The east leg of Charger Boulevard & Balboa Avenue

Missing yellow truncated domes on the pedestrian ramps at the following locations:

- The southwest corner of the Genesee Avenue & Derrick Drive intersection
- The southwest corner of the Genesee Avenue & Mt Alifan Drive intersection

The north leg of the I-805 SB Ramps & Balboa Avenue does not have yellow truncated domes on the pedestrian ramps at either crossing point. The south leg of this intersection as well as the two loop ramps currently lack the following features:

- Pedestrian signal heads
- Yellow truncated domes on the pedestrian ramps.

The south leg of the I-805 NB Ramps & Balboa Avenue does not have yellow truncated domes on the pedestrian ramps at either crossing point. The north leg of this intersection as well as the two loop ramps currently lack the following features:

- Pedestrian signal heads
- Yellow truncated domes on the pedestrian ramps.

Bicyclists

There are currently no bicycle facilities directly accessing the project site on Mt Etna Drive, however, Class II Bike lanes are provided on both sides Genesee Avenue. The Class II bike lane adjacent to the project site on the east has been painted green for high visibility as the lane approaches the Genesee Avenue and Balboa Avenue intersection to the south and sits adjacent to right turn pocket.

Transit

The project site is not directly served by transit. However, MTS Bus Route #27 and #41 have multiple stops/stations within a mile of the project site.

MTS Bus Route #27 – MTS Bus Route #27 connects between Pacific Beach to the west and Kearny Mesa Transit Center bus stop to the east. The Balboa Avenue and Genesee Avenue bus stop is the closest bus stop to the project site within 400 feet. MTS Bus Route #27 runs at 30-minute headways during peak periods and 60-minute headways during off-peak period on weekdays and 60 minutes headways on Saturdays. MTS Bus Route #27 does not operate on Sundays. MTS Bus Route #27 runs from approximately from 5:30 AM to 10:00 PM on weekdays and 6:00 AM and 8:30 PM on Saturdays.

MTS Bus Route #41 – MTS Bus Route #41 connects between UCSD/UTC to the north and Fashion Valley bus stop to the south. The Genesee Avenue and Mt Etna Drive bus stop is the closest bus stop to the project site within 400 feet. MTS Bus Route #41 runs at 15-minute headways during peak periods and 30-minute headways during off-peak period on weekdays. When UCSD is in session, MTS Bus Route #41 runs at 6-minute headways between 6:47 and 9:32AM towards UCSD and between 2:59PM and 5:29PM towards Fashion Valley. MTS Bus Route #41 also runs at 30-minute headways during peak period and 60-minute off-peak periods on the weekends. MTS Bus Route #41 runs from approximately 5:20AM and 11:40PM on weekdays, 6:30 AM and 10:00 PM on Sundays, and 6:00 AM and 10:30 PM on Saturdays.

Project Impacts

Potential impacts relating to pedestrian, bicycle and transit circulation would be considered significant if the Proposed Project would substantially increase hazards due to a design feature, or would conflict with the adopted policies plans, or programs supporting alternative transportation, as outlined in Appendix G of the *California Environmental Quality Act (CEQA) Guidelines*. Based on an initial review of the project site plan the Proposed Project would not generate any significant impacts associated with pedestrian, bicycle or transit facilities.

10.0 Travel Demand Management (TDM)

Implementation of a travel demand management (TDM) plan could lead to vehicle trip reduction, increased use of alternative modes, and better traffic management in the vicinity of the Project area. Based upon review of the Proposed Project site plan, the Proposed Project location in relation to near-by land uses and non-auto facilities, the following TDM measures are recommended:

1. Provide wayfinding signage to guide residents/retail patrons to/from bus stops on Genesee Avenue and Balboa Avenue. Exact signage location and type to be determined with coordination with City staff.
2. Provide secure bicycle parking within the community. Parking racks should accommodate U-locks.
3. Designate a Transportation Coordinator (such as a board member of the homeowner's association, a consultant, or a property management company representative) to monitor the TDM Program. The Transportation Coordinator will be responsible for developing, marketing, implementing, and evaluating the proposed TDM measures included in this Plan. The Transportation Coordinator's duties would include the following:
 - Create and distribute a "new resident" information packet identifying components of the TDM Plan, including but not limited to: carpool, vanpool and rideshare, transit route maps and service schedules, websites with relevant TDM information.
 - Provide information and resources regarding transit options and SANDAG's iCommute program on a yearly basis.
 - The Transportation Coordinator will coordinate with the nearby schools (e.g. Mt. Everest Academy, High Tech High Mesa, Sequoia Elementary School) to implement a "Walking School Bus" program (if feasible), whereby neighborhood students are accompanied by a "chaperone" (e.g., parental supervision) to safely walk to and from the school.

The Transportation Coordinator will coordinate with the nearby schools to provide student biking information to residents as a part of the "new resident" package.

4. Provide Electric Vehicle (EV) charging stations.
5. Implement raised crosswalks and curb extensions at the Genesee Avenue and Balboa Avenue intersection.

A final TDM plan will be developed in coordination with the City of San Diego.

11.0 Vehicle Miles Traveled (VMT)

Transportation is a major contributor to GHG emissions and a direct result of population and employment growth, which generates vehicle trips to move goods, provides public services, and connects people with work, school, shopping, and other activities. Growth in travel (especially vehicle travel) is due in large part to urban development patterns (i.e., the built environment). A performance measure used to quantify the amount of travel is Vehicle Miles Traveled (VMT).

The VMT estimates were derived from travel demand (TDF) model, used in this analysis to estimate the Project’s trip distribution and to develop the Horizon Year 2050 traffic volumes.

Table 11.1 displays the VMT results for regional average and the Proposed Project. According to the model, the regional average daily VMT per capita for residents is 14.3 and the regional average daily work-related VMT per employee is 21.3. The Proposed Project’s VMT would be 12.7 and 17.2 for residents and employees, respectively, which is both lower than the regional average. Given that the City has not yet adopted a significance criterion for the impending SB 743, the VMT analysis is used solely for informational purposes and not used to identify impacts.

Appendix M includes the SANDAG Series 13 model VMT analysis worksheet.

Table 11.1 Vehicle Miles Traveled

	Regional VMT Average Per Capita	Proposed Project
Residential (Households)	14.3	12.7
Retail (Employment)	21.3	17.2

I-2 Traffic Impact Study Addendum

Mt. Etna - Clairemont Mesa Community Plan Amendment and Zone Change
TRANSPORTATION IMPACT STUDY ADDENDUM

TO: Janelle Firoozi, ESA
FROM: Monique Chen, Dale Domingo, and Joseph Perez, Chen Ryan Associates
DATE: September 25, 2019
RE: Transportation Impact Study Addendum for the Mt. Etna - Clairemont Mesa Community Plan Amendment and Zone Change

The purpose of this addendum to the “Mt. Etna – Clairemont Mesa Community Plan Amendment and Zone Change Transportation Impact Study (TIS)”, dated May 2019, is to evaluate the roadway segment Level of Service (LOS) as well as intersection operational delay and LOS under the new Proposed Project description. The new project proposes 404 affordable multifamily units including 150 senior units and 1,500 square feet of ancillary uses. Analysis was conducted under the following three (3) project access options:

- Access Option 1 - One Driveway: Full access on Mt Etna Drive;
- Access Option 2 - Two Driveways: Full access on Mt Etna Drive and a right-in-right-out (RIRO) driveway on Genesee Avenue; and
- Access Option 3 - Three Driveways: Full access on Mt Etna Drive, RIRO driveway on Genesee Avenue, and RIRO driveway on Balboa Avenue.

The project trips were assigned to the transportation network under all three project access options. Given that the new project does not substantially deviate from the previous one (i.e. 448 dwelling units versus 404 dwelling units), the trip distribution was not expected to change, and therefore, has remained the same as what was used in the original analysis.

However, the new project access options would change traffic circulation immediately adjacent to the site. As a result, driveway operations analysis was conducted at the following four (4) roadway segments and seven (7) intersections:

Roadways

- Genesee Avenue, between Mt Etna Drive and Balboa Avenue;
- Mt Everest, between Mt Etna Drive and Balboa Avenue;
- Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue; and
- Balboa Avenue, between Mt Everest Drive and Genesee Avenue

Intersections

- Mt Everest Boulevard & Mt Etna Drive (All-Way Stop Controlled);
- Genesee Avenue & Mt Etna Drive (Signal);
- Mt Everest Boulevard & Balboa Avenue (Signal);
- Genesee Avenue & Balboa Avenue (Signal);
- Project Driveway #1 & Mt Etna Drive (Side-Street Stop Controlled);
- Project Driveway #2 & Genesee Avenue (Side-Street Stop Controlled); and
- Project Driveway #3 & Balboa Avenue (Side-Street Stop Controlled).

The analysis methodology and traffic volumes for the transportation network remained the same as those provided in the TIS. Similar to the TIS, the following three study scenarios are analyzed in this addendum:

1. **Existing Conditions Plus Project** shows how implementation of the new Proposed Project would affect existing traffic operations immediately adjacent to the project site.
2. **Near-Term Base (Year 2021) Conditions Plus Project** shows how implementation of the new Proposed Project would affect forecasted Near-Term Year 2021 traffic operations immediately adjacent to the project site.
3. **Year 2050 Conditions Plus Project** shows how implementation of the new Proposed Project would affect forecasted Horizon Year 2050 traffic operations immediately adjacent to the project site.

Since the new project would generate fewer trips compared to the previous project, an analysis of only the previously identified project impacts was conducted to determine which facilities would no longer be impacted and which would remain with the new project description. Mitigation measures are provided for Existing Plus Project, Near-Term Base (Year 2021) Plus Project, and Horizon Year 2050 Plus Project for all three access options.

A site access evaluation was also conducted to evaluate access to the project site by all travel modes per access option.

1.0 New Project Trip Generation, Distribution, and Assignment

The new project proposes 404 affordable multifamily units including 150 senior dwelling units. Additionally, the project would include 1,500 square feet of ground floor ancillary uses, which would be used primarily by the residents and would not generate new trips to the site.

The trip generation estimates for the residential units were derived utilizing the trip generation rates outlined in *Table 1 of the City of San Diego Land Development Code – Trip Generation Manual 2003*. The following trip reduction from the City’s Traffic Impact Study Manual was applied to the estimate:

Transit Reductions

The project site is located in a Transit Oriented Development (TOD) area, with high frequency transit services immediately adjacent to the site on Genesee Avenue. Bus Route # 41 is serviced along Genesee Avenue operating with 15-minute headways during peak hours and bus route #27 is serviced along Balboa Avenue operating with 30-minutes headways during peak hours. Transit stops for Bus Routes #41 and #27 are each within 400 feet of the Project site. Consequently, the following transit reductions were applied to account for residents using transit in lieu of driving:

- Daily = 5%
- AM Peak Hour = 9%
- PM Peak Hour = 6%

Table 1 displays the projected daily, as well as AM and PM peak hour Project trip generation under the new project.

Table 1- Project Trip Generation

Land Use	Units	Trip Rate	% Daily	ADT	AM Peak Hour				PM Peak Hour					
					%	Trips	Split	In	Out	%	Trips	Split	In	Out
Residential – Multi – Family	254 Units	6 / Unit	-	1,524	8%	122	(2:8)	24	98	9%	138	(7:3)	97	41
Residential - Retirement/ Senior Citizen Housing	150 Units	4 / Unit	-	600	5%	30	(4:6)	12	18	7%	42	(6:4)	25	17
Subtotal				2,124		152		36	116		180		122	58
Residential Reduction due to Transit Stations*	-	-	5%	-106	9%	-14		-3	-11	6%	-11		-7	-4
Total				2,018		138		33	105		169		115	54

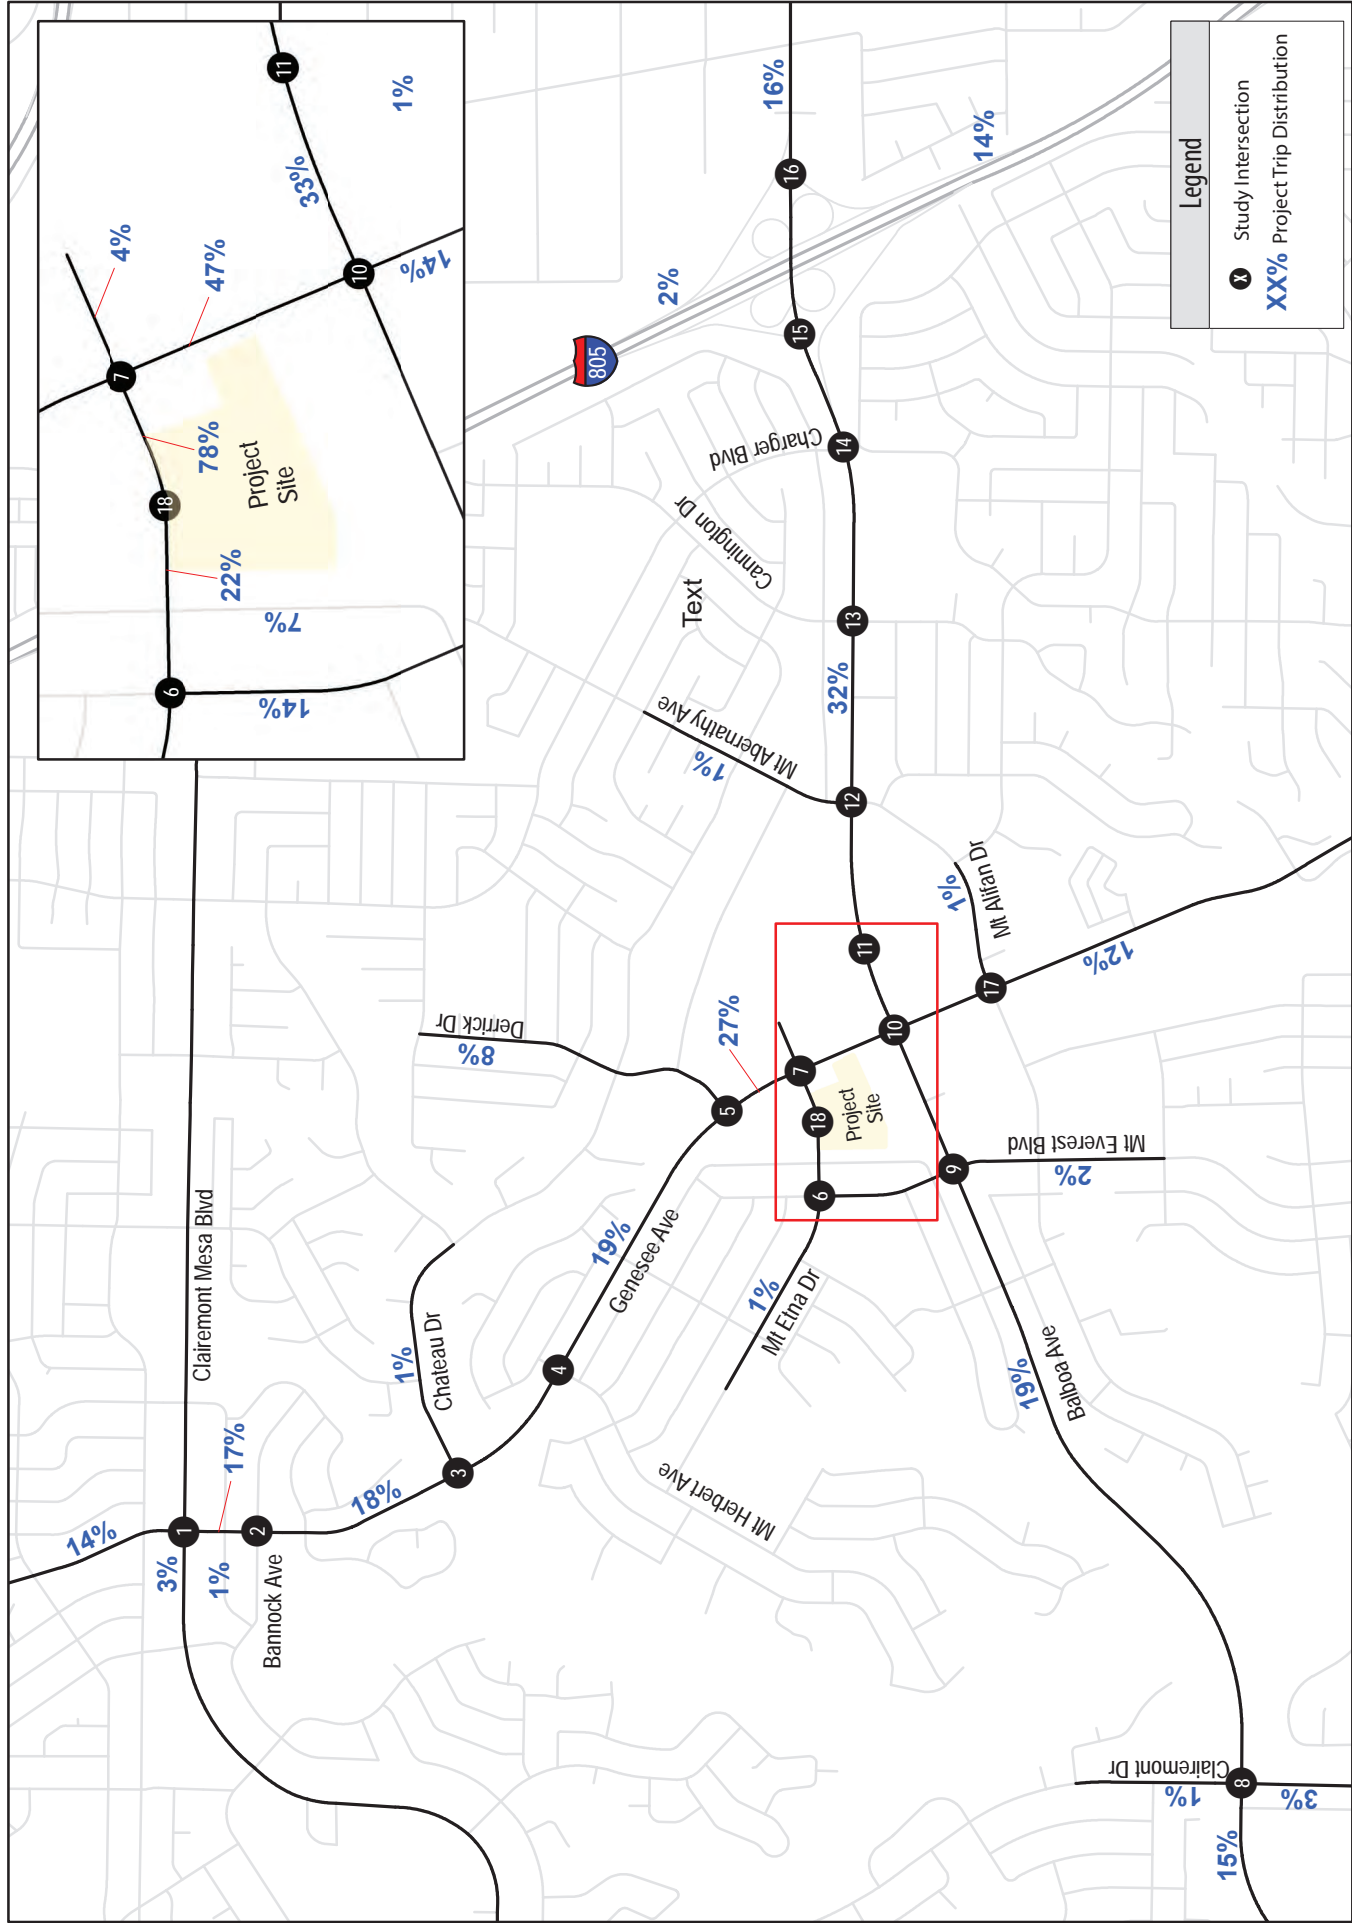

Source: City of San Diego Land Use Code – Trip Generation Manual, May 2003
 *Reductions applied from City of San Diego Traffic Impact Study Manual (July 1998)

As shown in Table 1, the new project is anticipated to generate a total of 2,018 daily trips, including 138 (33-in / 105-out) AM peak hour trips and 169 (115-in / 54-out) PM peak hour trips.

The trip distribution will remain the same as what was used in the original TIS as shown in **Figure 1**.

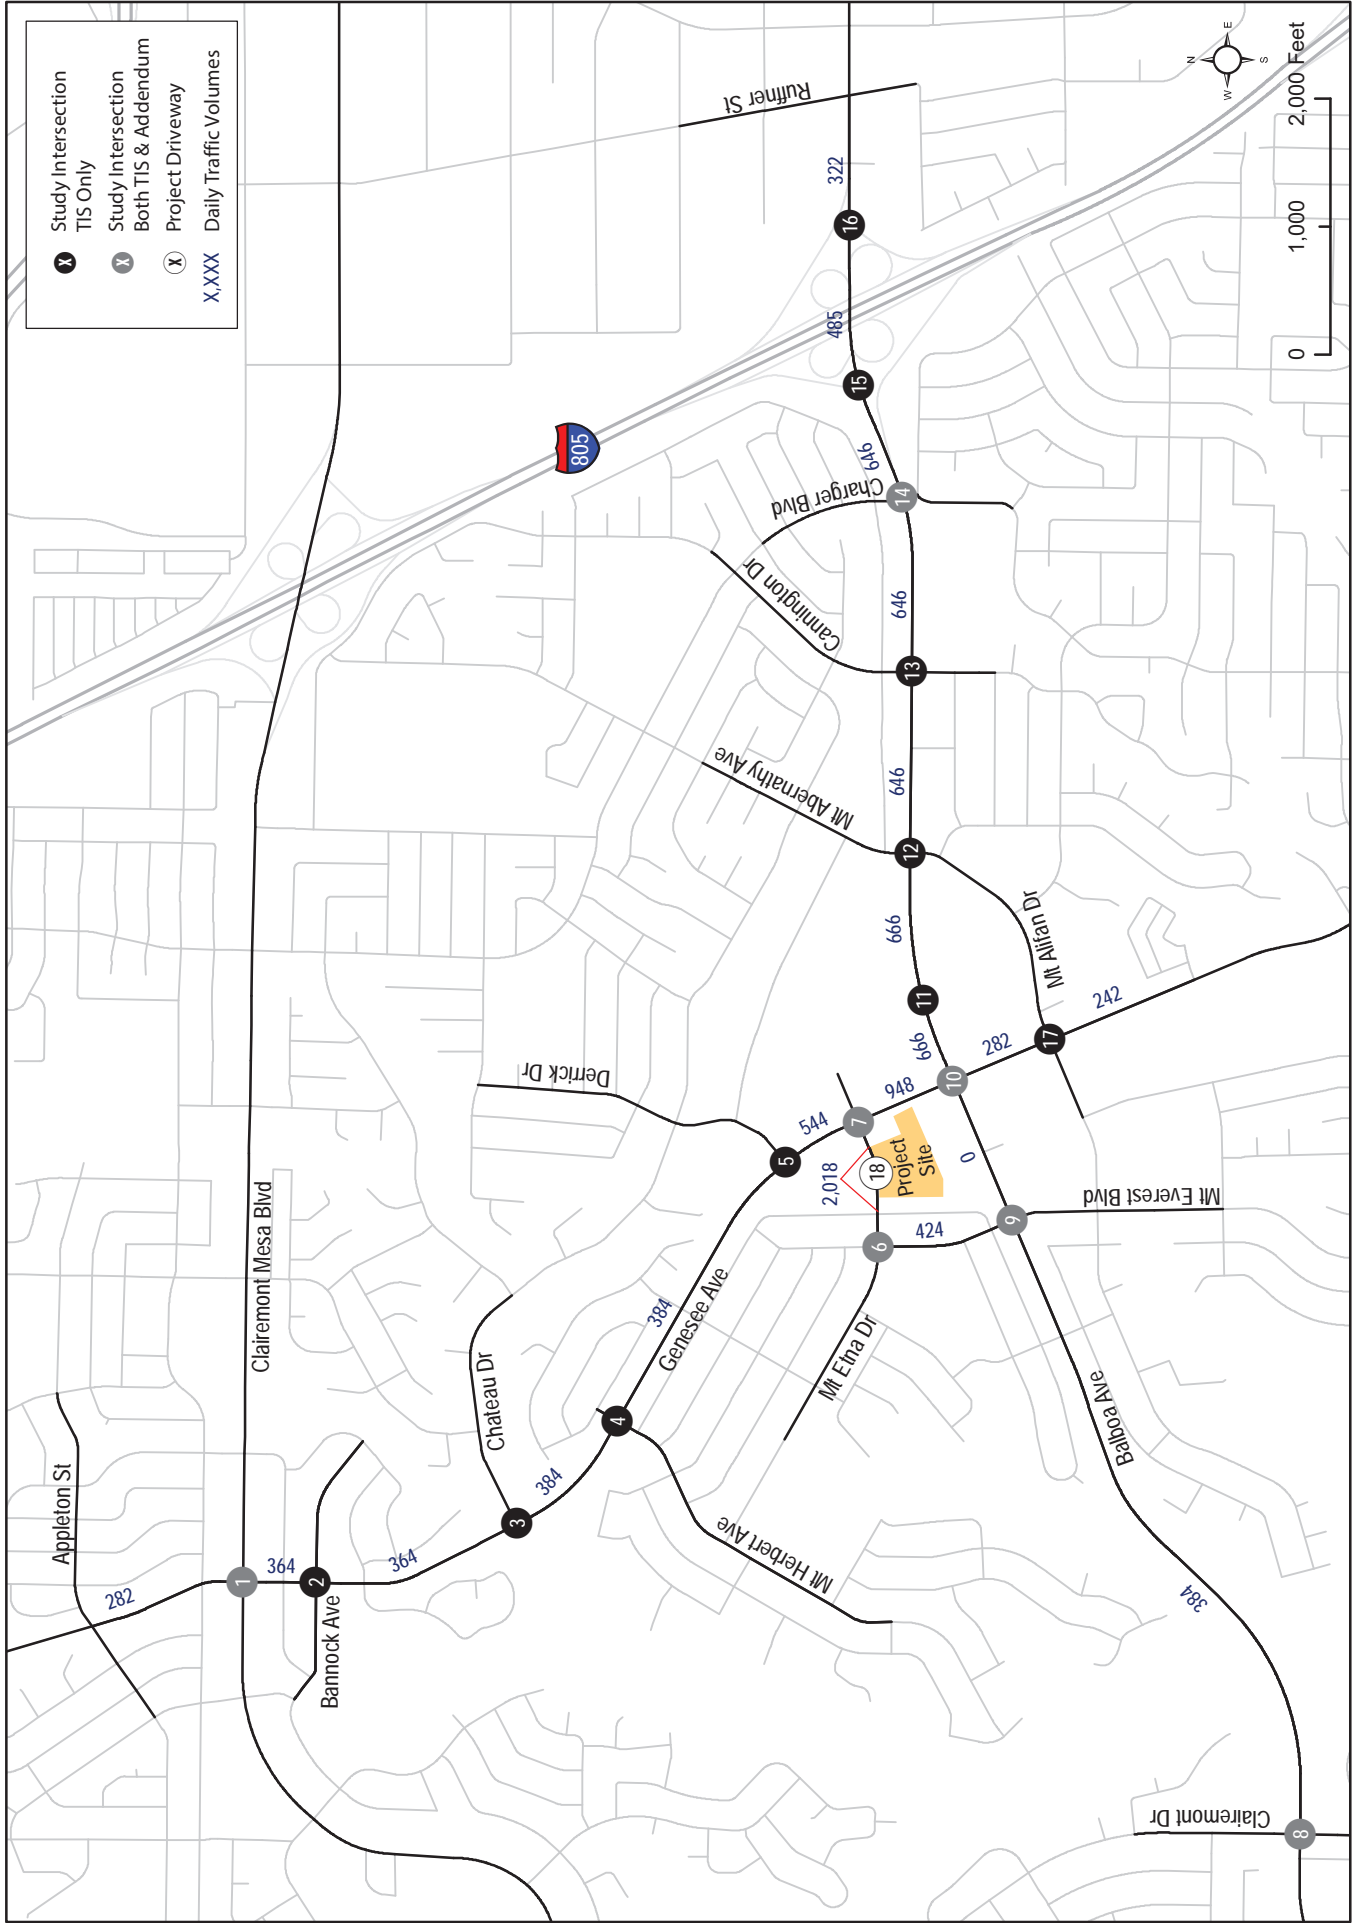

Based upon the assumed Project trip distribution and the three access options, daily and AM/PM peak hour Project trips were assigned to the adjacent network as displayed in **Figure 2, Figure 3, and Figure 4**, for the Access Option 1, Access Option 2, and Access Option 3, respectively.

Also depicted in Figures 2, 3, and 4 is the project trip assignment for the study roadways and intersections that were previously identified as impact under the old project.

2.0 Driveway Operations Analysis

This section provides an operations analysis for the following three (3) access options:

- Access Option 1 - One Driveway: Full access on Mt Etna Drive;
- Access Option 2 - Two Driveways: Full access on Mt Etna Drive and a right-in-right-out (RIRO) driveway on Genesee Avenue; and
- Access Option 3 - Three Driveways: Full access on Mt Etna Drive, RIRO driveway on Genesee Avenue, and RIRO driveway on Balboa Avenue.

The driveway analysis was conducted for all three study scenarios (Existing Plus Project, Near-Term Base (Year 2021) Plus Project, and Horizon Year 2050 Plus Project) based on the new project description.

Existing Plus Project Conditions

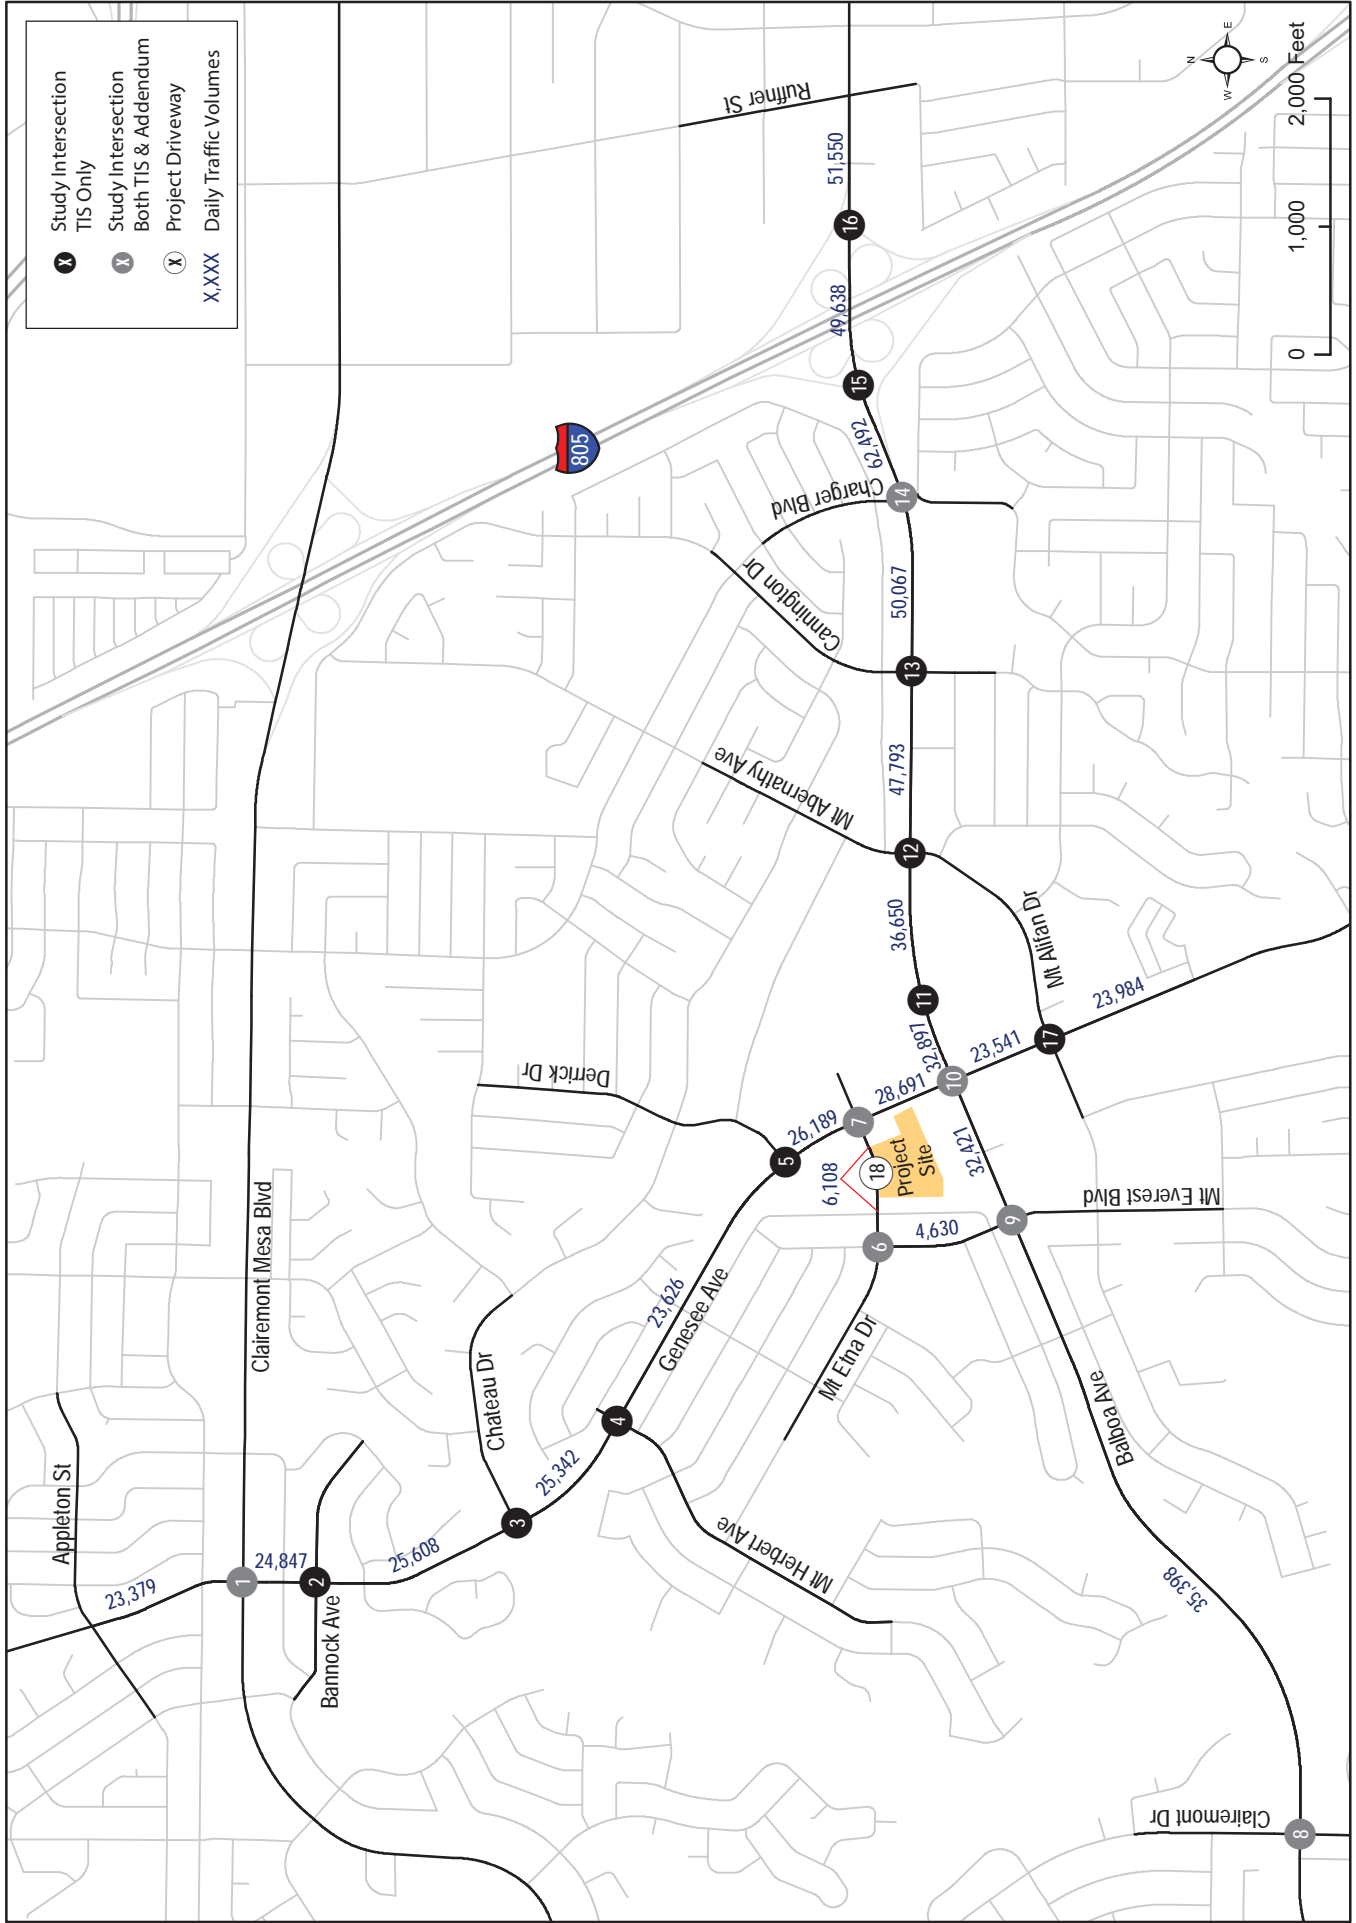

Existing Plus Project traffic volumes were derived by combining the existing traffic volumes from the TIS and Project trip assignment volumes (displayed in Figures 2, 3, and 4). Existing Plus Project daily roadway and peak hour intersection volumes are displayed in **Figure 5**, **Figure 6**, and **Figure 7** for Access Option 1, Access Option 2, and Access Option 3 conditions, respectively. Also depicted in Figures 5, 6, and 7 is the daily roadway and peak hour intersection volumes for the study roadways and intersections that were previously identified as impact under the old project.

Roadway Segment Analysis

Table 2 displays the roadway segment LOS analysis results under Existing Plus Project Conditions.

As shown in Table 2, all of the study roadway segments would operate at an acceptable LOS D or better with the addition of Project traffic for all three access options.

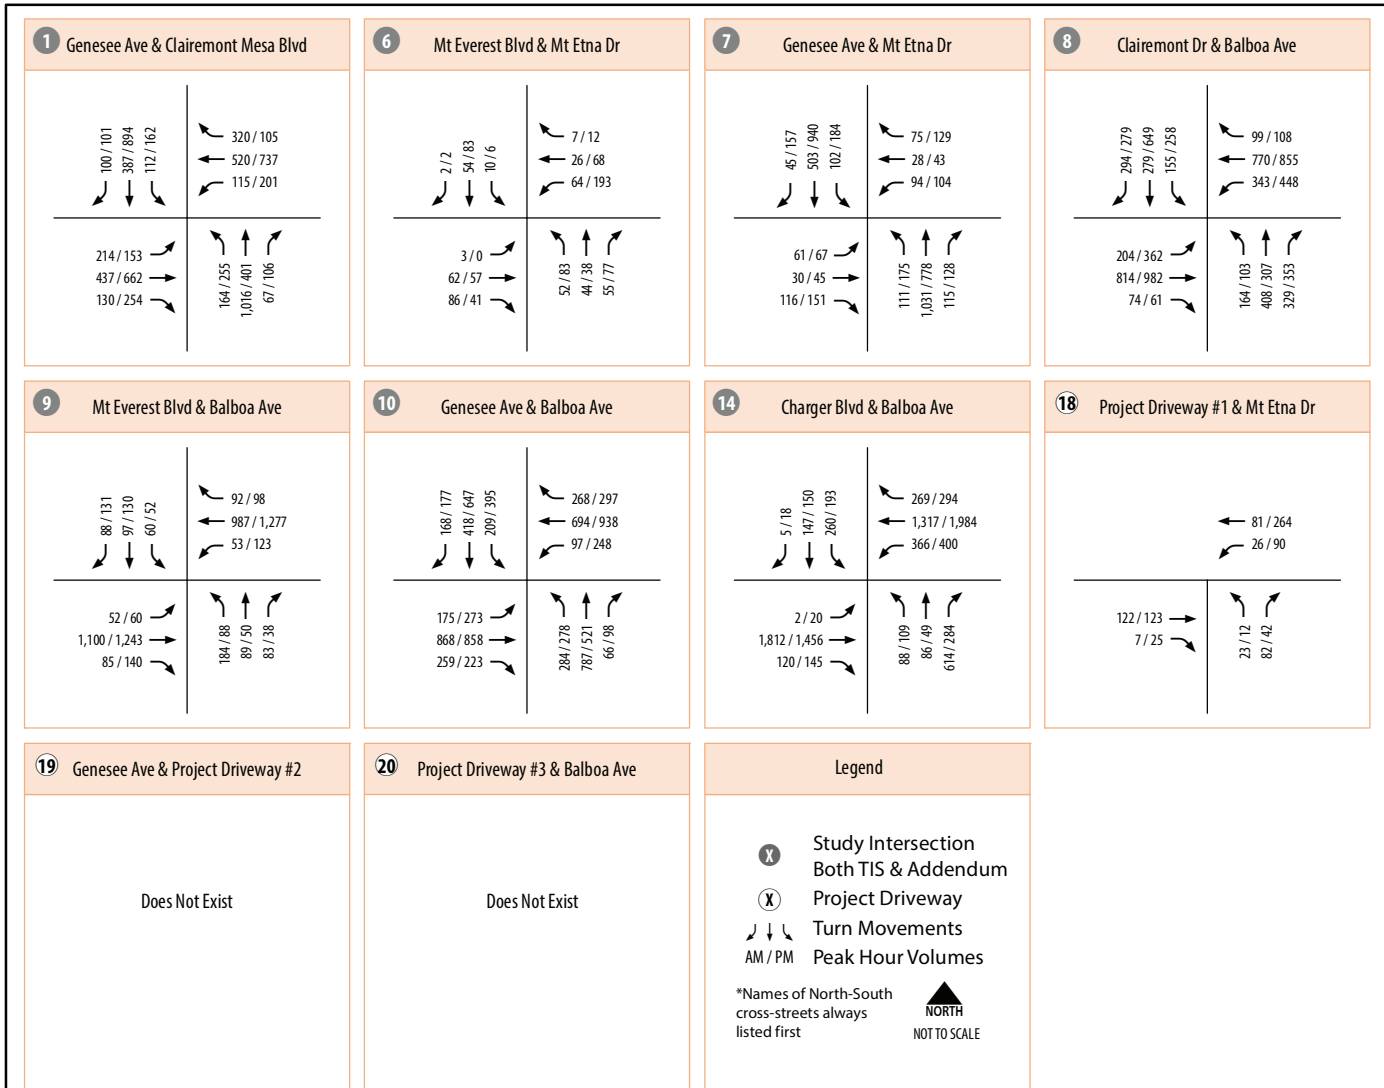

Based upon the City of San Diego Significance Criteria, outlined in Section 2.5 of the TIS, the traffic associated with the new project would not cause a significant impact to any of the study roadway segments under Existing Plus Project Conditions for all three access options.

Notes:

- Bold** letter indicates unacceptable LOS E or F.
- V/C = Volume to Capacity Ratio.
- Ln = Lane.
- S? = Indicates if change in V/C ratio is significant.
- ADT = Average Daily Traffic.
- LOS = Level of Service.
- CLTL = Continuous Left-Turn Lane.
- Δ = Change in V/C Ratio.

Intersection Analysis

Table 3 displays intersection LOS and average vehicle delay results under Existing Plus Project Conditions for all three access options. LOS calculation worksheets for Existing Plus Project Conditions are provided in **Attachment A**.

As shown in Table 3, the following study intersections would operate at unacceptable LOS E/F during one or both of the peak hours:

Access Option 1:

9. Mt Everest Boulevard & Balboa Avenue – LOS F during the AM peak hour and LOS E during the PM peak hour; and
10. Genesee Avenue & Balboa Avenue – LOS E during the PM peak hour.

Access Option 2:

9. Mt Everest Boulevard & Balboa Avenue – LOE during both AM and PM peak hour; and
10. Genesee Avenue & Balboa Avenue – LOS E during the PM peak hour.

Access Option 3:

9. Mt Everest Boulevard & Balboa Avenue – LOS E during both AM and PM peak hours; and
10. Genesee Avenue & Balboa Avenue – LOS E during the PM peak hour.

Based upon the City of San Diego Significance Criteria, outlined in Section 2.5 of the TIS, the traffic associated with the project would cause a significant impact to the following study intersections under Existing Plus Project Conditions:

Access Option 1:

9. Mt Everest Boulevard & Balboa Avenue.

Access Option 3:

9. Mt Everest Boulevard & Balboa Avenue; and
10. Genesee Avenue & Balboa Avenue.

Notes:

Bold letter indicates unacceptable LOS E or F and significant impact.
 AWSC = All-Way Stop Controlled.
 SSSC = Side-Street Stop Controlled.
 DNE = Does Not Exist.

Near-Term Base (Year 2021) Plus Project Conditions

Near-Term Base (Year 2021) Plus Project traffic volumes were derived by combining the Near-Term Base (Year 2021) traffic volumes from the TIS and Project trip assignment volumes (displayed in Figures 2, 3, and 4). Near-Term Base (Year 2021) Plus Project daily roadway and peak hour intersection volumes are displayed in **Figure 8**, **Figure 9**, and **Figure 10** for Access Option 1, Access Option 2, and Access Option 3 conditions, respectively. Also depicted in Figures 8, 9, and 10 is the daily roadway and peak hour intersection volumes for the study roadways and intersections that were previously identified as impact under the old project.

Roadway Segment Analysis

Table 4 displays the roadway segment LOS analysis results under Near-Term Base (Year 2021) Plus Project Conditions.

As shown in Table 4, all of the study roadway segments would operate at an acceptable LOS D or better with the addition of Project traffic for all three access options.

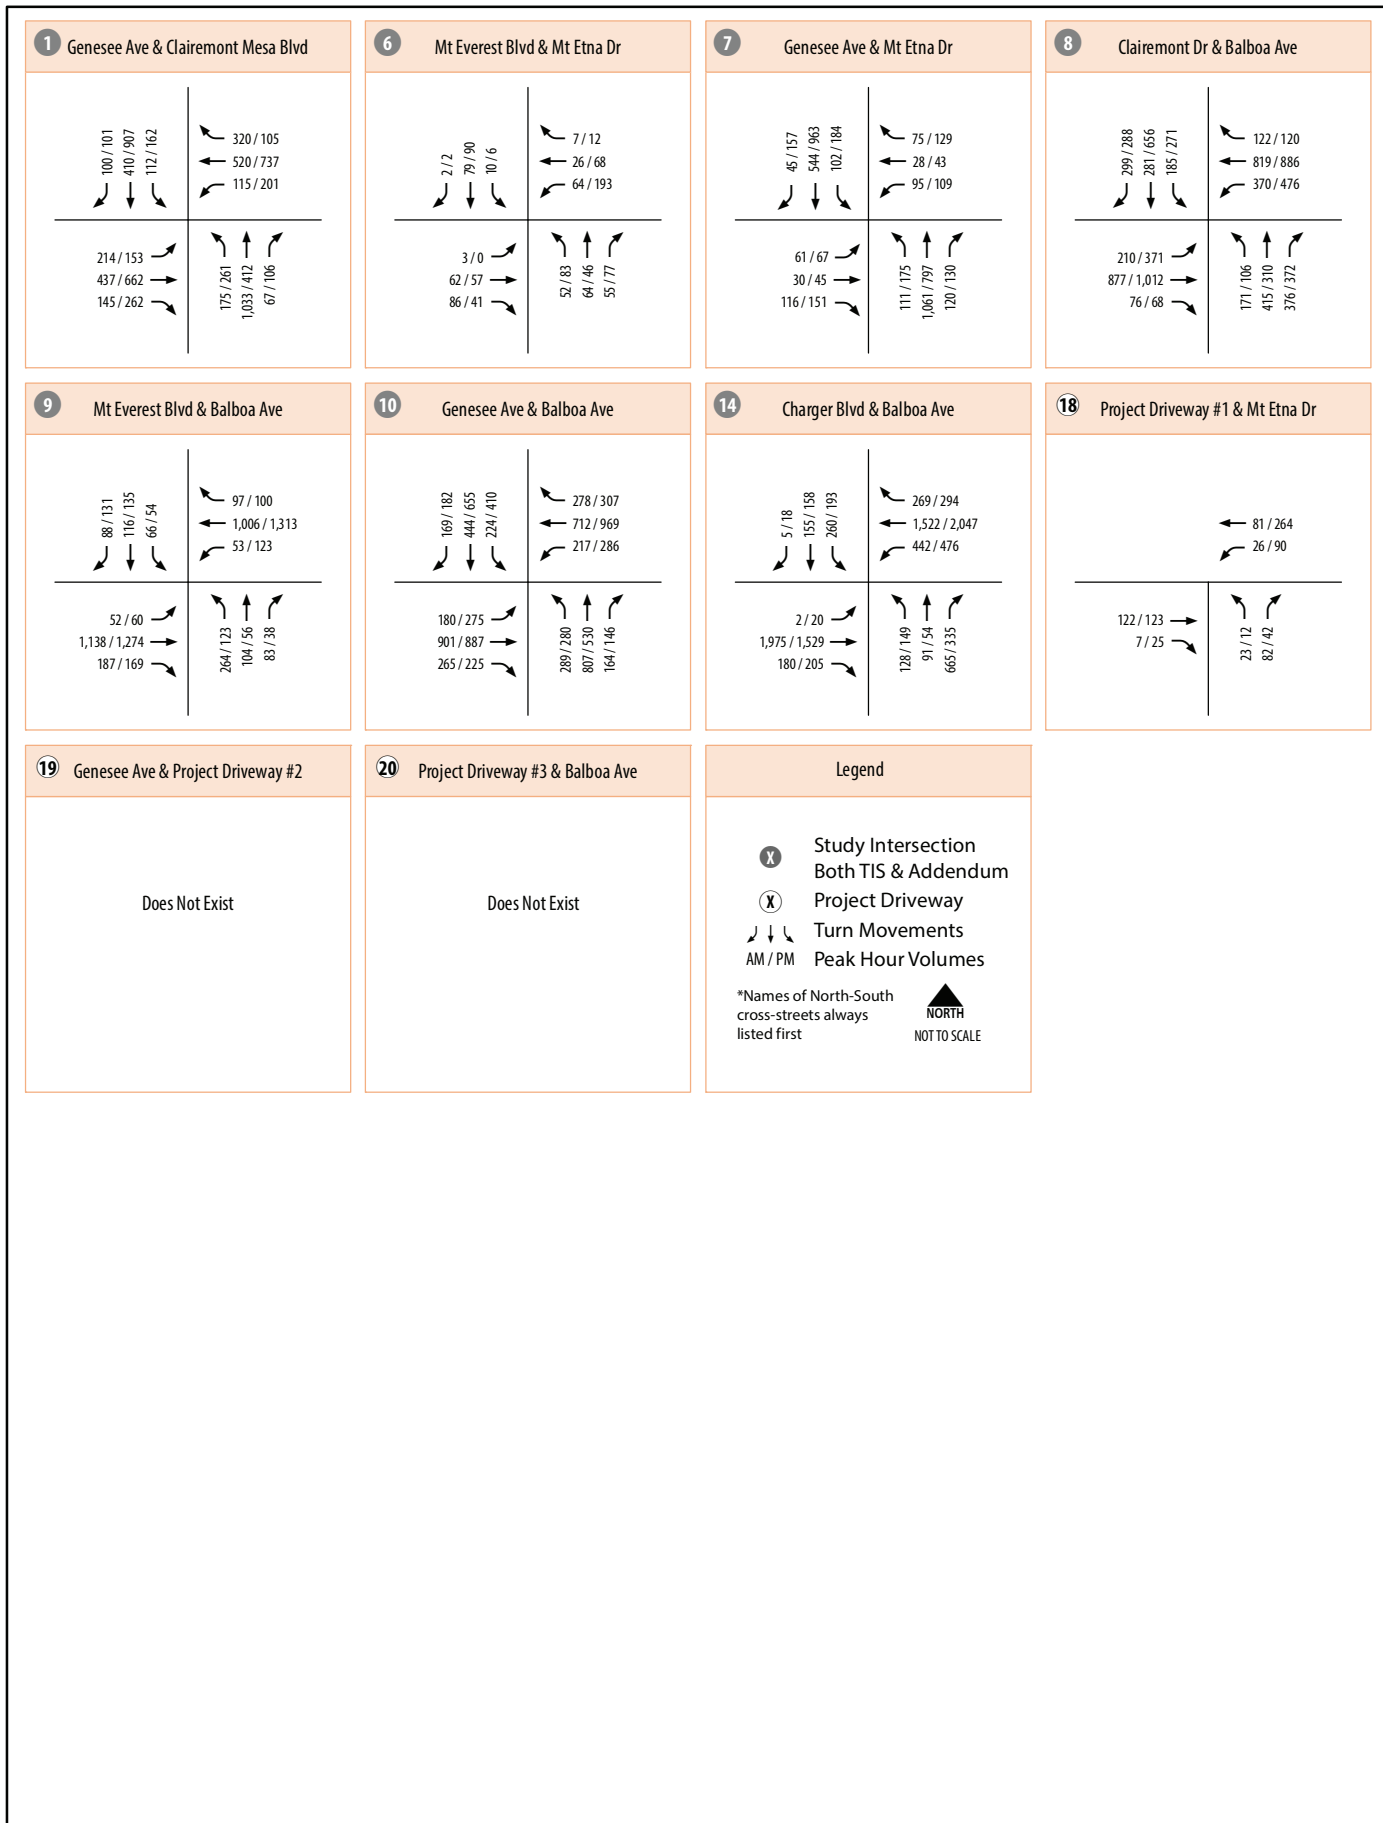

Based upon the City of San Diego Significance Criteria, outlined in Section 2.5 of the TIS, the traffic associated with the new project would not cause a significant impact to any of the study roadway segments under Near-Term Base (Year 2021) Plus Project Conditions for all three access options.

Intersection Analysis

Table 5 displays intersection LOS and average vehicle delay results under Near-Term Base (Year 2021) Plus Project Conditions for all three access options. LOS calculation worksheets for Near-Term Base (Year 2021) Plus Project Conditions are provided in **Attachment B**.

As shown in Table 5, the following study intersections would operate at unacceptable LOS E/F during one or both of the peak hours:

Access Option 1:

9. Mt Everest Boulevard & Balboa Avenue – LOS F during the AM peak hour and LOS E during the PM peak hour; and
10. Genesee Avenue & Balboa Avenue – LOS E during the PM peak hour.

Access Option 2:

9. Mt Everest Boulevard & Balboa Avenue – LOS F during the AM peak hour and LOS E during the PM peak hour; and
10. Genesee Avenue & Balboa Avenue – LOS E during the PM peak hour.

Access Option 3:

9. Mt Everest Boulevard & Balboa Avenue – LOS F during the AM peak hour and LOS E during the PM peak hour; and
10. Genesee Avenue & Balboa Avenue – LOS E during the PM peak hour.

Based upon the City of San Diego Significance Criteria, outlined in Section 2.5 of the TIS, the traffic associated with the new project would cause a significant impact to the following study intersections under Near-Term Base (Year 2021) Plus Project Conditions:

Access Option 1:

9. Mt Everest Boulevard & Balboa Avenue.

Access Option 2:

9. Mt Everest Boulevard & Balboa Avenue.

Access Option 3:

9. Mt Everest Boulevard & Balboa Avenue; and
10. Genesee Avenue & Balboa Avenue.

Notes:

- Bold** letter indicates unacceptable LOS E or F.
- AWSC = All-Way Stop Controlled.
- SSSC = Side-Street Stop Controlled.
- DNE = Does Not Exist.

Horizon Year 2050 Plus Project Conditions

Horizon Year 2050 Plus Project traffic volumes were derived by combining the Horizon Year 2050 traffic volumes from the TIS and Project trip assignment volumes (displayed in Figures 2, 3, and 4). Horizon Year 2050 Plus Project daily roadway and peak hour intersection volumes are displayed in **Figure 11**, **Figure 12**, and **Figure 13** for Access Option 1, Access Option 2, and Access Option 3 conditions, respectively. Also depicted in Figures 11, 12, and 13 is the daily roadway and peak hour intersection volumes for the study roadways and intersections that were previously identified as impact under the old project.

Roadway Segment Analysis

Table 6 displays the roadway segment LOS analysis results under Horizon Year 2050 Plus Project Conditions.

As shown in Table 6, the following study roadway segments would operate at unacceptable LOS E/F:

Access Option 1:

- Mt Etna Drive, between Mt Everest Boulevard & Genesee Avenue (LOS E).

Access Option 2:

- Balboa Avenue, between Mt Everest Boulevard & Genesee Avenue (LOS E).

Access Option 3:

- Balboa Avenue, between Mt Everest Boulevard & Genesee Avenue (LOS E).

Based upon the City of San Diego Significance Criteria, outlined in Section 2.5 of the TIS, the traffic associated with the project would cause a significant impact to the following roadway segments under Horizon Year 2050 Plus Project Conditions:

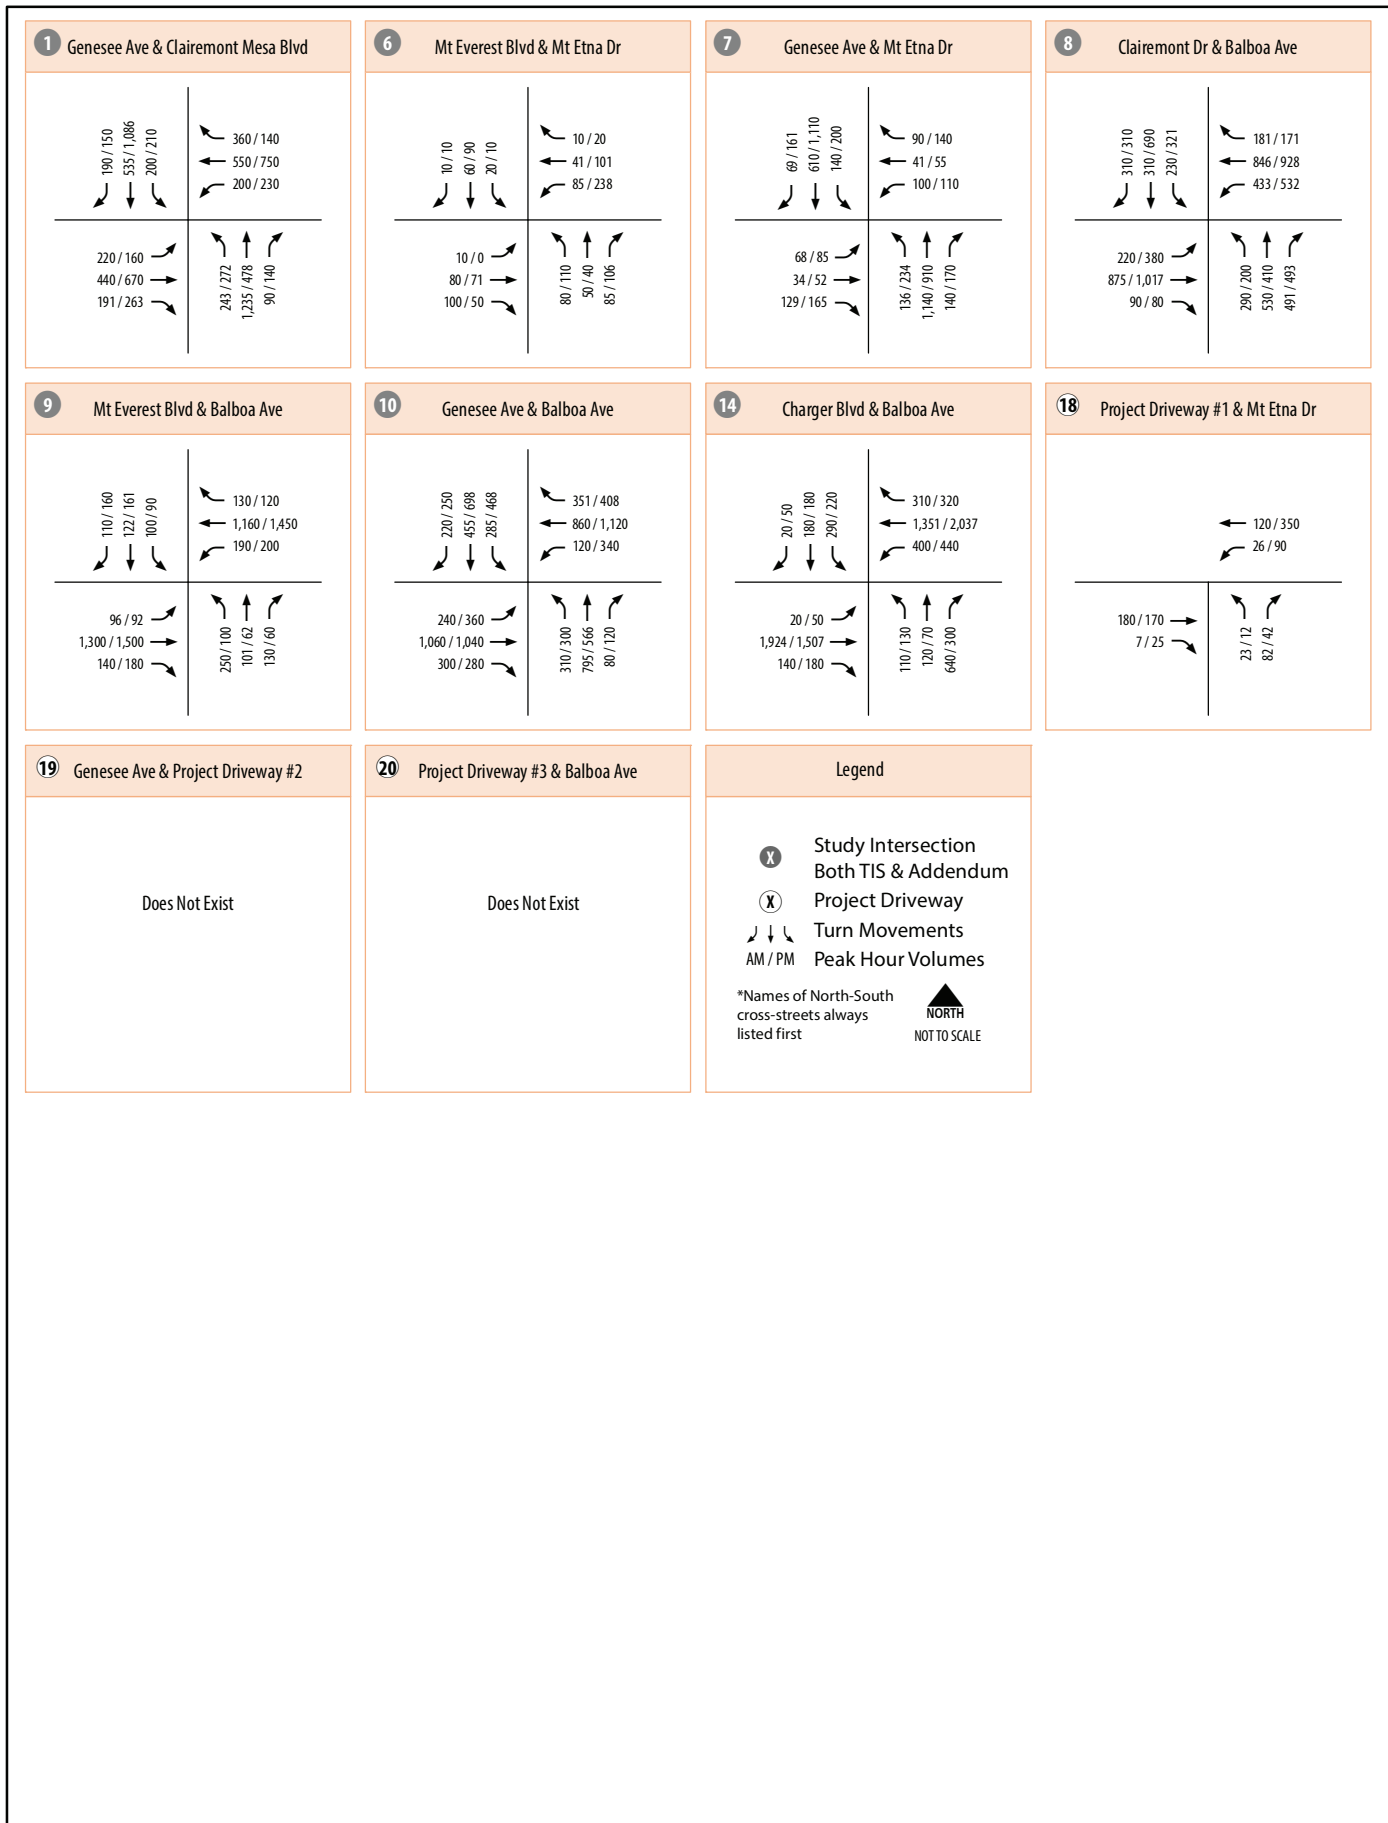

Access Option 1:

- Mt Etna Drive, between Mt Everest Boulevard & Genesee Avenue.

Intersection Analysis

Table 7 displays intersection LOS and average vehicle delay results under Horizon Year 2050 Plus Project Conditions for all three access options. LOS calculation worksheets for Horizon Year 2050 Plus Project Conditions are provided in **Attachment C**.

As shown in Table 7, the following study intersections would operate at unacceptable LOS E/F during one or both of the peak hours:

Access Option 1:

- 9. Mt Everest Boulevard & Balboa Avenue – LOS F during both AM and PM peak hours; and
- 10. Genesee Avenue & Balboa Avenue – LOS F during the PM peak hour.

Access Option 2:

- 9. Mt Everest Boulevard & Balboa Avenue – LOS F during both AM and PM peak hours; and
- 10. Genesee Avenue & Balboa Avenue – LOS F during the PM peak hour.

Access Option 3:

- 9. Mt Everest Boulevard & Balboa Avenue – LOS F during both AM and PM peak hours; and
- 10. Genesee Avenue & Balboa Avenue – LOS F during the PM peak hour.

Based upon the City of San Diego Significance Criteria, outlined in Section 2.5 of the TIS, the traffic associated with the project would cause a significant impact to the following study intersections under Horizon Year 2050 Plus Project Conditions:

Access Option 1:

- 9. Mt Everest Boulevard & Balboa Avenue; and
- 10. Genesee Avenue & Balboa Avenue.

Access Option 2:

- 9. Mt Everest Boulevard & Balboa Avenue; and
- 10. Genesee Avenue & Balboa Avenue.

Access Option 3:

- 9. Mt Everest Boulevard & Balboa Avenue; and
- 10. Genesee Avenue & Balboa Avenue.

- DNE = Does Not Exist.

3.0 Impact Analysis & Mitigation

The driveway analysis was conducted for all three access options, for all three study scenarios (Existing Plus Project, Near-Term Base (Year 2021) Plus Project, and Horizon Year 2050 Plus Project) based on the new project. Mitigation measures are also provided for each impacted facility.

Existing Plus Project Conditions

As discussed in the TIS, this scenario is required for the environmental assessment of substantive land use or roadway network modifications and provides decision-makers and the public with development impacts referenced to an “observable” baseline.

Roadway Segment Analysis

Table 8 displays the roadway segment LOS analysis results only for roadway segments that were previously identified as a significant impact with the old project and those that remain or identify as a new significant impact with the new project under Existing Plus Project Conditions.

As shown in Table 8, the following roadway segment would no longer be impacted with the new project for all three access options under Existing Plus Project Conditions:

- Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue.

Also shown in Table 8, the following roadway would remain impacted with the new project for all three access options under Existing Plus Project Conditions:

- Balboa Avenue, between Cannington Drive and Charger Boulevard.

Table 8 – Impact Analysis – Roadway Segment Level of Service – Existing Plus Project Conditions

Roadway	Segment	Functional Classification	Cross-Section	Capacity (LOS E)	With Project Studied in the TIS ¹					With Access Option 1					With Access Option 2					With Access Option 3				
					ADT	V/C	LOS	No Project	Δ from Project	S?	ADT	V/C	LOS	No Project	Δ from Project	S?	ADT	V/C	LOS	No Project	Δ from Project	S?	ADT	V/C
Mt Etna Drive	Between Mt Everest Boulevard & Genesee Avenue	2-Ln Collector w/o CLTL	Undivided	8,000	7,576	0.947	E	0.436	Y	6,108	0.764	D	0.253	N	5,286	0.661	D	0.150	N	5,129	0.641	D	0.130	N
	Between Cannington Drive & Charger Boulevard	6-Ln Major Arterial	Raised Median	50,000	50,383	1.008	F	0.019	Y	50,067	1.001	F	0.013	Y	50,067	1.001	F	0.013	Y	50,067	1.001	F	0.013	Y

Notes:

- Bold** letter indicates unacceptable LOS E or F.
- V/C = Volume to Capacity Ratio.
- Ln = Lane.
- S? = Indicates if change in V/C ratio is significant.
- ¹The project studied in the TIS included 448 multi-family units, 10,000 sq. ft retail space, and a single full access driveway off of Mt Etna Drive.
- ADT = Average Daily Traffic.
- LOS = Level of Service.
- CLTL = Continuous Left-Turn Lane.
- Δ = Change in V/C Ratio.

Mitigation

As mentioned previously in this section, Existing Plus Project is a hypothetical scenario, therefore, the mitigation measures described below are presented for informational purposes only.

Similar to the TIS (May 2019), the following roadway segment would remain significantly impacted:

- Balboa Avenue, between Cannington Drive and Charger Boulevard (Applies to all three access options. This impact occurs after the project generates more than 1,811 daily trips) –This roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the existing land use fronting this roadway (i.e. residential and school uses) as well as the right-of-way constraints, there are no feasible improvements that would expand the capacity of the roadway segment. The implementation of adaptive signal controls along the Balboa Avenue corridor, as well as signal modifications at the Charger Boulevard & Balboa Avenue intersection, would partially mitigate the project’s impacts. However, the County cannot assure that the City would implement adaptive signal controls along the Balboa Avenue corridor. Therefore, this impact would remain *significant and unavoidable*.

Intersection Analysis

Table 9 displays the intersection LOS analysis results only for intersections that were previously identified as a significant impact with the old project and those that remain or identify as a new significant impact with the new project under Existing Plus Project Conditions.

As shown in Table 9, the following intersections would no longer be impacted with the new project for all three access options under Existing Plus Project Conditions:

1. Genesee Avenue & Clairemont Mesa Boulevard; and
8. Clairemont Drive & Balboa Avenue.

Also shown in Table 9, the following intersection would remain impacted with the new project under Existing Plus Project Conditions:

Access Option 1:

9. Balboa Avenue & Mt Everest Boulevard.

Access Option 3:

9. Balboa Avenue & Mt Everest Boulevard.

In addition, the following intersection would be identified as a new impact with the new project under Existing Plus Project Conditions:

Access Option 3:

10. Genesee Avenue & Balboa Avenue.

Table 9 – Impact Analysis - Intersection Level of Service – Existing Plus Project Conditions

1. Genesee Avenue & Clairemont Mesa Boulevard	Signal	43.2 / 62.9	D / E	0.6 / 3.0	N / Y	N / Y	42.9 / 61.8	D / E	0.3 / 1.9	N / N	N / N	42.9 / 61.8	D / E	0.3 / 1.9	N / N	N / N	42.9 / 61.8	D / E	0.3 / 1.9	N / N	N / N
8. Clairemont Drive & Balboa Avenue	Signal	38.3 / 62.6	D / E	0.6 / 2.5	N / Y	N / Y	38.0 / 61.7	D / E	0.3 / 1.6	N / N	N / N	38.0 / 61.7	D / E	0.3 / 1.6	N / N	N / N	38.0 / 61.7	D / E	0.3 / 1.6	N / N	N / N
9. Mt Everest Boulevard & Balboa Avenue	Signal	84.3 / 60.6	F / E	10.6 / 1.9	Y / N	Y / N	80.1 / 59.5	F / E	6.4 / 0.8	Y / N	Y / N	75.0 / 59.2	E / E	1.3 / 0.5	N / N	N / N	78.7 / 62.7	E / E	5.0 / 4.0	Y / Y	Y / Y
10. Genesee Avenue & Balboa Avenue*	Signal	38.8 / 60.3	D / E	2.5 / 1.2	N / N	N / N	36.9 / 59.4	D / E	0.6 / 0.3	N / N	N / N	37.0 / 59.8	D / E	0.7 / 0.7	N / N	N / N	37.8 / 63.2	D / E	1.5 / 4.1	N / Y	N / Y

Notes:

Bold letter indicates unacceptable LOS E or F.

AWSC = All-Way Stop Controlled.

SSSC = Side-Street Stop Controlled.

DNE = Does Not Exist.

*New Impacted Intersection.

¹The project studied in the TIS included 448 multi-family units, 10,000 sq. ft. retail space, and a single full access driveway off of Mt Etna Drive.

Mitigation

Similar to the TIS (May 2019), the following intersection would remain significantly impacted:

9. Mt Everest Boulevard & Balboa Avenue (Applies to Access Option 1 and Access Option 3. This impact occurs after the project generates more than 650 daily trips) –Restripe the northbound and southbound approaches on Mt Everest Boulevard to provide an exclusive left-turn lane and a shared through-right turn lane, then convert the northbound and southbound approaches from split phasing to protected left-turn phasing. Implementing this improvement could be done within the existing right-of-way and would reduce intersection delays to pre-Project conditions. Implementing these improvements would mitigate the impact and would reduce this impact to *less than significant*.

The traffic generated by the new project is anticipated to create an impact at the following intersection:

10. Genesee Avenue & Balboa Avenue (Applies to Access Option 3. This impact occurs after the project generates more than 600 daily trips) – Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway. The City of San Diego’s *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this would mitigate the impact, and the project applicant would coordinate with the City to define the fees for the implementation of this improvement. Therefore, this impact would be reduced to *less than significant*.

Near-Term Base (Year 2021) Plus Project Conditions

Roadway Segment Analysis

Table 10 displays the roadway segment LOS analysis results only for roadway segments that were previously identified as a significant impact with the old project and those that remain or identify as a significant impact with the new project under Near-Term Base (Year 2021) Plus Project Conditions.

As shown in Table 10, the following roadway segment would no longer be impacted with the new project for all three access options under Near-Term Base (Year 2021) Plus Project Conditions:

- Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue.

Also shown in Table 10, the following roadway would remain impacted with the new project for all three access options under Near-Term Base (Year 2021) Plus Project Conditions:

- Balboa Avenue, between Cannington Drive and Charger Boulevard; and
- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps.

Mitigation

Similar to the TIS (May 2019), the following roadway segments would remain significantly impacted:

- Balboa Avenue, between Cannington Drive and Charger Boulevard (Applies to all three access options. This impact occurs after the project generates more than 1,811 daily trips) – This roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the existing land use fronting this roadway (i.e. residential and school uses) as well as the right-of-way constraints, there are no feasible improvements that would expand the capacity of the roadway segment. The implementation of adaptive signal controls along the Balboa Avenue corridor, as well as signal modifications at the Charger Boulevard & Balboa Avenue intersection, would partially mitigate the project’s impacts. However, the County cannot assure that the City would implement adaptive signal controls along the Balboa Avenue corridor. Therefore, this impact would remain *significant and unavoidable*.
- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps (Applies to all three access options. This impact occurs after the project generates more than 1,561 daily trips) – This roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the existing land use fronting this roadway (i.e. residential and school uses) as well as the right-of-way constraints, there are no feasible improvements that would expand the capacity of the roadway segment. The implementation of adaptive signal controls along the Balboa Avenue corridor, as well as signal modifications at the Charger Boulevard & Balboa Avenue intersection, would partially mitigate the project’s impacts. However, the County cannot assure that the City would implement adaptive signal controls along the Balboa Avenue corridor. Therefore, this impact would remain *significant and unavoidable*.

SSSC = Side-Street Stop Controlled.

DNE = Does Not Exist.

*New Impacted Intersection.

¹The project studied in the TIS included 448 multi-family units, 10,000 sq. ft retail space, and a single full access driveway off of Mt Etna Drive.

Mitigation

Similar to the TIS (May 2019), the following intersections would remain significantly impacted:

- 9. Mt Everest Boulevard & Balboa Avenue (Applies to all three access options. This impact occurs after the project generates more than 650 daily trips) – Restripe the northbound and southbound approaches on Mt Everest Boulevard to provide an exclusive left-turn lane and a shared through-right turn lane, then convert the northbound and southbound approaches from split phasing to protected left-turn phasing. Implementing this improvement could be done within the existing right-of-way and would reduce intersection delays to pre-Project conditions and would reduce this impact to *less than significant*.

- 14. Charger Boulevard & Balboa Avenue (Applies to all three access options. This impact occurs after the project generates more than 1,811 daily trips) – Restripe the northbound shared through-left turn lane into an exclusive through lane and convert the northbound and southbound signal from split phasing to protective phasing. Implementing this improvement would reduce intersection delays to pre-Project conditions and would reduce this impact to *less than significant*.

The traffic generated by the new project is anticipated to create an impact at the following intersection:

- 10. Genesee Avenue & Balboa Avenue (Applies to Access Option 3. This impact occurs after the project generates more than 600 daily trips) – Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway. The City of San Diego’s *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this would mitigate the impact would reduce this impact to *less than significant*.

Horizon Year 2050 Plus Project Conditions

Roadway Segment Analysis

Table 12 displays the roadway segment LOS analysis results only for roadway segments that were previously identified as a significant impact with the old project and those that remain or identify as a significant impact with the new project under Horizon Year 2050 Plus Project Conditions.

As shown in Table 12, the following roadway segment would no longer be impacted with the new project for all three access options under Horizon Year 2050 Plus Project Conditions:

- Mt Everest Boulevard, between Mt Etna Drive and Balboa Avenue.

Also shown in Table 12, the following roadway segments would remain impacted with the new project under Horizon Year 2050 Plus Project Conditions:

Access Option 1:

- Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue; and

- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps.

Access Option 2:

- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps.

Access Option 3:

- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps.

Notes:

Bold letter indicates unacceptable LOS E or F.
V/C = Volume to Capacity Ratio.

Ln = Lane.

S? = Indicates if change in V/C ratio is significant.

¹The project studied in the TIS included 448 multi-family units, 10,000 sq. ft retail space, and a single full access driveway off of Mt. Etna Drive.

ADT = Average Daily Traffic.
LOS = Level of Service.

CLTL = Continuous Left-Turn Lane.

Δ = Change in V/C Ratio.

Mitigation

Similar to the TIS (May 2019), the following roadway segments would remain significantly impacted:

- Mt Etna Drive, between Mt Everest Boulevard and Genesee Avenue (Applies to Access Option 1. This impact occurs after the project generates more than 1,399 daily trips) – This roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the classification of this roadway, there is insufficient right-of-way and street parking removal limitations that would prevent any improvements to the capacity of the impacted roadway segment. Therefore, this impact would remain *significant and unavoidable*.
- Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps (Applies to all three access options. This impact occurs after the project generates more than 1,561 daily trips) – This roadway is currently built to its ultimate classification per the currently adopted Clairemont Mesa Community Plan. Based on the existing land use fronting this roadway (i.e. residential and school uses) as well as the right-of-way constraints, there are no feasible improvements that would expand the capacity of the roadway segment. The implementation of adaptive signal controls along the Balboa Avenue corridor, as well as signal modifications at the Charger Boulevard & Balboa Avenue intersection, would partially mitigate the project’s impacts. However, the County cannot assure that the City would implement adaptive signal controls along the Balboa Avenue corridor. Therefore, this impact would remain *significant and unavoidable*.

Intersection Analysis

Table 13 displays the intersection LOS analysis results only for intersections that were previously identified as a significant impact with the old project and those that remain or identify as a significant impact with the new project under Horizon Year 2050 Plus Project Conditions.

As shown in Table 13, the following intersection would remain impacted with the new project for all three access options under Horizon Year 2050 Plus Project Conditions:

1. Genesee Avenue & Clairemont Mesa Boulevard;
8. Clairemont Drive & Balboa Avenue;
9. Mt Everest Boulevard & Balboa Avenue;
10. Genesee Avenue & Balboa Avenue; and
14. Charger Boulevard & Balboa Avenue.

Table 13 – Impact Analysis – Intersection Level of Service – Horizon Year 2050 Plus Project Conditions

Notes:

Bold letter indicates unacceptable LOS E or F.

AWSC = All-Way Stop Controlled.

SSSC = Side-Street Stop Controlled.

DNE = Does Not Exist.

¹The project studied in the TIS included 448 multi-family units, 10,000 sq. ft. retail space, and a single full access driveway off of Mt Etna Drive.

Mitigation

Similar to the TIS (May 2019), the following intersections would remain significantly impacted:

1. Genesee Avenue & Clairemont Mesa Boulevard (Applies to all three access options. This impact occurs after the project generates more than 800 daily trips) – Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway. The City of San Diego’s *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this improvement would reduce delays to pre-Project conditions and would mitigate the impact to less than significant. However, there is no specific mitigation program established by the City that would ensure the improvements would be implemented. Therefore, unless and until a specific mitigation program is created by the City to accommodate proportionate contributions toward the implementation of adaptive signal controls or other improvements at these locations, the County cannot assume that payment of its fair share of the mitigation improvements would reduce or avoid the project’s cumulative impact. Therefore, this impact would remain *significant and unavoidable*.
8. Clairemont Drive & Balboa Avenue (Applies to all three access options. This impact occurs after the project generates more than 1,300 daily trips) - Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway. The City of San Diego’s *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this improvement would reduce delays to pre-Project conditions and would mitigate the impact to less than significant. However, there is no specific mitigation program established by the City that would ensure the improvements would be implemented. Therefore, unless and until a specific mitigation program is created by the City to accommodate proportionate contributions toward the implementation of adaptive signal controls or other improvements at these locations, the County cannot assume that payment of its fair share of the mitigation improvements would reduce or avoid the project’s cumulative impact. Therefore, this impact would remain *significant and unavoidable*.
9. Mt Everest Boulevard & Balboa Avenue (Applies to all three access options. This impact occurs after the project generates more than 650 daily trips)– Restripe the northbound and southbound approaches on Mt Everest Boulevard to provide an exclusive left-turn lane and a shared through-right turn lane, then convert the northbound and southbound approaches from split phasing to protected left-turn phasing. Implementing this improvement could be done within the existing right-of-way and would reduce intersection delays to pre-Project conditions and would reduce this impact to *less than significant*

10. Genesee Avenue & Balboa Avenue (Applies to all three access options. This impact occurs after the project generates more than 1,811 daily trips) – Optimize signal timing or install traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway. The City of San Diego’s *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection is identified in that Plan as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Implementing this would mitigate the impact, and the project applicant would coordinate with the City to define the fees for the implementation of this improvement. Therefore, this impact would be reduced to *less than significant*.

14. Charger Boulevard & Balboa Avenue (Applies to all three access options. This impact occurs after the project generates more than 1,850 daily trips) – Restripe the northbound shared through-left turn lane into an exclusive through lane and convert the northbound and southbound signal from split phasing to protective phasing. Implementing this improvement would reduce intersection delays to pre-Project conditions. However, the County of San Diego cannot guarantee improvements to an intersection under the jurisdiction of the City of San Diego. Implementing this would mitigate the impact would reduce this impact to *less than significant*.

Impact Analysis Summary

Table 14 and **Table 15** displays the impact summary for roadway segment analysis and intersection analysis respectively.

Table 14 – Impact Analysis - Roadway Segment Level of Service – Summary

Roadway	Segment	With Project Studied in the TIS ¹			With Access Option 1			With Access Option 2			With Access Option 3		
		Existing Plus Project	Near-Term Plus Project	Horizon Plus Project	Existing Plus Project	Near-Term Plus Project	Horizon Plus Project	Existing Plus Project	Near-Term Plus Project	Horizon Plus Project	Existing Plus Project	Near-Term Plus Project	Horizon Plus Project
Mt Everest Boulevard	Between Mt Etna Drive & Balboa Avenue			X									
Mt Etna Drive	Between Mt Everest Boulevard & Genesee Avenue	X	X	X			X						
Balboa Avenue	Between Cannington Drive & Charger Boulevard	X	X		X	X		X	X			X	X
Balboa Avenue	Between Charger Boulevard & I-805 Southbound Ramps		X	X		X		X	X		X	X	X

Notes:

¹The project studied in the TIS included 448 multi-family units, 10,000 sq. ft retail space, and a single full access driveway off of Mt Etna Drive.

Table 15 – Impact Analysis - Intersection Level of Service – Summary

Roadway	Segment	With Project Studied in the TIS ¹			With Access Option 1			With Access Option 2			With Access Option 3

Notes:

*New impacted intersection.

¹The project studied in the TIS included 448 multi-family units, 10,000 sq. ft retail space, and a single full access driveway off of Mt Etna Drive.

4.0 Site Access

This section evaluates access to the project site for all transportation modes and for each project access options.

Access Option 1

For Access Option 1, the Project would provide full-access via a single driveway located along Mt Etna Drive. The driveway would be a side street stop-controlled intersection. Sidewalks currently exist along Mt Etna Drive and are expected to remain to allow full access from-to the project site for pedestrians. Bicycle facilities currently do not exist along Mt Etna Drive nor are there expected improvements per *San Diego Bicycle Master Plan, December 2013*. Since the proposed Access Option 1 would not alter the existing sidewalk, there are no impacts related to pedestrian or bicycle facilities under Access Option 1 for the Proposed Project.

Overall, this driveway is expected to serve at most 169 vehicles during the peak hour and would operate at LOS B or better for all study scenarios (i.e. Existing Plus Project, Near-Term Base Year Plus Project, and Horizon Year Plus Project). Therefore, no operational issues are expected to occur at the driveway located on Mt Etna Drive under Access Option 1. However, during the development of the site plan, the project should conduct a sight distance analysis to ensure sufficient line of sight exist at the project driveway.

Access Option 2

For Access Option 2, the Project would provide access via two driveways. The Mt Etna Drive driveway would provide full-access and operate as a side street stop-controlled intersection. The second driveway would be located on Genesee Avenue between Mt Etna Drive and Balboa Avenue and would provide right-in-right-out access with operation as a side street stop-controlled intersection. Sidewalks currently exist along the Mt Etna Drive and Genesee Avenue, and are expected to remain to allow full access from-to project site for pedestrians. Bicycle facilities currently do not exist along Mt Etna Drive, but a Class II bike lane does exist along Genesee Avenue with highly visible green striped markings. No bicycle facility improvements are expected for Mt Etna Drive or Genesee Avenue with in the project vicinity per *San Diego Bicycle Master Plan, December 2013*. Installation of the two driveways would not conflict with the current bicycle and pedestrian facilities; therefore, no impacts related to pedestrian or bicycle facilities are expected to occur under Access Option 2 of the Proposed Project.

Overall, the Mt Etna Drive driveway is expected to serve at most 108 project generated vehicles and the Genesee Avenue driveway is expected to serve at most 61 project generated vehicles during the PM Peak Hour. For the worst case, the driveway along Mt Etna Drive would operate at LOS B and driveway along Genesee Avenue at LOS C for all study scenarios (Existing Plus Project, Near-Term Base Year Plus Project, and Horizon Year Plus Project). Genesee Avenue's outer lane provides sufficient lane width of approximately 13 feet allowing for deceleration of vehicles entering the project site without substantially impeding traffic flow on Genesee Avenue. Therefore, no operational issues are expected to occur under Access Option 2 for the Proposed Project. However, during the development of the site plan, the project should conduct a sight distance analysis to ensure sufficient line of sight exist at the project driveway.

Access Option 3

For Access Option 3, the Project would provide access via three driveways. The Mt Etna Drive driveway would provide full-access and operate as a side street stop-controlled intersection. The second driveway would be located on Genesee Avenue between Mt Etna Drive and Balboa Avenue and would provide right-in-right-out access with operation as a side street stop-controlled intersection. The third driveway would be located on Balboa Avenue between Mt Everest Drive and Balboa Way and would provide right-in-right-out access with operation as a side-street stop-controlled intersection.

Sidewalks currently exist along Mt Etna Drive, Genesee Avenue, and Balboa Avenue, and are expected to remain to allow full access from-to project site for pedestrians. Bicycle facilities currently do not exist along Mt Etna Drive, but a Class II bike lane do exist along Genesee Avenue with highly visible, green striped markings. Additionally, Class II bike lanes are currently striped along Balboa Avenue in the vicinity of the project. No additional bicycle facility improvements are expected for Mt Etna Drive, Genesee Avenue, or Balboa Avenue within the project vicinity per *San Diego Bicycle Master Plan, December 2013*. Installation of the three site driveways would not conflict with the current bicycle and pedestrian facilities; therefore, no impacts related to pedestrian or bicycle facilities are expected to occur under Access Option 3 of the Proposed Project. However, during the development of the site plan, the project should conduct a sight distance analysis to ensure sufficient line of sight exist at the project driveway.

Overall, the driveways along Mt Etna Drive, Genesee Avenue, and Balboa Avenue are expected to serve at most 93, 43, and 32 project generated vehicles, respectively, during the PM Peak Hour. For the worst case, the driveways along Mt Etna Drive, Genesee Avenue, and Balboa Avenue would operate at LOS B, LOS C, and LOS C respectively for all study scenarios (Existing Plus Project, Near-Term Base Year Plus Project, and Horizon Year Plus Project). Furthermore, Genesee Avenue and Balboa Avenue's outer lanes provide sufficient lane width of approximately 13 feet and 18 feet, respectively, which allow for deceleration of vehicles entering the project site without substantially impeding traffic flow on Genesee Avenue or Balboa Avenue. Therefore, no operational issues are expected to occur under the Access Option 3 for the Proposed Project. However, during the development of the site plan, the project should conduct a sight distance analysis to ensure sufficient line of sight exist at the project driveway.

I-3 Vehicle Miles Traveled (VMT) Addendum

Mt. Etna - Clairemont Mesa Community Plan Amendment and Zone Change
VEHICLE MILES TRAVELED ADDENDUM

TO: Janelle Firoozi, ESA
FROM: Monique Chen, Dale Domingo, and Joseph Perez, Chen Ryan Associates
DATE: August 13, 2019
RE: Vehicle Miles Traveled Addendum for the Mt. Etna - Clairemont Mesa Community Plan Amendment and Zone Change

The purpose of this addendum to the “Mt. Etna – Clairemont Mesa Community Plan Amendment and Zone Change Transportation Impact Study (TIS)”, dated May 2019, is to analyze the Vehicle Miles Traveled (VMT) impacts related to the Proposed Project. The new project proposes 404 affordable multifamily units including 150 senior units and 1,500 square feet of ancillary uses.

This report has been prepared in accordance with the County of San Diego’s *Guidelines for Transportation Impact Studies in the San Diego Region, January 22, 2019*¹ (Regional TIS Guidelines), which complies with the SB 743 legislation specified by the Governor’s Office of Planning (OPR). SB 743 removes traffic Level of Service (LOS) as a metric for determining significant environment impact for transportation, and replaces it with VMT as the primary measure of transportation impacts.

1.0 Project Description

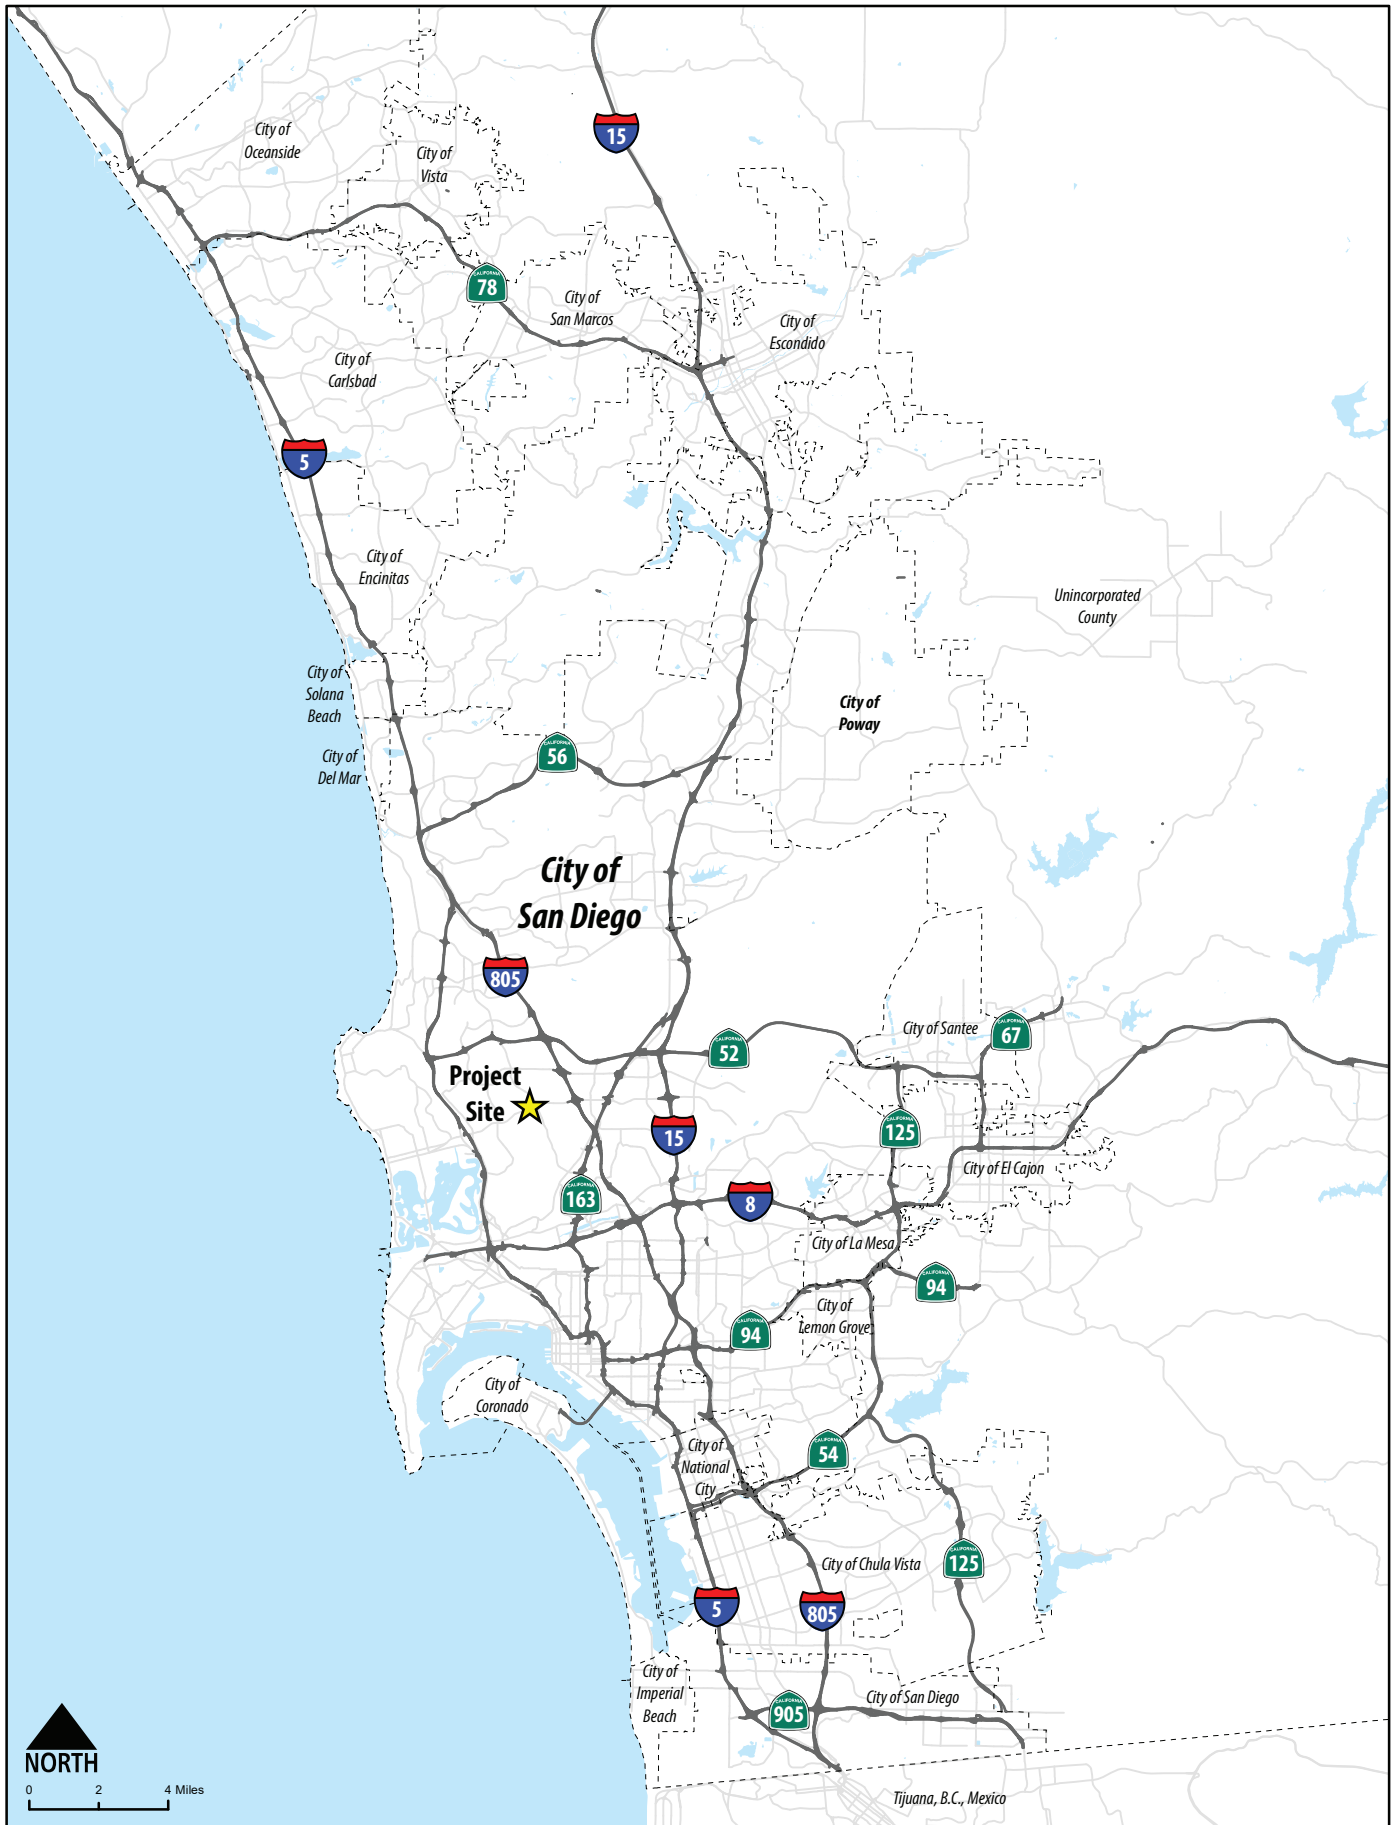

The Proposed Project would be located at 5255 Mt Etna Drive, San Diego, CA 92117 and would redevelop the vacant County’s Crime Lab site into 404 affordable multifamily units, of which 150 units would be senior units. Additionally, the project would include 1,500 square feet of ground floor ancillary uses (e.g. community center, daycare, etc.) that would be used primarily by the residents. Access to the project site will be provided via one of the following driveway alternatives:

- Driveway Alternative 1 - One Driveway: Full access on Mt Etna Drive;
- Driveway Alternative 2 - Two Driveways: Full access on Mt Etna Drive and a right-in-right-out (RIRO) driveway on Genesee Avenue; and
- Driveway Alternative 3 - Three Driveways: Full access on Mt Etna Drive, RIRO driveway on Genesee Avenue, and RIRO driveway on Balboa Avenue.

Figure 1 displays the Proposed Project’s regional location.

2.0 Analysis Methodology and Threshold

This chapter describes the analysis methodology that was prepared in accordance with the County of San Diego's *Guidelines for Transportation Impact Studies in the San Diego Region, January 22, 2019*² (Regional TIS Guidelines) as their transportation impact study guidelines and standards prior to the mandatory implementation of SB-743 (July 1, 2020). The Regional TIS Guidelines were recently developed by a committee of transportation engineers, both public and private, currently operating within the San Diego Region and were primarily based on the standards set forth in OPR's *Technical Advisory on Evaluating Transportation Impacts in CEQA (December 2018)*³. The intention of the guidelines is to address the new transportation analysis metrics and requirements, significance thresholds, and standards enacted by SB-743. The Regional TIS Guidelines were also developed to provide a consistent approach in the way transportation related impacts are analyzed, quantified, identified and mitigated within the San Diego Region.

SB-743 Background

On September 27, 2013, Governor Edmund G. Brown, Jr. signed SB-743 into law, starting a process that is expected to fundamentally change the way transportation impact analysis is conducted under CEQA. Within the State's CEQA Guidelines, these changes will include elimination of auto delay, level of service (LOS), and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts.

On December 2018, the Resources Agency certified and adopted the CEQA Guidelines update package, which included the California Natural Resources Agency Guidelines for the Implementation of the California Environmental Quality Act. As a result, the California Governor's Office of Planning and Research (OPR) updated and released the Technical Advisory on Evaluating Transportation Impacts in CEQA (Technical Advisory) in December 2018. According to the updated guidelines, lead agencies will have until July 1, 2020 to comply with the updated CEQA revision.

Screening Thresholds

The Regional TIS Guidelines and OPR's Technical Advisory provide the following screening thresholds for land use projects that are presumed to have a less than significant VMT impact due to project characteristics and/or location.

1. **Screening Thresholds for Small Projects:** Any project that generate less than the allowable ADT threshold (1,000 ADT if consistent with the City's General Plan and 500 if inconsistent with the City's General Plan) is not required to do a VMT analysis.
2. **Project's Located Near Transit:** Proposed CEQA Guideline Section 15064.3, subdivision (b)(1), states that lead agencies generally should presume that certain projects (including residential, retail, and office projects, as well as projects that are a mix of these uses) proposed within ½ mile of an existing

² Source: *Institute of Transportation Engineers San Diego Section (ITE San Diego) Transportation Capacity and Mobility Task Force SB 743 Subcommittee*

³ http://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf

major transit stop⁴ or an existing stop along a high quality transit corridor²¹ will have a less-than-significant impact on VMT. This presumption would not apply, however, if project-specific or location-specific information indicates that the project will still generate significant levels of VMT.

3. **Affordable Residential Development:** Project’s that include 100% affordable housing in infill locations can be presumed to have a less than significant impact. Infill locations will typically have better than average access to transit and/or greater opportunities for walking and bicycling trips.

Determination of CEQA Significant Impacts

The CEQA Guidelines recommend use of automobile VMT, as the preferred CEQA transportation metric. For land use projects, the Technical Advisory reports that research has shown that automobile VMT/Capita at the project level should be fifteen percent (15%) below those of existing development.

Therefore, consistent with the CEQA Guidelines, the Regional TIS Guidelines adopted the following threshold to determine whether a project has a significant transportation related impact. For both residential and employment-based land use developments, a project is considered to have a less than significant transportation related impact if the project VMT/Capita and VMT/Employee is lower than 85% of the regional average. **Table 2** presents the thresholds of significance and specific VMT metrics.

Table 2 Measures of Significance

Land Use Type	Threshold for Determination of a Significant Transportation VMT Impact
Residential	Below 85% of regional average* Resident VMT/Capita
Commercial Employment	Below 85% of regional average* Employee VMT/Employee

*The regional average or total regional VMT is determined using the base year of the current Regional Transportation Plan (RTP) version of the SANDAG Regional Travel Demand Model.

⁴ Pub. Resources Code, § 21064.3 (“Major transit stop’ means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.”)

For land use development projects, the following two metrics are analyzed to determine if a project has a significant transportation related impact:

- *VMT/Capita*: Includes all vehicle-based person trips grouped and summed to the home location of individuals who are drivers or passengers on each trip. It includes both home-based and non-homebased trips. The VMT for each home is then summed for all homes in a particular census tract and divided by the population of that census tract to arrive at Resident VMT/Capita.
- *VMT/Employee*: Includes all vehicle-based person trips grouped and summed to the work location of individuals on the trip. This includes all trips, not just work-related trips. The VMT for each work location is then summed for all work locations in a particular census tract and then divided by the total number of employees of that census tract to arrive at the VMT/Employee.

VMT Methodology

The following data and metrics were obtained from the SANDAG Series 13 Activity Based Model (ABM). The ABM is a travel demand forecasting model that incorporates census data and travel surveys to inform the algorithms of the model's projections. It uses a simulated population based on existing and projected demographics to match residents to employment and forecasts the daily travel on the regional transportation network. In addition, the model is able to track the daily travel of individuals in the simulated population, including origins, destinations, travel distances and mode choices. The Series 13 ABM has four (4) forecast scenarios: 2012, 2020, 2035, and 2050; scenarios 2012 and 2050 were used in this analysis.

To calculate VMT/Capita and VMT/Employee, the Proposed Project's land uses was coded into the Traffic Analysis Zone (TAZ) in which the Proposed Project is located. A Select Zone assignment was then conducted for the Proposed Project's TAZ to track origin and destination pairings and routes to and from the Proposed Project. The VMT for each home is then summed for all homes in the TAZ and divided by the population of that TAZ to arrive at Resident VMT/Capita. Similarly, the VMT for each employee is summed within the TAZ and then divided by the number of jobs.

3.0 Transportation Impact & Mitigation

This chapter derives and analyzes the projected VMT that will be generated by the Proposed Project. This chapter also identifies if the Proposed Project related VMT would create significant project related impact, as it relates to the standards outlined in the California Environmental Quality Act (CEQA) and the Regional TIS Guidelines.

Determination of Analysis

As described in the previous section, the Regional TIS Guidelines and OPR provides a screening criterion to determine if a project is required to do a VMT analysis based on the project's land use and location. The Proposed Project comprises 100% affordable housing units, including family and senior housing, and is located in a Transit Priority Area (TPA), which indicates that the land use characteristic and location of the project falls under the VMT screening criteria, and the Project is presumed to have a less than significant impact on VMT.

The Project is located in a TPA, with high frequency transit services immediately adjacent to the site on Genesee Avenue. Bus Route # 41 is serviced along Genesee Avenue operating with 15-minute headways during peak hours and bus route #27 is serviced along Balboa Avenue operating with 30-minutes headways during peak hours. Transit stops for Bus Routes #41 and #27 are each within 400 feet of the Project site. Furthermore, the Project includes 100% affordable housing units, and according to OPR's Technical Advisory, adding affordable housing to infill locations generally improves jobs-housing match, which results in shortened commutes and reducing VMT^{5,6}.

Consequently, based on the "Project's Located Near Transit" and "Affordable Residential Development" screening criteria, the Proposed Project is considered to have a *less than significant* VMT impact.

VMT Impact Analysis

Though the Proposed Project is considered to have a less than significant VMT Impact as previously described, the VMT analysis presented in this section is provided to further support the less than significant impacts of the project.

To calculate the average VMT/Capita and VMT/Employee generated by the Proposed Project, the Proposed Project land uses were incorporated into the SANDAG Series 13 Year 2050 Regional Model. A Select Zone assignment was conducted for the Proposed Project Transportation Analysis Zone (TAZ) which tracked and calculated the Proposed Project VMT by user type. The results of the Select Zone assignment are provided in **Table 3**. Model output results are presented in **Appendix A**.

⁵ Karner and Benner (2016) The convergence of social equity and environmental sustainability: Jobshousing fit and commute distance ("[P]olicies that advance a more equitable distribution of jobs and housing by linking the affordability of locally available housing with local wage levels are likely to be associated with reduced commuting distances").

⁶ Karner and Benner (2015) Low-wage jobs-housing fit: identifying locations of affordable housing shortages

Table 3 VMT Results Impact Analysis

VMT Metric	Base Year Average Regional	Project VMT	Project % of Base Year Regional	Significant Impact?
Resident VMT/Capita	17.3	12.6	72.8%	NO

Source: SANDAG Regional Transportation Model, July 2019

Note:

¹ San Diego Base Year Regional Average, Source, SANDAG Series 13-year 2012 Model

As shown in Table 3, the Proposed Project’s residential uses are anticipated to generate a VMT/Capita of 12.6, which is 72.8% of the base year regional average and is below the 85% threshold. Therefore, the Proposed Project is considered to have a *less than significant* impact.

RE: AB-52 Consultation for Clairemont Mesa Community Plan Amendment and Rezone Project.

The County of San Diego (County) Department of General Services (DGS) is inquiring whether you desire Assembly Bill No. 52 (AB 52) consultation on the Clairemont Mesa Community Plan Amendment and Rezone Project (proposed project). According to AB 52, public agencies are required to formally notify California Native American tribes on the Native American Heritage Commission's (NAHC) consultation list that are traditionally and culturally affiliated with the geographic area of a proposed project that is subject to the California Environmental Quality Act (CEQA).

The proposed project would include an amendment to the Clairemont Mesa Community Plan and rezone to facilitate the redevelopment of the County of San Diego Crime Lab property into affordable housing units. The proposed amendment would change the site's land use designation from Commercial to Residential High to allow for redevelopment of the site for up to 454 multi-family units, of which at least 50 percent will be affordable. In addition, a 10,000 square foot retail component could also be permitted under the amendment. The proposed project is located at 5255 Mount Etna Drive in the northwest corner of the intersection of Balboa Avenue and Genesee Avenue in the Clairemont Mesa Area of the City of San Diego.

If you have any comments or concerns regarding potential impacts to tribal cultural resources (as defined in Public Resources Code § 21074) in relation to the proposed project, or would like to request any additional information, please contact Marc Cass by (858) 694-2047 or by email at marc.cass@sdcounty.ca.gov within 30 days of receipt of this notice with a formal request for consultation.

Sincerely,

Marc Cass, Project Manager
